## NOMINATION OF HON. DONALD H. RUMSFELD TO BE SECRETARY OF DEFENSE

THURSDAY, JANUARY 11, 2001

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 10:06 a.m. in room SD-106, Dirksen Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Kennedy, Bingaman, Lieberman, Cleland, Reed, Warner, Thurmond, McCain, Inhofe, Roberts, Allard, and Sessions.

Other Senators present: Senators Akaka, Bill Nelson, Ben Nelson, Carnahan, Dayton, Collins, and Bunning.

Committee staff member present: David S. Lyles, staff director.

Majority staff members present: Richard D. DeBobes, counsel; Richard W. Fieldhouse, professional staff member; Creighton Greene, professional staff member; Gerald J. Leeling, counsel; Peter K. Levine, counsel; and Michael J. McCord, professional staff member.

Minority staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Charles S. Abell, professional staff member; Charles W. Alsup, professional staff member; John R. Barnes, professional staff member; Edward H. Edens IV, professional staff member; William C. Greenwalt, professional staff member; Mary Alice A. Hayward, professional staff member; Lawrence J. Lanzillotta, professional staff member; George W. Lauffer, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, assistant counsel; Joseph T. Sixeas, professional staff member; Cord A. Sterling, professional staff member; Scott W. Stucky, general counsel; and Eric H. Thoemmes, professional staff member.

Staff assistants present: Beth Ann Barozie, Thomas C. Moore, and Michele A. Traficante.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; Erik Raven, assistant to Senator Byrd; David Klain, assistant to Senator Landrieu; Christopher J. Paul and Walter E. Fischer, assistants to Senator McCain; Gregory C. McCarthy, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Thomas A. Vecchiolla, assistant to Senator Snowe; Robert Alan McCurry and James Beauchamp, assistants to Senator Roberts; Douglas Flanders, assistant to Senator Allard; Michael P. Ralsky, assistant to Senator Hutchinson; Scott Douglass, assistant to Senator Sessions.

Other Senate staff present: Richard Kessler, assistant to Senator Akaka; Pete Contostavlos, assistant to Senator Bill Nelson; Sheila Murphy, assistant to Senator Ben Nelson; Larry Smar, assistant to Senator Carnahan; Christopher Ford and Sam Patten, assistants to Senator Collins; and Jeff Freeman, assistant to Senator Cochran.

**STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. The history of this committee in the annals of the Senate reflect that we have achieved, through successive chairmen, a high degree of bipartisanship that our Nation is entitled from this committee. I have been privileged to serve 23 years on this committee with my distinguished colleague. We came together 23 years ago. It has been my privilege to serve as the Chairman for the past 2 years. If the high water does not rise and flood us out, I will return to that position in a week or so.

But in the meantime, in the spirit of bipartisanship, I am privileged to pass the gavel to Senator Levin. Senator Levin and I and Senator Inouye, Senator Stevens, and other members of the House went down to visit with President-elect Bush on Monday and we had a very good, thorough, and searching examination of defense issues and that struck the note of bipartisanship that is so essential as we, the collective members of our committee, represent this Nation in national security.

So, Mr. Chairman, it is with privilege I pass the gavel to you.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Thank you, Senator Warner. I have been Chairman of this Committee for all of about a week. I cannot tell you how many people have noted to me just how you have thrived under my chairmanship already. [Laughter.]

Before I proceed, I want to thank you for the many good years of friendship we have enjoyed over two decades now that we have been in the Senate. I will have some more comments about your chairmanship and that of Senator Thurmond and others in a moment. This is just a personal thank you to you.

The committee meets today to consider the nomination of Donald Rumsfeld to serve as Secretary of Defense.

As the first order of business, I want to welcome all of our Members back to the committee and extend a special welcome to our prospective new members. On our side, we are joined by Senator Akaka, Senator Bill Nelson, Senator Ben Nelson, Senator Carnahan, and Senator Dayton. On the Republican side, we are joined by Senators Collins and Bunning. This is a great committee to serve on. I know that Senator Warner and I and all the members of this committee look forward to our new members joining us.

On behalf of the entire committee, I extend a warm welcome to Mr. Rumsfeld and his family. I understand that you are accompanied by your wife, Joyce Rumsfeld, your daughter Marcy Rumsfeld, and your granddaughter Kayley Rumsfeld. We know the sacrifices that your family will make while you are in this position and we want to thank them in advance for their support of you and the sacrifices which they will make.

We also welcome Senators Durbin and Fitzgerald who have joined us today.

Mr. Rumsfeld is well known to this committee from his recent service as Chairman of the Commission to Assess the Ballistic Missile Threat to the United States and his many other endeavors. A couple of the senior members of the committee may also admit to their age by remembering Mr. Rumsfeld's previous service as Secretary of Defense in the Ford administration. Don Rumsfeld was the youngest Secretary of Defense in our history. After a few years of service in the upcoming Bush administration, he will earn the distinction of being our oldest Secretary of Defense as well—at least until Senator Thurmond is sworn in as his successor sometime in the future. [Laughter.]

We convene this hearing at a unique moment in the history of this country and in the history of the United States Senate. We have just concluded the closest presidential election in our history. For the first time ever at the beginning of Congress, the Senate is equally divided. A practical arrangement to accommodate that unusual situation was worked out by our leaders and approved by the Senate last week.

Times like these call out for, and necessitate, bipartisanship and cooperation. Fortunately, this committee, as Senator Warner has said, has a long tradition of working in a bipartisan manner to address the national security challenges facing this country. Chairman Warner has consistently led the committee in this spirit, as have the chairmen before him. At times when the rest of Congress has suffered from gridlock, our committee's legislative achievements—like the Goldwater-Nichols DOD Reorganization Act, and the Nunn-Lugar Cooperative Threat Reduction Program—have been marked by bipartisanship. Even our disagreements on issues have rarely been along partisan lines. For instance, while debates on the withdrawal of troops from Kosovo and on additional rounds of base closures have divided this committee in recent years, the division has not been on partisan lines.

It is my hope that the ease with which we hand the chairman's gavel back and forth in the course of this month will symbolize the close working relationships on this committee over the decades and help set the tone elsewhere.

Our new Secretary of Defense will inherit the most dominant military force in the history of the world. Over the last two decades, our military has incorporated a series of technological improvements that have revolutionized their military capability—from precision guided munitions and stealth technology to satellite reconnaissance and electronic warfare capabilities. The members of this committee, the Appropriations Committee, and our counterparts in the House of Representatives have played a key role in those changes. Today, each of our military services is more lethal, more maneuverable, more versatile and has greater situational awareness on the battlefield than at any time in history.

During the 1990s, Congress and the administration worked together to enhance our national security by achieving a balance between the needs of today's troops, including their current readiness, with the need to develop and field weapons that will enable us to retain our technological advantage in the future. This effort led to the enactment of comprehensive improvements to the military's health care system, military pay and retirement systems,

and the substantially increased acquisition spending to recapitalize and modernize the force.

We have also been engaged in a constant struggle to maintain funding for operations and maintenance accounts that support current readiness, given the high rates of deployment.

The terrorist attack on the U.S.S. *Cole* last fall demonstrated once again that our enemies are most likely to use indirect, asymmetric means to attack us. They realize it would be suicide to confront the United States military directly. The most likely threats to our national interest will come from regional conflicts due to ethnic, religious, or cultural conflicts and from terrorists and terrorist states.

If states are involved, they will seek to hide their involvement, because the retaliatory power of the United States is so massive and survivable as to guarantee the destruction of the principal goal of a totalitarian regime—its own survival.

In the area of national missile defense, the outgoing administration chose to aggressively pursue research and development, while stating a determination to consider in any deployment decision not only the threat, but the system's operational effectiveness and affordability, and the impact that deployment would have on our overall national security. This approach gives appropriate weight not only to the effect that large expenditures on missile defense would have on resources available to meet other vital defense needs, but also to the negative impact that the unilateral deployment of a national missile defense could have on our allies and on the proliferation of nuclear weapons, given the likelihood that the Russian and Chinese response to such unilateral deployment would be to increase (or stop reducing) the number of nuclear weapons and the amount of nuclear material on their soil. As Senator Baker and Lloyd Cutler found in their report released yesterday, the most urgent unmet national security threat to the United States is that weapons of mass destruction or weapons usable material located in Russia could be stolen and sold to terrorists or hostile nation states and used against American troops abroad or citizens at home.

We need to analyze the extent to which we spend defense resources on threats that are the least likely to occur. A ballistic missile attack from a terrorist state against the United States is a threat, but it is one that we have successfully deterred and against which we have a continuing overwhelming deterrent. There are cheaper and easier means of attacking the United States than an ICBM—means such as truck bombs, poisoning of water systems, or infiltration of computer networks—which may not open the unknown attacker to massive destruction in return. Those are just a few of the issues that we will be grappling with as a committee and you will be grappling with as Secretary of Defense.

We are blessed to live in a Nation whose political institutions and economy are respected throughout the world. With the end of the Cold War, our core values of freedom, democracy, and human rights appear to be stronger than ever with democratic revolutions changing the history of nation after nation. Our military, when used wisely, at once makes our Nation secure and enables us to play a unique role in influencing the course of events outside our borders in a peaceful and stable direction.

But the ability to influence events does not necessarily mean, of course, the ability to control them. We live in such a complex world, where we must deal with many interests that are contrary to our own. We should be proud of all that we have achieved in the world, including the reversal of ethnic cleansing in Europe for the first time in history, which also enabled nearly a million refugees and displaced persons to return to their homes. At the same time, we must be prepared to deal with new threats—particularly the terrorist threat—with new technologies, more mobile forces, and improved intelligence capabilities. Chairman Warner, with my support, created a subcommittee that is specially aimed at addressing these new threats. In the most recent defense authorization bill that we have adopted, we have paid special attention to the need to address the new threats.

The new administration will develop its own strategy for addressing these difficult issues and for maintaining the superiority of America's military force. Today's hearing provides an opportunity for all of us to begin the process of discussing that strategy. The nominee before us today has a strong commitment to the national defense. He is well-qualified to address the issues facing the Department of Defense and he is an extremely well-qualified nominee for this position. We congratulate him. We also congratulate the President-elect for this nomination. I now call upon Senator Warner for his opening statement.

#### **OPENING STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Thank you very much, Chairman Levin. I join you in welcoming our new members. Our new members put this committee at the highest level membership in history at 24.

In years past, we recruited members. Now we have certainly an indication of strength among our entire membership as reflected by so many wishing to join us. We welcome you.

To you, my dear friend for over 30 years, we have had a friendship and a personal relationship and indeed a professional one, having served together in the Ford administration, I as Secretary of the Navy and you as one of our troublemakers over in the White House.

I join in welcoming your lovely wife and family. Anyone taking on particularly your responsibilities as Secretary of Defense 24 hours a day, 7 days a week and that phone is always by your side. Indeed, your family fully shares the heavy responsibilities. You are so fortunate to have such a wonderful family to share that burden.

If I may say, Mrs. Rumsfeld, you will be an integral part of reassuring the other families of the service persons throughout the world by your strong support of your husband and indeed them.

So we welcome you as a team to the department. I look back over the hearing record of November 12, 1975. It was a very short hearing I note and perhaps not as well attended. But that reflects the importance of the Senate advice and consent today. This committee, as to other committees of the Senate, take that responsibility very seriously.

So our hearing today will be lengthy and we will probe deeply into many areas of our security relationships and your responsibility and how you intend to fulfill it.

First, I would like to say that based on my good fortune to have known you, I say without any reservation you are competent. You are experienced. You are trustworthy. You have the character, the honesty, to do this job second to none.

I was so pleased, and indeed I think the country should be grateful that you are willing to come back again, sign on for a second hitch, as we say in the military, for this important post. I note behind you two old-timers who are not paying any attention to what we are saying, Mr. Schneider and Mr. Korologos. [Laughter.] I do not know why they are here, but we welcome them anyway. [Laughter.]

We also commend you, Mr. Rumsfeld, for keeping active and informed on defense and security issues since your last Pentagon service. The committee is familiar with the excellent work you have done in both the Commission to Assess the Ballistic Missile Threat which issued its report in 1998 and the ongoing Commission to Assess United States National Security Space Management and Organization which coincidentally the report will be issued today.

Now, Senator Levin and I and others have received a briefing on the work of this commission. It is a job well done. It is another serious wake-up call to America about the threats directed at us.

Our committee played a central role in establishing both of these commissions and I commend its membership. We thank you again and the members of the committee for your work.

We are familiar with the findings and recommendations of the Ballistic Missile Threat Commission and the influence that that report had. It came at a critical time I say to you. In many ways, the Ballistic Missile Threat Report changed the entire debate over national missile defense by convincing many in Congress, and, respectfully, in the Clinton administration, that the potential threat is more serious and more imminent than previously understood throughout our Nation.

I look forward to your comments on this subject and my dear friend and colleague here I think quite appropriately in his opening statement indicated some of his strong views. We have not always agreed on it, but it is a subject that is the centerpiece of the new Bush administration. No one is better qualified than yourself to advise the President on the directions to be taken.

We still have, as you well know, you are a former sailor, former naval aviator the best-trained, best-equipped military force in the world today. There are certainly many areas in which we need to continue to make improvements.

We are not pleased at all with the retention levels, difficulty of recruiting. When we recruit today, we recruit families. We recruit unlike when you and I went in many years ago into the service. It is families today.

When that critical decision is made about retention the wives are usually co-equal partners. It was a family decision to stay or to go out and seek the lucrative opportunities that these well-trained individuals have in the private sector.

Readiness and modernization have been the highest priority of this committee. We have achieved some gains, but not enough.

Procurement. We have almost dropped to levels which are just totally unacceptable. We have to modernize and restore the best we

can within the budget a much higher level of acquiring new and modern weapons.

Just look at the truck inventory in the United States Army. No civilian, no private sector, would operate a truck force like we are operating in the military. That is just one thing people can understand all across America.

So therefore, Mr. Secretary, we have to increase defense spending. When we, Senator Levin and I, had an opportunity to visit with President-elect Bush, Vice President-elect Cheney, on Monday, we did not talk about specific levels. But there was the clear consensus that we have to increase substantially defense spending.

Now, this morning we cannot establish those levels with any precision. But I was heartened to see that the President-elect wants to first task you to examine how the current budget, those of past years, being expended, to determine whether or not you should redirect funding, to determine whether there are efficiencies within which you can gain some cash needed for other programs.

Then after doing that, you can establish that level of increase in the context of not only the other budget factors, but most importantly the President-elect said the defense budget has to have a direct relevance if not in fact be driven by the threats poised against this Nation, threats quite different than our generation of active service in the military. Quite different.

Senator Levin expounded on terrorism and the work of this committee, and I commend this committee for its work. We have constantly had to push the current administration for higher levels of funding in a wide range of areas to combat terrorism and the risks here in the United States which I will address momentarily. We call it homeland defense.

President-elect Bush used that very phrase in his statement at the Citadel which is a foundation document of his thinking.

Now, historically, the Joint Chiefs of Staff have had, of course, a vital role in the planning in the Department of Defense. But I commend them, especially for the past 2 years, and indeed the years before under my distinguished predecessor, Senator Thurmond, for coming before this committee and testifying about the need for additional funds over and above the recommendations and the submissions by the Commander in Chief, the President of the United States at that very table.

The past 2 years we have taken that testimony which has been essential as this committee has gone to the floor of the United States Senate to get higher authorization levels for spending. We have gotten what I regard as modest sums, but nevertheless very important increases in the past 2 fiscal years.

You will be faced early on with first the supplemental. We have talked about that together. We talked with Senator Stevens and Senator Inouye about it. Followed by a budget amendment to the current Clinton administration budget which is traditionally submitted to Congress by the outgoing President. Those are some of the key things that you will have to address immediately. Within both, you will have additional sums needed desperately for our defense.

President-elect Bush has articulated a vision for the U.S. military and have set three broad goals for national defense.

First, to strengthen the bond of trust between the President which is so essential, from the four star officer down to the private or the seaman, that bond of trust between the commander and chief and those in uniform and indeed their families.

Second, to defend the American people against missiles and terror. Very few in the United States recognize we are virtually defenseless against missile attack. That, of course, is the subject that my colleague discussed and we will have further discussions on that.

Third, to begin creating the military of the next century. How well you know from your own study the old slogan they are always preparing to fight the last battle. Well, that worked maybe in World War II when we had the time to catch up because of the protection of the oceans. But those protections are gone today. Warfare is instantaneous. It is the arsenal we have of weapons and trained people in place that will be used.

Cyber warfare. No one envisioned that a decade ago. But today it is a threat which I and others think is just as lethal as anything.

I commend your predecessor, Secretary Cohen. He has recognized would you not say, Mr. Chairman, the oncoming and the changing threats in just the 4 years that he has been present as Secretary of Defense?

I want to say at this time, and I think the members of this committee would want to reflect, our respect for the work that Secretary Cohen and his team have done in his administration. You understand these goals.

I want to go back to the President's speech at the Citadel. He said, and I quote, "Those who want to lead America accept two obligations. One is to use our military power wisely remembering the cost of the war. The other is to honor our commitments to veterans who have paid those costs."

People. Those who have served in the past, those who are serving today, and those we need to have come in and serve for tomorrow.

I am proud of the way this committee, this last bill, began to reach back and take care of those veterans, particularly the career veterans, in terms of their medical needs. This committee is very conscious of the fact that they are the best recruiters in the world, those who have served once. We have in the past, I think, neglected them. That has come to an end with the work of this committee.

The start point President-elect Bush has said that he will recommend a substantial pay raise, a billion. This committee has worked on two successive pay raises. We are ready to accept that challenge of that billion dollar mark. Perhaps it has to be adjusted maybe up or sideways or down a bit. But we will back him in working through that very important thing because that is key again to the retention and the care of the families.

We all know that most of the retention decisions as I mentioned are made on a family basis. That is critical to care for those people.

Homeland defense will be a high priority for President-elect Bush and yourself, if confirmed. President-elect Bush has said that he will deploy both theater and national ABM systems to guard the United States, our allies, and troops deployed overseas against missile attack or the threat of attack. Defense against domestic terror-

ism, including detecting and responding to such threats, will also be a priority for the next administration. You will be at the very forefront.

We also need an immediate and comprehensive review as President-elect Bush advised us when we visited with him of our military today, its structure, its strategy, its capabilities, and its modernization priorities.

President-elect Bush has promised such a review. In my conversations with you, you are fully prepared to undertake that the first day you arrive in the department.

We must look beyond the modest improvements we have had to our current systems and find ways to enhance and strengthen our military in many areas.

I want to include among that base closure. It has been a very contentious subject. In past years, I was privileged to join with my friend, the Chairman, in originating those bills. Senator McCain has been very active on that front. I urge you to take a look at that at the earliest opportunity. There is infrastructure out there that can be withdrawn and I think constructively and in many instances will help local communities to get that infrastructure back and put it to good use. There will be a cost savings to the military which those dollars can be applied elsewhere. In most instances, it will eventually help the local communities. These are some of the initiatives that you must undertake.

So I support this nomination very enthusiastically. It is my intention to cast that vote for you subject to the work of this committee and I wish to commend President-elect Bush for putting together an absolutely outstanding team on the areas of national defense, national security, and international affairs. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Warner. Two of our friends and dear colleagues have joined us to introduce Mr. Rumsfeld. Senator Durbin, we will call on you first. Then we will call on Senator Fitzgerald.

**STATEMENT OF HON. RICHARD J. DURBIN, U.S. SENATOR  
FROM ILLINOIS**

Senator DURBIN. Thank you, Chairman Levin, and the members of the committee. It is an honor to introduce to the committee today my distinguished colleague from the land of Lincoln. I know that presidents have often complained about the Senate confirmation process. Herbert Hoover, upon the birth of his granddaughter, said, "Thank God she doesn't have to be confirmed by the Senate."

Donald Rumsfeld has so much experience, I am sure he will have less trouble winning confirmation than President Hoover's granddaughter would have had if she had required the Senate's blessing.

Don Rumsfeld's resume is impressive. Four-term Congressman from Illinois, Director of the Office of Economic Opportunity, U.S. Ambassador to NATO, White House Chief of Staff, the youngest ever Secretary of Defense, CEO of several major corporations, and a special envoy for President under President Reagan.

We have heard a lot about bipartisanship lately. When Don Rumsfeld came by my office to talk about this hearing, he told me that when he served in Congress before Baker versus Clark that

Speaker Sam Rayburn had a congressional district of about 89,000. Is that what you remember, Don? His congressional district was the largest in the nation at 1.1 million.

The Illinois district that Don Rumsfeld represented in the House of Representatives was split in two in Congress after he departed. One district represented by a conservative Republican and one by a liberal Democrat. His ability to serve such a diverse district speaks well of his ability to bridge a Congress and a country almost equally divided.

While all Senators may not agree with Mr. Rumsfeld on every issue, he has certainly earned our respect. In fact, I want to warn my Senate colleagues to be reluctant to go to the mat with Don Rumsfeld. Not only was he Captain of Princeton University's wrestling team, and All Navy wrestling champion, he was also inducted in the National Wrestling Hall of Fame and Museum. He joined Speaker Hastert as another famous wrestler who hails from Illinois.

I for one plan to keep in mind that wrestling depends on strategy and making the right move at the right time as much as it does on strength and power.

Some of his critics have complained Mr. Rumsfeld's experience with defense is from a bygone, Cold War era. Those critics ignore the obvious. Mr. Rumsfeld's valuable contributions chairing several commissions, including the Ballistic Missile Threat Commission, and the obvious experience that he has had in managing major corporations in a new economy. Mr. Rumsfeld has kept up and I would challenge his critics to try to keep up with him.

In 1775, in our revolutionary era, Patrick Henry said, "I have but one lamp by which my feet are guided and that is the lamp of experience. I know of no way of judging the future but by the past."

It is only because the United States was so steadfast in fighting for freedom and democracy that the world enjoys an unprecedented era of freedom and prosperity today.

Mr. Chairman, Mr. Rumsfeld carries the lamp of experience. I wish him for our country's sake every success as he travels by that light. It is with pride that I present to you one of Illinois' favorite and most distinguished sons.

Chairman LEVIN. Senator Durbin, thank you.  
Senator Fitzgerald.

**STATEMENT OF HON. PETER G. FITZGERALD, U.S. SENATOR  
FROM ILLINOIS**

Senator FITZGERALD. Thank you very much, Mr. Chairman, and members of this distinguished committee. It is a great honor and privilege for me to join with my colleague, Senator Durbin, to present to this committee one of Illinois' most distinguished residents, Donald Rumsfeld.

The day after President-elect Bush announced his selection of Donald Rumsfeld, I noted that in the *New York Times* the reporter had asked Henry Kissinger his opinion of the Defense Secretary designate. Dr. Kissinger said, and I quote, "I literally cannot think of a better person for the post."

That was exactly my impression. I believe it was the impression of many of the members of this body and certainly of many of the newspaper editorial boards around the country.

It is kind of an irony, Don. You were actually my Congressman when I was growing up. I was one of those 1.1 million constituents Senator Durbin referred to.

Now, lest this committee conclude that either I am too young to be in the United States Senate or that he is too old to serve as Defense Secretary, I would point out that he was a very young Member of Congress, one of the youngest Members of Congress at the time, in his early 30s. I would note that in one of life's unfair ironies, he has more hair than I do today. As Senator Durbin said, I would not recommend that anybody try to wrestle with Don Rumsfeld.

Shortly after I got sworn in, I was very familiar with Donald Rumsfeld's record in business and in government. I knew of his impressive resume. But what I would urge you to reflect upon is, this man is not simply a resume who has held all these impressive posts. He is someone who has collected a lot of wisdom from his years of experience.

Shortly after I was sworn in, he shared with me a little pamphlet that he put together and compiled over the years known as "Rumsfeld's Rules". If any of you have not seen that, I would recommend that you get a copy of it. It has many of his words of wisdom and advice to Members of Congress or those in the administration. I read that carefully after I got sworn in. I remember certain pearls and chestnuts that you had, such as, "no Member of Congress is here by accident, if you get to know your fellow colleagues in this body, you will see that there is some special reason each one of them is here. In getting to know that special reason, you will come to respect that member and you will also learn a lot about America." So I recommend "Rumsfeld's Rules" to all of you. It has a great deal of wisdom in it.

As Senator Durbin said, Mr. Rumsfeld is a graduate of Princeton University, and captain of the wrestling team, and I believe, captain of the football team. He went on to be a naval aviator, was the Navy wrestling champion, served four terms in Congress, became the White House Chief of Staff, then was named Defense Secretary. He was regarded as having a wonderful record and having been an outstanding Secretary of Defense the first time around. I can only imagine him being better this time around.

Now, there is a lot of talk about investment opportunities these days with the market having gone up so much the last few years and then coming down. A good investment strategy over the last 20 years would have been to invest in companies that were chaired or the CEO was Donald Rumsfeld.

G.D. Searle Company, a major Illinois pharmaceutical company, was in dire straits back in 1977 when Don Rumsfeld took over. By the time he left in 1985 and the company was sold, the stock had quadrupled.

There was a similar success story with General Instrument Corporation. Many of you are familiar and are friends with Ted Forstman who runs a fund that invests in corporations. Ted Forstman, of course, is known for his philanthropy and his generos-

ity in creating scholarships for young children all over the country. That philanthropy might not have been possible had his fund not bought General Instruments, put Donald Rumsfeld in charge who within 3 years had tripled the stock of that corporation. They took it public.

He has continued on in advisory roles to this body and to the executive branch. He has stayed engaged in defense issues. This is a rare individual who has literally succeeded at almost everything he has done in life. I think I can only say, I can only conclude, as some of you have already concluded, that we are simply fortunate to have a person of this caliber who is willing to re-enter public service and to assist our country.

Mr. Chairman, I would ask leave to introduce into the record prepared remarks that I have. I want to thank you all for your consideration. I recommend Donald Rumsfeld with whole hearted enthusiasm and confidence. Thank you.

[The prepared statement of Senator Fitzgerald follows:]

PREPARED STATEMENT BY SENATOR PETER G. FITZGERALD

Thank you, Mr. Chairman, and members of the committee.

I am honored to be here today to introduce to you a man whom I have admired and respected throughout his distinguished career of public service. Introducing Don Rumsfeld to the Armed Services Committee is a little like introducing Sammy Sosa to the Chicago Cubs. Secretary Rumsfeld has hit home runs in literally everything he has done in his long and influential career.

Don Rumsfeld was my congressman when I was growing up. I first met Don in 1988, when he ran for President, and my family has known him for nearly 40 years. I am proud to be before this committee today in support of this extraordinary individual.

Don Rumsfeld attended Princeton University on a scholarship, and then was a Navy pilot and All Navy Wrestling Champion, before being elected four times to Congress from my home state of Illinois.

Don was an energetic and effective congressman, a rising star, who quickly caught the eye of Gerald Ford, then a Representative from Michigan. In 1969, President Nixon appointed Don as Director of the Office of Economic Opportunity, and later as U.S. Ambassador to NATO.

In 1974, President Ford selected Don to be his chief of staff, and Don's sound management and political instincts helped President Ford heal the wounds of Watergate and the Vietnam War. In 1975, President Ford appointed Don as Secretary of Defense, the youngest ever to serve in the position. Once again, Don displayed his extraordinary talents as a tough, skillful manager, strategist, and advocate. Don helped restore the confidence and credibility of our Armed Forces, warned of the growing Soviet threat, and built bipartisan support in Congress for strengthening and modernizing our military.

Don then applied his extraordinary energy and talent to the private sector, restoring profitability to two large, Illinois-based blue chip corporations. G.D. Searle, a major worldwide pharmaceutical company, was foundering when Don took over, but made a dramatic recovery under his leadership. Don then returned GI Corporation, a pioneer in telecommunications, to profitability—GI's market value tripled under Don's leadership.

Throughout Don's years in business, he continued to serve Illinois and the Nation, on numerous non-profit philanthropic boards, as an adviser to the State and Defense Departments, as President Reagan's Special Envoy to the Middle East, and as Chairman of the U.S. Ballistic Missile Threat Commission, among other things.

The President's most important job is Commander in Chief. President-elect Bush has demonstrated in selecting Don Rumsfeld as his Secretary of Defense that he will ensure that our Nation can face the security challenges of the 21st century. These challenges require that we create and maintain a flexible military force that is able to adapt quickly to changing threats. I know Don is committed to ensuring that America's Armed Forces are modernized to meet the challenges of the new century. He understands that today's procurement is tomorrow's readiness. He knows that the men and women of the Armed Forces must remain the best trained and best equipped in the world.

President-elect Bush has committed himself to building an effective missile defense system to protect our country from ballistic missile attack and nuclear intimidation. Don, as Chairman of the bipartisan Ballistic Missile Threat Commission, warned the Nation that the missile threat to the U.S. is real and growing, and that the United States will have little or no warning before a rogue state deploys ballistic missiles with the capability to inflict major destruction on the United States. As Don put it so well, the surprise is not that there are surprises, but that we are surprised that there are surprises.

We in Congress, by passing the National Missile Defense Act of 1999, made it the policy of the United States to deploy, as soon as is technologically possible, an effective National Missile Defense system. Don Rumsfeld is the right individual to make the hard choices and the tough calls that must be made to select and deploy an effective and affordable system that meets the threat.

Finally, providing the resources for the defense of this country is one of the greatest responsibilities we have as U.S. Senators. While we often get deeply involved in the pros and cons of this or that fighter plane or battleship, we can never forget what the defense of this country really rests on: our men and women in uniform. Don Rumsfeld knows this to his very core.

Don's 3 years of service in the U.S. Navy as a jet pilot and flight instructor, and his work as Secretary of Defense in the post-Vietnam years rebuilding the morale and pride of our military, are legendary. Don clearly understands the sacrifice that has been made by our service members. I am confident Don will help provide our military with the best equipment and training America has to offer and will ensure that every service member and his or her family has the quality of life they were promised. The recently released report on the U.S.S. *Cole* tragedy underscores the need to beef up security for our troops stationed abroad against the threat of terrorism.

In short, I cannot imagine anyone more capable of serving as Secretary of Defense than Don Rumsfeld, and I commend President-elect Bush for his bold choice. I am grateful that Don has agreed to return to what is, without doubt, one of the toughest jobs in the world. We are fortunate to have someone of Don's caliber willing to take on this difficult responsibility once again. It is therefore a great privilege to join my colleague, Senator Durbin, in introducing Don Rumsfeld, and urge the committee to give prompt and favorable consideration to his nomination.

Thank you, Mr. Chairman.

Chairman LEVIN. It will be made part of the record. We thank both of you for coming. It makes a real difference to the nominee I am sure and to this committee. Mr. Rumsfeld, now you have to live up to all of that and investment advice while you are at it.

**STATEMENT OF HON. DONALD RUMSFELD, SECRETARY OF  
DEFENSE NOMINEE**

Mr. RUMSFELD. Wow. Well, I must say I thank Senator Fitzgerald and Senator Durbin for those very generous words. I will try to live up to them.

Mr. Chairman, Senator Warner, members of the committee: It is a privilege and an honor to appear before you today as the nominee for the post of Secretary of Defense. I am certainly grateful to President-elect George W. Bush for his confidence that he's placed in me. I thank the committee and you, Mr. Chairman, for your courtesy in arranging this hearing so promptly.

I would like, with your permission, to make some remarks off my prepared statement and have the statement made a part of the record.

Chairman LEVIN. It will be made part of the record in full.

Mr. RUMSFELD. As has been said, it was 25 years ago that I had the privilege of appearing for the first time before this committee as President Ford's nominee for Secretary of Defense. Certainly, we lived in a very different world then. In the intervening quarter of a century, the world has changed in ways that we could really only have dreamed of.

America was locked in a nuclear and ideological standoff with the Soviet Union. Today, the Soviet Union is no more. The world of superpower standoff has given way to a world of expanding freedom and, I would add, expanding opportunity.

The last time I appeared here for a confirmation hearing, the Armed Forces and those of our NATO allies stood toe-to-toe facing the militaries of the Warsaw Pact—ready to clash at a moment's notice on a battlefield with Poland, Hungary, Czechoslovakia, and East Germany.

Today, the Warsaw Pact is no more; Berlin is again the capital of a unified Germany; and Warsaw, Prague, and Budapest are the capitals of our new NATO allies. As one who served as U.S. Ambassador to NATO, I must say I find these changes breathtaking and fundamental.

When I appeared previously, American industry was facing an industrial challenge from Japan. You will recall the productivity and competitiveness made American industry look fat in overhead, excessively layered in management, sluggish in confronting change and innovation.

Today, U.S. industry has shaken off those handicaps and—in a process that I have had the privilege to witness first hand—become a leader and a model for the rest of the world. The end of the Cold War and the collapse of Soviet military power have brought the twentieth century—possibly the most violent and destructive century in human history—to a remarkably peaceful close.

U.S. and allied military power was the indispensable instrument that contained the Soviet Union, confronted Soviet power and its surrogates at the geographic extremities of its advance, and provided the shield within which democratic order and economic prosperity could evolve and develop.

When the great struggle that was World War II had passed, this country found itself facing new challenges with the advent of the Cold War and the development of nuclear weapons. Today, with the Cold War Era history, we find ourselves facing a new era, often called the Post Cold War period or possibly more properly the Era of Globalization.

It is an extraordinarily hopeful time, one that is full of promise, but also full of challenges. One of those challenges, one that, if confirmed, I look forward to working with President-elect Bush and this committee and Congress to meet, is the challenge of bringing the American military successfully into the 21st century, so that it can continue to play its truly vital role in preserving and extending peace as far into the future as possible.

As President-elect Bush has said, "After the hard but clear struggle against an evil empire," the challenge that we face today "is not as obvious, but just as noble: To turn these years of influence into decades of peace." The "foundation of our peace" is a "strong, capable and modern military." Let there be no doubt.

The end of the Cold War did not bring about an end to armed conflict, or the end to challenges and threats to U.S. interests. We know that. Indeed, the centrifugal forces in world politics have created a more diverse and less predictable set of potential adversaries whose aspirations for regional influence and whose willingness to use military force will produce challenges to important U.S. in-

terests and to those of our friends and allies as Chairman Levin mentioned.

President-elect Bush has outlined three overarching goals for bringing U.S. Armed Forces into the 21st century: First, we must strengthen the bond of trust with the American military. The brave and dedicated men and women who serve our country in uniform active, guard, and reserve—must get the best support their country can possibly provide them so that we can continue to call on the best people in the decades to come.

Second, we must develop the capabilities to defend against missiles, terrorism, the newer threats against our space assets and information systems as members of the committee have mentioned. The American people, our forces abroad, and our friends and allies must be protected against the threats with modern technology and its proliferation confront us.

Third, we must take advantage of the new possibilities that the ongoing technological revolution offers to create the military of the next century.

Meeting these challenges will require a cooperative effort between Congress and the Executive Branch, and with industry and with our allies as well. If confirmed, I look forward to developing a close working relationship with this committee and with the counterpart committees in the House of Representatives to achieve these goals, and to fashion steps to help to transform our defense posture to address those new challenges.

We must work together if we are to be able to address the problems of inadequate funding, which has been the case, unreliable funding, perturbations in funding and resistance to change. Change is hard and institutions are difficult to move. With cooperation and collaboration, we can make real progress. Without cooperation, we will surely fail.

President-elect Bush is committed to a strong national defense. If confirmed, one of our first tasks will be to undertake a comprehensive review of U.S. defense policy that Senator Warner mentioned. This review will be aimed at making certain that we have a sound understanding of the state of U.S. forces and their readiness to meet the 21st century security environment.

We need to ensure that we will be able to develop, deploy, operate, and support a highly effective force capable of deterring and defending against new threats. This will require a refashioning of deterrence and defense capabilities. The old deterrence of the Cold War era is imperfect for dissuading the threats of the new century and for maintaining stability in our new national security environment.

If confirmed as Secretary, I plan to pursue five key objectives needed to support and make progress on the President's goal.

First, we need to fashion and sustain deterrence appropriate to the new national security environment. The proliferation of weapons of mass destruction and their means of delivery are a fact of life that first must be acknowledged and recognized for what it is. They must be managed. While striving to slow proliferation remains essential, a determined state may, nonetheless, succeed in acquiring weapons of mass destruction and increasingly capable missiles.

As a consequence, a decisive change in policy should be aimed at devaluing investment in weapons of mass destruction and their delivery systems by potential adversaries. Credible deterrence no longer can be based solely on the prospect of punishment through retaliation. It must be based on a combination of offensive nuclear and non-nuclear defensive capabilities, working together to deny potential adversaries the opportunity and the benefits that come from the threat and the use of weapons of mass destruction against our forces, our homeland, as well as those of our allies.

Second, the readiness and sustainability of deployed forces must be deferred. The price of inadequate readiness is paid in necessary risks to American interests and in unnecessary risks to the lives of American service men and women.

But inadequate readiness exacts a further price in the future quality of the force. Our Armed Forces today are all volunteers. Whether Active Duty, Reserve or National Guard, they are men and women who have willingly answered the call to serve our country and accepted the burdens and dangers that go with that service.

As President-elect Bush has said, "even the highest morale is eventually undermined by back-to-back deployments, poor pay, shortages of spare parts and equipment, and declining readiness. . . . A volunteer military really has only two paths it can travel. One is to lower standards to fill the ranks. Or it can inspire the best and brightest to join and stay." If confirmed, I look forward to working with the President and this committee that has been so interested in this subject to make sure that our country's service is able to attract and retain the best of our country.

Third, U.S. command-control-communication, intelligence and space capabilities must be modernized to support our 21st century needs. A modern command, control, communications, and intelligence infrastructure is the foundation upon which U.S. military power is employed. The development and deployment of a truly modern effective command, control, communication, and intelligence system is fundamental to the transformation of U.S. military forces, and it is indispensable to our ability to conduct effective diplomacy.

I am committed to strengthening our intelligence to serve both our short-term and our long-term national security needs. I will personally make establishing a strong spirit of cooperation between the Department of Defense and the rest of the intelligence community, under the leadership of the DCI, one of my top priorities. We simply must strengthen our intelligence capabilities and our space capabilities, along with the ability to protect those assets against various forms of attack.

Fourth, the U.S. defense establishment must be transformed to address our new circumstances. The need to swiftly introduce new weapons systems is clear. The transformation of U.S. military power to take full advantage of commercially created information-technology may require undertaking a near-term investment to acquire modern capabilities derived from U.S. scientific and industrial pre-eminence, rather than simply upgrading some existing systems.

The present weapons system acquisition process was designed in an environment different from the one that exists today. In my view, it is not well-suited to meet the demands posed by an expansion of unconventional and asymmetrical threats in an era of rapid technological advances and a period of pervasive proliferation.

The cycle time from program start to initial operational capability for major acquisition programs conducted over the past several decades has, I am told, generally been between 8 and 9 years. Some efforts obviously have taken far longer.

But such processes are not capable of harnessing the remarkable genius and productivity of the modern, information-based commercial and industrial sectors that have done so much to revolutionize our civilian economy.

Fifth, reform of DOD structures, processes, and organization. The legacy of obsolescent institutional structures, processes, and organizations does not merely create unnecessary costs—which, of course, it does—it also imposes an unacceptable burden on the national defense. In certain respects, it could be said that we are in a sense disarming or under arming by our failure to reform the acquisition process and to shed unneeded organizations and facilities.

If confirmed, we will examine, in consultation with Congress, omnibus approaches to changing the statutory and regulatory basis for the most significant obstacles to reform.

This agenda for the new security environment is admittedly ambitious. It is an achievable one if the legislative and the executive branches work together.

If confirmed, I will work closely with the committee and with the other appropriate committees of Congress to develop, fund, and implement an overall defense program that can achieve our goals for the future and for the future of our children.

I again want to express my appreciation to the President-elect for his confidence and to you, Mr. Chairman, and the members of the committee for inviting me here today. Thank you, sir.

[The prepared statement of Mr. Rumsfeld follows:]

PREPARED STATEMENT BY HON. DONALD H. RUMSFELD

Mr. Chairman, Senator Warner, members of the committee: It is a privilege and an honor to appear before you today as the nominee to be the next U.S. Secretary of Defense. I am grateful to President-elect George W. Bush for nominating me to this important post and for the confidence he has placed in me. I thank you and this Committee for your courtesy in scheduling this confirmation hearing.

With your permission, I will make a few opening remarks and request that my prepared statement be included in the record.

Some 25 years ago, I had the privilege of appearing for the first time before this Committee as President Gerald R. Ford's nominee for Secretary of Defense. We lived in a very different world then. In the intervening quarter century the world has changed in ways that we could once only dream of.

The last time I appeared before you in this capacity, America was locked in a nuclear and ideological standoff with the Soviet Union. Today, the Soviet Union is no more, and the world of superpower standoff has given way to a world of expanding freedom and, I would add, expanding opportunity.

The last time I appeared here for a confirmation hearing, U.S. Armed Forces and those of our NATO allies stood toe to toe facing the militaries of the Warsaw Pact—ready at a moment's notice to clash on the battlefield with Poland, Hungary, Czechoslovakia and East Germany. Today, the Warsaw Pact is no more; Berlin is again the capital of a unified Germany; and Warsaw, Prague, and Budapest are the capitals of our new NATO allies. As one who once served as U.S. Ambassador to NATO, I find these changes both breathtaking and fundamental.

When I appeared previously, American industry was facing an industrial challenge from Japan, whose productivity and competitiveness made American industry look fat in overhead, excessively layered in management and sluggish in confronting change and innovation. Today, U.S. industry has shaken off those handicaps and—in a process that I have witnessed personally—has become a leader and a model for the rest of the world.

The end of the Cold War and the collapse of Soviet military power have brought the 20th century—possibly the most violent and destructive century in human history—to a remarkably peaceful close. U.S. military power was the indispensable instrument that contained the Soviet Union, confronted Soviet power and its surrogates at the geographic extremities of its advance, and provided the shield within which democratic order and economic prosperity were able to develop. As part of this process, the peoples of Russia and other states of the former Soviet Union have, or are in the process of, throwing off communism and reaching for democratic order and market economy. The United States has emerged from the 20th century in a strong position in every measure of national strength—military, economic, scientific, industrial, diplomatic, political and, I believe, even spiritual. Even more important, the U.S. and our democratic allies in Europe, Asia and elsewhere enjoy a special position in the world that, if we can work together, offers the possibility to make the new century one of the most peaceful in history.

When the great struggle that was World War II had passed, this country found itself facing new challenges with the advent of the Cold War and the development of nuclear weapons. Today, with the Cold War Era history, we find ourselves facing a new era, one that is often called the Post Cold War Era or the Era of Globalization. It is an extraordinarily hopeful time, one that is full of promise, but also full of challenges. One of those challenges, one that, if confirmed, I look forward to working with President-elect Bush and Congress to meet, is the challenge of bringing the American military successfully into the 21st century, so that it can continue to play its vital role in preserving and extending the peace as far into the future as possible.

As President-elect Bush has said, “After the hard but clear struggle against an evil empire,” the challenge that we face today “is not as obvious, but just as noble: To turn these years of influence into decades of peace.” The “foundation of our peace” is a “strong, capable and modern military.”

The end of the Cold War did not bring about an end to armed conflict, or an end of challenges and threats to U.S. interests. Indeed, centrifugal forces in world politics have created a more diverse and less predictable set of potential adversaries whose aspirations for regional influence and whose willingness to use military force may well produce challenges to important U.S. interests and those of our friends and allies.

President-elect Bush has outlined three overarching goals for bringing U.S. Armed Forces into the 21st century:

First, we must strengthen the bond of trust with the American military. The brave and dedicated men and women who serve our country in uniform-active, guard and Reserve—must get the best support their country can possibly provide them, so that our country can continue to call on our best people to serve in the decades to come;

Second, we must develop the capabilities to defend against missiles, terrorism, and newer threats against our space assets and information systems. The American people, our forces abroad, and our friends and allies must be protected against the threats with which modern technology and its proliferation confront us; and

Third, we must take advantage of the new possibilities that the ongoing technological revolution offers to create the military of the next century.

Meeting these challenges will require a cooperative effort between Congress and the Executive Branch, and with industry and with our allies as well. If confirmed, I look forward to developing a close working relationship with this Committee and your counter-parts in the House to achieve these goals, and to fashion steps to transform our national defense posture from its current form to one that will address the challenges of 21st century security. Bonds of trust need to exist not only between the President and the Armed Forces, but between the Department of Defense and Congress as well. We must work together if we are going to be able to address the real problems of inadequate funding, unreliable funding and resistance to change. Without cooperation and collaboration we will fail.

President-elect Bush is committed to a strong national defense. Therefore, if confirmed, one of our first tasks will be to undertake a comprehensive review of U.S. defense policy. This review will be aimed at making certain that we have a sound understanding of the state of U.S. forces and their readiness to meet the requirements of the 21st century security environment.

We must ensure that we will be able to develop, deploy, operate and support a highly effective force capable of deterring and defending against new threats, so that our country can contribute to peace and stability in the world. This will require a refashioning of deterrence and defense capabilities. The old deterrence of the Cold War era is imperfect for dissuading the threats of the 21st century and for maintaining stability our new security environment.

#### PRIMARY OBJECTIVES

Mr. Chairman and members of the committee, the explosive advance of modern technology, and the forces of globalization that are making the technology available to ally and adversary alike, make the transformation of U.S. military power essential. While much of the existing defense establishment can be adapted to 21st century needs, a good deal cannot. We must move forcefully to rationalize the costly burden of force structures and practices that do not contribute to current and future U.S. security needs.

If confirmed as Secretary, I plan to pursue five key objectives and implement policies and allocate resources needed to achieve those objectives.

First, we need to fashion and sustain deterrence appropriate to the contemporary security environment—a new national security environment.

The proliferation of weapons of mass destruction and their means of delivery are increasingly a fact of life that first must be acknowledged and then managed. While striving to prevent further proliferation remains essential, a determined state may, nonetheless, succeed in acquiring weapons of mass destruction and increasingly capable missiles. As a consequence, a decisive change in policy should be aimed at devaluing investment in weapons of mass destruction and their delivery systems by potential adversaries.

In a world of smaller, but in some respects more deadly threats, the ability to defend ourselves and our friends against attacks by missiles and other terror weapons can strengthen deterrence and provide an important compliment purely to retaliatory capabilities. Moreover, the ability to protect our forces is essential to preserving our freedom to act in a crisis. To this end, effective missile defense—not only homeland defense, but also the ability to defend U.S. forces abroad and our allies and friends, must be achieved in the most cost-effective manner that modern technology offers.

Nuclear deterrence remains an essential element of our defense policy. The credibility, safety, reliability, and effectiveness of the Nation's nuclear deterrent must remain unquestioned. But it must be adapted to 21st century deterrence needs. Credible deterrence no longer can be based solely on the prospect of punishment through massive retaliation. Instead, it must be based on a combination of offensive nuclear and non-nuclear defensive capabilities working together to deny potential adversaries the opportunity and benefits from the threat or use of weapons of mass destruction against our forces and homeland, as well as those of our allies.

Second, the readiness and sustainability of deployed forces must be assured.

When U.S. forces are called upon, they must be ready to cope with any contingency they may face, and be able to sustain military operations over an extended period of time if necessary. The pace of modern military operations in the Kosovo campaign revealed the kinds of demands placed on the readiness and sustainability of U.S. forces.

The price of inadequate readiness is paid in unnecessary risk to American interests and lives of American service men and women. But inadequate readiness exacts a further price in the future quality of the force. Our armed forces today are all volunteers. Whether Active Duty, Reserve, or National Guard, they are men and women who have willingly answered the call to serve our country and accepted the burdens and dangers that go with that service. But, as President-elect Bush has said, "even the highest morale is eventually undermined by back-to-back deployments, poor pay, shortages of spare parts and equipment, and declining readiness. . . . A volunteer military has only two paths. It can lower its standards to fill its ranks. Or it can inspire the best and brightest to join and stay." If confirmed, I look forward to working with the President and Congress to make sure that our country's service continues to attract and keep our very best.

Third, U.S. command, control, communication, intelligence, and space capabilities must be modernized to support 21st century needs.

In his speech at the Citadel, President-elect Bush talked about how the threats to our security are changing: "We see the contagious spread of missile technology and weapons of mass destruction. All the unconventional and invisible threats of new technologies and old hatreds."

As the threats we face change, our defense capabilities must adapt and change with them. A modern command-control-communication and intelligence infrastructure is the foundation upon which U.S. military power is employed. The development and deployment of a truly modern and effective command-control-communication and intelligence system is fundamental to the transformation of U.S. military forces, and indispensable to our ability to conduct effective diplomacy.

I am committed to strengthening our intelligence to serve both our short-term and long-term national security needs. I will make establishing a strong spirit of cooperation between the Department of Defense and the rest of the intelligence community, under the leadership of the Director of Central Intelligence, one of my top priorities. We must strengthen our intelligence capabilities and our space capabilities, along with the ability to protect those capabilities against various forms of attack.

Fourth, the U.S. defense establishment must be transformed to address 21st century circumstances.

The DOD has been unable to procure advanced weapon systems that can lower the cost and increase the performance of the Armed Forces. The need to swiftly introduce new weapons systems is paramount. The transformation of U.S. military power to take full advantage of commercially created information-technology may require undertaking a near-term investment to acquire modern capabilities derived from U.S. scientific and industrial pre-eminence, rather than simply upgrading existing systems.

The present weapons system acquisition process was designed for a different environment than the one that exists today. It is ill suited to meet the demands posed by an expansion of unconventional and asymmetrical threats in an era of rapid technological advances and pervasive proliferation. The cycle time (from program start to initial operational capability) for major acquisition programs conducted over the past several decades has averaged between 8 and 9 years. Some efforts take far longer. Such processes are not responsive to urgent new challenges that involve considerable uncertainties. They are not capable of harnessing the remarkable genius and productivity of the modern, information-based commercial and industrial sectors that have done so much to revolutionize the U.S. civilian economy.

In the 1960s and 1970s, the time from initial concept to actual deployment was significantly shorter than it is today. In short, the pace of development has become slower while the pace of technological change has become far more rapid. These two opposite trends conspire to create a situation where it is difficult for the acquisition process to produce anything other than capabilities that are already a generation behind when deployed. This problem must be addressed.

Simply tinkering with the present acquisition system will not provide the innovation and speed necessary to satisfy future military needs and take advantage of powerful new technologies. If confirmed, I will work with this committee to develop a new acquisition strategy—one designed to take advantage of modern U.S. industrial practices—that will enable us to develop and field weapon systems at a speed that reflects the needs and possibilities of the new century.

Fifth, reform of DOD structures, processes and organization.

The legacy of obsolescent institutional structures, processes and organizations does not merely create unnecessary costs, it imposes an unacceptable burden on the National defense. In certain respects, it could be said that we, in a sense, are disarming ourselves by our failure to reform the acquisition processes and to shed unneeded organizations and facilities. If confirmed I will examine, in consultation with Congress, omnibus approaches to changing the statutory and regulatory basis for the most significant obstacles to reform.

This agenda for the new security environment is admittedly an extraordinarily ambitious one. It is an achievable one if the Legislative and Executive branches of our government strengthen the bond of trust, and work together in a determined and collaborative fashion. If confirmed, I will work closely with this committee and the other appropriate Committees of Congress to develop, fund, and implement an overall defense program that can achieve our goals for the future and for the future of our children and grandchildren.

Again, I want to express my appreciation to the President-elect for his confidence and trust. I thank you Mr. Chairman and members of the committee.

Chairman LEVIN. Thank you, Mr. Rumsfeld. In accordance with the practice of the committee, without objection, your responses to our pre-hearing policy questions and your response to the committee questionnaire will be made part of the record of this hearing.

We have not yet received all of the paperwork on Mr. Rumsfeld's nomination. That paperwork, which may be lengthy, will be reviewed by the committee and it could require additional discussion between the committee and the nominee.

Before we begin our first round of questions, there are several standard questions which we ask every nominee who comes before the committee. In your response to advance policy questions, you agreed, Mr. Rumsfeld, to appear as a witness before congressional committees when called and to ensure that briefings, testimony and other communications are provided to Congress.

Have you adhered to applicable laws and regulations governing conflict of interest?

Mr. RUMSFELD. I do not know. First of all, the laws and regulations and rules are different for the various entities to which I have submitted this massive amount of information: the Pentagon, the Office of Government Ethics, the committee. I do not know that they all agree among themselves, but they are reviewing it. I think probably one of the reasons for the delay in getting the stack of hundreds of pages of materials to you is because it is still down in the Office of Government Ethics.

I have a large number of investments and activities that would have to be characterized as conflicts were they to be maintained during my service as Secretary of Defense. I have, however, indicated in my response to you, Mr. Chairman, and to the other organizations, that I am ready and able—I believe able, but certainly ready—to take whatever steps are appropriate to eliminate anything that anyone of the various entities might feel would be inappropriate, both with respect to investments and with respect to relationships and boards and associations and that type of thing.

Chairman LEVIN. Then to rephrase the tense of the verb, will you adhere to applicable laws and regulations governing conflict of interest?

Mr. RUMSFELD. Yes, sir. Of that you can be certain.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Mr. RUMSFELD. No, I have not. I have talked to two people about—on a contingency basis that in the event that I am confirmed, they are individuals I would like to have join me in the department. But it has been purely on a contingency basis. I might just say that because the outcome of the election was delayed so long, the process is delayed. I hope that when we do get to the point of my recommending to the President-elect names to join me in the Pentagon, that the committee will move as promptly as possible with consideration of those people. Because when I think of the massive review you have characterized in your opening remarks that is facing me at the Pentagon, it is not something I would look forward to doing alone. I will need all the help I can get.

Chairman LEVIN. I am sure that our next Chairman will have the support of this full committee in trying to expedite the nominees for those positions.

Mr. RUMSFELD. Thank you, sir.

Chairman LEVIN. Will you ensure that the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record and hearings?

Mr. RUMSFELD. I will certainly try to. I have been told that the number of requests for studies and responses to questions from various elements of the committees of interest to the Executive Branch to the Department of Defense is enormous. I would have to look at it and see how we can manage that process in a way that is satisfactory to both Congress and to the Executive Branch. But I certainly would make every effort in the world to do so.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Mr. RUMSFELD. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. RUMSFELD. Well, if it is honest, certainly. If some witness came before a committee and said something that was inaccurate, I certainly would want to visit with them.

Chairman LEVIN. I think we would, too.

Mr. RUMSFELD. I do too.

Chairman LEVIN. I think we would too. But other than that qualification, you will take steps to make sure that there is no reprisal against witnesses who intend to honestly present testimony and their opinions.

Mr. RUMSFELD. Yes, sir. I would certainly want to see that witnesses were honest and forthright with the committees of Congress.

Chairman LEVIN. Now, we are going to proceed to a first round of questions which, because of the number of Members who are here, we are going to limit to 8 minutes for each Senator. First, we will do that on an alternating basis between the two sides. Then following the early bird rule, we will recognize current Members of the committee first, followed by our newly designated Members. That's a bit of an awkward way to go at this, but I hope that our designated Members who are not yet formally Members of the committee will understand that. If there is a difficulty with that, we can try to adjust among us to accommodate schedules. But I did not know any other way to proceed until our new Members are actually Members of the committee which will not occur apparently until next week. The second round and any subsequent rounds will be limited to 6 minutes for each Senator. It is my intent to recess the committee for lunch at about 1 o'clock and to resume the hearing at 2 o'clock. If necessary, we will schedule additional hearings.

First, relative to missile defense, Mr. Rumsfeld, press reports have occasionally suggested that the Ballistic Threat Commission, which you chaired, advocated the deployment of a national missile defense system.

Am I correct in stating that the mandate of the Commission was limited to examining the ballistic missile threat to the United States and that you and your commission did not take any position whether we should deploy a national missile defense system?

Mr. RUMSFELD. That is correct.

Chairman LEVIN. It has also been suggested that the incoming administration has already made decisions about the architecture of a national missile defense system should it seek to deploy such

a system. It has been stated by, I believe, one of our colleagues that a decision presumably has been made already, a phased layered plan and a reconfigured plan for the ground-based program including land, sea, and space components.

Do you know whether or not the incoming administration has made any decisions relative to the architecture of a national missile defense system, if in fact a decision is made to recommend such a system?

Mr. RUMSFELD. Well, we know that the President-elect—and I suppose in terms of trying to characterize an administration that does not exist yet and where there are prospective participants who have really not had opportunities to meet and discuss these things, the President-elect has indicated that it is his intention to deploy a missile defense system. I know of no decisions that have been made by him or by me with respect to exactly what form that might take.

Chairman LEVIN. The National Missile Defense Act, which was adopted by Congress and signed by the President, contains two equal statements of U.S. policy. The first statement is that it is the policy of the United States to deploy as soon as technologically possible an effective national missile defense system to defend against limited ballistic missile attacks. The second statement is that it is the policy of the United States to seek continued negotiated reductions in Russian nuclear weapons.

Do you believe that we should consider the possible negative impact that the deployment of a national missile defense system could have on our policy to seek continued negotiated reductions in Russian nuclear weapons as indicated by that statute?

Mr. RUMSFELD. Well, you were kind enough to give me a copy of that statute. I have read it. It seems perfectly reasonable to me. The only thing I might have added to it, had I been a Member of Congress, I might not have included the word negotiated in the second phrase where it says seek continued negotiated reductions in Russian nuclear forces.

It seems to me you may or may not do it on a negotiated basis. There had been instances in relationships with countries where they had each taken actions that were not a result of a final negotiated agreement but rather were understood and were agreed to be in both parties' interests. But I find nothing in here that is surprising or unusual or with which I would disagree.

Chairman LEVIN. You believe that both of those goals are legitimate goals with that qualification?

Mr. RUMSFELD. There is no question but that I think that we should deploy a missile defense system when it is technologically possible and effective. I think that you obviously would want to be in discussions with Russia about the sizes and shapes of their capabilities and ours.

Chairman LEVIN. Do you believe that it is a legitimate policy and an important policy to seek reductions in those nuclear weapons on Russian soil, as indicated by that statute? Do you agree with that as a goal?

Mr. RUMSFELD. I do. I think that to the extent we can manage those capabilities down—I must say I think that the Russian stockpile or capabilities are going to go down anyway. Simply because

of the circumstance of their economy. But I have no problem in talking with them about that. Although it is principally the responsibility of the Department of State.

Chairman LEVIN. Is it in our interest that there be fewer nuclear weapons on Russian soil rather than more nuclear weapons on Russian soil?

Mr. RUMSFELD. Sure.

Chairman LEVIN. Is that something which would be in America's interest and the world's interest?

Mr. RUMSFELD. Yes, indeed.

Chairman LEVIN. On the Comprehensive Test Ban Treaty, we have recently received a letter from former Secretary of Defense Laird, who now joins General Shalikhshvili, in believing that there should be reconsideration of the Comprehensive Test Ban Treaty with certain safeguards relative to verification. Given your previous position as having doubts about the question of verification, I am wondering whether you would be willing to take a look at the position of our Joint Chiefs which favors the Comprehensive Test Ban Treaty and believes that it is verifiable? Would you be willing to take a look at the recommendations of General Shalikhshvili, and Secretary Laird, relative to that treaty?

Mr. RUMSFELD. Former Secretary of Defense Mel Laird was kind enough to send me the material that he communicated with General Shalikhshvili about. I have not had a chance to study it. But my concern on the Comprehensive Test Ban Treaty—and I forget when it was before the Senate, but as I recall, I testified on the subject.

My concerns were two-fold really. One was the number of issues that were raised by people whose judgment I respect in the scientific community about the risks to the reliability and safety of the stockpile. I think that is something that is terribly important. We simply must have confidence in the safety and reliability of our weapons.

The second was the difficulty of verification. I am aware in the press of what General Shalikhshvili has come forward with. Certainly, I would want to look at it and think about it as any reasonable person would.

Chairman LEVIN. Thank you. Earlier this month, the *Chicago Tribune* reported on a taped conversation that you apparently had with President Nixon when you were serving as counselor to the President in 1971. On the tape, there are a number of statements which I would appreciate your commenting on. I think it is important that you do comment on them.

First, there were some offensive racist comments by the President. I would like you to explain your recollection of that conversation and your response to his comments.

Second, the *Chicago Tribune* reports that in the conversation you make the statement that the Republicans got us out of Democratic wars four times in this century, referring to the first World War, the second World War, the Korean War, and the Vietnam War. I am wondering whether you believed it at the time that those wars were Democratic wars? If not, why would you have made that statement? What are your thoughts about that?

Mr. RUMSFELD. Well, I was—the Bush transition office was contacted by the reporter who had been listening to the tape. He provided the office with some notes. I would not call them a transcript. Because in many cases they did not even purport to be a transcript of the tape. There was lots of places where it was dot, dot, dot. They then somehow—the transition office got ahold of the tape. I was able to listen to a few seconds of it. I do not know how long, but not much. I could not understand much of it. It is very difficult to understand.

The truth is I did not remember the meeting or the conversation at all when it was raised. It was 30 years ago, 29 years ago.

Apparently, from what can be reconstructed, I was in an office somewhere in the White House complex with President Nixon as a—I guess I was an aide or a counselor or an assistant to him at the time. Apparently—and again, I am not certain of all of this—it appears that he was characterizing some remarks that were made by Vice President Agnew. He was characterizing—he was quoting them in a critical manner saying that Agnew should not have said that. He should not have been drinking with people who he did not know or whatever it was.

Then later he quoted some other people and how they talked and he adopted a dialect according to this tape. The tape seems to indicate that I may have agreed with one or more things on that tape. To the extent I did agree with anything, I am certain I agreed only with the fact that some people talk like that and that Vice President Agnew should not have used or thought such derogatory and offensive and unfair and insensitive things about minorities.

I did not then and I do not now agree with the offensive and wrong characterizations. I think it is unfortunate that it comes up because it is not fair and it can cause pain to people to read that type of thing.

It is ironic that that newspaper, the *Chicago Tribune*, opposed the civil rights legislation during the 1960s when I was supporting it. That was the most powerful paper in my congressional district and I supported every single piece of civil rights legislation. I was Chairman of Tuskegee Institute's 100th anniversary fundraising when Chappy James died and have an honorary degree from Tuskegee Institute.

On the Democratic war quote, I would say this. That was a time when the Vietnam War was raging. President Nixon was embattled and he was trying to end it. There were buses around the White House if you think back to that period. It is not—when you think of the Hoover Depression or the Clinton economy today, there are shorthand ways of talking in private. It is a—a war is our country's war. It is not a Democratic war. It is not a Republican war. It is not a president's war. It is our Nation's war. I understand that. To the extent shorthand was used, it should not have been.

Chairman LEVIN. Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. That is an important inquiry that the Chairman has brought up and I feel I should add some personal recollections. I was Secretary of the Navy at that very time under Nixon. I recall being in a similar position from time-to-time in his presence when—although I regard him as a great President on national security and foreign affairs, he did

have his shortcomings. I have looked into that transcript very carefully with our nominee here this morning and I am personally satisfied that he conducted himself in a manner that reflects no discredit on him today.

Second, I must say, Mr. Chairman, the morning after that article appeared, Senator Moynihan called me. Senator Moynihan also was a member of our team in those days and very much involved. He said that if this is a matter that requires explanation, he would be happy to appear before this committee as a witness and testify to the unqualified credentials of this distinguished nominee, particularly in the area of civil rights. So I thank you for your forthright responses on that issue.

Let us turn to the critical question of defense spending. I am going to ask you three or four questions on it. We are not here today to establish a number, even a benchmark.

I think the important thing is to receive from you your unqualified support to increase defense spending. The procedures by which you will in the first 90 days undertake to ascertain first the efficiencies that can be generated within the existing budgets and second the procedures by which the President, yourself, and other advisors will determine how to increase it and by what amount.

Second, reiterate what the President has already said, to me and others, that, yes, other budget considerations, very important, will take into consideration, but threat, the threats facing the United States and the need for this modernization will be the controlling factor in reaching the determinations on increased funding. Can you elaborate on that, sir?

Mr. RUMSFELD. Yes, sir. I was asked by the President to consider becoming his nominee for this post I guess 8 or 10 days ago. I have spent most of my time visiting with members of this committee and preparing for this hearing. I have not taken the series of briefings at the Pentagon. Nor have I had an opportunity to wrap my head around the budget numbers. I have read a great deal about it. I mean, the CBO was using one number. I think it was something like \$40 or \$50 billion add on. I read an article by Jim Schlesinger and Harold Brown who came up with a number that was somewhat higher than that, \$60 or \$75 billion as I recall. I read a report from the CSIS, Georgetown Center, that was something in the neighborhood of \$100 billion or \$100 billion plus.

Senator WARNER. I heard you include the very conscientious evaluations of the Joint Chiefs.

Mr. RUMSFELD. Yes, yes. What the number is, I don't know. Is it clear that there needs to be an increase in the budget? There is no doubt in my mind. But I am not well enough along in my thinking on it. Nor have I had an opportunity to even begin to be briefed by Bill Cohen. Although he has told me they are—he feels the same way. I have not had a chance to talk to the transition people who are thinking through the budget numbers and how whatever it is—

Senator WARNER. But your commitment today is to work toward a significant increase.

Mr. RUMSFELD. Yes, sir.

Senator WARNER. That is what I wanted to know.

Mr. RUMSFELD. Absolutely.

Senator WARNER. That threat will be a consideration.

Mr. RUMSFELD. Absolutely.

Senator WARNER. Second, that in your capacity as Secretary of Defense, the Chiefs can continue under your administration to come before Congress and give us their views.

Mr. RUMSFELD. Yes, indeed.

Senator WARNER. That is fine.

Mr. RUMSFELD. I would prefer they give them to me first.

Senator WARNER. Well, that is all right. We will get them. Let us turn to another threat. It is interesting. I have done a lot of study on this. We know about the military threat, but there is another threat. That is the industrial base that America has been put to a tremendous task of trying to survive in the face of 12 to—a dozen years of decline in defense spending. They find very tempting avenues to go out into the private sector and do business and forget about all the regulations in the Department of Defense and the uncertainty of defense spending and take that on and simply worry about their bottom line.

But fortunately, we have a lot of courageous people who are willing to continue to provide our industrial base. So you bring that business experience which is very valuable, not unlike Dave Packard with whom I served with. He really understood the need to strengthen the industrial base.

Together with the competition from firms in Europe primarily where those firms have government support in some instances. So give us your thoughts on that. Then I address a quote by the President-elect here. They will want to get some clarifications.

“We will modernize some existing weapons and equipment necessary for current tasks. But our relative peace today allows us to do this selectively. The real goal is to move beyond marginal improvements, to replace existing programs with new technologies and strategies to use this window of opportunity to skip a generation of technology.”

That is a bold challenge. I bring back your recollection—I left the Department in roughly 1974. You came in shortly thereafter. You remember the bones of TFX were all over the Department, billions of dollars lost in trying to manufacture an airplane to hang every trinket known to mankind on it until it sunk of its own weight. We then experienced the A-12 which I can show you that. Billions of dollars lost.

Well, today we are working on, I think, some essential programs. I will not mention them here. One indeed needs to be scrutinized and that is the VSTOL and you know that craft, the Marines. It is important to the Marine mission. We have to give very serious consideration to that program.

But I am not getting into programs. I want you to explain to me against that background your definition of skipping a generation of technology and the impact that could have on this industrial base.

Mr. RUMSFELD. Yes, sir. First, with respect to the study on the defense industrial base, let me say that I agree with you. I had the privilege of being briefed by General Tom Morman who served, I believe it was on the Defense Science Board that did the study. It is a very serious problem. I mean, the return on investment in the defense industry today is not sufficient to attract investment. The

government does not make things. We purchase things. We acquire things. That industry has to be there. To be there, it has to be viable from an economic standpoint or people are not going to invest in it. It is a very serious problem.

Second, with respect to the President-elect's remarks about skipping generations and that, clearly the review is going to have to address this. But it seems to me there is at least two ways that one can achieve advances in technology.

I do not want to bring up ancient history, but as fate would have it, I was in the Secretary of Defense's office when the subject of the M1 tank came along. The argument was that it should continue to be another upgrade of a new diesel. Let us do another diesel and a couple more diesels. I decided no. I said let us go to a turbine engine.

Now, that takes a major weapon system and moved it into an entirely new generation of technologies at that time.

Senator WARNER. I think that is helpful. Let me get in one last question here. You will have an opportunity to amplify that for the record. That is the doctrine of the use of force. General Powell, the Secretary of State designee, once stated that we should always execute the decisive results and be prepared to commit "the force needed to achieve the political objective".

I was quite interested the other night in looking at the Lehrer news hour. Our Secretary of State, Mrs. Albright, I urge you to go back and look at that transcript. I will just pick out one of her quotes. I do that respectfully, but it says as follows. In answering that question about where she was with regard to the Powell doctrine, "It does not have to be all or nothing. If you think about the fact that you have to employ every piece of force that you have and you have months to plan it and the earth is flat, you are never going to do anything." In other words, you need the full—I have time limit. Give us your parameters of thinking of how you are going to advise the President of the United States as to when to send into harm's way the men and women of the Armed Forces, and, frankly, when not to send them.

Mr. RUMSFELD. Well, that is an enormous question and an exceedingly important one and I would be happy to talk about it for a few seconds here. Could I go back to the tank first? I would not want to leave you with the idea that the only way to transform is to go from one generation of technology and leapfrog into a new one. There is another way. I am not as familiar with it. But with respect to the same tank, it is my understanding that it has gone from I think the M1 to the M1—what is the second?

Senator WARNER. M1A2.

Mr. RUMSFELD. A2, right.

Senator WARNER. This is the tank expert right here.

Mr. RUMSFELD. But it has gone from analog to digital. Now, there you have taken a platform that exists and you have not done a leapfrog with the whole platform, but you have taken some electronics and leapfrogged. There are plenty of opportunities to do things where we can significantly improve capabilities, both with respect to the system itself, but also with respect to the pieces of the system or elements of the platform if you will.

Now, with respect to your question. This is a subject that is important. It is sensitive. It is in my view a presidential issue and not a Secretary of Defense issue alone. It is a national security council term issue. We have not met. We have not deposited ourselves and worried this through.

All of us in that team have opinions and all of us have opined on this subject, publicly and privately, from time-to-time, including the President-elect.

The elements that come back from time-to-time are is what you think you want to do actually achievable? It may be meritorious. It may need to be done. But if you can't really do it, oughten you maybe not to try? That's a tough one to evaluate. In no case is it a cookie mold you can press down and say there is the answer. Each of these are subjective and difficult.

The second that comes to mind is resources. Do you have the resources? You might be able to do it. But if you are spread all over the world, you simply do not have the capabilities at that given moment, then you have to face up to the truth. That is that you cannot do everything.

A second thing that comes back from time-to-time is to what degree is this particular activity or recommendation truly a part of our national interest? That is something that is a consideration. It is one of the dimensions of the debate and discussion.

Another I would say is are there artificial constraints as to how you can do this? I personally believe it is terribly important that we have a very clear understanding of what the command structure is and who is deciding what. That to the extent humanly possible you avoid a committee that has not pre-decided these things and ends up interminably debating as to what should be done with various aspects of an engagement.

I think last, and there may be others I have forgotten, but I thought about this last night. How would you characterize what success is? When you have done something, how do you know when you have done it that you have done what you went in to do? What is success? What is your exit strategy? When does it end? Is there some point where it is over? Or is it interminable?

Now, I do not know where that positions me across that spectrum because I tried to avoid characterizing where I happen to think in any given case because I do not know. It really is something I wanted to talk to the President-elect about and Secretary designate Powell and Condry Rice and the folks that are interested in this. It is an enormously important subject.

Chairman LEVIN. Thank you, Mr. Rumsfeld. Senator Kennedy.

Senator KENNEDY. Thank you, very much, and congratulations. Mr. Rumsfeld, during the campaign President-elect Bush made some interesting arms control proposals, including the reduction of nuclear weapons well below the START II levels and removing them from hair trigger status. I have long been an advocate of arms control and was pleased to see the President-elect's interest in this area.

I understand that when you were with President Ford as Secretary of Defense, you did not support the SALT II Treaty and are now opposed to the Comprehensive Test Ban Treaty. Will you support the President-elect's arms control agenda?

Mr. RUMSFELD. You can be sure I will support the President-elect's agenda. He is the President. I will, however, offer my views. I hope persuasively and thoughtfully in deliberation of the National Security Council as I did during that time. I mean, people, honorable people, can come to different views. I did with respect to SALT II.

Senator KENNEDY. You just had an exchange with Senator Levin on missile defense. As you know, the failure of the two most recent NMD flight tests has cast significant doubts on the viability of the current system. When the President-elect announced you as the nominee, you spoke of a need for the United States to develop a missile defense system that will work. I am interested in what your definition is of a system that will work.

You have spoken recently about the successes you've had in your discussions with our allies. When will we know that it will work? Will you establish as a baseline which requires that it has to pass a field test?

Mr. RUMSFELD. Senator, I would really like to avoid setting up hurdles on this subject. I was reading the book "Eye In The Sky" about the Corona Program and the first overhead satellite and recalling that it failed something like 11, 12, or 13 times during the Eisenhower administration or the Kennedy administration. They stuck with it and it worked and it ended up saving billions of dollars because of the better knowledge we achieved.

In this case, if I could just elaborate for a moment, the principle of deterrence, it seems to me, goes to what is in the minds of people who might do you harm. How can you effect their behavior?

The problem with ballistic missiles with weapons of mass destruction, even though there may be a low probability, as the chart that Senator Levin I believe mentioned suggests, the reality is they work without being fired. They alter behavior.

If you think back to the Gulf War, if Saddam Hussein, a week before he invaded Kuwait, had demonstrated that he had a ballistic missile and a nuclear weapon, the task of trying to put together that coalition would have been impossible. There is no way you could have persuaded the European countries that they should put themselves at-risk to a nuclear weapon.

People's behavior changes if they see those capabilities out there. I think we need missile defense because I think it devalues having that capability. It enables us to do a much better job with respect to our allies.

Now, finally, I do not think many weapons systems arrive full blown. Senator Levin or somebody mentioned phased and layered. Those are phrases that I think people not improperly use to suggest that things do not start and then suddenly they are perfect. What they do is they get them out there and they evolve over time and they improve.

So success, this is not the old Star Wars idea of a shield that will keep everything off of everyone in the world. It is something that in the beginning stages is designed to deal with handfuls of these things and persuade people that they are not going to be able to blackmail and intimidate the United States and its friends and allies.

Senator KENNEDY. Well, I think you've made a good response to that question. I hope this means that we have assurances that there will be a very careful review.

Mr. RUMSFELD. Absolutely.

Senator KENNEDY. In terms of the effectiveness of this missile defense system; it is going to have to meet a criteria. I understand that you are not prepared to establish that criteria today, but I assume that it is going to be meaningful criteria in terms of actually being able to function and be able to work in the different phases.

Mr. RUMSFELD. Yes, sir.

Senator KENNEDY. Let me move to the question of Colombia. What is your sense of the capacity of the military in these countries to address the challenge? How are we going to respond to reports about the conflict spilling over in the area and in the region? How are we really going to be able to determine the difference between the counter insurgency and the counter narcotics? Can you tell us what you are thinking?

This is complicated. It is specialized. It is enormously important. We are going to have to address this, and I would be interested in knowing your thinking at this time. We will have more time later on to discuss this, but can you tell us now what your thoughts are?

Mr. RUMSFELD. Senator, it is not something that I have been able to get briefed into. It is my understanding that the Department of State has the lead on this. I understand that there is a cap that has been put on by Congress on the numbers of people, military people, that are engaged.

It is complicated. I am one who believes that the drug problem is probably overwhelmingly a demand problem and that it is going to find—if the demand persists, it is going to find ways to get what it wants. If it is not from Colombia, it will be from somebody else. If I were the neighboring countries, I would be concerned about spillover as well.

I think it is a very important problem and it is not something I have had a chance to screw my head into or talk to the National Security Council team about.

Senator KENNEDY. For the next 8 days, I am the Chairman of the Seapower Subcommittee of this committee. Under Senator Snowe, we had extensive hearings about the decline of the shipbuilding budget and about what actions are going to be necessary in order to meet responsibility in terms of the Navy's budget. Have you had a chance to review that and can you give us any ideas of how you think that that issue is going to be addressed in the future?

Mr. RUMSFELD. Well, I have not been briefed on it at all. I am by background and interest very interested in the Navy. I recognize the importance—Senator Snowe indicated to me that we are currently building ships at a level that if it continues will permit the U.S. Navy to decline down into very low numbers. That the only thing that can be done if we are to maintain the kind of capabilities in the world where we can project power and presence through the United States Navy, we are going to have to increase the shipbuilding budget. I will stop there.

Senator KENNEDY. Senator Roberts, who is Chairman of the Emerging Threats and Capabilities Subcommittee, has been a real leader in the whole area of bio-terrorism and cyber-terrorism.

Chairman Levin also referenced these issues in his opening comments. Could you give us some assessment of what your concerns would be in those areas?

Senator Frist and I successfully completed legislation, last session, in the area of bio-terrorism. I would be interested in your own views regarding the nature of these threats as we look down the road.

Mr. RUMSFELD. Well, I have been made aware of Senator Frist's and your interest and Senator Roberts'. I would rank bio-terrorism quite high in terms of threats. I think that it has the advantage that it does not take a genius to create agents that are enormously powerful. They can be done in mobile facilities, in small facilities. I think it is something that merits very serious attention, not just by the Department of Defense, but by the country. I have an interest in it and certainly would intend to be attentive to it.

Senator KENNEDY. Thank you, very much. Thank you, Mr. Chairman.

[The prepared statement of Senator Kennedy follows:]

PREPARED STATEMENT BY SENATOR EDWARD M. KENNEDY

Thank you, Mr. Chairman. I join in welcoming Mr. Rumsfeld to the committee, and I congratulate him on his nomination to be Secretary of Defense.

Mr. Rumsfeld has a very impressive record of service to the country, from his years as a Naval Aviator, as Congressman from Illinois, as Director of the Office of Economic Opportunity, as Ambassador to NATO and, of course, as Secretary of Defense under President Ford. The list is long and has continued to grow.

He recently served as Chairman of the Ballistic Missile Threats Commission. He is currently chairman of the Commission to Assess National Security Space Management, and also chairman of the Congressional Leadership's National Security Advisor Group. This extraordinary background will be extremely valuable in dealing with the many issues that the Armed Forces of the United States currently face and that we will certainly face in the future.

Many challenges are waiting for our answer, starting with national missile defense and nuclear arms control. They also include force protection, which is especially urgent after the recent tragic attack on the U.S.S. *Cole*.

We're concerned about the heavy demands on our forces that strain both morale and readiness. We're concerned about training issues, such as how to maintain training areas and ensure adequate training budgets. We face challenges of recruitment and retention, when private sector competition remains strong. We must do more to ensure that military personnel and their families have good pay and good housing. They need modern equipment, modern weapon systems, and modern information technology. We have to be concerned about cyber-security and about chemical and biological terrorism.

Significant changes have occurred in the military since Mr. Rumsfeld was Secretary of Defense in the 1970s. Women now hold many military roles traditionally reserved for males, including service as combat pilots and on combat ships. There are more women generals and admirals than ever before, and the potential for further gains is large.

The military still faces many problems in this area, including the need to prevent harassment and discrimination in all forms. I continue to believe that the current "Don't Ask, Don't Tell" policy has been a failure. As a world leader, our Armed Forces need to set the example on human rights issues and treat all men and women, regardless of their diversity, with the respect and equality that they deserve.

Mr. Rumsfeld's many leadership experiences, in both public service and private life, will serve him well in dealing with all these challenges and I look forward to working with him in the years ahead.

Thank you, Mr. Chairman.

Chairman LEVIN. Senator Thurmond.

Senator THURMOND. Thank you, Chairman Levin. Mr. Chairman, I congratulate you on your leadership during this period of transi-

tion and appreciate your bipartisan approach in holding this hearing. Your chairmanship continues the committee's long tradition that the defense of our Nation is above politics.

Before I address the issue at hand, I want to express my appreciation for our outgoing Secretary of Defense, Bill Cohen. His tenure as Secretary of Defense will be marked by great advances in the quality of life for our military personnel and their families, the refocusing of the Department of Defense to the new threats of weapons of mass destruction and cyber-terrorism, and, more importantly, assuring this Nation's position as the world's only super power. I wish him and his lovely wife, Janet, the best in their future endeavors.

Secretary Rumsfeld, congratulations on your nomination and welcome to this your second confirmation hearing as Secretary of Defense. I hope that the praise of Bill Cohen does not lead you to the conclusion that you will not have any challenges as you move into the Office of the Secretary of Defense.

Our Nation is fortunate to have an individual such as you follow Bill Cohen. You have a distinguished career both in the public and private sector and have shown your willingness to take on the tough issues facing the Department of Defense. Those of us who served on the Armed Services Committee in the mid-70s can recall the problems you encountered then with the state of our Armed Forces—they were undermanned, morale was sagging, drugs were rampant, and most important they were underfunded. Fortunately, drugs in the Armed Forces are no longer a major issue. However, overworked and undermanned units and underfunded programs are problems that will again test your mettle.

Mr. Secretary, you have been a proponent for a strong defense. I can assure you that this committee will provide you the support that will be critical as you work to strengthen our Armed Forces to meet the challenges of the future. Our Nation's history is replete with examples of failing to anticipate the future challenges and degrading our military capability.

Coincidentally, it was 50 years ago, at the beginning of the Korean War, when the United States sent the ill-equipped and under-trained troops of Task Force Smith into battle with tragic results because we failed to anticipate the threat. As we commemorate that War, we should make the pledge of never again will this Nation send another Task Force Smith to battle.

Mr. Secretary, I wish you success and look forward to working with you in the coming years.

Thank you very much, Mr. Chairman.

Mr. RUMSFELD. Thank you, sir.

Chairman LEVIN. Thank you, Senator Thurmond for those comments and we very personally appreciate it and the leadership that you have shown on this committee and in so many other places in this Senate over the years.

Senator Lieberman, we all give you a special welcome back, some of us with greater enthusiasm perhaps than others. But welcome back.

Senator LIEBERMAN. Thanks, Mr. Chairman. Mr. Rumsfeld, I was privileged to have a courtesy call yesterday from Don Evans, the Secretary of Commerce designate, and I open by thanking him

for all he did to bring me back to the United States Senate. So it is good to be here with my colleagues, particularly on this committee.

Mr. Rumsfeld, I welcome you and join my colleagues in expressing not only my admiration for your extraordinary record of public and private service, but for your willingness to take on this job at this time.

I have not read "Rumsfeld's Rules" yet, but I will certainly—I remember there was a little red book in another country a distance from here. I do not know what color the "Rumsfeld's Rules" are going to be.

But as your opening statement suggests, at this critical time, unusual time in our national security history, there is a surprising amount that we have to do. We are—when I think of the comparison that you made of the Cold War situation you found on the last occasion when you came in as Secretary of Defense and the remarkably difference circumstance you find today.

We are not in ideological and strategic conflict with another major super power, the Soviet Union. We are it. But we are nonetheless challenged. Technology is expanding the threats as you have documented. We have tremendous demands on us to maintain our force, to keep our troops with the quality of life and training that we want them to have.

This is going to require some very tough leadership from you and priorities, the setting of priorities, and a willingness to try to implement those.

We have been, in the time I have been privileged to be on this committee and therefore have been involved more directly in national security questions, watching Congress and the military and the Executive Branch, we have generally reached beyond in authorization what we have ultimately—and conceptualization—of what we would ultimately be willing to pay for.

I think we are at such a point now where legitimate claims can be made for resources. We have not yet put them together. I mean, in the mad cap experience to which Senator Levin refers that I went through last year, a glorious experience actually and one that I thoroughly enjoyed, the Bush-Cheney campaign had a document out suggesting a willingness to spend \$45 billion more over the next 10 years for national security.

Vice President Gore and I doubled that to \$100 billion, big spenders that we are. But what is interesting, and, of course, focuses the tough choices you will have, is that the Chiefs, the Joint Chiefs, who I believe Senator Warner referred to, have essentially told us that what we really need is at least \$50 billion more a year.

So let me first put in an appeal which you and I have spoken about which is that all of us who care about national security have to really reach out and try to build more of a public understanding for the need to spend more to keep our national security strong in this age.

When you look at what people think we ought to spend more money on as we are deciding how to spend the surplus, national security comes out way down on the list. That is not good. As long as that exists, it is going to be hard for us here to make the decisions we should make.

The second point is how do you begin to approach the excess of needs and the deficiency of resources and make the kind of priority decisions that we need you to make?

Mr. RUMSFELD. I want you to know that I understand the task facing the Department of Defense is enormously complex. It is not a time to preside and tweak and calibrate what is going on. It is a time to take what has been done to start this transformation and see that it is continued in a way that hopefully has many, many more right decisions than wrong decisions.

There is no one person who has a monopoly on how to do this or genius. It is going to take a collaborative relationship within the Executive Branch and with Congress. I just hope and pray that we are wise enough to do it well.

But the one thing we know of certain knowledge is that it is not a peaceful world. It is a different world. It is more peaceful in the sense that the Soviet Union is gone. But it is nonetheless a more dangerous and untidy world. We also know that the power of weapons today is vastly greater than it was in earlier eras. We know that with the relaxation of tension at the end of the Cold War, the proliferation of these capabilities is pervasive. It is happening. We have to acknowledge that.

If I know anything, I know that history shows that weakness is provocative. Weakness invites people into doing things they would not otherwise think of. What we have to do is better understand what will deter and what will defend against this new range of threats. I do not look at them in isolation. I do not think of long-range ballistic missiles and short-range ballistic missiles and cruise missiles and terrorism as something that is disconnected.

I think of it as a continuum. With the Gulf War, the world was taught to not try to take on western armies, navies, and air forces because you lose. Therefore, you should try something else. That means you are going to look at things like information system attacks and cyber war. You are going to look at bio-terrorism. You are going to look at other kinds of terrorism. The vulnerability of space assets has to be worrisome to people. As well as shorter range ballistic missiles and cruise missiles in addition to long-range ballistic missiles.

Senator LIEBERMAN. Let me ask this question. I agree with you that we have to prepare to face this new range of threats to our security because no sensible antagonist will take us on as we were taken on in the Gulf War because we were too dominant. Does that not inevitably mean that we will have to cut some of the programs that we are now spending money on that may be more continuations of that earlier threat scenario than the new one?

Mr. RUMSFELD. It is entirely possible that that kind of a recommendation could come out of this review. Whether it will or not, I do not know until I dig into it. I mentioned the need for collaboration with Congress. That is true. We also need to make darn sure that we are dealing with our allies in a way that they are brought along. We are not alone in this world. We have some enormously important allies in Asia and in Europe and friends in other parts of the world. I think that those relationships as well are terribly important.

Senator LIEBERMAN. Let me ask about the review that you have spoken of. Congress has authorized by law a quadrennial defense review. That was a way to try to encourage and mandate an incoming administration to look forward and to require that those in the military present some big thoughts over the horizon.

You have also referred to, and the President-elect referred during the campaign and more recently, to a strategic review. Help me, if you would, to relate those two reviews to one another. Is the strategic review the incoming administration has in mind the quadrennial defense review authorized by law? Or, since that does not give you a final product until December, though it gives you some before, are you thinking about a separate review to help you make some of the budget priority decisions I have just referred to?

Mr. RUMSFELD. The latter. My impression is that what the President-elect has in mind is that we will take a look at how we view the world and our circumstance in it and fashion some thoughts with respect to broader strategy and then get down into more of the details as to the defense establishment's capability or appropriateness of our current arrangements to deal with those kinds of threats and opportunities.

The quadrennial review, I do not know—you say it is finished in December?

Senator LIEBERMAN. Well, you get earlier versions of it this spring. Then the final product will be in December.

Mr. RUMSFELD. My impression was that when Bill Cohen came in, it came at him very fast. The timing seemed to me, looking from outside, to be unfortunate. Because I did not get the impression that Secretary Cohen had much of an opportunity to effect it or to calibrate it. I am a little apprehensive that that is going to be the case in my situation.

The realistic thing is too—my whole life, I have benefitted from attracting enormously talented people to help me. I think when I took my first job in the Executive Branch, I hired Frank Carlucci and Dick Cheney and Ron James and people all across the spectrum from—Bill Bradley worked there and Christy Todd Whitman worked there. Micky Kantor I noticed had some remarks to make the other day and he was there as a legal service lawyer.

We had a wonderful group of people. Unless you are a Mozart or an Einstein who goes off in a closet who does something brilliant, the rest of us people, just people, we get other people to help us figure things out.

They are something like 500,000 security clearances behind in the Pentagon today. Now, the process of getting confirmed is just unbelievable. I just hope each of you will have that opportunity someday. [Laughter.]

It is an amazing process. I am going to recommend to the President that he think about getting some sort of an outside commission to look at this. Because the questions from the committee are one set. From the Ethics Office, there is another. The Pentagon has some others. You are supposed to fill them all out in 5 minutes. There is no way to do it.

I am worried about getting people picked, recommended, which I cannot do, as we know, until I am the man. I am not. I have to have help. I am being practical as a manager. I know that we are

going to have to figure out a way to flesh out this system a little bit.

Senator LIEBERMAN. Thanks very much. I would say from your performance here this morning that it is clear that you are the man. [Laughter.]

Mr. RUMSFELD. Thank you. Thank you.

[The prepared statement of Senator Lieberman follows:]

PREPARED STATEMENT BY SENATOR JOSEPH I. LIEBERMAN

Thank you Mr. Rumsfeld for appearing before this committee today. You have a distinguished record of service to our Nation and you bring impressive credentials to the job for which you are being considered. You will need all the expertise you have acquired over your long career, for the job ahead of you is one of the most consequential positions that one can hold in our government. You will assume stewardship of our military at a time when it is at a crossroads between taking the path defined by the ideas and methods of the 20th century or the path defined by the needs and potential of the 21st century. The Quadrennial Defense Review (QDR) and the NDP conducted in 1997 pretty well define these two roads for you, and define the choices you face. These panels produced two fundamentally and constructively different evaluations. The 1997 QDR's conclusion was that although future military challenges will likely be different, the "two war" construct, with some modifications, is and will continue to be the proper standard against which to gauge our capability and preparedness. By this standard, the QDR concluded, the current forces and weapons are satisfactory, and will continue to sustain our military dominance if modernized in kind. Much of the Pentagon effort since then has been toward increasing the budget to maintain and modernize this force. The members of the NDP disagreed. They asserted that "we are at the cusp of a revolution in warfare" and "unless we are willing to pursue a new course," one different than that proposed by the QDR, "we are likely to have forces that are ill-suited to protect our security twenty years from now." Indeed, the NDP questioned the advisability of continuing to use the "two war" standard and of continuing to procure some of our current core weapons. They concluded that transformation is the path we should follow, and therefore that spending better was more important than spending more.

The good news is that the first steps along the path toward transformation are being taken. The defense establishment has come to accept transformation as a fundamental policy goal, which is evident from a growing number of important official speeches and documents. Secretary of Defense Cohen has said that our defense policy is transformation, and that the strategy to implement it is "shape, respond, and prepare now." The QDR states "we must meet our requirements to shape and respond in the near term, while at the same time we must transform U.S. combat capabilities and support structures to be able to shape and respond effectively in the face of future challenges." And transformation as a goal is at the core of Joint Vision 2020—the Joint Chiefs of Staff vision that guides the continuing transformation of America's Armed Forces for the 21st century.

The bad news is that while the services are, to their credit, beginning to "talk the talk" and even to take steps to transform themselves, our actions and resourcing are not really keeping pace with the pronouncements. While most see the need for future forces fundamentally different than those of today, they urge that change be cautious and deliberate. So we continue to place the highest priority on current readiness, keeping our organizations and weapons prepared to deal with the threats they were designed to deal with, while trusting that incremental and evolutionary improvements will allow them to adapt to deal with new and more dangerous threats as they emerge. Consequently, our resource allocation is still too much like it was during the Cold War.

As a consequence, you are faced with funding a force that costs billions more than has been budgeted for it, and that requires more by far than President-elect Bush has said he is willing to spend. His stated intent to add significantly more money to missile defense programs will only add to that shortfall. We have heard that you intend to narrow the funding gap by cutting or terminating existing programs. You may have to make many of these decisions now before you are able to complete a strategic review. If you must do that, those decisions will impact the strategic review you will design and conduct as Secretary. The commitment of resources to execute the conclusions of that review will be substantial, and changing course will be exceedingly difficult and time consuming, and we will not likely have the money we would need to change course quickly. So if we choose the wrong road now we will

not have the trained, ready military we will need to dominate on the battlefields of the future.

I look forward to hearing what your approach will be to resolving these difficult conflicts, what philosophy you intend to follow to provide guidance to those who must decide about initial priorities among sea, land, air, and missile programs, and what guidance you intend to give the Pentagon to direct their design and execution of the upcoming strategic review. I look forward to working with you to build a dominant military for the 21st century.

Chairman LEVIN. Senator McCain.

Senator MCCAIN. Thank you, Mr. Chairman. I want to congratulate the President-elect for his outstanding selection of Don Rumsfeld to be the next Secretary of Defense. His reputation for intelligence, candor, and competency is well-deserved and we look forward to a rapid confirmation of his nomination so that he can get right to work.

I guess there are very few benefits of old age, but every new administration we hear the same complaint that you just mentioned. It is a very legitimate complaint. Perhaps maybe we ought to do something about this process.

I am not worried about the willingness of people like you to serve in all candor because you are a patriot first and last. But I am worried about at lower levels of government, the Under Secretary, the Assistant Secretary. Those positions when highly qualified men and women look at it and then see what they have to go through, they decide not to do that. I think that is the compelling reason.

I do not have a lot of sympathy for you, Mr. Secretary, but I certainly do for others that you need to attract on your team as you so well pointed out.

I was interested in your comments to Senator Warner's questions about the use of force and when and when not the United States troops should be committed. Those of us who assailed the administration and NATO's conduct of gradual escalation during the Balkans campaign took heart in your comments at that time, particularly your reflections on CNN on April 4, 1999, with respect to comparisons of Kosovo to Vietnam which went as follows, and I quote: "There's always a risk in gradualism. It pacifies the hesitant and the tentative. What it didn't do is shock and awe and alter the calculation of the people you're dealing with."

During an interview with Chris Matthews, you noted that it was a mistake to say that we would not use ground forces because it simplifies the problem for Milosevic.

It seems to me we ought to stop saying things to appease and placate our domestic political audiences. We ought to start behaving in a way that suggests to Milosevic that it is in his interest to end this and stop ethnic cleansing and come to the negotiating table. I appreciate those words very much.

But my question is do you think we should have gotten involved in Kosovo to start with?

Mr. RUMSFELD. There are pieces of that on both sides obviously. I think that NATO had historically been a defensive alliance and been thought of as that. Its image has altered as a result of that.

My comments—and they sound pretty good to me too. I am kind of pleased I said those things—were obviously after the fact. It was we're there. By golly, I'm no fan of graduated response. If we're going to do something, let's do it.

But I do not know that—the problem is that in our society people seem to watch how people manage a crisis or a conflict rather than what preceded it. Of course, the real kudos ought to go to people who manage things in a way that the conflict does not happen.

Senator MCCAIN. Or not manage them so that the conflict does happen.

Mr. RUMSFELD. Yes, sir. When I think back to the Balkans, I mean, goodness. Again, I do not want to bring up ancient history. But all of us for years did scenarios and war planning and war games with respect to Yugoslavia coming apart and problems in that part of the world. If we know anything, it is that the Europeans I think—by waiting for the Europeans to do something, things evolved in a way that are unfortunate. I think it requires a lot more effort up front.

Senator MCCAIN. I think that is certainly true of Bosnia.

Mr. RUMSFELD. It is.

Senator MCCAIN. Kosovo is a little closer call.

Mr. RUMSFELD. Yes, it is.

Senator MCCAIN. So you do not have an answer?

Mr. RUMSFELD. I do not. That is correct.

Senator MCCAIN. I would like to mention a couple more issues to you. I will again propose the question that you previously addressed in the advanced questions to the committee. Do you believe we still have excess military infrastructure that can and should be reduced?

Mr. RUMSFELD. Instinctively I do, but knowledgeably I do not. Because I have not gone back in and reviewed it. But I would say this—

Senator MCCAIN. Have you heard the comments of Colin Powell, the Joint Chiefs of Staff, the Secretary of Defense that you are succeeding, virtually every military expert in America?

Mr. RUMSFELD. I have. I am kind of old-fashioned. I like to figure things out for myself. But I am a firm believer that base structure has to fit force structure.

Senator MCCAIN. But it does now?

Mr. RUMSFELD. As I say, my impression is it does not. I have not been in there and—the next question after that would be, well, in what way? Of course, I do not know what way because I have not been over there getting briefed. But my brain tells me, my instincts tell me from the past that in fact not only should base structure fit force structure, it does not. That something should be done about it. Because we cannot afford to waste resources with the important tasks we have ahead of us. But I am not in a position to say this is how it ought to be done.

Senator MCCAIN. Recently, the United States made a very significant investment in problems in Colombia. Largely, but not totally, but largely unnoticed by Americans and their representatives. I take it from your answer that you have less than well-informed personal views which you prefer to discuss with the appropriate officials before taking a public position and that you have not paid as much attention to it as maybe other issues as well.

Mr. RUMSFELD. That could be true. I have not. I have not been to the country in years. I know only basically what I know from the press.

Senator MCCAIN. Do you know that we just invested about \$1.3 billion in the last appropriation cycle?

Mr. RUMSFELD. That is my understanding.

Senator MCCAIN. We are upgrading a base in Ecuador which I found out—perhaps I should not admit this—by looking at a newspaper.

Mr. RUMSFELD. I did not know that.

Senator MCCAIN. There are a lot of things going on in Colombia, Mr. Secretary. I hate to harken back to other conflicts, but I hope you will get very well aware of this situation, what we are doing, what the involvement of U.S. military personnel is in the area and what kind of investment and more importantly what goals we seek here. Because very frankly, I do not know the answer to those questions yet. I think that at least those of us who sit on this committee should be much better informed. I hope that the committee will start looking at the situation from an Armed Forces standpoint very quickly.

Mr. RUMSFELD. I will certainly invest the time needed to do that.

Chairman LEVIN. Senator McCain, if I could just interject. Senator Warner and I were just chatting. He raised that very same subject. I think both of us would agree with your comment that we should, indeed, as a committee, get more deeply involved and we will.

Senator MCCAIN. I thank you. I will take responsibility for not knowing about the upgrade in Ecuador, but very frankly I am not sure many Americans know about it either. Maybe that is perfectly fine. But I think we had better have a close and careful examination of exactly what we are committed to. I am not sure that the members of this committee or Americans, would agree with a proposed decision on the part of Colombia to give more areas of sanctuary to the so-called narco traffickers there. But anyway, finally, Mr. Secretary, I am sure that you are aware of my concerns about excess spending and the increase of pork barrel spending. It has risen—my time has expired.

Senator WARNER. We cut into your time. Go ahead and take that question.

Senator MCCAIN. Well, I will take about 5 or 10 more minutes, Mr. Rumsfeld. [Laughter.] It has gone up. It continues to go up. When you were Secretary of Defense, it was about \$200 to \$300 million a year of unrequested add-ons in the Defense appropriations process.

It is now up around \$6 or \$7 billion at minimum—at minimum. New gimmicks have been invented since you were there. One of them is the so-called wish list that comes over from the Pentagon, that although not requested in the budget, would be really great to have. So they pick and choose from that very long list.

I want to say this to you, Mr. Secretary, and I do not think you need any advice. But unless you get a handle on this spending, a billion and a half dollars for an aircraft helicopter carrier that the Navy and the Marine Corps said they neither want or need, continued acquisitions of C-130s which 10 years ago the United States Air Force said they did not need, we are going to have a C-130 in every schoolyard in America before this is over.

You are going to have to get a handle on this and you may have to face down some very powerful interests, both on the Hill and off the Hill. So I see it lurch out of control.

Why do I care? I was just down at Marine Corps Air Station Yuma. They are still living in World War II barracks. We are purchasing equipment that the military neither wants nor needs. We hope we have addressed the food stamp problem. Although, I am not sure we have satisfactorily.

But while all this excess and unnecessary spending is going on, the men and women in the military have suffered. It is not an accident that Army captains are getting out at a greater rate than in the history of this country's armed services. I do not mind losing a few admirals and generals. I do mind losing the high quality captains that are the future leaders of this country.

So I strongly urge you to look at this issue because the urgency of the Cold War situation has therefore allowed us a degree of license in unnecessary spending out of the defense budget, much of which has nothing to do with defense. You are never going to be able to meet our requirements of a new and modernized military, much less the men and women in the military being taken care of unless you address this issue. I thank the Chairman for the additional time.

[The prepared statement of Senator McCain follows:]

PREPARED STATEMENT BY SENATOR JOHN MCCAIN

Mr. Chairman, the President-elect should be commended for his outstanding selection of Don Rumsfeld to be the next Secretary of Defense. Secretary Rumsfeld's reputation for intelligence, candor, and competency is well deserved, and I look forward to today's hearing with great interest.

The decline in spending on national defense that we witnessed for 15 years coincided with dramatic global changes that, rightly or wrongly, resulted in a level of deployments that exceeded any previous period in memory. That protracted decline in defense spending did not come without a price.

We can rightly point to the United States Armed Forces as the most capable in the world, but they are not omnipotent, and they do have their breaking point. Shallow analyses that point to the size of the U.S. defense budget relative to those of potential enemies combined and an overemphasis on the two-war strategy as a planning guide have impeded our ability to accurately gauge requirements. The myriad readiness problems that have been well documented occur not because of the two-war strategy, but despite it. The resources and attention needed to correct those problems are required irrespective of that strategy. The readiness problems we are witnessing today occur as a result of the operational tempo demanded of our military combined with a force structure ill-suited to the projected international environment of tomorrow. They occur because of the failure of the Clinton administration and of Congress to adequately provide for a strong defense.

Not to be ignored is the considerable damage done to our national defense through the growing problem of pork-barrel spending and its related infrastructure issue, the closing of unneeded military bases. Defense spending bills have become a national disgrace, with increasing percentages of the budget wasted by earmarking many billions of dollars for solely parochial reasons. The problem, in fact, has gotten so bad that, increasingly, pork-barrel spending is not occurring on top of requested spending levels, but in place of it. In short, we are adding pork at the expense of vital programs. Should anybody doubt this statement, just wait for the uniformed services to request supplemental spending bills for the current fiscal year reflecting spending that should have already been appropriated.

For the past several years, together with Senator Levin, I have cosponsored legislation authorizing additional base closing rounds. That legislation has been regularly and summarily rejected by the Senate. Yes, the Clinton administration politicized the 1995 round and, yes, it costs money to close bases. But the real reason for the rejection of these amendments has been to protect jobs, not promote national defense. The Clinton administration will be gone in a matter of days, and no ration-

al person can possibly argue that a closed military base costs money once inevitable and programmed cleanup costs are completed. Additional base closings, together with contracting out of certain activities and the elimination of protectionist statutes, can account for as much as \$20 billion per year in savings—clearly enough to make a sizable dent in the modernization shortfall we are facing.

I am also interested in hearing Secretary Rumsfeld's approach to the use of force. Many of the most contentious debates that occur in this committee and on the floor of the Senate involve unforeseen and ongoing military contingencies. The question of when and how to use military force is central to our responsibilities as a government, the question of war powers central to our responsibilities as an institution. Secretary Rumsfeld's thoughts on these matters will be of immeasurable importance as we continue to wrestle with ongoing deployments in the Balkans and Southwest Asia and the unknown but certain deployments of the future.

Mr. Chairman, I thank you for the opportunity to address this session of the committee and look forward to Secretary Rumsfeld's opening statement.

Chairman LEVIN. Thank you. Do you have a quick comment on that before I call on Senator Cleland?

Mr. RUMSFELD. I certainly agree that the question that has to be posed is whether or not something is going to contribute to our national security and whether or not it meets the priorities that are important for this country. That has to be our focus.

Chairman LEVIN. Thank you. Senator Cleland.

Senator CLELAND. Mr. Secretary, since the C-130s are built in Georgia, I would like to say that I am for schoolyards being able to move anywhere in the world at a moment's notice. [Laughter.]

Let me just say that I am fascinated by the "Rumsfeld's Rules". I appreciate your appreciation for quotes and anecdotes.

In listening to your incredible resume and your wonderful experience that you bring to this task—and you certainly have my support for this job. I think you are going to be an outstanding Secretary of Defense—I thought about the line by Jack Kennedy that the thing he appreciated most in the White House was a sense of history. The thing he feared most was human miscalculation.

I think you bring something very special to this post and to this committee and to this country with your great sense of history, not only in service to this country yourself, but in the defense post. I think you can help us avoid a lot of human miscalculations. So congratulations to you.

Mr. RUMSFELD. Thank you, sir.

Senator CLELAND. In terms of deployment of American forces, I would just like to followup on my fellow combat veteran John McCain's comments and some of the comments that have been made here. I was privileged to visit General Powell when he was Chairman of the Joint Chiefs of Staff. Again, a fellow Vietnam veteran, someone like many of us that learned a lot of bitter lessons about deployment of forces in the Vietnam War.

I once heard General Powell say something very powerful. He said, "my job is to recommend to the President the best advice to the President on how to use the American military to stay out of war. But if we get in war, to win and win quickly."

When he said that, it occurred to me that that was the best mission statement that I had ever really heard about the purpose of the American military.

So he is going to be one of your great colleagues in the cabinet and I think that kind of thinking I heard from you today. I was appreciative of your comments about using force, using American military, using our posture to the extent to which we did not have

to commit it. But obviously, if we commit it, then there are certain things we have to do to make it successful.

In terms of success, I am glad to hear you say that we must ask the question how do we know when we are successful? I asked this question of several administration people in terms of the Balkan War. I said early on, make sure you define victory. Because one of these days you are going to have to declare it.

It leads me to a Clausewitz line that I like very much that the leader must know the last step he is going to take before he takes the first step. So that steps in motion a whole set of thought processes.

Senator Roberts and I took the floor all last year to argue out the question in a bipartisan way basically about when to commit American forces, about what is in the strategic national vital interest of the United States and what is not. That if you commit, then you have a definable objective. Then you do have an exit strategy. It has been a pleasure to work with my colleague across the aisle.

I just wanted to share those thoughts with you that might be of help in fulfilling your task.

Onto the question of our men and women in uniform. I appreciate your interest in your statement about working hard to make sure that we recruit the best and the brightest, that we do not just lower our standards, that we do not dummy up the military just to get numbers. That is fool's gold. That is false economy. Any way you cut it. I would rather have less numbers and keep quality people.

So we do want to go after the best and the brightest, not only to join but to stay. Senator McCain pointed out senior captains, senior NCOs. I have tried to fight through this, work through this, over the last 4 years I have been on the Personnel Subcommittee. We have looked at various ways, various incentives, not only for recruitment, but for retention. It does seem to me that retention is a real special challenge. I have learned that you recruit a soldier, but you retain a family. You have a family military now. Those families are interested in the same things families outside the post are interested in.

One of them is education. For the last 2 years, this body has put forward a notion that with my initiative that we ought to look at the GI bill and maybe see if we can use that to apply to family members to entice members to stay into the military for a full career. I would just like for you to take a look at that as we go along as just one of our tools that we use to retain quality personnel.

I appreciate in your statement a focus on intelligence. I cannot help but feel that intelligence prevents many battles and wins many battles when you get in them. That the coordination of our intelligence capabilities is itself a challenge.

I mentioned the deployments. Senator Roberts and I came to basically a point of view of realistic restraint. We just saw with the U.S.S. *Cole*. Now, if you project force or project power, you also make yourself in this terrorist world, in this terrorist environment, a target, so that power projection requires power protection.

Therefore, I think we have to be very realistic about our power projection. I think one of the reviews that I would be grateful for you to do as you review the American military is to see where it

is deployed around the world. We literally are out there everywhere in the world and I think it's a time for review.

In terms of weapons systems, I noticed that a couple of years ago, you joined with seven other Secretaries of Defense to endorse full funding for the F22. That is something that I think that is important to our national security interest.

Let me just say that one of the Rumsfeld's Rules is do not necessarily avoid sharp edges. Occasionally, they are necessary to leadership.

So onto a sharp edge. National missile defense. I have been a big supporter of theater missile defense, but especially the Arrow system that we worked very closely with, with our Israeli friends. I am a big booster of research and further testing of an anti-missile system.

I guess I feel right now that we are not ready for deployment of a system. I am not sure that the concept has been proven. But I am willing to work on it to prove it out, test it, and then make judgments on deployment later.

But one of the wonderful briefings I have received in the last year or so is from your commission on missile systems. Of course, we were all concerned about the North Korean launch of the missile in the Pacific.

I went to South Korea right up to the DMZ this past August. It was fascinating to get the briefing on North Korea and see where they were. We got a fascinating briefing. We had given to us by the Department of the Army a photo taken at night of lights on the Korean peninsula which also showed lights just into Southern China.

It is interesting. You see lights in South Korea. You see lights in China. North Korea literally is a big, dark, black hole. It is amazing to me that 50 years after the Korean War, they still cannot turn the lights on.

I just wonder—we do not want to overreact here. I think any missile defense system that is deployed should be well thought out and not just on the basis of one launch by a country that cannot even turn the lights on.

So I point that out to you because I am willing to walk down this path with you to continue to prove the concept. But I think first things first. Let us prove the concept and then think about deployment.

I would say too that in my analysis of threats, it is this terroristic threat that is maybe our biggest challenge. Particularly, in terms of missile systems one that Senator Sam Nunn and that great expert on nuclear warfare, Ted Turner, have recently articulated and that is that we might want to look at the whole question of the Soviets, former Soviets, or the Russians now and their de-alerting of their existing systems and any loose nukes that might be out there. That might be one of our biggest challenges in terms of missile threats.

Now, I would like for you just to respond to maybe the last point that I raised.

Mr. RUMSFELD. Well, I think the danger that has been suggested with respect to the disarray in the former Soviet Union and the large number of nuclear weapons is a very real concern. There is just no question but that it has to be looked at in two dimensions.

First is the actual materials which there are a number of countries that have appetites for it. If your circumstance is that anything is for sale, there is a risk.

The second dimension to it is the fact that you have a large number of very bright, talented, experienced weapons people in the Soviet Union that are not getting paid and not getting their pensions. Again, if everything is for sale, their brains and their knowledge is for sale. It results in a risk for accelerated proliferation that is serious and real and I am very much concerned about it. I recognize the fact that the United States needs to address it and play a role in trying to avoid that proliferation.

I would like to add one word on missile defense if I might. We talk frequently about the risks of deploying missile defense. We are properly concerned about our allies in that regard. We are properly concerned about attitudes by Russia and China and other countries.

I think it is useful from time-to-time to also ask ourselves what are the risks of not deploying missile defense. I would mention several. One is it seems to me if some countries that have significant technological capabilities, decide that they are vulnerable to ballistic missiles from their neighbors and that we lack the ability to assist them in defending against that capability. That we may contribute to proliferation by encouraging them to go forward and develop their own nuclear weapons and their own ballistic missiles. I think that is just a fact.

Second, the other thing that worries me if we do not deploy ballistic missile capability is I have been in the White House as Chief of Staff and as Secretary of Defense on the National Security Council. I have seen the process that a President has to go through when there is a risk or a threat.

If we know of certain knowledge that another country has a nuclear warhead that can effect us and we do not feel we have a good grip on their motivations, their behavior patterns, what could dissuade them, and we know that they are capable of using it, we are forced into one of two course of action.

Either we acquiesce and change our behavior and change our interest and alter what we would otherwise have done or we have to preempt. I think putting a President of the United States and a country in the position where their choices, their options, are so minimal that they are forced into a position of—as Israel was—with respect to the radon and nuclear capability in Iraq so many years ago—where a President is forced to go in and take action of a preemptive nature because he lacks the defensive capability to persuade those people that it is not in their interest to do that.

So that is a dimension to this missile defense thing that I do not think gets into the debate to the extent it ought to. I think we need to look at deterrence across the spectrum.

I was in a meeting up in New York. Some person raised their hand and they said that my father was a good friend of Colonel House. I thought back, my goodness gracious, Colonel House. That was Woodrow Wilson's day. I was talking about missiles and missile defense and so forth. He said, one day my father asked Colonel House why he was so courteous. Why he was just the most gracious, courteous, person he had ever met. The answer was by Colo-

nel House, well, young man, I grew up when gentleman carried revolvers. If you know everyone has a revolver, you tend to be courteous.

Well, North Korea is selling, has been and is today to my knowledge, to my not today knowledge, but very recent knowledge, selling those capabilities and technologies and trading them around the world. They are an active world class proliferator. It is my understanding when the United States representatives met with them, their response was when we asked if they would change their behavior with respect to ballistic missiles, one of their responses was something to the effect that you are America. You have bombed in the Sudan. You have bombed in Afghanistan. You are bombing in Kosovo. You are bombing in Iraq. You are giving food aid to North Korea. Now, why? Why is the behavior so different? Well, they believe it is because they have those weapons. They believe that those capabilities they believe they have are sufficient to alter behavior of their neighbors. I do not think we as a country want to think that the old mutual assured destruction where the United States and the Soviet Union could kill each other several times over is necessarily a deterrent that is well-fashioned for the period we are moving into.

Senator CLELAND. Thank you very much, Mr. Secretary. Thank you very much, Mr. Chairman.

Chairman LEVIN. Thank you. Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman. I can remember when I heard on TV—I did not have any indication that you would be nominated nor that you would accept if nominated to this position. I told my wife there is not a person in America today as qualified as Don Rumsfeld for this position.

I also had two personal reasons that I am rejoicing in your nomination. One is that as Senator Durbin said when you are inducted into the National Wrestling Hall of Fame—of course, that is located in Stillwater, Oklahoma. So you are even more of a hero there than you are in some other areas. I remember also when I came from the House to the Senate in 1994, I went through some of these confirmation hearings on the different Chiefs. I can remember identifying with them because we had served at the same time. You know, myself and Elvis Presley and some of these guys. So now as of about 5 years ago, Mr. Chairman, there is not one person in the service who was serving when I was serving. So you and I are contemporaries. We served precisely the same years and now I have someone I can communicate with.

I want to also complement you and your family and I look at your beautiful granddaughter over there. I think there is not one of my eight grandkids who would listen to me for 2 hours and be as patient as she is.

I think when we assess this thing, I know there is this euphoric attitude after the Cold War is over that somehow the threat is not there. I really believe the threat is greater today. I think we are in the most threatened position that we have been in as a nation in our Nation's history. Incidentally, George Tenet, the Director of Central Intelligence, agrees with that.

I think when you look at it, Senator Warner is right. We cannot try to pin you down as to what kind of a cost this is going to be.

But I would say that when you have the Joint Chiefs all agreeing that the range is similar between \$48 and \$58 billion additional. Do you have any reason to believe that is unreasonable?

Mr. RUMSFELD. I have no reason to believe any of those numbers are unreasonable. It takes—I really do like to get my brain engaged before my mouth. I need to get in there and pour over it and I need to get some people to help me.

Senator INHOFE. Well, there is one thing that has not been brought up that I think you—I am going to ask that you look into immediately. That is what we are going to have to do in a supplemental before the current budget year. We have been talking about it in future years. But right now we have a list that has been provided us with \$4.5 billion of near term readiness requirements. We are talking about spare parts and equipment maintenance and another \$2.5 billion for emergency personnel or modernization programs.

Now, we have been told that if we are unable to get that, we may have to cease training in the fourth quarter of this year. I am going to ask you to really pay attention to the current needs, those things that are having a deteriorating effect on our retention and those things that have to be done.

Our RPM accounts, for example. I mean, you can go down to Fort Bragg in a rainstorm as I have been there and our kids are covering up their equipment with their bodies to keep them from rusting. So those are the things that have to be done immediately. I hope that you would look at those.

Mr. RUMSFELD. I will indeed. Thank you, sir.

Senator INHOFE. Just so there is clarification as to the responses that you made, when the Chairman first asked about the missile defense law that we passed, the Missile Defense Act of 1999, and he read the two parts of that bill that I think we have heard many, many times before, do you see that there is anything incompatible about those two statements?

Mr. RUMSFELD. The first is deploying an effective system.

Senator INHOFE. As soon as technologically possible.

Mr. RUMSFELD. The second was negotiation.

Senator INHOFE. Yes.

Mr. RUMSFELD. Not that I can see.

Senator INHOFE. Well, I do not either. But I just wanted to—because I think that the act is very specific. Let us keep in mind that was not just passed by a huge margin in the House. It was passed by a 97 to 3 margin in the Senate. Not one person who has been in here today voted against it. So I would only ask that you would recommend to the administration that you immediately start complying with Public Law 106–38 and start getting and deploying.

By the way, I want to say that if there is one—one of the great recent services that you have provided for this country is the Rumsfeld Commission. I think if I were to single out one or two sentences in there when those who were opposed to our meeting what I think our requirements are on a national missile defense system. They often say, well, these countries, Iran, Iraq, and other countries are not going to be able to have this capability for another five to ten years. You pointed out that an indigenous system does not exist today. That these countries are trading technologies

and trading systems. So I appreciate very much your making that statement and making it very clear to this committee.

Third, there is one thing that we have not really talked about and I would ask that you address. It does not have a lot of sex appeal. Not many people talk about it. But it is our near-term readiness and modernization.

Just as one example, and I could use many other examples, but this is a personal one. I chair the Readiness and Management Support Subcommittee and have had a great deal of concern as to how these efforts over in Kosovo and Bosnia are draining our ability to defend America. Just one being the 21st TACOM. The 21st TACOM is responsible for ground logistics in that area of the Balkans, but also in the Middle East. They're at about 100 percent capacity right now.

Some of the equipment they had over there in the M915 trucks that we are using, many of them with over a million miles on them. We determined that if we could just use the amount of money that we are going to have to use to maintain those for a 3-year period, we could replace them with new vehicles.

Now, the problem there is an accounting problem that you are well aware of. I am not sure whether it was back in 1975 or not. But we cannot get anything done and prepare for the future when fiscally in a normal prudent business decision, you would say, no. We are not going to keep fixing those. We are going to have new ones.

Do you have any thoughts about how you might address that?

Mr. RUMSFELD. Well, there is no difference that the government operates quite differently from business. There is also no question that at a certain point people do not maintain fleets of things that are antiquated because of the upkeep and maintenance cost of continuing them.

Senator INHOFE. Yes, but, of course, we have been doing it.

Mr. RUMSFELD. Yes, sir.

Senator INHOFE. Because a question on base closure was asked, I would only make a request that the force structure that we have today is about one-half of what it was during 1991 during the Persian Gulf War. That can be quantified, half the Army divisions, half the tactical air wings, half the ships going out from 300 ships—600 ships to 300 ships.

After the U.S.S. *Cole*, tragedy took place, I went over there. I talked to virtually every rear admiral and everyone who was around there. They said that if we had had—when we cut down the number of ships, we cut our refuellers or our oilers down from 32 to 21. If we had not done that, every one of them to the last one said we would not have gone into Yemen or the other ports. We would have refueled at sea.

Now, when you go from the Mediterranean through the Suez Canal and the Red Sea and turn left and go up the Mediterranean Sea to the Persian Gulf. It is about 5,000 miles. You have to have some refueling capability. Virtually everything in there is in kind of a threatened area.

I went back to the bone yards and found that we had two vehicles out there that were in very good shape and cost very little more money to put them back into service. Those were the Higgins

and the Humphreys. I would hope that you would consider doing that and talk to your Navy people—and, of course, you draw on your own experience there—as to why it would not be prudent to pull some of those back into service and to get that refueling capability in that area. I just make that request that you would consider that.

Mr. RUMSFELD. I will be happy to look at it. Thank you, sir.

Senator INHOFE. Thank you, very much.

Mr. RUMSFELD. Could I clean up two things that are a little embarrassing to me? The Senator mentioned I was in the Wrestling Hall of Fame. It is true. But I did not go in the front door with the great wrestlers. I came in the back door with the so-called distinguished Americans who had wrestled. It was Abraham Lincoln, George Washington, Dennis Hastert, and Rumsfeld and a few others. [Laughter.]

Second, I was described as the captain—

Senator WARNER. We would add John Chafee is my recollection, our distinguished colleague.

Mr. RUMSFELD. That is right, exactly. I was described as captain of the college football team and it is true. But I was a little guy. It was the 150-pound football, not the big guys. I would not want to let the record stay inaccurate.

Chairman LEVIN. Well, we will keep the record open for a number of additional comments. [Laughter.]

Senator INHOFE. One last thing just for the record. I would ask also in this setting and this environment today at this time, you cannot get into your F-22, joint strike fighters, crusader, global hawk, for example. I know you were a real supporter of unmanned vehicles sometime ago.

But I hope for the record maybe later on you can have some time to think about this and address these platforms. We would like to believe, and many of the American people believe, that we have the very best of everything. But I was very proud of Gen. John Jumper not too long ago when he said in terms of air-to-air vehicles, we are not superior. In fact, the Russians have some things on the market right now, the SU-35, that are better than any air-to-air combat vehicle we have, including the F-15s. So I am hoping that you will be able to assess our modernization and get it as specific as you can as early in your term as possible.

Mr. RUMSFELD. Thank you.

Chairman LEVIN. Thank you. Senator Reed.

Senator REED. Thank you, Mr. Rumsfeld, not only for your willingness to serve, but for your lifetime of public service.

Mr. RUMSFELD. Thank you.

Senator REED. We had a chance this morning to chat briefly. I thank you for that also. I was listening to your response to Senator Warner about the conditions for committing American forces today. Frankly, and I think you would agree, that it is in a sense a work in progress that you are trying to understand the forces and the structure that we have and the threats we face.

I might suggest that we are pretty good at the initial phases of these operations because they are essentially military operations, the forceful entry into contested territory. We are not very good at the back end which is the policing operation which is humanitarian

operations. One of the reason we are not is that we do not have those resources. We have not been able to coordinate with our allies and with national organizations to have such resources. I wondered if you might comment upon this whole issue, not just in terms of America's role, but being able to parade an organization or mutual organizations that can do missions that you might feel needed to be done. We have the forces militarily to make the entry, but we are uncertain about whether or not we can extract ourselves in reasonable time. Would you comment on that?

Mr. RUMSFELD. Well, I can comment briefly. We all know it is a lot easier to get into something than it is to get out of it. We all know that everyone is not capable of doing everything. In fact, the tasks as you properly point out are distinctly different. I have had an impression over the years that we have a significant role in helping to deter aggression in the world. The way you do that is to be arranged to defend in the event you need to which you know well as a West Point graduate.

Having been at NATO and looking at different countries and what the different countries bring to that alliance, it is pretty obvious that the United States has some things that we bring to it that are notably different from some of the other countries. It is also true that the other countries can bring significant things.

I do not think that it is necessarily true that the United States has to become a great peacekeeper if you will. I think we need to have capabilities, as you are suggesting, that are distinct from war fighting capabilities. But I also think other countries can participate in these activities that are needed in the world from time-to-time and bring—they can bring the same capabilities we can to that type of thing. Whereas, they cannot bring the same capabilities that we can, for example, with respect to air lift or sea lift or intelligence gathering or a variety of other things.

There is one other aspect to being on the ground in an area. Someone mentioned with respect to the U.S.S. *Cole*. If you are a space asset or the Marines that were in Beirut Airport back when I was President Reagan's Middle East envoy, if you provide an attractive target, a lucrative target, somebody may want to try to test whether or not they can damage that target.

That is a lot less true—the United States of America is an attractive target. So when we are on the ground, we tend to become a bit more attractive, a bit more "lucrative" as a target. It seems to me that it may very well be that other countries can do some of those things in a way that is less likely to create the kind of targeting that the United States tends to draw.

Senator REED. Thank you. You made reference to and anticipated my next question which as the former Ambassador to NATO, you have a great experience you are bringing to the task because there are issues, one of which is to what extent NATO will operate or European forces will operate independently of NATO.

We have a current controversy about the depleted uranium being used in Kosovo. We have an ongoing debate and discussion about national missile defense. Most—many European governments are frankly opposed to it.

Then we also have the issue not only of whether or not we are willing to essentially allow our allies to do some things, frankly be-

cause they might get the impression that they can do everything alone and they do not need us any longer. I wonder from your perspective and as you go in how do you propose to deal with some of these issues relative to NATO?

Mr. RUMSFELD. I would begin with several principles. I think NATO is just an enormously important alliance. It has a record of amazing success. I believe in consultation with our NATO allies. I think that they have difficult political situations and close margins in their parliaments. They need time. They need discussion with us. They need leadership. They need an opportunity so that the solution can be fashioned in a way that makes sense.

With respect to the European defense force, let me just put it this way. I think anything that damages the NATO cohesion would be unwise for Europe and for the United States and for our ability to contribute to peace and stability in that part of the world.

Senator REED. During the campaign, Mr. Rumsfeld, the Bush campaign made a great point about suggesting that China was a competitor. Frankly, in that type of dynamic, there is always the fear that competition will lead to conflict. How do you think you can use your resources at the Department of Defense to preempt conflict with China?

Mr. RUMSFELD. Well, I think how China evolves in the 21st century into the world in Asia and elsewhere in the world is enormously important. I think our behavior and the behavior of other countries in the region and the world is going to make a difference as to how they evolve. I would characterize our relationship with the People's Republic of China as complicated and multi-dimensional.

It is true, as the President-elect said, that we are competitors. They are seeking influence in the region and we are in the region. We have been in the region. I think it is important we have been in the region because we have contributed to peace and stability in that part of the world.

We are trading partners simultaneously. So on the one hand, we are somewhat of a competitor. On the other hand, we are a trading partner.

We watch what they say and they write. I am no more an expert than others, but I do read what some of their military colleges, writings are saying. We see their defense budget increasing by double digits every year. We see an awful lot of their military doctrine talking about leapfrogging generations of capabilities and moving toward asymmetrical threats to the United States, cyber warfare and these types of things.

I do not think the history between the United States and the PRC is written. I think we are going to write it. I think we have to be wise and we have to be engaged and we have to be thoughtful. But we cannot engage in self-delusion. They are not strategic partners in my view. They are—it is a multi-faceted relationship.

Senator REED. Let me touch upon this. Many of my colleagues have national missile defense. But from the context of the overall theory of deterrence, you described from your vantage point in the White House the sort of two choices. If someone had a ballistic missile that could reach our shores, the choice is being acquiescence or preemption.

Yet, for decades, Russia had exactly that capability, the Soviet Union. I would suggest we did not acquiesce and we did not conduct preemptive strikes.

It seems to me that what is going on here in this deterrence theory is that it is as much about the psychology or one's perception of the psychology of the opponent as well as throw weight and defense mechanisms.

Mr. RUMSFELD. Absolutely.

Senator REED. Inherent, it seems that what you are saying, is that you really distinguish some of these so-called rogue states as being irrational as different from the Soviet Union, unable to appreciate the fact that any type of unilateral attack on the United States, even if frankly—one would assume, even if it was successfully defeated by a missile defense, would result in almost inevitable retaliation. Is that at the core of your thinking, that we are dealing now with some irrational actors?

Mr. RUMSFELD. No, sir. I must not have explained myself well. Two things. My comments about the behavior of the states that we are talking about—I am not terribly enamored of the phrase rogue state. It leaves the impression that the leadership there is kind of like a rogue elephant careening off a wall blindly and that is not the case. I mean, I have met with Saddam Hussein and I met with the elder Assad as Middle East envoy. These people are intelligent. They are survivors. They are tough. They do not think like we do. Goodness knows, they do not behave like we do with respect to their neighbors or their own people. But they are not erratic.

You are correct. We absolutely must—that is why this intelligence gathering task we have as a country is so much more important today, not just because of proliferation but because the weapons are so powerful.

It is not a matter of counting beans in Russia, how many missiles, how many ships, how many tanks? It is a matter of knowing a lot more about attitudes and behaviors and motivations and how you can alter their behavior to create a more peaceful world.

The thing that I would want to clarify is that when I said what I said, I was distinguishing between the relationship of the United States and the Soviet Union. There the so-called mutual shared destruction indeed worked. The potential to be able to have massive retaliation I think created a more stable situation.

To pretend that the fact that we had through massive retaliation a stable situation with Russia and that that necessarily would deter not only Russia, but others from making mischief is obviously historically wrong. We had a war in Korea. We had a war in Vietnam. Saddam Hussein went into Kuwait. Not withstanding the fact that the United States and the Soviet Union had a perfect ability to destroy each other several times over.

So what you need is deterrence across the spectrum that addressed the evolving threats that are notably different as you well know. I just must not have made myself very clear.

Senator REED. Well, again, this is a topic that cannot be exhausted in 5 or 6 or 7 minutes.

Mr. RUMSFELD. No, it is an interesting topic.

Senator REED. I appreciate your thoughtfulness and your comments. Thank you very much, Mr. Rumsfeld.

Mr. RUMSFELD. Thank you, sir.

Chairman LEVIN. Thank you very much, Senator Reed. We are going to call on two more Senators before lunch. We are going to try to squeeze in both Senator Roberts and then Senator Bingaman. Then we will break for lunch. If we break right at 1:00, we will come back at 2:00. If we go 5 minutes after 1:00, we will come back at five after 2:00.

Senator ROBERTS. Thank you, Mr. Chairman. Let me say I think you are the right man for the right job.

Mr. RUMSFELD. Thank you, sir.

Senator ROBERTS. This is a little different experience in regards to the usual nomination process at least for me and I think other members of the committee. We have all of our prepared questions that are prepared by staff in large type so that we can read them and go on from there.

But I think in your case, you shine the light of experience and expertise into the nomination fog and I think it has been very helpful. I think it has been educational. I think you caused us to think a little bit and I think that is very appropriate. I feel compelled to use part of my time—I should not, but I am going to—to inform my colleagues and Mr. Rumsfeld that in terms of our vital national security interests, I think that Latin America, Central America, our involvement in Colombia in the Southern Command where there are 31 nations involved is just as important as the Balkans. I noted that there was some concern in regards to maybe Congress going in with a blindfold or not really fully aware of all the details.

Let me point out that the subcommittee of which I am privileged to chair and Senator Bingaman was the ranking member, we had lengthy hearings and the full committee had hearings. We had General Wilhelm. We had the Assistant Secretary of Defense. We had the Assistant Secretary of State. We had two of those. We had two ambassadors. We went over in considerable detail what the pros and cons were in regards to our involvement.

More especially since we left Panama and went to Miami and found thousands of miles in the Southern Command that we are at risk. We do have bases. We have them in El Salvador. We have them in Aruba. Then I think we have them in Ecuador as well to do a tough job.

We took a lot of infrastructure away to go over to the Balkans. Well, why am I saying this? That is because there are 360 million people down there. The average age is 14 with a lot of problems.

In regards to immigration, in regards to drugs, in regards to trade, in regards to possible revolution, and in regards to our energy supply, where we have about 22 percent of our energy coming from Venezuela and Mexico and in regards to what a fellow down there named Chavez is doing, I think we better pay attention to it.

Now, I cannot say whether our policies in Colombia are going to work or not. But I do say that we have taken a considerable interest in this, had a subcommittee debate and in the full committee and in the Appropriations Committee where General Wilhelm had to stand tall and parade rest before the appropriators and in the Senate and in the House, this was not done without due consider-

ation. I would urge your attention to that because I think it is very important.

I want to talk about—I want to ask you if—in fact I am going to recommend a criteria in regard to the use of troops. This is in concert with what my dear friend Senator Cleland and I determine in our realistic restraint foreign policy dialogue that at least us two listened to. We had to listen to each other over on the Senate.

We came up with the criterion before we would put the troops in. One was the stakes are vital to the United States. Second, public support is assured. Third, overwhelming force is used in regards to a clear definition of goals and purpose. Last, everybody agrees on an exit strategy. I think that is a pretty good list.

The reason I mention that is on behalf of the warfighter. I was in Kosovo on exactly the same day that we mounted up and the 27th Marines went in. I took the advantage to get briefed. They probably did not want to brief me. That was the last thing they wanted to do was see a U.S. Senator there as they were getting ready to mount up.

But I asked a lance corporal, I said, what are your goals here? Do you think you can do the job in regard to Kosovo? He said, sir, I'm a United States Marine. I can do the job.

I said, but what is your personal goal? He said my personal goal is to take care of myself so that I can come home after 6 months to my wife and kids because I know just as soon as I leave, these guys are going to start shooting each other all over again.

I think too many times it is not that we should not pay attention to the geo-political concerns and the strategic concerns. My concern is the warfighter, that person in uniform.

I believe that as we go down this we remember that it is one thing to have a cause to fight for. It is another thing to have a cause to fight and die for.

So I am in agreement with the Powell Doctrine. I pretty much said what I think we ought to do on down the road. I offer that up as a suggestion.

The Emerging Threats and Capabilities Subcommittee of which I am privileged to chair and we have drugs and we have terrorism and we have weapons of mass destruction and we have the counter threat reduction programs. We have a whole bunch of things. Every staff member back here has to deal with me because of this subcommittee and the foresight of the distinguished Chairman.

We asked witnesses in terms of things that really bother you, whether it is a cyber attack or a biological attack or whatever it is, what keeps you up at night? What is the one big thing that keeps you up at night? Now, other than you filling out all the paperwork you have to in regard to the ethics business, what keeps you up at night?

What would you tell the Emerging Threats and Capabilities Subcommittee right now that you think is an immediate concern in terms of our national security? What keeps you up at night? Now, I know you said that you cannot really single one out, that this is a continuum and a many faceted kind of thing here with missile development, terrorism, so on and so forth.

Mr. RUMSFELD. Well, two things I would say. I would repeat what I said about the importance of considerably improving our in-

telligence capabilities so that we know more about what people think and how they behave and how their behavior can be altered and what the capabilities are in this world.

I think the goal ought not to be to win a war. The goal ought to be to be so strong and so powerful that you can dissuade people from doing things they otherwise would do. You do not have to even fight the war. That takes me to the second point.

The second point is I do not know that I really understand what deters people today because I do not think one thing deters everybody. I think that we need to understand that there are different parts of the world. There are different types of leaders with different motivations. We have to do a lot better job of thinking through deterrence and assuring that we have done the best job possible.

I mean, everyone is going to make mistakes. But today when mistakes are made with the power of weapons, they are not little mistakes, they are big mistakes.

We need to do everything we can to fashion a set of deterrents, a nest, a fabric that does the best possible job for this country.

Let me go to your first point just very briefly and add a thought for consideration. You mentioned overwhelming public support as a criteria. I am uncomfortable with that. I think that leaders have to lead and build support. I look back at history. I think there have been times when we have had to do things when the public was not there yet.

I think that what needs to be done is to have leaders in office, presidents, who think these things through, who make the right decisions, who are sufficiently persuaded that overwhelming support, public support, follows.

You cannot sustain anything without it. I quite agree. But I think that thinking that you are going to have it at the outset is optimistic.

Second, on overwhelming force. I have watched presidents look at their situation in a pre-crisis period, a build-up period. They have very few tools to deal with. The military tends to come in and the choices are not—you do not have a lot of arrows in your quiver. It is a proper thing to say we do not want to do something unless we are going to put the force into it we need. But the concept of overwhelming force in isolation I would think needs to have another dimension. It is this.

In the pre-crisis period, in the early period, you can do things to alter people's behavior that does not require 500,000 troops and 6 months to build up. If we are wise and think these things through, there are things that can be done in a build-up period that will persuade people they ought not to be doing what they are thinking about doing, that will persuade the people they need to support them in doing what they are thinking about doing, that those people ought not to support them.

That does not require overwhelming force. That requires a lot better intelligence and a lot more tools to affect and alter thinking in those periods. I think we need to broaden that concept somewhat.

Senator ROBERTS. I appreciate that. My time has expired. Thank you.

Chairman LEVIN. Thank you. Senator Bingaman is next. We will then recess and Senator Allard will be first when we return.

Senator BINGAMAN. Mr. Rumsfeld, thank you and congratulations on your stamina in considering all of these questions.

Mr. RUMSFELD. Thank you.

Senator BINGAMAN. As well as congratulations on your nomination. I certainly intend to support you.

Mr. RUMSFELD. Thank you, sir.

Senator BINGAMAN. One of the issues that we always hear a lot of talk about, but at least in my view has not been given adequate priority in defense budgeting, is science and technology.

It seems like, at least for the last several years, every time we see a defense budget proposed by the administration, the percentage of the defense budget that is committed to science and technology is reduced. It always loses out compared to procurement, compared to readiness, compared to all these other things.

I know that President-elect Bush gave a speech at the Citadel a year and a half ago where he talked about the importance of science and technology investment. He said he was committing an additional \$20 billion—or he would if elected President—commit an additional \$20 billion to defense research and development between now and 2006. I think that was the commitment he made in that speech or the statement he made.

Let me add one other aspect of this. The reductions in growth in defense research and development in recent years has been justified at some of our hearings on the basis that the industrial companies will pick up the difference here, that U.S. industry is sufficiently strong that we do not need to do what we once did in science and technology.

That to my mind is very much at odds with what I understand is happening to our defense industrial base. They do not have the luxury of putting substantial new resources into this area. So I would be interested in any comments you have about how we can increase research and development, defense related research and development and support for science and technology.

Mr. RUMSFELD. Senator, I agree completely with everything you have said. When President-elect Bush announced that I was his choice for this post, I said that I had visited with him. I had read his pronouncements and plans for defense and that I supported them enthusiastically. Certainly with respect to science and technology, he is on the mark and you are on the mark and I agree.

I came out of the pharmaceutical business where we invest in research and development that is not guaranteed to produce anything in the next 5 minutes. You have to be patient. You have to live with a lot of failures. I have been involved in the electronics business, quite the same.

If you are not investing for the future, you are going to die. You simply run out of gas at a certain point. This wonderful country of ours has such fine leadership in science and technology. But the reality is an awful lot of the foreign students who used to come over here and stay and study are now going back to their countries.

They are leaving with an enormous amount of knowledge and the country, this committee, this department, simply must be willing to make those investments.

Senator BINGAMAN. Well, thank you for that answer. Let me ask about one other area that I also think tends to get short changed in the defense budgets that I have seen, and that relates to test and evaluation. Again, there does not seem to me at least to be a strong constituency for funding the necessary infrastructure to accomplish and maintain our ability in the test and evaluation area. I have a parochial interest in this. Because White Sands Missile Range is in my state. It's our largest, and I believe our most capable test and evaluation facility.

But this is an area that I hope you will give some attention to. It seems to me to be one of those areas that falls between the stools when people start putting together defense budgets. It does not have the natural advocates behind it the way we are currently structured that would allow it to be given sufficient attention.

I am glad to hear your comment. Or I will go onto another question.

Mr. RUMSFELD. I am not knowledgeable about the state of that and will be happy to look into it.

Senator BINGAMAN. One other area I wanted to ask about, and this has been asked about by some of the other Senators. There was a *New York Times* editorial that I am sure you saw expressing concern about what they anticipate would be a missile defense organization. The MDO recommendation to the new president that he needs to order construction of a radar system in Alaska to begin this March in order to meet the deadlines that you identified in the commission report that you came up with for actual deployment by 2005 I believe. I believe I have those dates right.

I wondered if you have any insight into whether or not such a recommendation will be made, whether or not you would support such a recommendation to begin construction of a radar site in March or whether you believe that is premature.

Mr. RUMSFELD. It would be premature for me to comment on it. There is no question we simply have to get some folks pass through this committee engaging that subject. I have to get myself up to speed. It clearly would be an issue that would end up with the President and the National Security Council.

Senator BINGAMAN. Let me ask about one other thing, one other area, and that is export controls. My impression is that there are major problems in the system we have in place now to control defense related exports, that it has worked to the disadvantage of many of our companies that have defense related work, but also do a lot of commercial work. This is an issue that involves several departments, not just the Department of Defense, but the Department of Commerce, Department of State. I think we have probably added to the problem here in Congress by shifting responsibilities to the Department of State and not adequately funding them in this area.

I do not know if this is an area that you are informed about. If so, I would be anxious to hear your views. If not, I would be anxious to just urge you to look at this and see if you could bring some constructive recommendations to this system.

Mr. RUMSFELD. Well, I agree that it is something that has to be looked at. It is an enormously complicated set of problems of which I am only marginally informed. I have bumped into it through the

Ballistic Missile Threat Commission and watching that set of issues. I have bumped into it through business on a number of occasions. There has to be a balance between national security interest and our obvious desire to be able to encourage investment in this country to create advanced technologies.

To the extent you inhibit that, you do not stop it. You simply drive it offshore. A businessman can sit down in a room in Chicago and decide if he wants to do research and development in France or in Asia, in Japan or in Skokie, Illinois. Just with a decision it gets changed one place or another.

To the extent we are unwise and allow a system that needs to be very dynamic because there is so much happening to be static and prevent things that need not be prevented or delay things to the point where people are unwilling to accept the costs which delay imposes, then we damage ourselves, not just economically. We also damage ourselves from a national security standpoint because we force people to go offshore to develop these technologies.

So we need to give that system a good look.

Senator BINGAMAN. Thank you, very much. My time has expired.

Chairman LEVIN. We are going to recess now for 1 hour. We will start with Senator Allard. The order of recognition for all my colleagues is on a sheet of paper here, so you can see where in that list you will come. We will stand recessed until 2:05.

[Whereupon, at 1:05 p.m. the hearing was recessed.]

#### AFTERNOON SESSION

The committee met, pursuant to notice, at 2:07 p.m. in room SD-106, Dirksen Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Byrd, Cleland, Landrieu, Warner, Inhofe, Allard, and Sessions.

Other Senators present: Senators Akaka, Bill Nelson, Ben Nelson, Carnahan, Dayton, Collins, and Bunning.

Committee staff member present: David S. Lyles, staff director.

Majority staff members present: Richard D. DeBobes, counsel; Richard W. Fieldhouse, professional staff member; Creighton Greene, professional staff member; Gerald J. Leeling, counsel; Peter K. Levine, counsel; and Michael J. McCord, professional staff member.

Minority staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Charles S. Abell, professional staff member; Charles W. Alsup, professional staff member; John R. Barnes, professional staff member; Edward H. Edens IV, professional staff member; William C. Greenwalt, professional staff member; Mary Alice A. Hayward, professional staff member; Lawrence J. Lanzillotta, professional staff member; George W. Lauffer, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, assistant counsel; Joseph T. Sixeas, professional staff member; Cord A. Sterling, professional staff member; Scott W. Stucky, general counsel; and Eric H. Thoemmes, professional staff member.

Staff assistants present: Beth Ann Barozie, Thomas C. Moore, and Michele A. Traficante.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; Christina Evans, Terrence E. Sauvain, Barry Gene (B.G.) Wright, and Erik Raven, assistants to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Andrew Vanlandingham, assistant to Senator Cleland; Jason Matthews and David Klain, assistants to Senator Landrieu; Gregory C. McCarthy, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Thomas A. Vecchiolla, assistant to Senator Snowe; Robert Alan McCurry, assistant to Senator Roberts; Charles Cogar, assistant to Senator Allard; and Scott Douglass, assistant to Senator Sessions.

Other Senate staff present: Richard Kessler, assistant to Senator Akaka; Pete Contostavlos, assistant to Senator Bill Nelson; Sheila Murphy, assistant to Senator Ben Nelson; Larry Smar, assistant to Senator Carnahan; Christopher Ford and Sam Patten, assistants to Senator Collins; and Jeff Freeman, assistant to Senator Cochran.

Chairman LEVIN. The committee will come to order.

Senator Allard.

Senator ALLARD. Thank you, Mr. Chairman. I would echo the comments that have been made by my colleagues on this committee, Mr. Rumsfeld, about your qualifications. I do not think anybody can legitimately question your qualifications, and I am absolutely delighted with the President's appointment in appointing you specifically as Secretary of Defense. I do not see how you are going to apply the Rumsfeld's Rules over there as Secretary of Defense when you testify before this committee, and I respect your administrative capabilities, and I think everybody here also recognizes those.

When you visited my office we shared our experiences. I shared my experience on the NRO Commission. You shared your experience as Chairman of the Space Commission. Both reports are coming out with a recommendation. I guess the Space Commission's report is coming out today, and ours, the NRO Commission is already out that there needs to be, in fact it is critical that there is a dialogue between the Secretary of Defense and the Director of the Central Intelligence Agency. I just would hope that you would just for a moment at least express to me how you feel about this and what you plan to do to improve communications.

Mr. RUMSFELD. Well, I thank you, and I know of your service on the NRO Commission and, of course, have discussed it with you. The international community is really not a community. It is a set of organizations, the CIA and the NSA and the NRO and the DIA and the Air Force, Army, and Navy Intelligence, the State Department, the FBI, there are all kinds of pieces to it, and I think to use the word community is an overstatement, and because of the way the legislation, the way the funding works, it is something that I think takes a lot of senior level interaction so that things do not get bottlenecked.

There are some very complicated issues in rearranging our intelligence-gathering to fit the new century, to fit the new circumstance with proliferation, and I think that bureaucracies do not like to change. They are terribly resistant to change, and the only way they are going to change is if the very senior people who meet regularly understand where each is going, and recognizes the fact

that each has responsibilities that cannot be performed unless the two of them work together.

I suppose you could have perfect organizations and people who are not too good and you are not going to have very good organization or operation, and vice versa. You could have organizations that are not perfect, but if you have people who really care about it and are willing to force those issues through the bureaucracies it could work pretty darned well, and I just think that that is a start.

Senator ALLARD. With this election, there was a lot of discussion about voting by members of the military, and I do not know whether you have given this any thought or not, but I was disturbed, I think as many members of this committee were disturbed about credible attempts to disqualify certain military votes, and most of these were due to hypertechnical kinds of reasons, but in the legal community they are real reasons, and I am wondering if you are going to give any thought about how it is that we can make sure that that problem does not get repeated again on military votes.

Mr. RUMSFELD. Senator, I have discussed this with the President-elect, and thought a bit about it. As you suggest, it is complicated because of the role the States play, and not one State but 50 States. I do think it is an enormously discouraging thing for people serving overseas in the United States Armed Forces to read in the paper that because there may not be a postmark or some other issue, that their vote might not be counted.

It is just not fair, it is not right, and we have to figure out ways to do it, and I quite agree with you that if confirmed that the Secretary of Defense should address the issue and put in place some people to think that through and figure out what kinds of recommendations might be made so that there is a high confidence that the men and women in the Armed Services in fact vote and have their votes counted.

Senator ALLARD. I just do not know that anybody has ever really thought through just how those ballots may be handled, getting from the base or where there will not be a post office or maybe even a postmark getting them to their State where the individual is registered to vote, so I appreciate your answer on that.

On emerging threats, I think your 1998 ballistic missile report threat, you indicate there is an emerging threat and it is maturing more rapidly, and do you still believe the threat is emerging and maturing more rapidly, and also what do you perceive as our greatest threats?

Mr. RUMSFELD. Maturing more rapidly of course is relative. More rapidly than the international community at that time had anticipated, or had described. Our report, as you may recall, followed the 1995 NIE, the National Intelligence Estimate which Congress decided they wanted a second look at, so they empaneled the Ballistic Missile Threat Commission. We did take a look at it, and we came to a number of distinct disagreements with that National Intelligence Estimate.

I do not think I would say it is currently evolving more rapidly than the intelligence community believes, because since our report we then followed it with an intelligence side letter to the international community, and Director Tenet empaneled the entire

international community and we presented it, and they have been addressing the kinds of things that we suggested.

My impression is that more recent NIEs have begun to take account of some of the suggestions made, and that I would think, if you dropped a plumb line through the international community today and asked where they are on this issue, I would think that they are probably a lot closer to where we were than they used to be.

Senator ALLARD. I have not had a chance to completely review your Space Commission report, but from my briefings I am going to be, I think, pleased with its findings. One of the areas you talked about is vulnerability of our space assets, and I am wondering if you can comment about the vulnerability of our space assets and how you would manage that.

Mr. RUMSFELD. Well, I have not had a chance to see the final report, either. I was asked to become the nominee and I had to resign from the commission, and the following days they have completed it and printed it and they are now in the process of briefing Members of the House and Senate and the executive branch on that report.

Senator WARNER. If I can interrupt, we are going to release it at 2:30, and I am going to absent myself to go over for a few minutes.

Mr. RUMSFELD. Adm. Dave Jeremiah, Steve Cambone, the staff director, other members of the commission are going to be doing that, but one of the things that became fairly clear is that we have seen a significant growth in the use of space assets for all kinds of things, clearly from a military standpoint but also from a civil governmental standpoint as well as a civilian private sector standpoint, and as you end up with this greater degree of dependence on these assets you obviously become more vulnerable to interruptions of those capabilities.

I forget what the number is, but something like 70 or 80 or 90 percent of the pagers in the country were out for a period because of an interruption on a Galaxy satellite. We know that Russia or former Russian republics are selling, in effect, hand-held jammers that can jam satellite signals. We know that.

There is an organization in England that makes and puts in space microsattellites that have a variety of capabilities for lots of countries. They do it for—China has a relationship with them, and many other countries do as well, and if you are as dependent as our country is on space, you are, by definition, vulnerable, more vulnerable than others, and it seemed to the commission, unanimously, I might say, that that calls for attention on the part of our country to see that we have the ability to preserve those assets and defend the assets in a way that we could have reasonable assurance that we are going to not be dramatically inhibited, for example, in presidential leadership during a pre-crisis buildup, that we are going to be able to communicate with our military forces in a way that is appropriate in a conflict, to say nothing of the fact that our economy is so dependent today that significant economic disruptions could occur, and I am not just referring to space assets and space systems. I mean, ground stations as well as these systems.

Senator ALLARD. Mr. Chairman, my time has expired. Thank you.

[The prepared statement of Senator Allard follows:]

PREPARED STATEMENT BY SENATOR WAYNE ALLARD

Thank, you Mr. Chairman.

Secretary Rumsfeld, good morning and welcome to the committee. I enjoyed our meeting last week and during the course of today's hearing, I will broach a few of the issues we discussed.

I again look forward to hearing your views on the many important subjects facing America and the military, but I hope the presence of the media means that all of America will be introduced to you and your achievements for the country. Further, I always look forward to any opportunity when we have a chance to publicly discuss the many crucial issues facing America's national security and military service members.

Mr. Secretary, as we all know, for the last several years you have been involved with numerous commissions and studies, most notably your work on the "Commission to Assess the Ballistic Missile Threat to the United States", and most recently the Space Commission. I carefully studied the missile threat report, found it detailed, thoughtful, well researched, and credible. I have been operating with it in my mind whenever this committee deals with the missile defense issue. A new administration is seen by many as our only chance for fixing a critical flaw in our defense—a lack of NMD. Many of us are breathing a sigh of relief that we might finally be entering a phase of concrete actions. Better yet—actions with concrete.

Your other recent project, the Space Commission, is also of great interest to myself and many others in Colorado. Colorado has a close connection to military and civilian satellite launch and control. We are aware of the competing needs of civilian, military and intelligence. I don't want to get into the report too much for it is to be released today. While I do not have all the details of the report but from the briefing I received earlier, I am encouraged by the findings and the forward thinking recommendations. I hope we can continue to work together on these issues.

Finally, I note that at the press conference announcing your nomination, President Elect Bush mentioned that one of his defense goals was to "strengthen the bond of trust between the American president and those who wear our Nation's uniform." There has been a real degradation in that area. I hope to see this rapidly addressed. I will bring up this issue later in my questions.

Mr. Secretary, I look forward to your second tenure in the Pentagon. I hope we have a productive hearing today and have already concluded you run a tight ship. I am looking forward to hearing what your "Rumsfeld's Rules" might be.

Chairman LEVIN. Thank you very much. Senator Landrieu is next.

Senator LANDRIEU. Thank you, Mr. Secretary. Congratulations on your nomination. I look forward to working with you through these hearings, and I just want to say that Senator Durbin's and Senator Fitzgerald's comments go a long way with me. They are a ringing endorsement, and my own personal knowledge of your good work.

I just have a few questions. The first two have to deal with the nuclear policies of our Nation. In your opening statement, you made an excellent point about our need to invest more money and more resources in our defense. I could not agree with you more, and have a voting record to support that.

We need to make sure our money is spent wisely and well, but the need to make new investments, to shore up our defenses and to modernize them I think are crucial, and so I want to commend you for that, and one of the ways that we will be able to do that, there are really only two ways to identify new moneys, or to redirect some of the moneys we are spending now in new ways to make that goal that you have stated actually come to pass, and of course one of the big cost drivers is our nuclear strategic defenses.

Given that, and you are aware, because you served in this position before, that we are prohibited by law from falling below our START II levels, but we are coming upon several crucial and costly, and our underlying costly decision points, particularly regarding our Peacekeeper missile system, which the Defense Department has recommended that we move past, if you will.

I believe that it would make sense for our Nation to establish a cost-effective and appropriate deterrent, independent of anything Russia may do, because they have already provisionally ratified the levels indicated by START II, but it does not comport with our law, and so my question is, do you believe that we need to hold to some artificially mandated level of nuclear weapons, or in light of our great need to find resources within our budget as well as add to them, that there is some potential here for not only strategic thinking but some good cost savings could be applied in other ways, and would you be willing to explore or to comment today about some of your thoughts regarding that?

Mr. RUMSFELD. Well, I certainly agree with you, we are going to have to do both. We are going to have to find new dollars in non-trivial amounts, and we also have to see that the defense establishment functions in as cost-effective a way as is humanly possible, and that we find savings, and third, we are going to have to undoubtedly not do some things we have been doing, because the nature of our world has changed, and we are going to do some other things, and it certainly is at least logical, although I cannot tell you what that is, it is logical that we ought to be able to not keep on doing some of the things we have been doing.

With respect to the numbers of weapons, it is not a subject that I have engaged since the announcement a week or so ago. The President-elect has commented on the subject of numbers of weapons. We know that the Russian systems are very likely to be declining in some numbers, apart from negotiations, apart from agreements, simply because of their economic circumstance.

We also know that Russia is not the only nation in the world that one needs to be attentive to. The Chinese are increasing their—they have a very modest nuclear capability at the present time, but they are increasing their budget in double digits. They do have at least a publicly pronounced desire to be a factor in strategic nuclear weaponry.

I do not know whether we can reduce or not. I suspect that that will be part of the review, and in what numbers. I am afraid that the likelihood is that any reduction—there is a minimum below which you can go and maintain the kind of target list that rational people think is appropriate. My guess is that there are very likely not a lot of savings in that, but I do not know that.

Senator LANDRIEU. Well, I look forward to working with you on that, I think to be open to evaluate these questions from the bottom up, because it brings me actually to my next point, which is our targeting plan, which is our single integrated operational plan, our SIOP plan which actually lays out the nuclear targets and is one of the, for obvious reasons one of the most carefully guarded secrets of our Nation.

I raise this issue to you today because one of our most distinguished departing Members, Senator Bob Kerrey, who served for

many years on the Intelligence Committee, has been very frustrated publicly and privately. Many times publicly on the floor of the Senate and other places he has expressed his great concern, and I wanted to express it for him as if he were here today. This particular plan of targeting our nuclear weapons has been unavailable to be reviewed by the leadership of our committee, either Republican or Democrat, or even to the highest level of congressional Intelligence Committee members.

While it is claimed under our law or rules that he has to have reason to know, he, as the highest ranking member, was not given the information in order to make rational decisions, exactly what you said about not only what can we afford, but what is an effective deterrent, what do we need to do to maintain the safety of our citizens.

So my question would be, if you wanted to make a comment about it today, but at least could you assure this committee that you would be willing to work with the appropriate Members of Congress, and not all Members would be on an equal footing here, but the leadership of our committee and the Intelligence Committee members particularly, to jointly review that, because it has a direct bearing on the strategic posture that we either take or not take, and is driven by the target.

So could you make a comment, please, for the record?

Mr. RUMSFELD. Yes. For the record, those are decisions that I think are the President's, and it is not for me to opine as to what extent, if at all, the current procedures ought to be changed.

I do know that the U.S. plans are reviewed, admittedly by a very small number of people in the executive branch, the National command authorities. They are reviewed regularly. They are changed as circumstances change in the world. As you suggested, they are highly classified, and that is about all I can say.

Senator LANDRIEU. My third question is, again commenting on your opening statement, on your phrase that you would like to try to help us develop weapons systems, I think—I do not know the exact term you used, but taken off the shelf as opposed to the more traditional ways we have developed, to try to get weapons systems more quickly and more cost-effectively. I would like to commend our current Under Secretary, Rudy de Leon, for suggesting that we apply that same principle to the Reserve units in trying to combat terrorism in cyber space, to actually be able to access the brain power of the American people by developing more strategic smart Reserve units instead of developing that intelligence within the Defense Department to actually, if you would, Mr. Secretary, be able to pull it off the shelf.

So have you given any thought to perhaps strengthening our Reserves in this way, that we could get the best and the brightest minds in the United States to apply their great ability and intellect to help us to fight this new front in a smart, cost-effective way for the American people, and one that I think would tend to be more successful, perhaps, than the old ways that we are used to doing? Have you been briefed much about this, or know much about what I am suggesting?

Mr. RUMSFELD. I have not been briefed on it, and it is not a subject I have engaged personally. There is no question but that cyber

attacks and information warfare are an exceedingly important subject for the country. They are important for the private sector. They are important for the Government. They are certainly important for the military. I had not addressed the subject as to what role the Reserves and the Guard might play in that, but it certainly is worth exploring.

Senator LANDRIEU. My time has expired. I would just urge you to think about the strategy to solicit service from a core of very talented, well-skilled individuals to bring to bear the new abilities or talents we are going to need to fight the threats of the future.

Thank you very much.

Chairman LEVIN. Thank you, Senator Landrieu.

Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman. Before I ask a question, I wonder where we are on the possibility of moving this nomination? I think it would be well if we have as much support as it appears we have today for this extraordinary nominee I think the world would well receive the fact that we could promptly confirm him. Do you have any thoughts about how we could move this nomination, if there are no objections, as there appear to be? I think it would help the President-elect and his team to get started as early as possible.

Chairman LEVIN. Technically, I think the nomination has to be submitted by the new President. I think the first thing he usually does after being sworn in is to sign a number of nomination sheets and nominate his Cabinet officers. The nomination then has to be received technically by the Senate. Then, I believe it will be Chairman Warner's plan at that time, probably the same day, but I do not want to speak for him, that we try to meet even on Inauguration Day, if possible, to act on and confirm, if we are ready at that point to act on and confirm.

There is significant paperwork which we must go through. The nominee is working very hard on it with all of us. It has to be finished, too. I hope we can complete the hearing today, but there is no guarantee of that. It depends upon how many questions need to be asked that we have not had a chance to ask. That is our goal. I agree with your point, in any event even though it is not technically possible to even receive a nomination until Inauguration Day, or act on it. We will act promptly after we are legally able to act on this nomination, because it does have, indeed, broad bipartisan support.

Senator SESSIONS. Thank you, Mr. Chairman. I really believe we should move on that, and there might be some uncertainty in the world among those who—we had a prolonged election process, and I think it might be good for stability if we could move as promptly as possible.

I remember, when I was back in college, at Huntington College where I attended, they introduced the old president as a president proven and the new one as a president challenged, and you are both a proven Secretary of Defense and a challenged Secretary of Defense, so we are delighted to have you here. I think your testimony has been superb. It is wise and thoughtful and strong, and I know you know there are some real challenges out there that have to be met.

One thing I would say is that Senator Lieberman's comments really went to the heart of where we are, in my opinion. I think this Nation has a serious problem with our defense funding and structure, that in the past decade we have failed to maintain adequate funding streams. We are paying salaries and the like and that kind of thing, but really, recapitalizing the military has not occurred as it should, and I asked Secretary Cohen, your predecessor—who by the way was extraordinarily cooperative with this Senate.

I was a new member of this committee and he just did a great job of being forthcoming and helpful, and I would ask you to do the same, and want to compliment him on the work that he did, but he said this in answer to a question of mine. He said, as I indicated before, Senator Sessions, ever since the height of the Cold War we have seen a tremendous decline in defense spending.

This was last year, and many on this committee and throughout this body were urging a peace dividend, and we have been enjoying the fruits of that peace dividend, but it has come at the cost of relying on what President Reagan did in the 1980s as far as the build-up. We have been living off that, and now we are at the point where we have to replace it.

Do you understand what he is saying, and would you tend to agree with that?

Mr. RUMSFELD. I do, indeed. It is a surprise to me, when you think about it, but when I was Secretary of Defense I went to the roll-out for the F-16 and made the decision on the M-1 tank and the B-1 bomber, and that was a long time ago.

Senator SESSIONS. What we have is the question of how much needs to be spent. It is my understanding that the number of \$45 billion that President Bush was reported to have estimated that he would have to spend in addition was based on several programs he intended to initiate, did not represent his full commitment to spending more for defense, but I think Senator Lieberman rightly suggests it is going to take a lot more than that and a lot more than the \$100 billion over 10 years that was—and I think, Mr. Rumsfeld, that it—and I will ask you to respond to it, it is going to be your duty, and I think you have the credibility and the competence to evaluate this Defense Department to analyze the threats we are facing in the world, to comprehend what can be done technologically and how much money can be saved wherever it can be saved, and then I think it will be your duty to come back to this committee and use all the credibility that you have to sell this committee and this Nation on the amount of funding we are going to need to maintain the strength of the United States in the 21st century.

How would you respond to that?

Mr. RUMSFELD. First, your understanding of President-elect Bush's comments about budget are exactly mine, that he identified some particular things he wanted to see funded. He priced them, and he mentioned the price tag. I do not believe that he suggested that that was the totality of what he had in mind, because he was asked for a defense review and promised that as well, and that is something that of course has not been done, and until that has been done, it is clearly not possible to come up with the numbers.

I think second, with respect to the numbers, I do not know what the number is, but I have an impression that goes not to the total number over the 5-year period, but the impression is that we need some money up-front, and we may very well have to come back with a supplemental or something that would indicate the needs that exist now so that—because there have been things that have been pushed off, as has been mentioned here, for example, the shipbuilding budget and some other things, science and technology and others that have been mentioned.

Senator SESSIONS. There has been a lot put off and, in fact, we had testimony from one official, one General on research and development. He used the phrase, we are eating our seed corn. I am now looking at a National Association for the Advancement of Science survey, historical table on the amount of money spent for research and development. Since 1989 in real dollars, not inflated dollars, in actual dollars, the amount of DOD research has dropped 20 percent, while other research in nondefense departments and agencies are up 50 percent. Senator Bingaman raised that point.

I really do believe that we got squeezed to pay for lights, to pay for salaries. We were cutting, eating our seed corn. We were cutting back on things that are going to come back to haunt us and are going to cost us more money today than it would have if we had started on a 6 or 8-year program of research and development.

One more thing and I will give up this questioning. One expert has said that the post-Cold War, the references to the post-Cold War foreign policy are really a statement, an admission that we have not developed a post-Cold War foreign policy. Is it your opinion, briefly, that we do need to develop a more comprehensive foreign policy in this post-Cold War environment that the American people and this Congress can rally behind?

Mr. RUMSFELD. I certainly agree, but by agreeing I do not want to suggest that it is easy. There are some who look at our current period and characterize it as a transition out of the Cold War into something that is still ahead. There are others who suggest that possibly history might indicate that this is it, that we are not transitioning to something else, but what we are in now is what we will be in for a period, and that if that is true, and I am certainly not one who can suggest that I know the answer, but if it is true, it puts a much greater urgency on fashioning policies and standards and some flags we can plant down ahead so that we as a country can point directionally and know how to arrange ourselves to function and live with a maximum degree of safety and stability during that period.

Senator SESSIONS. Thank you.

Chairman LEVIN. Thank you, Senator Sessions.

Senator Byrd.

Senator BYRD. Mr. Secretary, you have been around this track before, and I appreciate your presence here today, and I compliment the President-elect on nominating you. Certainly it is my present intention to support you.

My time is brief, and so I will get right into a question. The Department of Defense continues to confront pervasive and complex management problems due to its inadequate financial management

systems. This can greatly diminish the efficiency of the military services operations.

Since 1995, the DOD's financial management has been on the General Accounting Office's list of high-risk areas vulnerable to waste, fraud, abuse, and mismanagement. While the Department has made progress in a number of areas of its financial management operations, no major part of DOD's operations has yet been able to pass the test of an independent financial audit.

The Chief Financial Officers' Act of 1990, as amended by the Federal Financial Management Act of 1994 requires the Department of Defense to prepare annual audited financial statements. Nevertheless, 10 years after the enactment of the CFO Act of 1990, the Department of Defense has yet to receive a clean audit opinion on its financial statements.

A recent article in the *Los Angeles Times*, written by a retired vice admiral and a civilian employee in the Office of the Secretary of Defense, accused the Secretary of Defense of being unable to account for the funds that Congress appropriates to it. The authors wrote, and I quote in part, quote, the Pentagon's books are in such utter disarray that no one knows what America's military actually owns or spends. That is the close of my extract.

The thrust of this *Los Angeles Times* article is backed up by the DOD's own Inspector General's financial audit for fiscal year 1999. I have a copy of that here in my hand. I assume you have seen it.

Mr. RUMSFELD. I have not. I cannot even say I look forward to seeing it. [Laughter.]

Senator BYRD. Well, I will look forward to hearing what you have to say about it after you have seen it. [Laughter.]

That audit report found that out of \$7.6 trillion in Department-level accounting interest, \$2.3 trillion in entries either did not contain adequate documentation or were improperly reconciled, or were made to force buyer and seller data to agree.

This DOD IG report is very disturbing. Last year, according to the General Accounting Office, the Pentagon reported that it did not expect to have the necessary assistance in place to be able to prepare financial statements for 3 more years. That was last year. We are now advised that the Pentagon is currently telling the Office of Management and Budget that it will take them until the year 2005 or 2006.

Now, I also note in the *Washington Post* of January 9, 2001, this sentence, which I extract from an article titled, "Bush Talks Defense with Key Members of Congress." Here is the sentence: The chiefs of the Armed Services have said that they need a budget increase of more than \$50 billion a year to modernize their forces. That figure dwarfs the \$4.5 billion in added defense spending proposed by Bush during the campaign.

Now, if the Pentagon cannot account for what it is doing this year, how can it hope to improve its operations next year? As Chairman of the Appropriations Committee, thank God, now for 17 days—[Laughter.]

I seriously question an increase in the Pentagon budget, and in the face of the Department's recent Inspector General's report how can we seriously consider a \$50 billion increase in the defense

budget when DOD's own auditors say the Department cannot account for \$2.3 trillion in transactions in 1 year alone?

Now, \$2.3 trillion I would readily assume is a large amount of money. According to my old style math, there have been 1 billion minutes, give or take a little, it will not make much difference, since Jesus Christ was born, 1 billion minutes, and according to that same old math, \$2.3 trillion, which the Department cannot account for in 1 year alone, would amount to \$2,300 per minute for every minute since Jesus Christ was born. Now perhaps we can begin to understand the magnitude of \$2.3 trillion.

So why is this happening? Of course, I would not expect you to be able to answer that question. The state of affairs did not occur on your watch, but you are inheriting it. Now, my question to you is, Mr. Secretary, what do you plan to do about this?

Mr. RUMSFELD. Decline the nomination. [Laughter.]

Chairman LEVIN. We will stand adjourned in that case. [Laughter.]

Mr. RUMSFELD. Senator, I have heard some of that and read some of that, that the Department is not capable of auditing its books. It is—I was going to say, terrifying. It is such a monumental task. I have met with two former officials of the Pentagon who served in the budget and control areas, and I have mused over the fact that I have read some of these things and asked what they thought.

One insight that I got was that to a certain extent the financial systems have been fashioned and designed to report on requirements that they receive from various organizations and they have not been fashioned and designed for financial management the way you would in a corporation. I do not know whether that is a useful insight or not, but it is something that is rattling around in my head, and certainly something that I think—I doubt, to be honest, that people inside the Department are going to be capable of sorting this out.

I have a feeling it is going to take some folks from outside to come in and look at this and put in place a process that over a period—and I regret to say, but I have seen how long things take. I think it is going to take a period of years to sort it out, and it will probably take the cooperation of Congress to try to get the system so that you can actually manage the financial aspects of that institution, rather than simply report on things that have happened imperfectly.

That is not a satisfactory answer, but I hear you. I recognize the problem and, if it is not solved, I hope at least that when I leave, if I am confirmed, that it will be better than it was when I came in.

Senator BYRD. My time is up, but Mr. Secretary, I have every confidence in you. I think I have the duty to request and to urge, and I am sure that my colleagues on both sides here join me, and I am sure as well that you do, because you have indicated the enormity of the task, and I think this may have come, perhaps, not as a surprise to you, but you have not seen it. Will you pledge to make balancing the Pentagon's books a topmost priority? The simple answer is yes, but I would like to hear your answer.

Mr. RUMSFELD. Well, I do not know that I can assure you it will be the topmost priority, but it will certainly be among the top priorities. It simply must be done for the National security interests of the country, as well as from the standpoint of the taxpayers of the country.

Senator BYRD. Absolutely, and let me close by saying that, as an appropriator, I cannot have much confidence in the budget request when we have such a track record as we see here, and the Joint Chiefs come up here and ask for \$50 billion, even \$4.5 billion more, whatever it is. I, as an appropriator, and I would think every member of the Appropriations Committee, would have to look with a jaundiced eye, perhaps not on some specific items, with which they are perhaps more acquainted, but with the overall—it is a terrible record, and it is preposterous that the Defense Department does not know what has happened to this money.

But I thank you for your testimony, and I hope you will do everything you can to set this thing in order and put the Pentagon's house in order in this regard.

Mr. RUMSFELD. Thank you, sir.

Chairman LEVIN. Thank you, Senator Byrd. Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman. Mr. Rumsfeld, I want to start by echoing the praise of my colleagues in congratulating you on your appointment, which I hope very much that you will not decline, and to also commend the President-elect for making such an outstanding choice.

I want to start with a comment before going to a couple of other issues, and I want to follow up with the exchange you had with Senator Kennedy, in that I share both yours and Senator Kennedy's concerns about the current shipbuilding rates. They do not support the goal of a 300-ship naval fleet, as identified by the last QDR and the Clinton administration's defense budgets have been gradually taking the Navy not toward a 300-ship Navy but ultimately toward a considerably smaller fleet.

To make the challenge confronting the new administration and the new Congress even more stark, even a 300-ship Navy has been increasingly recognized as inadequate to meet the increased operational and deployment requirements that we face. In addition, recent press reports indicate that the DD-21, the Navy's revolutionary new destroyer program, may be among the Pentagon programs most at risk of procurement budget cuts.

Now, I know from our brief conversation that you have not yet had an opportunity to review specific procurement programs, but I do want to express my concern about the direction that shipbuilding is heading, or has been heading in, and seek your commitment to reverse that direction, and to look to increasing our shipbuilding budget. I believe you gave that kind of commitment to Senator Kennedy in your earlier exchange, is that correct?

Mr. RUMSFELD. Indeed, I share your interest and concern, and if we are each year building fewer ships than are necessary to maintain the kind of Navy that this country needs, then we are damaging ourselves, and we are damaging our national security.

Senator COLLINS. Thank you. I look forward to working with you closely in that area.

Last month, Mr. Rumsfeld, I accompanied Secretary of Defense Bill Cohen on a holiday trip to visit our servicemen and women in Kosovo and Bosnia. We brought with us entertainers such as the Dallas Cowboy cheerleaders, which I will readily concede the servicemen were far more interested in talking to than they were in talking to United States Senators and Members of Congress.

Nevertheless, I did have the opportunity to speak with members of our active duty components, as well as reservists and members of the National Guard who were stationed in Bosnia and Kosovo, and while morale generally appeared to be high, I nevertheless heard many accounts of the effects of the increased operational tempo on the lives of those who are serving, their families and, in the case of reservists and guardsmen, their employers.

I was concerned about what I heard, because of the implications for retaining and recruiting men and women to serve in the military. For example, I spoke to one young Reservist from my home State who had returned to his family after an assignment in the Middle East, only to be called on again to be sent to the Balkans.

In addition, a young naval officer from my home State recently resigned after 12 years in the Navy because continuous 9-month periods of sea duty proved too great a burden on his growing family.

I am told that the Army is currently considering reducing its overseas assignments to periods of 120-days, and that other services, including the Guard and the Reserves, may adopt similar models. I realize that this issue really ties to the underlying issue of peacekeeping forces and these daunting and protracted missions we have undertaken, but I wonder if you support looking at ways that we can ease the burden on our young men and women who are serving so far from home for such protracted periods.

Mr. RUMSFELD. Yes, indeed. In any organization that does not use conscription or force to have people work there you have to fashion the sort of incentives that will enable you to attract and retain the people you need to run that activity in an efficient and cost-effective way. I do not know what the number is, but I think it was Senator McCain who mentioned the attrition rates with respect to our young captains. I think it is something like 12, 13, 14 percent.

My goodness. That has to tell anybody that we are doing something wrong. We simply cannot have that kind of churning when you train and develop and have this fine talent and then lose it. It costs so much to bring people through the intake, bring them along, get them experience, train them, and then you lose them, and so we have to arrange ourselves so that we have a high confidence that we can attract and retain the people we need, and that is a mixture of things.

It is a mixture of how they feel about their Government, and how they feel about the defense establishment. It is partly how their families are functioning and whether or not they feel that they are able to do what they need to do for their families. As you suggested, the operations tempo can be a difficult thing, time away from families. It is pay, it is health, it is education, it is a whole host of things, opportunity, and it is also feeling that the country

cares and appreciates what they have done and what they are doing.

Senator COLLINS. You are absolutely right about that, and I did in my discussions with the young men and women whom I met—I was so impressed with their pride and their professionalism, their dedication to their jobs, and many of them want to stay in the service, or they want to continue in the Guard, and we need to figure out ways to deal with the very real family concerns they have, and I appreciate the fact that you obviously acknowledge that and are committed to looking at that.

I want to raise quickly just one final issue. The Defense Department has for years tried to take steps to reduce the physical and electronic security, or the vulnerability of its communications satellites, but in recent conflicts such as Kosovo, and even in peacetime, it is my understanding that the military has come to depend more and more heavily upon commercial communications satellites.

It seems to me the Defense Department needs a stronger effort to work with the private sector and other appropriate parties to improve the safety, not just of our military satellite communication links, but of civilian ones as well, and I would be interested in knowing whether this is a priority area for you and whether you have any plans in this regard.

Mr. RUMSFELD. It is an area of interest to me. I am certainly not an expert. We do know that commercial capabilities in this area have for the most part no hardening or no ability to survive mischief and attacks. We also know that properly, in my view, the United States Government, including the military, are using more and more and should use more and more civilian capabilities for communications, for imagery, for a variety of things. It is efficient. They are good at it.

On the other hand, we have to be certain that we have secure systems so that we are not blinded at critical times. It is an area that I do intend to interest myself in, and I thank you for bringing it up.

Senator COLLINS. Thank you, Mr. Rumsfeld. Thank you, Mr. Chairman.

Chairman LEVIN. Senator Collins, thank you.

Senator Akaka.

Senator BYRD. Mr. Chairman, before the Senator responds, may I ask consent that the audit report to which I referred in my questions be included in the record, report number D-2000-179, dated August 18, 2000?

Chairman LEVIN. It will be made a part of the record.

MEMORANDUM FOR UNDER SECRETARY OF DEFENSE (COMPTRROLLER)  
AND CHIEF FINANCIAL OFFICER  
DIRECTOR, DEFENSE FINANCE AND ACCOUNTING  
SERVICE

SUBJECT: Audit Report on Department-Level Accounting Entries for FY 1999  
(Report No. D-2000-179)

We are providing this report for your information and use. We conducted the audit in response to the Chief Financial Officers Act of 1990, as amended by the Federal Financial Management Act of 1994. We considered management comments on a draft of this report when preparing the final report.

The Under Secretary of Defense (Comptroller) comments conformed to the requirements of DoD Directive 7650.3; therefore, additional comments are not required.

We appreciate the courtesies extended to the audit staff. For additional information on this report, please contact Mr. Richard B. Bird at (703) 604-9159 (DSN 664-9159) (rbird@dodig.osd.mil) or Ms. Cindi M. Miller at (317) 510-3855 (DSN 699-3855) (cmiller@dodig.osd.mil). See Appendix C for the report distribution. The audit team members are listed inside the back cover.

A handwritten signature in black ink that reads "Robert J. Lieberman".

Robert J. Lieberman  
Assistant Inspector General  
for Auditing

**Office of the Inspector General, DoD****Report No. D-2000-179**(Project No. D2000FI-0063.004)  
(formerly Project No. OFI-2115.04)**August 18, 2000****Department-Level Accounting Entries for FY 1999****Executive Summary**

**Introduction.** The Chief Financial Officers Act of 1990, as amended by the Federal Financial Management Act of 1994, requires DoD to prepare annual audited financial statements. This is the third in a series of reports related to the DoD Agency-Wide financial statements for FY 1999. In Inspector General, DoD, Report No. D-2000-091, "Internal Controls and Compliance With Laws and Regulations for the DoD Agency-Wide Financial Statements for FY 1999," February 25, 2000, we identified \$6.9 trillion of department-level accounting entries. An additional \$0.7 trillion identified after the issuance of the first report, bringing the total to \$7.6 trillion. On February 16, 2000, we issued a disclaimer of opinion on the DoD Agency-Wide financial statements for FY 1999.

The Military Departments, Defense agencies, and the Defense Finance and Accounting Service (DFAS) are responsible for the reliable processing of financial management data reported on the DoD financial statements. When DoD Components input data into the finance and accounting systems, the reliability of the data as they are further processed becomes the responsibility of DFAS. The DFAS centers provide finance and accounting support to DoD organizations, including maintaining department-level accounting records and preparing financial statements. The DFAS centers use amounts reported through the accounting systems and information collected from data calls and from other sources to compile the annual financial statements for DoD. The compilation process is complicated because much of the financial data submitted to the DFAS centers are not generated by integrated, transaction-driven, general ledger accounting systems.

**Objectives.** Our overall objective was to determine whether the DoD Agency-Wide financial statements for FY 1999 were prepared in accordance with Office of Management and Budget Bulletin No. 97-01, "Form and Content of Agency Financial Statements," October 16, 1996, as amended January 2000. In support of the objective, we identified the department-level accounting entries made to the DoD Component financial data that were used to prepare departmental reports and the DoD financial statements for FY 1999. We also reviewed the management control program as it related to the audit objective. This audit was originally announced under Project No. OFI-2115.04.

**Results.** The DFAS centers processed approximately \$7.6 trillion in department-level accounting entries to DoD Component financial data used to prepare departmental reports and DoD financial statements for FY 1999. Of the \$7.6 trillion in department-level accounting entries, \$3.5 trillion were supported with proper research, reconciliation, and audit trails. However, department-level accounting entries of \$2.3 trillion were made to force financial data to agree with various sources of financial data without adequate research and reconciliation, were made to force buyer and seller data to agree in preparation for eliminating entries, did not contain adequate documentation and audit trails, or did not follow accounting principles. We identified but did not have adequate time or staff to review another \$1.8 trillion in department-level accounting entries. The DoD Agency-Wide financial statements for FY 1999 were subject to a high risk of material misstatement. The sheer magnitude of department-level accounting entries required to compile the DoD financial statements for FY 1999 highlights the difficulties and problems that DoD encountered in attempting to produce accurate and reliable financial information using existing systems and processes. The largest number of department-level accounting entries were made for the Navy General Fund because DFAS Cleveland Center processed both monthly and year-end department-level accounting entries for the Navy General Fund. For details of the audit results, see the Finding section of the report. See Appendix A for details of the management control program as it relates to the processing of department-level accounting entries.

**Recommendation.** We recommend that the Under Secretary of Defense (Comptroller) establish an implementation strategy to eliminate unsupported department-level accounting entries and to minimize other department-level accounting entries to the data used to compile the DoD financial statements.

**Management Comments.** The Under Secretary of Defense (Comptroller) agreed that DoD lacked integrated financial and non-financial feeder systems that would minimize the need for department-level accounting entries to prepare financial statements. He stated that DoD has drafted an implementation strategy to address the issue of unsupported accounting entries during the preparation of financial statements. He also stated that the \$1.4 trillion of accounting entries for the Navy General Fund were related to Marine Corps budgetary data that are entered and later reversed, and the data have no impact on the official Navy General Fund financial statements. See the Finding section for a discussion of management comments, and the Management Comments section for the text of the comments.

**Audit Response.** The Under Secretary of Defense (Comptroller) comments on the recommendation are responsive, but the statement regarding the \$1.4 trillion of Navy General Fund accounting entries is incorrect. Only approximately \$948 billion of the accounting entries were related to Marine Corps appropriations, and not all of the accounting entries affecting Marine Corps appropriations came from budgetary data. DFAS Cleveland Center was given the opportunity to provide evidence documenting the reversal of the accounting entries and was not able to do so. Our audit of accounting entries for the FY 2000 financial reporting cycle will include a more detailed review of the process the DFAS Cleveland Center uses to make accounting entries for the Marine Corps budgetary data.

## Background

The audit was performed in response to the Chief Financial Officers Act of 1990, as amended by the Federal Financial Management Act of 1994. This report is the third in a series of audit reports related to the FY 1999 DoD financial statements. The first report discusses the internal controls and compliance with laws and regulations for DoD and includes audit results of our review of department-level accounting entries. The second report discusses the preparation of the DoD Agency-Wide and DoD Components' Statements of Net Cost and the reporting of performance measures in the Overview section of the DoD financial statements. This report discusses the department-level accounting entries for FY 1999 and incorporates the results of additional audit work completed since the issuance of the first report.

**Chief Financial Officers Act.** The Chief Financial Officers Act of 1990, as amended by the Federal Financial Management Act of 1994, requires DoD to annually prepare audited financial statements. For FY 1999, DoD prepared financial statements for the following reporting entities: the Army, Navy, and Air Force General Funds; the Army, Navy, and Air Force Working Capital Funds (WCFs); the Army Corps of Engineers, Civil Works Program; and the Military Retirement Fund. Those financial statements, as well as accounting data from Other Defense Organizations (ODO) General Funds and WCFs, were used to produce the DoD financial statements for FY 1999.

**Responsibility for Reliable Financial Management Data.** The Military Departments, Defense agencies, and the Defense Finance and Accounting Service (DFAS) are responsible for the reliability of financial management data reported on the FY 1999 financial statements. DFAS reported that approximately 80 percent of the data on the financial statements originated in the mixed systems owned by the Military Departments and Defense agencies. Mixed systems contain the day-to-day operating information to be translated into financial information and processed in finance and accounting systems to be useful for financial managers. Some examples of mixed systems are the acquisition and logistics systems. The reliable input, processing, and eventual reporting of financial data into the finance and accounting systems are the responsibility of the Military Departments and Defense agencies. When data are supplied to the finance and accounting systems, the reliability of the data as they are further processed becomes the responsibility of DFAS.

**Role of the DFAS Centers.** The DFAS centers provide finance and accounting support to DoD organizations. Support includes maintaining department-level accounting records and preparing financial statements from general ledger trial balances and other financial data submitted by DoD field accounting entities and other sources. DFAS uses amounts reported through the accounting systems and information collected from data calls and from other sources to compile the annual financial statements. The compilation process is complicated because much of the financial data submitted to the DFAS centers are not generated by integrated, transaction-driven, general ledger accounting systems.

The DFAS centers processed department-level accounting entries for the DoD reporting entities and ODO financial data. The DFAS centers did not prepare

---

accounting entries directly to the DoD financial statements for FY 1999. Accounting entries were processed into the DFAS accounting systems both by manual entries and system-generated entries.

**Previous Fiscal Year Review of Department-Level Accounting Entries.** In FY 1998, DFAS processed department-level accounting entries to make financial data agree with various data sources and to add new data. DFAS made department-level accounting entries without properly researching and reconciling differences between the accounting data and other data sources or providing adequate audit trails. We identified \$1.7 trillion in department-level accounting entries that were not supported by proper research, reconciliation, or adequate audit trails. Department-level accounting entries were made to the financial data for the Army General Fund, the Army WCF, the Navy General Fund, the ODO General Fund, and the Defense Logistics Agency WCF.

**DoD Financial Statements for FY 1999.** The DoD financial statements for FY 1999 reported \$599 billion in total assets, \$999 billion in total liabilities, \$378 billion in total net cost of operations, and \$628 billion in total budgetary resources. On February 16, 2000, we issued a disclaimer of opinion on the DoD financial statements for FY 1999.

**Implementation Strategies.** DoD acknowledged that financial management system deficiencies prevent it from producing auditable financial data. As an interim solution until compliant financial management and mixed systems are in place, DoD has been improving other aspects of its financial management through the development of DoD implementation strategies. In May 1998, the Deputy Chief Financial Officer began developing implementation strategies to achieve a favorable audit opinion on the DoD financial statements until compliant financial management and mixed systems were in place. As of January 2000, DoD had developed and approved a total of 12 implementation strategies.

## Objectives

Our overall objective was to determine whether the DoD Agency-Wide financial statements for FY 1999 were prepared in accordance with Office of Management and Budget Bulletin No. 97-01, "Form and Content of Agency Financial Statements," October 16, 1996, as amended January 2000. In support of the objective, we identified the department-level accounting entries made to the DoD Component financial data used to prepare departmental reports and the DoD financial statements for FY 1999. In addition, we categorized the department-level accounting entries based on the reason for the entry. We also reviewed the management control program as it related to the audit objective. See Appendix A for a discussion of the audit process and our review of the management control program at the DFAS centers. See Appendix B for a list of prior audits at the DFAS centers related to the audit objectives.

---

## Department-Level Accounting Entries

During FY 1999, the DFAS centers processed approximately \$7.6 trillion in department-level accounting entries to DoD Component financial data used to prepare departmental reports and the DoD financial statements for FY 1999. Of the \$7.6 trillion, \$3.5 trillion were supported, \$2.3 trillion were unsupported or posted to invalid general ledger accounts, and \$1.8 trillion were identified but not reviewed. Although some department-level accounting entries will always be necessary through the normal course of accounting operations and because of the complexity of DoD business practices, there are major concerns about the accounting entries because:

- The DFAS centers had to process 451 department-level accounting entries, valued at \$1,525 billion, to add new data. Many entries were made because DoD did not have adequate integrated systems for compiling accurate and reliable financial data.
- The DFAS centers processed 360 department-level accounting entries, valued at \$602.7 billion, to correct errors.
- The DFAS centers processed 10,161 accounting entries, valued at \$2,306 billion, for which DoD did not perform proper research and reconciliation, maintain adequate documentation and audit trails, and follow accounting principles.

As a result, the DoD financial statements for FY 1999 were subject to a high risk of material misstatement. The sheer magnitude of department-level accounting entries required for FY 1999 highlights the significant problems that DoD encountered in attempting to produce more accurate and reliable financial information using existing systems and processes.

## Guidance

**Section 35, Title 31, United States Code.** The requirements of the Federal Managers' Financial Integrity Act of 1982 for an agency's internal accounting and administrative controls were incorporated in section 3512, title 31, United States Code (31 U.S.C. 3512). That section requires DoD to establish and to implement internal accounting and administrative controls to provide reasonable assurance that "... revenues and expenditures applicable to agency operations are recorded and accounted for properly so that accounts and reliable financial and statistical reports may be prepared and accountability of the assets may be maintained." In addition, 31 U.S.C. 3512 requires DoD to assess the effectiveness of the internal accounting and administrative controls established and implemented.

---

**Office of Management and Budget Circular No. A-123.** Office of Management and Budget Circular No. A-123, "Management Accountability and Control," June 21, 1995, provides guidance to Federal managers on improving the accountability and effectiveness of Federal programs and operations by establishing, assessing, correcting, and reporting on management controls. Office of Management and Budget Circular No. A-123 requires Federal managers to promptly record, properly classify, and account for transactions to prepare timely and reliable accounts and reports.

**General Accounting Office "Standards for Internal Control in the Federal Government."** The General Accounting Office publication, "Standards for Internal Control in the Federal Government," November 1999, provides an overall framework for internal control. The standards state the following:

Control activities occur at all levels and functions of the entity. They include a wide range of diverse activities such as approvals, authorizations, verifications, reconciliations, performance reviews, maintenance of security, and the creation of related records which provide evidence of execution of these activities as well as appropriate documentation.

In addition, the standards require clear documentation of all transactions and other significant events, and the documentation should be readily available for examination.

**DoD Guidance.** DoD has issued guidance for the proper execution of department-level accounting entries. The DoD Financial Management Regulation, DoD Regulation 7000.14-R, volume 6A, "Reporting Policy and Procedures," January 1998, addresses documentation and audit trails necessary to support department-level accounting entries. In addition, DFAS headquarters policy guidance issued in October 1999 established requirements for processing department-level accounting entries.

## Department-Level Accounting Entries

**Department-Level Accounting Entries for FY 1999.** The DFAS centers processed approximately \$7.6 trillion in department-level accounting entries to the DoD Components' financial data used to prepare departmental reports and the DoD Agency-Wide financial statements for FY 1999. The department-level accounting entries were processed to force financial data to agree with various data sources, to correct errors, and to add new data. Of the \$7.6 trillion, proper research, reconciliations, and adequate audit trails supported \$3.5 trillion of the department-level accounting entries. However, accounting entries of \$2.3 trillion were made to force financial data to agree with various sources without adequate research and reconciliation, were made to force buyer and seller data to agree in preparation for eliminating entries, did not contain adequate audit trails and documentation, or did not follow accounting principles. Because of time and staff constraints, we identified but did not review \$1.8 trillion of accounting entries and, therefore, we did not determine whether they were adequately supported. The following table identifies the results of our

review of department-level accounting entries made to the DoD Components' financial data. The data contained in the table have been updated to incorporate the results of our additional audit work completed since the issuance of Inspector General, DoD, Report No. D-2000-091, "Internal Controls and Compliance With Laws and Regulations for the DoD Agency-Wide Financial Statements for FY 1999," February 25, 2000. That report addresses \$6.9 trillion in entries, which consisted of \$2.6 trillion of supported accounting entries, \$2.3 trillion of unsupported accounting entries, and \$2.0 trillion of unreviewed entries.

Department-Level Accounting Entries for FY 1999 (dollars in billions)				
Department-Level Accounting Entries	Supported (entries)	Unsupported or Invalid (entries)	Not Reviewed (entries)	Total (entries)
Army General Fund	\$ 175.4 (176)	\$ 290.2 (192)	\$ 4.1 (12)	\$ 469.7 (380)
Army Working Capital Fund	54.0 (90)	127.8 (105)	0 (0)	181.8 (195)
Navy General Fund	158.9 (276)	1,463.2 (9,348)	1,781.5 (4,789)	3,403.6 (14,413)
Navy Working Capital Fund	549.5 (35)	48.0 (39)	7.3 (159)	604.8 (233)
Air Force General Fund	1,156.1 (363)	66.6 (89)	0 (0)	1,222.7 (452)
Air Force Working Capital Fund	90.5 (293)	79.1 (245)	11.2 (32)	180.8 (570)
ODO General Fund	557.9 (62)	179.9 (24)	0.5 (19)	738.3 (105)
ODO Working Capital Fund	65.7 (77)	51.0 (119)	4.7 (4)*	121.4 (200)*
Military Retirement Fund	661.7 (1)	0 (0)	0 (0)	661.7 (1)
<b>Total</b>	<b>\$3,469.7</b> <b>(1,373)</b>	<b>\$2,305.8</b> <b>(10,161)</b>	<b>\$1,809.3</b> <b>(5,015)</b>	<b>\$7,584.8</b> <b>(16,549)</b>

\*The scope of accounting entries reviewed for the ODO WCF was limited to Defense Logistics Agency entries processed by the DFAS Columbus Center (\$12.2 billion) and ODO WCF entries processed by the DFAS Denver Center (\$109.2 billion). Therefore, the total amount of accounting entries to the ODO WCF financial statements is unknown.

The reason the number and value of accounting entries for the Navy General Fund is so much larger than for the other reporting entities was in part because of the way financial data are processed by DFAS Cleveland Center. DFAS Cleveland Center uses general ledger accounts and posts Navy financial data, some of which impact the financial statements, every month and at year-end in preparation for monthly and year-end reporting. The process used to prepare financial statements varies from center to center and thus by Service and fund. As a result, the number of department-level accounting entries processed by

---

each of the centers varies significantly. Monthly posting of financial data is in fact preferable to a once-a-year summary process as it provides an opportunity to adjust accounting reports to reflect the most current data.

**Comparison of Audit Work Performed for FYs 1998 and 1999.** We reviewed portions of the department-level accounting entries for DoD reporting entities and identified approximately \$1.7 trillion in unsupported entries made to selected reporting entities for FY 1998. Because of problems noted, we expanded the scope of our audit work for FY 1999. The DFAS Indianapolis Center made progress in reducing the unsupported department-level accounting entries that affect the Army General Fund financial statements. The DFAS Indianapolis Center decreased the amount of unsupported department-level accounting entries processed into the financial data used to compile the Army General Fund financial statements from \$673 billion in FY 1998 to \$290 billion in FY 1999.

For FY 1999, we attempted to identify all the department-level accounting entries that the DFAS centers made. However, because of resource constraints and other accounting classification issues, we were not able to identify the total number of department-level accounting entries and their dollar values that the DFAS centers made to DoD Component financial data used to prepare departmental reports and the DoD financial statements for FY 1999.

### Supported Department-Level Accounting Entries

The DFAS centers processed 1,373 department-level accounting entries, valued at \$3,470 billion, for which proper research and reconciliations were performed and adequate audit trails existed. The department-level accounting entries were made to do the following:

- enter new data into the accounting records,
- correct errors, and
- meet the requirements of accounting principles and other guidance.

**Data Entries.** The DFAS centers processed 451 department-level accounting entries, valued at \$1,525 billion, to add new data into the accounting records. The DFAS centers were required to process some department-level accounting entries, such as actuarial estimates, that could not be generated through transaction-driven integrated accounting systems. The data came from outside sources over which the DFAS centers had little or no direct influence. For example, DFAS processed a department-level accounting entry for \$661.7 billion to record the liability for military retirement pensions. The department-level accounting entry was properly supported, and we verified that the amount was accurate. Although some department-level accounting entries were properly supported, they could not be verified through audit. For example, the DFAS centers processed department-level accounting entries, valued at \$79.7 billion, to record environmental liabilities based on documentation that the Military Departments provided. However, because of

insufficient controls that DoD used to develop the estimates, auditors could not verify the accuracy of the reported amount. Also, DFAS processed a department-level accounting entry to record the \$196 billion Military Retirement Health Benefits Liability. The Assistant Secretary of Defense (Health Affairs) acknowledged that the reported amount was unreliable.

The DFAS centers also processed department-level accounting entries to add new data into the accounting records that normally should be generated through a transaction-driven integrated financial management system. Instead, the DFAS centers were forced to prepare data calls for field organizations to obtain amounts to be reported on line items such as property, plant, and equipment and inventory because the current financial management systems were not capable of generating that information. The information should be available to DoD managers throughout the year, not just reported through data calls conducted once a year. DoD developed long-term plans to correct all critical financial management system deficiencies. We will assess the adequacy of DoD long-term plans in separate audit reports. Therefore, we are not making recommendations in this report regarding DoD plans to correct financial management system deficiencies.

**Corrections of Errors.** The DFAS centers processed 360 department-level accounting entries, valued at \$602.7 billion, to correct accounting errors. Errors were created by field and department-level personnel and by deficiencies in automated systems. Errors should be minimized to ensure the integrity of the data used to prepare the financial statements. DoD should establish an implementation strategy addressing department-level accounting entries, including minimizing errors.

**Entries Required by Guidance.** The DFAS centers processed 562 department-level accounting entries, valued at \$1,342 billion, to record entries required by guidance. They included department-level accounting entries that were required by the DoD Financial Management Regulation and were properly supported. For example, the DoD Financial Management Regulation volume 11, chapter 55, requires that DoD inventory be valued at the latest acquisition cost for financial statement presentation. However, to record inventory on the financial statements at latest acquisition cost, DoD organizations that maintain inventory values at the selling price adjust the inventory values to latest acquisition cost by removing operating cost recovery amounts.

### **Unsupported or Invalid Department-Level Accounting Entries**

The DFAS centers processed 10,161 unsupported or invalid department-level accounting entries, valued at \$2,306 billion. The department-level accounting entries were unsupported or invalid because of the following:

- they were made to force general ledger data to agree with data from other sources without adequate research and reconciliation;
- they were made to force buyer and seller data to agree in preparation for eliminating entries; and

- they did not follow accounting principles, did not contain adequate supporting documentation, or did not contain adequate audit trails.

**Entries to Force Financial Data to Agree With Various Sources.** The DFAS centers processed department-level accounting entries, valued at \$431 billion, to force financial data from various sources to agree without performing the proper research and reconciliations. DFAS headquarters guidance requires that, when accounting personnel process accounting entries made to force financial data from various sources to agree, they must document the reason for the discrepancy and explain how they determined the proper source to be correct. For example, DFAS Indianapolis Center identified \$148.5 billion of differences between various financial data sources used to prepare the Army General Fund financial statements. Instead of conducting the proper research to identify the correct amount to be reported, the DFAS Indianapolis Center processed 51 department-level accounting entries to force the various amounts to agree without performing the proper reconciliations. Without proper research and reconciliation, management's ability to support the financial data is impaired. Proper research and reconciliation are important management responsibilities and control required by the Office of Management and Budget and the General Accounting Office.

**Entries to Force Buyer and Seller Data to Agree.** In FY 1999, DoD conducted \$111 billion worth of business between DoD Components. When DoD prepared the DoD Agency-Wide financial statements for FY 1999, it eliminated the effects of financial transactions among the DoD Components. Amounts reported for revenues, expenses, assets, and liabilities should be reported based on transactions with outside parties. Guidance that the Office of the Under Secretary of Defense (Comptroller) issued requires that the DFAS centers, in conjunction with the DoD Components, accumulate seller data and use them to adjust the buyer accounts at the reporting entity level. We identified department-level accounting entries, valued at approximately \$140 billion, that the DFAS centers processed to force buyer data to match seller data in preparation for the eliminations on the DoD financial statements for FY 1999 without conducting the proper research and reconciliations. The Office of the Under Secretary of Defense (Comptroller) stated that the guidance requiring the buyer and seller data to match was the result of U.S. Treasury requirements. Even though DoD was making the entries as a result of requirements over which it had no control, it made the entries without performing the proper reconciliations as required by the Office of Management and Budget and the General Accounting Office. Further details on entries to force the buyer and seller data to agree and eliminations will be addressed in a separate report.

**Other Unsupported or Invalid Department-Level Accounting Entries.** The DFAS centers processed 9,755 department-level accounting entries, valued at \$1,735 billion, that did not follow accounting principles, did not contain adequate supporting documentation, or did not contain adequate audit trails. For example, DFAS Cleveland Center processed 9,348 department-level accounting entries, valued at \$1.5 trillion, that posted transactions to invalid general ledger accounts. The transactions were not logical accounting and did not follow accounting principles. Additional information on the entries to invalid general ledger accounts is contained in Inspector General, DoD, Report No. D-2000-137, "Accounting Entries and Data Processing for the FY 1999

---

Department of the Navy General Fund Financial Statements," June 1, 2000. In addition, we identified numerous examples of documentation and audit trail problems. For example, DFAS Denver Center processed a department-level accounting entry for the Air Force WCF for which no documentation was attached to support the entry. Another example involved a department-level accounting entry that DFAS Cleveland Center processed for the Navy WCF that also did not have supporting documentation of any kind.

### **DoD Implementation Strategies**

As an interim solution until compliant financial management and mixed systems were in place, DoD was improving other aspects of its financial management through various initiatives. One such initiative was the development of DoD implementation strategies for financial management areas needing improvement. The implementation strategies are a step toward achieving a favorable audit opinion. However, the Inspector General, DoD; the Under Secretary of Defense (Comptroller); the Office of Management and Budget; and the General Accounting Office believe that the long-term plan needs to address additional areas related to financial management systems and processes. Although DoD developed 12 implementation strategies for various financial management areas needing improvement, it did not address department-level accounting entries. The department-level accounting entries is an area that DoD should address.

### **Summary**

DoD will always make some department-level accounting entries to reflect needed adjustments to the accounting data. However, DoD made many of the accounting entries to add new data into the accounting records because DoD lacked integrated financial management systems that meet Federal financial management system requirements and accounting principles. DoD acknowledged that deficiencies exist and developed long-term plans to correct all critical financial management systems.

Although DFAS adequately supported \$3.5 trillion of accounting entries, many could not be verified through audit, and \$602.7 billion in entries were made to correct errors. In addition to its long-term system correction plans, DoD should focus efforts on improving the accuracy of accounting entries made and minimizing error corrections.

DoD did not perform proper research and reconciliations, did not follow accounting principles in making accounting entries, and did not maintain adequate documentation and audit trails for \$2.3 trillion of department-level accounting entries. The accounting entries indicate potential problems in DoD financial management systems and processes. Until compliant financial management systems are in place, DoD could improve the accuracy of its financial data by following accounting principles and including the proper support for any accounting entries made to the accounting records.

---

As a result of processing \$7.6 trillion of department-level accounting entries, of which \$2.3 trillion could not be supported or were made to invalid general ledger accounts, the DoD Agency-Wide financial statements for FY 1999 were subject to a high risk of material misstatement. The lack of research, reconciliation, and audit trails impaired the auditors' ability to validate the department-level accounting entries. The magnitude of department-level accounting entries required to compile the DoD financial statements highlights the significant problems that DoD had in producing accurate and reliable financial statements with existing systems and processes.

### Management Comments on Finding and Audit Response

**Management Comments.** The Under Secretary of Defense (Comptroller) stated that the \$1.4 trillion of department-level accounting entries for the Navy General Fund were related to the process that DoD used to reflect the Marine Corps budgetary data on monthly budgetary reports and that none of the \$1.4 trillion was used to prepare the Navy General Fund financial statements. In addition, the Under Secretary of Defense (Comptroller) stated that the discussion of the accounting entries to record environmental liabilities and the Military Retirement Health Benefits Liability was contradictory and a source of confusion because the entries were classified as supported and suggested that we delete the discussion from this report.

**Audit Response.** The Under Secretary of Defense (Comptroller) statement that the \$1.4 trillion of Navy General Fund department-level accounting entries were related to Marine Corps budgetary data is incorrect. Only approximately \$948 billion of the department-level accounting entries were related to Marine Corps appropriations, and based on our review of accounting during FY 2000, not all of the entries affecting Marine Corps appropriations that DFAS Cleveland Center entered came from the Marine Corps budgetary data. DFAS Cleveland Center was given the opportunity during the audit to provide evidence documenting the reversal of the department-level accounting entries for the Marine Corps budgetary data and was not able to do so. Our audit of department-level accounting entries for the FY 2000 financial reporting cycle for the Navy General Fund will emphasize a review of the process the DFAS Cleveland Center uses to make department-level accounting entries for the Marine Corps budgetary data.

The \$1.4 trillion in department-level accounting entries for the Navy General Fund are discussed in Inspector General, DoD, Report No. D-2000-137, "Accounting Entries and Data Processing for the FY 1999 Department of the Navy General Fund Financial Statements," June 1, 2000.

All of the \$1.4 trillion of unsupported accounting entries that DFAS Cleveland Center processed for the Navy were made to invalid general ledger accounts. We classified the entries as "unsupported" because they were made to invalid general ledger accounts, and because DFAS Cleveland Center did not provide supporting documentation for the accounting entries. DFAS Cleveland Center has begun to initiate changes in how it processes and explains accounting

---

adjustments for FY 2000 department-level accounting entries. We are also working with DFAS Cleveland and Kansas City centers to eliminate the need for using invalid general ledger accounts.

The amounts included on the financial statements for environmental liabilities and the Military Retirement Health Benefits Liability were estimates developed by outside sources, such as the Military Departments, and provided to DFAS. DFAS then processed the accounting entries using the correct debits and credits. However, because of insufficient controls used to develop the estimates, auditors were unable to verify whether the estimates provided to DFAS were accurate. It is significant to note the issues in this report because although DFAS followed proper procedures to record the liabilities, it had no certainty that the estimates themselves were reliable.

### **Recommendation and Management Comments**

**We recommend that the Under Secretary of Defense (Comptroller) establish an implementation strategy to eliminate unsupported department-level accounting entries and to minimize department-level accounting entries to the data used to compile the DoD Component and DoD financial statements. The implementation strategy should include, but not be limited to the following:**

- **review and clarification of policies related to department-level accounting entries,**
- **review of financial management system plans to ensure requirements are included to eliminate unsupported and minimize other department-level accounting entries, and**
- **development of a metric to measure progress in eliminating unsupported and minimizing other department-level accounting entries.**

**Management Comments.** Although the comments from the Under Secretary of Defense (Comptroller) did not state specific concurrence with the recommendation, the Under Secretary of Defense (Comptroller) drafted an implementation strategy to address the issue of unsupported accounting entries during the preparation of financial statements. The Under Secretary of Defense (Comptroller) stated that DFAS; the Inspector General, DoD; and other DoD Components will meet to attempt to address the level of documentation to support accounting entries. In an attempt to reduce the number of unsupported accounting entries, the draft strategy requires that guidance be developed requiring approving officials to certify all categories of accounting entry vouchers.

The Under Secretary of Defense (Comptroller) stated that the current process used to prepare the financial statements relies heavily on department-level accounting entries because the systems used to generate the financial data are not integrated. As system improvements are made, the financial statement process will become less dependent on department-level accounting entries.

---

To measure progress in eliminating unsupported and minimizing other department-level accounting entries, DFAS intends to use the Defense Departmental Reporting System to produce the FY 2000 financial statements and to identify the number and types of accounting entries processed.

---

## Appendix A. Audit Process

### Scope

**Work Performed.** We reviewed \$5.8 trillion of the \$7.6 trillion department-level accounting entries that the DFAS centers processed. The department-level accounting entries adjusted financial data used to prepare the DoD Component financial reports and financial statements for FY 1999. We reviewed guidance requiring or resulting in department-level accounting entries in addition to guidance on the documentation necessary to support the entries. We developed categories for use in classifying the department-level accounting entries that the DFAS centers processed and identified the type and scope of department-level accounting entries for FY 1999. We reviewed the department-level accounting entries to determine whether they were adequately supported, maintained adequate audit trails, and were in compliance with accounting principles.

**Limitations to Audit Scope.** We attempted to identify all the department-level accounting entries made by the DFAS centers that impacted the DoD financial report and financial statements for FY 1999. However, because of resource constraints and other accounting classification issues, we were not able to identify the total number of department-level accounting entries and their dollar values made by the DFAS centers that may have impacted the DoD financial statements for FY 1999.

**DoD-Wide Corporate-Level Government Performance and Results Act Coverage.** In response to the Government Performance and Results Act, the Secretary of Defense annually establishes DoD-wide corporate-level goals, subordinate performance goals, and performance measures. This report pertains to achievement of the following goal, subordinate performance goal, and performance measures.

- **FY 2001 DoD Corporate-Level Goal 2:** Prepare now for an uncertain future by pursuing a focused modernization effort that maintains U.S. qualitative superiority in key warfighting capabilities. Transform the force by exploiting the Revolution in Military Affairs, and reengineer the Department to achieve a 21<sup>st</sup> century infrastructure. (01-DoD-2)
- **FY 2001 Subordinate Performance Goal 2.5:** Improve DoD financial and information management. (01-DoD-2.5)
- **FY 2001 Performance Measure 2.5.1:** Reduce the number of noncompliant accounting and finance systems. (01-DoD-2.5.1.)
- **FY 2001 Performance Measure 2.5.2:** Achieve unqualified opinions on financial statements. (01-DoD-2.5.2.)

---

**DoD Functional Area Reform Goals.** Most major DoD functional areas have also established performance improvement reform objectives and goals. This report pertains to achievement of the following functional area objectives and goals.

- **Financial Management Area. Objective:** Strengthen internal controls. **Goal:** Improve compliance with the Federal Managers' Financial Integrity Act. (FM-5.3)

**General Accounting Office High-Risk Area.** The General Accounting Office has identified several high-risk areas in the DoD. This report provides coverage of the Defense Financial Management high-risk area.

## Methodology

**Use of Computer-Processed Data.** We could not rely on the computer-processed data used to prepare the DoD Component and DoD Agency-Wide financial statements for FY 1999. DoD financial management systems were unreliable. DoD candidly addressed deficiencies in its financial management systems in the Annual Statement of Assurance, the DoD Financial Management Improvement Plan, and the management representation letter for the DoD financial statements for FY 1999. Unreliable computer-processed data were used in preparing the departmental entries, the financial statements, and this report because they were the only data available. We planned to continue to review the adequacy of existing and proposed financial management systems.

**Audit Type, Dates, and Standards.** We performed this financial-related audit at the DFAS centers from July 13, 1999, through April 12, 2000. The audit was made in compliance with auditing standards established by the Comptroller General of the United States, as implemented by the Inspector General, DoD, and with Office of Management and Budget guidance; however, we limited our scope as noted in this appendix. The audit included tests of management controls as we considered necessary.

**Contacts During the Audit.** We visited or contacted individuals and organizations within the DoD. Further details are available on request.

## Management Control Program

DoD Directive 5010.38, "Management Control (MC) Program," August 26, 1996, requires DoD organizations to implement a comprehensive system of management controls that provide reasonable assurance that programs are operating as intended and to evaluate the adequacy of the controls.

**Scope of the Review of the Management Control Program.** We reviewed management controls over the DFAS centers' processes and procedures for

---

recording department-level accounting entries into the financial data used to compile the DoD Component and the DoD financial statements for FY 1999. We also reviewed management's self-evaluation of controls over the DFAS centers' processes and procedures for department-level accounting entries.

**Adequacy of Management Controls.** We identified a material management control weakness as defined in DoD Instruction 5010.40, "Management Control (MC) Program Procedures," August 28, 1996. Management controls at the DFAS centers were not adequate to ensure that all department-level accounting entries were adequately supported. The details and results of management control reviews at each of the DFAS centers will be addressed in the reports on the financial statement compilation process at the individual DFAS centers. The control weakness identified and our recommendation for improvements are discussed in the finding in this report. The recommendation, if implemented, will improve the controls over processing and adequately supporting department-level accounting entries. A copy of this report will be provided to the senior official responsible for management controls at the DFAS centers.

**Adequacy of Management's Self-Evaluation.** DoD identified in the Annual Statement of Assurance for FY 1999 inadequacies in its accounting processes and systems. However, the Annual Statement of Assurance does not specifically address processing of department-level accounting entries. The adequacy of management's self-evaluation over the processes and procedures for department-level accounting entries at each of the DFAS centers will be addressed in the reports on the financial statement compilation process at the individual DFAS centers.

## Under Secretary of Defense (Comptroller) Comments

OFFICE OF THE UNDER SECRETARY OF DEFENSE  
1100 DEFENSE PENTAGON  
WASHINGTON, DC 20301-1100

JUN 23 2000

MEMORANDUM FOR DIRECTOR, FINANCE AND ACCOUNTING DIRECTORATE,  
OFFICE OF THE INSPECTOR GENERAL

SUBJECT: Office of the Inspector General, Department of Defense Draft Audit Report,  
"Department-Level Accounting Entries Impacting the DoD Financial Statements  
for FY 1999," Dated April 12, 2000 (Project No. D2000FT-0063.004)

This is in response to the subject Office of the Inspector General, Department of Defense  
draft report.

The process of preparing financial statements for the Department is dependent on  
department-level accounting entries. Currently, the Department's financial and nonfinancial  
feeder systems lack the integration that would minimize the need for these accounting entries.  
The Department has drafted an implementation strategy that has the objective of better ensuring  
accounting entries are supported by appropriate documentation. Detailed comments on the  
finding and recommendation contained in the report are provided in the attachment.

The point of contact for this matter is Ms. Barbara Zientek. She may be reached by  
e-mail: [zientekb@osd.pentagon.mil](mailto:zientekb@osd.pentagon.mil) or by telephone at (703) 697-8618 (DSN 227-8618).

  
Nelson Toye  
Deputy Chief Financial Officer

OFFICE OF THE INSPECTOR GENERAL DRAFT AUDIT REPORT  
 "DEPARTMENT-LEVEL ACCOUNTING ENTRIES IMPACTING THE DOD  
 FINANCIAL STATEMENTS FOR FY 1999"  
 DATED APRIL 12, 2000  
 (PROJECT NO. D2000FI-0063.004)

\*\*\*\*\*

COMMENTS ON THE FINDING

**Finding page 5:** The table on page 5 shows that the Navy General fund has \$1,463.2 billion in unsupported accounting entries. Page 5 also contains the following statement regarding these accounting entries: "DFAS Cleveland uses general ledger accounts and posts Navy financial data which impacts the financial statements every month and at year-end in preparation for monthly and year-end reporting."

**Management Comments:** The \$1,463.2 billion reported as unsupported accounting entries for the Navy General fund are related to the process that the Department of Defense (DoD) used to reflect the Marine Corps budgetary data on monthly Department of the Navy (DoN) budgetary reports. The Defense Finance and Accounting Service (DFAS) Cleveland Center prepares consolidated departmental reports for the DoN that include both Navy and Marine Corps data. Marine Corps data is prepared by the DFAS Kansas City Center. At the DFAS Cleveland Center, hard copy Marine Corps Report on Budget Execution (SF 133) data is used to prepare the Navy SF 133. The Marine Corps SF 133 budgetary data input from the DFAS Kansas City Center is entered via a journal voucher process and then reversed after the SF 133 report preparation. About three or four days later, the DFAS Kansas City Center provides the DFAS Cleveland Center a detailed electronic budgetary trial balance dataset at the level necessary to produce the Appropriation Status by Fiscal Year Program and Subaccounts (DD Form 1002). Therefore, the data from the SF 133 is replaced by the detailed data when it becomes available. Since the SF 133 data is replaced, it has no impact on the financial statements. The annual audited financial statements are prepared using the detail-level year-end amounts. Therefore, none of the referenced \$1,463.2 billion was used to prepare the Navy's official financial statements.

This office does not agree that the entries were unsupported. The Office of the Inspector General (OIG), DoD claimed that all of these entries were unsupported because (1) there was not a fully integrated system to enter budgetary trial balance data from the DFAS Kansas City Center to the DFAS Cleveland Center departmental system, and (2) the DFAS Cleveland Center used a pseudo general ledger account in the journal voucher process to establish budgetary accounts based on the SF 133 data. The entries were supported by the hard copy SF 133s provided by the DFAS Kansas City Center. The use of a pseudo general ledger account had no effect on the Marine Corps SF 133 data reflected in the Navy departmental SF 133. This office agrees that the use of the hardcopy SF 133 and the journal voucher process is not the most efficient process to enter Marine Corps data into the Navy SF 133. The DFAS is reviewing the process and plans to have

Attachment

a better procedure in place before the end of FY 2000 for the DFAS Kansas City Center to provide budgetary trial balance data to the DFAS Cleveland Center departmental system.

The accounting entries had no effect on the published annual financial statements. The summary entries only affected the monthly SF 133. All the entries had been reversed before preparing the annual financial statements. The Navy's Statement of Budgetary Resources was compiled using the detailed electronic dataset that has all the DFAS Kansas City Center trial balance data, not the summary information.

**Finding pages 6 and 7: Supported Department-Level Accounting Entries.** "Although some department-level accounting entries were properly supported, they could not be verified through audit. For example, the DFAS Centers processed departmental-level accounting entries, valued at \$79.7 billion, to record environmental liabilities based on documentation that the Military Departments provided. However, because of insufficient controls that the DoD used to develop the estimates, auditors could not verify the accuracy of the reported amount. Also, the DFAS processed a department-level accounting entry to record the \$196 billion Military Retirement Health Benefits Liability. The Assistant Secretary of Defense (Health Affairs) acknowledged that the reported amount was unreliable."

**Management Comments:** The sentences appear contradictory and are a source of confusion. This office recommends that they be deleted. Since the OIG, DoD has determined that these entries were supported entries, addressing them in this context unnecessarily complicates the discussion of the need for improved processing controls and documentation for department-level accounting entries.

\*\*\*\*\*

#### COMMENTS ON RECOMMENDATIONS

**RECOMMENDATION 1:** The OIG, DoD recommended that the Under Secretary of Defense (Comptroller) (USD(C)) establish an implementation strategy to eliminate unsupported department-level accounting entries and to minimize department-level accounting entries to the data used to compile the DoD Component and DoD financial statements. The implementation strategy should include, but not be limited to the following:

- Review and clarification of policies related to department-level accounting entries,
- Review of financial management system plans to ensure requirements are included to eliminate unsupported and minimize other department-level accounting entries, and
- Development of a metric to measure progress in eliminating unsupported and minimizing other department-level accounting entries.

**OUSD(C) Response:** An implementation strategy which addresses the issue of unsupported accounting entries during the preparation of financial statements has been drafted. The draft implementation strategy states that the DFAS, the OIG, DoD, and other DoD Components will

Attachment

meet to attempt to address the level of documentation that is desired by the OIG, DoD in order to state that applicable accounting entries are supported. The draft implementation strategy states that guidance will be developed requiring all categories of accounting entry vouchers to be certified by approving officials. This control is expected to significantly reduce the number of alleged unsupported accounting entries.

The current process used to prepare financial statements is dependent on department-level accounting entries because financial and nonfinancial feeder systems are not integrated. Therefore, the only way to compile the information necessary to produce financial statements is through department-level accounting entries. As system improvements are implemented, the financial statement process will become increasingly less dependent on the department-level accounting entries. However, it should be noted that accounting entries are normal in the preparation of financial statements for both government entities and private sector companies and always will be part of the process.

With regard to the alleged unsupported adjustments, one reason that a full audit trail may not exist is that the detail data that is desired by the auditors may not be available in the current systems. As a result, management estimates are used in some cases to allocate amounts for which the lower level of detail is not available. As improved systems are implemented, more detailed data and better audit trails will become available.

For fiscal year 2000, audited financial statements are expected to be produced using the Defense Departmental Reporting System (DDRS). The DDRS is expected to capture transaction information in such a manner that the DFAS should be able to determine how many accounting entries were processed individually through the DDRS. Additionally, the DDRS will require that each accounting entry be classified into one of the following categories: identified errors and reasonableness checks, reconciliation of trial balance and budget execution reports, balancing entries for eliminations, supply management inventory, reclassification of accounts, audit recommended journal vouchers, customer requested journal vouchers, data call entry, recognition of undistributed disbursements and collections, and other accruals and reversals. Based on the information provided by the DDRS and management reviews, the DFAS is expected to be able to measure the progress in eliminating any unsupported entries, as well as minimizing other department-level accounting entries.

Salvatore G. Guli  
Richard B. Bird  
Jack L. Armstrong  
Cindi M. Miller  
Cheri D. Givan  
John E. Aber  
Noelle Blank

Chairman LEVIN. Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman.

Mr. Chairman, I ask my opening statement be placed in the record.

Chairman LEVIN. It will be.

[The prepared statement of Senator Akaka follows:]

### PREPARED STATEMENT BY SENATOR DANIEL K. AKAKA

Thank you, Mr. Chairman.

I am honored to join the committee for today's hearing. I want to thank you, Mr. Chairman, for providing me with the opportunity to participate today.

I look forward to working with you and Senator Warner and the other distinguished members on this committee to address issues involving our National Security and our Armed Forces, beginning with the confirmation hearing for the Secretary of Defense.

The Department of Defense has a substantial impact on my home State of Hawaii. We proudly have military installations from every Armed Service branch in the State of Hawaii.

We have traditionally had a very good relationship with the United States military, and I look forward to continuing to work with the Department of Defense in fostering these relationships.

I am familiar with Mr. Rumsfeld's experience, accomplishments and impressive record, including his service as the chair of the U.S. Ballistic Missile Threat Commission.

I look forward to hearing more from Mr. Rumsfeld on his vision for our Nation's security and military preparedness, and again, I thank my colleagues on the committee for welcoming me to participate today.

Senator AKAKA. Mr. Chairman, we are sitting in this hearing with a man who has had tremendous experience, and has had lots of confidence given by others, and is now being considered for Defense Secretary. After reading your bio, I think that this is the kind of person we would expect much from because of your experience. I think, talking about deals, I think we have a good deal in hand with you.

In the Pacific and in other areas, we have had some issues, and besides issues of appropriate funding, issues of the criteria for the deployment of U.S. troops, and necessary situations. There have been issues in the community regarding encroachment, including the importance of dealing with communities surrounding military installations and training ranges, and the environmental constraints on training ranges.

I must tell you that in Hawaii we have had over the years, as long as I can remember, very, very good relationships with the

military. We work well together. We live well together. We respect the leadership of the military, and they have helped us out in many ways.

Now, they have really tried to deal with our communities as well, so encroachment is an issue. I understand you intend to deal with these issues in a more comprehensive and systematic fashion, and that you are open to work with all parties involved, so my question to you is, how do you intend to implement a more comprehensive approach to these issues?

Mr. RUMSFELD. Well, I wish I had an answer that represented a solution to the problems. As you properly point out, not just in the United States, including Puerto Rico, and Japan, and in other parts of the world where the United States Armed Forces has a presence there are pressures and difficulties that run to this issue that is characterized as encroachment.

I do not know the way the encroachment goes, whether the base is encroaching or the community is encroaching on the base, which happens to be historically the case in most instances, but it is a problem that is real, it is serious. The United States needs bases, it needs ranges, it needs test ranges, and it cannot provide the training and the testing that people need before they go into battle unless those kinds of facilities are available, and each year that goes by there are greater and greater pressures on them.

Admittedly, I suspect, and I do not know enough to say, but I suspect that, as with many things, there are ways that technology can assist us in these areas that will enable the military to do things that they need to do that they used to do physically that they will be able to do with computers and various other types of technologies. Certainly that is true with all kinds of simulations and what-have-you, but you cannot do everything, and you do need to do live fire for people before they go into battle to have some sense of what that is like.

I am afraid it is not so much a problem as a fact of our times that, not to be solved, but to be coped with over a period of time. I think it is going to be a constant pressure on the defense establishment, and all we can do is our best.

Senator AKAKA. I was glad to hear your commitment to research and development, and how you feel about not standing still, or static, but in order to move ahead we must move into areas like that.

You also mentioned in your response to Senator Kennedy the book on the Corona satellite program. I feel that space and the military, of course, can work so much together. What role, if any, do you see for the new commercial satellite imaging industry to supplement our classified systems?

Mr. RUMSFELD. My impression is that the United States Government, including the military, will and should be increasingly using commercially available capabilities, satellite capabilities. Whether it is communications or imagery, there are a great many instances when you could take available off-the-shelf products and services of the type and use them to great effect.

Senator AKAKA. I know you are well-versed in missile defense. In your response to the committee's advance policy questions you state, before deploying a national defense, missile defense, a factor to be considered is, and I quote, "the urgency of the ballistic missile

threat to the United States.” How do you assess the urgency of that threat now, and has it changed since the Rumsfeld Commission report?

Mr. RUMSFELD. The Ballistic Missile Threat Commission I think have the subject right, and I think that has been agreed to by both Secretary Cohen and by others. What has happened in the intervening 2 years is that time has passed. Proliferation has continued. People have advanced in their development programs of missiles and weapons of mass destruction.

I do not believe it possible to stop the proliferation of things we do not want proliferated. I think we ought to try, and we ought to work hard at it, but the reality is today that in this relaxed environment, and so much available on the Internet, and so many people willing to sell almost anything for a price, that we have to learn to live in that world, and we are capable of living in that world. There is no question but that we can do it, and so I think that time passes, and capabilities grow.

Senator AKAKA. Thank you very much. My time is up. I just want you to know that you have my support.

Mr. RUMSFELD. Thank you, sir.

Chairman LEVIN. Thank you, Senator Akaka.

Senator Bunning.

Senator BUNNING. Thank you, Mr. Chairman. I first want to say that I am honored to serve with all of the other people on this committee, this esteemed Senate Armed Services Committee. It has been a promise I made to my constituents, and a desire of mine since coming to the Senate 2 years ago, to serve on this great committee, and I am very happy to be here.

Second, Secretary Rumsfeld, welcome. It is good to see you. Assuming you are confirmed as the next Secretary of Defense, I am looking forward to working with you and your Department of Defense.

Of course, the United States has the strongest military in the world. There is no arguing that fact. However, our biggest challenge may be to keep it strong, and to redefine it in this new century.

It has been said that our military is stressed, overdeployed, and underfunded. Many talk of the last 10 years as the decade of decline for our military. I hope you find it not to be true.

I look forward to this committee and Congress working with you to take on the tough issues regarding missile defense, the readiness of our military, particularly recruitment and retention, and the overall wellbeing and safety of our citizens, soldiers, and Nation.

Over the past 8 years, I have watched generals and officers come before this committee and testify about the readiness and overall strength of the military. Time and facts have proven that they were either ill-informed or not giving Congress the full picture as to what really was happening, for whatever reasons, with our military.

I simply ask you that you urge those under your watch to tell us the truth, the good, the bad, and sometimes the ugly, for only with the truth can we help to shape a military through policy and funding that is strong and ready to protect this Nation with peace through strength throughout the world.

Now, I am looking forward to working with you. As I stated, over the last 8 years many generals have testified before this committee regarding the overall readiness, strength, and quality of our military. Time and facts have proven the generals were either ill-informed or not fully up-front with the committee, and things turned out worse than they had testified. Therefore, we in Congress made decisions about funding and policy based on the words of those generals. What will you do to make sure that this does not happen again under your watch?

Mr. RUMSFELD. Well, I suppose for one thing, if I find that people are telling Congress something that is not so, you will not find them back up here telling Congress anything.

Senator BUNNING. We can count on that?

Mr. RUMSFELD. Yes, sir.

Senator BUNNING. Senator Allard talked about this, but I think it needs to be reiterated, about the military ballots, particularly voting by our soldiers on bases. We know that there was a proposal to not allow our military to vote on bases, and Congress stopped that and allowed it to happen for one more year.

I would like to ask you the question if you think that is the right or wrong thing to do, that we continue to extend the privilege to our military to vote on base?

Mr. RUMSFELD. I do not know enough about it to answer. I am not an attorney. I do not know the extent to which State law governs, and I am simply not current, and I should be, and I will get current.

Senator BUNNING. Can you give me a general idea about your thinking about military people voting on bases, if it is legal?

Mr. RUMSFELD. If it is legal, sure. I just do not know enough about the legalities, but I think that in our country we like to have people participate in the elections of our country, and certainly people who are serving in the Armed Services ought to be treated at least equally in terms of having an opportunity to vote.

To the extent the defense establishment can find ways to facilitate the ease of that voting, I think we ought to try to do that, and to the extent we cannot because of legalities, I think it is perfectly proper to recommend to other entities, whether it is the White House or State and local governments, that this is our view and we would hope that they would take steps to provide so that men and women of the Armed Forces can, in fact, vote.

Senator BUNNING. This is a more localized question. This is about Fort Knox, which is a training and doctrine post, and the U.S. Army Recruiting Command is located there as well. When initial entry trainees come to Recruiting Command at Fort Knox they see 50-year-old barracks that are run down and literally patched together. Fort Knox has the oldest entry training barracks in the Army, with no barracks being built since before the Korean War.

Despite that fact, Knox has been absent on TRADOC's list of recommended posts to receive new training barracks or a Starbase complex which integrates barracks, classrooms, and dining facilities and other soldier components. How will you go about assessing the condition of trainee barracks in recommending new construction of training barracks complexes for the Army?

Mr. RUMSFELD. Well, I suppose the first thing to do would be to try and see if we can find the best possible people to serve in the posts of leadership in the Army that share the concern you have expressed about the circumstances of these barracks. That is a part of the broader question we were talking about earlier.

This establishment will not function if we do not have talented people, and talented people are simply not going to accept an environment for themselves and their families and a circumstance that drives them away from the military. We need people who we can attract and retain, and who are proud to be there and available to be there.

Senator BUNNING. My last question, I read in your answers to the committee policy questions that you cannot fully give your opinion on whether you do or do not support another round of base closures because you are awaiting the DOD's next defense review. I have been seeking answers as to whether or not the last round of BRAC has saved money, or whether or not we have reduced our strength and readiness. I have never received any real answers with numbers either way.

We all know the policies of BRAC, but I hope in your tenure as Secretary of Defense you can illustrate to us the realities and simple facts as to how past base closures and possible future ones have and will affect the taxpayers and the military, because no one has ever shown me actual numbers on the actual savings of the last BRAC, so before I ever look at anything new I want to see the old.

Mr. RUMSFELD. Well, I am sure that there must be data. My general impression on the subject is that there is no question but that savings result from adjusting base structures to fit force structures. There is also no question but that they tend not to occur in the first or second year. They tend to come out over a period of time, so there is a cost factor. There is also a factor of military efficiency, and both benefit, the former being somewhat more easy to quantify than the latter.

Senator BUNNING. Thank you very much.

Chairman LEVIN. Thank you, Senator Bunning.

Senator Nelson.

Senator BEN NELSON. Thank you, Mr. Chairman. I welcome this opportunity to appear at today's confirmation hearing, even though my membership on the committee is not fully official, and should I serve on the committee I would be honored to be a part, and I look forward to it.

I have been tremendously impressed, Mr. Rumsfeld, with your knowledge of the whole subject of national defense, your concern about readiness, your concern about budget realities, the external and internal security risks, and those unpredictable circumstances which are always there, and at this point in time virtually every question that could be asked seems as though it has been asked, and I do not want to be redundant, but there are a couple of questions that I would like to ask you.

First of all, I think it was Senator Cleland who mentioned that defense does not poll very high among the public. Maybe that is because the public seems to be falsely secure when we are not. There are different kinds of threats today, as you have indicated, and there are limited resources to deal with those threats, so my first

question is, do you have some plans that would engage and raise the public awareness and interest in the importance of the kind of defense we need to provide for today's world to get more resources and more money to be supported for national defense?

It is always a challenge when there are limited resources and seem to be unlimited demands in all kinds of areas, and I wonder if you do have some specific plans to make the public far more aware of the need for these increased resources.

The second question is, it has been often said that someone who takes on a new challenge can bring to it one big idea, and while you have been very generous with your thoughts about all of the realities that we are dealing with and what you propose to do, to the extent that you know at the present time, I would like to ask, do you have one big idea, and if you do, what is it? You can choose which order you prefer to respond.

Mr. RUMSFELD. Well, let me just make a comment on the first point you have posed while I think about the second. With respect to the first, I do not think there is any one person who is going to help our country and, indeed, our allies as well fully understand what needs to be done and why. It is a task that takes a lot of people, multiple centers of leadership in Europe and Asia and in this Congress, in the executive branch.

I give President-elect Bush high marks on the pronouncements he has made with respect to national defense, and I think that that is a good start. That bully pulpit of the White House is an important place, and we need leadership there that is sensitive to these issues and concerned about them.

We all know that history is filled with instances where people were surprised. There were plenty of signals, plenty of warnings, plenty of cautions, but they were not taken aboard. They did not register. They were not sufficient to cause a person to act on those concerns. It was not that the information was not there. It just did not register.

It happens to people in businesses. They go along, and pretty soon they do not see all those warning signs out there and they do not act on it. We see it in families when a youngster goes wrong, and when do you step in and do something, or try to do something?

We know that the thing that tends to register on people is fear, and we know that that tends to happen after there is a Pearl Harbor. It tends to happen after there is a crisis, and that is too late for us. We have to be smarter than that. We have to be wiser than that. We have to be more forward-looking.

So I would throw that back and say, it is going to take you, and it is going to take every member of this committee, and it is going to take Presidents, and it is going to take our friends in other countries to make sure that we understand that it is a world full of hope and opportunity, but it is also a world filled with dangers, and there are different kinds, and we need to be attentive to them, and I think we can be wise enough to do that.

There is a wonderful book on Pearl Harbor by Roberta Wohlstetter, and a forward by Dr. Schelling, that talks about this problem of seeing things happen and not integrating them in your mind and saying, yes, we need to be doing something about that now, that I reread periodically because it is so important.

As to a single big idea, I do not know, but it may be this. It may be that one of the biggest things we have to do is what I mentioned earlier, and that is, recognize that the deterrence of the Cold War worked. Those deterrents very likely will not work as well or as broadly as we will need during the period of this era of globalization, or post-Cold War period, or whatever we are going to end up calling it, that the problems are different, and the demands will be different, and that we as a people have an obligation to be smart enough to think about those things and to see that we get arranged as a defense establishment with our allies so that in fact we dissuade people from doing things.

We do not want to win wars, we want to prevent them. We want to be so powerful and so forward-looking that it is clear to others that they ought not to be damaging their neighbors when it affects our interests, and they ought not to be doing things that are imposing threats and dangers to us, and I think we can do that, but I think it is going to take some fresh thinking.

Senator BEN NELSON. Thank you.

Chairman LEVIN. Thank you very much, Senator Nelson.

Next, under our early bird rule, is Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman, and I want to thank you very much for your support in my obtaining a spot on this esteemed committee. I understand Senator Warner's dismay about the expansion of the membership after seeing how long it takes to move once around the cycle here.

Senator WARNER. I did not express dismay, I expressed appreciation to so many Senators wanting to come on. In years past we used to be like the old Navy. We went out and pressed them out of the bars and dragged them in. [Laughter.]

Chairman LEVIN. He was not referring to Senators in bars, by the way.

Senator DAYTON. As you can see, if you were to cut it any finer, I would be the one who would be cut off, but feeling my lofty 100th position in seniority I can see I am going to be sitting at the end of a lot of tables for the next couple of years.

But Mr. Rumsfeld, I join with the others in congratulating you for your willingness to take on this huge responsibility. Your career in both the public sector and the private sector is certainly admirable, and as a citizen and a public servant I think to combine those careers with the longevity of years is extraordinary, and I wish you well, and I do not presume to have the expertise that my colleagues here or you have, so my questions are inquisitory, not meant to be presumptive.

I know that you said in your opening statement, you talked about the timetable, the cycle time for the development of new major projects, now 8, 9 years, and how that pace has slowed while technology has accelerated. To what do you attribute that lengthening delay, and what would you think might be some of the approaches to improving it?

Mr. RUMSFELD. It is interesting to me that this is the case. We have seen in the sixties things could go from concept to deployment in a very short period of time. They had much more flexibility with respect to acquisition.

There was much greater secrecy, and there was much greater urgency, quote-unquote, perceived urgency which allowed much more flexibility in acquisition rules and much greater secrecy, so at a time when those numbers have gone from a year or 2 to 8 or 9, and in a period when technologies—in those days took 5, 10, 8 years to change.

Today they are changing in a year, so you have those two things conspiring to produce equipment that when it is there is not the most advanced possible. There has to be a way to shorten that process.

Business is finding ways to do it. Silicon Valley has dozens of ways to do it. I do not know, beyond what I have said, that in some cases I think you leapfrog systems, but in other cases I think you probably keep platforms and leapfrog elements of that and provide flexibility as advanced technologies come along.

We are going to have to do it. We cannot simply be spending money to produce things that are going to be behind the curve. We have to find ways to do it.

It sure will not be Don Rumsfeld that will figure it out, but if I am lucky we will find people who are smart enough and a lot smarter than I am to put down and screw their head into it and then come up to Congress and talk about how we can adjust these systems so that they will work in the environment we are in, which is much more rapidly paced.

Senator DAYTON. It has certainly done a lot for Minnesota business. The difficulty and the length of time and the cumbersome procurement requirements, bidding contracts, procedures, anything that can be done it seems to me to reduce by two-thirds or more the amount of paperwork requirements and therefore the timetables involved will benefit the private sector as well as the Government.

Perhaps related to that, you talked also about the need to try to have the technological systems of the various services better coordinated. You talked about, I think your phrase was, borne jointly, where they would start again, given the disparity of the services and the contracting procedures, like, how realistically are you going to effectuate it. I cannot get my Washington office computers and my Minnesota office computers joint at this point yet, so when you talk about the complexity of what you are doing, isn't that problem going to get worse?

Mr. RUMSFELD. I am having the same problem with my computers, but it could. I mean, we have to see that the services can talk to each other. They simply must be able to do that, and the effort that occurred really well after my watch on, quote, jointness, has I think made strides in that direction.

But I mean, your point about the private sector, the Government of the United States has not been a good customer. We have not been a good interactor with the defense industry. It is not an accident. The last time I looked the three top defense contractors in size, Boeing and Raytheon and Lockheed, had a market cap that was less than Wal-Mart. Now, why is that? Because doing business with the Government is not a great deal.

Senator DAYTON. I might prefer that you stick with the analogy of Target, but I would not quarrel with you. [Laughter.]

In your response to the questions you were asked about the international criminal court, and particularly the Rome Accord. You said you opposed it. Is it that you oppose that concept in the entirety, or oppose the particular framework of the Rome Accord? What is your position, sir?

Mr. RUMSFELD. I do not have the letter I signed along with George Shultz and a host of Republicans and Democrats expressing our concern about that, but if I am not mistaken President Clinton has recently signed that and announced he was not going to send it to the Senate, is that correct? I think that is right.

Again, I am not an international lawyer, but my view of it was that it posed a risk to the men and women in the Armed Services that they could be doing the bidding of the United States Government and the United States Senate and be hauled before an international court for war crimes, and it concerned me, and it concerned a whole series of former Secretaries of State and Secretaries of Defense, which is the reason we signed the letter.

The current status of the situation as I understand it is that the President has signed it and said that he had concerns about it and was not going to send it to the Senate for ratification. I am further advised that a signed agreement like that, even though not ratified, has standing, standing in the sense that if you sign it and it is not ratified, you take unto yourself the obligation not to undermine it and to support it and to behave reasonably in accordance with it. That concerns me, so I am uncomfortable with the position that President Clinton has taken.

I am not the nominee for Secretary of State, nor am I the President-elect. It is up to them to take—in the National Security Council context to consider this, and my understanding is that President-elect Bush has indicated that is what will happen, that he will not send it up either, but whether or not he wants to leave it stand I think is an issue that the National Security Council would engage at some point in the future, and I would need to know a lot more than I currently know.

Senator DAYTON. My time has expired. Just quickly, we are sending you up there with all of the responsibilities, all this good advice. We talked just before this afternoon about your going there essentially by yourself. What can this committee do to help you get underway most productively over the next couple of months?

Mr. RUMSFELD. If I get through this process and it looks like I am going to be confirmed, then the next order of business is two-fold. One is to get briefed up by the fine people who have been serving there and understand what the circumstance is, and the second is to come to some judgments as to who I think ought to be recommended to President-elect Bush for nominees, and there are an enormous number of critical jobs that need to be filled.

With a backlog in clearances and a backlog in FBI approvals, and the amount of time it takes to get through the Office of Government Ethics, and the amount of time it takes to process a human being through this thing, the odds are, if I get there, I will be there alone, without another soul that has been brought in to help, and you have to be very careful about bringing people in on a temporary basis to help you, because of the assumptions and presump-

tions, and because they have not been confirmed by the Senate they are really not in a position to make decisions.

So we have a strange complication here, where we are kind of tangled up on ourselves. On the 20th we are going to have a President of the United States in office, and who knows how many of his Cabinet will be there. He cannot even nominate until he is sworn in, as the chairman said. I do not know what the answer is.

As I said earlier, I know that I am just one human being, and there is no way I can do that job down there. The only way I can ever do anything in my life is to find the best talent around.

Chairman LEVIN. Senator Nelson.

Senator BILL NELSON. Mr. Chairman, this is a pleasure for me to be a member of your committee, one in which you and the next chairman operate in such a bipartisan manner, and I am privileged and honored to be a part of the committee.

Mr. Secretary—I will call you that ahead of time—welcome. Clearly, the issue of terrorism is going to be one that is going to be facing us quite a bit in the future.

As we look back in the breakup of the Soviet Union, it is questionable whether the United States moved quickly enough to do what it could, as in the resulting chaos, where people utilizing money perhaps spirited away nuclear weapons, tactical nuclear weapons, the command and control system, all of the temptations that came into the system at that time, I would like to have your comments on that, and what you think we should be thinking about in this committee, assisting you as we try to confront this issue of containing this proliferation.

Mr. RUMSFELD. The problem of terrorism is an exceedingly serious one. It is a problem for us in our homeland. It is a problem for deployed forces. It is a problem for our friends and allies, and I think it was Lenin who said that the purpose of terrorism is to terrorize, and that is what it does. It changes people's behavior, and the wonderful advantage is, a terrorist can attack at any time in any place using any technique, and it is physically impossible to defend at every time and every place against every technique.

In Beirut, I watched a process where they first used trucks with explosives to drive into a barracks and kill 241 American Marines. The next thing, people started putting barricades up like we have around the White House, and what do they do then? Well, you change your method.

What you do is, you start using rocket-propelled grenades and lobbing them over, so the next thing, you look at the embassy, the British Embassy in Beirut, and they have wire nets hanging off the building to reject rocket-propelled grenades. Fine. It did not happen again.

The next thing, they go after targets. They go after people, families, going to and from their place of work. So it is not something that ends. It is something you need to be attentive to. It is something we need to have vastly better intelligence than we do today, and it is something that needs to not simply be a Defense Department problem, or a homeland defense problem, but it is also a diplomatic problem.

We have to find ways to function in this world where we work with people and try to create an environment that is less hos-

pitiable to terrorists and to terrorism. I do not know the number, but I have something rattling in my head that we are spending today something like \$11 billion on this problem, and I do not have any idea if that is the right number or the wrong number, but it is a lot, and it is a lot more, for example, than is being proposed to spend on some other defense techniques, but it is a problem.

Senator BILL NELSON. Well, we are looking forward to working with you on this. Down in Florida we had an interesting election this year.

Mr. RUMSFELD. I noticed that.

Senator BILL NELSON. Part of the problem was military overseas ballots, and I want to work with the committee particularly in devising a way that—in Florida, for example, 42 percent of the ballots were not counted, of the military overseas ballots were not counted because they did not qualify under Florida law, even though the Attorney General issued a ruling in the midst of all the controversy actually changing the effect of the law so that it did not have to be just a postmark, that it could be a signature, a date, and a witness, and what we need is some uniform procedures, and I am going to propose to the committee that we have voting by military overseas personnel by the Internet.

It is interesting that just today a consortium of companies, both software and hardware companies, are proposing to do software for Internet voting for the entire country. Well, that is on down the road, but I think we ought to look at the Internet for our military overseas personnel. We can discuss that later.

Finally, I have some knowledge of launch vehicles and the competition of American launch vehicles with foreign launch vehicles, and we are getting into a situation, as you have responded to other questions on space-based assets, of, we have to have the assurance that we can get those assets to space and now it is not necessarily the DOD payloads that we have to have on expendable booster rockets, which are Government vehicles, but we have a great reliance now of getting our commercial satellites on orbit, many of whom perform a function that is absolutely essential to the functioning of the free world, and we are relying on foreign competitors getting over half of those payloads to orbit.

So I am going to look forward to working with you and your staff on this, and this committee as well on that. I would love to have any comments you have.

Mr. RUMSFELD. Well, you are of course exactly correct. There is no question but that the launch capability of the United States has been diminishing relative to the rest of the world, and there have been three or four studies that have analyzed in some depth the nature of the problem with respect to U.S. launch capabilities, and I think it is important you have raised it, and certainly I am aware of those studies.

Our Commission on Space Management and Organization did not go into detail on it because it had been addressed by so many previous organizations, and I think the problems are fundamentally rather well-known. They are not being attended to, but they are rather well-known.

Senator BILL NELSON. Did your report get into the transfer of technology by putting American spacecraft on the top of foreign vehicles, particularly the Chinese?

Mr. RUMSFELD. It did not. There have been others who have looked at that, and there is no question but that if you are going to marry a payload with a launch vehicle, that it requires inevitably a certain amount of technology transfer.

Senator BILL NELSON. Thank you, Mr. Secretary. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you.

Senator CARNAHAN.

Senator CARNAHAN. Thank you, Mr. Chairman.

Mr. Rumsfeld, you have certainly shown this committee impeccable credentials, and you have shown a great deal of candor and forthrightness in answering all of the questions that have been presented to you today, and I thank you for that and for your patience.

Because of the length of the day and the brevity of my seniority I will confine myself to just one question. Fort Leonard Wood in Missouri is a major part of the Army training system, with a chemical school, an engineering school, and an MP school and I have been told that, from Congressman Ike Skelton, that the readiness level at this TRADOC post is not all that it should be, as it is not in other posts as well. I was wondering what your thoughts might be on how we would address the readiness level at TRADOC posts.

Mr. RUMSFELD. Well, I am certainly not knowledgeable about that particular situation, but people are aware of their circumstance, and to the extent readiness levels in an institution like that, an organization like that are not what they ought to be, the people there know they are not what they ought to be, and it affects their attitude, it affects their morale, it affects their feeling about their jobs, and whether or not they want to stay in the service, so it seems to me it is part of a much broader problem that we must address, and certainly if it is true there, as I understand that it is, then it is very likely true in other locations.

I would say one other thing about readiness. It is one thing to say, here are our readiness categories and here are the levels of readiness that we need to meet, and that is well and good, but the first thing to do is say, ready for what? We need to make sure what we are getting ready for, and that they are not simply categories that existed in the prior period that are not well-adapted to the future, because people understand that, too, the people who have the responsibility for that.

It is not good for morale if you know you are breaking your neck trying to get your readiness level up for something that in fact made a lot of sense yesterday but may not make as much sense tomorrow.

Senator CARNAHAN. Thank you.

Chairman LEVIN. Thank you, Senator Carnahan.

Mr. Rumsfeld, let me go back to national missile defense. I want to press that issue with you. I want to follow up on a number of questions which I, Senator Cleland, Senator Reed, and others have asked here.

First, you said this morning that your experience led you to the view that in a crisis, that a President should not be presented with

just two options, either capitulation or a preemptive strike. I could not agree with you more. But there is a third option that is missing from your response, which is to pursue the policy of the United States and not be deflected by any threat with a real level of confidence that it would be a totally irrational act for anybody to carry out that threat.

You this morning said those dictators you enumerated are rational folks. We do not like them. We do not like what they do, but that they act rationally.

Mr. RUMSFELD. Maybe not rational in our context, but by their standards.

Chairman LEVIN. We have been told over and over again by our intelligence sources and otherwise that the first goal of these regimes is survival and self-perpetuation. This third option, which you did not address this morning, which is to pursue the course we are on and not be deflected by that threat, seems to me to be a very important and most likely option. We should not signal in any way to any of these folks that one possibility of their having such a weapon of mass destruction would be that we might acquiesce.

I think Senator Reed made reference to that point. It seems to me it is absolutely critical, number 1.

Number 2, you indicated that we should consider certain adverse effects if we fail to deploy a national missile defense, and I agree with that. I think the pros and cons of deployment at a time when we have a technologically feasible missile defense, when that time comes, if it comes, that the pros and cons should all be on the table.

Mr. RUMSFELD. I agree.

Chairman LEVIN. What is essential is to consider the effects you made reference to. It seems to me those are important effects, that we also have to consider the negative effects of a deployment if it is unilateral—if it requires us to pull out of the ABM Treaty that we have with Russia—and if it results in a larger number of weapons on Russian soil and Chinese soil.

We had a report yesterday referred to in this morning's paper by the writers, Howard Baker and Lloyd Cutler. I referred to it this morning, but I just want to read one thing to you, that the most urgent unmet national security threat to the United States today is that weapons of mass destruction, or weapons-usable material located in Russia, could be stolen or sold to terrorists or hostile nation-States and used against American troops abroad, or citizens at home. Now, whether that is the most urgent unmet national security threat or not, and I happen to think it certainly ranks near or at the top, I think you would agree that it is a serious concern. I qualify this. I say, if the effect of our deployment of a national missile defense would be to increase the proliferation threat of a weapon of mass destruction, or material that is involved in a weapon of mass destruction by Russia responding to our unilateral withdrawal from this treaty by no longer reducing the number of weapons she has, or increasing the number of weapons she has, that is a factor which I hope you would consider. Would you agree it is a legitimate factor to consider, however you come out in the end?

Mr. RUMSFELD. I agree completely that in this process the advantages and disadvantages of deployment should be considered and

the advantages and disadvantages of not deploying should be considered.

Chairman LEVIN. I welcome that. It seems to me that is important. But there are some other disadvantages I just want to throw in there, and I happen to agree with you that we should look at all the advantages and disadvantages. But I want to mention a couple of others.

Our allies have urged us not to unilaterally deploy this system, not to leave them out of any system. They have not urged us, as far as I know of, in any case to unilaterally deploy. I use the word unilateral to mean that we would pull out of the treaty with Russia and proceed on our own, without being able to modify it.

Now, you have said in your answers to the questions to the committee that you would seek modification of that treaty with Russia. I believe that was in your answers. It seems to me that is the course which should be followed. If it was not in your answers, then it was the President-elect that made reference to an effort to modify the treaty.

Mr. RUMSFELD. It may have been the President-elect.

Chairman LEVIN. Now, there is one other factor which I think should be placed on the table.

Mr. RUMSFELD. Am I going to get a chance to comment?

Chairman LEVIN. Absolutely, and if you cannot remember all of these points, then I will remind you of them. But there is another consideration here which seems to me that should be put on the table. Even if we are willing to take those adverse effects because we think that the positives outweigh the negatives, we are still left with the fact that there are other means of delivery besides missiles, trucks, and ships, which are cheaper, more reliable, have no return address.

In the case of a truck, we could be threatened by one of these dictators with the kind of ultimatum like, I just invaded Kuwait. If you try to throw me out of Kuwait, there is a truck going around the interstate of the United States that has a biological or chemical weapon on it. You are going to lose part of your major cities, or you are going to see your air poisoned, for example.

We are going to face potential threats even if we successfully create a national defense technologically, and even if we decide to take the risk of proliferation, which might result, if Russia's response is what she said that it will be, which is, forget the reductions, forget START II, forget START III. Rather than building down she is going to build up, creating the threat which Baker and Cutler talked about in their report.

I would urge you to read the President's signing statement when he signed the Missile Defense Act, by the way. I think it is really important that you read that statement.

I made reference this morning to the Missile Defense Act. Those factors which I have tried to enumerate in the last couple of minutes are all on the table before a deployment decision would be made by the current administration. Of course, it later on decided to delay it because of the failure of the tests. But I would urge you to read that statement before he signed the act, relative to the meaning of those two clauses, before you reach any final conclusion on the meaning of those two clauses yourself.

I will stop there. I will help you to remember all of these factors if you were not able to write them all down, but I surely want to give you a chance to respond.

Mr. RUMSFELD. Thank you. I think I have them all down. My question is, can I read my handwriting, I was writing so rapidly here.

I think we have to begin with the fact that the President-elect has indicated that he intends to deploy a missile defense capability. I do not want to get ahead of myself and argue in any way that suggests that I know what the outcome of the review will be or what he means by that, or what the National Security Council will end up recommending, and I understand that Congress has a role in this. The authorization and appropriation process is there.

First, with respect to the concept of unilateral, I may overstate for emphasis a little bit, but I have the impression that for at least a period of 4, 5, or 6 years the argument has been made by the United States Government that missile defense would be destabilizing, that missile defense would be a bad thing, and that it could be, and the feedback we got was yes, that is right. The Russians say, we do not like it, and the allies say, we do not want the Russians to be unhappy and we do not want the agreements between the United States and Russia to be ruptured by the United States doing something unilaterally.

There is no way I can prove what I am going to say, but I have a feeling that once the Russians understand that the United States is serious about this and intends to deploy, as opposed to the reverse of that, that they will in fact find a way in the negotiations—I do not know quite how, or when, or in what way—in the discussions that take place to accept that reality, recognize that there are threats from States with capabilities that not only threaten us and our allies and our friends, but over time will threaten the Russians as well. They are worried about terrorism. They are worried about military capabilities.

Second, the implication has been set forth that we would do something precipitous or unilateral with respect to our allies. That is just not going to happen. We understand how important that alliance is. We understand that our allies need to be consulted. We also understand that to some extent the allies' concern is twofold. One is that—and I am meandering off into the Secretary of State-designate's area of responsibility and not mine, but—and I will tighten this up a little bit, but the allies are concerned, and I have talked with a number of them, about being disconnected.

Our program, as it is currently on path, could conceivably have the effect of providing States with protection, but leaving our allies with less protection, and that kind of decoupling would be unwise by us. It would be unhelpful to the alliance, and I do not think you will see things happen—I think you will see a much closer consultation take place.

Next, you mentioned the Baker-Cutler thing and connected it to this in some way. I do not see the connection. My impression is that—and I did not read the article. I was so busy getting ready for today that I did not read it carefully, but I was under the impression, at least, that they were talking about the loose-nuke problem, the risk that in fact nuclear materials and nuclear weap-

ons and nuclear competence in terms of people, could and are and may to a greater degree lead to proliferation. I agree with that completely.

The Russians have been telling us they have not been doing it, and they have been doing it. They have been helping Iran. They have been helping other countries. Certainly they have been helping India, and we know it and they know it, and they know we know it.

Is it because they are actively trying to make mischief? Is it because they're making money, or is it because they do not have the kinds of controls over what is taking place in that country and there is a demand for that kind of assistance, or is it some combination of those? I do not know for sure, but I know that they in fact are active proliferators.

The Baker issue is, I think, a somewhat different one, is my impression. You are right, there are other means of delivery, we know that. We know anything other than fighting armies, navies, and air forces is attractive because they are all cheaper. They are all more readily available, and they all offer the prospect that even without doing it you can affect people's behavior because you can threaten the use of a terror weapon and terrorize others and alter their behavior.

My view of that is simply because you cannot do everything does not mean you should not do anything. I mean, I agree to the extent it is unattractive to work one end of that spectrum or some place along the spectrum. It inevitably will lead people to look for the weak link, to look for another part of that asymmetrical spectrum to assert their influence. I agree with that. That is a fact, and yet that does not say to me that it makes sense for us to remain vulnerable to ballistic missile attack if we do not have to.

Chairman LEVIN. Thank you. I am sure my time is up.

Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. I think everyone realizes our second round is 6 minutes.

Chairman LEVIN. Yes. I should have announced that.

Senator WARNER. Mr. Chairman, I certainly want to compliment you and others. This has been an excellent hearing, and I have moved about a little bit in the course of this hearing and wanted to go over and welcome your Space Council and they are carrying on, as you might expect, quite well, and others, and throughout the whole way this compliment is being paid to this committee as a whole for undertaking a very thorough and in-depth hearing.

I shall proceed quickly, under my 6 minutes. Did you want a seventh-inning stretch here?

Mr. RUMSFELD. No, I am fine.

Senator WARNER. As you can clearly see, there is a diversity of views on this very important subject. For the 23 years my good friend and I have been here in this Senate together, we have from time to time been on opposite sides on this question of missile defense, but listening to this very important colloquy between the two of you, let us also include the following category, and that is accidental.

Military men and women training all over the world on all types of systems, accidents happen. No treaty is going to stop that. No

form of deterrence is going to stop that, and I have often said that every President better have a draft statement on his desk to explain to a half-million American people who lost their lives and their families and survivors why we were not prepared to stop an accident, so that is a factor we had better figure in.

Now, I want to cover some very important subjects that we touched on, and our very valued ally, Israel. As we have had a strategic relationship with them for many, many years. Unfortunately that area of the world is embroiled in conflict, one which you, as a former negotiator and troubleshooter, have a clear understanding of the origins. Regrettably, many of those origins are still there.

I would like to have your views on that, and in the gulf region we have done our best. We have formed a magnificent coalition under President Bush. Some 13 nations came together to stop the aggression of Saddam Hussein, and send his forces back in-country, and we are in there alone today, except for some help from Great Britain in the air campaign and from some other nations in the sea campaign, to contain him. I would like to have your views on how we approach that.

As I stated this morning, President-elect Bush has put together an extraordinary and superbly well-qualified national security team. These questions are going to be on their desk on the day of arrival.

I would like to also explore with you the relationship between the People's Republic of China and Taiwan. Again, we have had a long-standing relationship with the people of Taiwan. We have in place certain agreements, and lastly I think we should cover the policy that you would hope to recommend to the President with regard to the withdrawal of our peacekeepers and our timetable, maybe not specifically, but the general discussion of the withdrawal from Bosnia and Kosovo. This is a subject I have been active in.

Last year, I and other colleagues—Senator Byrd joined with me and I joined with him on separate pieces of legislation to try and bring to the attention of our allies the commitments they made, the fact that we were trying to fulfill our commitment, and somehow if they did not continue to live up to those commitments we would have to address a withdrawal policy.

Well, guess what happened. Very quickly the allies came in and fulfilled their commitments in terms of money in Kosovo and troops and likewise, and that situation righted itself.

I think it is important that the United States keep some presence in both the Kosovo and Bosnian military forces so long as our allies are there, perhaps not to the level that we have today, but we do not want to give the perception that we are not a reliable partner in all of these, so if you would sort of kick off, and we will take the first one.

Mr. RUMSFELD. OK. Most of what you have posed, well, falls over in the area of the Department of State and the National Security Council as much or more than it does the defense establishment.

Senator WARNER. But you are a team, and you are at that table.

Mr. RUMSFELD. I understand, and I am going to reach out and comment, but I want to preface it by saying that we are not in of-

ficie. We have not had meetings. We have not talked about these things.

Senator WARNER. I understand that.

Mr. RUMSFELD. It would be wrong for me to try to think I could sketch out policy, so whatever I am saying is coming from Rumsfeld.

Senator WARNER. That is clear, but we have an obligation under advise and consent to get your views, because you are one of the most experienced, if not the most experienced person on that team.

Mr. RUMSFELD. Well, with respect to Israel, the situation is very difficult. The hostilities are obvious. People die in that region regularly. Israel is a very small country. They cannot make many mistakes about what they give up. There is a feeling I have had, watching that process, that to the extent someone leans forward, someone leans back, to the extent someone leans back, someone leans forward, and it goes that way.

I do not think it is possible for the United States of America to go in and grab people by the scruff of the neck and think they could put them together and have something stick. It has to make sense on the ground.

I have questions about Mr. Arafat's ability to manage his affairs, his circumstances, and I think to be dealing with him as though he were a State in control of his circumstance may not—may be somewhat unrealistic. I am hopeful. I think that it is an important issue that I am sure Secretary of State-designate Colin Powell and Condoleezza Rice and the President will engage, and certainly I will be happy to be a participant.

The gulf coalition is in fact unraveling and there is no question but that Saddam Hussein's appetite for weapons of mass destruction has not disappeared. Under the agreement, he was allowed to continue working on ballistic missiles below a certain range and, of course, the weight of the warhead affects range, so he has his team together, and he is working aggressively to make better relationships with Syria under the new Assad, and I suspect that we will not have heard the last of him by a darned sight.

The control over assets and funding I think is rather important and fundamental, and ought not to be let go. There is a lot of pressure from various coalition partners to ease up, but I think that central principle is one we ought to think about.

Senator WARNER. We have over 20,000 U.S. troops in that region containing these policies.

Mr. RUMSFELD. They are risking their lives in the north and south with flights. It is a dangerous situation.

The PRC and Taiwan, so much has been said I think there is not much I can add. Clearly, we have laws, we have obligations, we have hopes, and that situation also seems to ebb and flow in terms of the volume of the words coming out of the PRC on that subject, and at the moment they seem to have ebbed rather than flowed.

Senator WARNER. But the one thing certain is a steady buildup in the PRC military capabilities.

Mr. RUMSFELD. Not just generally, but in that area.

Senator WARNER. That is correct.

Mr. RUMSFELD. Third, peacekeepers in Bosnia. The first thing I would say is that we have forces on the ground. We have troops

there, and we ought to be supporting them, and I worry about forums like this where we talk about altering what we have, the Government, the President, Congress.

We have to decide what we want to do on these things, but discussions that lead to uncertainty harm the people on the ground who are trying to do things, and I went into Bosnia sometime back and visited with people from various factions, and they are either leaning forward or they are leaning back, and you can be sure the more there is talk about departure, the more they wait you out. It is true across the globe.

I have never been a fan of deadlines. I mean, the original deadline that we would be out by Christmas was not wise, not good policy in my judgment. We ought not to do that. It tells everybody, wait for a year, go on.

I think what we ought to do—and I know the President has said he will review it. He will. When he has a view—you can be certain he will not do anything precipitous. He understands the importance of the relationships with our allies. What he will decide, I have no idea. He will certainly consult with Congress as well as allies, and we will all know when that process has completed.

Senator WARNER. I think that term, consult with Congress, is a very reassuring one, Mr. Chairman and members of the committee, and I thank the distinguished witness for those replies.

Chairman LEVIN. Senator Lieberman.

Senator LIEBERMAN. Thanks, Mr. Chairman. I had to leave for a while. I apologize for that. I must say, coming back, I thought I would find you weary, mentally worn, but I am discouraged to find that you are as sharp as you were when I left this morning. [Laughter.]

I want to thank you particularly for some of the straight talk. As another member of the committee was fond of saying earlier last year, you have been on the straight talk express here for part of today, and I appreciate it.

Chris Williams, sitting behind you, worked with Senator Lott, and Senator Lott and I have sponsored some legislation on our concern about proliferation to Iran, and you were dead right that the Russians have just continued to do that. Sometimes we do not like to deal with that reality, but it is real, and I appreciate the straight talk that you gave, and I hope that we will continue to work on that, because it threatens our security and the security of our allies.

The same is true of your answer just now on the question of our forces in the Balkans, and I thank you for it. We made a serious mistake here some years ago, under political pressure, where we did set a deadline, and it created a real credibility gap that we are still fighting to overcome.

Believe it or not, I want to come back to national missile defense in a slightly different way and make this statement and ask you for your reaction. I accept the reality of the threat. I think it is a serious one. I was an original or early cosponsor of the National Missile Defense Act. I was pleased when it went through Congress and pleased when the President signed it, and I was up in my office for meetings, listening to your earlier testimony, and if I understood correctly, in response to a question from Senator Akaka

you indicated logic would tell us that in the time since your commission's report the threat has just naturally become more serious because proliferation goes on.

My concern is about the timeliness of a response, and just to say that I am concerned, as the new administration comes in and thinks about the layered approach to national missile defense, that if you think about the 2005 date, or whatever date, even earlier by some estimates, which some of these folks who have hostile intent toward us could get capacity to do our homeland damage, I think that one of the reasons—not all, but one of the reasons the Clinton administration chose the land-based alternative for national missile defense because it was possible, assuming technological abilities, to get, if you will, online earlier. Sea-based is essentially a concept now, and estimates I have seen say that it will not come online any earlier than 2010, space-based probably later than that.

So my concern is, as you think about the alternatives you have as you come into office, that you take a look at the fact that while the land-based system missile defense may not be the best, it may be the one that we can get operating earliest.

Mr. RUMSFELD. I do not disagree with that. I do not know enough to know, of certain knowledge, that that is right, but I have a set of impressions, and they are these, that the current program may very well have been something that could be done sooner than some of the other alternatives such as sea-based or space-based capabilities.

On the other hand, my further impression is that the current system was designed to fit within the treaty. I have never believed—I mean, that treaty is ancient history. It is almost—it dates even back farther than when I was last in the Pentagon. That is a long time.

Think what has happened to technology in the intervening period. I mean, to try to fashion something that fits within the constraints of that, and expect you are going to get the most effective program, the earliest to deploy, and the most cost-effective, it is just—it boggles the mind. That is not how people do advance technologies, is to sit down with those kinds of constraints and try to fit it in that straitjacket.

I do not disagree that at this stage it may be something that could be done earlier than other alternatives, but I would say it may very well be that pieces of it might very well fit in what one might ultimately want to do.

Now, this is all sheer speculation on my part. I mean, the press has kind of played me up as an expert in missile defense, and I am not. I know a lot about the threat, and I spent a lot of time on it, but I have spent much less time on the ways of dealing with it, and that is something I have simply got to wrap my head around.

Senator LIEBERMAN. I have one more question. Incidentally, enjoy whenever the press plays you up as an expert on anything, because it will not last long. [Laughter.]

I want to come to the fifth of your priorities in the opening statement you made, reform of DOD structures, processes, and organization. One of the things that struck me in my years on the com-

mittee is the extent to which the goals of the Goldwater-Nichols Act have not yet been realized.

That is one of them, which is one of the central ones, which is based on the conclusion, I think correctly, that warfighting would be joint, that therefore more of the operation of our military should be joint, and there has been a natural institutional resistance to that, and look, the four services have extraordinary histories of capability and unique functions to play, but I was thinking, in terms of your background, in this case in the private sector, that too often probably I found myself saying, I do not think any CEO of a big company—and there is no company as big as the Pentagon. You are about to become the CEO of the largest company in the world, but would tolerate that kind of overlap.

We have made some progress lately, particularly through the establishment of the Joint Forces Command in Norfolk, and I really commend it to you and hope you can get to know it well, but ideally we should be having more joint experimentation, joint acquisition, joint training, so that when we come to warfighting we will not only have avoided redundancy and saved some money along the way to do some of the many things that we have all said today we want you to do, but we will be better able to fight jointly.

Mr. RUMSFELD. I do not disagree at all. I think warfighting is inevitably going to involve all of the services, and to the extent they have not trained and exercised and equipped for interoperability in that kind of an environment they are not going to do what they could do had they done that.

Senator LIEBERMAN. My time is more than up. Thank you very much.

Chairman LEVIN. Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman. I know that the chairman has been a skillful questioner, let us say on national missile defense.

Now, we went through a long battle on it. Senator Lieberman and Senator Cochran formed an opinion, as did a number of us, that we needed to move forward. We accepted your bipartisan unanimous report that by the year 2005 we did have a threat that we needed to be prepared to defend against, and in the Senate I think Senator Roberts had over 90 votes, maybe 3 dissents, to deploy and follow through on this.

The President did, in fact, drag his feet. We did not do the Alaska radar work that we hoped to have done this summer, so we have already missed the 2005 year that your commission, your report suggested we should try to meet, and so we are now at 2006, and I believe this summer we will have another date that we will need to make a decision soon to get started with the Alaska base or we will be at 2007.

I just wanted to say, to follow up on Senator Roberts, I believe this Congress is for this. I believe we voted overwhelmingly for this, and with determined leadership, the technological problems will be overcome, and I think we need to move forward.

Most Americans have no idea we have no defense to incoming missiles, absolutely none. They saw in Israel, in the Gulf War, some Patriot and Scuds, and think maybe we have that here. We really have none of that here, and I believe we need to move for-

ward on that. I salute you for coming to it with the background you do, and I salute you for the report that you issued, and your fellow members, which we acted on, and the President did sign.

I would like to pursue a little bit—and by the way, on national missile defense, we are talking about a \$3 billion a year expenditure, maybe \$4. That is hardly 1 percent of the total defense budget. It is not going to drain our defense resources to deploy national missile defense.

Colombia has 38 million people. It is a significant trading partner of the United States, but 40 to 50 percent of that country is now being held by Marxist guerrillas who are working with the narcotraffickers. Venezuela is showing some strange activity.

At best, I do believe we need to give more attention to our hemisphere, and when you compare that to Kosovo, there are 2 million people we have no trading relationships with, and it is clearly in the backyard of the Europeans.

Would you share with us your view about the importance of our involvement in this hemisphere in general?

Mr. RUMSFELD. Well, in general is about what I can do. Again, I am reluctant to be continuously infringing on my friend Colin Powell's areas of prospective responsibility. We live here. It is important to us, there is no question that this hemisphere is, and I think that successive administrations in both parties have recognized that and addressed that over my adult lifetime.

That is a very complicated problem down there, and I need to get steeped in it. We have talked a bit about what is going on. I understand there are a limited number of U.S. military forces, that the State Department has the lead, that a lot of what is being done there is being done by contract personnel, that there is fear around the periphery that whatever is done in Colombia is not going to end the problem but move the problem geographically.

I have read the same speculation you have about the Venezuelan involvement. I do not know much about it beyond that. It is going to take a lot of very careful thought, and a combination probably of the kinds of things that are being done as well as diplomacy, to see if we cannot have that situation begin to get better rather than worse, thus far.

I have seen the maps that show the minimal control that the Government is currently exerting in the country, and it tends to be urban areas, as I understand it.

Senator SESSIONS. It is a disturbing situation, and I do not know the answer to it. I do not believe it requires troops, but I do believe we need to say, which Ambassador Pickering would not say in one of these hearings when I asked him, that we endorse—perhaps they have sense, but we need to endorse unequivocally the oldest democracy in the hemisphere, except ours, Colombia, in their struggles with the Marxist guerrillas, in my view, and we need to encourage them to be aggressive, and if they are not going to defend their country, I do not see how we can defend it for them.

But I believe they are going to be reaching a point soon where they are going to decide they have to fight to preserve their democracy, and if they do not fight they are going to lose it. At that point I think we are going to have to help them. I wish we did not, I wish it was not a problem, but I am afraid it is.

Finally, I would say I agree with you totally that this treaty with Russia and the missile defense question is ancient history. It was with a dead empire that no longer exists. Surely we will deploy the best system and work and just deal with the Russians in a fair and objective way, tell them we love them, we want to be partners and friends with them, but we are going to do what is in our interests to protect our American citizens, and I think they will accept that if we will quit waffling and be clear, and I hope that you will do that.

Mr. RUMSFELD. Thank you.

Chairman LEVIN. Senator Cleland.

Senator CLELAND. Thank you, Mr. Chairman. Just for the committee's information, I do understand that under the voting of military ballots and the counting of military ballots overseas, with your help, Mr. Chairman, and myself and Senator Hutchison and Senator Warner, we have asked for the GAO to do an independent investigation on this whole issue of military ballots being counted, and how military votes overseas, and that that report will be to us in a matter of months.

Mr. Secretary, let me just say, thank you very much for waiting us out and for being so patient. A couple of years ago you signed a letter along with Dick Cheney supporting full funding for the F-22, which is advanced technology for our tactical aircraft. I would like to, Mr. Chairman, submit that letter for the record, if there is no objection.

Chairman LEVIN. It will be made a part of the record.

[The information referred to follows:]

## Former Defense Secretaries' Statement on F-22

April 27, 1998

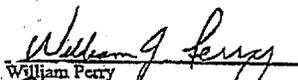

The nation's defense needs have changed considerably since the end of the Cold War. New threats, new technologies and new ideas about how to define national security have led to a rethinking of military requirements.

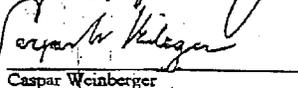

Wherever this debate may lead, it should not be permitted to obscure the enduring importance of preserving American command of the air. The contribution of air superiority to national military success can hardly be overstated: no U.S. soldier has been killed by hostile air power in over forty years.

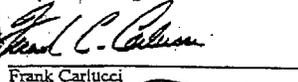

But command of the air requires that the U.S. possess unrivaled tactical aircraft, and the U.S. has not developed a new air-superiority fighter since the 1970s. It has one such aircraft under development today, the F-22 Raptor, and it is essential that this program succeed. If it does not, a half century may pass between when the last generation of fighters was fielded and when a new generation becomes operational.

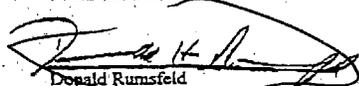

It is unlikely that U.S. command of the air could survive such a delay in the development of new systems. Even in a period of diminished threats, other nations will gradually overtake and surpass the fighting effectiveness of current U.S. fighters. Therefore, the stealth, agility, firepower and situational awareness embodied in the F-22 must be funded.

It is not enough to say that something better may be available in the future. Something better is always available in the future. Serious threats to American air superiority may arise sooner, and the nation's security cannot tolerate a loss of command of the air. Congress and the Administration must focus on this fundamental reality, and fully fund the nation's only truly stealthy air superiority fighter.

  
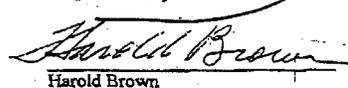

William Perry

  
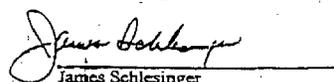

Caspar Weinberger

  
Frank Carlucci

  
Donald Rumsfeld

  
Richard Cheney

  
Harold Brown

  
James Schlesinger

Senator CLELAND. Mr. Secretary, thank you for your support of the F-22 in the past. I hope we can count on your continued support for the F-22. Any remarks you would like to make on that?

Mr. RUMSFELD. No, sir, other than that I said what I said, I believed it when I said it, I am now in a circumstance where I have to take a review and look at that and other things and try to come to some rational conclusions, and I shall do so.

Senator CLELAND. Thank you very much. In terms of airlift capability, it is interesting that the fiscal year 2000 defense authorization bill did direct the Secretary of Defense to submit a report to this Congress no later than February. The airlift requirement report is in. The current requirement for airlift in the Pentagon is almost 50 million ton-miles, and a mobility requirement study esti-

mates the requirement may rise to around 54 or 55 million ton-miles.

With the move away from more forward-deployed forces, an airlift and air mobility more and more important, the C-130J is integral to our rapid deployment operations. The last administration proposed some 24 new C-130Js over the next 4 or 5 years. I have a special interest in this program, Mr. Secretary, and would hope that you would continue to look hard at the C-130J program, particularly in terms of its critical role in moving our forces abroad.

Finally, Warner-Robbins is one of three remaining Air Force depots. There used to be five. Now there are three. Part of the challenge here, it seems to me, is to determine if the Pentagon is going to continue to keep core capability in its maintenance and depot facilities, and in determining that core capability I just hope you would work with all of us so that our military commanders will have the ability in a crisis to ramp up and work 7 days a week, 24 hours a day, to meet the needs of our servicemen and women overseas.

So I will just have those thoughts, and any response from you would be welcome.

Mr. RUMSFELD. I have not engaged this subject of depots. I understand that among all the caucuses in Congress these days the depot caucus may take the cake as being the largest one. It is a subject that—let me phrase it this way. There is no question but that the United States military needs to have what they need to have, and the question is, in what way can they assure that they have that so that their capabilities, and our capabilities as a country to contribute to peace and stability are assured?

I have not looked at it. I understand it is there and will certainly address it.

Senator CLELAND. Thank you very much. We talked about one big idea, and when I heard that I thought about maybe a question on deterrence in this new globalized era, and defining what could maybe deter the terrorist or the biochemical attack and so forth, and I appreciate your views on that and look forward to that continued discussion.

But one of the big ideas I would just like for you to think about in the challenge of dealing with an all-volunteer force, and now a married all-volunteer force in terms of a big idea, in the last few years, in looking at the GI bill and its power to attract young men and women to the military, maybe one of the big ideas we ought to explore together is in the American military being the greatest university in the world.

In other words, we are going to have to train constantly, and there probably already is the greatest university, certainly the biggest university in the world, but education begets education. If the American military can become known not just as a good place to get a couple or 3 or 4 years of education and then get out, but some place to educate yourself and your family over the long haul, then maybe we can work in a wonderful way on our retention problem as well.

Because people who get out that contact me, get out basically with tears in their eyes. They love the military, they love the serv-

ice, but they get out because they have pressures on their families. One of the pressures on their families is their kids' education.

So I would just like to throw that out as an interesting big idea that we can explore as we walk down this road together, because it does seem to me that the power of the GI bill, or the power of education and the military can be a powerful tool to keep people—I mean, to attract people and to keep people in that otherwise would get out, but we have to broaden it so that it includes their families as well.

I might say one of your colleagues in the Cabinet will be Tony Principi, who was the author a couple of years ago of the Principi Commission report, which actually recommended the concept that a serviceman or woman can take their unused GI bill assets and transfer them to their spouse or to their kids, thereby creating a college fund for them. Tony Principi was the author of that idea, and he will be in the Cabinet with you as head of the Veterans Administration, so I wanted to throw that out as a big idea that you might consider.

Mr. RUMSFELD. Thank you very much.

Senator CLELAND. Thank you very much for your patience, Mr. Chairman. No further questions.

Chairman LEVIN. Thank you, Senator Cleland. Let me also add our thanks for your continuing leadership on the broadening of the GI bill. It is a very important initiative. You have had a little success. You deserve a lot more success, and hopefully will achieve a lot more success in that area.

Senator Nelson.

Senator BEN NELSON. Mr. Secretary, in Nebraska we have the Joint Command and Strategic Command. The military for the last several years and the civilian leadership have worked toward finding ways to marry the military establishment in a way that certainly will work better for cooperation and collaboration, and obviously under a Joint Command you tend to get that. It surprises people in Nebraska to see the Strategic Command under the control of an admiral from the Navy, because Nebraska may be nearly landlocked, except for the Missouri River.

I have a question that really relates to how you develop an exit strategy without showing your hand. We have a civilian military. We have a citizen Government, and yet we know that the right of the public to know is there, and this body provides oversight so that when you come with an idea that you would like to provide some knowledge about, the first question is, what is your exit strategy? Once you have tipped your hand, there is no going back. The genie does not go back in the bottle, whether you say we are not going to use any land forces, we are going to be out by December—are we somewhat relegated to going back to 1968? When nominee President Nixon was running and said, "I have a plan to end the war," he would not tip his hand.

I think when you have this challenge it is very easy for people to put you in the box, where they want to know that you have a plan, they want to know what it is, but once you have told them, it is like the coach giving his playbook to the other team, the other coach.

Mr. RUMSFELD. You have put your finger on an enormously difficult problem. I was chief of staff in the White House when Vietnam ended, and you had all of these fine people who had supported that effort, and at some point you pulled the plug, and when you do, people are killed, people are hurt, people are damaged, and the reputation of our country for following through and for consistency and for being a reliable partner is damaged for a period.

I was the one who had to go tell President Jmail of Lebanon that the United States and the President and Security Council had decided to withdraw support, and walked into his office, and it was a heartbreaker, just an absolute heartbreaker. There were a whole host of people who had stepped forward and relied on us to help him try to get the Syrians out of his country, and at a certain moment it is gone.

You are right, if you talk and if you telegraph something more people get killed, more people are damaged, and the hardship is much greater.

What is the answer? Well, I do not know what the answer is. I think part of the answer is, let us try not to get into things we cannot get out of. Let us try not to get into things we cannot finish well.

We are still going to have this happen. We are not always going to be right. We are going to end up trying to do things because we are concerned and we care, and it will not work because we miscalculated. We thought there was a greater possibility that there could be an institutional capability to sustain itself and create a nation that could build and go forward, but that is hard.

We are not geniuses at nation-building, institutional capabilities. There has to be something where people say, my gosh, the Marshall Plan, goodness gracious, those countries there, they were capable, they were competent, we gave them money. They did what they did, and the analogy of the Marshall Plan to some of the kinds of continents that we have been dealing with and problems that we have been dealing with I think is a mismatch.

You are right, I think that about all you can do is if you have been wrong, do it fast, confess, and get out. That is all you can do, and try not to get yourself in a situation where you cause other people to support you and then you leave them in the lurch, which is just a heartbreaker.

Senator BEN NELSON. Thank you.

Chairman LEVIN. Thank you. Senator Dayton.

Senator DAYTON. Mr. Chairman, I believe that a member of President Kennedy's Cabinet said that as Secretary you have one boss and 535 advisors, and I think you have received enough advice for one day. I wish you well, and I would cede the rest of my time unless there is anything you would like to say, sir.

Mr. RUMSFELD. I would like to say something, Senator, and I thank you for that opportunity.

Chairman LEVIN. By the way, there will be another round of questions.

Mr. RUMSFELD. Maybe I will save it, then. [Laughter.]

Well, I will say it right now. I must say, if I know anything I know that you do not tackle Defense Department problems and issues and challenges by political party. You do it on a bipartisan

basis, and I respect the way you and Senator Warner have handled your back-and-forth chairmanships, and I admire it, and I assure you that I approach these issues in a nonpartisan way, and I intend to work with the committee in that way and look forward to it.

Chairman LEVIN. We are going to have a third round for those who might be interested in asking additional questions.

First, on the space policy question. There was a report in *Defense Daily* recently—it quoted—I do not know who was saying these words, but here are the words: “Rumsfeld understands the need for militarization of space.” My question is, do you see the need for the “militarization of space”?

Mr. RUMSFELD. I did not say it, and I do not know who wrote it, and I do not know quite what it means. Let me see if I can put some words around my thoughts on the subject. We know what has been done on land by way of military conflict, we know what has been done on the sea, and we know what has been done in the air. I think it would be a stretch to suggest that space will not at some point in the future find itself receiving similar attention.

Why do I say that? Well, if, for example, we have an interest on the sea to maintain the sea lanes open and to create an environment that is hospitable to sea traffic for international intercourse, and we have a lot of assets in space, one would think we would feel or share a similar view about having the assets in space free to provide these services and the capabilities that they do, and to the extent we do, as we do, both civilian and military space assets, and to the extent they conceivably, as with ships and tanks and planes, become a target at some point, there is no question in my mind but that it is in our interest to create the kinds of deterrence and capability so that it is not attractive to disable the United States and our enormous dependence on space assets.

I do not know quite what that means in answer to that article, but those are my views, and I should say these were my views as a member of the commission. They are not the views of the administration, since I have not had a chance to even discuss these things with President-elect Bush or the National Security Council.

Chairman LEVIN. Thank you. You made, I think, brief reference to this today. That the United States and North Korea signed an agreement in 1994 which provides that North Korea will end and disband its plutonium production capacity. By the way, I actually went up to see with my own eyes that that was being done. It also called for the United States to lead a coalition with South Korea and Japan to provide North Korea with proliferation-resistant light water reactors if it complies with every step of the agreement, and it also provides for some fuel, I believe, to substitute for the loss of that capacity. Assuming that both sides comply with this agreement, in your judgment does this agreed framework serve our national security interest?

Mr. RUMSFELD. I will offer some personal views, but I have to again begin with the beginning, and that is, this is quite a distance off my turf, and certainly the National Security Council and President and Secretary-designate Colin Powell will be addressing it.

My view on North Korea is that they have been as active a proliferator of technologies across the globe as any country that I

know of. It is hard to believe that a country that cannot feed its people, that has a dictatorship that is as repressive and damaging to its country as anything on the face of the earth, could be developing and marketing and benefiting financially from the proliferation of these technologies, but it is a fact.

I was very impressed with the Senator's photograph of the Korean peninsula earlier today, where it showed lights in the south, and lights in China, and black, and it is a wonderful metaphor for the problem.

I think talking is fine. I am glad they are talking. I think there has not been, to my knowledge, changes in their military posture with respect to South Korea or with respect to their activities of proliferation. It is good to be hopeful. It is good to talk. I am not an expert on the agreed framework. I have not been there, as you have. I am not sure I would be welcome.

Chairman LEVIN. As far as you know, have they dismantled their plutonium production capacity?

Mr. RUMSFELD. I know that—I know what I know and I know what I do not know, and I do not know what I do not know. Specifically, they are world-class tunnelers. They have gone underground across that country in a way that few other nations have done. They have underground emplacements that have enormous numbers of weapons.

For me to sit here, having never been there, and not being a sufficient expert to know anyway, and say that I have high confidence that they are doing what the agreed framework suggested would be foolhardy. They do not have a record of behaving well, and we know they are a secretive, closed society, and it is perfectly possible for Americans to go milling around there, think they see something, and it is over there. It is a shell game with those folks.

Chairman LEVIN. Let me try a different question. Is it in our interests to try to find a way to eliminate North Korea's plutonium production capacity so they cannot build nuclear weapons? Is it in our interest to do that?

Mr. RUMSFELD. I would broaden it. I think it is in our interest, and our Asian allies' interests, and our antiproliferation interest across the globe that North Korea stop proliferating, stop threatening South Korea, and begin to behave rationally to its people and stop having them die of starvation.

So I guess the answer is, sure it is in our interest, but there are a lot of things that are in our interest with respect to North Korea, and I do not know that I would stick one ahead of the other.

Chairman LEVIN. I would agree with you there are a lot of things that are in our interest, but it is in our interest to end the plutonium production?

Mr. RUMSFELD. You bet.

Chairman LEVIN. There are a lot of other things in our interest as well, but at least you would agree that it is in our interest?

Mr. RUMSFELD. Yes.

Chairman LEVIN. Senator Warner.

Senator WARNER. Thank you very much, Mr. Chairman.

Just to put on our old Navy hats for a moment, and that is the shipbuilding program in the Navy. Any reasonable analysis of the curves in the outyears, the current projection? We are going to be

moving down precipitously close to the 300 level, and I just think at the moment the most you can say is, again climbing back into our purple suits so we are fair to all, we have to address the level of naval ship construction, and we have to do it early on. Do you not agree with me?

Mr. RUMSFELD. I agree. I think that the pressures we face around the world with respect to bases suggest that we do need to be able to have capabilities that are afloat.

Senator WARNER. My follow-on for that, of course, is that—and these are true stories—Presidents, when they are awakened at night by that phone, either you on the other end or someone else, the Secretary of State advising them of a crisis somewhere in the world, as Senator John Stennis, the very valued and wonderful chairman of this committee used to say, the Presidents would always say to me, well, the first thing that comes to mind, where is the nearest U.S. aircraft carrier? Do you recall that?

Mr. RUMSFELD. I do indeed. Mr. Stennis was chairman when I was last Secretary.

Senator WARNER. I testified before him, as did you, many times. We have to keep that carrier level up. We have 12 now, one in training capacity, several in upkeep, some in transit, four to five at max on station throughout the world, and I would hope that you would indicate to me now that your preliminary thinking is, we have to maintain that minimal level, in my judgment, of that key asset of our arsenal of deterrence.

Mr. RUMSFELD. Senator, as an ex-Navy pilot I am not unaware of the value of aircraft carriers, but the last thing I am going to do is start speculating about one weapons system. I have an enormous task to gather some folks and look at the whole picture and see that they come into a coherent whole, and I am reluctant to start piecing things out.

Senator WARNER. That is all right, my good friend. You maintain your reluctance, and I will not have any reluctance to continue to bring that subject up with you repeatedly from time to time. [Laughter.]

South Korea. It is so interesting, my modest experience in the U.S. military, and I have said this before, it did a lot more for me than I was able to return to them on Active Duty, but anyway, with South Korea, in the Marines in 1951. We are still there, 50-plus years, and we have a very significant number of our troops there.

Now, you have covered the North. Let us talk a little bit about the South and its importance as our strong ally, and its importance for the forward-deployment of our troops to be in that region. I think this record should reflect some of your views on that.

Mr. RUMSFELD. Well, I think the U.S. presence in Asia since, essentially since the Korean War and World War II, has been a superb investment in the sense that we have, without question, contributed to a more stable region.

Their presence there is still useful in that regard, and I think that—I am trying to think where I heard it or read it, but there have been comments to the effect that in conversations between the North and the South, both have indicated that the U.S. presence is a useful thing, and I find that very interesting. The rhetoric

sometimes from the North is a little different, but my impression is that realistically we are wanted and it is a good thing for us to be there.

I also think it has been helpful from the standpoint of Japan.

Senator WARNER. I do, too, and indeed they are very valuable allies for the security of that region out there, and we should really touch a little bit on our valuable allies, Australia and New Zealand, and you will undoubtedly be visiting that region of the world, where we have had to dispense some of our troops not long ago for a contingency situation, but they are valued allies.

Mr. RUMSFELD. As you look at what is happening in that part of the globe, and the periodic difficulties that the People's Republic of China has had with its neighbors, whether it is the Spratly Islands, or difficulties with India, difficulties with Russia, difficulties with Vietnam, there is no question but that Australia is a truly important nation, and it is important to that region, it is important to us, and it seems to me that it merits a priority from the standpoint of the United States of America.

Senator WARNER. Mr. Chairman, again, an excellent hearing. I would yield back the balance of my time. I think our witness has more than fulfilled our expectations, and the endurance test he has withstood indicates he can handle that department pretty well.

Chairman LEVIN. Just a few more questions. Senator Sessions, would you like to go first?

Senator SESSIONS. You go ahead.

Chairman LEVIN. The Army has been in the process of transforming itself into a lighter and more agile force that can deal with the challenges posed by threats in the uncertain future. In response to the pre-hearing questions, you stated you would not be in a position to evaluate the Army's plans until you have conducted a complete review of all the services' investment programs. That review is expected to take several months, and therefore I have the following questions.

Does your answer mean that we should not expect any changes to the Army's transformation plans in this budget cycle?

Mr. RUMSFELD. I just do not know.

Chairman LEVIN. Are you open to the possibility of reallocation of resources among the military departments, if your review points in that direction?

Mr. RUMSFELD. It would be foolish for me to say that I was not open to anything at this stage, because I really am coming out of civilian life into an institution that is not easily understood.

Senator WARNER. Or managed. [Laughter.]

Chairman LEVIN. You have been asked a number of questions about the U.S. and China, and I have one additional one in that area. What approach would you take with respect to military-to-military contacts between the United States and China? Do you have any feelings?

Mr. RUMSFELD. We have had some, and I have been there myself.

Chairman LEVIN. Do you have any feelings about continuing or expanding those contacts?

Mr. RUMSFELD. I have not thought about it. Off the top of my head, I have no reason to believe that they are undesirable.

Chairman LEVIN. Just a couple of questions to follow up Senator Sessions' questions on the missile defense issue. I want to read just a portion of the statement of the President when he signed the Missile Defense Act. I think it is important.

Mr. RUMSFELD. I would like a copy of it, if you have it.

Chairman LEVIN. We will provide that to you.

Before I do that, though, I want to ask you a question again. I think you answered it clearly this morning, but given something which was said just a little while ago, did your report on the North Korean or on the missile threat in general suggest anything relative to the deployment of missile defenses?

Mr. RUMSFELD. Not that I can recall.

Chairman LEVIN. Now, this is just a part of the President's statement. I am going to give you the whole thing to read after the hearing. I am going to be putting the whole thing in the record.

[The information referred to follows:]

Statement on Signing the National Missile Defense Act of 1999

July 22, 1999

I have signed into law H.R. 4, the "National Missile Defense Act of 1999." My Administration is committed to addressing the growing danger that rogue nations may develop and field long-range missiles capable of delivering weapons of mass destruction against the United States and our allies.

Section 2 of this Act states that it is the policy of the United States to deploy as soon as technologically possible an effective National Missile Defense (NMD) system with funding subject to the annual authorization of appropriations and the annual appropriation of funds for NMD. By specifying that any NMD deployment must be subject to the authorization and appropriations process, the legislation makes clear that no decision on deployment has been made. This interpretation, which is confirmed by the legislative record taken as a whole, is also required to avoid any possible impairment of my constitutional authorities.

Section 3 of the Act states that it is the policy of the United States to seek continued negotiated reductions in Russian nuclear forces. Thus, section 3 puts the Congress on record as continuing to support negotiated reductions in strategic nuclear arms, reaffirming my Administration's position that our missile defense policy must take into account our arms control and nuclear nonproliferation objectives.

Next year, we will, for the first time, determine whether to deploy a limited National Missile Defense, when we review the results of flight tests and other developmental efforts, consider cost estimates, and evaluate the threat. Any NMD system we deploy must be operationally effective, cost-effective, and enhance our security. In making our determination, we will also review progress in achieving our arms control objectives, including negotiating any amendments to the ABM Treaty that may be required to accommodate a possible NMD deployment.

William J. Clinton

The White House,  
July 22, 1999.

We have been talking about two sections. One is the "policy of the United States to deploy as soon as technologically possible an effective national missile defense system with funding subject to the annual authorization of appropriations and the annual appropriation of funds for NMD. By specifying that any NMD deployment must be subject to the authorization and appropriations process, the legislation makes no clear decision on the deployment has been made." We call that the first point.

Mr. RUMSFELD. This is reading from his statement?

Chairman LEVIN. I am. This is part of what the President said relative to the second policy that was in that National Missile Defense Act.

Section 3 puts Congress on record as continuing to support negotiated reductions in strategic nuclear arms, and he also said our missile defense policy must take into account our arms control and nuclear nonproliferation objectives. At the end he said: "Any NMD system we deploy must be operationally effective, cost-effective, and enhance our security. In making our determination, we will also review progress in achieving our arms control objectives, including negotiating any amendments to the ABM treaty that may be required to accommodate a possible NMD deployment."

I offer you an opportunity to react as to whether you disagree with any of that. It is kind of hard, because maybe I read too many excerpts for you to follow. In any event, do you wish to comment now or not as to whether you have any disagreement with that. I really would urge that you read the President's statement after this hearing so that you are familiar with the thinking of both the administration in signing that act, but also the thinking of many of us—I will not say a majority, necessarily—but many of us in supporting that act after section 3 was added in the Senate.

It is a very important part of the history of that National Missile Defense Act. Now, let me give you an opportunity to comment if you want.

Mr. RUMSFELD. Well, Mr. Chairman, I will read it. As you went through it I was trying to parse it in my mind, and clearly, while President Clinton is President that is his view. We have a President-elect coming in who has expressed some views that are somewhat different from that.

Chairman LEVIN. I am talking about the view of the President about the act he was signing. I do not know if the President-elect has any different view about this act. He has not spoken, as far as I know, on that issue. Maybe he has. But I am talking about just what the President who signed the act said when he signed it.

Senator SESSIONS, do you have anything more?

Senator SESSIONS. I do not.

Chairman LEVIN. Let me just make a very quick final statement. First, we will include any statements in the record by committee Members who either were not able to be here today or who were here today but would want to expand on any statements they made. There were a number of Members who had other commitments. This hearing came up quickly and a number of our Members were unable to make it, although they are occupied in a number of instances on business that relate to this committee's work.

Second, several Senators have indicated that they have some questions that they would like to submit to you for the record. We will ask for those questions, if possible, by the end of this week. You have many things to do. I do not expect there will be a lot, but there could be some, and I want to keep that record open. I know Senator Thurmond asked me to keep the record open for questions he wanted to ask. There may be others that want to ask questions. The record will be kept open for that purpose.

We will keep the record open at least through tomorrow. We urge everybody to get their questions in by tomorrow, and then urge you to respond by the end of the day next Wednesday. If any questions come in after that, we will just give you additional time. We do not expect there will be a lot.

We look forward to getting all of that paperwork you made reference to.

Mr. RUMSFELD. We have it over at the other places. Before they want to release it they want to try and massage it.

Chairman LEVIN. As always, there is an FBI report which we will receive and we will review. We again want to recognize your family for your attendance and your patience. You may not have noticed, but the audience has significantly dwindled. What has not dwindled is the love, affection, and support of your family, and we thank them for that. We will now stand in recess subject to the call of the chair. We do not expect we are going to need another hearing, but I do not want to preclude that possibility because we do not know what events may transpire. We will, therefore, stand in recess subject to the call of the chair.

We want to thank you for your testimony today. Again I think you feel that there is broad support to move this nomination quickly out of this committee as soon as that can legally happen, after receipt of all the materials and after the President-elect formally sends in your nomination after he is inaugurated.

Senator Warner, I do not think you were here at that moment, but I am sure that you, as our chairman-to-be, will move expeditiously, within moments after receipt of that official nomination on the 20th, to convene this committee. That is going to be his call because it will be his gavel.

Senator WARNER. Let us elaborate, because a lot of people are quite interested in that. What we did last time was, President Clinton came off the dais after the inaugural ceremonies and went up and signed a series of documents. Among them were the nominations of several Cabinet members.

The committees voted, and then the Senate voice-voted that day, and in discussion with our distinguished Majority and, indeed, Minority Leaders, I think that is their intention to do just that, so I think we will follow the protocols that we have had through the years, and the Good Lord willing, and your endurance and that of your family, things should be in place Monday afternoon.

It is important we do that, that the security team, particularly of the President of the United States, irrespective of the President, be in place.

I remember our old boss one time, President Nixon, I happened to be with him one day and he said that the order of the succession of the presidency should never be in doubt for a minute. I remember that very well, and the same way with the team in the National security.

So I congratulate you, I join my colleagues in congratulating you for a very, very good hearing. Both of us have been through hearings now for 23 years, and we put this one at the very top. Again, you and your family have stood the test side by side.

Chairman LEVIN. If this ideal process works as outlined, the Inaugural Ball you will be going to a week from next Saturday night will be at the Pentagon. [Laughter.]

Mr. RUMSFELD. Mr. Chairman, Senator Warner, thank you.

Chairman LEVIN. We stand in recess.

[The prepared statements of Senators Smith, Santorum, and Hutchinson follow:]

PREPARED STATEMENT BY SENATOR BOB SMITH

Secretary Rumsfeld, I thank you and your family for coming before the Senate Armed Services Committee today. I am very pleased with your nomination. President-elect Bush has made an excellent choice to bring you onto his national security team. I can think of no one more qualified. You bring to the office your great experience, having held the position of Secretary of Defense previously in the Ford Administration. As a former White House Chief of Staff, you bring to the office your knowledge of the challenges faced by our President. As a former Congressman, you bring to the office a knowledge of the Hill. You also bring to the office your experience as a highly successful businessman. When confirmed, you will be running an organization larger than any business in the world, an organization chartered to defend the United States of America. Most of all, you bring to the office a great appreciation for the two major threats this Nation will face in this new century which I have long fought to address on this Committee and in the Senate, namely the threat to our Nation's growing reliance on space and the threat from missile attack.

Coincidentally, today also marks the release of the report from the Commission to Assess United States National Security and Space Management and Organization, more commonly known today as the Space Commission, which I worked to create in the Fiscal Year 2000 Defense Authorization Act. You chaired that bipartisan group composed of the Nation's leading military space experts. The Space Commission's findings confirmed my long-held view of the growing importance of space to the nation and my belief that space management and organization reforms are urgently needed as America's commercial, civil, and military reliance on space assets expands. The Commission's recommendations lay the foundations for what I have said may be necessary—the eventual creation of a separate Space Force. These near-term management and organization reforms will begin to put in place the leadership and advocacy for space programs that have long been lacking.

The United States has shown the world the value of space in providing information superiority on the modern battlefield. As we move into the new century, we need to defend our space-based information superiority, be able to deny our adversaries that same capability, and leverage the uniqueness of space to be able to rapidly project military force around the world. We need a strong advocate for space to fight for and justify new space programs needed for the 21st century in competition with many other pressing military investment requirements. I salute your leadership on the Space Commission, and I am grateful for the knowledge and appreciation of the issue you will bring to your new office.

Another of your many recent activities serving the nation was your chairing the 1998 Commission to Assess the Ballistic Missile Threat to the United States. The unanimous finding by that Commission served as a wake-up call to the nation and set us on a course that I hope will lead to a robust multilayered national missile defense capability in the near term.

I thank you for your service to the nation and your willingness to take on the daunting task of Secretary of Defense again. I look forward to your testimony.

PREPARED STATEMENT BY SENATOR RICK SANTORUM

Senator Levin and Senator Warner, thank you for scheduling this hearing today. I believe it is important that this committee do all that it can to assist the new administration on helping to address pressing issues facing our military forces. This confirmation hearing will help begin that process.

Members of this committee are familiar with Secretary Rumsfeld from his service in the Legislative Branch, the Executive Branch and as a private citizen. Based on Secretary Rumsfeld's past record of service to this country, President-elect Bush has made a wise choice in nominating him to be our next Secretary of Defense.

There are significant issues that the next secretary will be forced to confront. For example, there is the issue of military readiness. Five times, under the leadership of both Senator Thurmond and Senator Warner, this committee has examined the

status of U.S. military readiness. To fully examine reports concerning the decline of military readiness, the committee received the testimony of the Service Chiefs and asked for their views on these reports.

As you are probably aware, the Department of Defense's most recent Quarterly Readiness Report indicates that risk factors for executing ongoing operations and responding to a Major Theater War (MTW) are moderate, while risk for a second MTW is high. The committee also learned that of the Army's 20 schools for critical military skills such as field artillery, land combat and helicopter aviation, 12 have received C-4 ratings. The most recent readiness hearing confirmed what members of this committee suspected—that non-forward deployed forces are being "raided" for resources needed to maintain the readiness levels of our forward deployed forces.

One of the biggest challenges facing the next secretary concerns the need to adequately fund not only our readiness accounts but also our modernization accounts. As chairman of the Subcommittee on Airland, I pay close attention to the modernization needs of the Services. I am troubled by a recent CBO report which notes, at a minimum, a \$50.0 billion disparity between the funds appropriated for fiscal year 2000 and the level of funding needed to sustain our defense forces in a steady state. The largest gap identified by CBO concerns the funds needed to modernize our military. Under a worst case scenario, CBO identifies a gap as large as \$62 billion between current funding and the funding needed to modernize at a "steady state."

It will also be necessary to review and scrutinize those programs and weapons systems currently under development. This will be particularly important with respect to the development and procurement costs associated with three tactical aviation programs being pursued by the military Services. The total costs associated with developing and procuring the F-22 Raptor, F/A-18E/F Super Hornet, and Joint Strike Fighter will total upwards of \$350 billion. It will be important to view the affordability of these programs against the full range of requirements facing the Department of Defense.

In addition to the financial burden associated with our TACAIR programs, the Army has recently unveiled a new transformation initiative. In late 1999, General Eric Shinseki announced that the Army intended to embark on an effort to transform the Army to better respond to today's conflicts. The transformation process includes three elements: modernization of the current legacy force, establishment of rapidly deployable Interim Brigade Combat Teams (IBCTs), and research and development investments in the Objective Force.

The Fiscal Year 2001 National Defense Authorization Act (NDAA) authorized \$637 million for the fielding of the first IBCT, \$300 million to begin fielding the second IBCT and another \$200 million for related equipment. The fiscal year 2001 NDAA also required an acceptable form of side-by-side test against the current inventory of armor vehicles as well as additional field trials to examine the IAV's conventional warfare capabilities against a conventional force.

One of the concerns expressed by this committee has been a perceived reluctance on the part of the Office of the Secretary of Defense to support the Army's transformation effort with sufficient resources. In order to fund the effort for fiscal year 2001, the Army was required to terminate or restructure a number of important programs. Congress subsequently restored many of these cuts. It is unclear to this committee whether there are sufficient funds to support modernization of the legacy force, fielding IBCTs and R&D efforts on the Objective Force. It is essential that you review all aspects of the Army's plan—fielding schedule, resourcing, testing plan, threat assessment, acquisition plan and lift requirements—if you are confirmed by the Senate.

An area of keen interest to this committee has been the need to protect our critical infrastructure from being attacked or compromised by enemies, terrorist organization or individuals.

The committee has also been interested in seeing improved coordination between the public sector and private sector with respect to identifying threats to our critical infrastructure and in efforts to safeguard these important networks.

As part of the fiscal year 2001 NDAA, the committee authorized funding for two important programs which will help address our current weakness in addressing "cyber threats." First, the committee authorized \$10.0 million for the creation of an Institute for Defense Computer Security and Information Protection to conduct research and technology development in the area of information assurance and to facilitate the exchange of information regarding cyber threats, technology, tools, and other relevant issues.

Second, the committee authorized \$15.0 million to support the establishment of a Information Security Scholarship Program. The program would authorize the Secretary of Defense to award grants to institutions of higher learning to establish or

improve programs in information security and to provide financial assistance to persons pursuing a baccalaureate or advanced degree in information assurance. The Department's support for both these efforts is vital to address this critical problem.

The Clinton administration elected to approach this problem with a government-sponsored entity, the Institute for Infrastructure Information Protection. Such an approach fails to capitalize on the abilities of our Nation's federally Funded Research and Development Centers (FFRDCs) to disseminate information on cyber threats, promote best practices to industry, and provide a safe meeting place for discussions about cyber threats. I hope that you will do all you can to tap the resources of these FFRDCs in helping to counter cyber threats.

Again, Senators Levin and Warner, thank you for convening this hearing and I look forward to the testimony of Secretary Rumsfeld.

---

PREPARED STATEMENT BY SENATOR TIM HUTCHINSON

Mr. Chairman, members of the Committee, Mr. Secretary, I regret that I could not attend today's hearing. President-elect Bush's decision to designate an individual as experienced and as capable as Don Rumsfeld to serve as our Nation's 21st Secretary of Defense sends an unmistakable signal that this Administration is committed to tackling the tremendous challenge of transforming our military from the force that defended our Nation during the Cold War to a force capable of deterring and winning the wars of the 21st century.

While I look forward to working with the Secretary on all of the national security-related challenges facing this great nation of ours, I am particularly anxious to begin addressing a number of critical personnel issues. Implementation of the Warner/Hutchinson "TRICARE-for-Life" plan must proceed carefully and expeditiously. Equitable compensation for senior enlisted members of our Armed Forces must be restored. New programs must be developed so that the men and women who choose to make a career of the military are able to provide college educations to their dependents.

I am equally committed to working with the Secretary on a number of Arkansas-specific matters. Enhancing the continuing missions of Little Rock Air Force Base and the Pine Bluff Arsenal are two of the main reasons that my constituents sent me to Washington, DC, and I intend to continue to work every day to exceed their expectations.

Mr. Secretary, I have every confidence that you will be able to satisfactorily answer all of the questions put to you by my colleagues, and I look forward to casting my vote in favor of your nomination. Good luck, and thank you for your continued dedication to public service.

[Whereupon, at 5:05 p.m., the committee adjourned.]

[Prepared questions submitted to Donald H. Rumsfeld by Chairman Levin prior to the hearing with answers supplied follow:]

*January 9, 2001*

The Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the policy questions the Senate Armed Services Committee asked me to complete.

Sincerely,

DONALD H. RUMSFELD.

cc: Hon. John Warner

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* The establishment of the unified and specified combatant commands, the delineation of responsibilities, and most importantly the focus on "jointness" out-

lined in the Defense Reorganization Act of 1986 has enhanced the readiness and warfighting capabilities of the U.S. Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I have had no personal experience with these reforms, but it is my understanding that these reforms have changed the way the Department of Defense works by strengthening the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders, and significantly improving the ability of the Department to protect America's security and further its vital interests. It apparently has helped improve the interaction among the services in conducting military operations by making joint operations the norm.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The goals of Congress in enacting these reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; enhancing the effectiveness of military operations; and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation. But it must be said that they represent a tall order.

*Question.* Do you anticipate submitting legislative proposals to amend Goldwater-Nichols?

*Answer.* If confirmed as Secretary of Defense, I will review the extent to which the reforms have been implemented to assess the extent to which they have achieved the stated goals. I would consult with Congress on any changes that might be appropriate.

*Question.* If so, what areas do you plan to address in these proposals?

*Answer.* It would be premature to offer any thoughts at this time.

#### DUTIES

*Question.* Section 113 of Title 10, United States Code, provides that the Secretary of Defense is the principal assistant to the President in all matters relating to the Department of Defense. Subject to the direction of the President, and the law, he has authority, direction and control over the Department of Defense.

Do you believe there are actions you need to take to enhance your ability to perform the duties of the Secretary of Defense?

*Answer.* I suspect there are, but I am not in a position to comment today. If I determine that additional authorities are needed in this regard, I will propose such changes.

*Question.* Do you believe that you can provide advice to the President, or the NSC, in disagreement with or in addition to the advice of the Chairman without jeopardizing your relationship with General Shelton?

*Answer.* Yes without question. The relationship between the Secretary of Defense and the Chairman of the Joint Chiefs of Staff is important. I have had highly constructive relationships in the past and, if confirmed, I believe we both will be able to effectively fulfill our responsibilities in support of the President.

#### CHAIN OF COMMAND

*Question.* Section 162(b) of Title 10, United States Code, provides that the chain of command runs from the President to the Secretary of Defense and from the Secretary of Defense to the combatant commands. Section 163(a) of Title 10 further provides that the President may direct communications to combatant commanders be transmitted through the Chairman of the Joint Chiefs of Staff and may assign duties to the Chairman to assist the President and Secretary in performing their command function.

Do you believe that these provisions facilitate a clear and effective chain of command?

*Answer.* I do not know. I assume it does. I will be interested to see how it works in practice.

*Question.* Do these provisions enhance or degrade civilian control of the military?

*Answer.* I would have to work with them to know.

## PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Department of Defense?

*Answer.* Our responsibility will be to take the lead in fulfilling President-elect Bush's commitments as set forth in my opening statement to the committee. I will insist that the Department cooperate with Congress and with the defense oversight committees. To the American people, I pledge every effort to foster special concern for those who have volunteered to serve in uniform—including the guard and reserve as well as the active forces—and to achieve careful management of their tax dollars. For America's Armed Forces, I will do all in my power to give our military men and women every advantage in fulfilling their difficult missions.

Regarding more specific priorities or objectives, I will work to:

1. Fashion and sustain deterrence appropriate to the new national security environment;
2. Ensure the readiness and sustainability of deployed forces;
3. Transform U.S. military forces from a Cold War-oriented force to a 21st century force capable of deterring and defeating new threats;
4. Modernize the intelligence and command-control-communications-infrastructure and secure our space assets given the growing dependence on those assets and their vulnerabilities; and
5. Reform DOD structures, processes, and organizations.

## U.S. DEFENSE STRATEGY

*Question.* The essence of present U.S. defense strategy, as articulated in the Secretary of Defense's Annual Report to the President and Congress, is defined as consisting of three elements—shaping, responding, and preparing.

Do you agree with that defense strategy?

*Answer.* See response below.

*Question.* If not, what defense strategy would you substitute for it?

*Answer.* Determining what an appropriate defense strategy should be is one of the most important issues that will need to be addressed by the Department. From defense strategy flows policies, programs, and resource requirements. The U.S. must have a national security strategy that seeks to advance U.S. national interests and to have a positive impact on world events without the need to resort to armed force. It is important that we shape and prepare the Armed Forces to respond to whatever national security challenges may confront us—this is the essence of deterrence. External events sometimes are outside our control. Therefore, we must ensure that the military has the tools it needs to fight and win, should that be necessary.

If confirmed, the defense strategy would recognize that peace is best preserved when the U.S. remains strong. By providing for a military that is second-to-none and equipped to meet the newer challenges of the 21st century, I believe we can best ensure a peaceful strategic environment that advances U.S. national security interests and those of our friends and allies.

## QUADRENNIAL DEFENSE REVIEW

*Question.* The Quadrennial Defense Review is required to be submitted to Congress by September 30, 2001.

Will that deadline provide sufficient time for the new administration to develop required changes to national security strategy on which the Quadrennial Defense Review will be based?

*Answer.* No I do not believe it will. We intend to undertake a comprehensive review of strategy, forces, and capabilities as prescribed by law and will consult with Congress should the deadline prove to be overly burdensome.

*Question.* How will you keep the committees of jurisdiction informed during the conduct of the QDR?

*Answer.* I do not know precisely but I will consult with congressional leadership and request staff to keep the committees appropriately informed as the review progresses.

*Question.* During the past decade, the military departments have been reduced significantly, both in terms of force structure and resources, in response to the perceived post-Cold War security environment. During the same period, the various Defense Agencies have grown considerably—a prudent investment in some eyes, but a questionable investment to others.

How will you include the Defense Agencies in the overall QDR process?

*Answer.* If confirmed, the Department will undertake a comprehensive review of our strategy, forces, and capabilities that addresses all elements of the Department.

*Question.* Do you envision a separate process to review the Defense Agencies, apart from the review of the military departments?

Answer. I have not considered the shape of the review process.

#### HART-RUDMAN COMMISSION. THE 21ST CENTURY NATIONAL SECURITY STUDY GROUP

*Question.* The Hart-Rudman Commission, the 21st Century National Security Study Group Phase 3 report is scheduled to be completed by February 2001 to recommend alternatives to the current national security apparatus and suggest ways to implement the proposed national security strategy.

What process and organization do you intend to use to review the report and do you intend to use the results to influence the Quadrennial Defense Review?

Answer. The U.S. Commission on National Security/21st Century, commonly known as the Hart-Rudman Commission, is composed of a group of prominent Americans drawn from all sectors of society, well suited to examine American national security in the 21st century. I fully expect the commission's phase 3 report to stimulate significant thought and discussion inside and outside of government and contribute to the ongoing national security debate and the new administration's defense review.

#### TWO MAJOR THEATER WARS REQUIREMENT

*Question.* The present requirement to have the capability to fight and win two major theater wars in overlapping time frames is extremely demanding. Some argue that as long as that requirement exists, our Armed Forces will have to be sized in such a way as to address the least likely contingency with short shrift given to any preparation for other lesser contingencies and for emerging threats.

Do you believe the two major theater wars requirement should be maintained?

Answer. Modern history suggests that the U.S. has often faced more than one security contingency at a time. With that history in mind, preparations are appropriate. The manner in which the U.S. responds to two near-simultaneous contingencies is an issue of military strategy and operations and the adequacy of available resources at the time. This issue should be examined in the upcoming strategy review.

*Question.* If so, how do you respond to the above argument?

Answer. The consequences of not being prepared to fulfill the military's primary mission of deterring war and winning war if deterrence fails would be devastating. The U.S. military must also be able to deal with emerging threats. If confirmed, I will work to restructure our military to meet 21st century threats.

#### STRATEGIC PAUSE

*Question.* Some have argued for taking a strategic pause now in modernization programs, accepting some modest risk in the near-term when we have no peer competitor, while making more fundamental shifts for dealing with challenges we will face in the future. During the campaign, President-elect Bush endorsed skipping procurement of a generation of weapons systems.

What is your view on this issue and, if confirmed, how would you proceed in implementing your view?

Answer. We cannot allow the effectiveness of our military forces to degrade while we are modernizing and transforming. The U.S. military needs to get on a new path that will permit the rapid introduction of advanced technology that can materially increase military effectiveness and decrease the cost of operating and maintaining those forces. The cost of maintaining Cold War era equipment and its associated infrastructure and the steep reduction in modernization funding since the end of the Cold War has produced long-term modernization problems that must be addressed. If confirmed, I will conduct a comprehensive review of our military structure, strategy and procurement priorities, as promised by President-elect Bush. This review should help to determine how best to modernize the U.S. military to deal with future challenges.

#### WHEN TO USE MILITARY FORCE

*Question.* The question as to whether and when U.S. forces should participate in potentially dangerous situations, including peace enforcement operations, is one of the most important and difficult decisions that the national command authorities have to make. Prior Secretaries of Defense and Chairmen of the Joint Chiefs of Staff have proposed criteria to guide decision making for such situations.

What is your criteria for such situations?

*Answer.* The use of military force is one of the most important decisions a President can take. If confirmed, I would work closely with the President and his senior advisors to develop appropriate policies to guide the use of our military forces in peacetime, crisis, and war.

*Question.* If you have not developed such criteria, what are the factors that you believe are most important with regard to such decisions?

*Answer.* My general views are these: A decision to use military force, whether unilaterally or in coalition with other nations, should reflect important U.S. national security interests. The U.S. structure of alliances and its diplomatic ability to build informal, but effective regional coalitions provides the President with a variety of options to bring military power to bear in a specific situation where U.S. interests are involved. U.S. military forces can best be used when the military mission is clear and achievable and when there is a reasonable exit strategy. I look forward to working the President and his national security team on the details of this important question in the weeks ahead.

#### PARTICIPATION IN PEACEKEEPING

*Question.* Some have taken the position that the United States should not generally participate in peacekeeping in view of the negative impact that such activities have on certain warfighting skills, and the fact that the U.S. Armed Forces' primary mission is fighting and winning our Nation's wars. Others have taken the position that participation in peacekeeping operations is in our Nation's interest and strengthens U.S. leadership and that such actually improves certain warfighting skills, such as leadership skills.

What is your view on the participation of U.S. forces in peacekeeping operations?

*Answer.* Clear criteria for the use of U.S. military forces should be established prior to U.S. participation in specific peacekeeping operations. There should be clear objectives, a coherent strategy to achieve them, a reasonable chance of success, acceptable command and control arrangements, and an exit strategy. When the main burden of the U.S. presence shifts to infrastructure and nation-building, however, we are into missions that are not appropriate for the U.S. military.

#### JOINTNESS

*Question.* It became apparent during this year's debate on defense needs that our military deployments have increased dramatically in the past decade at the same time our force structure and resources have declined, increasing the tempo on our military personnel and equipment. To the consternation of many, including members of this committee, we seem to encounter the same significant problems with meaningful joint operations and interoperability of our Armed Forces during each significant military operation. Most notably, the armed services continue to be hampered by communications systems, information management systems, and other capabilities that are often not interoperable and sometimes redundant. This committee has expended considerable time on these issues, but continues to observe problems in the development and fielding of interoperable systems and concepts.

How do you propose to remedy these recurring shortcomings?

*Answer.* Interoperability among our forces is an issue which I believe demands immediate attention. Interoperability should be addressed as new systems are conceived, not simply after they are fielded. I believe we should devote significant efforts to solving the warfighter's problems in the field as identified by the CINCs, including from experiences in Kosovo, Bosnia, and Desert Storm.

*Question.* In your opinion, do our experimentation, requirements generation, and acquisition processes need significant reform? If so, how would you propose to reform these processes?

*Answer.* If confirmed, I will undertake a review of these processes, with a special emphasis on innovation and streamlining, and will report the results of that review to Congress. My current impression is that the process is mired in unrealistic requirements that unnecessarily delay the time from concept to deployment at a time when technology is leaping ahead. Because of the lengthy acquisition process and the rapid advances in technology, we may have driven ourselves into a position that is guaranteed to produce technologically obsolete equipment the day it is deployed.

#### NATIONAL SECURITY

*Question.* Most agree the most significant near-term threat to our national security is not from a military peer competitor, but from transnational, ideological groups that may attempt to employ some type of weapon of mass destruction within the United States.

How would you assess our preparedness to respond to such a situation?

Answer. I am advised that the U.S. government is spending more than \$11 billion to deal with terrorist threats that might be posed by transnational or ideological terrorists, including the use of weapons of mass destruction. While some impressive results have been achieved from this considerable effort, my preliminary impression is that more remains to be done, particularly with respect to the role of the Department in providing for homeland defense as well as for defense of U.S. facilities overseas.

*Question.* What adjustments would you recommend, if confirmed, to our national security mechanisms to ensure the collective, accountable cooperation of all appropriate agencies?

Answer. I am not prepared at this time to recommend adjustments. While the response to the transnational terrorist threat to the U.S. has been well supported the distribution of resources, programs, and leadership over numerous Federal agencies has posed significant coordination problems. Greater coordination and interagency leadership is needed to assure an effective U.S. government response to this threat.

Two areas of particular interest to me are space and intelligence. Each would benefit from more senior level leadership and closer coordination between the Secretary of Defense and the DCI.

#### TRANSFORMATION

*Question.* The December 1997 Report of the National Defense Panel, titled "Transforming Defense: National Security in the 21st Century," contained the following statements: "The Defense Department should accord the highest priority to executing a transformation strategy. Taking the wrong transformation course (or failing to transform) opens the nation to both strategic and technological surprise. Transformation will take dedication and commitment—and a willingness to put talented people, money, resources, and structure behind a process designed to foster change. Greater emphasis should be placed on experimenting with a variety of military systems, operational concepts, and force structures. The goal is to identify the means to meet the emerging challenges, exploit the opportunities, and terminate those approaches that do not succeed." And: "At the core of the effort should be a much greater emphasis on jointness, building upon the legacy of Goldwater-Nichols."

Do you agree that there is a need to transform the U.S. Armed Forces into a very different kind of military from that which exists today?

Answer. Yes. Our current force structure will be sorely challenged by asymmetric threats and the growing ability of both state and non-state actors to deny access to critical forward bases and lines of communication. We have the opportunity now to critically evaluate both our force structure as well as how we organize and employ our forces. Lessons learned from previous operations suggest the need for improvement in the areas of intelligence, rapid deployment and employment, decisive operations across the spectrum of conflict, streamlining of logistics, and improvements in the C<sup>4</sup>ISR capabilities and architectures.

*Question.* Do you agree that experimentation, particularly joint experimentation, is essential to successfully achieving such a transformation?

Answer. Yes. Joint experimentation is essential in ensuring that operations, doctrine-related activities, and acquisition are more fully explored from inception to delivery/implementation. Our concept should be to field systems and develop capabilities that are "born joint." An essential step in helping to ensure that new capabilities are "born joint" and work is through experimentation. We must avoid radios usable by only one service, service-specific software, and procedures that are peculiar to one community or service. Transformation involves more than merely new weapons systems. Rather, it is a process of reorganization and reform that can best be validated through joint experimentation.

*Question.* Over the last year, we have seen the Army begin a process to transform the service into a force that will be able to deal with a wide range of anticipated 21st century national security challenges. The Navy and Air Force have also begun to explore opportunities to initiate transformation processes to keep current with evolving defense challenges. These efforts demonstrate a recognition that fundamental change is necessary if they are to remain viable over the next 20–30 years.

Are you at all concerned that these initiatives appear to be "self defined" by the services without direct participation of the Secretary of Defense or the Chairman, Joint Chiefs of Staff?

Answer. I am told that a structure is in place in which JFCOM was designated the lead for joint force integration and for joint force training. While I am not familiar with it, I intend to assess the effectiveness of the current arrangement.

*Question.* Should the Department of Defense play a role in steering or guiding individual service efforts? If so, how?

Answer. Yes. Service initiative is invaluable. However, if forces are to fight jointly in the field, transformation must be conducted as a joint endeavor. Only then can the Services' specific cultures and capabilities likely to be forged into a joint cooperative endeavor.

#### ARMY TRANSFORMATION

*Question.* The Army has begun a process for transforming itself into a lighter, more agile force that will be able to deal with the challenges posed by threats in an uncertain future.

Do you believe that the Department should support the Army's current transformation plan even if it means diverting resources from other Services' investment programs to pay for it?

Answer. I cannot answer this without an analysis of all the Services' investment programs. But I can say this: I believe that the Secretary of Defense should seek an allocation of resources that is best for the overall defense posture—that gives priority to funding the most pressing requirements. The transformation of our Armed Forces will be a high priority. But before recommending major changes in the allocation of investment funding—which Congress has recently approved—I intend to assess what new capabilities are being sought and the soundness of programs advancing those capabilities and their impact on deterrence and warfighting capabilities.

*Question.* What is your view of the appropriate role that experimentation, including joint experimentation, should play in directing the Army's efforts in modernizing the legacy force, fielding an interim force, and developing the objective force?

Answer. Army Transformation must be coherent with evolving joint operational doctrine, and that doctrine will only emerge through joint experimentation. I see experimentation playing an important role. But let me be clear: experimentation will yield changes in course, exhibit failures of expectations, or even reveal past mistakes. We must be careful to learn from experimentation, and acknowledge the risks it reveals.

*Question.* Do you believe that the current Air Force and Navy strategic mobility programs will support the Army's transformation goals for strategic agility? If not, what changes do you believe should be made in those programs?

Answer. My preliminary impression is that we need to make improvements in our strategic mobility capability. As we transform the forces, we will need an appropriate strategic sea/airlift fleet.

#### BUDGET PRIORITIES

*Question.* During the 106th Congress, both Congress and the administration placed the highest priority on increasing pay and compensation for military personnel and health care benefits for retirees, and on improving housing for military families.

If you are confirmed, what will be your highest priorities for increased funding over and above financing the unfunded cost of these previously enacted benefit increases?

Answer. *First*, preserving the high quality of our military personnel and restoring their morale. We need to spend what is needed to compensate military people fairly and ensure a competitive quality of life for them and their families. In this tight U.S. labor market for highly-skilled professionals, we must spend enough to attract and retain people with the skills required for the technically sophisticated Armed Forces. Also important is good military health care, housing, and other quality of life contributors. I would review the progress made in recent years and decide if further improvements are needed. President-elect Bush has signaled that taking care of our military people is a top priority with his pledge to increase pay for the Armed Forces. *Second*, readiness. I would look for areas where increased funding is needed for training, maintenance, and other readiness essentials—there are also important quality of life considerations. I also would consider actions to prevent indirect threats to readiness—that is, to prevent funding shortfalls that could result in funds being diverted from readiness accounts. *Third*, future capabilities—focused on ballistic missile defense and modernization of air, sea, land, intelligence, and space capabilities. These areas are complex, and I will likely not complete an assessment of where best to put added funding until the defense review is completed. I hope to have identified some immediate funding needs in time to include in the fiscal year 2002 budget submission, and possibly in a fiscal year 2001 supplemental.

*Question.* As Secretary you would be called on to make tough decisions in many areas, one of which would be funding priorities. What areas in the defense budget represent your highest priorities for additional resources?

Answer. Again, the highest priorities would be people, readiness, and future capabilities. It is important to ensure that we are taking good care of our people, both now and for the future; and to seek the proper balance between current readiness and investment in the high-tech capabilities to ensure our future superiority in all security realms—with special attention to the threats of this post-Cold War period. Over the past few years I have been focused on the issues of ballistic missile defense, America's security posture in space, and intelligence. If confirmed, these would certainly be high priorities.

*Question.* There are an increasing number of studies from outside the administration, in addition to the Joint Chiefs, which indicate that current and projected levels of defense spending will be inadequate to meet U.S. national security requirements as they are currently stated.

What is your view of these and other studies, and will you seek additional funding for defense?

Answer. I agree with the conclusion that projected defense spending levels are inadequate to meet U.S. national security requirements as they are currently stated. President-elect Bush has expressed the same conclusion. If confirmed I would direct a study to specify exactly where inadequacies lie, where savings could be achieved to help address those inadequacies, and what additional funding may be required.

#### READINESS FOR MOST LIKELY MILITARY OPERATIONS

*Question.* The Army has been exploring changes to the way readiness is measured due in part to confusion in some recent deployments where units were assessing themselves and reporting against one set of requirements while they were undertaking a different mission at the time.

Do you believe the readiness reporting system should be made more comprehensive so that it measures our units not only against the most demanding requirements contained in the national military strategy but also assesses the performance of those units in the real world missions directed by the national command authorities?

Answer. The question "ready to do what?" is a good one. The current system centers on our readiness for high intensity combat operations, such as a major theater war, and provides broad indicators of readiness status ranging from personnel to equipment. I understand that planning is underway for a number of improvements to the existing reporting system, in both the near and longer term.

*Question.* Over the last few years many have agreed that we have seen increasing evidence that the readiness of the U.S. Armed Forces has begun to deteriorate as a result of the over-commitment of an under-resourced Department of Defense.

What do you view as the major readiness challenges that will have to be addressed by the Bush administration, and, if confirmed, how will you approach these issues?

Answer. There are a number of readiness challenges that must be addressed. These include the classic "unit readiness" concerns of robust manning, functioning equipment, and realistic training. Warfighting commanders have to have the assets to synchronize and use their units in effective joint and coalition forces. National Guard and Reserves have a number of unique challenges in meeting their mission requirements upon deployment that require immediate address.

Some of the more pressing concerns lie in the condition of equipment, or more broadly, the materiel readiness of the forces. Problems include higher-than-planned use, inadequate spare parts inventories, and recruiting and retaining highly skilled personnel.

Joint readiness requires effective command, control, communications, and computer (C<sup>4</sup>) systems; robust intelligence, surveillance, and reconnaissance (ISR) systems; sufficient lift to mobilize forces and equipment; and healthy logistics practices and sustainment stocks. The U.S. needs to be better prepared for the growing threats posed by terrorism, weapons of mass destruction (WMD), threats to critical information and other infrastructure systems, and vulnerable space assets. As we review our National Military Strategy in the Quadrennial Defense Review, these concerns must be addressed.

#### ENCROACHMENT

*Question.* Some of the most significant issues that will impact the readiness of the Armed Forces as we enter the 21st century could be categorized as outside encroachment upon military resources. This encroachment includes environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, transfer of radio frequency spectrum from the Department of Defense to the wireless communications

industry, and many others. Unless these issues are effectively addressed our military forces will find it increasingly difficult to train and operate at home and abroad.

In your opinion, how serious are these problems?

Answer. This is an important issue. The myriad forms of encroachment ranges face threaten to complicate and in some cases severely restrict the ability to conduct critical training. The number of external pressures is increasing and the readiness impacts are growing. We need to address these issues in a more comprehensive and systematic fashion. It will be important to work with regulators, special interests, other federal agencies, and communities to more clearly define the issues from all viewpoints. We must anticipate pressures and reach acceptable, timely solutions, whenever possible. We will also need to address the issues raised by the transfer of radio frequency spectrum from DOD to the wireless communications industry.

*Question.* If confirmed, what efforts will you take to ensure that military access to these specific, and other required resources, will be preserved?

Answer. The Department's approach should be comprehensive and balanced, supporting test and training and operational requirements, while seeking to protect the natural environment and operating within a balanced regulatory framework. Modernizing instrumentation is central to efforts to make DOD ranges sustainable. Live training is expensive. Improved range instrumentation can increase the return on investment by: expanding the battle space and creating a more realistic warfare environment; providing improved learning by better feedback; and reducing the impact on the environment by substituting simulated engagements. All Services are experiencing deterioration of training range infrastructure, which will require recapitalization. I am advised that the Senior Readiness Oversight Council recently directed a broad-based effort to counter encroachment and protect the future capability of ranges to support required training and testing. The goal is to maintain fully sustainable ranges. A comprehensive approach is needed to satisfy both readiness needs and the legal and moral responsibilities as stewards of public lands.

#### OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Over the past several years the Department of Defense has increased its reliance upon the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort while others have expressed concern that core activities are being jeopardized by reducing our reliance upon military personnel and civilian employees of the Federal Government.

What approach would you recommend to balance maintaining military necessary capabilities and outsourcing?

Answer. The size and composition of DOD's facilities to perform equipment maintenance is an important aspect of the overall readiness of the Armed Forces. The appropriate balance between government and private sector facilities must be struck in a manner that assures the equipment employed by the Armed Forces will be ready for use when needed. This balance in turn will be affected over time by the nature of the technology used in military equipment. A balance will be reviewed to assure that capabilities essential to national defense that cannot reliably be provided by the private sector will be provided by the government sector. Moreover, critical capabilities will be maintained in the government sector.

#### COUNTER-NARCOTICS

*Question.* The U.S. Government has initiated a massive assistance program to the Government of Colombia to regain control of its territory in an effort to stem the production of cocaine and other narcotics that are sent to the United States. The Department of Defense is playing a particularly significant role in this program by training and providing resources to the Colombian Armed Forces. This program, Plan Colombia, has come under criticism as expensive and misdirected and, some allege, will contribute to the abuse of human rights and lead the U.S. military into "another Vietnam."

What is your view with regard to Plan Colombia—its potential for success and the appropriate role of the U.S. Armed Forces?

Answer. I have less than well-informed personal views which I prefer to discuss with the appropriate officials before taking a public position.

#### COMBATING TERRORISM

*Question.* The Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (sec. 901) requires the Secretary of Defense to designate an Assistant Secretary as the individual responsible for providing "overall direction and supervision

for policy, program planning and execution, and allocation and use of resources for the activities of the Department of Defense for combating terrorism.”

If confirmed, what are your plans for implementing this legislation and any other plans you have for streamlining and providing more focus on the Department’s combating terrorism programs?

Answer. I am aware of the Section 901 language requiring the designation of an Assistant Secretary of Defense for the Department’s combating terrorism activities. I share the committee’s concerns with providing an appropriate focus for combating terrorism. If confirmed, I would hope to review the current organizational structure. I would of course inform Congress as implementing decisions are made.

*Question.* In recent years, there have been numerous congressional proposals to establish a National Coordinator for Combating Domestic Terrorism. The proposals have ranged from establishing a position similar to the current “Drug Czar” to creating a Deputy Attorney General for Combating Domestic Terrorism.

Would you have concerns with such an individual having budgetary and policy responsibilities over certain Department of Defense combating terrorism programs?

Answer. The many activities associated with combating terrorism, domestically and internationally, need to be coordinated. Combating terrorism is a complex issue involving the expertise and statutory authorities of many departments and agencies. I would be concerned with proposals that could limit the Department’s ability to fulfill its responsibilities. I would need to know more than I do now to have conclusions about such proposals and provide the committee with my appraisal.

*Question.* Do you have any suggestions as to what type of a position, and its responsibilities, should be established to better coordinate our Nation’s combating domestic terrorism efforts?

Answer. I would need some time to be prepared to make a recommendation.

#### TACTICAL FIGHTER PROGRAMS

*Question.* Perhaps the largest modernization effort that we will face over the next several years is the set of programs to modernize our tactical aviation forces, including the F-22, the F/A-18E/F, and the Joint Strike Fighter (JSF). The Congressional Budget Office has estimated that these three programs will consume over \$300 billion of our investment resources over the next 20 years. Some have said that we need to cancel or truncate one or more of these programs in order to afford other high priority modernization efforts, such as Army transformation, or recapitalizing the Navy’s fleet.

What are your views on the requirements for and timing of these three programs?

Answer. The modernization of U.S. tactical fighter programs is of immense importance to the maintenance of U.S. military superiority. It is costly, and deserves a careful review. The requirements and timing of the tactical fighter programs will be a subject in the defense review.

#### B-2 BOMBERS

*Question.* Do you favor restarting production of B-2 bombers?

Answer. Long-range bombers are a crucial national military capability providing timely worldwide reach to American military power. As is the case with tactical fighters, the bomber modernization requirement needs to be reviewed in the forthcoming defense review. Before such a decision could be made, one would have to look at the overall cost and the impact on other programs, and how that cost would compare to fielding other weapon delivery systems, including stand-off missiles that could perform or contribute to the same or similar missions. One would also likely look at whether more B-2s would be more effective than additional upgrades and improvements to the current bomber force structure of B-2, B-1, and B-52 aircraft.

#### V-22 PROGRAM

*Question.* Do you believe that the V-22 program should move to full rate production now, should substantial additional operational testing be conducted, or is the Department pursuing a flawed program for which another alternative should be adopted?

Answer. The two recent crashes of the V-22 which have resulted in loss of life are disturbing. I have read that the Department is reviewing the program in light of these incidents. I have no conclusions at this time.

#### STRATEGIC LIFT

*Question.* One of the shortfalls most consistently identified by Commanders-in-Chief in written and oral testimony has been in the area of the required strategic

lift to support the National Military Strategy. Study after study has confirmed this shortfall, yet the shortfall remains.

What steps would you propose to address this deficiency?

Answer. Strategic lift is a key element of U.S. military power because of our dependence on the ability to conduct expeditionary campaigns to defend U.S. interests and those of our friends and allies. Depending on the airlift requirement established, there are several options to be considered. The question of strategic lift will need to be addressed in the defense review.

#### NATO EXPANSION

*Question.* The United States will face a decision on the addition of new members to the NATO Alliance by the 2002 NATO summit meeting.

What are your views on continued NATO expansion?

Answer. As former Ambassador to NATO, I have great respect for the value of the NATO Alliance. It has been the key instrument in keeping the peace in Europe for over 50 years. The key factor in considering future NATO expansion is whether or not expansion will enhance U.S. and NATO security. I believe it is important that the broadening of NATO membership preserve the alliance's capacity for effective collective action. This suggests that new members should share the democratic values of the alliance and be prepared to make the necessary investments in the creation and maintenance of effective and interoperable military forces.

It is my understanding that Allied leaders agreed to "review" the issue of enlargement at their next summit, to be held no later than 2002. This is an issue that will need to be addressed by the President and his national security team.

#### REVIEW OF OVERSEAS MILITARY DEPLOYMENTS

*Question.* In an address to the Citadel in September 1999, then-Governor Bush said that he would order an immediate review of U.S. overseas military deployments worldwide. According to the Governor, "the problem comes with open-ended deployments and unclear military missions."

In conducting this review, what factors will you use to determine continued U.S. military participation in on going overseas deployments?

Answer. A decision to employ U.S. military forces in support of our national interests is one that should never be taken lightly. Likewise the decision to sustain, reduce, or end the commitment of U.S. forces to on-going operations must be informed by careful assessment and deliberation. If confirmed, I will assist the President and his senior advisors in reviewing these matters, preferably in a way that does not create unnecessary uncertainties and difficulties for those responsible for managing such operations.

#### EUROPEAN SECURITY AND DEFENSE POLICY

*Question.* The European Union (EU) is working to implement its European Security and Defense Policy (ESDP) to enable the EU to take decisions and, where NATO as a whole is not engaged, to launch and conduct EU-led military operations in response to international crises. Secretary Cohen recently warned our European allies that NATO could become "a relic of the past" if ESDP is not implemented in a way that will strengthen the NATO Alliance. Members of Congress have expressed similar concerns.

What are your views on the EU's ESDP?

Answer. I share these concerns. A free and democratic Europe is a vital security interest for the United States. The transatlantic alliance has proven to be the most effective instrument of collective military action in history. Coming at a time of historically low levels of investment and public interest in defense matters in Europe, the ESDP could pose a resource-diversion risk to NATO, and in doing so, undermine the ability of NATO to undertake effective collective defense. The U.S. and our NATO allies need to assure that any ESDP would not diminish the effectiveness of the NATO alliance.

*Question.* What actions do you believe the EU should take in implementing ESDP to address the concerns expressed by Secretary Cohen and others?

Answer. The task is to preserve the integrity of NATO as the primary instrument of transatlantic security. It will take active U.S. leadership at both the bilateral and multilateral levels to ensure that any ESDP does not diminish the effectiveness of the NATO alliance.

*Question.* Do you believe that ESDP is, or could be, a threat to the NATO Alliance?

Answer. It could, potentially. But we need to work with our allies to make sure that it does not.

## INTERNATIONAL CRIMINAL COURT

*Question.* The United States signed the Rome Treaty on the International Criminal Court on December 31, 2000, the deadline established in the Treaty. The decision to sign, despite concerns about significant flaws in the Treaty, was to put the United States in a position to influence the evolution of the Court.

What are your views on the Rome Treaty?

*Answer.* I oppose the Treaty. The Rome Statute has deficiencies that expose U.S. personnel to certain risks. We must be concerned about the exposure of U.S. personnel to politically motivated prosecution. I favor rejecting the assertion of the ICC's purported jurisdiction over non-party states.

*Question.* The Pentagon has been very concerned that the court could claim jurisdiction over American service members and officials, even if the U.S. has not ratified the treaty.

Do you share those concerns with regards to the ICC?

*Answer.* Yes. See my comments above.

## NATIONAL MISSILE DEFENSE

*Question.* President-elect Bush has stated his support for deploying a robust National Missile Defense (NMD) system "at the earliest possible date" to protect the United States and its allies.

Will you only consider deploying the NMD system currently under development, or will you consider alternative systems and architectures for deployment?

*Answer.* I believe it would be good to examine alternative and complementary architectures to the NMD system currently under development. In doing so, a number of factors would need to be considered, including the urgency of the ballistic missile threat to the United States, U.S. forces deployed overseas, and our friends and allies, as well as the technical feasibility, cost, and deployment schedule for potential alternatives.

*Question.* If you consider alternatives, they are likely to take longer to develop, test, and deploy than the system currently under development, perhaps considerably longer.

Are you willing to wait until after 2010 to deploy a system if its development takes that long, or will you only consider systems that can be deployed during this decade?

*Answer.* President-elect Bush is committed to deployment of an effective NMD at the earliest possible date. This commitment is based on the need to protect the American people against long-range missile threats that can evolve rapidly and with little or no warning. I agree. However, this does not mean we will foreclose alternatives that could be deployed after 2010, particularly if they can provide increased effectiveness or would address uncertainties in the evolution of the long range missile threat.

*Question.* The Bush administration and the Clinton administration both pursued development of a limited NMD system to defend against limited attacks. Then-Governor Bush wrote in May 2000, of the need for missile defense against "missile attacks by rogue nations or accidental launches."

Will you pursue an NMD system designed to defend against such limited attacks, or will you pursue an NMD system designed to defend against all Russian and Chinese ballistic missile systems?

*Answer.* If confirmed, I would plan to review the various alternatives to defend us and our allies against ballistic missile attacks by rogue nations as well as accidental or unauthorized launches.

*Question.* The Clinton administration adopted four criteria for determining whether to deploy an NMD system: (1) the existence of a threat that warrants deployment; (2) an NMD system that is operationally effective; (3) an NMD system that is affordable and cost-effective; and (4) an assessment of the impact of deployment on our relations with other nations and on nuclear arms control and non-proliferation efforts. The overall focus of these criteria was to determine whether deployment would make the United States more or less secure.

What will be your criteria for determining whether deploying an NMD system will make us more or less secure?

*Answer.* The incoming administration has not issued a specific set of criteria. However, the President-elect has stated his support of the deployment of an NMD system as soon as possible. This is founded in a belief that an effective NMD systems will make us more secure.

*Question.* Since you chaired the Commission to Assess the Ballistic Missile Threat to the United States in 1998, have your judgments changed regarding the nature and scope of the ballistic missile threat?

Answer. No. The threat to the U.S. posed by emerging ballistic missile capabilities is broader, more mature, and evolving more rapidly than had been previously estimated.

*Question.* The current NMD program being developed by DOD is focused on the deployment of a single ground-based site in Alaska in the 2005–2007 timeframe. Some have advocated either substituting a sea-based NMD system for the ground-based program or adding sea-based systems as adjuncts to the ground-based system.

What role do you believe sea-based systems might have in a future NMD architecture?

Answer. I am aware that sea-based systems could play an important role in defending against ballistic missile threats. I further understand that the Department has prepared a classified study of the possible contributions of sea-based systems to National Missile Defense. If confirmed I will review that study and make recommendations to the President, as appropriate.

#### THEATER MISSILE DEFENSE

*Question.* Theater ballistic missile threats exist today and are growing. There are currently five U.S. theater missile defense (TMD) systems under development for deployment against these existing and growing threats.

What priority will you give to theater missile defense and how will it compare to National Missile Defense?

Answer. In light of the widespread deployment of ballistic missiles today, I believe it is imperative that the Department develop, test, procure, and deploy TMD systems. Given the simultaneous emergence of the long-range ballistic missile threat to the United States, it is essential that the Department give equal priority to developing and procuring an effective NMD as well.

*Question.* Will you continue the “family of systems” approach of layered and complementary TMD systems currently being developed, or will you change the approach to TMD? If you would change the approach, what manner of change would you propose?

Answer. It is my understanding that the concept of layered defense has been adopted because a single TMD system cannot defeat the range of theater ballistic missiles U.S. forces could face. It also provides greater confidence in the overall effectiveness of the system. I currently know of no reason to move away from the “family-of-systems” approach currently under development.

*Question.* Several of DOD’s theater missile defense programs are currently funding-constrained, resulting in either inefficient production rates or development delays.

What sort of priority would you attach to ensuring that we develop and field TMD systems in a timely and efficient manner?

Answer. Given the widespread deployment of theater-range ballistic missiles and the threat those missiles pose to deployed U.S. forces as well as our friends and allies, I would attach a high priority to the development and deployment of effective TMD systems in a timely and efficient manner.

#### MISSILE DEFENSE TECHNOLOGY

*Question.* Congress has repeatedly expressed concerns over the declining level of funding available for ballistic missile defense science and technology and follow-on technology development.

Do you believe that it should be a priority to reinvigorate the Ballistic Missile Defense Organization’s support technology efforts?

Answer. Yes. Effective ballistic missile defense relies on the application of some of the most advanced technologies available. In assessing the scope of science and technology work in this area, it is also important to look beyond the specific dedicated investments in BMDO programs.

#### ANTI-BALLISTIC MISSILE (ABM) TREATY

*Question.* Then-Governor Bush stated in September 1999, that his administration would “offer Russia the necessary amendments to the Anti-Ballistic Missile Treaty” to make possible the deployment of a U.S. NMD system. “If Russia refuses the changes we propose, we will give prompt notice, under the provisions of the Treaty, that we can no longer be a party to it.”

What amendments to the ABM Treaty would you propose to the Russians?

Answer. The issue of how to handle the ABM Treaty will be part of the overall review of NMD to be directed by the President.

*Question.* The ABM Treaty gives each party the right to withdraw from the treaty if it decides that “extraordinary events related to the subject matter of this treaty have jeopardized its supreme interests.”

If the U.S. makes a unilateral decision to withdraw from the ABM Treaty in order to deploy an NMD system, what possible negative consequences do you foresee from the reaction of our allies, from Russia, or from China?

*Answer.* I am aware that concerns have been expressed by some of our allies about NMD and the prospect of U.S. withdrawal from the ABM Treaty. I believe these concerns can be addressed through close consultations. In the longer run, I believe that deployment of an effective NMD system can strengthen U.S. and allied security. For example, the failure to deploy appropriate defensive systems could also have adverse effects, including:

- Paralyzing our ability to act in a crisis or deterring other countries from assisting us;
- Providing incentives to U.S. friends and allies to develop nuclear capabilities;
- Putting the U.S. in a position where its only option may be preemption; and
- Moving the U.S. to a more isolationist position because of an inability to defend against ballistic missiles.

To date, the Russians have rejected amendments to the treaty to permit deployment of any U.S. NMD system, and have raised the possibility of withdrawing from existing arms control regimes and on-going efforts to reduce strategic offensive arms. The task is to persuade the world of the truth that deployment of a NMD system will strengthen global security and stability. As President-elect Bush has stated, “America’s development of missile defenses is a search for security, not a search for advantage.”

*Question.* Could these consequences, possibly including Russia ending its nuclear weapon reductions, have the effect of reducing our security or increasing the risk of nuclear proliferation?

*Answer.* I don’t believe that is the case. These are issues the President-elect and his senior officials will need to address.

#### NUCLEAR FORCE LEVELS AND POSTURE

*Question.* Then-Governor Bush wrote in May 2000 of the need for a new approach to nuclear security, saying that “the premises of Cold War targeting should no longer dictate the size of our arsenal.” Concerning the number of nuclear weapons in the U.S. stockpile, Governor Bush wrote that he would “pursue the lowest possible number consistent with our national security.” He also stated that, “It should be possible to reduce the number of American nuclear warheads significantly beyond what has already been agreed to under START II, without compromising our security in any way.”

Under what circumstances do you believe it would be possible to achieve such reductions?

*Answer.* President-elect Bush has stated that he will direct his Secretary of Defense to conduct an assessment of the nuclear force posture and determine how best to meet U.S. security needs. At the same time, he has stated he will pursue the lowest possible number of weapons consistent with our national security. I prefer to wait until that review is completed before speculating on the circumstances under which reductions might be advisable.

*Question.* Do you believe we should pursue such reductions through negotiated agreement with Russia (and possibly other nations)?

*Answer.* The President’s advisers plan to undertake a review of how best to pursue President-elect Bush’s goal of further reductions. Logically, this could involve traditional arms control tools, innovative unilateral initiatives, or some combination. In any case, an approach to any nuclear reductions would need to be developed in the context of a number of interrelated factors. These include decisions on the ABM Treaty and National Missile Defense, as well as measures relating to tactical nuclear weapons, the evolution in Russia’s unilateral strategic force posture, and the outcome of the planned Nuclear Posture Review.

*Question.* Governor Bush also wrote that “the United States should remove as many weapons as possible from high-alert, hair-trigger status,” because “keeping so many weapons on high alert may create unacceptable risks of accidental or unauthorized launch.”

Do you intend to carry out an assessment of “what we can safely do to lower the alert status of our forces?”

Answer. This is one of the questions that would be considered as part of the nuclear posture review.

#### U.S.-NORTH KOREAN NUCLEAR AGREED FRAMEWORK

*Question.* The United States and North Korea signed an agreement in 1994 that calls for North Korea to end and dismantle its plutonium production capacity, and for the United States to lead a coalition with South Korea and Japan to provide North Korea with proliferation-resistant light water reactors if it complies with each step of the agreement. To date, both sides have complied with the Agreed Framework, which has prevented North Korea from producing enough plutonium for dozens of nuclear weapons.

Assuming both sides continue to comply with its terms, do you believe this Agreed Framework serves our national security interests?

Answer. It is in U.S. interest to ensure that the North Korean nuclear weapons program is terminated. I assume that the new administration will pursue that objective through means it deems most effective. Those precise means would likely be determined following a review of U.S. policy towards North Korea and U.S. non-proliferation policies.

#### COMPREHENSIVE TEST BAN TREATY (CTBT) AND NUCLEAR TESTING

*Question.* You have expressed opposition to a permanent, zero-yield CTBT.

If U.S. ratification were conditioned on a robust Stockpile Stewardship Program; a firm commitment to preserve the option to test a nuclear weapon (by withdrawing from the treaty) if necessary to fix a critical problem with the stockpile; and there were a review of the treaty after 10 years, would that address some of your concerns about the treaty?

Answer. I am not convinced that that approach would adequately protect U.S. national security. The President-elect has opposed CTBT, but has stated that he would continue the current testing moratorium. That being said, I believe the new administration is likely to undertake a review of this matter.

*Question.* Do you agree that we should maintain our current moratorium on nuclear testing?

Answer. The President-elect has stated that he will continue the current moratorium on nuclear testing. The President will review annually the size, composition, and status of the U.S. nuclear weapons stockpile. This will include a detailed assessment of the safety, reliability, and effectiveness of the weapons in the stockpile. Developments in this area need to be monitored closely.

*Question.* Do you believe that a CTBT would make it more difficult for such nations to develop and stockpile advanced thermonuclear nuclear weapons?

Answer. Not necessarily. History teaches that nations that are determined to cheat do so and I do not see how the CTBT can be effectively verified.

*Question.* As Secretary of Defense, what measures do you believe must be taken to ensure that the U.S. stockpile is reliable and safe?

Answer. I am not an expert, but one point is important. The U.S. cannot afford to lose too many of its key design and manufacturing personnel who have had senior-level experience in the nuclear weapons program when testing was undertaken. The DOD will work closely with the new Secretary of Energy and the Director of the National Nuclear Security Administration to ensure a safe, effective, and reliable U.S. nuclear stockpile and complex.

#### COOPERATIVE THREAT REDUCTION (CTR) PROGRAM

*Question.* The U.S. Defense Department has a Cooperative Threat Reduction (CTR) program initiated by Senators Nunn and Lugar that is designed to reduce the threat of insecure nuclear stockpiles and excess weapons of mass destruction in the former Soviet Union.

Do you agree that this Cooperative Threat Reduction program serves U.S. national security interests by reducing the threat from former Soviet weapons of mass destruction?

Answer. Certainly, the elimination of former Soviet strategic nuclear weapons and their delivery vehicles that the CTR program has funded has benefited U.S. national security. But, we need to be aware of the fact that Russia, in particular, claims to lack the financial resources to eliminate weapons of mass destruction, but continues to invest scarce resources in the development of newer, more sophisticated ICBMs and other weapons. We would not want the U.S. investment in the CTR program to become the means by which Russia frees up resources to finance its military modernization programs. A review of ongoing CTR projects and their respective national security benefits would be appropriate.

*Question.* Are you concerned about continuing this \$1 billion program at the same time that Russia is increasing its military spending and arms exports?

Answer. Yes. See answer above.

#### SPACE POLICY

*Question.* You have recently served as chairman of a commission to examine U.S. space policy.

Do you believe that protecting our space assets requires the United States to develop and deploy offensive means of disabling or destroying other nations' space assets, either from the ground or from space?

Answer. The United States is increasingly dependent on its civil, commercial, and defense and intelligence space assets. With that dependence comes vulnerability to hostile acts. The Nation needs a capability to deter attack on space assets, and systems to defend satellites in orbit, the ground stations that control them, and the electronic links between them.

*Question.* If the United States were to develop and deploy offensive means of disabling or destroying foreign satellites, do you believe it could lead other nations to acquire such means to threaten U.S. space systems? If so, do you believe that would be contrary to our security interests?

Answer. The U.S. and other nations that make use of space face real threats to the operation of their satellites. We know that other nations have jammed telecommunications from on-orbit satellites, that Russian entities market devices that can jam GPS signals, and that foreign satellite manufacturers market so-called "micro satellites" to other foreign countries that can be used for offensive actions against satellites. In light of U.S. dependence on space assets, the vulnerability of the assets to attack or disruption and the fact that others have the means of doing harm to U.S. interests in space, it would be contrary to U.S. security interests not to develop, test, and deploy the means of deterring attack on and defending space systems.

*Question.* In light of this experience, what types of management and organizational changes do you believe are needed in DOD to improve space management?

Answer. If confirmed, I will give careful attention to the recommendations of the several recent studies and commissions on space systems and other matters. There are three areas of particular interest. First is the relationship between the Secretary of Defense and the DCI, who together have the greatest responsibility for the operation of national security space systems. Second, is to assess whether the existing organizational structure is adequate for developing space policy, working with the military commanders in chief (CINCs), and overseeing the development and acquisition of capabilities by the Services. Third, is to assess whether changes are necessary within the Air Force so as to facilitate more efficient acquisition and operation of space systems and to create a dedicated cadre of space professionals.

*Question.* The Department of Defense is currently reevaluating the military requirement for a space-based infrared system to support ballistic missile defense.

Do you believe that the SBIRS-Low Program is a necessary element in an overall space and missile defense architecture?

Answer. I am informed that a number of DOD reviews have concluded that a SBIRS Low capability is a necessary element of an effective missile defense architecture.

#### SPACE PROGRAMS

*Question.* The Department of Defense has sought to establish a space-based radar program for surveillance and moving target tracking.

How do you rank such a program in terms of the various new technologies being developed by the DOD?

Answer. We use space extensively today to support military operations. A radar in space to provide tracking of moving targets is an attractive concept. Demonstrating the feasibility of that concept is important. I understand there are concerns about the cost associated with space demonstration projects. However, without such demonstrations it is not possible to know if those systems will help to transform our military and provide the means for deterring adversaries and defending the United States, our forces, and our friends and allies.

#### THE BALKANS

*Question.* U.S. troops are deployed to Bosnia and Kosovo as part of NATO-led peacekeeping forces.

Do you support the continued participation of U.S. forces in the NATO-led peacekeeping efforts in Bosnia and Kosovo?

Answer. President-elect Bush has indicated that a review will be conducted of U.S. peacekeeping deployments. His national security team will participate in this review. In the meantime, the deployed forces have an important job to do and should not be distracted by the fact of a new administration.

*Question.* If so, under what circumstances and for what timeframe?

Answer. See previous response.

*Question.* Do you believe that our European allies should eventually assume full responsibility for these missions?

Answer. See previous response.

#### IRAQ

*Question.* Since the end of the Persian Gulf War in 1991, the United States has been working to ensure Iraqi compliance with the obligations Iraq accepted at the end of the war—particularly those obligations related to disarmament. Unfortunately, since 1991 we have witnessed the fragmentation of the coalition that liberated Kuwait; the end of UN weapons inspections in Iraq; disagreement in the UN Security Council on how to proceed; and the re-establishment of diplomatic ties with Iraq by many nations in the Gulf region. At the same time, the United States continues to deploy thousands of troops to the Gulf region and spends approximately \$1 billion per year for military operations to contain Iraq.

What are your views on the current U.S. policy toward Iraq?

Answer. See response below.

*Question.* Are you concerned about the weakening in support for United Nations economic sanctions?

Answer. See response below.

*Question.* Do you believe that the benefits relating to enforcement of the no-fly zones justify the risk to U.S. and British airmen?

Answer. See response below.

*Question.* What additional or different steps, if any, do you believe the United States and its allies should take to ensure that Iraq's weapons of mass destruction programs and the means of their delivery are permanently ended?

Answer. Saddam Hussein is still in power. The UN weapons inspection program established to ensure Iraqi fulfillment of its commitment to destroy all of its WMD programs has been suspended for more than 2 years. Baghdad continues to pose a military threat to its neighbors as well as its own people, and Iraqi planes continue to challenge U.S. pilots enforcing the northern and southern no-fly zones. In addition, political support for Iraq's position seems to be solidifying among some Arab states, the economic embargo seems to be collapsing, and the coalition that successfully prosecuted the war with Iraq seems to be coming undone. The United States continues to maintain a presence in the region to deter Iraqi aggression, and daily no-fly zone patrols expose U.S. pilots to continuous risk. If confirmed, I will work closely with the national security team to help craft a policy that is effective and merits the support of Congress and the American people.

#### IRAQI OPPOSITION

*Question.* There is a continuing debate about the implementation of the Iraq Liberation Act, which provides authority to provide up to \$97 million worth of defense articles and services to support the Iraqi opposition.

What is your view as to how the Iraq Liberation Act should be implemented?

Answer. In the past I have favored it. However, this is an issue that the President-elect and his new administration's national security team will need to address. The Iraq Liberation Act established a policy of regime-change for Iraq and provides the authority for the Department of Defense to draw down \$97 million worth of goods and services to support the efforts of the Iraqi opposition to bring about a change in the regime. I understand that the Department of Defense to date has utilized this authority only sparingly, primarily with the provision of training and other forms of non-lethal assistance aimed at improving the opposition's effectiveness as a political force.

Helping the Iraqi opposition become a more credible alternative voice for the Iraqi people is useful, but may not, in itself, bring about a regime change in Baghdad. It could, however, make a useful contribution toward achieving that aim.

#### NORTH KOREA

*Question.* Please outline your views with regard to the situation on the Korean peninsula, in particular the talks between North and South Korea and ongoing missile proliferation talks between the U.S. and North Korea.

Answer. This is a matter the new administration will need to address. My personal impression, which is not well-informed, is that the on-going political discussions between North and South Korea are encouraging. The summit meeting between the Presidents of North and South Korea was a dramatic development. Obviously, tensions on the Peninsula cannot be reduced unless the two principal parties involved are committed to that effort.

For over 2 years, the Clinton administration has sought to convince the North Koreans to limit their missile and missile export programs. In September 1999 the DPRK stated that it would refrain from testing long-range ballistic missiles (No Dong or greater) while talks to improve U.S.-DPRK relations were underway. That decision could be reversed at any time. At the same time, I believe that North Korean missile exports have continued apace.

*Question.* In light of developments on the peninsula, what are your views on U.S. troop levels in South Korea?

Answer. Neither the North Korean military threat nor its forces and posture along the DMZ have changed. Thus, although the in-coming administration will undertake a review of our overall military deployments, I have seen nothing thus far that persuades me that a change in U.S. troop levels in South Korea should be considered.

#### RUSSIA AND IRAN

*Question.* In early December Secretary Cohen met with Russian defense minister Igor Sergeev to discuss U.S. concern over Moscow's continued arms sales and proliferation activities with Iran. While this meeting and subsequent State Department meetings later in December were considered upbeat, the United States did not receive concrete assurances from Russia that these activities would cease.

As Secretary of Defense, what policy options would you propose to President-elect Bush to address and minimize the continued proliferation activities of Russia with Iran?

Answer. This is a matter for the President-elect and his national security team. However I would recommend to the President that senior officials of the new administration who meet with Russian counterparts bring up the serious U.S. concern on proliferation activities that strengthen Iran militarily. We must remind Russian policy makers that they are dealing with a new administration and they have the opportunity to start the relationship in a productive direction if they take concrete steps to address our concerns in this area.

#### VIEQUES

*Question.* Last fall, Congress enacted legislation that essentially followed the agreement reached between President Clinton and the outgoing Governor of Puerto Rico, in particular by calling for a referendum to decide on whether training will continue there. That referendum is currently scheduled for November 2001, but recent comments by the incoming Governor of Puerto Rico suggest that she may attempt to reopen this deal.

Do you believe there is a requirement to continue live fire training at Vieques?

Answer. While simulation and non-live fire training certainly have value and are integral to the Navy and Marine Corps basic training programs, they do not provide an adequate substitute for live-fire training. Live-fire training contains an element of realism that is absent from simulators and non-live fire training. If U.S. forces cannot train under this realism, Sailors and Marines, when placed in a combat situation, will not only face the certain chaos that comes with combat but also the uncertainty which comes from handling and expending live ordnance for the first time in a highly complex, time synchronized combat operation. Failing to provide for adequate live-fire training prior to combat will place our Nation in the position of risking needless casualties through unpreparedness.

*Question.* Do you agree with the Chief of Naval Operations and the Commandant of the Marine Corps that Vieques is essential to the readiness of East Coast naval forces?

Answer. I am advised that Vieques is a superior site for rehearsing amphibious operations, the only site currently used for aerial mine warfare training, and is the only location currently available on the east coast where aircraft, naval surface ships, and ground forces can employ combined arms training with live ammunition under realistic conditions. It is the only range currently available on the east coast that allows sailors and marines to conduct naval gunfire training. So it is a very important site.

*Question.* Do you intend to look for alternative sites?

Answer. I understand that to date no alternative sites, providing the ability to conduct combined arms training with live ammunition under realistic conditions, have been located.

*Question.* Do you believe the existing agreement should be adhered to, or is there some alternative solution you believe would be more agreeable to all the parties involved that you intend to propose?

Answer. I have not had an opportunity to study it.

#### BASE CLOSURE

*Question.* Secretary Cohen requested two additional rounds of base closures in each of his budget proposals to Congress, but so far Congress has not agreed to authorize any additional base closures.

Do you believe we still have excess military infrastructure that can and should be reduced?

Answer. See response below.

*Question.* Do you believe it is in the best interest of the Defense Department to authorize additional military base closures and realignments and that such closures and realignments could better align our military base structure to meet the requirements of the new century and free up resources for higher priority military needs, while still protecting key training areas for which we have enduring requirements?

Answer. See response below.

*Question.* Should any future base closures follow the same basic procedures as the past four rounds?

Answer. I will withhold an assessment of this issue until after the completion of the defense review.

#### CRISIS IN THE MILITARY

*Question.* Recent articles and op-eds by James Schlesinger and Harold Brown forecast that one of the first “nightmares” the new president will inherit is the threat of a “defense train wreck” looming in the next 5 to 10 years as the result of a decade of massive under-funding of the true costs of maintaining the current size and structure of the U.S. military.

What are your views regarding these assessments of the future of our Armed Forces?

Answer. Given President-elect Bush’s commitment to rebuilding and reforming the U.S. military, and the commitment of many members of Congress, I believe we can ensure a strong future for U.S. Armed Forces. We do face major funding and technological challenges. Overcoming these challenges is necessarily a multi-year undertaking. The American people clearly support keeping our Nation secure, and our economy certainly makes that affordable. I believe my predecessors, Jim Schlesinger and Harold Brown, are correct in noting that many years of carefully targeted investment will be needed to guarantee the future superiority of those forces.

#### RECRUITING AND RETENTION

*Question.* The Armed Forces are experiencing significant problems in retaining company- and field-grade officers (O-3, O-4) who would, if retained, be contenders for intermediate service schools and command. The Armed Forces are experiencing similar problems in retaining mid-grade noncommissioned officers (E-5, E-6). These personnel are the backbone of the enlisted force, both as workers and as trainers and role models for younger enlisted personnel.

In your view what are the primary factors associated with this attrition?

Answer. See response below.

*Question.* What would you propose to mitigate this attrition?

Answer. It is my understanding that a number of factors have contributed to recruiting and retention challenges. A robust domestic economy has made it more difficult for recruiters to compete with the private sector job market; a heavy operations tempo has placed significant burdens on family life; and perceptions about a changing mission for the military have all contributed to stresses on military recruiting and retention efforts.

President-elect Bush has spoken often about this issue during the campaign. As he stated, “the military should be a magnet for the best and brightest in America.” I share this view. We will examine a range of measures to try to make this goal a reality, including an increase in military pay, improved military housing, and a review of overseas deployments.

## FORCE STRUCTURE

*Question.* Force structure has been reduced about 35 percent since 1989. Evidence, both anecdotal and analytical, increasingly indicates that the force structure of the Armed Forces may not be adequate to carry out the national security strategy of the United States including the current range of contingency operations. If this is so, the alternatives would seem to be a less ambitious strategy, a bolstering of force structure, or some combination of those alternatives.

In your opinion, is the existing force structure of the Armed Forces adequate?

Answer. See response below.

*Question.* If not, what measures would you recommend, if confirmed, to deal with the problem?

Answer. U.S. forces are stretched thin. This committee has heard testimony from the service chiefs to that effect. In accordance with law, the incoming administration will work to develop a national security strategy within 150 days after inauguration. That is a very short period. Also in accordance with law, the Department of Defense will review the overall defense strategy and produce a report to Congress in the fall. If confirmed, I expect to be fully engaged in those efforts. Once we have a new national security strategy, and we have had the opportunity to review our defense strategy, we can make decisions about the appropriate size and nature of the force.

## HOMOSEXUAL CONDUCT POLICY

*Question.* The current Department of Defense Homosexual Conduct Policy went into effect in February 1994 after months of congressional hearings and debate resulting in the enactment of a Federal statute. Although there have been some changes in how this policy has been implemented, the basic policy has not been changed.

Do you believe that the current policy is effective? If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

Answer. I am not yet knowledgeable as to how the current policy is working. Consistent with what President-elect Bush said during the campaign, and if confirmed, I have no plans to recommend changes either to current law or policy.

## GENDER INTEGRATED TRAINING

*Question.* Basic training for new recruits is structured and defined differently by each Service. Men training for direct ground combat positions in the Army and Marine Corps train in all-male units. Men and women training to serve in positions that are open to women in the Army, Navy, and Air Force train in gender-integrated units. Men and women in the Marine Corps are segregated at boot camp, then integrated during subsequent training.

Do you believe the current DOD policy of allowing each of the Services to establish its own policy for gender integration in Basic Training is effective? If confirmed, will you propose changes to the DOD or Service policies? If so, what changes will you propose?

Answer. Basic training should have one purpose: to transform the recruit from civilian into a disciplined, physically fit soldier, sailor, airmen/women, and marine. If and when that goal is not being met, then changes should be made. Each service has the responsibility to design and implement the system of basic training that best accomplishes the goal for that service, and it should do just that. At present the services have varying policies with regard to gender integration in basic training. I do not have sufficient information as yet to comment further.

## ARMY CORPS OF ENGINEERS

*Question.* The Army Inspector General recently released a report criticizing the Army Corps of Engineers for "institutional bias" and "an atmosphere where objectivity in its analyses [has been] placed in jeopardy."

Do you agree that the Army Corps of Engineers should institute a system of independent peer review of studies supporting major projects by experts from outside the agency before such projects are approved? Why or why not?

Answer. I am not aware of this matter. I am advised that the Secretary of the Army and the new Chief of the Army Corps of Engineers recently developed working arrangements aimed at ensuring open lines of communication, necessary oversight, and, at the same time, the application of independent technical judgment by the Corps. Additionally, the Chief of the Corps has been directed to respond to the Army Inspector General's findings regarding the objectivity of its analyses and bring for-

ward improvements aimed at ensuring sound, unbiased decision making. Those responses will have to be reviewed before making any recommendations.

#### U.S.S. COLE INVESTIGATIONS

*Question.* When Secretary Cohen took office, one of his first actions was to review the multiple Defense Department and Air Force inquiries into the terrorist attack on the Khobar Towers in Saudi Arabia. These investigations were initiated under his predecessor, then-Secretary William Perry. The attack on Khobar Towers on June 25, 1996, killed 19 military personnel and left hundreds injured. Following his review, Secretary Cohen directed actions that were opposed by many in the Air Force and that resulted in the voluntary retirement of the then-Air Force Chief of Staff. You will begin your term as Defense Secretary under strikingly similar circumstances. Several investigations into the October 12, 2000, bombing of the U.S.S. *Cole* are being concluded.

Will you make one of your first priorities in office to review the findings of the multiple Defense Department and Navy investigations into the terrorist attack on the U.S.S. *Cole*?

Answer. Yes.

*Question.* Will you transmit to the President and to Congress your assessment of the findings and recommendations of the U.S.S. *Cole*-related investigations as soon as possible?

Answer. I will transmit any findings and recommendations that may result from the investigations.

*Question.* If you find that the investigation initiated by your predecessor or the Navy were deficient in any areas, will you direct additional inquiries?

Answer. It is important that the findings of the current investigations be reviewed without prejudice.

#### MODERNIZATION

*Question.* For the last several years, the Department of Defense modernization budget has fallen short of critical requirements identified by the Chairman of the Joint Chiefs of Staff and each of the military services while the operational tempo of our forces is extremely high. As a result, near term readiness requirements have often been met at the expense of the long-term readiness, or modernization arena. We recognize that President-elect Bush has called for an overall review of military modernization programs and that this will be an area of great interest to you as the Secretary of Defense.

How will you establish this modernization review process, what will be considered, and how will you incorporate the conclusions of this process into Department of Defense modernization budget requests?

Answer. If confirmed, I will undertake congressionally-mandated review of the U.S. national security strategy and examine the modernization plans to carry it out in the conduct of the Quadrennial Defense Review (QDR). Considering which weapons to modernize and which to replace with new technology should be a major part of the QDR process.

#### EXPORTS OF SENSITIVE TECHNOLOGIES

*Question.* In his October 1999 speech on high tech issues, then-Governor Bush stated that, as President, he would safeguard sensitive high technology exports, while letting Americans sell what is already widely available elsewhere. He stated that wherever there is no security interest at stake, exports would be permitted. Wherever security is truly at stake, exports would be barred, with serious penalties for violations. Governor Bush stated further that his administration would work to renew the cooperation of U.S. allies in this effort.

As Secretary of Defense, what policies and procedures would you consider changing to reflect these criteria as the basis for determining the exports of sensitive high technology?

Answer. Exports of sensitive high technology affect U.S. national security interests in many ways. First, we must protect our military personnel and our security interests by ensuring that sensitive technologies are not exported to potential adversaries or to foreign entities that represent a significant diversion risk. Second, we must have sensible and effective policies and procedures to ensure that appropriate transfers of military and commercial systems and technologies that support our coalition warfighting objectives through greater interoperability with our allies and friends are permitted. Finally, we must be mindful that the U.S. is not the only country with advanced military and commercial technology. Thus, we need to work aggressively with our allies and friends to ensure that our policies and approaches

toward the export of such technologies meet our mutual security interests. The Department of Defense has an essential role to play in implementing these principles, and I will ensure that appropriate resources and senior level attention are devoted to this area.

#### INFORMATION SECURITY

*Question.* Information superiority is widely recognized as an enabler of U.S. military superiority, and information security is a key to achieving information superiority.

How do you plan on ensuring the security and integrity of the defense information infrastructure in the face of ever-expanding cyber threats?

Answer. Information security poses important challenges and opportunities for Defense. We must prevent unauthorized access to information and information systems. We must work with other government organizations—the FBI, Department of Justice, and the Intelligence Community—in a collaborative environment to anticipate and counter such threats. I will ensure that the department devotes considerable time and attention to information security and information superiority.

#### INTELLIGENCE

*Question.* What would be your top intelligence priority if you are confirmed as Secretary of Defense?

Answer. We are in a new national security environment. Characteristics of this new environment include:

- A relaxed attitude with the end of the Cold War.
- The proliferation of powerful weapons and technologies throughout the world.
- As a result of the Gulf War, a set of threats less likely to be deterred by the threat of U.S. nuclear retaliation.
- Considerably more complex intelligence challenges given the larger number of targets, and the proliferation of deception and denial capabilities.
- Increasing dependence on space assets and therefore increased vulnerability.

The intelligence community, just as the Department of Defense, needs to be reorganized to deal with the new security environment. The national command authorities need information more than simply numbers of things—ships, missiles, tanks, and planes—they need better information on intentions and motives as well.

Certainly the proliferation of nuclear, biological, and chemical weapons and the means to deliver them pose a threat to the security of the United States, its allies, and friends. We must ensure that we are devoting the appropriate resources to identify these newer threats, including cyber attack.

*Question.* What organizational and management changes do you believe are necessary in the Department of Defense to ensure that the best possible intelligence support is provided to the warfighter?

Answer. This is an area that I intend to review if confirmed. Most important is senior level leadership, and a close working relationship between the SECDEF and the DCI is critical to the challenges ahead.

*Question.* What specific actions would you pursue to ensure that the Secretary of Defense and the Director of Central Intelligence are able to cooperate and coordinate on national and military intelligence matters?

Answer. One of the highest priorities should be to establish a real partnership with the DCI to ensure cooperation and coordination on intelligence matters. Reform of the Intelligence Community will require close collaboration.

#### SCIENCE AND TECHNOLOGY

*Question.* The Department of Defense Science and Technology program is at a 20-year low. The Strom Thurmond National Defense Authorization Bill for Fiscal Year 1999 established the goal of increasing the budget for the defense science and technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. This goal has not been met in the fiscal year 2000 nor the fiscal year 2001 budget request.

Do you believe that a substantial increase in science and technology funding is needed?

Answer. Determining a sufficient level of science and technology (S&T) investment is not a precise science. A downsized military needs a technological edge more now than ever. President-elect Bush has committed to increasing defense R&D by

at least \$20 billion between fiscal year 2002–2006. The S&T accounts should receive a substantial share of this increase.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Secretary of Defense?

*Answer.* The new administration will need to consider all of these aspects in evaluating the National Security Strategy and National Military Strategy. The goal is to assure that our country has the new capabilities necessary to deter and defend in our new national security environment so we are able to contribute to the peace and stability. This will entail transforming U.S. military forces to a 21st century force, modernizing the intelligence and command, control and communications infrastructure, and reforming DOD structures, processes, and organizations. Further, the new capabilities and readiness must be sustainable.

Balancing limited resources—even in an atmosphere of projected budget surpluses—is always a challenge. Properly outfitting our forces today, while at the same time ensuring we sustain robust modernization for the future, will be a key challenge for the new administration.

Specific issues—such as morale, recruiting and retention, health care and benefits—will also be important.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* These issues and others should be components of the upcoming defense review and Quadrennial Defense Review. Through those reviews, the new administration can examine priorities and weigh the fiscal implications associated with those priorities.

#### MOST SERIOUS PROBLEMS

*Question.* What do you consider to be the most serious problems in the performance of the functions of Secretary of Defense?

*Answer.* Institutional resistance to change across the board—executive branch, legislative branch, the private sector, as well as our allies. Change is difficult for institutions, but change we must.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* It is too soon to establish time lines. If confirmed I would need to know a lot more than I do now to respond. It will require close consultation with Congress and this committee.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes. I consider that to be one of the most important parts of the job.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Secretary of Defense?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

1. Senator KENNEDY. Secretary Rumsfeld, while the F-18E/F has significantly modernized our carrier aircraft fleet, many Navy and Marine Corps aircraft still need to be modernized. The AV-8B Harrier and EA-6B Prowler are some of the oldest aircraft in our inventory.

Do you see the Joint Strike Fighter as a possible solution to these aircraft modernization needs?

Secretary RUMSFELD. The Joint Strike Fighter, along with other tactical aircraft programs, will be assessed as part of the planned review of defense policy and programs.

2a. Senator KENNEDY. The risk in being ready to fight the first war is "moderate" and that of the second is "high." As the Department of Defense prepares to conduct the next Quadrennial Defense Review, will you consider alternative strategies to the two war scenario as you prepare to conduct the next review?

Secretary RUMSFELD. I anticipate that a wide range of strategy options will be considered as part of the upcoming QDR.

2b. Senator KENNEDY. If the two war scenario continues to be our strategy, how can we reduce the risk of each? President-elect Bush has said that he wants to increase defense spending by \$20 billion.

How much of this amount will be dedicated to non-national missile defense related research and development programs?

Secretary RUMSFELD. No decision has been made on the appropriate level of resources for defense or how any additional funds would be distributed.

3a. Senator KENNEDY. The Defense Science Board released "The Technology Capabilities of Non-DOD Providers" report in June 2000. In this report the Board recommends substantially increasing the defense science and technology base and, in particular, a 30 percent increase in defense basic research over 3 years. The concern over the eroding defense science and technology program was addressed by Congress in the Fiscal Year 1999 National Defense Authorization Act, which stated it should be an objective of the Secretary of Defense to increase the budget for the science and technology program by at least 2 percent a year over inflation each year through 2008.

How do you propose to address this urgent national priority?

Secretary RUMSFELD. I agree that the defense science and technology program needs to be strengthened. However, until I have had an opportunity to review the program in detail, I am not in a position to comment on the appropriate funding level for the program.

3b. Senator KENNEDY. Many believe that stability will never be restored in the Balkans as long as indicted war criminals remain at large. Do you believe that the military should be involved in the arrest of war criminals?

Secretary RUMSFELD. I would like to review the recent history and discuss this with my associates in the new administration before commenting.

4a. Senator KENNEDY. For years now, Iraq has refused to accept an independent monitoring team to ensure that Saddam Hussein is not rebuilding his arsenal of nuclear, biological, and chemical weapons of mass destruction. In addition, the economic and diplomat sanctions placed on his regime have been weakened by our allies in the region and in Europe. Some nations are even setting up offices in Iraq, in hopes of contracting Iraqi oil fields in the future in anticipation of these weakened sanctions collapsing.

Regarding Iraq and Hussein, the President-elect's choice to be Secretary of State, Colin Powell, has said, "I think it is possible to re-energize those sanctions and to continue to contain him and then confront him, should that become necessary again."

Under what circumstances could you envision such a confrontation?

Secretary RUMSFELD. U.S. policy towards Iraq will no doubt be the subject of review by the new national security team. If confirmed, I will look forward to participating in that review. That being said, it is important to keep in mind that Saddam Hussein has miscalculated before and therefore any confrontation that takes place might be as a result of his actions.

4b. Senator KENNEDY. What do you think sanctions on Iraq should accomplish? Are they accomplishing this goal? Are we targeting the right behavior? Are the objectives of halting chemical, biological, and nuclear weapons production attainable in your view?

Secretary RUMSFELD. Because of the erosion of the sanctions regime, it is reasonable to assume that weapons of mass destruction and missile programs are continuing in Iraq. How best to deal with the threat posed by Saddam will be the subject of review by the new administration.

5. Senator KENNEDY. In September 1999, President Clinton issued an executive order severing all U.S. military ties with Indonesia following the violence perpetrated against the East Timorese people in the aftermath of their vote for independence.

Will you support a continuation of the current military cut-off? What signs or indications within the Indonesian military and government will you be watching for before you consider re-establishing full military relations?

Secretary RUMSFELD. Although I am aware of the general state of U.S.-Indonesian military-to-military relations, I have not had an opportunity to review this matter in detail. If confirmed, I will undertake to review those relations.

6. Senator KENNEDY. There have been substantial changes in the role of women in our Nation's Armed Forces in the years since you were Secretary of Defense. Women now serve in a wide range of military occupations and there are more women generals and admirals than ever before. Women serve on combat ships and fly combat aircraft; women and men train together in all services at advanced levels—and in three of the services at the basic training level.

What is your view of the role of women in today's military? Specifically, do you have any objection to the ways in which women and men train together today, or to opening any particular military occupational specialties to women?

Secretary RUMSFELD. As I stated in answer to one of the committee's questions, basic training should have one purpose: to transform the recruit from civilian into a disciplined, physically fit soldier, sailor, airman/woman, or marine. If and when that goal is not being met, then changes should be made. Each service has the responsibility to design and implement the system of basic and other training that best accomplishes the goal for that service. At present the services have varying policies with regard to gender integration in basic training. I do not have sufficient information as yet to comment further.

7. Senator KENNEDY. The Pentagon Inspector General conducted a survey of 75,000 service members last year and found that 80 percent reported hearing, witnessing, or experiencing anti-gay harassment. Based on those findings, Secretary of Defense Cohen asked a Department working group to review the current rules and training to prevent such harassment. The working group produced a 13-point action plan for a new regulations by the Department on this issue.

Will you ensure that these new regulations are fully implemented and enforced?

Secretary RUMSFELD. I have not had an opportunity to review the current rules or the working group's findings and recommendations.

8. Senator KENNEDY. The lack of good housing for our service members and their families is an area where I think we really need improvement. At Hanscom AFB, there is currently a 6-month wait for on-base housing. The number of families on this list today stands at 106. I venture that the wait is similar at bases across the country.

What can be done to limit or eliminate this wait? How can we ease the burden on a service member and his or her family when they've been assigned to a new base, but have to find short-term living arrangements while waiting for affordable base housing?

Secretary RUMSFELD. I agree that military housing can and should be improved. Substandard housing and long delays undermine morale and ultimately affect job performance. If the Department can effectively tap into the prodigious resources and methodologies of the private sector to improve this situation, then we should do so. If confirmed, improving the quality and availability of military housing will be a priority.

9. Senator KENNEDY. You noted in your answers to the advance policy questions that, "(t)he Department's approach should be comprehensive and balanced, supporting test and training and operational requirements, while seeking to protect the natural environment and operating within a balanced regulatory framework" and that "(t)he goal is to maintain fully sustainable ranges."

Last week, three of my colleagues on this committee and I wrote to Secretary Cohen urging that he consider establishing a Defense Environmental Restoration Account to begin to deal with the large amount of unexploded ordnance left at many of our military facilities.

Would you please take a look at this idea? The more quickly the Department can get a handle on this issue, the more sustainable training will be at many military bases.

Secretary RUMSFELD. If confirmed, I will task a review of this suggestion and report back on the results.

10. Senator KENNEDY. Several years ago, President Clinton, the Joint Chiefs, and Congress agreed that the United States would search aggressively for alternatives to land mines, and that if suitable alternatives are fielded the United States will join the Ottawa Convention. The Pentagon has made progress, but more needs to be done. Later this year we will also have the benefit of recommendations on mine alternatives by the Los Alamos/Livermore Laboratories and the National Academy of Sciences. There is bipartisan support in Congress for the United States to join our NATO allies and others, and set an example to rid the world of land mines. We also want to ensure the safety of our Armed Forces, which includes improving their counter-mine capabilities.

Will you, as Secretary of Defense, strongly support the effort to field alternatives to land mines, so we can join the Ottawa Convention?

Secretary RUMSFELD. I am not familiar with the obligations imposed under the Ottawa Convention and have not yet been briefed on the efforts to develop alternatives to land mines. If confirmed, I will review this issue, keeping foremost in mind the need to protect American servicemen and women.

---

QUESTIONS SUBMITTED BY SENATOR ROBERT C. BYRD

11. Senator BYRD. I am very concerned about the threat of homeland terrorism. I believe that Senator Levin mentioned in his opening remarks how easy it would be for a terrorist to poison our public water systems. As best I can tell, all it would take is a single vial of some type of chemical or biological agent and you could wipe out the water supply for an entire city. Frankly, I believe that this threat is a more likely scenario under current world circumstances than that of the conventional ballistic missile threat posed by rogue nations.

Do you believe that the threat of chemical and biological terrorism, as well as the threat posed by simple suitcase or truck bombs, deserve the same emphasis as a national missile defense system?

Secretary RUMSFELD. Defending the American people against all types of unconventional or terrorist attacks must be a top priority of the new administration. If confirmed, I will devote time and attention to strategies and programs that can address this growing threat. In addition, because of the sometimes overlapping or conflicting obligations of the various federal and state governmental departments and agencies, inter-agency coordination is important. If confirmed, I will do my best to ensure proper coordination is achieved.

12. Senator BYRD. Turning to terrorism overseas—a Pentagon Commission reviewing the terrorist attack on the U.S.S. *Cole* released its report earlier this week. The Commission determined that the military lacks coordination with other government agencies to fight terrorist threats. It recommended that training against terrorism be made as high a priority as training for combat.

Do you agree with that conclusion?

Secretary RUMSFELD. If confirmed, I will review the Crouch-Gehman report carefully, along with the other reports commissioned on aspects of the U.S.S. *Cole* terrorist incident. That being said, I agree that realistic training against a wide range of terrorist and other threats, including operating in a nuclear, chemical, biological, or radiological environment, is imperative.

13. Senator BYRD. I understand that there was a good deal of discussion about Colombia at the morning session of this hearing. I commend Chairman Levin and Senator Warner for recommending that this committee get more involved in future decisions surrounding our involvement in Colombia. This is a dangerous mission, and I am deeply concerned that the United States should not be drawn into Colombia's civil war.

As you and I discussed earlier, it was my proposal that capped the number of military and civilian personnel who could be involved in Plan Colombia in country. The reason that I proposed these caps was to ensure that mission creep would not inflate the number of American citizens in Colombia on what is a potentially deadly mission.

Mr. Secretary, you've seen the results of American troops being drawn into civil conflicts overseas with no exit strategy. I understand that you want to wait until you can have a full briefing on the situation in Colombia before recommending a specific course of future action. However, this is not the first time that the U.S. has

run up against the possibility of being drawn into another nation's civil war. How do we guard against that happening with this mission? Will you re-evaluate our presence in Colombia?

Secretary RUMSFELD. As I stated during the hearing, I am not sufficiently informed about the situation in Colombia. I understand the nature of your concern, however, and if confirmed will review the U.S. military involvement carefully.

---

QUESTIONS SUBMITTED BY SENATOR MAX CLELAND

14a. Senator CLELAND. As you may know, language was included in the Fiscal Year 2000 Defense Authorization bill directing the Secretary of Defense to submit a report no later than February 2000 describing the airlift requirements necessary to carry out the various missions of our Armed Forces. It is my understanding that this report is finally complete and is awaiting release by the Secretary of Defense.

Preliminary information contained in this report outlines our current mobility challenges. Our current requirement is 49.7 million ton miles. The Mobility Requirements Study estimates that the requirement may rise to around 54.4 million ton miles. This indicates we are woefully short on meeting the future requirements.

With the move away from more forward-deployed forces, airlift and air mobility will continue to be the key ingredient in our responding to future military missions and crises. However, there is uncertainty on how best to address this challenge. Certainly, the C-130J is integral in our rapid deployment within the theater of operations. However, the Air Force has been reluctant to put C-130s in their budget or in placing the aircraft on their unfunded requirements list—instead relying on congressional add-ons during the budget process. How would you rectify the inconsistencies of the C-130J program over the past several years?

Secretary RUMSFELD. I am aware of and appreciate the keen interest in the C-130J program shown by you and several of your colleagues. However, I have not had an opportunity to review the program in detail, nor have I seen the results of the Mobility Requirements Study you mention. If confirmed, I will review the study and the program.

14b. Senator CLELAND. Given your plans to review and revise our military strategy in the context of President-elect Bush's desire to review all military operations and the Quadrennial Defense Review (QDR), would you consider submitting a new mobility requirements report?

Secretary RUMSFELD. Until I have had the opportunity to review the above-mentioned study, it would be premature to suggest that an additional study is needed.

15. Senator CLELAND. Military health care is a matter of great importance to our service members and to this committee. Last year, in response to concerns raised by the Secretary of Defense and the Chairman of the Joint Chiefs, we enacted legislation that eliminates deductibles and copayments under TRICARE Prime for families of Active Duty service members; provides lifetime health care for military retirees and their families through the TRICARE program; and provides a comprehensive pharmacy benefit for military retirees. We still hear concerns from our constituents about lack of timely access to health care, portability of benefits as our service members move around, and poor claims processing.

What are your priorities for maintaining a working, accessible, properly funded health care system?

Secretary RUMSFELD. I agree that the provision of effective, affordable health care to our servicemen and women and their families is a high-priority objective I have not had an opportunity to review the Defense Health Program, however, and therefore I am unable to comment on how best to ensure such coverage and treatment. If confirmed, I will devote time to this important program.

16. Senator CLELAND. Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half of these use their benefits, and many who use the benefit do not use all of their entitlement. Many of these soldiers, sailors, airmen, and Marines say they would like to stay in the service, but feel they have to leave so that they can provide for the education of their spouses and children.

I believe that many of these service members would stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

Will you give serious consideration to how the Department of Defense could use the transfer of GI Bill benefits to family members as a retention tool and give me your thoughts on how we best do this?

Secretary RUMSFELD. I was interested in this suggestion when you mentioned it during the confirmation hearing. If confirmed, I will give consideration to this suggestion.

17. Senator CLELAND. From what we have heard in today's session and from what has occurred on Capitol Hill in the past few years, it seems obvious that one of the most contentious national security issues—which too often has broken down along party lines—is the subject of National Missile Defense. I would add, however, that I believe this important question cannot be viewed in isolation from our overall national strategic policy. For example, how will NMD be related by the new administration to the Comprehensive Test Ban Treaty, which unfortunately also broke down along partisan lines in the last Congress. I believe we must try to achieve a bipartisan consensus on this whole collection of issues and do so in a fashion which is comprehensive and coordinated. Therefore, I have proposed that we consider creating a bipartisan Commission on National Security Policy composed of respected leaders from both parties which seeks to develop such a consensus and encompasses both NMD and CTBT as well as related issues. I fear, Mr. Secretary, that absent a comprehensive, consensus approach that we may face more partisan wrangling and more internal division, which will serve our military, our country, and indeed the entire world.

Would you care to react to any of these points?

Secretary RUMSFELD. I agree that it is vital to consider issues such as NMD and CTBT in a broader context, and certainly bipartisan consensus is desirable. That being said, I am not persuaded that establishment of a commission, as you describe, is needed. The President-elect has stated that he does not favor ratification of the CTBT. He has indicated that he plans to continue the moratorium on underground nuclear testing so long as the safety, reliability, and effectiveness of the nuclear stockpile can be certified. If confirmed, I will do what I can to contribute to the achievement of bipartisan support on topics such as these.

18. Senator CLELAND. This committee has expressed its full support for upgrading and modernizing the C-5 fleet, both A and B models. Airlift is absolutely vital to America's ability to project military force. This will continue to be true for the foreseeable future. In last year's report accompanying S. 2549 (The Fiscal Year 2001 Defense Authorization Act), this committee expressed concern that the Air Force appears to have budgeted for just modernizing the B-models first and yet has not provided any form of explanation for deviating from the committee's belief that the A and B models both need to be re-engined as soon as possible. In addition, the Air Force has not explained how it could arrive at this plan without doing the initial EMD testing on at least one A and one B model to factually determine the potential for improving the performance and reliability of the each model. The committee requested that the Air Force address these concerns by February 15, 2001.

In the meantime, despite the support of this committee and the House defense committees, the contracting for the C-5 RERP has been inexplicably delayed. The contract was supposed to be let in November and yet still is not complete. For a program as vital to national security as the improvement of outsized/oversized airlift capability, this sort of unnecessary and unexplained delay is unacceptable.

What commitment can you give this committee that the C-5 RERP will proceed as directed? What will you do to get the C-5 RERP back on schedule? Will you ensure that both A and B models are included in the initial testing so that any future program decisions are based on real facts?

Secretary RUMSFELD. I have not yet had the opportunity to review the C-5 program. I expect that the C-5 program will be reviewed in the context of mobility requirements as part of the overall defense policy review I plan to undertake, if confirmed.

---

QUESTIONS SUBMITTED BY SENATOR MARY L. LANDRIEU

19. Senator LANDRIEU. Our nuclear posture is essentially frozen by a law that we not fall below Start I levels. Furthermore, we are coming upon several crucial and costly decision points with respect to some of our nuclear systems. I believe that this nation would be well-advised to establish an appropriate and cost-effective deterrent independent of anything Russia does.

Do you believe that we need to hold to some artificially mandated level of nuclear weapons, or is it wise for the Pentagon to evaluate these questions from the bottom up?

Secretary RUMSFELD. The President has stated that we want to go to the lowest level of nuclear weapons commensurate with the national security of the United States and our allies. Upon completion of the Nuclear Posture Review, we will review this requirement as well as which criteria to use in determining an appropriate strategic nuclear force level for the foreseeable future. I do hope that Congress would provide for the ability to get to the appropriate number of nuclear weapons, likely to be below today's level.

20. Senator LANDRIEU. We all understand that the Single Integrated Operation Plan or SIOP, is, of necessity, one of the most closely guarded secrets that our Nation possesses. However, one of our esteemed Senate colleagues, Bob Kerrey, the ranking member of the Senate Intelligence Committee, shared with us the fact that he had been stone-walled by his every effort to have some opportunity to review these plans. While the SIOP is obviously one of our most import secrets, it is also one of our most fundamental defense policy decisions.

Can you assure this committee that you will at least assist the committee leadership in gaining access to the SIOP for their review and consideration?

Secretary RUMSFELD. I understand that there are certain procedures in place at this time whereby Congress has access to data regarding the nuclear war plan. I also understand that there are concerns that these procedures may not be sufficient. I will look into this matter and work with Congress to reach an acceptable balance between the requirement for security and the congressional need for information on this highly sensitive plan.

21. Senator LANDRIEU. You very cogently argued for the need to better integrate commercial off-the-shelf technology into our military force. It is important for us to do, and an important piece of that work is being done at our Navy Technology Center in New Orleans. However, I'd like you to consider a slightly different application of that same principle. I believe that we need to consider the utilization of commercial off-the-shelf personnel. What I mean by that term is this nation is creating a vast community of highly intelligent, highly skilled, and highly sought-after workers in the computer and communications fields. We also know that with the onset of NET-CENTRIC, and so-called "cyber" warfare, our Nation's military is going to desperately need more of these minds. Unfortunately, I believe that there is something of a disconnect between this need for talent, and an institutional culture that would attract this sort of talent. I have commended Rudy de Leon for taking the initiative of focusing the Reserve components on this question.

Would you endorse a new strategy to solicit service from this core of talented individuals and introduce new standards which may be outside the box in order to employ them fight this new threat?

Secretary RUMSFELD. I agree that the Department can do a better job of recruiting and retaining individuals with skills in the computer and communications fields. If confirmed, I will seek to develop strategies for securing the availability of such individuals and look forward to working with Congress to implement appropriate strategies.

22. Senator LANDRIEU. Do you believe that adding funds to the defense budget alone will solve the problems we face? Do you have an estimate of an increase that you would desire?

Secretary RUMSFELD. The challenges facing the Department are many. Certainly, a shortage of resources is evident, and priorities are needed. There are numerous other challenges as well, as I laid out in my testimony before the committee. If confirmed, I look forward to working with the committee and Congress as a whole to address these challenges.

23. Senator LANDRIEU. I would like to know your opinion with the approach of decreasing some of our existing infrastructure and transferring those assets to the operational forces in order to provide some relief to our deployed forces. Do you have any specific approaches you could provide us with today?

Secretary RUMSFELD. I do not, as of today.

24. Senator LANDRIEU. One of the most exciting projects that we have underway in Louisiana is the Navy Information Technology Center in New Orleans. I would like to invite you to see this operation first-hand at your earliest opportunity. This center is really a model for the sort of innovation required by the Clinger-Cohen Act.

Would you please comment on your views of this act, and what steps we might take to increase the pace of reform?

Secretary RUMSFELD. First, thank you for the kind invitation. I have not reviewed the Clinger-Cohen Act, although I understand it allows for certain innovative "pilot projects" associated with acquisition reform. Given the fact that the existing acquisition system is in need of substantial reform, it may be that additional use of the authorities to conduct "pilot projects" aimed at that reform is warranted.

25. Senator LANDRIEU. As you may know, recent studies estimate that it will take \$30 billion and more than 30 years just to fix the current backlog of military housing deficiencies. On the bright side, the National Defense Authorization Act for Fiscal Year 1996 included a series of new authorities that allow the Department of Defense to work with the private sector to build and renovate military housing by obtaining private capital to leverage government dollars, and use a variety of private sector approaches to construct and refurbish military housing faster and at a lower cost to American taxpayers. This legislation was recently extended to December 2004.

What is your opinion concerning this approach? Do you support a broader expansion of this initiative to include permanent authority?

Secretary RUMSFELD. Although I have not been briefed on the law to which you refer, I support efforts to ensure that our servicemen and women have access to quality, affordable military housing. Measures to harness the productive potential of private industry are important to this end.

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

26. Senator THURMOND. Due to the leaner Active Duty military and greater number of operational commitments, the DOD has increasingly called on the Reserves and National Guard. In 1989, Reservists and members of the Guard recorded one million days of duty. In each of the past 3 years, that figure has averaged 13 million days. This increased workload has had an impact on retention and recruiting. In extreme cases, the relationship between the reservist and his employer is adversely affected.

What are your general views on the use of the Reserve components and, specifically, in peacekeeping operations?

Secretary RUMSFELD. The Guard and Reserve perform admirably in the defense of our Nation, including deployments in peacekeeping operations. Although I have not had the opportunity to study this issue carefully, the quality of training, the status of equipment, and national support for the missions of the Guard and Reserve are keys to recruitment and retention of these essential forces. If confirmed, I will give priority consideration to this situation including the impact on civilian employment of deployed individuals.

27. Senator THURMOND. Since your last tour in the Department of Defense, there has been a concerted effort to privatize many of the services necessary to support our Armed Forces. Among the most recent are the efforts to privatize military family housing and the installation utility systems.

What are your views in regard to the privatization of essential services within the Department of Defense?

Secretary RUMSFELD. The size and composition of DOD's facilities to perform equipment maintenance is an important aspect of the overall readiness of the Armed Forces. An appropriate balance between government and private sector facilities must be struck in a manner that assures the equipment employed by the Armed Forces will be ready for use when needed. This balance in turn will be affected over time by the nature of the technology used in military equipment. A balance will be reviewed to assure that capabilities essential to national defense that cannot reliably be provided by the private sector will be provided by the government sector. Moreover, critical capabilities will be maintained in the government sector. As noted above, private sector support for military housing appears to have potential for accelerated improvement of that housing.

28. Senator THURMOND. With the end of the Cold War, some of the leading figures from the nuclear weapons programs and strategic policy advocated that the existing nuclear states dismantle their nuclear stockpile, which they considered as pointless and morally dubious arsenals.

What are your views on the role of nuclear weapons in the future threat environment?

Secretary RUMSFELD. Nuclear weapons remain an important element of U.S. and allied defense policy. That being said, President-elect Bush has stated that he will direct the next Secretary of Defense to undertake a review of the U.S. nuclear posture and associated force levels. If confirmed, I look forward to conducting that review.

29. Senator THURMOND. The Nation has made the decision not to produce new nuclear weapons. More importantly, we no longer have the capability to manufacture plutonium pits on a large scale to modernize the existing stockpile.

Since you have historically advocated a strong nuclear TRIAD, what are your concerns regarding this lack of capability to modernize our nuclear stockpile?

Secretary RUMSFELD. There are real challenges associated with maintaining a safe, reliable, and effective nuclear weapons stockpile in the absence of underground nuclear testing. If confirmed, I will work with the Secretary of Energy and the Administrator of the National Nuclear Security Administration to ensure U.S. nuclear weapons are capable of fulfilling the missions to which they have been assigned.

---

#### QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

##### BASE CLOSURES

30a. Senator MCCAIN. Mr. Secretary, in your answers to the advance questions for today's hearing, I noticed your response with regard to additional base closure rounds. As you are aware, Secretary Cohen has requested two additional rounds of base closures in each of his budget proposals to Congress, but so far Congress has not agreed to authorize any additional closures—failing to authorize 40–60 and 36–63 in the last 2 years—an experience not dissimilar to your experience as the Secretary of Defense to President Ford.

The National Defense Panel, Secretary Cohen, nearly all the Service Chiefs and other respected defense experts have been consistent in their plea that the Pentagon be permitted to divest themselves of excess infrastructure beyond what was eliminated during the prior four rounds of base closings. Through the end of 1998, the Pentagon had closed 97 major bases in the United States. Since then, it has closed none. Moreover, the savings attained would ostensibly be used for force modernization purposes.

According to our senior military leaders, the facts are the Department of Defense still has nearly 23 percent more base facilities than necessary to support our Nation's military forces.

I say this for my colleagues' benefit: the facts are—billions of dollars are at stake. Department of Defense figures suggest previous base closures will save, after one-time closing costs, \$15 billion through fiscal year 2001, \$25 billion through fiscal year 2003, and \$6.1 billion a year thereafter. Additional needed closures can save \$20 billion by 2015, and \$3 billion a year thereafter. Sooner or later these surplus bases will be closed anyway. The sooner the issue is addressed, the greater will be the savings, that will ultimately go toward defense modernization and greater pay raises for servicemembers—two areas where President-elect Bush and I strongly agree.

Previous base closure rounds have had many success stories. For example, after England Air Force Base closed in 1992, Alexandria, Louisiana, benefitted from the creation of over 1,400 jobs—nearly double the number of jobs lost. Across the U.S. about 60,000 new jobs have been created at closing military bases. At bases closed more than 2 years, nearly 75 percent of the civilian jobs have been replaced.

In Charleston, South Carolina, where the number of defense job losses, as a percentage of the work force, was greater than at any other base closure location, 23 major entities are reusing the former Navy facilities and providing more than 3,300 jobs and another 13 more applications are pending—adding soon even more newly created jobs to that number. Additionally, roughly 75 percent of the 6 million square feet of leasable space on the base is occupied. This is comparable to the successes in my home State of Arizona with the closure of Williams Air Force Base in the Phoenix East Valley.

Mr. Secretary, I will again propose the questions that you previously addressed in the advance questions to the Senate Armed Services Committee. Do you believe we still have excess military infrastructure that can and should be reduced?

Secretary RUMSFELD. Our base structure should fit our force structure requirements. As the President has noted, it appears that we have 23 percent in estimated excess infrastructure. We are looking at the issue, and will make a decision on how best to address as soon as we can in the review process.

30b. Senator MCCAIN. Do you believe it is in the best interest of the Defense Department to authorize additional military base closures and realignments could better align our military base structure to meet the requirements of the new century and free up resources for higher priority needs?

Secretary RUMSFELD. As noted previously, our base structure should fit our force structure requirements. We are reviewing the current force structure, and will make a decision on how best to address mismatches as soon as we can in the review process.

30c. Senator MCCAIN. Should any future base closures follow the same basic procedures as the past four rounds?

Secretary RUMSFELD. It is too early to determine a process, but when we have had the chance to review the proper force structure-infrastructure alignment in greater detail, we will engage the committee and others in Congress as appropriate.

31a. Senator MCCAIN. Mr. Secretary, congressional legislation authorizing the Pentagon to close bases expired in 1995. Since then, Defense Secretary Cohen has repeatedly asked for new authority to conduct two more rounds of base closures. Ostensibly because of a widespread belief that the 1995 round was politicized by the Clinton administration, Congress repeatedly rejected efforts to authorize additional rounds. Last year, for instance, the Senate voted against legislation mandating base closures by a vote of 36–63.

Mr. Secretary, what actions will you take to ensure that there is no repetition of the politicization of the base closing process as was evident in the cases of Kelly and McClellan Air Force Bases, recommended for closure in the 1995 BRAC?

Secretary RUMSFELD. When we have established the proper relationship between the force structure needed to execute our national security strategy and the infrastructure needed to support that force, we will work closely with Congress to develop a process that is fair and true to that objective.

31b. Senator MCCAIN. Mr. Secretary, from your previous experience as Secretary of Defense, will you recommend to the President additional base closing rounds and what advice can you lend to some of my more skeptical colleagues in the House and the Senate?

Secretary RUMSFELD. Our base structure should fit our force structure requirements. We are reviewing the current force structure, and prefer to wait until the review is further along before we decide to go forward with a legislative proposal seeking authority to conduct future base closures.

#### CONGRESSIONAL ADD-ONS

32a. Senator MCCAIN. During the last major drawdown following the Vietnam War, there were instances of pork-barrel spending—a phenomenon no doubt as old as the Republic—totaling 0.1 to 0.3 percent of the President's budget request or roughly about \$100 to \$300 million, but it is miniscule compared with the rampant abuse of the process today. During the post-Cold War drawdown, in contrast to the 1970s, spending for parochial purposes expanded to 2.2 percent of the President's defense budget request—which doesn't seem like that much money but represents about \$5.5 to \$6.0 billion annually. Now that the budget is on an upswing, that expansion has grown even more. Last year, for example, Congress added over \$4 billion to the President's budget request. Similarly, the Defense Appropriations Bill contained over \$7 billion in unrequested and non-defense add-ons that is a net loss to national security of at least \$3 billion. Moreover, each year during markup of the defense bill, this committee receives requests from Senators for parochial projects produced in their home state, last year those requests totaled \$30 billion, a 25 percent increase over the prior year.

Mr. Secretary, that is the state of the defense budget that you are inheriting, could you comment on your intended approach to dealing with the hundreds of member-adds that will most assuredly come your way?

Secretary RUMSFELD. When presenting my budget plan, I will urge Congress to give it strong support. President Bush has emphasized that strategy should drive our resource decisions—I support his position.

32b. Senator MCCAIN. Mr. Secretary, do you see this type of congressional behavior of congressional add-ons at cross purposes to President Bush's modernization plan, which I support, that skips a generation of weapon systems for "programs that propel America generations ahead in military technology" and what will you try to do to curb these excesses?

Secretary RUMSFELD. Our on-going reviews across a wide array of matters will yield information that can be developed into operational concepts and, from these, program decisions. I will work closely with Congress to seek its support for these decisions.

33. Senator MCCAIN. Mr. Secretary, a process evolved during the post-Cold War drawdown wherein the Joint Chiefs of Staff and Service Secretaries were asked to produce so-called Unfunded Priority Lists or "wish lists" detailing where they would allocate additional funds if provided by Congress. These wish lists, over time, grew from several pages to lengthy binders. This was understandable given the degree to which the Armed Forces were under-funded by the Clinton administration. My concern, however, has to do with the degree to which the Department of Defense has been pressured by Members of Congress to include items too numerous to list here on the Unfunded Priority Lists.

What will you do to resist such pressure and minimize pork-barrel spending when pressing modernization, long-term research and development, and readiness problems remain?

Secretary RUMSFELD. I feel it is important that the Department speak with a unified voice, across the Services, in seeking to fund our Defense programs to achieve the President's objectives. That is the principle that will guide our interactions with Congress, in budgetary and other matters.

#### USE OF FORCE: KOSOVO AND OTHERS

34. Senator MCCAIN. Mr. Secretary, one of the fundamental unresolved questions that must be faced by every President and Secretary of State and Secretary of Defense is "when to use military force." Beyond that is the equally important question of "how to apply that force once the decision is made to use it." You are on the record, I believe, as having been reluctant to become militarily engaged in the Balkans, but once President Clinton initiated air strikes, as having opposed his announced decision not to use ground forces.

Mr. Secretary, could you articulate for the committee your sense of the criteria that should guide the use of military force and, once force is used, how it would be employed?

Secretary RUMSFELD. This is an issue for the President and his national security team, not the Secretary of Defense alone. Each case is unique. Some of the questions that should be discussed when considering the use of force include: Are the goals achievable? Do we have the resources? What interests are at stake? Are there constraints, such as the command structure, that will impact how we can carry out the operation? How would we characterize success? In the end, the President, following careful consultation with his national security team, must decide each case.

35a. Senator MCCAIN. Those of us who assailed the administration and NATO's conduct of gradual escalation during the Balkans campaign took heart in your comments of that time, particularly your reflections on CNN on April 4, 1999, with respect to comparisons of Kosovo to Vietnam, which went as follows: "There is always a risk in gradualism. It pacifies the hesitant and the tentative. What it didn't do is shock and awe, and alter the calculations of the people you're dealing with." Similarly, during an interview with Chris Matthews, you noted that ". . . it was a mistake to say that we should not use ground forces, because it simplifies the problem for Milosevic. . . It seems to me we ought to stop saying things to appease and placate our domestic political audiences and we ought to start behaving in a way that suggests to Milosevic that it's . . . in his interest to end this and stop ethnic cleansing and come to the negotiating table. . ."

Mr. Secretary, do you anticipate adopting this approach as one of the key figures in the chain of command?

Secretary RUMSFELD. We must approach each potential use of military force mindful of the unique circumstances at play. Our decisions must be made with an understanding of the goals we seek to achieve and our readiness to honestly evaluate the resources needed to achieve those goals.

35b. Senator MCCAIN. Mr. Secretary, could you offer some insight on the philosophical approach you intend to bring to the job of Secretary of Defense when the question of military deployments arise? How do you approach the issue of moral imperative when no compelling national interest is involved?

Secretary RUMSFELD. I fundamentally believe that America has compelling interests as a global leader and that our interests will continue to be challenged in ways

that will threaten this Nation's security. Deciding when and where to employ military forces to protect our interests is a matter for the President in consultation with his national security team. We must be a reliable ally, but resist hasty decisions to use force. I also believe that, by remaining strong and capable, we can dissuade potential adversaries from taking actions that will ultimately lead to far more costly consequences for both of us.

36. Senator MCCAIN. During the early phase of fighting in Bosnia-Herzegovina, there existed a decision-making process, chain of command, and rules of engagement that virtually guaranteed failure. Our pilots found themselves having to receive the personal okay of the U.N. Secretary General and his deputy for the Balkans prior to retaliating against Bosnian Serb forces. In Kosovo, during Operation Allied Force, we witnessed the spectacle of military commanders vetting their tactical targeting plans through a 19-nation alliance built on unanimity that also limited the effectiveness of the military operation.

Mr. Secretary, what policies would you propose be implemented in order to avoid a recurrence of such situations?

Secretary RUMSFELD. The key to avoiding such awkward command and control situations in the future is to carefully review our procedures and come to agreements with our allies before we ever have to put those procedures into practice. This would entail several steps. First, we need to refine and update our regional contingency plans where we are likely to engage in combined operations within established alliances. For different wartime scenarios, we must define what our mission would be, and what would constitute success. We must also define appropriate target sets that support the mission. Together with our allies, we should define what military targets would contribute to the success of operations described under the various scenarios, and define rules of engagement for each type of target under each scenario. We must establish operational guidelines within the framework of each alliance. In addition, it is essential that we wargame each scenario, using realistic command and control procedures, at the highest staff levels. Finally, it is important to review agreements within the alliance on a periodic basis to ensure currency.

---

QUESTIONS SUBMITTED BY SENATOR BOB SMITH

37. Senator SMITH. You understandably resigned from the Space Commission which you chaired to focus on your nomination. However, you left before signing onto the report and the unanimous conclusions of the remaining 12 Commissioners. Do you in fact agree with the findings and recommendations of the Space Commission?

Secretary RUMSFELD. I agree that the United States is increasingly dependent on its civil, commercial, and defense and intelligence space assets. With that dependence comes vulnerability to hostile acts. The Nation needs a capability to deter and defend against attack on space assets and systems.

38. Senator SMITH. The Space Commission report recommends several actions for the Secretary of Defense. If confirmed, will you implement those changes?

Secretary RUMSFELD. If confirmed, I will give careful attention to these recommendations and the recommendations of several other recent studies and commissions on space systems.

39. Senator SMITH. There are several recommendations for the President and other agencies of the administration. Some are even suggestions for Congress.

If confirmed, will you encourage the President, other agencies of the administration, and Congress to implement the changes recommended by the Space Commission?

Secretary RUMSFELD. See answer above.

40. Senator SMITH. The Commission's report stated that we have not adequately funded a number of space activities. In particular, it noted that we need space control and satellite negation capability.

Do you believe the U.S. should have an anti-satellite capability?

Secretary RUMSFELD. The U.S. and other nations that make use of space face threats to the operation of their satellites. We know that other nations have jammed telecommunications from on-orbit satellites, that Russian entities market devices that can jam GPS signals, and that foreign satellite manufacturers market so-called "micro satellites" to other foreign countries that can be used for offensive actions against satellites. In light of U.S. dependence on space assets, the vulnerability of

these assets to attack or disruption and the fact that others have the means of doing harm to U.S. interests in space, it would be contrary to U.S. security interests not to develop, test, and deploy the appropriate means of deterring attack on and defending space systems.

41a. Senator SMITH. The Commission had concerns about the Air Force not doing a good job of growing space experts from within the space community for senior leadership positions. Rather, they tend to bring in rated officers with little or no space experience to fill key space leadership positions.

If confirmed, will you encourage the Air Force to promote more career space experts to senior leadership positions rather than drawing so heavily from the pilot community while space officers stagnate?

Secretary RUMSFELD. Yes.

41b. Senator SMITH. Based on what you know of the emerging missile threat and the current administration's planned National Missile Defense concept, do you believe the planned concept by itself is sufficiently robust and capable of providing the defense you and the President-elect have described to the nation? When do you anticipate completing your review of the critical missile defense mission and bringing forward to Congress the robust missile defense architecture to protect America and our friends and allies?

Secretary RUMSFELD. I believe it would be good to examine alternate and complementary architectures to the NMD system currently under development. I cannot now predict when that review will be completed or the architectures that will be found to be appropriate.

---

QUESTIONS SUBMITTED BY SENATOR OLYMPIA J. SNOWE

42. Senator SNOWE. In its review of the fiscal year 2001 budget request, the Seapower Subcommittee took testimony from Congressional Research Service that indicated a \$10 to \$12 billion annual investment, depending on the actual ship mix, and an average build rate of 8.7 ships per year is required to maintain 308 ships. However, in its budget request for fiscal year 2001, the administration in its Future Years Defense Program included only 7.5 ships per year and over the last 8 years of the Clinton administration requested only 4.75 ships per year. Congress helped raise that average to 5.5 ships per year.

Given that the CNO has testified that 34 percent of the Navy is deployed at any given time and that he is hard-pressed to meet that requirement with the current fleet, are you committed to review the shipbuilding account for adequacy?

Secretary RUMSFELD. Yes.

43. Senator SNOWE. In a *New York Times* article dated January 8, 2001, the authors questioned the DOD's ability to pursue leap-ahead technologies while modernizing the military. The article specifically mentioned three programs that might be candidates for cancellation or postponement to pay for pursuit of leap-ahead technologies: the F-22, the MV-22, and the DD-21. Witnesses testified before the Seapower Subcommittee that the Marines have been at considerable risk in naval surface fire support since the retirement of the Iowa-class battleship and will remain so until the DD-21 joins the fleet in strength. Slippage of the DD-21 would increase risk to the Navy team's capability for forced entry operations and its ability to conduct Operational Maneuver From The Sea.

Do you plan to review the resources necessary to meet naval surface fire support requirements of the United States Marine Corps to perform the missions we expect of them?

Secretary RUMSFELD. Yes.

44. Senator SNOWE. The safety and efficacy of the Department of Defense Anthrax Vaccine Immunization Program (AVIP) continues to be of great concern to our men and women in uniform and their families. In light of the divisive nature of the DOD anthrax policy, do you plan to review this policy, and what actions might you plan to take to regain the trust of our service members and their families lost due to AVIP?

Secretary RUMSFELD. I am not familiar with the details of the AVIP program. However, the trust of our service members and their families is essential to the effectiveness, morale, and welfare of the U.S. Armed Forces. If confirmed, I will get briefed on the program. In the interim, it would not be appropriate for me to comment in detail.

45. Senator SNOWE. In your 1998 commission report you highlighted the missile threat faced by not only our own forces, but America's allies like Israel as well. U.S.-Israeli cooperation on the Arrow missile system has been a critical component to Israel's defensive capabilities as well as a centerpiece for our strategic relationship. Also, during your service in the Ford administration you were supportive of Israeli security requirements.

As Secretary, do you foresee this joint initiative continuing? Will you continue to facilitate Israel's qualitative military edge, including the provision of advanced U.S. defense technologies?

Secretary RUMSFELD. I support continued cooperative efforts in the area of ballistic missile defense. I have not been briefed on the ARROW program in detail, however, and therefore do not believe it appropriate to comment on possible future directions or funding for that program.

46. Senator SNOWE. The Taiwan Relations Act declares America's intention to provide for the defensive capabilities of Taiwan with no veto by China. The Taiwan Relations Act also states that "the President and Congress" shall determine Taiwan's defense requirements.

What recommendations to the President will you make based on the needs of Taiwan in order to defend itself as required by the Taiwan Relations Act?

Secretary RUMSFELD. Any recommendations regarding arms sales to Taiwan will be made to the President. However, I understand the requirements of the Taiwan Relations Act and support a strong relationship between Taiwan and the United States, in support of Taiwan's need for effective self-defense capability against the threats posed to it.

47. Senator SNOWE. In addition to U.S. military aid to present recipients, as Secretary would you recommend to President Bush that there is a need to expand this aid? If so, do you have any regions or countries that you foresee need this assistance?

Secretary RUMSFELD. I have not had an opportunity to review U.S. arms sales policy. If confirmed, I will assess U.S. arms sales policy, in conjunction with the other members of the President's national security team.

---

#### QUESTIONS SUBMITTED BY SENATOR WAYNE ALLARD

48. Senator ALLARD. As a member of the NRO Commission, we found that there is a valuable role to be played by commercial space systems in order to allow our defense and intelligence assets to be available for critical tasks.

Do you see a role for commercial systems and will you advocate a clear national strategy and a commitment of funding for acquisition of imagery in order to take full advantage of commercial satellite capabilities?

Secretary RUMSFELD. As I stated in the confirmation hearing, my impression is that the United States government, including the military, will and should increase the use of commercially available satellite capabilities, especially in the area of communications and imagery. There are a number of instances where the government might take advantage of commercial off-the-shelf type products and services, and use those products and services to good effect.

49. Senator ALLARD. A concern for me is the adequate funding for our long lead space research and development programs—such as the space based radar.

What key areas and needs do you see as a focus for technological development in order to move our systems to the next generation?

Secretary RUMSFELD. I agree that there needs to be considerable investment in "leading edge" technologies. The United States cannot afford to lose its preeminence in science and technology.

---

#### QUESTIONS SUBMITTED BY SENATOR TIM HUTCHINSON

50. Senator HUTCHINSON. I am concerned that the military's basic pay table has become compressed over the last decade—that senior enlisted members of our Armed Forces are no longer receiving compensation commensurate with the great responsibilities placed upon their shoulders.

If confirmed, will you thoroughly examine the area of compensation for senior enlisted members of our Armed Forces before President Bush sends an amended fiscal year 2002 budget request to Congress?

Secretary RUMSFELD. Yes.

51. Senator HUTCHINSON. Nearly every soldier, sailor, airman, or marine that I have spoken to has told me that the need to provide a college education for a spouse or child has become a major factor in most re-enlistment decisions. While I have, in the past, supported efforts to make Montgomery G.I. Bill benefits portable, I am not convinced that this would provide the best solution.

If confirmed, will you commit yourself to working with Congress to explore new methods by which those who make a career of the Armed Forces will be able to provide college educations for their dependents?

Secretary RUMSFELD. If confirmed, I will be pleased to work with you and your colleagues in the Senate and the House of Representatives to identify options for improving the overall morale and welfare of our servicemen and women, including the dependent's education option you have suggested.

52. Senator HUTCHINSON. One of the many programmatic challenges facing the Department of Defense is the modernization of our Nation's fleet of C-130 transport aircraft.

If confirmed, what steps will you take to ensure a modern and viable mission-ready C-130 force for today and for the future?

Secretary RUMSFELD. I am aware of and appreciate the keen interest in the C-130J program shown by you and several of your colleagues. However, I have not had an opportunity to review the program, nor have I seen the results of the mobility requirements study you mention. If confirmed, I will review the study and the program.

---

#### QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

53. Senator SESSIONS. The U.S. government is faced with the enormous task of destroying unexploded ordnance at munitions sites that have been found across the United States, most notably recently at Massachusetts Military Range on Cape Cod, in Massachusetts and Rocky Mountain Arsenal in Denver, Colorado. There are hundreds of U.S. sites with similar problems. These munitions and their toxic explosives can pose serious environmental problems both in terms of their storage or if they are destroyed by open burn or open detonation.

What plans would your Department have to destroy munitions found in current and former U.S. bases? Will you focus on closed disposal technologies rather than continuation of open burn/open detonations as a solution to this problem? What priority would you give to the funding of new methods of destroying these hazardous materials, including finding private sector solutions to this problem that would not require the hazardous transport of conventional unexploded ordnance?

Secretary RUMSFELD. I appreciate your concern about unexploded ordnance. However, I have not been briefed on the Department's plans and programs in this area, and am unable to comment at this time. If confirmed, these activities will be reviewed and assessed.

54. Senator SESSIONS. Areas of the former Soviet Union, Central and Eastern Europe, and Asia have numerous outdated and hazardous munitions sites that could pose a proliferation problem if those munitions and explosives are not properly destroyed. The U.S. government currently funds this program in the former Soviet Union.

Would you support the continuation of this non-proliferation program and an increase in budgetary allocations to help stem this proliferation concern? Would you support the extension of this program to include Central and Eastern Europe and Asia? Which areas pose a particular concern? Would your administration support the extension of non-proliferation programs to China that would help American companies enter this market, destroying munitions that pose an environmental hazard? Would you support the use of Foreign Ministry Financing Funds for the destruction of unexploded ordnance and chemical weapons if requested by an eligible country?

Secretary RUMSFELD. I am unaware of the program to which you refer. If confirmed, I will undertake to have this program reviewed in light of your questions.

---

[The nomination reference of Donald H. Rumsfeld follows:]

#### NOMINATION REFERENCE

[On January 20, 2001, the Senate received the Donald H. Rumsfeld nomination. It was not referred to the Senate Armed Services

Committee, but was signed by the President, placed on the Senate Executive Calendar, and then confirmed by the full Senate by voice vote all on the same day. A confirmation hearing was held by the Senate Armed Services Committee on January 11, 2001.]

---

[The biographical sketch of Donald H. Rumsfeld follows:]

BIOGRAPHICAL SKETCH OF DONALD H. RUMSFELD

Donald Rumsfeld was born in 1932 in Chicago, Illinois, attended Princeton University on scholarship, served in the U.S. Navy (1954–1957) as an aviator, and was All Navy Wrestling Champion. Married in 1954, he and his wife Joyce have three children and five grandchildren.

Mr. Rumsfeld is in private business and is Chairman of the Board of Directors of Gilead Sciences, Inc. He serves as a member of the boards of directors of ABB (Asea Brown Boveri) Ltd. (Zurich, Switzerland), Amylin Pharmaceuticals, and Tribune Company. He is also Chairman of the Salomon Smith Barney International Advisory Board and an advisor to a number of companies, including Investor AB of Sweden. He is currently Chairman of the U.S. Commission to Assess National Security Space Management and Organization.

In 1962, at the age of 30, he was elected to his first of four terms in the U.S. Congress. In 1969, he resigned from Congress to join the President's Cabinet. He served as Director of the Office of Economic Opportunity and Assistant to the President, and later as Director of the Economic Stabilization Program and Counselor to the President. In January 1973 he was posted to Brussels, Belgium, as U.S. Ambassador to North Atlantic Treaty Organization (NATO).

In August 1974, Mr. Rumsfeld was called back to Washington, DC, to serve as Chairman of the transition to the Presidency of Gerald R. Ford. He served as Chief of Staff of the White House and as a member of the President's Cabinet, 1974–1975, and as the 13th U.S. Secretary of Defense, 1975–1977, the youngest in history.

In 1977, Mr. Rumsfeld left Washington, DC, after some 20 years of public service and lectured at Princeton University's Woodrow Wilson School of International Affairs and at Northwestern University's Kellogg Graduate School of Management prior to entering business.

In June 1977, he became Chief Executive Officer of G.D. Searle & Co., a worldwide pharmaceutical company, where he served until 1985. The turnaround there earned him awards as the Outstanding Chief Executive Officer in the Pharmaceutical Industry in 1980 and 1981. He was in private business from 1985 to 1990. From 1990 to 1993, Mr. Rumsfeld served as Chairman and Chief Executive Officer of General Instrument Corporation, a leader in broadband and digital high-definition television technology. After taking the company public, Mr. Rumsfeld returned to private business.

During his years in business, he has continued public service in a variety of federal posts including service as President Reagan's Special Envoy for the Middle East, and as a Member of the President's General Advisory Committee on Arms Control, and the National Economic Commission. His current civic activities include service on the Boards of Trustees of the Chicago Historical Society, Eisenhower Exchange Fellowships, the Hoover Institution at Stanford University, the Rand Corporation and the National Park Foundation. He is also a member of the U.S.-Russia Business Forum, and recently completed service as Chairman of the U.S. Government Commission to Assess the Ballistic Missile Threat to the United States.

Honors include: Distinguished Eagle Scout Award (1975), George Catlett Marshall Award (1984), Woodrow Wilson Award (1985), Dwight Eisenhower Medal (1993), and eleven honorary degrees. In 1977, Mr. Rumsfeld was awarded the nation's highest civilian award, the Presidential Medal of Freedom.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Donald H. Rumsfeld in connection with his nomination follows:]

UNITED STATES SENATE  
 COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
 NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

This attachment represents my best recollections. It is complete to the best of my ability, but I suspect there may be some unintentional omissions.

AWARDS AND HONORS

Date	Awards/Honors
1947 .....	Eagle Scout Award
1948 .....	Elected Vice President of Junior Class, New Trier High School, Winnetka, Illinois
1949-50 ...	Elected Vice President of the Tri-Ship Club, New Trier High School, Winnetka, Illinois
1949-50 ...	Awarded the Fathers Club Award as the Outstanding Wrestler in 1949 and in 1950, New Trier High School, Winnetka, Illinois
1949-50 ...	Elected Co-Captain of the New Trier High School Varsity Wrestling Team (State Champions), Winnetka, Illinois
1950 .....	Awarded scholarship to Princeton University, Princeton, New Jersey
1950-51 ...	Awarded the Hooker Trophy as the Outstanding Freshman Wrestler, Princeton University, Princeton, New Jersey
1951-54 ...	Selected in a national competition for an NROTC Regular Scholarship, Princeton University, Princeton, New Jersey
1953 .....	Elected Captain, Princeton University Varsity 150 lb. Football Team, Princeton, New Jersey
1953 .....	Elected Captain of the Princeton University Varsity Wrestling Team, Princeton, New Jersey

## AWARDS AND HONORS—Continued

Date	Awards/Honors
1953–54 ...	Awarded the Triede Award as the Outstanding Varsity Wrestler in 1953 and in 1954, Princeton University, Princeton, New Jersey
1/55 .....	Designated Naval Aviator
1956 .....	Won the All Navy Wrestling Championship title at 147 lbs
1956 .....	Won the Olympic District Wrestling Championship at 160 lbs
1956 .....	Selected as a Flight Instructor in the Instructor's Basic Training Group, U.S. Navy, Pensacola, Florida
1962 .....	Elected to the U.S. Congress, 13th District of Illinois
1964 .....	Re-elected to the U.S. Congress, 13th District of Illinois
1964–66 ...	Awarded the Watchdog of the Treasury Award, by the National Association of Businessmen in 1964, 1966 and 1968
1965 .....	Selected as one of the ten Outstanding Young Men by the Chicago Chamber of Commerce & Industry, Chicago, Illinois
1966 .....	Re-elected to the U.S. Congress, 13th District of Illinois
1967–68 ...	Elected President of the 88th Club (Republican Members of the U.S. Congress who were elected in 1962)
1968 .....	Re-elected to the U.S. Congress, 13th District of Illinois, by the highest percentage (76) of all Congressmen in the U.S.
1975 .....	Awarded the Distinguished Eagle Scout Award
1975 .....	Awarded the Opportunity Industrial Centers (OIC) Executive Government Award, presented by Rev. Leon Sullivan
5/18/75 ....	Awarded an Honorary Doctor of Laws Degree—Illinois College, Jacksonville, Illinois
5/25/75 ....	Awarded an Honorary Doctor of Laws Degree—Park College, Kansas City, Missouri
6/7/75 .....	Awarded an Honorary Doctor of Laws Degree—Lake Forest College, Lake Forest, Illinois
10/2/76 ....	Awarded the Leadership Citation for Outstanding Public Service, presented by the American Friends of the Hebrew University of Jerusalem
1/10/77 ....	Awarded the Presidential Medal of Freedom—with distinction—the Nation's highest civilian award, Washington, D.C.
3/17/80 ....	Awarded the Gold Medal as the Outstanding Chief Executive Officer in the Pharmaceutical Industry, presented by Wall Street Transcript
1981 .....	Received the Northwest Suburban 1981 "Good Scout" Award, presented by Northwest Suburban (Ill.) Boy Scouts
2/23/81 ....	Awarded the Bronze Medal as the #3 Outstanding Chief Executive Officer in the Pharmaceutical Industry, presented by Wall Street Transcript
3/11/81 ....	Presented the Outstanding Chief Executive Officer Award in the Pharmaceutical Industry, by Financial World
4/81 .....	Elected Chairman of the Board of Trustees of The RAND Corporation, Santa Monica, California
4/12/81 ....	Awarded an Honorary Doctor of Laws Degree—Tuskegee Institute, Tuskegee, Alabama
5/16/81 ....	Awarded an Honorary Doctor of Science in Business Administration Degree—Bryant College, Smithfield, Rhode Island
9/81 .....	Elected to the National Academy of Public Administration
1/25/82 ....	Awarded a Silver Medal as the #2 Outstanding Chief Executive Officer in the Pharmaceutical Industry, presented by Wall Street Transcript
1/31/83 ....	Awarded the Silver Medal as the #2 Chief Executive Officer in the Pharmaceutical Industry, presented by Wall Street Transcript
4/1/83 .....	Awarded the Executive of the Year Award, by the University of Arizona Business Advisory Council, Tucson, Arizona
5/6/83 .....	Awarded the Invest-in-America Eagle Award for dedication to the country's enterprise system
5/26/83 ....	Presented the City Club of Chicago 80th Anniversary Award honoring Outstanding Chicagoans
7/9/83 .....	Presented the Golden Plate Award, by American Academy of Achievement
10/17/84 ...	Awarded the George Catlett Marshall Medal, by the U.S. Army Association, Washington, DC
2/16/85 ....	Awarded the Woodrow Wilson Medal, by Princeton University, Princeton, New Jersey
3/5/85 .....	Presented the Marketing Man of the Year Award, by the Commercial Development Association, Inc
9/27/85 ....	Awarded an Honorary Doctor of Laws Degree, by the National College of Education, Evanston, Illinois
11/20/85 ...	Presented the Shelby Cullom Davis Award, by the Ethics & Public Policy Center, Washington, DC
4/28/86 ....	Presented the Award of Merit for Entrepreneurship from the Wharton School of Business of the University of Pennsylvania, Philadelphia, Pennsylvania
7/86 .....	Awarded the George Washington Honor Medal for Excellence in Public Address, by the Freedoms Foundation, Valley Forge, Pennsylvania
7/86 .....	Presented the Outstanding Private Sector Leader Award, by The American Legislative Exchange Council
9/87 .....	Presented the Professional Manager of the Year Award, by the Society for the Advancement of Management, Chicago Chapter, Chicago, Illinois
5/88 .....	Awarded Honorary Doctor of Letters Degree, by Claremont University Center and Graduate School, Claremont, California
4/8/90 .....	To be inducted into the Illinois Wrestling Coaches and Officials Hall of Fame
6/10/90 ....	Awarded Honorary Doctor of Laws Degree, DePaul University College of Commerce, Chicago, Illinois
11/22/91 ...	Awarded Certificate of Appreciation, Private Sector Council, Washington, DC

## AWARDS AND HONORS—Continued

Date	Awards/Honors
4/23/92 .....	Presented the Henry Townley Heald Award by Lewis Collens, President, Institute of Technology at Ceremony honoring 10-year members of the President's Council, Chicago, Illinois
5/2/92 .....	Induction as a Distinguished American by the National Wrestling Hall of Fame & Museum, Stillwater, Oklahoma
5/22/93 .....	Awarded Honorary Doctor of Laws Degree, Illinois Wesleyan University, Bloomington, Illinois
5/27/93 .....	Presented the Dwight David Eisenhower Medal, Eisenhower Exchange Fellowships, Inc., Philadelphia, Pennsylvania
7/10/93 .....	Awarded Honorary Degree of Doctor of Public Policy, The RAND Graduate School, Santa Monica, California
6/19/97 .....	Presented the Atlantic Legal Foundation Award for Free Enterprise, New York, New York
5/10/98 .....	Presented the Doctor of Laws from Hampden-Sydney College, Hampden-Sydney, Virginia
10/7/98 .....	The Center for Security Policy 10th Anniversary "Keeper of the Flame" Award, Four Seasons Hotel, Washington, DC
4/27/00 .....	Presented the Distinguished Community Service Award, Princeton Club of Chicago, Chicago, Illinois
9/21/00 .....	Named 42nd Ward Republican of the Year 2000, Chicago, Illinois

Community Forum Series  
Bryn Mawr, Pennsylvania  
February 8, 2000

The New National Security Environment

Good evening. I am delighted to be with you to discuss what I believe to be a most important subject.

What I would like to do this evening is to talk a bit about our changing world and our country's circumstance in that world, with particular attention to weapons of mass destruction, ballistic and cruise missiles, and the problems they pose in what I characterize as our New National Security Environment.

Let me put the subject in context by recalling some press headlines in recent weeks and months:

- Russian sailor shoots eight crewmen and takes control of nuclear submarine.
- Students renew protests in Jakarta.
- Japan and South Korea concerned over failure of U.S. intelligence to monitor North Korean missile flight over Japan.
- Another bombing in Northern Ireland.
- Cyber hackers shut down Yahoo for several hours.
- Russian tanker violates Iraq oil ban.
- PRC tells Philippines all Spratley Islands belong to China.
- UN increases peace keepers in Sierra Leone to deal with brutal rebel armies.
- Undeclared civil war rages in Angola.
- Turkey threatens military action against Syria.
- Iran military pressures Afghan Taliban.
- India and Pakistan launch ballistic missiles.
- Japan fires warning shots at North Korean spy ships.
- Yugoslav defense minister assassinated.
- Dean of Georgetown's School of Foreign Service describes U.S. foreign policy as "scold and bomb."
- 1000 classified documents on nuclear secrets released by Department of Energy in error.
- Chinese demonstrators torch U.S. consulate and stone U.S. embassy in Beijing.
- New York Times says U.S. aid diverted to Russian germ warfare activity.
- Yugoslavia threatens stability in Montenegro.
- U.N. Security Council reviews Rwanda horrors where an estimated one million were killed in tribal war.

- China, increasing defense budget in double digits, warns U.S. against ballistic missile shield for Taiwan, Japan and South Korea.
- CIA warns of possible Taiwan P.R.C. flare-up.
- China and Russia continue to export nuclear and missile technologies.
- National Security Agency's massive computer and electronic systems fail and go silent for three days, showing dangerous U.S. vulnerability.
- North Korea believed to be obtaining uranium from the Congo for its nuclear weapons program.
- CIA not ruling out Iran building nuclear bombs.
- Russia declares battle for Grozny is over.
- Washington Times says Russia conducts a series of missile tests - an SS 19; an ABM Interceptor; an SS 21; and 2 SSN 20 submarine launched missiles.

And, with all of that, use of the internet is doubling every 100 days. This decentralization of power has been described as the "second coming of the de Toqueville movement." By 2002 some 250 million people will likely be connected on the Internet.

As you know, Moore's law stipulates that in the world of silicon, "the speed and capacity of computing power available at any given price will double every 18 months." More recently Gordon Moore observed that if these same conditions had been applicable to the auto industry, cars today would travel at the speed of light, get a million miles to the gallon and you would be able to park one in your pocket.

And a final headline: U.S. stock markets reach new highs.

These headlines tell a story. Yes, the U.S. economy remains strong. Inflation and unemployment are low. The Internet is exploding and changing the lives of millions -- how we work and how we live. But there is much that is unsettled in this still-shrinking and rapidly globalizing post-Cold War world.

\* \* \*

I don't want to seem negative about our circumstance or our future - for I am not. Indeed, I am optimistic. But we do need to be realistic about the world and our circumstance in it if we are to remain safe. We are currently operating off of a world view that is several decades old. We need to get about the task of preparing ourselves to live safely in the world as it now is, and as it will be for the decades ahead.

Serious national security problems rarely happen suddenly. It only seems that they do. In fact, they tend to build and accumulate over time. There generally are warning signs, but often the signs are ignored or not recognized. The signals - so clear after the fact - often don't seem "actionable," if you will, until it's too late.

To the extent we are wise, attentive and prepared, many, if not most, dangers can be avoided. To the extent we fail to heed warning signals, problems compound and risks escalate. I will touch on this issue of warning a bit later.

\* \* \* \* \*

With that as background, let me turn to some broad issues facing our country and the world -- issues that are sure to be with us over the decades ahead.

In 1998, the Congress established the Commission to Assess the Ballistic Missile Threat to the United States. The members of this bi-partisan Commission -- appointed by the Democratic and Republican leaders of the House and Senate -- spent an enormous number of hours over 1998 and 1999, reviewing all available information, in some 200 plus briefings. Not surprisingly, given the different backgrounds and experiences of the Commissioners-- military, civilian, technical and policy-oriented, but each with two or three decades of experience dealing with the Intelligence Community and its products -- we began with a variety of different views. As we proceeded, each time we seemed to be arriving at different conclusions, we called for more briefings and focused back on the facts.

Eventually we arrived at a set of unanimous conclusions and recommendations. As one of our Commissioners, General Larry Welch, former Air Force Chief of Staff said, "the facts overcame our biases and opinions and drove us to our unanimous conclusions." And in Washington D.C. these days, unanimity on anything is remarkable, let alone on subjects as heated as these.

Given that so few people are able to read our classified final report of some 300 plus pages, and that the unclassified version was only 36 pages, the fact that our conclusions were unanimous made them considerably more persuasive.

During the course of our deliberations, almost each month there was an event involving ballistic missiles or weapons of mass destruction -- Pakistan's Gauri missile launch, the Indian and Pakistani nuclear explosions, U.N. inspectors being tossed out of Iraq, Iran's Shahab 3 missile firing, and North Korea's Taepo Dong 1 three-stage missile launch. The accelerated pace of these disturbing events provided a vivid backdrop for our work.

\* \* \*

In the early 1990s we experienced two events that have had a significant impact on our world.

First was the end of the Cold War, with all of its positive aspects. But there have also been some less positive aspects. One is that we have seen ethnic and religious hostilities bubbling up that had been long repressed, in the Balkans and elsewhere as well. We also have seen a relaxation of vigilance by the West, a sense that the dangers and threats are all gone. This

misunderstanding of our circumstance has contributed to a rapid acceleration in the pace of proliferation of weapons of mass destruction and their delivery systems.

A second major event in the 1990's was the Gulf War. It taught regional powers that it is unwise to try to compete directly with Western armies, navies and air forces. They now know full well that they are better advised to seek so-called "asymmetrical" capabilities to threaten and intimidate their neighbors and dissuade Western nations from becoming involved in their regions.

Regional powers have several cost effective options:

- Terrorism is one;
- Cruise missiles are also attractive, and likely to become weapons of choice as, we can anticipate, will be cyber attacks.
- Third, are ballistic missiles. It is not happenstance that some 20-25 countries either have, or are seeking ballistic missiles; they are relatively inexpensive when compared to armies, navies and air forces. Like cruise missiles, they can be launched from land, sea or air, and deliver high explosives, biological, chemical or nuclear warheads. And finally, ballistic missiles have the advantage of being almost certain to arrive at their intended destinations -- since there are as yet no defenses against them.

Those of us from Chicago recall Al Capone's observation that, "You get more with a kind word and a gun, than you do with a kind word alone." Substitute "ballistic missile" for "gun" and the name of a modern day Al Capone of a rogue state, or even a non-state entity, and you have the idea.

\* \* \* \* \*

The term "rogue countries" is unfortunate in that it suggests that their behavior is erratic, like a rogue elephant. While unusual to us, I believe their actions are rational for them and not really that unpredictable. To say that such countries would be deterred from using ballistic missiles with weapons of mass destruction, because of the vastly greater nuclear power of the U.S. is to misunderstand. These are terror weapons, and they work. They terrorize.

Such weapons in the hands of even small countries or non-state entities, such as Osama bin Laden, force a different calculation on the part of their neighbors as well as the U.S.

One aspect of terror weapons is that they need not be used to be effective. They work if they are used to be sure, but they also work without being fired. Possession alone alters the behavior of others. It forces people to take into account the risks to them from these powerful weapons.

Conversely, in the case of North Korea, the U.S. is providing not bombs, but food aid and nuclear power assistance. Why? The short answer is that we know North Korea has weapons of mass destruction, ballistic missiles, and a willingness to use them. The other countries do not - yet.

The lesson our seemingly contradictory behavior teaches the world is, if you want influence, if you want assistance, as opposed to being bombed, get weapons of mass destruction.

A second example of how terror weapons can alter behavior is the Gulf War. Imagine if Saddam Hussein had launched a demonstration nuclear weapon on an ICBM a few days before invading Kuwait, simply to show he could do it. Could the U.S. have fashioned a coalition of allied governments against him? Consider the debates in the Senate and in other parliaments and how different the outcomes would have been had they known with certain knowledge that Iraq had nuclear weapons that could reach their homelands. Consider the discussions in the National Security Council and other capitals as to what should be done about Iraq's invasion of Kuwait. The outcome would have been notably different.

\* \* \* \*

Very briefly, our Commission's unanimous conclusions were these:

First, that Russia and China continue to pose the greatest potential threats to the U.S., although different in nature. Each is on an uncertain, albeit different, path. We can't know what Russia's future will be, whether it will navigate through what may take two more decades toward a more democratic, less centralized version of a market system, or, conversely, become a criminal kleptocracy -- a giant Zaire.

Nor can we know what the People's Republic of China's direction will be, how they will engage or fail to engage the world; whether relatively smoothly or with a grinding of gears is still unclear, although the recent government-sponsored stoning of the U.S. embassy and torching of a U.S. Consulate was not a positive sign.

As to North Korea and Iran, we concluded that each could pose a threat to the U.S. within 5 years of a decision to do so, and that the U.S. might well not know for several of those years whether such a decision had been made. Given that U.N. sanctions and inspections are not in place in Iraq, it must also be included with North Korea and Iran.

Further, we concluded that under some plausible scenarios --we might have "little or no warning" of an attack on the U.S. or against our allies or forces overseas.

There are several ways that developing threats can be accelerated:

- One is where one country bases their missiles in another country;
- Another is where a country tests its missiles in another country, thereby masking their capabilities;

- Still another is where a complete operational missile system is transferred from one country to another;
- And last is to put a ballistic missile aboard a ship, and sail it to a closer range, thereby shortening the longer range development cycle.

Each of these has been done in recent years. They are not possibilities. They have happened.

As Jim Woolsey, CIA Director in Mr. Clinton's first term and one of our commissioners, pointed out, making ICBMs or nuclear weapons was once like the old four-minute mile barrier - it seemed impossible until Roger Bannister broke the four-minute mile. Today it is being done regularly.

Our Commission's unanimous conclusions were notably different from the then official estimates of the U.S. Intelligence Community. The Community has, however, since generally agreed with our conclusions, and as a result, U.S. policy and practices are being changed to recognize these realities.

\* \* \* \* \*

Beyond the Commission's findings with respect to specific countries, we came to two overarching conclusions:

The first is that the proliferation of technologies relating to weapons of mass destruction and ballistic missiles is pervasive. That proliferation is from many sources:

- The leading proliferating countries - Russia, the People's Republic of China and North Korea - are providing vital assistance to each other as well as to other nations;
- Proliferation among the so-called "rogue" states -- North Korea, Iran and Iraq -- is extensive, to the point that it is becoming self-sustaining. Each has a comparative advantage they can and do barter with each other; and
- Proliferation also comes from Western nations - not the least of which is the U.S. - and that is a key part of the problem, since Western nations have the most advanced technologies.

There are legal as well as illegal paths for technology transfer. They include use of technologies rejected by us decades ago, block declassifications by the U.S. government of information which, while old, none the less reveals important secrets and technical information, dual-use technologies, international symposia, student exchanges, even the internet, as well as espionage and secret sales through intermediaries.

There are several motivations for countries to proliferate. One is economic, as in the case of North Korea. Another is strategic, as with China's assistance to Pakistan, where their goal is to make life difficult for their neighbor India, and their aid to Iran to make it difficult for the U.S. and the West. And these are historic reasons, as with Italy's 2000-year relationship with Libya.

Last month there was a report that Iran may be providing missiles to the Congo, of all places. It illustrates the proliferation problem vividly. Think of it. Ballistic missiles were first developed by Dr. Robert Goddard here in the U. S. Germany took his ideas and developed the V-1 and V-2 rockets used against England in World War II. After World War II, the Soviet Union captured German scientists and missiles and developed what is called Scud missiles. Later the Soviets put Scuds in Egypt under Nasser. Nasser sold a Scud missile to North Korea. They reverse engineered it and sold what they call the Roe Dong or No Dong missiles to Iran. And last week, reports were that Iran might be selling them to the Congo. Quite a round trip.

If I know anything, it is that proliferation cannot be prevented - it can only be stalled. We need to face it and get arranged to live with that truth.

It is these new realities that lead to the inescapable conclusion that the U.S. and the West face a new national security environment. Specifically, more nations unfriendly to the West - and even non-nation entities - will have weapons of mass destruction -- biological, chemical and nuclear, as well as cyber attack capabilities -- weapons of enormous destructive power, and the missiles and/or techniques to deliver them. This is a problem of a new order. Given the destructive power and reach of these weapons, it is a new major, indeed, an overarching problem which requires our prompt attention and focus.

Our Commission's second overarching conclusion was that the ability of the U.S. Intelligence Community, and indeed western intelligence communities, to monitor weapons of mass destruction and missile programs in target countries has eroded, as the pace of proliferation has accelerated. This is true for a variety of reasons:

First, there are more countries to try to monitor.

Second, dramatically more sophisticated deception and denial capabilities are in the hands of more and more countries, partly as a result of the spread of information on how to deceive resulting from espionage, and partly as a result of the availability of various advanced technologies such as fiber optics and new tunneling equipment - equipment that can cut 50' diameter some 200 feet in a day. Russia, China, North Korea, Iran, Iraq, Serbia, Libya have all dug underground, making observation and surveillance vastly more difficult.

Also, many intelligence analysts need to re-learn the old rule that "the absence of evidence is not evidence of absence." Baldy's Law is true -- "that some of it, what you can see, plus the rest of it, what you can't see, equals all of it." Put another way, "There are known knowns, known unknowns and unknown unknowns." Effective intelligence work must consider them all. We must know what we know and know what we don't know.

In short, because of these new threats to our safety - threats of a different order than in the past - we have moved from having "adequate threat warning" to an environment of "little or no warning." This makes even more urgent the need to overcome the reluctance of the military, the

Congress and other institutions to recognize the changes they need to make to meet our new national security requirements.

\* \* \* \* \*

The Intelligence Community's ability to provide timely and accurate warning of ballistic missile threats to the U.S. and the proliferation of weapons of mass destruction has eroded for a variety of reasons – reasons both external to the community and internal.

A few examples:

- With the end of the cold war, western nations relaxed export controls on sensitive technologies, with the inevitable results.
- Espionage has provided other countries massive amounts of information on how the U.S. collects intelligence.
- Intelligence resources have been reduced.
- Military operations understandably get first call on intelligence assets, but military operations are increasingly frequent with the result that intelligence gathering on strategic targets such as missiles and weapons of mass destruction development programs suffer.
- Compartmentation is a problem.
- There are weaknesses in science and technology.
- So-called "mirror imaging" no longer works. Other nations don't need the high volumes, the near perfect accuracy or the safety we require.

And then there is "fudging." You may recall that President Clinton said last year that legislation requiring sanctions cause the Administration to "fudge." True, but "fudging" has dangerous effects.

There are several ways to "fudge." One is simply to not study or analyze a subject if the answer might put your superiors in an uncomfortable position, or delay studying or reporting "bad news." A second, one can narrowly construe an issue, so that the answer will not be adverse to your superior's views or preferences, by selecting assumptions that assure the answers will be acceptable, for example, study carefully whether or not the U.S. will have adequate warning of threats from "indigenous" ballistic missile development programs – programs without outside assistance – even though "indigenous" ballistic missile development programs don't exist.

In short, the effect of "fudging" is to corrupt the intelligence process. Leaders need to create an environment that is hospitable to the truth – whether the news is bad or good - not an environment that forces subordinates to trim, hedge and, "fudge."

\* \* \* \* \*

This brings us back to the issue of warning. I've mentioned "surprises." We need to accept the fact that ours is a big world. There will be surprises. We can't know everything. The only surprise for me is that people are surprised that there are surprises. But warning forces us to ask: When do we know something? Put another way – when is it that what we know is sufficiently understood so that it becomes actionable?

Roberta Wohlstetter's brilliant book *Pearl Harbor*, and its foreword, compellingly argue that:

"...we were not caught napping at the time of Pearl Harbor. We just expected wrong. And it was not our warning that was most at fault, but our strategic analysis. We were so busy thinking through some "obvious" Japanese moves that we neglected to hedge against the choice they actually made."

It may have been a somewhat "improbable" choice, but it was not all that improbable. We provided the undefended target, and if we know anything from history, it is that "weakness is provocative." Weakness does entice others into adventures they otherwise would avoid. "The risk is that what is strange - what hasn't happened before is thought to be "improbable," and what seems improbable is not taken seriously."

Regrettably, that behavior pattern is human and familiar – whether in national security, in a corporation or even in a family.

Our Commission's unanimous recommendation was that the U.S. national security community review and adjust all policies, practices and strategies dependent on early warning and get arranged to live in the new environment of "little or no warning."

Specifically, the Department of State needs to adjust its focus. We likely will need to triage with respect to proliferation issues, working to stop transfer of the most dangerous technologies, delaying a second tier of technologies, and merely tracking the remaining. We need to rethink U.S. diplomatic priorities and not use up precious political capital unless the genie is already out of the bottle.

The Intelligence Community faces difficult new challenges. Their resources were cut. Military operations draw intelligence capabilities away from critical targets. They need to develop new capabilities and new priorities to assure that we have the right assets in the right places at the right times.

The Department of Defense plans, strategies, as well as our offensive, defensive and preemptive capabilities need to be reviewed and refashioned to fit this new environment.

\* \* \* \* \*

To conclude, the United States must be prepared and capable of focusing on more than one trouble spot at a time. This world of ours will not offer us the luxury of but one problem at a time. I am concerned about several aspects of U.S. policy.

Since the end of the cold war we have been adrift, with no new central organizing principle to guide us, to put purpose, direction and structure in our conduct. U.S. leadership is crucial to a reasonably ordered world. Absent U.S. leadership, opportunities are lost and new threats emerge in circumstances vastly more dangerous than would otherwise need be the case.

We need to decide and agree on how to deal with rogue states and non-state actors that possess weapons of mass destruction, and to do it without spreading our forces all across the globe. We need to fashion ways to translate our values into diplomacy, but without, as was said, a policy of "scold and bomb," that alienates so much of the world. Only when the U.S. leads are our interests best served. And we must stop the drift towards protectionism that Seattle represented, or risk damaging the world economy and injecting still greater risks and dangers into the world equation.

It is important to recognize that no President uses capabilities that result from decisions made during his time in office. Lead times are too long. Presidents have only what is left for him by their predecessors. And their successors will have only that which prior administrations leave to them. A President who fails to make the necessary investments during his tenure leaves a hollow military for his successors - to our country's great harm. And that is where we are today. We have squandered time to our detriment.

We read and hear arguments that we can't afford to spend more on defense. Nonsense. Our country is not wealthy enough to do everything in the world that everyone may wish -- we can't and we shouldn't try. But the first responsibility of government is to provide for our national security. And, let there be no doubt, our country is more than wealthy enough to do everything we need to do to provide for our safety. Defense expenditures at 3% of our GDP, and heading south, are the lowest percent in my adult lifetime.

And I must add that the silence on this subject in the national dialogue on public issues is deafening and disturbing. We need to stop the decade-long series of defense reductions and rearrange U.S. national security capabilities to fit the post-Cold War world. We must invest what is necessary to assure that future Presidents have the capabilities needed to contribute to peace and stability in this still very dangerous and untidy world.

Despite all the challenges, I have full confidence that we as a people will find our way and that we will demonstrate the good judgment to do what is necessary to fashion ways to live safely in this new and different, but still dangerous world.

Thank you very much.

END

Statement of the Honorable Donald Rumsfeld  
Prepared for the Senate Foreign Relations Committee  
October 6, 1998  
2:00 p.m.

---

Thank you, Mr. Chairman and Members of the Committee.

I am very pleased that Dr. Barry M. Blechman and Dr. William R. Graham are able to join in presenting the unclassified version of the Report of the Ballistic Missile Threat Commission to your Committee.

Dr. Blechman is the founder of the Henry Stimson Center and a former Assistant Director of the Arms Control and Disarmament Agency in the Carter Administration.

Dr. Graham is the former Science Advisor to the President in the Reagan Administration and Deputy Director of NASA.

Others members of the Commission were:

- Retired four-star general Lee Butler, former Commander of the U.S. Strategic Air Command;
- Dr. Richard L. Garwin, formerly of IBM, a distinguished scientist with a long record of service on Federal commissions and advisory committees;
- Dr. William Schneider, Jr., former Undersecretary of State for Security Assistance in the Reagan Administration;
- General Larry D. Welch, former Chief of Staff of the U.S. Air Force and currently CEO of the Institute for Defense Analysis;
- Dr. Paul Wolfowitz, former Undersecretary of Defense for Policy in the Bush Administration and former U.S. Ambassador to Indonesia, and currently Dean of the Nitze School of Advanced International Studies at Johns Hopkins University here in Washington; and
- The Honorable James Woolsey, former Director of the CIA in the Clinton Administration.

I could not have served with a more knowledgeable, experienced, talented and dedicated group of Commissioners. They deserve and have my great respect and my appreciation.

As you know, the Commission was established by Congress. We delivered our report in July, which included a brief, unclassified executive summary and a lengthy classified report. Mr. Chairman, I request that the unclassified executive summary be placed in the record at the conclusion of my remarks.

Nominated by the House and Senate Republican and Democratic leadership, the members of the Commission came to their task with a variety of views. Our work covered some six months and included two-hundred briefings. As General Welch observed, the facts finally overrode all of our biases and opinions and literally drove us to our unanimous conclusions and recommendation.

As required by our charter, we looked only at the emerging and current ballistic missile threat to the U.S. -- not other threats such as terrorism or cruise missiles. We concentrated on the threat to the United States -- not to U.S. forces overseas or friends or allies. We examined the ballistic missile countries, both as buyers and sellers, as well as users of the technology, and the state of their capabilities, including biological and nuclear weapons.

We consulted with technical, area, functional, and policy experts. We commissioned work to look at technical aspects as to what is possible and the various approaches in missile development. And we examined the availability of nuclear and biological weapon capabilities.

I will summarize our conclusions briefly.

China and Russia continue to pose threats, although different in nature. Each is on a somewhat uncertain, albeit different, path. With respect to North Korea and Iran, we concluded each could pose a threat to the U.S. within five years of a decision to do so, and that the U.S. might not know for several years whether or not such a decision had been made.

We concluded that Iraq could pose a threat to the U.S. within 10 years of a decision to do so and that the U.S. might not know for several years when such a decision was made. That view was based on the assumption that the UNSCOM sanctions and inspections would be in place. It is now increasingly likely that they will not be in place. Therefore, we would place Iraq with North Korea and Iran as capable of posing a threat to the U.S. within five years of making a decision to do so, and underline that we might not know for several years if such a decision had been made.

We concluded unanimously that the emerging capabilities are broader, more mature, and evolving more rapidly than had been reported, and that the intelligence community's ability to provide timely warning is being eroded. We concluded that the warning time of deployment of a ballistic missile threat to the United States is reduced. Under some plausible scenarios -- including re-basing or transfer of operational missiles, sea- and air-launch options, shortened development programs that might include testing in a third country, or some combination of these -- we concluded that the U.S. might well have little or no warning before operational deployment. All of these possibilities have happened, so it is hard to see how they could be described as unlikely.

One important reason for reduced warning is that the emerging powers are secretive about their programs and are increasingly sophisticated in deception and denial. They know considerably more than we would like them to know about the sources and methods of our collection, in no small part through espionage. And they use that knowledge to good effect in hiding their programs.

We have concluded that there will be surprises. It is a big world, it is a complicated world, and deception and denial are extensive. The surprise to me is not that there are and will be surprises, but that we are surprised that there are surprises. It is my view we must recognize that surprises will occur and take the necessary steps to see that our country is arranged to deal with the risks that the inevitable surprises inevitably will pose.

The second key factor is the extensive foreign assistance, technology transfer and foreign trade in ballistic missile and weapons of mass destruction capabilities. Foreign trade and foreign assistance are, in our view, not a "wild card." They are facts. The contention that there are nations with "indigenous ballistic missile development programs" is, in our view, not correct. We don't know of one such nation. There may not have been a truly indigenous ballistic missile development program since Mr. Goddard. The countries of interest are helping each other. They are doing it for a variety of reasons -- some strategic, some financial. Technology transfer is not rare or unusual, it is pervasive.

The intelligence community has a difficult assignment. There are more actors, more programs and more facilities to monitor than was the case during the Cold War. Their assets are spread somewhat thinly across many priorities. Methodological adjustments relative to collecting and analyzing evidence is, in our view, not keeping up with the pace of events. We approached our assignment not as intelligence analysts, but as policymakers, with decades of experience in dealing with the intelligence community and its products. As such, we approached it in a way that was different from the normal intelligence analyst's approach. Therefore, it should not be surprising that our conclusions diverged from earlier community estimates.

Specifically, Russia and China have emerged as major suppliers of technology to a number of countries. There is the advent and acceleration of trade among second-tier powers to the point that the development of these capabilities may well have become self-sustaining. For example, today they each have various capabilities the others do not. As they trade -- whether it's knowledge, systems, components, or technicians -- the result is that they benefit from each other and are able to move forward on development paths that are notably different from ours or that of the Soviet Union, and they are able to move at a more rapid pace.

To characterize the programs of target nations as "high-risk," it seems to me, is a misunderstanding of the situation. These countries do not need the accuracies the U.S. required. They do not have the same concerns about safety that the U.S. has. Nor do they need the high volumes the U.S. acquired. As a result, they are capable of using technologies, techniques and even equipment that the U.S. would have rejected as too primitive as much as three decades ago. Whether called "high risk" or not, let there be no doubt but that they are rapidly and successfully developing the capabilities necessary to threaten the United States.

Since January, 1998 when we began our assignment, we have seen the Pakistani Ghauri missile launch, Indian nuclear tests, Pakistani nuclear tests, Iran's Shahab 3 test and, most recently, the North Korean TD-1 space launch vehicle effort, to mention but a few events. There has not been a month that has passed where there has not been some event or new information that has reinforced the reality of the extensive technology transfer taking place, or a new surprise because of the sophistication of these countries' deception and denial and their increasing skill at keeping the U.S. from knowing what it is they are doing and where they are doing it.

The recent TD-1 space launch vehicle test is an object lesson and also a warning. Many were skeptical for technical reasons that the TD-1 could fly at all. It had been the conventional wisdom that "staging" and systems integration were too complex and difficult for countries such as North Korea to accomplish in any near time frame. Yet North Korea demonstrated staging twice.

The third stage solid motor and the satellite were both a surprise. The U.S. was aware that a launch was going to take place, but not that the TD-1 would have a third stage, and certainly not that they would attempt to put a satellite in low-earth orbit. So, while anticipating a flight of a TD-1, none of us anticipated this type of a flight.

The question is, does this bring North Korea to an ICBM capability? The intelligence community is estimating that the system tested is somewhere in a 4,000- to 6,000-kilometer range. ICBM range is in that neighborhood. That means that a three-staged TD-1 might be able to reach Alaska and parts of the western-most Hawaiian Islands. This range, however, was not what was expected of a TD-1. Rather, it is what was expected of their follow-on missile, the TD-2.

How much further might a three-staged North Korean TD-1 fly? That, of course, is a function of the payload type and size, the weight of the materials used and the number of stages. It would not be surprising if the range/payload calculations suggest that a three-staged TD-1 has a potential greater than that of a 5,500-kilometer ICBM. Overcoming the failure in the third stage should be manageable, and reentry vehicle technology is on the open market.

Even if calculations indicate the TD-1 cannot reach beyond Alaska and Hawaii with a nuclear payload, their recent launch does suggest that, because of their demonstrated technical proficiency, the TD-2 will be more capable than had been thought.

In short, the likelihood that a TD-2 will be successfully tested has gone up considerably since the August 31<sup>st</sup> flight. The likelihood that a TD-2 flight will exceed 5,000 to 6,000 kilometers in range with a useful payload has gone up as well. And, the likelihood that we will not know very much in advance of a launch what a TD-2 will be capable of continues to be high.

Now, what I have said about North Korea is interesting, but given the reality of technology transfer, what happens in North Korea also is important with respect to, for example, Iran. If North Korea has the capability it has now demonstrated, we can be certain that they will offer that capability to other countries, including Iran. That has been their public posture. It has been their private behavior. They are very, very active marketing ballistic missile technologies.

In addition, Iran not only has assistance from North Korea, but it also has assistance from Russia and China, which creates additional options and development paths for them.

What does this all mean by way of warning? Well, it powerfully reinforces our Commission's conclusions that technology transfer is pervasive and that deception and denial work. Further, it points up the fact that longer range ballistic missiles are increasingly attractive to a number of countries because the world knows from the Gulf War that combating Western armies, air forces and navies is not a wise choice.

This reality makes threats such as terrorism, ballistic missiles and cruise missiles more attractive. They are cheaper than armies and air forces. They are attainable. And ballistic missiles have the advantage of being able to arrive at their destination undefended.

We concluded unanimously that we are in an environment of little or no warning. We believe that arguments to the contrary are not supported by the facts.

This led us to our unanimous recommendation that U.S. analyses, practices and policies that depend on expectations of extended warning of deployment be reviewed and, as appropriate, revised to reflect the reality of an environment in which there may be little or no warning. Specifically, we believe the Department of State should review its policies and priorities, including sanctions and non-proliferation activities; the intelligence community should review U.S. collection capabilities, given their more complex task; and last, that the defense establishment should review both U.S. offensive and defensive capabilities and strategies based on extended warning.

In short, we are in a new circumstance and the policies and approaches that were appropriate when we could rely on extended warning no longer apply.

Thank you very much, Mr. Chairman. Dr. Blechman, Dr. Graham and I are available to respond to questions.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete

DONALD H. RUMSFELD

This 9th day of January, 2001.

[The nomination of Donald H. Rumsfeld was reported to the Senate by Senator John Warner on January 20, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on January 20, 2001.]

## **NOMINATION OF DR. PAUL D. WOLFOWITZ TO BE THE DEPUTY SECRETARY OF DEFENSE**

**TUESDAY, FEBRUARY 27, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:38 a.m. in room SD-106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Inhofe, Allard, Hutchinson, Sessions, Collins, Bunning, Levin, Cleland, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, and Carnahan.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Anita H. Rouse, deputy chief clerk; and Scott W. Stucky, general counsel.

Professional staff members present: Charles S. Abell, John R. Barnes, Edward H. Edens IV, William C. Greenwalt, Gary M. Hall, George W. Lauffer, Patricia L. Lewis, Thomas L. MacKenzie, Cord A. Sterling, and Eric H. Thoemmes.

Minority staff members present: David S. Lyles, minority staff director; Richard W. Fieldhouse, professional staff member; Gerald J. Leeling, professional staff member; Peter K. Levine, minority counsel; and Michael J. McCord, professional staff member.

Staff assistants present: Jennifer Key, Thomas C. Moore, Jennifer L. Naccari, and Michele A. Traficante.

Committee members' assistants present: George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; Michael P. Ralsky, assistant to Senator Hutchinson; Arch Galloway II, assistant to Senator Sessions; Kristine Fauser, assistant to Senator Collins; Menda Sue Fife, assistant to Senator Kennedy; Christina Evans and Barry Gene (B.G.) Wright, assistants to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Andrew Vanlandingham, assistant to Senator Cleland; Davelyn Noelani Kalipi, assistant to Senator Akaka; Peter A. Contostavlos, assistant to Senator Bill Nelson; and Sheila Murphy, assistant to Senator E. Benjamin Nelson.

### **OPENING STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN**

Chairman WARNER. Good morning. The committee meets today on a very important nomination by President George W. Bush for the Deputy Secretary of Defense, Dr. Paul Wolfowitz. I have had the privilege of knowing Dr. Wolfowitz for many years, worked

with him in various capacities, and I commend the President for his nomination of this outstanding public servant.

You are a man of accomplishments in many venues. You have many years of service in government and academia. You served in the Department of Defense on two previous occasions, as Deputy Assistant Secretary of Defense for Regional Programs from 1977 to 1980 and as Under Secretary of Defense for Policy during the period 1989 through 1993. You were Under Secretary of Defense for Policy during the Persian Gulf War, a critical juncture in the history of our country. The tenth anniversary is now being observed by our Nation and the coalition partners who came together under the leadership of President George Bush to mount that most important offensive against the aggression of Saddam Hussein.

You have served in various other government assignments, including Chief of the State Department Policy Planning Staff and as Ambassador to Indonesia under the Reagan administration. In addition, you have had a distinguished career in the academic world, having taught at Yale, Johns Hopkins, and the National War College. Most recently, you served as Dean and Professor of International Relations at the Paul H. Nitze School of Advanced International Studies at Johns Hopkins University.

You have also appeared before this committee many times, providing valuable testimony, throughout your public career. Your insights and expertise have assisted this committee, and indeed Congress as a whole, in our deliberations and responsibilities, and we are confident, at least this Senator is, that you will continue to give that valued counsel and advice to this committee and Congress as a whole.

If confirmed, you will be returning to the Department of Defense at a very challenging time in our history. In the judgment of many, and certainly this Senator, the threats growing against our interests as a Nation and those of our allies are more diverse, more complicated, than any time in contemporary history.

I agree wholeheartedly with the directions which President George W. Bush and Secretary of Defense Don Rumsfeld are taking towards their new leadership roles in national security affairs, and most particularly the Department of Defense. It is a wise decision for the President and the Secretary of Defense to determine that they would undertake a top-to-bottom study long-term of the issues, beginning with the threat, the need to realign the military in many ways to meet these changing threats, and to take a long and counseled course for deciding which programs should continue and those that should be terminated.

I continue—and I am perhaps a lone voice in some respects on this—to believe that we have short-term interests that have to be addressed, hopefully eventually in a supplemental appropriation late this summer or perhaps even earlier—before the Fourth of July is the target date I have. We will work along on that issue.

Secretary Rumsfeld has asked this committee, during his confirmation hearing and in subsequent consultations, to move as quickly as we can on key nominations. I think that we are doing that in every respect. I commend my distinguished colleague, the ranking member, Mr. Levin, in working to see that this nomination

has been handled properly and promptly, and we will continue to do that.

Senator Levin.

#### STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, thank you. Let me welcome our nominee. I see Senator Sarbanes is here to introduce him and we are delighted that he is present this morning. I am pleased to join you in welcoming Paul Wolfowitz and his family to the Armed Services Committee for today's hearing.

Mr. Wolfowitz is familiar with the work of this committee from the many times that he has testified before us and the House in his role as Dean of the Johns Hopkins University School of Advanced International Studies. He surely is familiar with the job to which he has been nominated from his previous service as Under Secretary of Defense for Policy.

The Deputy Secretary of Defense serves in a position of awesome responsibility. He is the alter ego of the Secretary. In this capacity, the new Deputy Secretary will play a key role in determining how our country will meet the national security challenges that face us today. For example:

- How do we need to transform our military forces to meet a new set of threats over the coming decades?
- What new weapons systems and technologies do we need to field? Do we need to skip a generation of technology to do so?
- Will the National Missile Defense make us more or less secure?
- Should we commit to deploy such a system?
- If so, what system should we deploy and under what circumstances?
- To what extent should the United States remain engaged around the world—for example in Kosovo, Bosnia, Colombia, and even on the Korean peninsula?
- What is the best approach to restrain Saddam Hussein from developing weapons of mass destruction and from threatening his neighbors in the Persian Gulf?

Over the years, the best approach to foreign policy and national security policy has always been a bipartisan one. The administration is properly conducting a strategic review to determine the direction of our national security strategy and what direction our defense programs should take in the years ahead.

I have supported President Bush's and Secretary Rumsfeld's decision to conduct this review before determining the level of resources that we should apply to our national defense. I look forward to working with them on these issues over the next several years.

In addition, the Deputy Secretary has traditionally served as the chief manager of the Defense Department. A wide array of management challenges, including financial management, information security, and human capital issues, cut across functional areas in the Department to such an extent that no official other than the Secretary or the Deputy Secretary has the authority needed to address them.

To take just one example, DOD's financial systems remain in need of modernization, with hundreds of partially-linked, error-prone computer systems spread throughout the Department. As a result, the Department remains unable to account for billions of dollars of property, equipment, inventory, and supplies, and unable to reconcile billions of dollars in differences between checks issued by the Department of Defense and reported to the Treasury.

So if Mr. Wolfowitz is confirmed, and I expect that he will be, he will have a very full plate indeed. I look forward to working with you, as I know all members of this committee do.

Chairman WARNER. Thank you, Senator Levin.

Senator Sarbanes, we are very fortunate, and indeed the nominee, to have you appear before this committee this morning. In my 23 years in the Senate I have come to know you very well and respect your knowledge on foreign affairs and national security matters. Indeed, we have traveled abroad together many times in this context of our security responsibilities. It is a privilege for this committee to welcome you this morning and to have you speak on behalf of this distinguished nominee.

**STATEMENT OF HON. PAUL S. SARBANES, U.S. SENATOR FROM MARYLAND**

Senator SARBANES. Thank you very much, Mr. Chairman, Senator Levin, members of the Armed Services Committee.

I am pleased to have the opportunity to recommend this morning to you, very strongly recommend, a distinguished Maryland resident, Dr. Paul Wolfowitz, for the position of Deputy Secretary of Defense. Now, Mr. Chairman, I hope you will not hold it against him that he chose to live on the Maryland side of the Potomac and not the Virginia side.

Chairman WARNER. We observed that, but we will let it go by.

Senator SARBANES. We will let it pass. Thank you very much.

Chairman WARNER. He will be working in Virginia, though.

Senator SARBANES. I understand.

Chairman WARNER. If confirmed.

Senator SARBANES. Paul Wolfowitz has had a long and impressive career in both government and academia. Actually, his involvement in public service dates back to 1966, when he was a management intern in the Bureau of the Budget. From 1973 to 1977 he held various positions at the Arms Control and Disarmament Agency. That posting was followed by his service as Deputy Assistant Secretary of Defense for Regional Programs from 1977 to 1980, then Director of the Policy Planning Staff at the State Department in 1981 and 1982, and Assistant Secretary of State for East Asian and Pacific Affairs from 1982 to 1986.

President Reagan then sent him from 1986 to 1989 as U.S. Ambassador to Indonesia, the fourth most populous country in the world. During his tenure there, his post was cited as one of the four best-managed embassies reviewed by the inspectors in 1988. His last government position was Under Secretary of Defense for Policy from 1989 to 1993, when Dick Cheney was the Secretary of Defense.

This is a very wide-ranging and balanced government service, involving both the State Department and the Pentagon, and I think a very impressive blend of responsibilities.

Shortly after leaving government service in 1993, Paul was appointed Dean of the Paul H. Nitze School of Advanced International Studies of the Johns Hopkins University here in Washington, commonly known as SAIS. SAIS is one of the preeminent institutions of higher learning devoted to the study of international relations. It is no wonder, of course, that he was appointed dean at this prestigious school because, in addition to important government service, he has outstanding academic qualifications: a B.A. in mathematics and chemistry from Cornell University in 1965, followed by an M.A. and a Ph.D. from the University of Chicago in political science and economics. He has taught at Yale, SAIS, and the National War College, where he was the George F. Kennan Professor of National Security Strategy.

In my view, in the post-Cold War environment in which we operate, Paul's extensive background and experience should serve him well in this very significant and important post of Deputy Secretary of Defense. He has a solid grasp of complex defense and security issues, the diplomatic skills to operate in the international arena, the intellectual strength to look ahead to the challenges facing us in the 21st century, and the administrative skills to be the number two person in our largest government agency. No doubt his mathematics degree and his experience on budget matters will also come in handy at the Pentagon from time to time.

Mr. Chairman, I would like to close with a quote from a statement released by the President of the Johns Hopkins University, William Brody, an outstanding educational leader, issued at the time of President Bush's announcement of his intention to nominate Paul to this position. President Brody said: "The bad news is that Johns Hopkins is losing a great dean. The good news is that the country is getting a very smart, very focused, clear-thinking leader as Deputy Secretary of Defense. Paul Wolfowitz will serve the Nation well."

Mr. Chairman and members of the committee, I strongly concur with this assessment. I believe you have a highly qualified nominee before you who will serve our country well as Deputy Secretary of Defense, and I strongly urge his favorable consideration by the committee.

Chairman WARNER. Senator, we thank you. I think those of us who had the opportunity to know this distinguished nominee concur in your observations and that of the distinguished President of Johns Hopkins. Thank you, Senator.

Senator SARBANES. Thank you, Mr. Chairman.

Chairman WARNER. At this point, I submit for the record the statement of Senator Barbara A. Mikulski, who could not be here in person due to other Senate responsibilities.

I also submit for the record the statement of Senator Strom Thurmond.

[The prepared statements of Senator Mikulski and Senator Thurmond follow:]

## PREPARED STATEMENT BY SENATOR BARBARA A. MIKULSKI

Mr. Chairman: I appreciate the opportunity to express my support for the nomination of Dr. Paul Wolfowitz to be Deputy Secretary of Defense.

Dr. Wolfowitz is well known to members of the Armed Services Committee. For over 30 years, he has committed his life to public service. As the Under Secretary of Defense for Policy, he was the principal civilian responsible for strategy, plans and policy. As the Assistant Secretary of State for East Asian Affairs, and as our Ambassador to Indonesia, Dr. Wolfowitz understands foreign policy as well as defense policy—and how the two are linked.

Most recently, Dr. Wolfowitz served as dean of the Paul H. Nitze School of Advanced International Studies at the Johns Hopkins University. He repositioned the school from a Cold War orientation, which it had since its founding, to a focus on the impact and challenges of globalization in the post-Cold War era. He strengthened the faculty, increased the endowment, raised funds for student aid and enhanced the school's visibility among policymakers in Washington and around the world.

At the Pentagon, Dr. Wolfowitz will face great challenges. We need to improve the quality of life for our men and women in uniform—so that we can continue to attract the best and the brightest to serve in our military. We also need to upgrade our weapons and technology. For example, the average Navy aircraft is 18 years old. We need to invest in new aircraft quickly—to give our pilots what they need to defend America.

I am pleased that Dr. Wolfowitz will bring his keen intellect and wide ranging experience to the important position of Deputy Secretary of Defense. I look forward to working with him to ensure that our military remains strong in a world constantly challenged by ethnic conflict, civil and nationalist tensions, and the proliferation of weapons of mass destruction.

Mr. Chairman, I'm sorry that other Senate responsibilities prevent me from being here in person, but I look forward to voting for Dr. Wolfowitz when his nomination is considered by the full Senate.

## PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman:

Mr. Chairman, I join you and the members of the Committee in welcoming Dr. Wolfowitz. I also want to take this opportunity to thank Deputy Secretary of Defense DeLeon for his service to our Nation while on the House Armed Services Committee and during the past 8 years in the many challenging positions he held in the Department of Defense. We may not always have been on the same side, but we always had the same goal of providing the best for our soldiers, sailors, airmen and Marines.

Secretary Wolfowitz, congratulations on your nomination and on your superb record of public service. Your willingness to serve a third tour in the Department of Defense speaks highly of your dedication to our country and to the men and women who wear the uniforms of our military services. It is also noteworthy because holding public office requires many sacrifices and the rewards are few.

Mr. Secretary, once confirmed, you will be part of the team that will face the challenge of transforming our armed forces, and for that matter the Department of Defense, to meet the challenges and threats of a new century. I want you to know that you can count on me, and, I believe the entire Armed Services Committee, to provide, on a bipartisan basis, the support that will be so critical toward achieving that goal. I wish you success and hope you will not hesitate to speak out forcefully on behalf of the men and women of our Armed Forces and the civilian employees of the Department of Defense.

Thank you, Mr. Chairman.

Chairman WARNER. Dr. Wolfowitz, you now have the unlimited opportunity to express such views as you wish. Following that, we will have a 6-minute round of questions by our members.

**STATEMENT OF DR. PAUL D. WOLFOWITZ, NOMINATED TO BE  
DEPUTY SECRETARY OF DEFENSE**

Dr. WOLFOWITZ. Thank you, Mr. Chairman. I know that unlimited opportunities are best kept short and I will read just a part of my statement and submit the rest for the record.

I want to thank Senator Sarbanes for being so gracious as to make time in a very busy schedule to come and introduce me.

Chairman Warner, Senator Levin, members of the Armed Services Committee, it is a great honor to appear again before this committee, one that has done so much over the years to make our Nation strong and the world more peaceful. I am grateful to the President and to Secretary Rumsfeld for the confidence that they have shown in me by nominating me for a position of such great responsibility.

If confirmed by the Senate, this will be my third tour in the Pentagon. It is also the second time that I come before this distinguished committee to seek confirmation for a senior position in the Department of Defense. On the previous occasion in 1989, it was a very different world. The Cold War was still a reality. Even in the heyday of Mr. Gorbachev, the principal threat to our Nation still came from a Soviet Union that was armed to the teeth with nuclear and conventional weapons. We had well over two million men and women on active duty to deter and, if necessary, to defend against this constant threat.

Twelve years ago many observers believed that the United States was in a period of permanent decline and many pointed to other nations as models for reforming our economy. Budget deficits were taken as a given, the personal computer was a toddler, and the Internet was a mere infant.

In the intervening years, the Cold War has become truly a part of history and we've fought and won a major war in the Persian Gulf. America did not decline, it prospered. We remain a vibrant world power with a position that is in many respects unique in the history of the world.

Under these circumstances, it was only natural that our Nation desired to reap a peace dividend. We reduced our defense budget by 40 percent. We cut the force by nearly the same amount. Our defense budget was drawn down to the lowest percentage of our gross domestic product since the late 1930s.

But the world remains, in Secretary Rumsfeld's phrase, a dangerous and untidy place. The need, indeed the demand, for U.S. leadership has increased as well. So, despite declining defense budgets and a shrinking force structure, in the past decade we drastically increased the number of military deployments for humanitarian and peacekeeping operations. This added greatly to the workload of an already busy force, one that was struggling to maintain its combat readiness, with dedicated but tired troops manning aging equipment.

Today, as General Shelton has said, the force is frayed. We must begin a long overdue renovation and transformation of the armed forces, so that we can preserve and extend the peace well into the 21st century. President Bush has set this task as one of the highest priorities of his administration.

The President has set three important goals for the Department of Defense. First, we must strengthen the bond of trust with the American military. As General Creighton Abrams said when the all-volunteer force was first created: "People aren't in the Army; they are the Army." The same is true of all the military services.

Building on the dedicated work of the Senate and the House, we must continue to improve military pay and quality of life.

But good pay and fair allowances by themselves won't keep the best people in the service. Working with Congress and our allies, we must also re-examine the balance among force levels, commitments, and deployments. We will have to make sure that we are focused on the most important defense tasks and not placing unreasonable demands on our men and women in uniform.

We will also have to acknowledge the relationship between morale and readiness. President Bush has said that even the highest morale is eventually undermined by back-to-back deployments, poor pay, shortage of spare parts and equipment, and declining readiness.

Second, we must develop the capabilities to defend against missiles, terrorists, and the complex set of threats to our information systems and our all-important assets in space. U.S. military strength in the field is unparalleled. Many of our enemies therefore have determined that in order to move against us they must be able to strike us at home. Some have chosen to develop long-range missile systems. Others have chosen to support or direct terrorist attacks with conventional devices, weapons of mass destruction, or cyber weapons against our Nation, our forces, or our diplomats abroad. We must do everything in our power to stop them.

Third, the Department of Defense must take advantage of the technological revolution to help us create a military for the 21st century. To this end, at the direction of the President, Secretary Rumsfeld has already launched a review of our defense strategy and programs designed to provide a sound understanding of the state of our armed forces and their readiness for the 21st century security environment.

This work must be done quickly and it must be done before we can know what our true defense resource requirements are. President Bush and Secretary Rumsfeld believe, as the Secretary puts it, that we need to engage our brains before we open the taxpayers' wallets. I strongly support that approach and will work hard to shape a prompt and effective review.

In addition to that review, to support and make progress on the President's goals, the Secretary has set five key objectives for the Department of Defense: First, to fashion and sustain a new form of deterrence appropriate to the new strategic environment, a deterrence based less on massive levels of punishment or retaliation and more on the use of both defensive and offensive means to deny our adversaries the opportunity and benefits that come from the use of weapons of mass destruction.

Second, to assure the readiness and sustainability of our armed forces now and into the future. This will require not only spending to bring up current readiness levels, but also investment in the modernization efforts that our forces need to avoid being caught in a trap of making ever-increasing expenditures to maintain aging equipment.

Third, to modernize our command and control and space capabilities to support our 21st century needs. That infrastructure is the foundation of American military strength.

Fourth, to begin reshaping the U.S. defense establishment to meet new challenges and take advantage of new opportunities, we must begin to move, as President Bush has said, beyond marginal improvements to replace existing programs with new technologies and strategies. Building on the superb human capital of the current force, we must fashion a future force that is at once more agile, more lethal, and more rapidly deployable. It must be able to operate over increasingly longer ranges. It must integrate the capabilities of all of the services so that field commanders have the best possible combination of air, sea, and land weapons for each situation, and it must have the best technology that America can offer. Our dedicated soldiers, sailors, airmen, Marines, and Coast Guardsmen deserve no less.

Finally, we must reform Department of Defense structures, processes, and organizations. We need to seek greater efficiencies, not only to safeguard the taxpayers' money, but also because that will allow us to create better weapon systems and invest more in the cutting edge of our Nation's defenses.

There is no more solemn responsibility that the American people entrust to the Federal Government than to provide for the common defense. There is no group of Americans who deserve more respect and honor from their fellow citizens than the men and women of our armed forces who daily put themselves in harm's way for that constitutional purpose. It is both exciting and humbling to be asked once again to help lead them in their work for the common defense.

Mr. Chairman, it is more than just an honor to be nominated by the President to be Deputy Secretary of Defense. It is also a great responsibility. I appreciate the trust that President Bush and Secretary Rumsfeld have placed in me. If confirmed, I look forward to continuing to work closely with this committee to achieve our common goals. Indeed, I pledge to you that, if confirmed, I will work with the services, Congress, and the defense industry to help the President and the Secretary prepare our armed forces to meet the challenges of the 21st century.

Thank you. I look forward to your questions.

[The prepared statement of Dr. Wolfowitz follows:]

PREPARED STATEMENT BY DR. PAUL WOLFOWITZ

Senator Warner, Senator Levin, Members of the Armed Services Committee: It is an honor to appear again before this great committee, one that has done so much over the years to make our Nation strong and the world more peaceful. I am grateful to the President and Secretary Rumsfeld for the confidence that they have shown in me by nominating me for a position of such great responsibility. When I think of the men and women who have sought confirmation here in the past, and the number of important laws—like the Goldwater-Nichols Act—that have originated with this committee, I feel truly humbled.

If confirmed by the Senate, this will be my third tour in the Pentagon. It is also the second time that I have come before this distinguished committee to seek confirmation for a senior position in the Department of Defense.

On the previous occasion, in 1989, it was a very different world. The Cold War was still a reality. Even in the heyday of Mr. Gorbachev, the principal threat to our Nation still came from a Soviet Union that was armed to the teeth with nuclear and conventional weapons.

We had well over 2 million men and women on Active Duty to deter and, if necessary, defend against this constant threat.

Twelve years ago, many observers believed that the United States was in a period of permanent decline, and many pointed to other nations as models for reforming

the U.S. economy. Budget deficits were taken as a given, the personal computer was a toddler, and the Internet was a mere infant.

In the intervening years, the Cold War has become part of history, and we have fought and won a major war in the Persian Gulf. America did not decline, it prospered. We remain a vibrant world power, with a position that is in many respects unique in the history of the world.

Under these circumstances, it was only natural that our Nation desired to reap a peace dividend. We reduced our defense budget by 40 percent, and cut the force by nearly the same amount. Our defense budget was drawn down to the lowest percentage of our gross domestic product since the late 1930s.

But the world remained, in Secretary Rumsfeld's phrase, a "dangerous and untidy" place. Amidst the peace that encompassed the developed world, ethnic conflict, regional thugs, failed states, terrorists, and the proliferation of missiles and weapons of mass destruction presented new challenges. The need, indeed the demand, for U.S. leadership increased, as well.

Despite declining defense budgets and a shrinking force structure, in the past decade we drastically increased the number of military deployments for humanitarian and peacekeeping operations. This added greatly to the workload of an already busy force, one that was struggling to maintain its combat readiness with dedicated, but tired troops manning aging equipment. Today, as General Shelton has said, the force is "frayed."

We must begin a long overdue renovation and transformation of the Armed Forces in order to preserve and extend the peace well into the 21st century. President Bush has set this task as one of the highest priorities of his administration. As the President has reminded us, peace is not ordained, it is earned; and it must be earned, in particular, by the hard and often dangerous work of our men and women in uniform.

The President has set three important goals for the Defense Department:

*First, we must strengthen the bond of trust with the American military.*

As General Creighton Abrams said when the All-Volunteer Force was first created, "people aren't *in* the Army, people *are* the Army"—and the same is true of all the military services.

Building on the dedicated work of the House and the Senate, we must continue to improve military pay and quality of life. But good pay and fair allowances by themselves won't keep the best people in the service. Working with Congress and with our allies, we must also reexamine the balance among force levels, commitments, and deployments. We will have to make sure that we are focused on the most important defense tasks, and not placing unreasonable demands on our men and women in uniform.

We will also have to acknowledge the relationship between morale and readiness. President Bush has said that "even the highest morale is eventually undermined by back-to-back deployments, poor pay, shortage of spare parts and equipment, and rapidly declining readiness." Our men and women in uniform must have first-class equipment, adequate materiel for training and maintenance, decent barracks, modern family quarters, and suitable working conditions.

*Second, we must develop the capabilities to defend against missiles, terrorists and the complex set of threats to our information systems and our all-important assets in space.* U.S. power in the field is unparalleled. Many of our enemies have determined that in order to move against us, they must be able to strike us at home. Some have chosen to develop long-range missile systems. Others have chosen to support or direct terrorist attacks—with conventional devices, weapons of mass destruction, or cyber weapons—against our Nation, our forces, or our diplomats abroad. We must do everything in our power to stop them.

*Third, the Department of Defense must take advantage of the technological revolution to help us create a military for the 21st century.* To this end, at the direction of the President, Secretary Rumsfeld has already launched a review of our defense strategy and programs designed to provide a sound understanding of the state of our Armed Forces and their readiness for the 21st century security environment. This work must be done quickly, and it must be done before we can know what our true defense resource requirements are. President Bush and Secretary Rumsfeld believe, as the Secretary puts it, that we need to "engage our brains before we open the taxpayer's wallet." I strongly support that approach and will work hard to shape a prompt and effective review.

In addition to that review, to support and make progress on the President's goals, the Secretary has set five key objectives for the Department of Defense:

*First, we must fashion and sustain a new form of deterrence appropriate to the new strategic environment.* The proliferation of missiles and weapons of mass destruction is a key element in the new strategic environment. We need new concepts and forms of deterrence to deal with it. We need a deterrence based less on massive levels of punishment or retaliation, and more on the use of both defensive and offensive means to deny our adversaries the opportunity and benefits that come from the use of weapons of mass destruction.

*Second, we must assure the readiness and sustainability of our Armed Forces, now and into the future.* This will require not only spending to bring up current readiness levels, but also investment in the re-capitalization and modernization efforts that our forces need to avoid being caught in the trap of making ever-increasing expenditures to maintain aging equipment.

*Third, we must modernize our command and control, and space capabilities to support our 21st century needs.* Our command, control, communications, and intelligence infrastructure is the foundation of American military strength. That infrastructure is essential for current operations and indispensable for adapting today's force to take advantage of new technology to meet 21st century challenges. As Secretary Rumsfeld has said, we must significantly improve our intelligence and space capabilities, as well as our ability to protect them against various forms of attack.

*Fourth, we must begin reshaping the U.S. defense establishment to meet new challenges and take advantage of new opportunities.* We face the demanding task of preparing for an uncertain future where there are many individual, unpredictable threats but no single major adversary to focus our efforts. We will have to make a stronger effort to define the key tasks and begin to move, as President Bush has said, "beyond marginal improvements to replace existing programs with new technologies and strategies."

Building on the superb human capital of the current force, we must fashion a future force that is at once more agile, more lethal, and more rapidly deployable. It must be able to operate over increasingly longer ranges. It must integrate the capabilities of all of the services so that field commanders have the best possible combination of air, sea, and land weapons for each situation; and it must have the best technology that America can offer. Our dedicated soldiers, sailors, airmen, marines and coast guardsmen deserve no less.

*Finally, we must reform Department of Defense structures, processes, and organizations.* We need to seek greater efficiencies not only to safeguard the taxpayer's money, but also because that will allow us to create better weapons systems and invest more in the cutting edge of our Nation's defenses.

There is no more solemn responsibility that the American people entrust to the Federal Government than—in the words of the Constitution—"to provide for the common defense." There is no group of Americans who deserve more respect and honor from their fellow citizens than the men and women of our Armed Forces, who daily put themselves in harm's way for that constitutional purpose. It is both exciting and humbling to be asked again to help lead them in their work for the common defense.

Mr. Chairman, it is more than just an honor to be nominated by the President to be Deputy Secretary of Defense, it is also a great responsibility. I appreciate the trust that President Bush and Secretary Rumsfeld have placed in me. If confirmed, I look forward to continuing to work closely with this committee to achieve our common goals. Indeed, I pledge to you that I will work with the Services, Congress, and the defense industry to help the President and the Secretary prepare our Armed Forces to meet the challenges of the 21st century.

Thank you. I look forward to your questions.

Chairman WARNER. Thank you, Dr. Wolfowitz.

By the long-standing tradition of this committee, the Chair now propounds to you questions that are given to each nominee. First, have you adhered to applicable laws and regulations governing conflict of interest?

Dr. WOLFOWITZ. Yes, I have, Senator.

Chairman WARNER. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Dr. WOLFOWITZ. No, I have not, Mr. Chairman.

Chairman WARNER. Will you ensure that you and your staff comply with the deadlines established for requested communications, including questions for the record, by this committee and other committees of Congress?

Dr. WOLFOWITZ. Yes, Mr. Chairman. I consider that a high priority. I also will work with Secretary Rumsfeld, as he indicated in his testimony, to try and see if we can streamline some of those requirements, because they are quite substantial, I have observed already.

Chairman WARNER. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Dr. WOLFOWITZ. I certainly will, Mr. Chairman.

Chairman WARNER. Will those witnesses be protected from any reprisal for their testimony or briefings?

Dr. WOLFOWITZ. Yes, they will.

Chairman WARNER. The Chair notes that you have responded to the questions propounded by this committee and that they will be made a part of the record today.

Now we will proceed on a round of 6 minutes to each member. Dr. Wolfowitz, you were in the Department of Defense during the Gulf War, and I copied a note from your opening statement in which you said, "We fought and won the war in the Persian Gulf." Unquestionably, the coalition of military forces did fight bravely and win that war. It is interesting, it was a war of about 100 hours.

The decision was made not to pursue Saddam Hussein's forces back into Iraq and I have always defended that decision that was made by our then-President George Bush. But the aftermath is not necessarily one of victory. We have seen 10 consecutive years now in which, although early on there was some compliance with the UN Security Council resolutions by Iraq, there has been absolute defiance of the Security Council resolutions and the understandings that were agreed to by Saddam Hussein.

This morning I looked at the headlines and it said the U.S. is prepared to revise the sanctions regime and the caption was that we would lessen the sanctions. My question to you is, what do we get in return from Saddam Hussein and what is the likelihood that he will now comply with the clear obligations he undertook at the end of the conflict and the clear mandates of the Security Council?

Dr. WOLFOWITZ. Mr. Chairman, in compliance with the strictures on me as a not yet confirmed nominee, I have not been intimately involved in the policy process on Iraq. I saw the same article you saw in the paper this morning. I have not yet seen a complete transcript of what Secretary Powell said.

Chairman WARNER. I recognize that you have not been involved in that. I understand that. But you have devoted much of your career to these types of issues and questions. What counsel and advice would you share with the President and the Secretary of Defense?

Dr. WOLFOWITZ. I believe that what one has to do in approaching this issue, and it is a very difficult issue and you are absolutely correct in saying that we may have won the war, but we still have a major problem there as long as Saddam Hussein is in power—one needs not just a single policy decision, for example one concerning sanctions, one needs an overall strategy.

That strategy has to reflect the reality of where you are today and where you hope to be a year from now or 2 years from now. I do believe that part of the reality is that where we are today is that we have lost a lot of ground since the end of the Gulf War and he has gained a lot of ground. In particular, the coalition that the first President Bush assembled to confront Iraq is not anything like what it used to be.

Part of that problem is that Saddam has succeeded to a disturbing degree in cultivating the notion that the sanctions are not punishing him, they are only punishing the Iraqi people. I believe that part of what we need to do is make clear that the sanctions that are in place are not intended and should not prevent humanitarian assistance or food or medical supplies from getting to the Iraqi people.

But I would also emphasize sanctions are not a policy; they are at best a part of a policy. I think the overall policy has to focus on how one can prevent him from getting weapons of mass destruction or get rid of them if he has them, how to keep him from becoming a threat to his neighbors by conventional or unconventional means, and hopefully, if possible, to devise a strategy to assist the Iraqi people in freeing themselves from this tyrant. That is not going to be something that is going to happen overnight.

Chairman WARNER. I have just returned from a trip to that region. Senator Stevens, Chairman of the Appropriations Committee, and I and several other Senators, visited in Egypt with President Mubarak. We visited in Israel with Prime Minister-designate Sharon. It seems that there is a feeling that we can reconstitute under U.S. leadership in some measure the coalition of nations that fought that battle 10 years ago. Speaking for myself, I think that is probably the key to such new policies as we have towards Iraq.

Regrettably, the United States and Great Britain have been going it alone certainly in the containment of Saddam Hussein through the very courageous air operations in the north and the south. In the Gulf itself we have been joined by several other nations in the naval activities to curtail the smuggling and other trafficking to and from Iraq in the Gulf waterways. But largely it has been the United States and Great Britain alone.

My question to you is what is the likelihood that we can reconstitute in some measure that some 20-plus nations, is my recollection, that participated in that Gulf action?

Dr. WOLFOWITZ. I think it is going to depend on what we want them for, and in fact we may not need all of them, depending on what we want to do. But I do think the key to putting the coalition together the first time and the key to reassembling another coalition if we need it is to convince people that there is a long-term outcome that benefits them.

I think one of the problems we face today is they see many short-term costs. Every time there is a military strike, Arab governments

suffer criticism from their own people. That is just one of many short-term costs. They do not see the long-term gain or benefit. It is crucial, I think, as the American piece of putting this coalition together to convince people that there is an outcome that is worth enduring those obvious costs.

Chairman WARNER. During the course of the early comments by President George W. Bush and based on his campaign commitments to the American people was the commitment to say that we would not engage the U.S. forces in the many and diverse actions that were undertaken by President Clinton. We now recognize that the Department of Defense was underfunded and the troops overextended in that period and corrections have to be made.

In your work with Secretary Rumsfeld and indeed with the extraordinary competent security team the President has put together, what is the general framework? What are the general guidelines that should be laid down, in your judgment, to guide future military commitments by the United States and to guide those situations in which we will simply say, no, we will not participate?

Dr. WOLFOWITZ. I think clearly one of the most important criteria is that it has to be something that is important to our national interests. It also has to be something where military forces can achieve the objectives of our national interest, and I think it has to be something where we have a strategy for success, that we have a way of achieving our goals and completing the mission and not end up in something that is an unending commitment with no way out.

It is also true, Mr. Chairman, that I believe we need to be more careful about how we engage our forces. But one also has to be very careful about how you disengage. One cannot rewrite history and it is very important as we try to reduce the requirements and burdens that we have imposed by many commitments all around the world that we not recreate the very situations that we went in to prevent.

Chairman WARNER. Thank you.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

Dr. Wolfowitz, applying those criteria, where are we currently deployed where we should not be?

Dr. WOLFOWITZ. It is not so much that we are deployed somewhere that we should not be, but I think everywhere that we are deployed we should look at the question of whether we need as much as we have. We should look at the question of whether we are heading down a road where we may tragically pull out precipitously.

I think one of the very important things we want to avoid is the precedent—and it has been a bipartisan failure—in Beirut where we lost Marines and then suddenly pulled out, and Somalia where we lost Rangers and suddenly pulled out. It is very dangerous to have a commitment where we are undertaking dangers that we have not fully appreciated and that the American people are not prepared to support.

As a general principle, I think we need to look as much as possible at turning responsibilities over to other people. Sometimes that means turning responsibilities over to our allies, sometimes—

and I would hope this might be true in some places like East Timor and the Balkans—turning more responsibility over to the indigenous people themselves. Sometimes, where it is a matter where our highly trained combat people are performing what is essentially a police function, I would hope we could find policemen, hopefully not Americans, who can perform those functions.

So it is less a matter that there is a specific place that we should pull out of, but rather everywhere that we have this very precious resource engaged we should try to make sure that there are not better alternatives.

Senator LEVIN. I think we always should do that on an on-going and continuing basis. But you are not prepared to tell us where, applying those criteria and asking those questions, we should now plan on withdrawing forces?

Dr. WOLFOWITZ. No, I am not. I think that is part of what this defense review that the Secretary is undertaking has to look at, although it is not entirely a Defense Department responsibility.

Senator LEVIN. On the Iraq questions that the Chairman asked, you have previously said that the no-fly zones do not matter. You have been highly critical of that policy. You have also advocated what you have called a serious policy aimed at liberating the Iraqi people by creating a liberated zone in southern Iraq that could be used as a base by the Iraqi opposition. You have stated that it will take American forces, to use your words, to create a protected area in which the opposition forces can organize.

Now, General Zinni, who is our most recent CINC in that area of the world, has taken a very different approach, saying that that approach which you have proposed is a dangerous illusion that was likely to lead to what he called a “Bay of Goats”—like a Bay of Pigs kind of an operation.

Do you still advocate the commitment of U.S. forces to support opposition elements within Iraq in an effort to overthrow Saddam?

Dr. WOLFOWITZ. Senator, it would depend on what those opposition forces are actually capable of doing. Every statement one makes, thoughtful statement about Iraq policy, as I said to the Chairman before, has to look at the context. In 1991, a month after the end of the Gulf War, we actually did put ground forces back into northern Iraq to create a protected zone under which Kurdish opposition forces could operate, and to this day, although there was a significant failure in 1996, northern Iraq is a largely liberated area.

I think some of the statements you are referring to go back to a time a few years ago when Sandy Berger, President Clinton’s National Security Adviser, was saying that the problem of Saddam’s weapons of mass destruction was something worth fighting for, and my reaction was, if it is worth fighting for, then it is worth fighting with whatever capabilities we need and not simply limiting ourselves to air power.

Senator LEVIN. Is it worth fighting for?

Dr. WOLFOWITZ. It depends on what we are being asked to do. When we were asked in 1991 to get the Kurdish refugees back into northern Iraq, it was a plausible plan that made sense. I have not yet seen a plausible plan today, but I would be very interested in seeing one.

Senator LEVIN. Is that goal worth seeking?

Dr. WOLFOWITZ. I think there is no question that the whole region would be a safer place, Iraq would be a much more successful country, and American national interests would benefit greatly if there were a change of regime in Iraq.

Senator LEVIN. That being the case, why then do you apparently now back away from your previous statement that it is worth achieving a base from which the Iraqi opposition can attack Saddam?

Dr. WOLFOWITZ. Senator, because I believe it depends on the context. It depends on what your real options are. If there is a real option to do that, I would certainly think it is still worthwhile.

Senator LEVIN. But you are not then saying that as of today there is a real option?

Dr. WOLFOWITZ. I have not seen it yet.

Senator LEVIN. On North Korea, do you have evidence that North Korea has cheated on the Framework Agreement?

Dr. WOLFOWITZ. No, I do not, Senator. But during the months I spent with now Secretary Rumsfeld on the Ballistic Missile Threat Commission that he chaired, we kept hearing statements that there is no evidence of this and no evidence of that, and the commission as a whole began to come up with the saying, which I think George Tenet adopted, that absence of evidence is not evidence of absence.

In the case of a country like North Korea, where it is so hard to know what is going on, it is very hard to get hard evidence. There are bits of information that suggest it might be possible, but there is certainly no proof.

Senator LEVIN. Do you advocate abrogating the Framework Agreement at this time?

Dr. WOLFOWITZ. Not if the North Koreans comply with it, no.

Senator LEVIN. Based on what you know, do you favor abrogating it at this time?

Dr. WOLFOWITZ. No.

Senator LEVIN. Thank you.

My time is up. Thank you very much.

Chairman WARNER. Senator Inhofe.

#### **STATEMENT OF SENATOR JAMES M. INHOFE**

Senator INHOFE. Thank you, Mr. Chairman.

Dr. Wolfowitz, I do not think I have ever seen someone come in for confirmation with a more glittering array of credentials than you have. I think we are very fortunate to be having you at this confirmation hearing. Your credentials, as I think outlined by the Chairman and others, are both in the world of academia as well as in the Pentagon.

What do you in your mind feel particularly qualifies you for this job with your background?

Dr. WOLFOWITZ. I appreciate the question, Senator, because you have been polite, but I think one of the questions is: You are taking on—I am asking to be confirmed for a job that is essentially the chief operating officer of the Pentagon and it is quite a management challenge. I have had quite a bit of management experience. I would say for the last, ever since I was Assistant Secretary of

State for East Asian Affairs, so that makes it the last 18 years, I have been managing organizations of 100 or multiple hundreds of people, and I think I would say reasonably successfully.

I think there are two things that I bring to it as a manager. One is I believe in managing for results, whether the result was a focused American policy that helped to remove Ferdinand Marcos in the Philippines or the result when I was Under Secretary of Defense for Policy implementing, designing and implementing a strategy that helped to keep Israel out of the Gulf War, or designing and implementing a strategy that raised \$50 billion, more than \$50 billion, from our allies and friends to support the war effort, or, on a more modest scale, but I hope I had a real impact, as Dean of the Johns Hopkins School of Advanced International Studies, managing an enterprise of, if you count our students, over a thousand people, tens of millions of dollars, which is just a rounding error at the Pentagon, but it's real money, and a very successful capital campaign that raised four times our original goal.

So I believe results is the way you measure management, not how many jobs you've held, and I believe people are the way you get results. That is the other thing I hope I bring to the job.

There is something I think that some private sector managers do not quite appreciate about managing in government. It is even more so in the academic world. Your flexibility to reward people or to penalize people tangibly is limited. You have to motivate them in other ways. I think I have had the experience of motivating very good people to work ungodly hours for the national interest, and I hope I can continue to do that.

Senator INHOFE. I am sure you can.

The Chairman talked about how it might become necessary to reconstitute the 20-plus nation alliance that we once had should it become necessary in the Middle East. My concern is, while I am concerned for that, I am also concerned equally about reconstituting our state of readiness. The CINCs have identified some 87 readiness-related deficiencies, of which 31 of these are listed as category one, and that is our ability to fight a war.

Are you prepared to try to address these? We brought these up before and nothing has happened in the last few years. How do you look at these identified deficiencies?

Dr. WOLFOWITZ. I think that is one of the most important issues that this defense review that Secretary Rumsfeld is undertaking has to address. It is really central to the first of the President's priorities, because readiness is both a matter of our ability to fight wars, but it is also a measure of our ability to keep competent, capable people in the military services. So it is a top priority.

Senator INHOFE. Also, some of the readiness issues that are there today, where there are some \$4.5 billion of near-term readiness requirements, some of these I have been out in the field and I have seen. I use the example of out at Fort Bragg during a rain storm just that there is no roof on the barracks and they are covering up their equipment with their bodies. Real Property Maintenance (RPM) accounts that are supposed to be done immediately, they are robbing one account for the other to get ammunition.

What is your feeling about a supplemental covering some of these things that really have to be done?

Dr. WOLFOWITZ. As the Secretary said, we really have to do this review and do it quickly and see what our total requirements are and see if everything we are doing we need to do. But clearly we cannot have a force that is suffering from the kinds of problems that you have identified and we have to cover those things.

Senator INHOFE. They are immediate.

In your statement, I appreciate the fact that you talked about the problems that are out there threatening us, not just being missiles but other types, the suitcase type. When you sit on the floor of the Senate, those who are opposed to a National Missile Defense system are saying the real threat is that in a truck or a suitcase. Certainly, being from Oklahoma and the Murrah Federal Office Building, which you are very familiar with, I guess the most significant domestic terrorist attack in the history of America, I am very sensitive to that. Yet, just one nuclear warhead has a thousand times that explosive power. So I hope that you would look at both of these tracks at the same time as the real threat that is out there.

You performed very well in the Rumsfeld Commission concerning the necessity for a National Missile Defense system and I applaud you for that, and I look forward to working with you in this committee to achieve that goal.

Thank you.

Dr. WOLFOWITZ. Thank you.

Chairman WARNER. Thank you very much.

Senator Cleland.

#### STATEMENT OF SENATOR MAX CLELAND

Senator CLELAND. Thank you very much, Mr. Chairman.

Dr. Wolfowitz, welcome and we appreciate your commitment to public service. You talked earlier in your testimony today about the over-commitment of American men and women and the stress on families from our commitments, the need to review those commitments, which I certainly share. Senator Pat Roberts and I took the Senate floor a number of times last year to talk about the sense in which we were over-committed and under-funded as a Nation.

Then, in terms of Iraq, I hear that the air campaign may not be enough, that certain things are worth fighting for. I just want to get it straight. Are you prepared to support an American ground invasion of Iraq to overthrow Saddam Hussein?

Dr. WOLFOWITZ. No one has proposed that, Senator, and I do not believe that even the statement Senator Levin referred to has to do with how we might support efforts by the Iraqi people to overthrow their own government.

Senator CLELAND. I just wanted to say that that would be a dramatic increase in American commitment abroad and American forces are now stretched pretty thin. I just wanted to make that clear, since you have talked about over-commitment and then in effect indicated the air campaign may not be enough and that certain things were worth fighting for. I just wanted to clarify your position on that. You do not now support an American ground invasion with American forces to overthrow Saddam Hussein?

Dr. WOLFOWITZ. I have never supported an American invasion to overthrow Saddam.

Senator CLELAND. Thank you very much.

Dr. WOLFOWITZ. But Senator, I think it is also fair to say, to point out that the prolonged commitment to that region of our forces that Chairman Warner referred to earlier is in part because that war ended inconclusively. We can debate endlessly whether we should have fought longer, fought differently. But the fact is one of the things that produces protracted commitments is inconclusive conclusions.

Senator CLELAND. As a Vietnam veteran myself, I am familiar with inconclusive conclusions and situations that turn out badly if you do not pursue them in the right way. Enough said.

May I just say that part of my concern about the overcommitment of American forces is the inability to get them there quickly. If we are to actually make sure that we are not overcommitted, but are able to respond to hot spots in the world, that means that we have to have global airlift strength. The Hart-Rudman Commission recently reviewed American airlift capability and found it basically inadequate.

I would just like to call that to your attention, because great aircraft like the new C-130J, the C-5B, and its possible modernization, are all part of a global airlift strategy that I think fits into our strategic needs very well, and I would just call that to your attention, the deficit in the airlift capability.

There is another deficit I would like to bring to your attention. The key to our defense is our defenders and I think we would all agree with that. Almost all new service members enroll and contribute to the GI Bill, the Montgomery GI Bill, yet only about half of these service men and women actually use these benefits. Many who use the benefits do not use all of their entitlement. The great historian Steven Ambrose has said that the creation of the GI Bill was the single most important law ever passed by the Federal Government. Yet many of these soldiers and sailors and airmen and Marines are getting out of the service. Many would like to stay in the service, they tell me as I get around to bases, not only here in this country but around the world, but they feel they have to leave so that they can provide, especially for the education of their spouses and children.

I believe many of these service members would stay in the military if they could transfer part of their unused entitlement to the GI Bill to family members in return for a service commitment. That is a win-win situation, it seems to me. It is an idea actually supported by the Hart-Rudman Commission report. Service secretaries could use this retention tool selectively, just as they use reenlistment bonuses selectively.

I would deeply appreciate it if you would give serious consideration to how the Department of Defense can use the transfer of GI Bill benefits to family members, in other words making the GI Bill more family-friendly, as the military itself has become a more family institution, use it as a retention tool, and continue to give us your best thoughts on how we might pursue this idea.

Is that something that might be of interest to you?

Dr. WOLFOWITZ. It sounds very interesting and it certainly addresses probably our highest priority, which is how to keep good people, attract good people, and keep them in the service. I know

there is nothing that a parent cares more about than the education of their children. I know that as a father.

Senator CLELAND. You put your finger right on it. The old saying is you recruit a soldier, but you retain a family. I was just in Osaka, Japan, and a Navy admiral mentioned to me that the decision to stay in the Navy is made at the dinner table. So these retention decisions of our aviators, of our top quality people, of our high tech people, of our senior captains and senior NCOs seem to be made around the dinner table. This question of the ability to care for the education of our spouses, the education of our kids, is something that is of growing importance.

We thank you very much for your testimony today.

Mr. Chairman, no further questions. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator. I wish to associate myself with your observations about that GI Bill. You know that I will work with you again to achieve those goals. Just yesterday in Virginia I had a constituent raise that very issue of transferability.

Senator LEVIN. Mr. Chairman, I wonder if you would yield for 10 seconds so I could join in the Chairman's support of Senator Cleland's comment on the GI Bill transferability issue. This committee has been very supportive of that effort. So, if you are confirmed, maybe you can help us persuade some of our House colleagues on it.

Dr. WOLFOWITZ. It will be high on my list to look at, Senator.

Chairman WARNER. Senator Hutchinson.

#### STATEMENT OF SENATOR TIM HUTCHINSON

Senator HUTCHINSON. Thank you, Mr. Chairman.

Dr. Wolfowitz, I join my colleagues in welcoming you and in expressing our belief that our Nation is very fortunate to have you. I also want to pick up on what Senator Cleland was saying. I chair the Personnel Subcommittee. Senator Cleland is our ranking member. We have worked closely on this whole issue of retaining our men and women in uniform. While at one time most of our service men and women were single, that is not the case any more. Most of them have families, and the issue of not just their education, but the education of dependents, is foremost in their minds.

I have supported, and still support very strongly, Senator Cleland's efforts at portability on the Montgomery GI Bill. But I also believe that there may be other areas, other methods by which service men and women can ensure that their children are going to receive an education. I just ask for your commitment to work with our committee in exploring ways in which we can ensure that that opportunity is there for all of the dependents of our men and women in uniform.

Dr. WOLFOWITZ. I will do so with enthusiasm.

Senator HUTCHINSON. Thank you. I think when you speak of strengthening the bond of trust, that is a big part of the quality of life that we are all concerned about.

Also, I want to raise an issue concerning the acquisition policy of the Department of Defense on vaccine production. In the early 1990s the Department made the mistake, I believe, of abandoning its plans to construct a GOCO vaccine production facility. The con-

sequences of that erroneous decision are only now being made fully evident and fully demonstrated.

Last summer, partly as a result of prodding from this committee and our subcommittee's hearings, the gentleman that you will replace if confirmed, wisely, I think, decided to throw in the towel on that existing vaccine acquisition strategy and signaled that the Department would return to the pre-1994 strategy, namely the construction of a GOCO.

Now, during this time of transition there are grumblings that there are those who now want to abandon that or head in another direction, which concerns me. I have written Secretary Rumsfeld and have asked him personally to investigate that matter. If confirmed, will you assure me that you will personally look into this vaccine acquisition strategy to ensure that it is an open and fair process?

Dr. WOLFOWITZ. Yes, I will.

Senator HUTCHINSON. I also want to raise something I have been very concerned about, as well as Senator Reed and Senator Cleland, and that is the C-130 acquisition and beddown schedule for the future. The Little Rock Air Force Base, in my home State of Arkansas, is the schoolhouse for the training for the C-130s, and the Little Rock Air Force Base is scheduled to receive the C-130J flight simulator, it should be up and running by 2004.

But Little Rock is not scheduled to receive the first C-130J aircraft until 2006. That means there will be a 2-year gap between the availability of the simulator and the arrival of the aircraft. That is obviously a problem. It is a problem that Senator Reed faces in his State as well. That would be eased considerably if OSD and the Air Force provided \$130 million in the budget, the 2002 budget, as was promised last year, for the purchase of two C-130J aircraft.

I do not ask you to make a commitment on that, but I do ask you to make a commitment that you will examine this budget issue and get back to me on what the possibilities are, because obviously if you are going to have a schoolhouse to train the pilots and you have the simulators there you need the aircraft there.

Dr. WOLFOWITZ. I will look into that.

[The information referred to follows:]

There are two C-130J aircraft in the President's budget request for fiscal year 2002, while a third aircraft is on the Air Force's unfunded priority list. For now, the Air Force will continue to conduct in-flight training at the students' ultimate operational training bases.

Senator HUTCHINSON. That is a very brief answer, but we are going to hold you to that.

Dr. WOLFOWITZ. I will do it.

Senator HUTCHINSON. We look forward to working with you, and we are very pleased that the President has nominated you and I look forward to your confirmation and being able to have the next couple of years to really see that commitment to the quality of life, to health care, to housing, to pay, being fulfilled and the whole retention issue that has been such a severe problem eased.

Dr. WOLFOWITZ. Thank you. It is, I think, a unique time to both fix some old problems and move forward on some new ones, and

I really look forward to working with you and this committee to do that.

Senator HUTCHINSON. Thank you, Dr. Wolfowitz.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator. Senator Nelson.

#### STATEMENT OF SENATOR E. BENJAMIN NELSON

Senator BEN NELSON. Thank you very much.

Dr. Wolfowitz, there is a report coming out from the Pentagon that questions the policy in "Plan Colombia" as it relates to strengthening the efforts at controlling the growth in coca and therefore the growth of cocaine to the United States. It is questioning whether the policy ought to be on controlling the area of supply or whether our efforts in "Plan Colombia" ought to be more in the nature of working with sub-south countries as well as within Colombia to build those economies and to work with those countries.

I wonder if you can give us your distinction between what you would consider to be an appropriate role for the United States in Colombia with "Plan Colombia" and what might border on nation-building. My concern is that there is a lot of discussion and things are categorized as nation-building when we disagree with the efforts, but also it seems to be sanitized language when we say we need to work with these countries to help them with their infrastructure and with their democracy.

Can you give us a distinction? I note that in the answers to the questions about Colombia that you have reserved the right to make statements later, given the fact that you are only being considered for approval here at the present time, and I can appreciate that. But I wonder if you could share with us a distinction that you would have between, let us say, what we are doing in Colombia and what might be considered by others as nation-building.

Dr. WOLFOWITZ. I have a lot to learn about Colombia, Senator, I think, including from you. I think you were just down there, I understand. I know the other Senator Nelson was and I met with him yesterday.

It does seem to me that one of the essential things that has everyone concerned, including myself, is that we not find ourselves in a situation as we were 35 years ago where we are fighting someone else's civil war. I think that is the essential thing to stay out of, and that that means I would draw the line, I think, less at—I try to understand what we mean by the exact terms, but I think most importantly we know when they are doing the job as opposed to us taking over the job.

I think helping the Colombians to help themselves is something that probably does serve American interests. But I would be very leery of something that looked like we were starting to get our troops involved in another war down there.

Senator BEN NELSON. Is it a question of an internal struggle or is our policy and our national interest to stem the flow of drugs north to the United States, which may be a completely different mission than strengthening Colombia, although it may have some connection, but it may be a different mission?

Dr. WOLFOWITZ. I think that is ultimately a major part of our interest, although I would think also it is not in our interest from ei-

ther point of view to see a so far rather democratic government in Latin America taken over by drug lords. So yes, I think there is a difference, and I think the primary purpose of our efforts to date has been to stem the flow of narcotics.

One of the things I need to learn is whether you can really disentangle those two as much as we say we are doing.

Senator BEN NELSON. At some point you might be in a position to help us understand which is the primary role and which is the secondary role.

Dr. WOLFOWITZ. I will work very hard on that, and I look forward to actually learning from those of you who have just been down there. I think there is nothing like being on the spot.

Senator BEN NELSON. Thank you, Mr. Chairman.

Chairman WARNER. Thank you. That is a very important subject before this committee and I commend you and our distinguished ranking member for undertaking a trip down there.

Senator Sessions.

#### STATEMENT OF SENATOR JEFF SESSIONS

Senator SESSIONS. Thank you, Mr. Chairman.

Dr. Wolfowitz, we are delighted to have you here. You have an extraordinary background, the kind of background I think is most valuable in public service. You have had three tours in the Pentagon, the State Department, SALT talks, but have also been in the private sector and in a university, where you have had the opportunity to study, maybe more objectively, the events that go on around the world, and now back in the leadership. I think it is tremendous that you have agreed to take on this challenge, which I think is very great.

When I first came here about 4 years ago, George Gilder gave a little talk and told us that the 19th Century was a century of progress, the 20th Century was the century of the devil, with wars and oppressions and death, the likes of which we had never seen before, in a time when it really should not have happened, and that the 21st century has the potential to be the greatest in the history of mankind.

I guess I want to ask you, do you feel that the United States has an interest, a responsibility, and an ability to help shape this new century in a way that promotes peace and prosperity around the world, and if so, would you comment in general about how that might be done?

Dr. WOLFOWITZ. I believe very strongly, Senator, and I think the reference you made to past history is unfortunately all too true. The 20th Century started on an extremely optimistic note. People thought technology and economic progress was going to bring untold benefits and even outlaw war, that people would see war was not worth pursuing any longer. Then World War I came and it was all downhill from there. Once that terrible genie is out of the bottle, the consequences ripple on for decades. The consequences of World War I were felt well into the end of the last century.

I think one of the greatest things to be concerned about is that we come to take for granted the structures that have produced a relatively peaceful world today. I say relatively. It is peaceful for us. It is peaceful for the big countries of Europe. Obviously, there

are a lot of parts of the world that do not look peaceful at all. But the big wars do not threaten us now.

I think it is very important to have an active strategy that is not just a military strategy—in fact, I think diplomacy and even economic policy may be just as important or more important—a policy that tries to protect those large zones of peace that we have created in the world and to try to extend them. I do believe a strong American military is part of that. I think it is an indispensable part of that. I think the goal is to keep wars as small and as far away as possible, and hopefully smaller and further away, until eventually the whole world benefits from that.

Senator SESSIONS. So I take it that you are committed to creating the kind of defense force that would be relevant to this new world we are in for the purpose of promoting peace and prosperity?

Dr. WOLFOWITZ. Exactly, and I also think that is a significant part of what Secretary Rumsfeld means when he talks about the need for rethinking the concept of deterrence for this new world.

Senator SESSIONS. That is going to take a challenge, because we have constructed a defense establishment designed for a different kind of threat. Institutions, I think maybe even government institutions most of all, are reluctant to change. Do you think and believe at this point that you will have to confront some outmoded thinking and to recreate some strategies and equipment that would meet these new challenges?

Dr. WOLFOWITZ. I am sure we will, and I know there is resistance to change. I would say that I also think there is particularly high resistance to change when you have a situation, as I think we have today, where we are trying to do too much with the force that we have and when people are stretched thin, when you are losing people because of excessive deployments, when they are afraid that if they identify some function they do not need that money will get taken away and they will suffer in their operational readiness accounts.

I think all of that puts a pressure on the force that makes it much harder to be innovative. So I think on the one hand we have to fix some of these immediate needs, but if you want to create the head room for people to think in an innovative fashion, I think you have to give them some confidence that when they do try to do things differently there will be rewards for that, rather than people saying, oh, well, you have just demonstrated we can do without that division because you are experimenting with it.

Senator SESSIONS. I agree. I have been to Kosovo a couple of times and I do believe that our men and women are basically doing police work. In fact, the UN was under an obligation and agreed to produce police forces that would allow our military to leave and they have not done so. So I think generating a system that actually produces police force in those kind of circumstances, so that our military do not have to be deployed, is the correct policy.

Let me mention one other thing. I am on the Seapower Subcommittee and I chair it now. We have learned that we had, perhaps when you were last in the Department or in the early 1990s, we had over 500 ships; we are now at 315. We have seen, as you note in your opening remarks, a 40 percent reduction in funding and personnel pretty much across the board.

I believe that there will be no way to transform this military, to maintain it at the right level, without some increasing expenditures to accomplish those goals. I hope and believe you will find every possible efficiency. I hope and believe you will find programs that you do not have to continue to fund, that could free up money for the things that we do have to fund.

But how are you feeling about this review that is going to take place, and how are you feeling about how much additional funding the Defense Department is going to need?

Dr. WOLFOWITZ. I would not, even in the security of a closed hearing, feel comfortable taking a guess at a number like that. I do share Secretary Rumsfeld's general feeling that we probably need more, but if we are going to ask for more we had better be very sure that everything we are asking for is something we need. I suspect there are things we are doing now that we could either stop doing or do much more efficiently.

I think it was President Bush during the campaign said that we need to spend more, but we need to spend smarter. Part of this review is going to be focused very much on spending smarter, so that if we come and ask you for more you can be convinced that it is needed.

Senator SESSIONS. I support your idea that you need to conduct a review before we just continue to continue programs. But I do believe that you will need some additional support. We will need to increase this budget, not beyond reason. A solid increase for a number of years to compensate for a long period now of neglect is going to be necessary if we are going to maintain our ability to defend our just national interests around the world.

I look forward to working with you. I am absolutely convinced that you and Secretary Rumsfeld are about to lead a tremendous revitalization of our Defense Department, and we thank you for it.

Chairman WARNER. We thank you, Senator.

Senator Akaka.

#### STATEMENT OF SENATOR DANIEL K. AKAKA

Senator AKAKA. Thank you very much, Mr. Chairman.

I would like to add my welcome to Dr. Wolfowitz this morning. I am familiar with you, as others who have been in Congress for a while, and I am familiar with your experience, accomplishments, and of course as has been said already, familiar with your impressive record here of service to our country.

I am also familiar with your prior service as Under Secretary of Defense for Policy from 1989 to 1993. I'm particularly pleased to know that you have given service as Assistant Secretary of State for East Asian and Pacific Affairs, since policies in the Pacific have the most direct impact in my home State. I should tell you, in case you were not aware, that my friend who worked at East-West Center, Mike Oxenberg, just recently passed on. I know you have known him and have worked with him on China.

Dr. WOLFOWITZ. It is a great loss to our country, Senator.

Senator AKAKA. News reports indicate that China has been helping develop a fiber optics communication system for Iraq's military. This is the same system that British and American forces just attacked, I understand. How important do you think it is that we

should prevent this system from becoming operational and how persistent should we be in attacking it?

Dr. WOLFOWITZ. Senator, I have not had the benefit yet of classified briefings on the details of that. It does seem to me the principle is very clear. If they are building something that threatens the safety of our air crews, we should do what we have to do to eliminate it or otherwise assure their safety.

We should also, I think, make it very clear to the Chinese that this is behavior that has a real cost in our relations.

Senator AKAKA. I know, as I said, you have been in policy. Do you support a policy which would permit the Chinese to resume the launching of commercial satellites which the U.S. licenses?

Dr. WOLFOWITZ. I think it depends crucially on whether we can have the kind of adequate safeguards that make sure that our missile guidance technology does not end up in the hands of the Chinese. As a commercial matter, it is probably good all around, but I think there is evidence that suggests the practices in the past were not sufficiently rigorous.

Senator AKAKA. As I have indicated, I regard you as a person who has had such a broad view of our country and our security. So let me ask you this one. There have been discrepancies in the readiness reports of operational forces. It is my understanding that some of the discrepancies have been attributed to a reporting system which is designed to provide a view of the current state of readiness, rather than a projection of the future.

If confirmed, how will you address the issues surrounding the accuracy of determining the readiness of operational forces?

Dr. WOLFOWITZ. The first thing I would do, if it has not been done already, is to work with Secretary Rumsfeld to make sure that we have a really first class person in that Under Secretary job, Manpower and Readiness, because this is a huge task. I would work with that individual to try to consider carefully whether the kinds of measures we are using for readiness are, number one, measuring what we want them to measure; and number two, to make sure they are not—every time you set up a way of measurement, whether it is military readiness or academic excellence, people start to game the system and they start to design to the measurement instead of to something else.

So you have to be very careful. I suppose this is a Heisenberg Uncertainty Principle. When you start to measure and you put out a certain measurement, you change how people behave. You want to make sure that you are changing it in the way you want to change it and not in an unintended way. But it is a very big issue that you raise and a very legitimate one.

Senator AKAKA. I am also aware of your work out in the Pacific Rim and in the Philippines and what you have done there. Again, I want to say that I am glad to see you here and seeking, I think, the position here with this administration. We all know that the future of our country and the security of our country leans in the Pacific and that area, so it is important to have a person like you.

Thank you very much, Mr. Chairman.

Chairman WARNER. Thank you, Senator.

Dr. WOLFOWITZ. Thank you.

Chairman WARNER. Senator Bunning.

**STATEMENT OF SENATOR JIM BUNNING**

Senator BUNNING. Thank you, Mr. Chairman.

First of all, welcome to the committee.

Dr. WOLFOWITZ. Thank you.

Senator BUNNING. I want to explore just three different areas with you, Doctor. First, base realignment and closures. I notice in your answers that Senator Warner has shared with all the members that you took what we call a powder. You did not answer the question. You said: "As Secretary Rumsfeld noted in his response to advance policy questions from this committee, we withhold an assessment of this issue until after the completion of the defense review." At least that is what is written down here.

Do you have any idea what the President's feelings are on base realignment and closure, because I am deeply concerned until I have seen the savings that occurred from the first and the second round of base closures and had them proven to me, not just put down on paper and here is what we saved, but a much more thorough examination. If we proceed in another round you are going to have a terrible time up here on the Hill trying to convince anyone that this is in the best interests of this country.

So do you have anything to add to your statement here?

Dr. WOLFOWITZ. I think I would say what I believe Secretary Rumsfeld said when he was up here, that he believes, and I agree with him, that the base structure should correspond to the force structure. We are only now looking at what the force structure ought to be as a product of this review.

There is a general feeling that we have more base structure than our present force structure requires. But until the review is done, it is a little early to state that as a firm conclusion.

You bring up another issue which I discussed with you in your office yesterday, and I concur very strongly that we need to make sure that the savings that are attributed to past BRACs have actually been realized and if we end up in another process of that kind, that we get real savings out of it. That is certainly something I will look into very hard if I am confirmed.

Senator BUNNING. Second, there is a statement that you just made this morning and I wonder how that fits into this statement. I will read from the statement: "Finally, we must reform the Department of Defense structures, processes, and organizations. We need to seek greater efficiencies, not only to safeguard the taxpayers' money, but also because that will allow us to create better weapons systems and invest more in the cutting edge of our national defense."

I want to make sure that if we are going to do something here in closing down a base or removing structures that it is not just to save money, but that it does not force us to try to do more with less. If I have heard it once in the last 14 years, I have heard it an awful lot of times, that the Defense Department can do more with less.

It can like heck, and it has been proven that it cannot do more with less and ask for more deployments. So does that fit into that statement that you made?

Dr. WOLFOWITZ. I certainly agree with you we have been trying to do more with less and the consequences are that frayed force

that General Shelton referred to. I do believe—when I wrote those words in that statement, I am thinking much more of the kinds of efficiencies that people say we could achieve in things like the way we do our pay and accounts system, the way we purchase electricity for our bases.

There seem to be a lot of places where we are much less efficient than the private sector and there is no obvious reason why we ought to be. But I certainly agree with you the purpose is not simply to save money. We need that money. There are a lot of needs, both immediate needs and long-term needs, it has to be applied to.

Senator BUNNING. Last but not least, Britain's Foreign Minister, Robin Cook, recently was before this committee. He told us about the effort of the European allies to form a 60,000-member force which would perform humanitarian action and perform military police type duties, such as overtaking security checkpoint duties in the Kosovo region and those things.

Are you familiar with this effort of our European allies?

Dr. WOLFOWITZ. I am in general terms and in some detail.

Senator BUNNING. Let me give you an experience that I had that shows that maybe we should encourage our European allies. I just spent a day or 2 at Fort Campbell in Kentucky, and 3,000 of our finest young men and women are about on June 1st to go off and replace 3,000 people that are in Kosovo.

I went out to the training site on site, and those men and women were being trained to be MPs. I asked the general, how is that in the best national interest of our country, national security, to be MPs in Kosovo? He disagreed that it was not in our best interest, but they were being trained to secure their own safety when they were there.

Would you like to expand on that a little bit?

Dr. WOLFOWITZ. I repeat I think what I said earlier, which is I believe it is in our interest, where possible, to get our allies to take over jobs that they can do and that we do not need to do. It is in our interest to get local forces to take over tasks that they can do that we do not need to do. Where we are talking about police work, we really ought to be looking for policemen or their equivalent to do it and not sending highly trained combat troops, in fact, as you correctly point out, untraining them, retraining them for a whole new task, and then having to retrain them for their combat missions when they come home. There is a lot in that that does not make sense and we ought to be looking for alternatives.

Senator BUNNING. I wish you good luck. Thank you.

Dr. WOLFOWITZ. Thank you.

Chairman WARNER. Thank you very much, Senator.  
Senator Carnahan.

#### **STATEMENT OF SENATOR JEAN CARNAHAN**

Senator CARNAHAN. Thank you, Mr. Chairman.

I want to welcome you to the committee today. I also want to congratulate you on your nomination and for your years of national service.

Although we live in a time of peace and prosperity, these are certainly challenging times for the Department of Defense. Once the threat to our national security was formidable and apparent. Now

the overall threat has been reduced, but we do not always know where the enemy is or where he is located or who he is or what weapons are at his disposal.

We live in a time of unprecedented budget surpluses, but the pressure on the defense budget remains quite heavy. If we are to continue to have the best and the most highly trained and most effective military in the world, we have to invest in our military personnel. That means higher salaries and better health care and improved quality of life for those who wear the uniform.

I think we also owe it to our troops that when they are placed in harm's way that they are properly equipped and that they are trained to perform the tasks for which they have been sent.

The military services continue to demand newer and sophisticated weapons systems, but these demands must be evaluated against the type of threats we expect to face and balanced against competing defense and domestic spending priorities. There are discussions of transforming our entire armed forces structure, but we face a bureaucracy that is set in its ways and very resistant to change. So I expect that you will have a difficult time, but hopefully a very rewarding job. I look forward to working with you in those efforts.

I have a few questions I would like to ask today. Senator Bond and Congressman Gephardt have been very involved in urging the South Korean government to purchase F-15s. I am very supportive of those efforts as well. The new purchase of F-15s is necessary to keep the F-15 production line running.

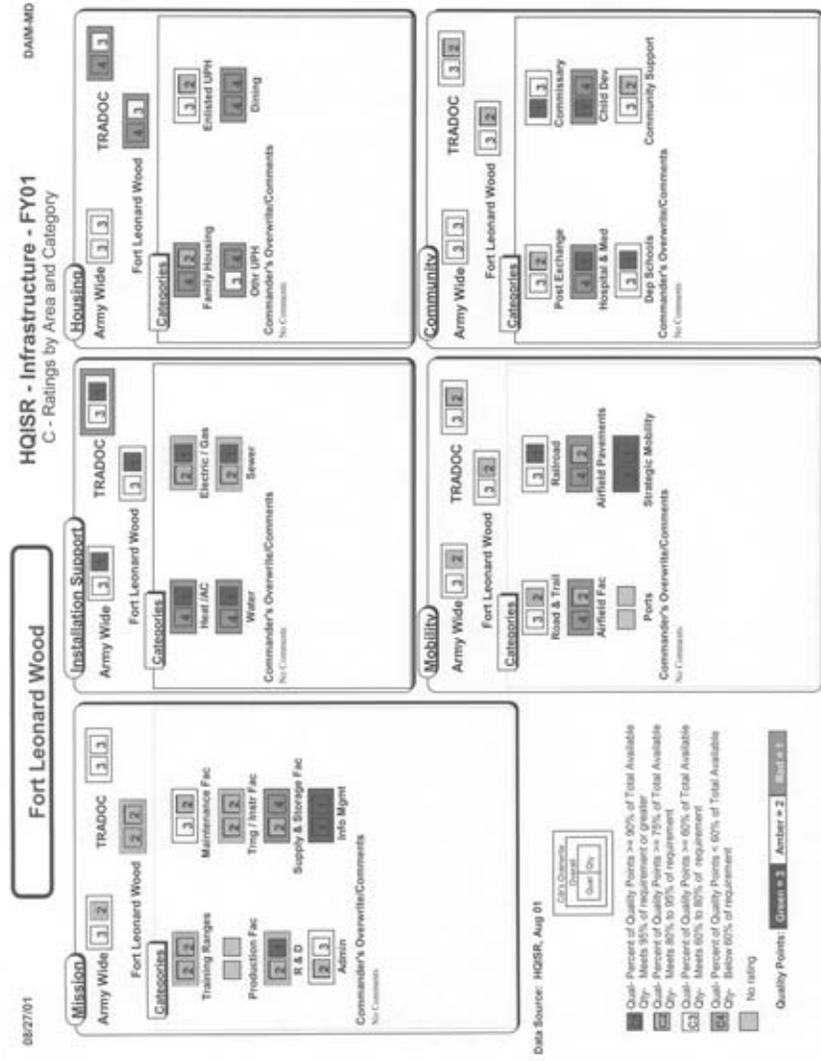

Given the uncertainty of whether we will be relying on the Super Hornet or the F-22 or the Joint Strike Fighter, do you agree that it is in our national interest to continue the production of the F-15?

Dr. WOLFOWITZ. Senator, I certainly think it is very much in our national interest to maintain a strong industrial base. Clearly, aircraft production is a big part of that. You asked me when I met with you yesterday about this forthcoming Korean decision. It seems to me that there are two strong principles here which we should emphasize to our Korean allies in their consideration of what kind of aircraft to buy. One is that it will be far more effective if we are both flying the same kind of aircraft. It is not just a matter of interoperability, but the ability to repair one another's systems.

Second, given that their budgets are tight as well as ours, I hope they will buy the best value for the dollar or for the won, and I suspect very much that is going to be the American plane.

Senator CARNAHAN. I also mentioned to Secretary Rumsfeld when he was here a concern that had been expressed to me a number of times. That has to do with the readiness of our TRADOC posts, especially the one at Fort Leonard Wood. I would like for you to, if you would, check on that for me and get back to me with more information about that.

[The information follows:]

The question I will ask today is one that is a little bit more general. I understand the Department is doing a comprehensive review, but I would like to hear what your views are on what measures the Department should take to address the short-term readiness of our troops.

Dr. WOLFOVITZ. Clearly, one of the most serious readiness deficiencies that I have been briefed on is shortages in training facilities and lack of training time and lack of resources to do training properly. There is no, I think, more important contributor to the readiness of forces than the fact that they are well-trained.

I remember going right after the Gulf War with Secretary Cheney to visit the Second Armored Division inside Iraq, and Secretary

Cheney talked to a tough-looking senior master sergeant who I think had spent 26 years in the Army and asked him, was it tough? He said it wasn't anywhere near as tough as the National Training Center. That is the kind of training you want to have. It is an essential part of readiness and it is certainly something we will be looking hard at in this review.

Senator CARNAHAN. Thank you very much.

Chairman WARNER. Thank you very much, Senator.

Senator Collins.

#### STATEMENT OF SENATOR SUSAN COLLINS

Senator COLLINS. Thank you, Mr. Chairman.

Dr. Wolfowitz, I first want to echo the comments of my colleagues in thanking you for accepting this considerable challenge and for bringing your considerable expertise and talents to bear in this exciting new position.

Dr. WOLFOWITZ. Thank you, Senator.

Senator COLLINS. As a new member of the Senate Armed Services Committee, I have had a parade of service chiefs and senior officers come to my office to brief me and those meetings have been very helpful. I have, however, been concerned by what I have heard. Over and over again, senior officers have told me that there has been a pattern in the last administration of robbing our modernization accounts to pay for pressing readiness problems.

Indeed, one senior officer told me that he was actually instructed to prepare a budget in the last administration that he knew would not possibly meet the readiness needs of his service. In fact, there was a reliance on supplementals in the last administration that caused there to be lots of concerns about the training moneys available for our troops and other readiness issues.

It seems to me we need a new approach and that is a lousy way to go about budgeting. Are you going to commit today to a truth-in-budgeting process so that we really know what the numbers are and can make sure that we are not essentially gaming the system?

Dr. WOLFOWITZ. I think it is essential not only for Congress to know, but for the President and the Secretary of Defense to know. I certainly agree with you it is a misuse of the budgeting process to have expenditures that you fully know you are going to need submitted as an emergency supplement to your budget. We have to figure out how we work our way out of that process that you correctly identify we have gotten into.

Senator COLLINS. On a related issue, I have also heard from these senior officers about inefficiencies within the Defense Department's acquisition and procurement process. For example, one senior officer told me that the Defense Logistics Agency adds a markup of 22 percent to each uniform that it buys. He was saying that if he could eliminate the middleman within DOD that he could save a great deal of money.

Are you planning to take a thorough look at the internal acquisition and procurement systems of DOD to see whether there are ways to improve efficiencies and perhaps save substantial sums of money?

Dr. WOLFOWITZ. Absolutely. One of the things that has struck me a lot in briefings I have had over the last 6 weeks or so is there

just are shelves full of studies going back at least to David Packard's commission in the early 1980s that identify all kinds of reforms. I keep asking the question: We do not need more studies; we need to implement these things; why is it not happening?

It is not that people have not tried, and it is not as though it is going to be simple to do so. But I certainly think, with this unusual man we have as Secretary of Defense, we have a real opportunity now to get some things done that everyone agrees are long overdue.

Senator COLLINS. I agree. I think everyone knows what the problems are, but there has been too much internal resistance to solving them that has prevented needed reforms from being implemented, so I appreciate that commitment.

Finally, I want to echo Senator Sessions' concerns about our current shipbuilding rates. The current rates of shipbuilding do not support the goal of a 300-ship naval fleet as identified by the last QDR. The Clinton administration's defense budgets have been gradually taking the Navy, not toward a 300-ship Navy, but rather toward a considerably smaller fleet.

Adding to the challenges are the facts that many defense experts believe that even a 300-ship Navy is inadequate for our current operational and deployment requirements. I hope as part of the top-to-bottom review that you and the Secretary are conducting that you will take a very hard look at what we can do to make sure that our shipbuilding budgets are adequate to make up for the deficiencies of the past 8 years.

Dr. WOLFOWITZ. That will be a very important part of what we look at, yes.

Senator COLLINS. Thank you.

Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator, very much.

Senator Nelson.

#### STATEMENT OF SENATOR BILL NELSON

Senator BILL NELSON. Thank you, Mr. Chairman.

I just want to say to the ranking member, thank you again for that trip to Colombia over the last few days. It was extraordinary, it was informative, it was personally enjoyable to be with you and the other members, and I thank you very much.

Senator LEVIN. Thank you. Your contribution to that very quick trip was really crucial. Our learning was mutually at a high level. You and Senator Ben Nelson, Senator Jack Reed, and I travelled and again, thank you for participating.

Senator BILL NELSON. Dr. Wolfowitz, it was a pleasure to visit with you yesterday. I want to encourage you on the seeming new policy of the administration to break the mold, to think outside the lines. It is, I think, refreshing that you approach it this way, and with the changing nature of the threat to the United States I think it is essential. I thank you about that.

Now, what I would like to get from you is some of your ideas about what are going to be the appropriations needs over the course of the next decade. Chairman Warner and a group of other Senators from this committee had recently written a letter asking for necessary appropriations having to do with a supplemental for

this year. Senator Warner, if I recall, it totaled some perhaps \$7 billion additional moneys in this particular year. This is for the 2001 budget, even before we get to the 2002 budget.

If I recall also, that had to do with pay and benefits, health benefits. It had to do with spare parts. It had to do with the cost of fuel and a number of things like that. That is \$7 billion before we even get to the decade that we are talking about.

Can you give me some clue as to what you think are going to be the needs of increased defense spending over the course of the next decade?

Dr. WOLFOWITZ. I suppose the real answer is without the review I cannot say very much. But I guess if you want a clue, it seems to me there is a general feeling, unless we are going to radically change what we try to do in the world—and I say radically because I think we probably do have to change what we try to do in the world, and we may want to do more. But unless we are going to do radically less, we probably need more resources.

But we also have to find savings within what we do, because we cannot simply add to the defense budget. That is why even the short-term question of what do we need to make it through 2001 is something that requires a thorough look at what we are already spending our money on.

Senator BILL NELSON. I know that that is the answer that you have to give at this point and I respect that. So let me suggest what I think the truth is on the answer. The fact is, as we change the nature of our defense posture we can save money, but at the same time, since the reason for a Federal Government in large part is to provide for the national defense, we cannot be penny wise and pound foolish, particularly with research and development and particularly with regard to the provision of our forces in the field, the supplies, the material, and the quality of the troops by virtue of what it is going to cost in competition with the private sector in order to be able to retain them.

I think the bottom line is that there is going to be a considerable demand for increased spending over the course of the next decade. I think we are fooling ourselves if we do not plan for that. We have some choices to make very shortly in formulating a budget and how much are we going to allocate for defense and how much for education and for prescription drug benefit, and balance all that against the need to protect social security and the surplus in the Medicare trust fund, and then balance all of that on the question of how large is going to be the tax cut.

So I think there are, as we approach the subject matter of this committee, people that are fooling themselves if they think that we are not going to need substantial defense increases over the next 10 years and do so at the peril of providing for the common defense if you use it up in other areas so that we do not have it, or so that the only choice that is left to us is the choice of going back into deficit financing, which was one of the reasons of a poorly performing economy in the decade of the 1980s.

So you see where I am coming from, Dr. Wolfowitz. I congratulate you on your nomination. I congratulate you ahead of time. I am going to be visiting with you about these budgetary matters in the future.

Dr. WOLFOWITZ. I look forward to it, Senator. Thank you.

Senator BILL NELSON. Thank you.

Chairman WARNER. Thank you very much, Senator.

We will now have a second round of questions. I will initiate those questions and my distinguished colleague, Mr. Levin, will follow up.

I was quite interested in your selection of a quote in your opening statement, that General Creighton Abrams said when the all-volunteer force was first created that, "People are not in the Army; people are the Army." I was privileged to serve in the Pentagon at that time when he was Chief of Staff and I have the greatest respect for that military leader. He was exactly right.

As you said, you will become the chief operating officer and people will be at the very top of your agenda. This committee, indeed Congress as a whole, are very concerned about the inability of the Department of Defense, all services, some with varying degrees, but all services, having difficulty retaining particularly that critical group of younger officers, captains, so to speak, lieutenants in the Navy, who are making that pivotal decision as to whether to go on and perhaps commit for a career of at least 20 years.

Similarly, the enlisted ranks, the middle grade and senior petty officers, sergeants and the like, are likewise not staying in the numbers that we need.

Now, there has been some modest improvement here recently, possibly as a consequence of the initiatives taken by the past administration and Congress. This committee took the initiative to increase the pay raises, took the initiative to increase the quality of health care.

What are your initiatives that you are going to assert, if confirmed and you take on this responsibility, to stem the flow of these young people out of the military, somewhat induced by very lucrative opportunities for their trained skills in the private sector?

Dr. WOLFOWITZ. Pay and allowances are one of the first things one looks at. You are absolutely correct, this committee has taken very important decisions, including just at the end of the last year, that I think should help us. Some of I suppose the kinds of tangible benefits that Senator Cleland referred to earlier that can help service people think that by staying in they are ensuring their children's future, that is very important.

I think, as I said earlier, it is equally important to make sure that people feel that they are getting the right kind of training and equipment to perform the missions, because at the end of the day I think what keeps people in the service will never be the pay and allowances. Pay and allowances have to be adequate, but they can almost always earn more money with less time away from home and less risk of life doing something else. It is the sense of mission.

It is very hard to convince people of a sense of mission if they are not being given equipment for that mission or the training for the mission is not adequate.

I also believe that, and I think hopefully this will be part of this review, we need as a country—and certainly this committee makes a big contribution in that respect—to convince the country that the mission these men and women are doing is important, because that

I think is one of the greatest psychic rewards and therefore one of the greatest rewards that they get for service.

So you have to look at it, I think, as a whole. It starts with pay and allowances, but it goes right up to what the President, Congress, and the country believe is the importance of what they are doing.

Chairman WARNER. It is also family separation, Dr. Wolfowitz. That is brought about by overdeployments in terms of the number of times that these young men and women are sent abroad. They will accept not only a reasonable level, but a high level, because that is what they joined to do. But I think we have in the past few years seen where we have crossed that invisible line to where they are now confronted with serious family situations because of their departure from family for prolonged periods, and they are all too often coming at a critical time when they are trying to raise some young children. How well all of us who have had that great privilege and challenge in life know the essential need for the two parents to be together as much as possible with those children in their formative years. Bear that in mind.

Dr. WOLFOWITZ. You are absolutely right, Senator.

Chairman WARNER. Also, but for a spare part no bigger than that tip of that pencil, airplanes cannot fly. The mechanics are instructed to go over and take it out of another airplane which is operational and cannibalize it and put that airplane parked for a while. That is why I am urging consideration of this supplemental. We have to get into the spare parts replenishment and the distribution of those spare parts right away, because these young people working, whether it is on ships or on the line of airplanes on the tarmac working on it, they need to feel that we are supplying those parts such that they can keep those pieces of equipment up and ready.

In my most recent visit to Kosovo a week or so ago, we visited a young captain who had several tanks and other motorized vehicles high on a hill in that sector that is becoming more and more destabilized, the valley. He said some of those units that he had up there were in a precarious situation because of spare parts. There is a trooper right out on the front line taking risks.

Again, I know this question of the supplemental is not a cheerful one, but I take the brunt of criticism directed. I just think it has to be studied and studied very carefully. I am confident that Senator Stevens, Senator Byrd, and others that are entrusted with the appropriations—therein is the primary responsibility—can manage that in a way that we can achieve it, hopefully for the military, and maybe restrict it and let the President indicate that he will veto if this thing becomes a giant snowball rolling down the hillside with everybody's need attached to it. So I will continue to work on that.

The industrial base. We can really be no stronger as a Nation and a military if we do not have those companies who are willing to get out there and put at risk their capital and to have the ability to attract the talent that is necessary to do the research and development and the test and evaluation on these systems that are coming along.

What are your views about assisting the industrial base, and particularly the question of across-the-ocean mergers? They are primarily in the Atlantic, trans-Atlantic, but they could well become also in the Pacific region a factor that concerns the industrial base here at home. That will be your responsibility. What are your views on that subject?

Dr. WOLFOWITZ. First, Senator, Mr. Chairman, I am very concerned about the health of our industrial base. It is crucial to our ability to support forces in the future. It is crucial to our ability to innovate. I think it is hurting badly.

I think when one looks at this issue of trans-Atlantic or even possibly trans-Pacific mergers, I think the crucial question is do these mergers contribute to our ability to innovate, contribute to the long-term health of our industrial base, or conversely are they a kind of fire sale where we are transferring absolutely essential American capabilities abroad in a way that will hurt our long-term competitiveness.

I think some degree of distributing production across defense establishments of our allies as well as ourselves may be a way to make the overall industrial base more efficient. But certainly one of the things we better look at is to make sure that if some of that is going eastward across the Atlantic that there is enough gain coming back the other direction that we are all better off in the long run.

Chairman WARNER. I thank you.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

I want to go back to Colombia first. Senator Bill Nelson indicated that four of us went down to Colombia last weekend. Let me just give you a quick impression, and then ask you for a response. First, our focus clearly has to be on the demand side of this equation. We are creating the demand which is creating the supply that Colombia currently is supplying in the area of cocaine. But stemming the flow of cocaine and the supply of it is an important goal as well. That is number one.

Second, we should not send our forces there to try to go after the narco-terrorists and the narco-suppliers, but we should, as you put it, assist them to assist themselves, to go after those folks that are creating this problem.

This is third—unlike many other countries in Latin America, the army in Colombia has been supportive of the democratic government in Colombia traditionally and is now. Strengthening that army is essential to the survival of that democracy against the onslaught of the narco-traffickers, number one. Those narco-traffickers are now funding the threats to that democracy both from the guerrillas and from the paramilitaries. So, when we strengthen the professionalism and the training and the protection of human rights by that army, we are in the process trying to accomplish two things. First, we are stemming the flow of narcotics to this country, attempting to reduce that coca crop. Second, we are in the process strengthening Colombian democracy. Both things are going on and they are inseparable.

So when you talk about disentangling the two goals, the goal of supporting Colombian democracy or nation-building and the goal of

stemming the flow of cocaine, both of those goals are dependent upon strengthening the professionalism, training of the army, and making sure that they protect human rights in order to reduce the power of the narco-traffickers. So the goals, it seems to me, are inseparable and talking about disentangling them may miss the point. I just want to give you that thought and give you a chance to respond if you want, or just to think about it, either way.

Dr. WOLFOWITZ. I will respond. You are taking me in the direction I was heading already. I can see a clear difference between their doing the job and our doing the job, and that is the line I would like to keep clear and bright. I know people make a distinction between fighting narco-terrorists and fighting the civil war. I guess I have—you are saying it yourself. It is hard to disentangle because the instrument for doing both, especially if they are going to do it themselves, is their own military.

When I was Ambassador in Jakarta, the Colombian Ambassador—and it may have been the first they ever sent to Indonesia—was not a foreign service officer. He was a judge who had sent some narco-terrorist to jail and he was in Indonesia essentially to protect his life. He told me with great bitterness that all that money from the United States that's sucking cocaine up from Latin America is destroying his country and destroying democracy in his country. It was very poignant and very moving. People like that judge-become-ambassador are very courageous people.

It seems to me if they want our financial support, our material support, our training support, within limits we ought to provide it. If they want the lives of our service people, then we will say, it is your country, it is your lives that should be on the line.

Senator LEVIN. They have not asked for that.

Dr. WOLFOWITZ. I know they have not.

Senator LEVIN. I do not think there is any support for that that I know of in this country. What there is, however, support for in "Plan Colombia" is what I just described and what you just described. I gather you, in general, are supportive of that goal; is that fair to say?

Dr. WOLFOWITZ. Yes.

Senator LEVIN. Back to Iraq for a moment and what many thought, including myself, was an unclear signal to Saddam prior to his invasion of Kuwait. Would you comment on that? I think you have spoken on that issue before. Comment on the importance of clarity of our signals and the lack of clarity in terms of that signal to him as to what the impact would be should he move on Kuwait.

Dr. WOLFOWITZ. Well, I believed at the time and I believe now that we sent ambiguous signals. I argued strongly at the time that we should send a clearer signal. In fairness to that administration, it also has to be said that one of the greatest ambiguities came in congressional testimony where an Assistant Secretary of State was pushed in my view a little bit too hard to say exactly what our commitments were.

I liked Secretary Cheney's formulation at the time, which was: We have stood by our friends in the past and we will stand by them in the future, no further questions. I think if the administration had stuck to that line it would have been a better signal.

But having said that, two things. Number one, given how Saddam behaved when he was faced with the threat of Desert Storm and his unwillingness to yield at that point, I think there is every reason to be skeptical that even a very clear signal would have deterred him. He was convinced that we were weak, that we had lost in Vietnam, we would lose again there.

Number two, there is no question that once he invaded it was a great help in dealing with our Arab friends in the region that no one could accuse us of having provoked the attack. There is always a little bit of a tradeoff between sending clear signals on the one hand and being seen as being belligerent on the other.

At the end of the day, I think history probably would have taken a similar course.

Senator LEVIN. Just two last questions, and I thank our Chairman for yielding to me and so graciously allowing me to extend my questions so I can go to another hearing.

When you were Under Secretary for Policy in President George Bush's administration, there was an employee in the Office of Non-proliferation Policy who became convinced that the administration was about to present false information to Congress in a classified briefing about Pakistan's nuclear capabilities. The individual complained to his supervisor and the supervisor then became concerned that the employee might take it upon himself to correct the inaccurate information presented to Congress.

I am not getting into the merits at all of that case, as to who was right or who was wrong. But there was a response by the supervisor there ordering him not to supply that information, and terminated the employment and apparently acted to ensure that security clearances be removed from that employee. I do not want to get involved in the specifics of that, either. That is the background. There is apparently litigation going on, so I am not asking you to comment in any way which could affect that litigation. The reason I am asking you this is because of the questions asked of you at this hearing about providing information to this committee and to our designated staff, who are cleared to receive classified information. It is important, I believe, to us that people who wish to come to give us classified information in no way be deterred from doing so or be threatened or be in any way deterred from providing that to, again, designated staff who are cleared to receive classified information.

The Whistleblower Protection Act does not apply to this type of case because information is classified. But putting that aside, do you believe that it is appropriate in any way to retaliate against an employee who threatens to take accurate information to properly cleared congressional staffers, as a matter of policy?

Dr. WOLFOWITZ. My answer is absolutely not. I do not believe that kind of retaliation is appropriate at all. I would go a bit further, too. I think it is terribly important, and on that specific issue of what Pakistan was doing with nuclear weapons there was a legal obligation to keep Congress appropriately informed.

Senator, I was not even aware of that employee or the entire case until about 18 months ago when I was asked to give a deposition in a civil suit. Most of the events he alleged took place before I was confirmed as Under Secretary.

Senator LEVIN. I did not want to get into your—

Dr. WOLFOWITZ. Well, OK, but you brought it up. So I believe—

Senator LEVIN. I assume you were aware of it one way or another.

Dr. WOLFOWITZ. Only within the last—

Senator LEVIN. The issue. I do not mean back then. I mean you are aware of it.

Dr. WOLFOWITZ. I have been aware of the issue. In fact, there have been times on that issue when I specifically sensed that people thought we could somehow construct a policy on the house of cards that Congress would not know what the Pakistanis were doing. I have always thought policies based on withholding information from Congress are going to fail in the long run. In that case, there was a clear legal obligation to keep Congress informed.

Senator LEVIN. I appreciate that.

My final question is the question of whether and how to deploy a National Missile Defense part of the strategic review or is it left out of the strategic review as far as you know?

Dr. WOLFOWITZ. My understanding is it is a piece of the strategic review. There are many pieces. There is not a single—as Secretary Rumsfeld said when he was up here, surely one of the things that is going to come out of this strategic review is we can make some decisions now, we are going to have to review some more. I do not think this is a process that is going to end. But clearly you cannot make decisions about long-term resource requirements without factoring in what missile defense requirements are going to be.

Senator LEVIN. Mr. Chairman, let me just again thank you. I want to congratulate Dr. Wolfowitz and wish him the best of luck. I know there will be a lot of important efforts here to keep this committee on the bipartisan tack that it has always tried to follow and that we can look to you to assist us in that process.

Dr. WOLFOWITZ. Thank you. I think I have had courtesy calls with 18 members of this committee, and every one of them has been a strong bipartisan supporter of a strong national defense. So I am sure the other six are as well, and I really look forward to working with this committee if I am confirmed.

Senator LEVIN. Thank you.

Chairman WARNER. I have several more questions I wish to ask. Speaking for myself and I think others, we were shocked about this recent series of allegations regarding a long and trusted member of the Federal Bureau of Investigation and the allegations of his sharing classified material with another nation. Also, regrettably, a person who preceded you in the office to which you aspire to serve this Nation was the subject of a pardon recently by the President with regard to allegations about his handling of classified materials.

As the chief operating officer, it seems to me, in consultation with the Secretary of Defense and other persons in the administration, you should undertake a review of the Department of Defense with regard to the handling of classified material and the means by which to detect any violation of the regulations of the use of that material by employees at all levels of the Department.

Therefore, my question to you is how do you view the importance of classification, the responsibility that those entrusted with documents that are classified and how they should deal, not only in the safeguarding of that, but the sharing of that information? How do you intend to deal with that issue and what are your views with regard to classified material?

I feel very strongly that the most rigid rules should apply and that when an individual is found to have violated, and subject to the appropriate legal actions that have to be reviewed to verify that violation, whether it is a court case or whatever, that accountability of the strongest measures should be done. What are your views?

Dr. WOLFOWITZ. I agree very strongly with you about that, Senator. It is kind of shocking, the extent to which classified information frequently and with great speed finds its way into public in one form or another. I do think we need to do everything we can to hold people accountable, to make it clear that we take this seriously.

I know any one of us has come across a classified document that we may have thought was overclassified. But that does not give you an individual right to take it on yourself to declassify it or downgrade it. There are procedures for doing that and they should be stuck with.

You are talking about two very different things and the second one—the first one is a matter of treason. We clearly have to look at what that whole Hansen case tells us about our counterintelligence capabilities, which clearly have missed two big ones in recent times, and think about how to protect ourselves from that kind of traitor.

On the more almost mundane matter of the day-to-day handling of classified materials, I think we lead by example. We have to be careful ourselves. We have to take infractions seriously. If we think that things are overclassified, then we need in an orderly way to take care of that problem, but not let individuals take it on themselves.

Chairman WARNER. Are you prepared to commit to this committee that, if confirmed, you will undertake as one of your top priorities a review of that subject within your Department?

Dr. WOLFOWITZ. I will do so, Mr. Chairman.

Chairman WARNER. Thank you.

The President, I think quite wisely, and the Secretary of Defense, in the course of his hearing before this committee, put increased emphasis on the subject of homeland defense. This committee has taken a number of initiatives to strengthen the ability of our communities to deal with a terrorist attack involving weapons of mass destruction, biological, chemical. We have really been out on the cutting edge. We have a Subcommittee on Emerging Threats and Capabilities and it has been one of the most active subcommittees. I commend the chairman and ranking member for the past work and indeed what they propose to do in the coming year.

But this is a subject of great concern to this Senator and I think many others. It is astonishing. I do not want to harp too much on my recollections, but I remember when we had blackouts in Washington, D.C., in the early stages of World War II. I was a youngster

then. I remember it well. People would sit here and listen to me make that statement in astonishment.

But that was the last time, really, that this Nation felt imperiled at the hands of an adversary. At that time it was primarily the Nazi submarine fleet, which was actively sinking shipping off of the shores. I will not go into further details, but it was the silhouetting of the shipping as a consequence of the lighting emanating from the shores. A drastic number of ships lost right off the Atlantic coast of the United States.

There have been other incidents. But now we have come to the point where we are threatened by intercontinental ballistic missiles, we are defenseless. I commend the President for his strong initiatives to address the question of missile defense. We have covered it here today.

But the terrorism that could strike here at home is a major concern. We have taken initiatives in the last authorization bill of this committee, to try and urge a reorganization of the lines of responsibility in our Federal Government. I do not have it with me, but I will see that you get it, a chart showing the voluminous number of crossed lines and crossed authority that exists today. I do not say that as a criticism of the past administration. It is just a statement of fact.

I would hope that you would put this high on your list of priorities to address, because we have to have, I think, greater involvement by all departments and agencies of the Federal Government in this question of homeland defense. I just wondered what you thought about the missions for the Department which you will hopefully be responsible as Deputy Secretary of Defense. Right now the Department of Justice has primary authority, and we come up against the time-honored law of Posse Comitatus which limits the involvement of the U.S. military as it relates to the daily lives of our people in this country. I think that doctrine is well-founded in history and should be protected.

But again, the assets and the knowledge of the Department of Defense need to be shared at every level of government and with the communities as to how best to protect themselves and, if an incident were to happen, how we can best assist those in the community that will come to the rescue of their fellow citizens.

Dr. WOLFOWITZ. Actually, I know John Hamre, when he was Deputy Secretary, took a very strong interest in this issue, as will I if I am confirmed.

Chairman WARNER. I commend him. He did indeed. We talked many times on this subject.

Dr. WOLFOWITZ. Actually, during, I guess it was the transition—it was actually the period of the recount of the Florida vote—he convened a very interesting 3-hour session over at CSIS of officials from the Clinton administration with a number of people prospectively on both the Gore and Bush group, to talk about this issue. What that discussion and many others reveals is there is a fundamental problem that you identify of how the U.S. Government organizes itself to deal with this problem, which has both a domestic and a foreign aspect, both a law enforcement and a security aspect.

We need to do everything we can to prevent that kind of attack, everything we can, where possible, to defend against it. But also this question of how you respond is crucial. I was in Israel during the Gulf War with Deputy Secretary Larry Eagleburger, whom President Bush sent over to persuade the Israelis not to get in the war. So I have been in a country under missile attack. We knew the odds and the odds individually were not that dangerous, but the whole country is immobilized by it.

The Israelis had a very substantial civil defense effort and they were quite clear that without that civil defense effort, without the little bit of warning that our satellites were able to provide so the people could go into shelters, they would have had a mass panic. So the ability to deal with an event if it happens I think is very important for the stability of society as a whole. It has to get a high priority.

Chairman WARNER. That is an interesting historical footnote that you mention about your visit with my old friend Dr. Eagleburger, former Secretary of State. I too was in Israel, on February 18th, 1991, with Senator Nunn—then Chairman of the Armed Services Committee—Senator Stevens, and Senator Inouye. We were in the headquarters of the Defense Ministry when the last Scud fell on Tel Aviv. We had to stop our meetings and put on our gas masks.

The strike landed a mile or two away. I never felt—well, you are in the hands of the gods when that thing came in, because it did not have any particular target except to hit the population. It was used as a terrorist weapon, not as a military.

The people of Israel and the government of Israel showed enormous courage at that time to withhold their ability, and they had it, to retaliate because they knew of how it could fracture and impede the progress of the coalition at that time engaged in repressing Saddam Hussein.

So I share that. But I hope that you put this high on your agenda, this subject of homeland defense.

Dr. WOLFOWITZ. I will, Mr. Chairman. I hope our whole government does.

Chairman WARNER. The National Missile Defense system, as I said, the President is taking a strong leadership role, together with other members of his cabinet. Secretary of State Powell, I think in a very forceful and successful way, based on the reports received, asserted the right of the United States to defend itself in the face of this threat. We stand, as I think we have to repeatedly say, defenseless against an incoming strategic intercontinental ballistic missile, and indeed other missiles for that matter, and we must marshal the resources of this country to determine whether or not we can devise a limited ability to interdict the accidentally fired or terrorist missile or whatever the case may be, up to a dozen or more of these missiles.

As the President and Secretary Powell and others have pointed out, it is not a system that in any way should lessen the deterrence that Russia looks to its system to provide, or indeed other nations. It is simply an essential protection for our cities and communities here at home.

Now, you have spent time on this. Have you ever sorted out the sea-based system and how that could be brought in a timely way to augment the current architecture that was employed by the last administration?

Dr. WOLFOWITZ. If I may make one general point quickly and then get to your question. I think you said something which I think is missed too often, and that is we are not talking about missile defense as it emerged during the Cold War. We are not talking about SDI, we are not talking about how to compete with the Soviet Union. We are talking about a limited missile defense, of a kind that, frankly, I would think the Russians themselves would want to have.

On the specific question of sea-based options or, I would say, other options more generally, I think one of the things we need to do, and hopefully the Russians will concur in this and we can do it cooperatively, is to relax a number of the restrictions of the ABM Treaty that I believe have prevented us from looking adequately at those kinds of options. I am just starting to get read into this on a classified basis, but it is quite clear to me from what I have seen already that our development would have looked very different over the last 10 years if the ABM Treaty had not been there or if it had been modified.

What we want to do is find the most effective, least expensive, and least provocative way of proceeding in this direction. I think that is something that hopefully we can persuade the Russians and our allies and many other people is in their interest as well.

Chairman WARNER. I thank you for that observation and I share that. Actually, I was in the Department at the time the ABM Treaty was negotiated and happen to have been part of the delegation that attended the signing, that ceremony. I was there for other purposes.

Dr. WOLFOWITZ. It was a different era, was it not, Mr. Chairman?

Chairman WARNER. It was a different era. It was May 1972, and at that time I was Secretary of the Navy and had finished negotiations of the Incidents at Sea agreement which was signed the day before the ABM Treaty.

The point being that, yes, we do need to address modifications, amendments, to the ABM Treaty because the Treaty does serve, I think, an important role in the architecture, the world architecture of arms control agreements. But I think progress is being made with the Russians to come to the realization that this country has a right to defend itself and employ that technology which can be most efficiently and cost effectively used to achieve that system.

Again, I commend the President for his very clear, forceful message to the entire world that he is going to protect the rights of this country to defend itself and that he will pursue, I think, in a diligent way, in consultation with our allies, amendments to the ABM Treaty.

Dr. WOLFOWITZ. I think we are getting more of a bipartisan consensus in this country, which is progress.

Chairman WARNER. I think you are correct in that.

But I do believe that we have to begin to put more focus on the sea-based option as a follow-on or an adjunct, whatever phraseol-

ogy you wish, because that gives us in my judgment a greater protection of the instruments themselves on the high seas from interdiction of the defense system as a part of any attack, a limited attack.

Now, moving on to Secretary Rumsfeld's very important point when he was before this committee, he said that this Nation needs "a reasonable exit strategy" as a precondition for the decision to make a military intervention. What definition would you apply to "a reasonable exit strategy"?

Dr. WOLFOWITZ. That we can define what our goals are, successfully achieve those goals, and then take our forces out. I suppose one might—at least that would be what I would generally strive to achieve. I suppose there might be a situation like the one we used to have in Europe or the one we still have in Korea, where "exit" is not the right word; it is a long-term commitment, but a stable one where you have a deterrent force in place.

But certainly for most of the things we are talking about I would hope it is the kind of thing where you can finish the job and be done.

Chairman WARNER. Dr. Wolfowitz, that concludes the questions from the committee. I think that your responses have been very clear. I thank you for your what I perceive as total cooperation today. This committee will very shortly gather to determine the balance of the confirmation process, but at the moment I am optimistic we can conclude it in an expeditious manner.

I thank you very much.

Dr. WOLFOWITZ. Thank you, Mr. Chairman.

[Whereupon, at 12 noon, the committee adjourned.]

[Prepared questions submitted to Dr. Paul D. Wolfowitz by Chairman Warner prior to the hearing with answers supplied follow:]

FEBRUARY 23, 2001.

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the policy questions the Senate Armed Services Committee asked me to complete.

Sincerely,

PAUL D. WOLFOWITZ.

cc: Senator Carl Levin,  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* The establishment of the unified and specified combatant commands, the delineation of responsibilities, and most importantly, the focus on "jointness" outlined in the Defense Reorganization Act of 1986 has enhanced the readiness and warfighting capabilities of the U.S. Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. These reforms have changed the way the Department of Defense works by strengthening the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders, and significantly improving the ability of the Department to protect America's security and further its vital interests. The reforms have helped improve the interaction among the services in conducting military operations by making joint operations the norm.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. I would consider each of the goals noted below to be an important aspect of these defense reforms. Each one has enhanced the ability of the Department of Defense to carry out its assigned responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Do you anticipate submitting legislative proposals to amend Goldwater-Nichols?

Answer. If confirmed as Deputy Secretary of Defense, I will work with the Secretary to review the extent to which the reforms have been implemented and the extent to which they have achieved their stated goals. As Secretary Rumsfeld has noted, we would consult with Congress on any changes that might be appropriate.

*Question.* If so, what areas do you plan to address in these proposals?

Answer. It would be premature to offer any thoughts on the question at this time.

#### RELATIONSHIPS

*Question.* What do you see as the relationship between the Deputy Secretary of Defense and each of the following?

The Secretary of Defense

Answer. If confirmed, it is the Secretary's intent that I act as the Department's chief operating officer under the Secretary's direction as chief executive officer. It will be my duty to execute the policies of the President and the Secretary within the department, and, when new direction or guidance is needed, to facilitate the timely, accurate, and reasoned presentation to the Secretary of issues that require his or the President's consideration.

*Question.* The Under Secretaries of Defense

Answer. My relationship with all other senior officials of the Department will, for the most part, be based on the chief operating officer role described above. If I am confirmed, I will seek to carry out the policies and guidance of the Secretary with respect to actions and initiatives of the respective Under Secretaries, and bring to the Secretary's attention facts, options, analyses, and recommendations from the Under Secretaries when such guidance or direction is needed.

*Question.* The Assistant Secretaries of Defense

Answer. My relationship with Assistant Secretaries of Defense and other senior officials of the Office of the Secretary of Defense would be similar to that described above in relation to the Under Secretaries of Defense.

*Question.* The Chairman of the Joint Chiefs of Staff

Answer. The Chairman of the Joint Chiefs of Staff is the principal military advisor to the President, the National Security Council, and the Secretary of Defense. If confirmed, I intend to work closely with the Chairman to assure his full participation in the leadership team of the Department of Defense.

*Question.* The Vice Chairman of the Joint Chiefs of Staff

Answer. The Vice Chairman of the Joint Chiefs of Staff has a vital role in developing and implementing joint plans, programs, and policies for the Services. If confirmed, I anticipate working very closely with the Vice Chairman.

*Question.* The Secretaries of the Military Departments

Answer. The Secretaries of the Military Departments carry out the policies of the President and the Secretary of Defense in their respective Military Departments and make recommendations to the Secretary and to Congress relating to their Military Departments and the Department of Defense. If confirmed, I intend to work

closely with the Secretaries of the Military Departments. I will assure that they are aware of the President's and the Secretary's policies and priorities and assist them in contributing to the successful development and implementation of effective DOD policies and programs. This includes assuring that the recommendations of the Secretaries of the Military Departments are brought to the Secretary of Defense and that they understand his policies.

*Question.* The Chiefs of Staff of the Services

*Answer.* The Chiefs of Staff provide advice to the Secretaries of their respective Military Departments and other senior officials, and carry out the policies of the Secretaries of their respective Military Departments and the Secretary of Defense. My relationship with the Service Chiefs will follow the model outlined above, but with the extra dimension that my relationship will be in the context of my overarching relationship with the Military Departments and the Joint Chiefs of Staff.

*Question.* The Service Acquisition Executives

*Answer.* The Service Acquisition Executives are most directly involved with their respective Service Secretaries and the Under Secretary of Defense for Acquisition, Technology, and Logistics. In the role of chief operating officer of the Department, I will, if confirmed, promote the successful involvement of the Service Acquisition Executives in the development and execution of the policies and initiatives of the Secretary of Defense in the acquisition field.

*Question.* The Inspector General

*Answer.* As the Department's chief operating officer, I consider it my responsibility to support the Department of Defense Inspector General (DODIG) in carrying out his or her duties as set forth in the Inspector General Act.

#### QUALIFICATIONS

*Question.* Section 132 of Title 10, United States Code, provides that the duties of the Deputy Secretary of Defense are to be prescribed by the Secretary of Defense.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

*Answer.* In general, if confirmed, I expect to be the chief operating officer of the Department while the Secretary fulfills the role of the chief executive officer. It will be my duty to execute the policies of the President and the Secretary within the Department and, where necessary, to present well-reasoned advice when policy must be changed or modified. If confirmed, I will endeavor to establish close and effective relationships with Congress and to insist that responsible officials in the Office of the Secretary of Defense and the Military Departments do likewise.

*Question.* What background and expertise do you possess that you believe qualifies you to perform these duties?

*Answer.* If confirmed, this will be my third senior position in the Department of Defense and the second one that requires confirmation by the Senate. I served as Deputy Assistant Secretary of Defense for Regional Programs from 1977–1980 and as Under Secretary of Defense for Policy from 1989–1993. This latter position covered a period of time that included the end of the Cold War, the revision of our national strategy, and the planning for and conduct of major military operations in Panama and the Persian Gulf region. In addition to these positions, I have held senior management positions as Assistant Secretary of State for East Asian and Pacific Affairs, and served as U.S. Ambassador to Indonesia, running one of the most important U.S. embassies in Asia. Finally, for the last 7 years I have managed a school of international affairs that entailed the development of fiscal and academic programs for 750 students on campuses in Washington, D.C.; Nanjing, China; and Bologna, Italy. The school is a \$30 million per year operation. While in the job, I also supervised a team that more than doubled the school's endowment.

*Question.* Do you believe that there are any steps you need to take to enhance your expertise to perform the duties of Deputy Secretary of Defense?

*Answer.* I believe that I have an excellent, general base of experience for this position. Without presuming confirmation, I have already begun to benefit from excellent information briefings from the SASC Staff, various offices within the Office of the Secretary of Defense, and the Joint Staff. Courtesy calls with over a dozen members of this committee have been invaluable. I believe if confirmed, I am ready to assume the duties of the position of Deputy Secretary of Defense, which will remain a learning experience, as long as I hold the office.

#### BUDGETARY IMPACT OF CONTINGENCY OPERATIONS

*Question.* Over the past several years, military units have been increasingly deployed to contingency operations around the world. While participation in these operations may improve discipline, unit cohesion and leadership skills that are not

generally possible to develop during normal garrison activities, they disrupt operating budgets, cause lost training opportunities, and accelerate wear and tear on equipment. Additionally, increased OPTEMPO impacts quality of life and could jeopardize retention of high-quality people. Finally, unless funded through timely emergency supplemental appropriations, they divert funds from programs designed for needed readiness or modernization.

Do you have any ideas as to how to reduce the impact of these operations on both near and long-term readiness and modernization programs?

Answer. Near term, contingency operations—regardless of their intrinsic merits—can damage readiness by interrupting needed training for wartime operations, accelerating wear and tear on equipment, and eroding the quality of life of military personnel and their families. However, that damage can be minimized through careful management, and whatever damage is unavoidable can sometimes be offset by benefits to the units participating in these operations. Key to avoiding damage is robust funding for readiness accounts, so that readiness needs can be met before, during, and after contingency operations. Looking long-term, damage to modernization programs is best prevented by timely funding so that the Department does not have to disrupt procurement and RDT&E programs. Especially key is accurate DOD projections of operational costs and timely congressional approval of supplemental appropriations that are needed for unbudgeted contingency operations.

#### PREPARATION FOR FUTURE THREATS

*Question.* We have heard a great deal recently about the fact that Russia no longer poses the threat to U.S. interests that the Soviet Union and the Warsaw Pact once did. Because of this, many argue that we can continue to cut back on defense spending and force structure beyond that which we have already achieved. Recognizing the need for a comprehensive examination of our national security requirements, Congress passed legislation last year that would make permanent the requirement for the Department of Defense to conduct the Quadrennial Defense Review (QDR). As a result of the last QDR, the Department recommended a reduction in military personnel levels despite the recognition that we will continue to engage in numerous peacekeeping activities. This, in part, led the National Defense Panel to state that “there is insufficient connectivity between the strategy on the one hand, and force structure, operational concepts, and procurement decisions on the other.”

Do you believe that the Two Major Theater War scenario continues to be the most appropriate basis for determining force structure, operational concepts and procurement decisions for U.S. armed forces?

Answer. Modern history suggests that the United States has often faced more than one security contingency at a time. With that history in mind, preparations are appropriate. The increasing diversification of current and emerging threats requires that we build forces and operational concepts aimed at fashioning a new approach to deterrence. The manner in which the United States underwrites deterrence—for example, how we posture our military to be able to respond to multiple contingencies—is an issue of military strategy and operations and the adequacy of available resources at the time. This issue will be examined in the strategic review.

*Question.* Do you believe that the force structure, operational concepts, and procurement decisions recommended by the QDR are sufficient to provide the capability to engage in overlapping Major Theater Wars today, and to prepare for the potential military threats of the future?

Answer. It is important that we shape and prepare the armed forces to respond to whatever national security challenges may confront us. We must ensure that the military has the tools it needs to fight and win, should that be necessary. The technological revolution makes possible new forces and concepts of operations that can transform the way we fight in the future. These matters will be among those examined in the strategic review.

*Question.* What are the principal threats to U.S. vital national security interests that you believe the Department should examine both in the near and long term?

Answer. The centrifugal forces in world politics have created a more diverse and less predictable set of potential adversaries, whose aspirations for regional influence and whose willingness to use military force will produce challenges to important U.S. interests and to those of our friends and allies. Modern technology and its proliferation also confront us with an expansion of unconventional threats, including nuclear, biological, and chemical (NBC) weapons, missiles, terrorism, and the newer threats against space assets and information systems. At the same time, we have traditional responsibilities to existing allies in key strategic theaters that remain in our vital interests.

*Question.* Would you agree that the uncertainty which we face in the future requires us to maintain a military which is both strong and flexible?

*Answer.* In addition to fielding strong, flexible military forces for an uncertain future, the United States can help build a new national security environment by integrating the economic, technological, and diplomatic tools at our disposal, maintaining and strengthening our alliances, and promoting continued market and democratic reforms around the world. By providing for a military that is second-to-none and equipped to meet the newer challenges of the 21st century, I believe we can best ensure a peaceful strategic environment that advances U.S. national security interests and those of our friends and allies. The goal is to assure that our country has the new capabilities necessary to deter and defend in this new security environment so we are able to contribute to lasting peace and stability.

#### READINESS INDICATORS

*Question.* Over the past several years, the committee has observed discrepancies between the readiness reports we receive from the Pentagon and the information we receive from the operational forces. Many of these discrepancies are attributed to a readiness reporting system including the SORTS data which is designed to provide a snapshot of the current state of readiness rather than a projection of the future.

If confirmed as the Deputy Secretary of Defense, will you work with the Services to try to develop a better system of measuring and reporting readiness, including a way to predict future readiness, so that we have an adequate understanding of any readiness problems within the operational forces?

*Answer.* At its core, our readiness reporting system centers on the readiness of our forces for high intensity combat operations. While the current system is useful, I know that it can be improved, and I support efforts to do so. The basic position as developed in this committee and others and as outlined by President Bush remains clear: we have an urgent need to address any decline in operational readiness.

#### PLAN COLOMBIA

*Question.* The United States is heavily involved in resourcing and training Colombian security forces that are fighting the growth and processing of coca leaves and the transport of refined cocaine. U.S. forces are specifically precluded, by policy, from taking a direct part in any such operations.

Do you favor continuing U.S. support for Colombian security forces in this effort?

*Answer.* The Department's counterdrug programs and policies are currently under review. This is a process in which I will participate if confirmed. At this point, however, it would be premature on my part to comment on this review until it is completed.

*Question.* Are you committed to maintaining the policy that precludes U.S. forces from taking a direct part in these operations?

*Answer.* As with all other Department policies, if confirmed I will reserve the right to review the existing policy and make my recommendations to the Secretary. However, in principle, I support the policy which prohibits DOD personnel from accompanying drug law enforcement and foreign military forces on counterdrug field operations.

*Question.* Would you favor increasing U.S. assistance to the countries bordering Columbia to prevent a relocation of coca growth elsewhere?

*Answer.* U.S. counterdrug policy relative to programs in the region is currently under review within the interagency, to include the Department of Defense. It would be premature on my part to speculate on the outcome of these reviews.

#### MAINTAINING OUR INFRASTRUCTURE

*Question.* The Department of Defense maintains the world's largest infrastructure, with a physical plant value exceeding \$500 million. It is widely acknowledged that much of this infrastructure is in poor condition and therefore impacts quality of life and readiness.

What are the most critical infrastructure issues facing the Department of Defense?

*Answer.* Our physical plant is too big, too old, and too often in poor condition. The Department faces the daunting task of rationalizing its infrastructure and finding the resources to properly sustain, restore and modernize the facilities and installations we will keep. Improving the quality of life and workplaces for our servicemembers and their families is critical to readiness and retention. The Department believes that it has excess facility capacity and infrastructure in the wrong

locations. We will address these issues during our planned review and the months thereafter.

*Question.* The Military Housing Privatization Initiative was enacted to provide a means for solving the military services' housing crisis.

Has the initiative lived up to its expectations? If not, what actions would you advocate to assure the success of the program?

*Answer.* The Military Housing Privatization Initiative was slow to start, but with nine projects now awarded, it has demonstrated that it is a powerful and important tool to solve our housing shortfall. Enthusiasm is high in the Military Services to do more, but the success of the program depends on capturing lessons learned at the initial projects and applying them as we move forward.

#### DEFENSE HEALTH FUNDING

*Question.* As you are aware from your current position, the Department of Defense has identified a core program shortfall in the Defense Health Program of \$6 billion from fiscal year 2002–2005. These figures do not include any expansion of the Department's capabilities or resources to meet the commitment to the over 65 military retiree population and their families.

If confirmed as Deputy Secretary of Defense, how do you plan to address this shortfall?

*Answer.* Addressing this or any other major program funding shortfall will be our task once the DOD strategic review is completed and used to set guidelines for future spending. Additionally, however, we will be scrutinizing processes and management—including those in the Defense Health Program—to make improvements, increase efficiency, and save money.

#### AVIATION MODERNIZATION PROGRAMS

*Question.* In a recent presentation, the Air Force Chief of Staff stated that if all of our current aviation modernization programs execute as planned, in 15 years the average age of aircraft in the inventory will be 30 years. Specifically there has been much speculation that the current tactical aviation modernization plan is not affordable.

Is this a viable program?

*Answer.* The requirements and timing of the tactical fighter programs are subjects in the on-going review which Secretary Rumsfeld has initiated. Although a major investment, the modernization of U.S. tactical fighters is of immense importance and deserves careful review.

*Question.* With the cost of individual platforms escalating, will we ever be able to rejuvenate our fleet of aircraft without a significant increase in our modernization budgets?

*Answer.* Given the aging of the current fighter force structure, replacement aircraft must be procured. Once the review is complete, we will be in a position to address the budget necessary to satisfy the required future force structure.

*Question.* How do you expect the development of unmanned aerial vehicles to impact our requirements for manned platforms over this period?

*Answer.* Our unmanned aerial vehicles have demonstrated their value as intelligence, surveillance, and reconnaissance assets. As the quantity and capability of these unmanned systems increase, we expect them to pick up more of these roles, complementing our heavily tasked, manned intelligence surveillance and reconnaissance fleet. We also have technology programs to begin to develop combat roles for unmanned aerial vehicles. If the technologies prove successful, these unmanned systems will complement our manned combat fleet.

#### READINESS

*Question.* Over the last few years we have seen increasing evidence that the readiness of the U.S. Armed Forces has begun to deteriorate as a result of the over-commitment of an under-resourced Department of Defense. Whether you look at the comments of Army Training and Doctrine Command commanders, the testimony of the Service Chiefs, or reports of severe shortages aboard deployed naval vessels, all point to a pending readiness crisis. Many have argued that we are approaching a readiness death spiral where maintaining today's aging equipment and facilities is preventing the modernization necessary to maintain readiness in the future.

What do you view as the major readiness challenges that will have to be addressed by the Bush administration, and, if confirmed, how will you approach these issues?

*Answer.* Our new administration faces a number of readiness challenges across the military. These include the classic "unit readiness" concerns of robust manning,

functioning equipment, and realistic training so that our military is prepared to defend the vital national interests of the United States. Our war fighting commanders around the world must have the assets to synchronize and use their units in effective joint and coalition forces. This "joint readiness" requires effective command, control, communications, and computer (C<sup>4</sup>) systems; robust intelligence, surveillance, and reconnaissance (ISR) systems; sufficient lift to mobilize forces and equipment; interoperability; and healthy logistics practices and sustainment stocks. I believe that the U.S. also needs to be better prepared for the growing threats posed by terrorism, weapons of mass destruction (WMD), threats to critical information and other infrastructure systems, and vulnerable space assets. Some of the more pressing concerns lie in the condition of equipment, or more broadly, the materiel readiness of the forces. Of particular concern is the readiness of our aviation forces. They continue to struggle to overcome the ill effects of higher-than-planned use and inadequate parts support that have accrued since the end of the Cold War. While increased funding in the past 2 years has had some positive effect on materiel readiness, there is more work to be done. DOD's equipment is growing older, and we will be continually challenged to keep our existing forces ready while preparing for the threats of the future. Our National Guard and Reserve Forces also have a number of unique challenges in meeting their mission requirements upon deployment that require our immediate attention. As we undertake a thorough review of the National Military Strategy, we will address these concerns.

#### READINESS SUPPLEMENTAL FUNDING REQUIREMENT

*Question.* The military services have provided this committee with a list of \$4.5 billion in near-term readiness requirements, such as spare parts and equipment maintenance, and another \$2.5 billion for emergency personnel and modernization programs, that they have identified for this fiscal year.

Have you taken a look at the military services fiscal year 2001 emergency requirements and will the administration submit a supplemental budget request to fund these items?

*Answer.* I have not studied in detail the service's unfunded fiscal year 2001 requirements. The administration's position is that DOD's strategic review must be completed before any decision on submitting an fiscal year 2001 supplemental appropriations request is made.

#### VIEQUES

*Question.* Over the past 18 months Naval forces deploying from the east coast of the United States have been prevented from conducting live-fire training on the Navy's training range on Vieques, Puerto Rico, which has had a significant impact on the readiness of these forces to execute their wartime missions. An agreement was reached with the then-Governor of Puerto Rico, and legislation passed to implement that agreement, which will provide economic incentives to the people of Vieques in return for their cooperation in the restoration of live-fire training. Unfortunately, the current Governor has stated that she will not abide by the terms of this agreement and that she will insist the Navy cease operations immediately.

If confirmed, what actions will you take to achieve the restoration of live-fire training on Vieques?

*Answer.* It is my understanding that Vieques is a superior site for rehearsing amphibious operations, the only site currently used for aerial mine warfare training, and is the only location currently available on the east coast where aircraft, naval surface ships, and ground forces can employ combined arms training with live ammunition under realistic conditions. It is also the only range currently available on the east coast that allows the Navy and Marine Corps to conduct naval gunfire training. I understand that to date no alternative sites, providing the ability to conduct combined arms training with live ammunition under realistic conditions, have been located. If confirmed, I will work with Secretary Rumsfeld and the Department of the Navy to explore all possible options for solutions that best meet the national interest.

#### OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Do you believe that the military services need to retain a core capability to perform certain activities such as equipment maintenance, and what approach you take to allocate workloads between the public and private sector?

*Answer.* The size and composition of DOD's facilities to perform equipment maintenance is an important aspect of the overall readiness of the Armed Forces. The appropriate balance between government and private sector facilities must be struck in a manner that assures the equipment employed by the Armed Forces will be

ready for use when needed. This balance in turn will be affected over time by the nature of the technology used in military equipment. A balance will be reviewed to assure that capabilities essential to national defense that cannot reliably be provided by the private sector will be provided by the government sector. Moreover, critical capabilities will be maintained in the government sector.

*Question.* Do you believe that significant savings can be achieved through outsourcing, and if so, do you have any data that would be applicable to those activities which you would outsource?

*Answer.* I believe significant savings can be achieved by competing the Department's non-core activities with the private sector. While there has been some debate over the actual magnitude of the savings, recent studies have all agreed that savings are substantial. I believe specific functions should be identified for study where the most potential for savings and efficiency improvement exists. For example, past studies indicate base operating support functions achieve above average savings. I would review all functional areas to identify and target those commercial activities that offer the most promise for competition with the private sector.

#### COMMERCIAL VS. MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* If confirmed, what actions will you take to review the Department's total spectrum requirements and ensure that new systems are designed to ensure efficient spectrum utilization by the Department of Defense?

*Answer.* I understand the Department has reviewed its current and long-term electromagnetic spectrum needs, and will continue to re-assess these regularly. The Department has also revised its acquisition regulations to mandate more stringent procedures for determining and validating, prior to production decision, the requirements for and availability of spectrum for all equipment and systems to be utilized by the Department. If confirmed, I plan to support these efforts and ensure that the Department continues to investigate new technologies for the more efficient use of the electromagnetic spectrum such as software programmable radio technology.

*Question.* If confirmed, what actions will you take if the study currently being conducted within the Department of Defense determines that there will be a significant cost and operational impact if the military services surrender the 1755—1850 MHz band of frequencies?

*Answer.* If confirmed, I will need to be thoroughly briefed on the study to fully appreciate its findings. The Department will continue to work closely with the National Telecommunication and Information Administration and the Federal Communications Commission in determining the best decision for the Nation, balancing national security and economic development, in identifying spectrum for the next generation of wireless systems while understanding that the Department's readiness must not be compromised. I know that Secretary Rumsfeld assigns a very high priority to this. I would also like to acknowledge the tremendous support the Department has received from this committee in supporting the Department's assured access to the electromagnetic spectrum.

#### BASE REALIGNMENT AND CLOSURE

*Question.* The previous administration insisted that another round of base closures was needed to streamline the defense budget and to shift resources into personnel programs and weapons procurement. However, when asked if in the absence of an additional base closure round they would provide, for congressional consideration, a list of those facilities that they consider excess and eligible for closure, they have been unable, or unwilling, to do so.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* See response below.

*Question.* Would you recommend additional rounds of base closures?

*Answer.* See response below.

*Question.* Would you provide a list of those facilities for congressional consideration absent the authorization of another round of base closure?

*Answer.* See response below.

*Question.* Would you support another round of BRAC but limited to where excess capacity exists?

*Answer.* As Secretary Rumsfeld noted in his response to Advance Policy Questions from this committee, we will withhold an assessment of this issue until after the completion of the defense review.

## POLICY TOWARD IRAQ

*Question.* Ten years after the successful conclusion of Operation Desert Storm, tens of thousands of U.S. troops remain in the Persian Gulf region—at a cost of \$1 billion per year—to enforce the current U.S. policy of containing Saddam Hussein. Despite our efforts, Saddam remains in power in Iraq, his weapons programs unchecked; the international coalition that repelled him from Kuwait has virtually collapsed; and our friends and allies in Europe and the Gulf region are reestablishing diplomatic ties with Iraq.

What steps do you think the United States should take to reinvigorate the international community's efforts to ensure Iraqi compliance with the obligations Iraq accepted at the end of the Gulf War—particularly those obligations related to disarmament?

*Answer.* The administration is in the process of reviewing all the elements of U.S. policy toward Iraq. This review will have to address whether more can be done to secure Baghdad's compliance with the conditions laid down by the United Nations, particularly its obligation to forswear the pursuit of weapons of mass destruction. It will also have to address the complex task of rebuilding support for an effective policy in the region and in the international community.

*Question.* What role do you believe the Iraqi opposition can play in these efforts?

*Answer.* This is an issue that the Iraq policy review now underway will have to address. It would be inappropriate for me to comment on it at this time.

*Question.* Do you believe that sanctions are an effective tool against Saddam Hussein?

*Answer.* Sanctions can be a part of an effective policy, but they are not a substitute for a policy. The administration is reviewing whether any adjustments are needed in the U.S. approach to administering the sanctions. It is important to remember that the focus of the sanctions is not the Iraqi people but preventing Saddam Hussein from developing and using weapons of mass destruction against his own people or his neighbors, as he has done before.

## U.S. MILITARY PRESENCE IN BOSNIA

*Question.* Last December marked the 5-year anniversary of the NATO military presence in Bosnia. Although reduced from its early high of about 60,000 troops, the international community, under NATO leadership, today maintains a force of over 20,000 troops in Bosnia, almost 4,600 of whom are American. Despite over 5 years of an international military presence in Bosnia, we are far from achieving the goal of a unified, multi-ethnic nation, as envisioned in the Dayton Accords which ended the war. In fact, during the most recent nation-wide elections in Bosnia, the Nationalists—those who oppose the aims of Dayton—made surprising gains.

What should the United States do to break the stalemate in Bosnia and help create the conditions for the withdrawal of U.S. troops?

*Answer.* NATO is currently assessing options. It would be inappropriate for me to comment further.

*Question.* Should we consider a renegotiation of the Dayton Accords?

*Answer.* Dayton has served the central purpose of stopping the war. The Dayton Accords include procedures for making changes. Whether any changes are made is ultimately a matter for the Bosnians themselves to decide.

## NORTH KOREA

*Question.* What is your view of the agreed framework between the United States and North Korea?

*Answer.* The Agreed Framework is one element of an overall effort by the U.S. and its democratic allies, the Republic of Korea and Japan, to prevent war and reduce the level of confrontation on the Korean Peninsula. It is important to remember that their overall problem is not only a nuclear one but also involves a large North Korean conventional military threat and a long record of North Korean hostility toward the South. The historic summit between Kim Dae-Jung and Kim Jong-Il is a significant positive step, but we need to proceed with caution. We also need to make sure that North Korea honors its commitments as we live up to ours.

*Question.* What steps can the United States take to reduce the risks from North Korea's weapons proliferation activities?

*Answer.* The risks posed by North Korea fall in three areas: the potential to build an ICBM capable of hitting U.S. territory; the continued domestic deployment of missiles that put our allies at risk; and the export of long-range missiles and missile technology to world trouble spots that heighten regional tensions. The administration is committed to the deployment of an effective national missile defense as soon

as it is technologically feasible. Given the widespread deployment of North Korean derived theater range ballistic missiles and the threat those missiles pose to deployed U.S. forces as well as our friends and allies, the administration would attach a high priority to the development and deployment of effective theater missile defense systems in a timely and efficient manner. It is in the U.S. interest that the North Koreans terminate their programs and stop exporting missile technology to other countries. The administration will pursue that objective—the precise means would likely be determined following a review of U.S. policy toward North Korea and its proliferation policies.

## AFRICA

*Question.* The Defense Department is currently involved in a number of initiatives in Africa to help certain nations be better prepared to provide their own regional peacekeeping forces and humanitarian missions. The African Crisis Response Initiative and the ongoing training of several Nigerian army battalions for peacekeeping duty in Sierra Leone are two examples of this policy.

Do you support such initiatives which are aimed at helping African nations be better prepared to respond to a regional crisis?

*Answer.* Yes. The current strategy to develop peace operations and humanitarian response capacity in Sub-Saharan Africa includes two key objectives: to develop defense partnerships with important states, and to actively engage sub-regional organizations. One of these important states is Nigeria, with whom the U.S. is currently implementing peace operations training in support of UNAMSIL in Sierra Leone (Operation Focus Relief, or OFR).

## EXPORT CONTROLS

*Question.* The domestic satellite industry has complained that it has lost a significant amount of market share, and billions of dollars, as a result of the satellite licensing provisions that were enacted as part of the National Defense Authorization Act for Fiscal Year 1999.

What is your view of these complaints?

*Answer.* Let me start by saying that the satellite industry is an important industry for national defense. We must ensure that government processes are not unnecessarily impeding legitimate exports of satellites that provide the critical revenues for the industry to continue to invest in advancing the state of the art. The satellite industry itself has released information suggesting that competitive pressures facing the industry are the result of a number of factors including launch failures, competition from land-based communications systems, and growing capabilities of foreign suppliers. All of these factors must be reviewed in the course of establishing an appropriate policy on the export of satellites. National security must always be of paramount consideration.

*Question.* Do you believe that Congress should revisit the issue of how we license exports of satellite technology?

*Answer.* I believe that the administration will be examining this issue carefully (including any statutory or regulatory changes that might be required), and will consult closely with Congress as this review proceeds. Any review must be undertaken in a manner that preserves fundamental national security interests.

*Question.* Over the past 2 years, 16 ambassadors from NATO countries have written to the Secretary of State expressing their deep frustration with the U.S. export control system. Deputy Secretary of Defense Hamre initiated an effort to streamline export control process without weakening controls. What is your view of Secretary Hamre's reforms?

Do you believe that further streamlining is required?

*Answer.* The administration will be reviewing this issue.

*Question.* What policies and procedures do you believe need to be changed in the export license control process that would reflect the right balance between national security and commercial interests?

*Answer.* Exports of sensitive high technology affect U.S. national security interests in many ways. First, we must protect our military personnel and our security interests by ensuring that sensitive technologies are not exported to potential adversaries or to foreign entities that represent a significant diversion risk. Second, we must have sensible and effective policies and procedures to ensure that appropriate transfers of military and commercial systems and technologies that support our coalition warfighting objectives are permitted. Finally, we must be mindful that the U.S. is not the only country with advanced military and commercial technology. Efforts to control exports can sometimes become counterproductive if they weaken American technical capacity without protecting truly critical technologies. Thus, we

need to work aggressively with our allies and friends to ensure that our policies and approaches toward the export of such technologies meet our mutual security interests. The Department of Defense has an essential role to play in designing export control policies and implementing the principles I have outlined. We will be working closely with Congress and the other Executive Departments on these important matters.

*Question.* Do you believe the Department of Defense should play a greater role in the export licensing process than it currently does in determining whether sensitive technologies should be exported overseas?

*Answer.* The Defense Department must play a strong role in the export control policy process. Defense has a tremendous amount of technical expertise in the export control area and should have the ability to apply these assets to the overall export control process. I will be reviewing whether there are specific changes that should be proposed concerning DOD participation in these processes.

*Question.* What critical military technologies do you believe the United States should not license for export overseas and why?

*Answer.* There are obviously a number of critical military and dual-use systems and technologies that must be export controlled to preserve U.S. military technological advantages and to ensure that these items do not fall into the wrong hands. This is a changing picture as military capabilities advance and technology become diffuse worldwide. We must ensure that we have a system in place that regularly reviews the specifics to make sure that we are controlling the most important items and that we are not controlling items that cannot be effectively controlled because of widespread availability.

*Question.* Senator Gramm recently reintroduced his bill to reauthorize the Export Administration Act. Senator Gramm has characterized his bill as an effort to build a higher fence around a smaller number of items, the export of which would have a detrimental impact on our national security. Others have expressed concern that the bill does not pay sufficient attention to national security concerns.

What is your view of Senator Gramm's bill?

*Answer.* I have not studied the bill but will do so as soon as possible.

*Question.* Do you support the reauthorization of the Export Administration Act?

*Answer.* It is my understanding that the administration is in the process of reviewing the bill and will have some comments soon.

#### TECHNOLOGICAL CAPABILITIES OF TERRORISTS

*Question.* A key disadvantage of the proliferation of information technology is that potential and acknowledged adversaries can now gather data, imagery, and intelligence updates from many of the same sources and means that the U.S. military uses. Keeping a step ahead of these capabilities is a great concern for this committee.

What would you propose the Department of Defense do to address this concern?

*Answer.* While greater access to multiple sources of data has many advantages for the U.S., it is also true that our adversaries can use commercial imagery and other burgeoning information technologies to monitor and target U.S. interests. While we cannot prevent commercial capabilities from becoming more sophisticated and widespread, we do have the ability, with the proper blend of resources, personnel and processes, to enhance the likelihood that the U.S. will continue to maintain the information advantage it needs. Furthermore, the control of certain technologies remains an issue of significant concern to the Department. We will continue to review each export license request and appropriately apply conditions and provisos to those licenses to protect our national security interests. The Secretary has made it clear that information superiority is one of his top priorities. If confirmed, I intend to fully support these efforts.

*Question.* According to the Department of Defense's most recent annual report to Congress entitled "Worldwide NBC Weapons and Missile Threat", "technology to improve the delivery of nuclear, biological, and chemical weapons is becoming more advanced and in some cases more available. Some countries are focused on the production of better missile guidance and control mechanisms and countermeasures to defeat ballistic missile defense systems."

What options should the Department of Defense pursue to address the threat posed by this growing capability?

*Answer.* The Department of Defense needs to continue to support U.S. Government nonproliferation efforts intended to prevent or reverse the proliferation of nuclear, chemical, and biological weapons, their means of delivery, and associated technologies. It needs to press ahead with its counterproliferation programs to ensure that U.S. forces are prepared to fight and win in chemical and biological weap-

ons environments. It must develop and deploy missile defenses that are effective against current and emerging ballistic missile threats. We also must strive to build stronger international non-proliferation regimes and simultaneously look for opportunities for cooperative programs with like-minded Defense Ministries.

#### COOPERATIVE THREAT REDUCTION (CTR)

*Question.* Last month Secretary Rumsfeld told the committee that “we need to be aware of the fact that Russia, in particular, claims to lack the financial resources to eliminate weapons of mass destruction, but continues to invest scarce resources in the development of newer, more sophisticated ICBMs and other weapons. We would not want the U.S. investment in the [DOD] CTR program to become the means by which Russia frees up resources to finance its military modernization programs. A review of ongoing [DOD] CTR projects and their respective national security benefits would be appropriate.”

What are the most important factors that should be considered during this review?

*Answer.* The most important factor for this review should be the extent to which the assistance provided to the eligible states of the former Soviet Union enhances the security of the United States. Each eligible state is unique and that will also be an important consideration. Russia is the only eligible state that is permitted by international treaty to retain and modernize its nuclear forces. Therefore, an important factor for review should be whether the Department’s CTR program is structured to prevent support for Russian military modernization programs.

*Question.* Do you agree that the CTR program serves the U.S. national interests by reducing the threat from former Soviet weapons of mass destruction?

*Answer.* Certainly the elimination of former Soviet strategic and tactical nuclear weapons and their delivery vehicles that the CTR program has funded has benefited U.S. national security. As the previous answer indicates, we need to monitor the details of implementation to insure that those purposes continue to be achieved.

#### RESERVE COMPONENTS

*Question.* Although the Department of Defense is committed to the “Total Force,” as recently demonstrated by the deployment of the 49th Armored Division of the Texas Army National Guard to Bosnia, there is concern among the Reserve community that this commitment to the “Total Force” is only “lip service.” Those who question the Department’s support of the Reserve components point out the Reserves do not receive an appropriate share of the defense budget for modernization and military construction. A specific issue was that the fiscal year 2000 military construction program. While the request for the National Guard amounted to about 3 percent of its critical needs, the active-component funding request covered nearly 20 percent of their critical needs.

What role should our Reserve components have in the post-Cold War era?

*Answer.* Over the last several years, the National Guard and Reserves have been transformed from a Cold War force held in Reserve to an essential force serving in the “front lines” daily. For example, during each of the past 5 years, Reserve component personnel have performed between 12.5 and 13.5 million workdays per year supporting the active force. The Total Force Policy is now a fundamental principle guiding the restructuring and reorientation of our Nation’s military forces. At the same time, though, we must be careful not to place too much of the burden of our national security objectives on the Guard and Reserve. These are immensely capable forces that play a critical but well-defined role in our force structure. As such, the role of our Reserve components will be examined, along with our other Armed Forces, during the review of the overall defense strategy.

*Question.* Do you believe the Reserve components are fully integrated into the “Total Force?” If not, what further steps should be taken to make the integration a reality?

*Answer.* The integration of the Reserve components has improved steadily. Although barriers to full integration into the Total Force have been reduced or eliminated, work remains. For example, quality of life programs are needed to recruit and retain Reserve component forces. We need to work together to address employers’ concerns and provide family support programs.

*Question.* What should be the basis for level of funding in the administration’s budget request for the Reserve components?

*Answer.* Keeping the required force trained and ready remains our top priority. The basis for the level of funding for the Reserve components in the administration’s budget request should be based on the readiness requirements placed on the Reserve components by the National Military Strategy, the ongoing strategic review

being undertaken by Secretary Rumsfeld at the President's direction, the fiscal year 2001 QDR, and other missions assigned by the Services. The Reserve components should then be resourced to ensure interoperability to meet the requirements identified by those mandates.

*Question.* Due to the leaner Active Duty military and greater number of operational commitments, the Department of Defense has increasingly called on the Reserves and National Guard. In 1989, reservists and members of the Guard recorded one million days of duty. In each of the past 3 years, that figure has averaged 13 million days. This increased workload has had an impact on the individual reservist and on his civilian employer. As a result, retention and recruiting are impacted and in extreme cases the relationship between the reservist and his employer.

In your judgement, is it realistic to expect the Reserve components to assume an increasing role in operational deployments and in the "Total Force" without adverse impact on their civilian jobs?

*Answer.* The Reserve Forces are a major and integral part of our National Defense team. The key to their effective use is maintaining the proper balance of utilizing their capabilities without overusing any specific segment of the force. We will endeavor to seek a level of participation for our reservists that maximizes the investments made in their training and equipping while mediating the potential for inadvertent harm done by their overuse.

*Question.* What can the Department do to mitigate the impact of increasing Reserve deployments on the civilian employers?

*Answer.* The key to mitigating the impact of Reserve component deployments on civilian employers is early notification, a predictable return of the Reserve component member, and not calling upon the same individual too often. We will continue to improve our ability to return reservists from deployments when they are scheduled to return. Work needs to be done to ensure that the force structure contains sufficient high demand units so the same reservists are not used too frequently.

*Question.* The Reserve components represent a great asset to our Nation as they support the National military strategy while also serving to link our military forces to hometown populations where they serve. These forces also provide state governments with a critical ability to respond to natural disasters and are available to be the first responders to homeland defense mission requirements. Unfortunately, a significant portion of these forces appear to be improperly structured as there are a number of medium and heavy divisions in the Reserve components that have not been required or assigned to support warfighting requirements. These forces are similarly not equipped to properly support state missions. Tanks and mechanized infantry units are of little utility to governors who need these forces to respond to natural disasters. Modernizing these forces with combat support and combat service support equipment appears to be the most appropriate course to follow but would require Department of Defense oversight and a significant investment in resources.

How do you believe this issue should be addressed and what will you do to restructure our Reserve components to be in a better position to support both Federal and state mission requirements?

*Answer.* The National Guard and Reserve Forces play an essential role within today's force in supporting the day-to-day operations, at home and abroad. It is also my understanding that today's Guard and Reserve Force structure provides a significant portion of the Total Force's combat support/combat service support capability, which coincidentally, is also likely to be needed to help mitigate the consequences of a domestic Weapons of Mass Destruction event. While we anticipate that the Guard and Reserve will continue to play an important role in supporting our homeland security for the reasons you have articulated, it is important to note that the President and his key national security advisors are in the process of developing a new National Security Strategy. The President has already asked the Secretary of Defense to be prepared to undertake appropriate actions to reshape and restructure our force to meet that strategy. Therefore, it would be premature to predict with any precision what changes in structure are appropriate at this time.

#### PRIVATIZATION OF SERVICES

*Question.* The Department is relying increasingly on the private sector to provide critical services. Among the most significant privatization efforts are the areas of military family housing and utility systems.

What are your views on the ever-increasing reliance by the Department of Defense on the private sector to provide essential services to our military personnel?

*Answer.* I believe the Department should seek out private sector performance for non-core functions where they are more cost effective and efficient.

*Question.* If you support additional privatization of defense activities, what are they?

*Answer.* Following the success of housing and utility privatization, other defense activities should be reviewed as possible privatization candidates. This is an issue that, if confirmed, I will have to study in further detail.

*Question.* Although initial privatization efforts have resulted in near term savings, there is concern that over the long term there will be no savings.

What are your expectations of the long term benefits from these privatization initiatives?

*Answer.* All of our privatization efforts require analysis of life cycle savings to ensure they benefit the government over the long term. My understanding is that analysis of specific competitive sourcing competitions indicates that initial savings do, in fact, hold up over the life of the contract. In addition to savings, privatization supports the rapid infusion of best business practices, and attracts private sector capital to augment Department resources.

#### MANAGEMENT ISSUES

*Question.* During your tenure as Deputy Secretary, what key management performance goals do you want to accomplish, and how would this committee be able to judge whether you have accomplished them?

*Answer.* If confirmed, I plan to work with Secretary Rumsfeld to establish key management performance goals. At this point, it would be premature for me to offer specific performance initiatives, but in general, one of our primary goals should be to hire, support, and retain military and civilian personnel with the necessary skills to meet our mission needs. As we establish our goals, we must carefully consider the results of our ongoing strategic reviews as well as the QDR process, and look to closely tie DOD's strategic plans to our desired mission outcome. We also need to establish financial management operations that provide reliable information and foster accountability. Finally, we must look to reform our acquisition processes, establishing business practices that are more efficient and effective. I look forward to working with this committee and Congress as we strive to reduce or eliminate bureaucratic redundancies in the Department of Defense and streamline our management practices.

*Question.* To successfully lead an organization, a leader must be able to create and share a vision that inspires people to follow.

In your past experience, what specific steps have you taken to successfully create a vision for an organization, and how did you make sure that the entire organization had a common understanding of the mission and was aligned so that it could be accomplished?

*Answer.* In previous questions and in many documents supplied to the committee, I have outlined my work history and the many organizations that I have run. I have always believed that the importance of leadership and management jobs is measured not by the title but by the results that the whole organization achieves. Perhaps most telling in the area of establishing a vision were my positions as Under Secretary for Policy, and my work as Dean at the Paul H. Nitze School of Advanced International Studies (SAIS), The Johns Hopkins University. In OSD Policy from 1989–1993, I redrew the organization, picked new people, and held numerous team building sessions to drive home my vision for how policy would operate. I don't want to say that my team did it all alone. Indeed, working closely with Congress, the Military Departments, the Joint Chiefs of Staff, and our allies were integral parts of our standard operating procedures. I hope that the results—a new strategy and force structure, success in the Gulf War and in Panama, improved relations with our allies, highly successful arms control initiatives, and a whole set of new defense relationships with former adversaries—validated my approach. At SAIS, I followed the same organizational strategies and was very pleased with the results—we doubled the goal for the school's 5-year capital campaign, focused it on the school's top priorities and then reached our goal in 2½ years (eventually reaching almost four times the original goal by the end of the campaign). Through a combined team effort, we were able to not only achieve significant increases in the school's endowment, but also created new and up-to-date programs, better faculty, improved facilities, and improved communications with the central university administration in Baltimore. In both cases, the keys to success were setting sensible objectives that could inspire support, clear communications, good people, and lots of hard work. I agree strongly with someone who once said that good government is a team sport. If confirmed by the Senate, that is the spirit I will bring to my duties as Deputy Secretary of Defense.

*Question.* What steps do you intend to take to accomplish these objectives at the Department of Defense?

*Answer.* As noted above, it would be premature for me to offer specific performance initiatives at this time. If confirmed, I will work with Secretary Rumsfeld to establish key management performance goals. I look forward to working with this committee and Congress as we move ahead.

*Question.* The Government Performance and Results Act (GPRA) is intended to provide managers with a disciplined approach—developing a strategic plan, establishing annual goals, measuring performance, and reporting on the results—for improving the performance and internal management of an organization.

What are your views on this law and your experience with it, as well as your preliminary ideas on how this law might be implemented?

*Answer.* Congress enacted GPRA in 1993 to strengthen performance management within the Federal Government. At the time GPRA was enacted, most Federal agencies did not routinely use strategic planning or performance management to shape resource decisions. DOD was a major exception, having relied for more than four decades on the Planning, Programming, and Budgeting System (PPBS) to guide program development and resource-allocation decisions. The PPBS is well aligned, in structure and intent, with the results-oriented mandate of GPRA. Instead of introducing a new data reporting or management system to implement GPRA, DOD has elected to use GPRA reporting to provide an executive-level overview of how the Secretary employs PPBS performance objectives to manage the Department's resources.

*Question.* Are you familiar with the strategic plan, annual performance plans, annual accountability report, and financial statements of the Department of Defense?

*Answer.* Yes, I'm familiar with these plans and reports, which are an important part of communicating the President's and the Secretary's priorities to the Department, Congress, and in a larger sense, to the American people. GPRA requires each Federal agency to produce a strategic plan every 3 years, to submit a performance plan with each budget, and to publish a performance report at the end of each budget year, summarizing progress in implementing the performance plan. In the case of DOD, Congress subsequently passed legislation establishing the Report on the Quadrennial Defense Review as DOD's strategic plan. DOD's annual performance plans and reports are structured to track progress in executing the defense strategy. In the next month or 2, the Department will forward its fiscal year 2000 performance report to Congress. If confirmed, I will give it close attention.

*Question.* What do you consider to be the most important priorities and challenges facing DOD as it strives to achieve these management goals?

*Answer.* Fundamentally, I believe the Department has effective processes in place for developing its strategic plan, establishing goals and measuring performance, and reporting the results. The challenge is to make sure that the substantive results of those processes reflect the true needs of U.S. national security in the 21st century and that goals are clearly articulated. Overall, the quality of the data we use to monitor performance has allowed us to measure and report our progress in meeting annual goals. In those cases where data is lacking, we are working to improve the underlying data support systems. Over the past several years, the Department has worked closely with Congress, the General Accounting Office, and the DOD Inspector General to enhance the performance of its internal management systems. In that process, several challenges have been identified, including the effective management of information technology investments and the need to streamline and improve the efficiency of financial management systems. The Secretary has made the modernization of these financial management systems one of his priorities, and I certainly support that objective.

*Question.* What changes, if any, do you feel might be necessary in these plans?

*Answer.* With the change of administration, the Department will revise its strategic plan and annual performance plans to reflect the priorities of President Bush and Secretary Rumsfeld as informed in the ongoing strategic reviews. We will continue to work with Congress as we present future GPRA strategic plans, performance plans, and performance reports to ensure that our GPRA activities reflect a full and effective implementation of the law.

*Question.* What are your views on the importance and role of financial information in managing operations and holding managers accountable?

*Answer.* These are immensely important. Accurate financial information is critical to evaluating outputs, services, costs, efficiency, productivity, and other essential management indicators. Such information is a vital tool for holding managers accountable.

*Question.* How would you address a situation in which you found that reliable, useful, and timely financial information was not routinely available for these purposes?

Answer. I would move decisively to improve the system or get a different one that works. It is my understanding that given the financial challenges we are facing, systems will need to be replaced over time.

*Question.* What is your view of the importance and role of internal controls (i.e., management controls) in ensuring the reliability of financial information?

Answer. Internal controls are very important. Their most critical role is to hold managers accountable for results and the wise use of resources. Also, these controls are essential to ensuring the proper allocation, disbursement, and accounting of funds and to prevent waste, fraud, and abuse.

*Question.* How would you determine whether the Department has in place the key information management processes required by law, including a detailed architecture, an investment control process, and appropriate information security plans?

Answer. If confirmed, I will look to the DOD Chief Information Officer to advise the Secretary and me on what information management initiatives are currently in place and what additional steps need to be taken to ensure that information technology investments are consistent with plans, process change requirements, architectures, and other information management guidance. I believe that the Department already has laid the foundation for a structured and systematic process for determining whether the key information management processes required by law are in place.

*Question.* What role do you envision you would play in managing or providing oversight over these processes?

Answer. As I indicated above, if confirmed I will look to the DOD Chief Information Officer to provide guidance for DOD information management and to spearhead the coordination of information technology activities across the Department. As such, I intend to fully support the DOD Chief Information Officer in these and other information technology management efforts.

*Question.* How would you go about implementing or improving these processes?

Answer. It would be premature for me to make any recommendations until I have had more time to study this area. However, if confirmed I intend to work closely with the DOD Chief Information Officer and other senior leaders in the Department to identify opportunities to improve existing information technology and management processes, and to achieve those improvements.

*Question.* The Government Performance and Results Act (GPRA) envisions that agencies will link their human capital planning with their strategic and annual plans.

Can you describe your experience in building and maintaining the human capital needed to achieve results (getting the right employees for the job and providing the training, structure, incentives, and accountability to work effectively)?

Answer. Attracting the right people, matching “faces with spaces,” ensuring professional development, and rewarding outstanding performance have been essential parts of every management job that I have ever held. Indeed, I believe that recruiting the right people for the right jobs and motivating them to perform are the most important keys to effective management. In government and in the academic world, where I have managed medium to large organizations, there are fewer tangible incentives to offer for performance and less flexibility to hire and fire. That means that one has to pay more attention, not less, to how you motivate people and provide as much intangible job satisfaction as possible, most importantly by empowering capable performers and entrusting them with meaningful responsibilities. Given our tight labor market, the Department of Defense’s senior leadership and personnel managers will have to become more people-centric and rethink our incentive structure. If confirmed by the Senate, I pledge to make personnel issues—military and civilian—a central concern for senior departmental management.

*Question.* The DOD workforce has undergone significant downsizing in the past several years, and with the current tight labor market, it is becoming increasingly difficult to attract and retain talent.

How would you work to attract and retain individuals with the experience, education, and skills needed throughout the Department of Defense?

Answer. The issues facing DOD in recruiting, developing, and retaining an excellent civilian workforce require a multi-faceted approach. I believe we begin by determining carefully what future workforce needs will be. Armed with that information, we need to strengthen or put into place the appropriate accession and retention strategies, including policies, legislation, and compensation. We also need to offer development opportunities, both as key accession and retention tools and as insurance that we are growing the cadre of leaders and managers necessary to implement our Defense strategy. Finally, we must continue to manage the workforce transition effectively.

*Question.* To become a high-performance organization, an agency needs senior leaders who are drivers of continuous improvement.

What is your approach to motivating career employees to achieve excellence?

Answer. Career civil servants represent the core of operations, as they provide the continuity and institutional knowledge that support all of our military operations. Therefore, I believe in recognizing that value and rewarding excellence. One of the most important things is to communicate clearly the importance of the mission and an understanding of how their work contributes to the mission. Another way of doing so is to provide the education and training necessary to meet the increasingly complex mission. If confirmed, I will review existing education and training programs to ensure that they give current and prospective leaders the tools they need to manage effectively in the highly complex Defense environment. I will also make every effort to ensure that our career employees are appropriately compensated for all they do and would encourage public recognition of excellence.

#### SCIENCE AND TECHNOLOGY

*Question.* The Department of Defense Science and Technology program is at a 20-year low. The Strom Thurmond National Defense Authorization Bill for Fiscal Year 1999 established the goal of increasing the budget for the defense science and technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. This goal has not been met in the fiscal year 2000 nor the fiscal year 2001 budget request submitted by President Clinton. In President-elect Bush's speech at the Citadel he spoke of his support for a strong and stable technology base.

If confirmed, how will you reflect this support in the defense budget?

Answer. One of my goals will be to fund the Science and Technology (S&T) program at a level adequate to ensure the technological superiority of our armed forces. A downsized military needs a technological edge now more than ever. President Bush has committed to increasing defense R&D by at least \$20 billion between fiscal years 2001–2006. The S&T accounts should receive a substantial share of this increase.

*Question.* The defense laboratories are facing a future of continued reductions in research and support personnel. This trend, if unchecked, could result in a loss of "critical mass" in research efforts across a number of areas critical to future programs. This situation is further complicated by the fact that in the current economy the Department is vying with industry for the best and the brightest high tech personnel, but is unable to compete on salary and quality of work. Finally, the process for hiring can take up to 18 months as opposed to direct hiring in industry.

If confirmed, how will you attract and retain scientists and engineers in the Department of Defense?

Answer. This is an important issue, central to transformation. Unfortunately, I do not yet know enough about it to give you a complete answer. If confirmed, I will ensure that attracting and retaining scientists and engineers is a key priority of the Department of Defense.

#### MODERNIZATION

*Question.* Last fall, the Congressional Budget Office estimated that if the Department were to execute just the current procurement plans, at the rates included in the approved acquisition strategy, that an additional \$30 billion a year would be required in the procurement accounts alone.

Do you agree that the procurement accounts are not executable unless there is an infusion of additional funds?

Answer. The CBO estimate is based on the assumption that the currently approved plans are appropriate. The ongoing defense review directed by Secretary Rumsfeld will specify where shortfalls lie and what must be done to address those shortfalls. If confirmed, I will actively support that review.

*Question.* Do you believe that significant changes are needed in the Department's current procurement plans?

Answer. See previous answer.

*Question.* If confirmed, how do you intend to address this shortfall, if it in fact exists?

Answer. The aforementioned review of the U.S. national security strategy will result in consideration of which capabilities to modernize, upgrade or replace with new technology. Properly conducted, this process would address the Department's procurement plans.

*Question.* Even if all of the current aircraft modernization programs execute as planned, the average age of the tactical, strategic, and tanker fleet will increase.

Aging aircraft require ever-increasing maintenance, but even with these increasing maintenance costs, readiness levels continue to decline.

How can both the maintenance of the legacy force and the modernization efforts be affordable at anywhere near the current budget levels?

Answer. I look at Secretary Rumsfeld's ongoing defense review as the first step to addressing these issues. That review should clarify the appropriate balance between legacy forces and modernization efforts.

#### DEPARTMENT OF DEFENSE ORGANIZATION

*Question.* In the 50 years of DOD's existence, there has grown up a substantial bureaucracy, much of which duplicates functions in the military departments.

In your opinion, are there areas where functions should be centralized in DOD, at the expense of the military departments, or should functions be devolved from DOD to those departments? Please give examples.

Answer. Without a more careful internal review, it would be premature for me at this point to offer any thoughts on administrative restructuring. If confirmed, I will work with Secretary Rumsfeld and the Service Secretaries to identify redundancies in our bureaucratic infrastructure and to streamline our operations where possible.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Deputy Secretary of Defense?

Answer. We will need to consider a number of issues in evaluating our National Security Strategy and National Military Strategy. Our goal is to assure that our country has the new capabilities necessary to deter threats and defend our national security interests and contribute to peace and stability. This will involve transforming our U.S. military into a 21st century force, modernizing the intelligence and command, control, and communications infrastructure, and reforming DOD structures, processes, and organizations. In addition, our new capabilities and readiness must be sustainable. Balancing limited resources—even in an atmosphere of projected budget surpluses—is always a challenge. Properly outfitting our forces today, while at the same time ensuring we sustain robust modernization for the future, will be a key challenge for the new administration. Specific quality of life issues—such as morale, recruiting and retention, health care and benefits—will also be important.

*Question.* If confirmed, what plans do you have for addressing these challenges?

Answer. These issues and others will be considered in the defense review and the QDR. Through these reviews, we will examine priorities and consider the fiscal implications associated with those priorities.

#### MOST SERIOUS PROBLEMS

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Department of Defense?

Answer. As Secretary Rumsfeld has noted, institutional change across the board—in the executive branch, the legislative branch, the private sector, as well as our allies—will present a great challenge. If confirmed, I plan to work with Secretary Rumsfeld to establish key management performance goals and to reduce or eliminate bureaucratic redundancies in the Department of Defense and streamline our management practices.

*Question.* What management actions and time lines would you establish to address these problems?

Answer. It is too early to establish time lines. If confirmed, I look forward to working with this committee and Congress as we address current problems in the Department of Defense.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Secretary of Defense?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

OVERSEAS PRESENCE

1. Senator THURMOND. The United States maintains a significant number of forces in forward deployed locations such as Europe and South Korea. With the end of the Cold War and ongoing peace initiatives on the Korean Peninsula, what is the justification for keeping the large number of forces forward deployed?

Dr. WOLFOWITZ. Although the Cold War has ended and tensions on the Korean Peninsula have begun to lessen, forward-deployed U.S. forces in Europe, South Korea, and elsewhere continue to serve a number of vital national purposes. Our forces in Europe not only ensure the continuing security and stability of this critical region, they are also well postured to respond to crises both in Europe and in adjoining regions such as the Middle East.

Despite some lessening of tensions on the Korean Peninsula, North Korea remains a significant military threat to South Korea. U.S. forces in South Korea and elsewhere in Northeast Asia represent a powerful deterrent to North Korean aggression and, should deterrence fail, would constitute a critical element of the initial response to that aggression. Moreover, as with our forces in Europe, our forces in Northeast Asia provide broader benefits. They demonstrate our ongoing security commitment to the region, underwrite regional stability, and provide rapid response to crises throughout Asia.

MOST SIGNIFICANT CHALLENGE

2. Senator THURMOND. Unlike the period of the Cold War, the United States Armed Forces are facing the challenges of a world that is politically and economically unstable and unpredictable. In view of this uncertain future what in your personal views will be the most significant challenge facing the U.S. Armed Forces in the next 10 years?

Dr. WOLFOWITZ. The most pressing challenge we face in the next 10 years will be ensuring our men and women in uniform have the wherewithal they need to address the threats of a new security environment, in which a more diverse, less predictable set of potential adversaries will seek to challenge the strategic interests of the United States and of our allies. Maintaining a capable and flexible force appropriate for this environment will require us to address issues ranging from recruitment and quality of life concerns to the expansion of unconventional threats brought by the proliferation of modern technology, including nuclear, biological, and chemical (NBC) weapons, missiles, terrorism and newer threats against space assets and information systems.

JUNIOR ROTC PROGRAMS

3. Senator THURMOND. As you may be aware, I am very interested in the Junior ROTC program. While the primary purpose of the program is to develop good citizens, there are tangible benefits to our Nation's Armed Forces. Statistics show that more than 40 percent of the students who graduate from the Junior ROTC program choose some form of military service.

Although I have expressed my goal to enhance the program to Secretary Rumsfeld, I want to make you aware of my interest in the program and would appreciate your views regarding Junior ROTC?

Dr. WOLFOWITZ. In his February 21 letter to you, Secretary Rumsfeld underscored his support for the Junior ROTC program and reported the intent to look into expansion during the Department's forthcoming defense review. I agree that JROTC

is a great way to improve the citizenship of America's high school youth, while helping students and faculty better understand and appreciate their armed forces.

#### DOD TRANSFORMATION

4. Senator THURMOND. Our services are undergoing or are planning major transformation to meet the challenges posed by threats of spreading technologies, increased nationalism, and weapons of mass destruction. In your personal view, why has it taken this long to begin the transformation and are these changes looking far enough into the future to be effective against emerging threats?

Dr. WOLFOWITZ. Implementing rapid transformation of the world's premier fighting force is difficult absent a compelling case for how and why the future security environment demands such change. It is a difficult challenge to balance this transformation with our nearer-term readiness concerns. As a greater consensus emerges on future security challenges, the pace of transformation should accelerate. The means to measure progress toward transformation goals are also required in order to manage the allocation of resources appropriately. It is our goal to achieve a clearer articulation of emerging challenges in the context of the current strategy review. The metrics for measuring success should follow closely. We must carefully look at process changes that will bring new transformed capabilities to the field more rapidly.

#### KEY ISSUES

5. Senator THURMOND. Your experience and knowledge regarding the Department of Defense and Congress will serve you well during your tenure as Deputy Secretary of Defense.

Based on that experience and on the needs of our Armed Forces, what is the one key issue that you would like to resolve before you leave office?

Dr. WOLFOWITZ. I have no single issue that will animate my work in the Department. Rather, I will focus my efforts on helping Secretary Rumsfeld attain the President's three major goals for the Defense Department:

- First, to strengthen the bond of trust with the American military;
- Second, to develop the capabilities to defend against missiles, terrorists and the complex set of threats to our information systems and our all-important assets in space; and
- Third, to take advantage of the technological revolution in order to help us create a military for the 21st century.

At the end of my tour, if I have improved the well-being of the Department's people—military and civilian, Active and Reserve—and their ability to defend our Nation, I will consider my mission accomplished.

#### MULTINATIONAL FORCE AND OBSERVERS—SINAI FORCE DEPLOYMENT

6. Senator THURMOND. A significant concern with both the Bosnia and Kosovo deployments is that they appear to have no end. We only need to look at our deployments to the Sinai Peninsula that started in 1982. The 900 servicemembers year round commitment contributes to the high operations pace of our Armed Forces and is a drain on the Department of Defense's resources.

In this era of peace between Egypt and Israel, what do these forces contribute to the peace in the region and when will this commitment end?

Dr. WOLFOWITZ. MFO-Sinai has been a particularly successful peacekeeping operation and a highlight of the continued peace between Egypt and Israel. The presence of U.S. forces in the MFO has been a major contributor to mutual Egyptian-Israeli confidence in the Camp David Accords. This success now presents the opportunity to consider whether this commitment is still necessary. The Department is now reviewing options for the possible reduction of U.S. troop commitment in the Sinai.

#### DEPARTMENT OF DEFENSE FACILITIES

7. Senator THURMOND. The average age of the Department of Defense facilities is 41 years and is increasing. To support this infrastructure the Department is investing less than 2 percent of its replacement value while the accepted corporate standard is at least 3 percent. In simple terms, we are not investing sufficient resources to maintain our facilities to ensure the quality of life and readiness.

As the next Deputy Secretary of Defense you will have a significant role in ensuring the readiness of our facilities. Other than providing the necessary fiscal resources to maintain our facilities, what other steps can the Department take to resolve this critical issue?

Dr. WOLFOWITZ. You are right, Senator, our physical plant is aging. DOD has previously reported that it maintains excess infrastructure. We will continue to demolish and dispose of excess facilities individually. We plan to improve utilization of existing facilities through more joint use and through partnering with the private sector on leasing underutilized facilities. However, the Department is currently conducting a comprehensive defense review that will help guide decisions regarding our infrastructure strategy. Until that review is complete, I will defer judgment on whether further initiatives and additional funding are needed.

---

QUESTIONS SUBMITTED BY SENATOR BOB SMITH

U.S.-CHINA MILITARY-TO-MILITARY RELATIONS

8. Senator SMITH. I believe China is a serious threat to U.S. national security and our allies in Asia. In 1999, Rep. Tom DeLay and I addressed the threat posed by the Clinton administration's policy of engagement with China with an amendment restricting military-to-military exchanges, a law which we believe the Clinton administration circumvented. We believe the military-to-military briefings given by DOD made available sensitive U.S. military information to the People's Liberation Army.

Would you support ending this military-to-military exchange program? Or would you propose to overhaul it to convert it into a program that teaches code of conduct for soldiers, the role of a military in a democratic society, etc., information which would actually benefit the PLA and would promote our stated goals of encouraging China to democratize?

Dr. WOLFOWITZ. Section 1201 of the Fiscal Year 2000 National Defense Authorization Act prohibits "inappropriate exposure" of U.S. operational capabilities and technologies to Chinese visitors. The Department of Defense will continue to strictly comply with the requirements of this provision in our military-to-military engagement with the PRC. As the new administration settles in place, we are undertaking a serious review of the schedule of military-to-military events with the PLA planned for 2001. In this review, we will ensure that our military-to-military program with the PLA supports U.S. policy objectives and will emphasize that the program must have increased reciprocity and transparency on the part of the PLA. Secretary Rumsfeld conveyed this message clearly and directly to senior Chinese leaders during his March 22, 2001 meeting at the Pentagon with Chinese Vice Premier Qian Qichen.

EXPORT CONTROLS

9. Senator SMITH. I am very concerned over easing export control restrictions to China, which has allowed the Chinese Government to purchase powerful computers and garner sensitive aerospace technology assistance from the United States that can be employed for military purposes. How do you see the DOD working to prevent such dual-use transfers of technology from occurring under the Bush administration? Do you believe the DOD should have a heightened role in determining the sale of sensitive dual-use technologies to China?

Dr. WOLFOWITZ. My objective is to ensure that we have a robust export control system that controls sensitive items and technologies that represent national security or proliferation risks. I am committed to ensuring that DOD plays a key role in the development and implementation of export control policy. In this regard, I will be paying close attention to the operation of existing interagency mechanisms and will work to revise them if it is necessary to protect our national security interests, particularly with regard to exports of sensitive dual-use technologies to high risk destinations.

TAIWAN POLICY

10. Senator SMITH. I support the sale of U.S. military hardware, including the Aegis system, to Taiwan in order for the island nation to defend its democracy against Chinese threats to reunify through military aggression. Furthermore, I support the Taiwan Security Enhancement Act (TSEA).

Do you agree that the U.S. should sell advanced military hardware such as the Aegis system and other types of military hardware to Taiwan to balance the military situation in the Taiwan Strait? Will you push for TSEA's passage in the Senate since President Bush endorsed the measure as a candidate?

Do you believe the United States military has a role to play in the collective defense of Taiwan as a democratic friendly nation beyond military hardware sales should China initiate military aggression towards Taiwan?

Dr. WOLFOWITZ. We support the provision of defense articles and services in accordance with the Taiwan Relations Act. We are currently evaluating this year's Taiwan's arms sales requests, to include the Aegis-derived Evolved Advanced Combat System. With regard to the Taiwan Security Enhancement Act, we support the intent of the legislation—ensuring the security of Taiwan. As has been stated publicly, the United States remains committed to maintaining regional peace and stability in this region, and we continue to stand firmly for the peaceful resolution of differences between the PRC and Taiwan. With regard to U.S. military support to Taiwan beyond arms sales, our forces are postured to safeguard U.S. interests and to react quickly to a range of possible contingencies in the region.

#### KE-ASAT

11. Senator SMITH. Over the last decade I have encountered considerable difficulty within the DOD and the previous administration to ensure the development and deployment of the Kinetic Energy Anti-Satellite (KE-ASAT) program. I believe we should finish the KE-ASAT program (which is 90 percent complete), which provides defensive measures against hostile space assets surveiling U.S. forces.

Do you support programs such as KE-ASAT that will protect U.S. troops and ensure U.S. military dominance? I would like to ask you for your commitment to completing this vital program and providing the necessary oversight over SMDC to do so, including returning the team to the program and necessary funding for completion, as General Shinseki committed to me to do.

Dr. WOLFOWITZ. I fully support protecting our U.S. troops and doing what is necessary to ensure U.S. military dominance. We will be looking at a new strategy for America's defense in our strategic review and subsequently in the Quadrennial Defense Review. As part of these reviews, we will look at how to programmatically and operationally support these very important goals.

#### SPACE COMMISSION REPORT

12. Senator SMITH. Last month, Secretary Rumsfeld released the findings of the Space Commission Report which made several recommendations to improve military space management and assets.

What are your views on the need to reform military space management and the need to implement the recommendations made by Secretary Rumsfeld and the Commissioners?

Dr. WOLFOWITZ. It is clear that the United States relies significantly on space for our national security. We need to ensure that the management and the organization of our national security space program reflect the importance of space to the Nation today. I believe that a more comprehensive approach is necessary to assign clear responsibilities and accountability for national security space programs. The Space Commission has presented a thorough, independent and objective assessment of our national space program. In our strategic review, we must seriously consider their recommended management and organizational changes if we are to meet the national security space needs of the 21st century.

#### COOPERATIVE THREAT REDUCTION

13. Senator SMITH. I have serious concerns with the Cooperative Threat Reduction (CTR) program which I believe subsidizes the Russian Government's ability to improve their military at U.S. taxpayers expense—allowing the Russians to use our funds to replace obsolete weapons with more sophisticated ones. Meanwhile, the Russians continue to modernize their military and proliferate weapons of mass destruction to other hostile states.

Do you believe the Cooperative Threat Reduction program could be reinvented to reach its original objectives—i.e. reducing the threat and conditioning funding to Russian compliance, particularly on proliferation issues?

Dr. WOLFOWITZ. As Secretary Rumsfeld has noted to Congress, the elimination of former Soviet strategic nuclear weapons and their delivery vehicles under the Coop-

erative Threat Reduction (CTR) program has benefited U.S. national security. I would note that the CTR program does not provide funds to the Russian Government. All assistance is in the form of contracts to either U.S. companies or to Russian enterprises and institutes. The weapon systems being eliminated are mainly operational systems while the pace of Russian strategic modernization remains slower than projected. Nevertheless, a review of ongoing CTR projects and their national security implications is appropriate and has now begun.

#### CHINESE MISSILES

14. Senator SMITH. Last year, I addressed in a floor amendment the sale of the Russian-made Moskit sea-skimming missiles purchased by China for use on Sovremenny Class destroyers, which China now possesses.

How do you view this direct threat to U.S. naval forces in the Pacific and how do we aid Taiwan as required under the TRA to counter this escalated threat?

Dr. WOLFOWITZ. Due to its high speed and maneuverability, the Moskit sea-skimming missile does present technical challenges to navies around the world. The Taiwan military has some limited capability against Moskit missile through U.S. supplied weapons systems. Perry-class and Knox-class frigates are equipped with the PHALANX Close-In Weapons System (CIWS), which is designed to intercept surface skimming, low-flying anti-ship missiles. In the event of a conflict, Taiwan's F-16 aircraft, equipped with the air-launched Harpoon missiles, could be used to attack People's Republic of China ships equipped with the Moskit anti-ship cruise missile.

#### PHALCON SALE

15. Senator SMITH. I have recently read in defense industry publications that Israel is attempting to resurrect its Phalcon early warning radar sale with China. This sale will increase China's ability to project force in the Taiwan Strait and into the South China Sea. I believe this sale would also threaten the U.S. Navy's 7th Fleet. What would you do as Deputy Secretary of Defense to deter this sale to China?

Dr. WOLFOWITZ. The United States has consulted with the Israeli government closely on its proposal to sell the Phalcon early warning aircraft to China. We have made clear to the Israelis that we view the Phalcon as a threat to U.S. interests and regional stability in Asia, as well as a potential threat to any U.S. forces involved in a military conflict with China, and we have clearly stated our opposition to the sale. Then-Prime Minister Barak announced in July 2000 that the sale would not go forward, and we consider the matter closed.

#### NATIONAL MISSILE DEFENSE

16. Senator SMITH. I am an ardent supporter of the creation of a multi-tiered missile defense system. I believe the United States should move forward with developing and deploying this system. Furthermore, I am in full agreement with Secretary Rumsfeld's assessment that without a missile defense, hostile nations will be able to alter the actions and limit options available to the United States.

Would the abrogation of the ABM Treaty help with the goal of pursuing missile defense?

How should the United States approach providing Great Britain, Japan and Taiwan and other allies with missile defense capabilities?

Dr. WOLFOWITZ. The issue of how to handle the ABM Treaty will be part of our overall strategic review. However, as senior administration officials have made clear, the ABM Treaty, in its current form, is no longer relevant. We will look at missile defense options unconstrained by the ABM Treaty, to see what makes the most sense. We hope to persuade the Russians of the need to permit deployment of effective missile defenses. But as Secretary Powell has noted, it may be necessary to withdraw from the ABM Treaty if the government of the Russian Federation will not agree to modifications necessary to accommodate our missile defense programs.

The administration has made clear that our proposed missile defenses would protect our friends and allies as well as the United States. We have also made clear our commitment to close and substantive consultations with allies. These consultations have begun, and we will seek the views of our allies about specific missile defense responses to the growing ballistic missile threat.

## PEACEKEEPING AND HUMANITARIAN MISSIONS: IMPACT ON READINESS

17. Senator SMITH. I am disturbed at the dangerous decline of the U.S. military over the last decade. There is a long list of issues that concern me, but in particular, I see a pressing need to address military readiness. Furthermore, I believe peacekeeping and humanitarian missions correlate directly to our current readiness dilemma. What do you believe is the best way to work with the DOD to reverse our readiness deficiencies and to terminate U.S. peacekeeping and humanitarian missions that have no bearing on U.S. national security interests? Is anyone at DOD conceiving an exit strategy for the Balkans?

Dr. WOLFOWITZ. The Secretary is actively reviewing U.S. military participation in the full range of ongoing peace operations, humanitarian operations, and routine engagement activities to ascertain ways for reducing tempo strains on our personnel while also continuing to advance U.S. interests. In this regard, it is worth noting that in some cases, such as communications, engineering, and civil affairs, the impact of ongoing operations on readiness is not entirely negative, as they can provide excellent training for certain military specialties.

Our strategic goals in the Balkans are to maintain peace and security in South Eastern Europe, protect the strength of the NATO Alliance, and maintain U.S. credibility with our European Allies. With that in mind, we want to avoid precipitous withdrawals while continuously reviewing troop levels to tailor them properly to mission and environment. Changing conditions in Bosnia and Kosovo will allow adjustments with the intent of "right-sizing" our forces to the tasks at hand.

## DEFENSE REVIEW

18. Senator SMITH. I am pleased that Andy Marshall has been selected to review the structure of the Defense Department. When will this review be completed and what kind of input will you or other appointees have in it? Will Senate Armed Services Committee members be briefed on Marshall's findings?

Dr. WOLFOWITZ. To clarify the structure of our review, Andy Marshall has been asked to review the Department's overall strategy. Additional reviews will be conducted to look at other areas of concern. Later this spring, Secretary Rumsfeld will provide testimony in support of the fiscal year 2001 Supplemental Budget, at which time he will outline some broad aspects of the review for Congress.

## SECURITY CLEARANCE BACKLOG

19. Senator SMITH. Last year, I passed legislation that tightened the requirements for people seeking DOD security clearances for job-related purposes following revelations of clearances being granted to felons. But there is another problem, the clearance backlog.

The Defense Security Service (DSS) is still a chaotic and demoralized agency and the security clearance backlog has not improved. What is being done to resolve this problem? Will new leadership be appointed at the DSS?

Dr. WOLFOWITZ. I share your concern that this is a very serious issue that must be addressed quickly. As we assemble our senior leadership team, it will be a priority to consider any process changes that may be necessary to alleviate the current backlog in security clearances.

## BASE CLOSURES

20. Senator SMITH. As I understand it, a BRAC round is being considered as a way to save money by the DOD. Portsmouth Naval Shipyard, (PNSY), which is located in New Hampshire, represents the best performance shipyard for attack subs. PNSY successfully rolled out "smartbase" technologies to demonstrate to the DOD the cost saving improvements of the "smartbase" technology. Can you outline what you believe are the parameters of any BRAC Secretary Rumsfeld and you would like to see?

Dr. WOLFOWITZ. Our base structure should fit our force structure requirements. We are looking at the issue of excess infrastructure, and will make a decision on how best to address this as soon as we can in the review process. When we have established the proper relationship between the force structure needed to execute our national security strategy and the infrastructure needed to support that force, we will work closely with Congress to develop a process that is fair and true to that objective.

QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

BASIC RESEARCH FUNDING

21. Senator SANTORUM. President Bush has emphasized the need to fund “leap ahead” technologies and has mentioned the possibility of “skipping a generation of weapons to make them more lethal and mobile.” The only way this policy will succeed is if President Bush commits to investing heavily in basic sciences in American universities.

The Department of Defense has historically played a major Federal role in funding basic research and has been a significant sponsor of engineering research and technology development conducted in American universities. For over 50 years, Department of Defense investments in university research have been a dominant element of the Nation’s research and development (R&D) infrastructure and an essential component of the U.S. capacity for technological innovation.

Supporting university research benefits the Department of Defense in many ways. In addition to producing important advances in knowledge, support to university research helps keep top scientists and engineers involved in defense research. Also, students who get hands-on research training become the highly qualified scientists and engineers of the future who go to work in academia, industry, and Federal laboratories.

In the 1990s, Basic Research funded through the Department of Defense peaked at \$1.489 billion in fiscal year 1993 and declined to a level of \$1.059 billion in fiscal year 1998. In fact, funding for Department of Defense Basic Research began to increase, beginning in fiscal year 1999, only after Congress took the lead in reversing this trend.

Do you believe that there exists a mismatch between the goals of President Bush and levels of investment in our Department of Defense Basic Research accounts?

If so, what do you believe is a more accurate figure that ought to be invested in Department of Defense Basic Research funding?

Can you indicate any short-term goals that you feel are achievable with respect to Department of Defense Basic Research funding?

Dr. WOLFOWITZ. First, it is important to review the funding history for the Department’s Basic Research program. The funding numbers you have cited for fiscal years 1993 and 1998 are appropriated values in fiscal year 2001 constant dollars. The table below shows both the requested and appropriated amounts for the Department’s Basic Research program in fiscal year 2001 constant dollars.

BASIC RESEARCH DOLLARS IN MILLIONS/FISCAL YEAR 2001 CONSTANT

	Fiscal Year								
	1993	1994	1995	1996	1997	1998	1999	2000	2001
Requested .....	1,277	1,398	1,337	1,300	1,220	1,215	1,148	1,133	1,217
Appropriated .....	1,489	1,312	1,282	1,176	1,090	1,059	1,098	1,157	1,314
Difference .....	+213	-86	-55	-124	-130	-156	-50	+24	+97

As stated in “A Blueprint for New Beginnings,” outlining the President’s Budget Request to Congress, “the President believes that the Nation’s defense strategy should drive decisions on defense resources.” Such is the case with Basic Research. However, determining a sufficient level of investment for Basic Research is not a precise science, rather it is a strategic decision to invest in broad areas of research that have the potential of yielding revolutionary advances, as well as pursuing solutions to known operational problems. An investment in Basic Research pays dividends in many ways. Basic research is a long-term investment with an emphasis on opportunities for military application in the future, yet it also, as you note, contributes to our national academic and scientific knowledge base by providing approximately 40 percent of the research funding for the Nation’s colleges of engineering. The Department will sustain an investment in Basic Research because of proven significant, long-term benefits.

It has always been the Department’s goal to fund Basic Research, and the remainder of the Science and Technology program, at a level adequate to ensure the technological superiority of our armed forces. However, we also need to ensure that the funding levels of the various components of the DOD budget are balanced based on our assessment of the most urgent requirements at any given time. The Department’s compelling desire to increase the modernization budget, while sustaining readiness at a high level, must also be considered. The amount of funding the De-

partment will request for Basic Research will, I believe, be adequate to maintain our technological superiority both near-term and in the future.

#### DEFENSE INDUSTRIAL BASE

22. Senator SANTORUM. Last year, based on concerns articulated by the defense industry, the Department of Defense initiated a review of ways to improve not only the health of the defense industrial base but also competition among these companies. The review was carried out by a Defense Science Board (DSB) panel. The goal of the process was to see what kinds of actions in terms of acquisition practices, rules and regulations needed to be changed in order to help the Department get lower costs and more innovation.

The DSB report, *Preserving a Healthy and Competitive U.S. Defense Industry to Ensure our Future National Security*, concluded that the Department of Defense must move aggressively to help American companies attract and retain top talent as well as improve overall profitability by continuing changes in profit policies boosting investment in defense research and development.

The DSB panel issued a listing of 27 regulatory and policy changes designed to help ensure the financial health of the defense industry.

Have you reviewed the DSB panel's report on improving the health of the defense industry?

Are there other policy or regulatory changes that you would recommend to improve the health of the defense industry and improve innovation that were omitted by the report?

Are there ways that the Department could do a better job at encouraging firms to increase their independent research and development (IR&D) efforts?

Are there changes that can be made which will enable individuals who leave the private sector for public sector service the ability to return to private sector employment?

Dr. WOLFOWITZ. We are continuing to address the recommendations of the DSB panel's report. As we assemble our management team, we will be examining recommendations made by a variety of groups, such as the Business Executives for National Security Tail-to-Tooth Commission, in order to establish the initiatives we intend to pursue. It is recognized that we must consider ways that the Department can encourage firms to increase their IR&D efforts. For example, the recommendation made by the DSB to revise the IR&D policy regarding fees could incentivize contractors to spend IR&D dollars. This is an area that certainly requires further analysis and careful consideration. At this point, it would be premature to offer more specific detail on changes that may be necessary.

#### BASE CLOSURES

23. Senator SANTORUM. The military base closure process (BRAC) was first established in 1988. Since that time, 97 bases have been closed and about 400 have been realigned. The process of closure and community development after the base closes has suffered from problems in the past, especially in the late 1980s and early 1990s. Accordingly, between 1992 and 1995, the Federal Government adopted policies to improve the reuse and redevelopment process governing these closed facilities.

Congressional efforts to authorize additional base closing rounds have been unsuccessful due in large part to the belief that President Clinton interfered with the integrity of the process during the 1995 BRAC review.

In an effort to re-start the base closing process, several Members of Congress have discussed the creation of a "two-step" BRAC process. Under this proposal, the military services would identify certain "core" bases that would not be considered for closure. Facilities like the Pentagon or Andrews Air Force Base would fall into this category. These core facilities, which might comprise up to 25 percent of all bases, would be exempt from further review by the base closure commission.

A full assessment of "non-core" bases would follow this initial review period. Proponents of this approach believe that the two-step process would help eliminate community uncertainty and also help "core base" communities avoid the expense of hiring consultants and other experts to guide them through fighting the closure process.

Do you believe that the Department of Defense should recommend to President Bush that he request authorization of additional BRAC rounds?

If so, do you believe that the process must be changed to restore faith in the fairness of the process?

What are your thoughts on the proposed “two-step” BRAC process that has been suggested?

Dr. WOLFOWITZ. Our base structure should fit our force structure requirements. We are looking at the issue of excess infrastructure, and will make a decision on how best to address this as soon as we can in the review process. When we have established the proper relationship between the force structure needed to execute our national security strategy and the infrastructure needed to support that force, we will work closely with Congress to develop a process that is fair and true to that objective.

---

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

STRATEGIC REVIEW

24. Senator LIEBERMAN. What is your role in the current strategic review?

Dr. WOLFOWITZ. As the Deputy Secretary of Defense I am part of a small group reviewing the work of each panel associated with our overall look at the Defense Department structure. I provide guidance regarding the particular areas each panel undertakes, as well as reviewing their results. I also make recommendations to Secretary Rumsfeld on various aspects of the overall review.

TRANSFORMATION

25. Senator LIEBERMAN. What do you think are the necessary actions to effect transformation?

Dr. WOLFOWITZ. Successful military transformation will require several actions, the first of which is to generate organizational slack and free-up resources needed to develop future capabilities. Second, we need to create new, experimental forces dedicated to the development of new combat capabilities. These forces would conduct long-term experiments, develop operational concepts and even look at new ways of organizing forces. Finally, when the U.S. engages in conflict, these new units, should they prove effective, would be vanguard forces to test and refine our new methods.

STRATEGIC REVIEW

26. Senator LIEBERMAN. How do you intend to assure the strategic review puts the main focus on these actions?

Dr. WOLFOWITZ. As discussed earlier, Andy Marshall is conducting one element of the strategy review. For the past 8 years, he has carefully reviewed past military transformation efforts and the conditions that allowed them to be successful. Also, there is a panel dedicated solely to the issue of transformation among the group of panels contributing to the Defense review.

QUADRENNIAL DEFENSE REVIEW

27. Senator LIEBERMAN. How do you see the review connecting to the Quadrennial Defense Review (QDR)?

Dr. WOLFOWITZ. The Defense review is an iterative process that will be ongoing. The findings and recommendations of the various elements of the Defense review will serve as road maps for key issues that must be considered during the QDR process, and subsequently, in the development of future budget requests.

DEFENSE REVIEW

28. Senator LIEBERMAN. Please tell us the time lines for the review.

Dr. WOLFOWITZ. Again, I want to emphasize that the Defense review is an iterative process that will be ongoing. Accordingly, specific completion dates have not been established.

TOP PRIORITIES

29. Senator LIEBERMAN. What do you see as the top priorities for the Defense Department and the Pentagon?

Dr. WOLFOWITZ. The Department's top priorities, as outlined by Secretary Rumsfeld are:

1. Fashion and sustain deterrence appropriate to the new national security environment, aimed at devaluing investment made in weapons of mass destruction and their delivery systems. This must be based on a combination of nuclear and non-nuclear defensive capabilities working together to deny the opportunity and benefits associated with the threat or the use of weapons of mass destruction against U.S. forces, our homeland, and our allies.

2. Assure the readiness and sustainability of our forces, reducing unnecessary risks to American interests and to the lives of American service men and women. Inadequate readiness takes a larger toll on the future quality of our forces. Even the highest morale is eventually undermined by back-to-back deployments, poor pay, shortages of spare parts and equipment, and declining readiness.

3. Modernize U.S. Command, Control, Communications, and Intelligence (C<sup>3</sup>I) capabilities to support our 21st century needs. Modern C<sup>3</sup>I infrastructure is the foundation upon which military power rests, and is fundamental to the transformation of U.S. military forces. We must also strengthen our intelligence capabilities and our space capabilities and protect those assets against various forms of attack.

4. Transform the U.S. defense establishment to address our new circumstance by swiftly introducing new weapons systems. Undertake near-term investment to acquire modern capabilities derived from U.S. scientific and industrial preeminence.

5. Reform DOD structures, processes, and organization. The legacy of obsolete institutional structures, processes, and organizations creates unnecessary costs and imposes unacceptable burden on national defense. We will examine omnibus approaches to changing the statutory and regulatory basis for the most significant obstacles to reform.

#### THE ROLE OF THE DEPUTY SECRETARY OF DEFENSE

30. Senator LIEBERMAN. Will you adhere to the habitual role of the DEPSECDEF and manage the day-to-day operations of the Pentagon?

Dr. WOLFOWITZ. Yes, it is fair to say that while the Secretary is the Chief Executive Officer, the Deputy functions mainly as the Chief Operating Officer (COO). This normal business relationship does not extend to the day-to-day supervision of military operations, but does cover most other areas of responsibility in the Department.

31. Senator LIEBERMAN. Will your role be policy or management?

Dr. WOLFOWITZ. I believe it is impossible to separate policy formulation and management. In general, I intend to be the COO of the Department. I realize that we will have an Under Secretary for Policy, as well as other senior officials in the Department with responsibility for various aspects of policy. My prior service as Under Secretary for Policy will in no way limit the traditional authority of those officials.

32. Senator LIEBERMAN. Given your depth of policy expertise, how will you coordinate your role with the Under Secretary for Policy, once he/she is nominated?

Dr. WOLFOWITZ. The Under Secretary for Policy will function in much the same way as they have in the past. I will assist and give guidance as necessary, but the fact that I once held this position will not limit the prerogatives of the incumbent.

#### HOMELAND DEFENSE

33. Senator LIEBERMAN. What should be the Pentagon's role in the broader issue of homeland defense?

Dr. WOLFOWITZ. Homeland defense is not a new mission area. The U.S. military has a long and proud tradition of protecting the American homeland from a wide variety of threats. Over time, the nature of the threat has changed—from traditional land and maritime invasion in the country's early years, to potential nuclear attack during the Cold War, to the present day potential of nuclear, biological, chemical, missile and information attacks from both state and non-state actors, such as terrorists. As part of our strategic review we will be addressing how the Department of Defense should be postured to ensure continued defense of the U.S. homeland from these evolving threats.

#### MILITARY PAY

34. Senator LIEBERMAN. Do you believe there is a pay gap for military members?

Dr. WOLFOWITZ. Much has been written about the existence of a military “pay gap.” Many argue that difficulty in recruiting and retaining high quality people in itself suggests the presence of a pay gap, but I believe the fundamental issue is the ability of pay to attract and retain a quality force. Recognizing that it has become increasingly difficult to recruit and retain amidst today’s economy, one can make a case that pay may not be adequate. One of my important responsibilities will be to ensure that great attention is paid to sustaining a level of military pay that is competitive, and supportive of consistent success in recruiting and retention.

35. Senator LIEBERMAN. Do you support a military pay raise?

Dr. WOLFOWITZ. Yes. The President recently announced an additional \$1.4 billion to be directed to military pay. This will provide for a minimum pay raise of 4.6 percent on January 1, 2002, and \$1 billion to be used to address specific recruiting and retention needs.

36. Senator LIEBERMAN. Should the next pay raise be across the board or targeted, as in pay for skill?

Dr. WOLFOWITZ. I believe all military members should receive a pay raise, and the President has proposed that all members will get a minimum of a 4.6 percent raise on January 1, 2002. Exactly how to use the President’s additional billion dollars needs further review.

#### DEFENSE HEALTH PROGRAM

37. Senator LIEBERMAN. What do you consider to be the most significant threats to the Defense Health Program (DHP) and the ongoing implementation of TRICARE?

Dr. WOLFOWITZ. It is imperative that the Defense Health Program (DHP) maintains a fully funded budget that allows for a stable business environment. The absence of adequate funding directly impacts patient care in the Military Health System. With the implementation of expanded TRICARE benefits for our Medicare-eligible beneficiaries, directed by the National Defense Authorization Act for Fiscal Year 2001, funding continues to be a challenge. The Department has identified an approximate shortfall of \$1.4 billion for fiscal year 2001 and will continue to assess DHP funding requirements as well as necessary solutions during the Secretary’s strategic review.

#### TEMPO FOR OUR ARMED FORCES

38. Senator LIEBERMAN. Do you have any plans to reduce tempo for our armed forces?

Dr. WOLFOWITZ. The use of military force is one of the most important decisions a President can make. We in the Department will work closely with the President and his senior advisors to develop appropriate policies to guide the use of our military forces in peacetime, crisis and war. A decision to employ U.S. military forces in support of our national interests is one that should never be taken lightly. Likewise, the decision to sustain, reduce, or end the commitment of U.S. forces to ongoing operations must be informed by careful assessment and deliberation. Working with Congress and our allies, we will reexamine the balance among force levels, commitments and deployments. We will ensure that we are focusing on the most important defense tasks and not placing unreasonable demands on our men and women in uniform. Still, we recognize that deployments will always be a part of military life, and we will continue to improve the ways we monitor and manage them.

39. Senator LIEBERMAN. Given that the Services are different and even define tempo differently, how do you plan to measure tempo in a consistent manner?

Dr. WOLFOWITZ. We recognize that deployments will always be a part of military life, and we continue to improve the ways we monitor and manage them. Last year, DOD implemented a department-wide tempo management system to allow us to identify the activities that have most affected the pace of operations and help us to better manage the demands on our people. Also adopted was a common definition for personnel tempo that allows us to measure it in a consistent manner across the Department. Personnel tempo is defined as the time an individual spends away from his or her home station.

## TWO MAJOR THEATER WAR (MTW) FORCE STRUCTURE

40. Senator LIEBERMAN. Is the two MTW force structure the right planning tool to create a military prepared for the dangers of a new century? If not, what would you support using instead?

Dr. WOLFOWITZ. Modern history suggests that the United States has often faced more than one security contingency at a time. With that history in mind, the Department's preparations to deal with multiple challenges have been appropriate. However, the increasing diversification of current and emerging threats requires that we build forces and operational concepts aimed at fashioning a new approach to deterrence. This issue will be examined in the strategic review.

## NATIONAL MISSILE DEFENSE

41. Senator LIEBERMAN. What type of NMD system should the U.S. pursue?

Dr. WOLFOWITZ. President Bush has said that the U.S. must build effective missile defenses, based on the best available options, at the earliest possible date, and that missile defenses must be designed to protect all 50 states, our friends and allies, and our deployed forces overseas. The administration is currently undertaking a major review of missile defense as part of a broader strategic review examining our future offensive and defensive requirements. In this review, we are examining all available technologies and basing modes that could contribute to an effective and affordable missile defense.

42. Senator LIEBERMAN. Given the limited funds available, what recommendations would you give regarding finding money for NMD?

Dr. WOLFOWITZ. We are currently reviewing our policy with regard to missile defenses and how they can best contribute to deterrence in the current and emerging strategic environment. Given this, no decisions have yet been made with regard to possible deployments or funding requirements.

43. Senator LIEBERMAN. What is your priority if forced to make choices among NMD and conventional forces?

Dr. WOLFOWITZ. The top priorities of the Department include the deployment of effective missile defenses, the assured readiness and sustainability of our deployed conventional forces, the modernization of command, control, communications, intelligence and space capabilities, and the transformation of the means by which we acquire these forces. Additionally, the Secretary is currently conducting a comprehensive review of the defense strategy and program, which includes our missile defenses as well as our conventional forces. Given this, no decisions have yet been made with regard to making funding choices among different programs.

44. Senator LIEBERMAN. How will the U.S.'s plans change if our European allies refuse to support U.S. NMD plans and Russia and China execute a nuclear force expansion as a result?

Dr. WOLFOWITZ. As we move forward with missile defense, the administration is committed to consulting closely with our friends and allies to address their concerns and explore their possible participation in the program. The U.S. wants to deploy defenses that would protect our friends and allies as well as ourselves. We see missile defense as a necessary element of deterrence and an opportunity for a collective approach to enhancing security for all.

We will also engage Russia and China on missile defense and seek to address their concerns about our defenses.

Clearly, the missile defenses we are pursuing are so limited that they would not call into question Russia's nuclear deterrent. As for China, the Chinese have already embarked upon significant modernization of their nuclear forces that predates, and will take place regardless of, current U.S. NMD planning.

45. Senator LIEBERMAN. What is your reaction to the Russian European Missile Defense proposal?

Dr. WOLFOWITZ. We are currently examining the Russian proposal. The U.S. government welcomes the fact Russia recognizes that Europe also faces a serious threat from weapons of mass destruction and missile delivery systems. While we welcome the prospect of cooperation in principle, the deployment of a "Pan-European" TMD system would not defend North America from ballistic missile attacks, and is therefore not a substitute for the deployment of a missile defense capable of defending North America.

## STOCKPILE STEWARDSHIP PROGRAM (SSP)

46. Senator LIEBERMAN. Will you support full funding for the Stockpile Stewardship Program (SSP)?

Dr. WOLFOWITZ. As Secretary Rumsfeld made clear in his confirmation hearing, maintaining high confidence in the U.S. nuclear weapons stockpile is critically important to the national security interests of the United States. I believe that the administration needs to review the Stockpile Stewardship Program and to evaluate how well it has done its job to date, and how well it will likely meet future stockpile issues. Following on that review and evaluation, it should be in a position to make informed decisions on the future of the Stockpile Stewardship Program, including appropriate levels of funding.

## NUCLEAR WEAPONS TESTING

47. Senator LIEBERMAN. You have stated that continued nuclear weapons testing is not an impediment to arms reductions. That, on the contrary, our confidence in the reliability of our weapons has enabled us to take the lead in nuclear arms reductions since the end of the Cold War. Can you explain this? If the U.S. tests, what argument would you use with the nations who might then decide on their own limited test program?

Dr. WOLFOWITZ. During the last 5 years that the United States was conducting nuclear tests (1987–1992), we concluded arms control agreements and announced unilateral initiatives to reduce the number of U.S. nuclear arms by many thousands of warheads. So clearly, nuclear weapons testing is not an impediment to nuclear arms reductions. Indeed, our decisions to make these reductions were in part based upon the fact that due to nuclear testing we believed that our residual stockpile of nuclear weapons was safe, secure, and highly reliable.

## BALKANS POLICY

48. Senator LIEBERMAN. What policy do you expect to promote for U.S. forces in the Balkans?

Dr. WOLFOWITZ. The presence of U.S. forces in the Balkans is key to the successful outcome of these missions with associated issues of regional stability, both U.S. and NATO credibility, and alliance cohesion. However, we do believe that conditions in Bosnia have changed so as to allow a restructuring of the force, and we are working with our allies through the normal NATO 6-Month Review process and associated Stabilization Force (SFOR) Restructuring Options Study to achieve this. In Kosovo, the situation remains unstable enough to require engagement at current levels. However, we will pursue a change in the capabilities of the existing force more appropriate to the current mission.

49. Senator LIEBERMAN. Do you advocate a full or partial withdrawal of U.S. forces in the Balkans?

Dr. WOLFOWITZ. Withdrawal of U.S. troops from the Balkans is a function of many things: the security situation, our position in NATO, regional stability. I am committed to withdrawing U.S. troops when the situation warrants. That will be done through the established NATO processes. I do feel that the situation in Bosnia should allow for restructuring of SFOR. Kosovo, however, is still unstable, and will require a more careful examination in consultation with our allies before any decisions are taken there. Within these factors, then, I am committed to withdrawing our soldiers as quickly as possible.

50. Senator LIEBERMAN. What strategy would you recommend we undertake regarding the Balkans?

Dr. WOLFOWITZ. With the fall of Milosevic, and the consequent rise of a democratic-oriented government in Belgrade, the dynamics of the region have changed. We should clearly be able to focus on things such as: promoting rule of law, respect for human rights and civil society; combating crime and corruption; assisting in economic reform and revitalization; and regional cooperation as basis for integration into European institutions. These are the means by which we may capitalize on the change in the strategic context.

51. Senator LIEBERMAN. How do you intend to pursue that with our European allies and the Russians?

Dr. WOLFOWITZ. The current engagement with our European allies continues to be effective. Increasingly, they are assuming more of the burden, and we will continue to press them on this.

Ironically, our relations with Russia by way of the SFOR and International Security Force (KFOR) missions continue to be strong and cooperative. Our goal should be to build on these relationships through the NATO Permanent Joint Council and other bilateral means so as to gain their effective cooperation in dealing with the Balkan states.

#### ACCELERATING DRAWDOWN FOR IRAQI OPPOSITION

52. Senator LIEBERMAN. Will you act to accelerate the drawdown authority you have for the Iraqi opposition?

Dr. WOLFOWITZ. It all depends on how the drawdown authority is to be used. The administration is in the process of reviewing all elements of U.S. policy toward Iraq. This review will address whether efforts to promote regime change are appropriately focused. Until that review is complete it would be premature to make a judgment as whether the use of the drawdown authority should be changed.

#### UPGRADING SUPPORT FOR THE IRAQI OPPOSITION

53. Senator LIEBERMAN. Some speculate that the new administration's most promising option for putting Saddam "back in the box", in addition to bombing, is to support the Iraqi National Congress (INC). How would you recommend the U.S. upgrade our political, economic, and military support of the opposition? What are the plans to do this?

Dr. WOLFOWITZ. The administration is in the process of reviewing all elements of U.S. policy toward Iraq. This review will address whether our efforts to promote regime change are appropriately focused. Until that review is complete it would be premature to make a judgment on the exact nature of our future support to the Iraqi National Congress.

#### SUPPORT FOR THE IRAQI OPPOSITION

54. Senator LIEBERMAN. How far should we be willing to go with regards to support for the INC-funds, weapons, equipment, sales, joint training, TMD, etc.?

Dr. WOLFOWITZ. As part of our comprehensive policy review on Iraq, we are exploring how best to work with the Iraqi National Congress and other opposition groups to promote a regime transition in Iraq. Until the policy review is completed, it would be premature to speculate on the details of our support.

#### INC CHARTER

55. Senator LIEBERMAN. What will the INC task force's charter include? When do you see it in place and functioning?

Dr. WOLFOWITZ. The administration is reviewing its Iraq policy, including how it will work with the INC.

#### REGIME CHANGE STRATEGY

56. Senator LIEBERMAN. You have talked about the current policy of containment regarding Iraq. You have stated that when this policy collapses, the U.S. will face a Saddam who has new nuclear, biological, and chemical weapons and a renewed capacity to conduct conventional warfare and terrorism, and who is bent on avenging his 1991 defeat. Further, this policy would risk many more lives than trying to overthrow Saddam by force. What are your recommendations regarding this new Iraqi strategy? What do you see as the Pentagon role? How will this affect U.S. force posture and OPTEMPO? What would you do to deal with increased OPTEMPO?

Dr. WOLFOWITZ. There can be no doubt that Iraq under Saddam Hussein remains a threat to the Gulf region and to U.S. interests and that this threat must be deterred and contained. Part of the administration's Iraq policy review must be to consider whether more can be done to secure Baghdad's compliance with the conditions laid down by the United Nations in a way that would satisfy us and the world community at large that Iraq is no longer a threat. We also are exploring whether more can be done to hasten the replacement of the present regime by one that is prepared to live at peace with its neighbors and with the people of Iraq. Clearly, our armed

forces will have a prominent part to play in our national strategy toward Iraq. Until our review is completed, however, it is not possible to say what the effect will be on OPTEMPO.

#### TAIWAN POLICY

57. Senator LIEBERMAN. You suggested that Taiwan point the way of democracy to China. That is no doubt several years down the road. How should the U.S. plan to assist in this endeavor?

Dr. WOLFOWITZ. Taiwan today is a full-fledged democracy, with a vibrant multiparty system, a popularly elected president and representatives at all levels of government, a free and spirited press, and the people's strong commitment to democratization. One of the most important measures the United States can take to foster the development of democracy in the PRC is to support Taiwan's fledgling democracy by acting in accordance with the principles outlined in the Taiwan Relations Act.

58. Senator LIEBERMAN. You are known as a fierce defender of Taiwan, yet you have proposed a status quo in your writings. Can you elaborate on your approach?

Dr. WOLFOWITZ. The status quo can best be maintained by ensuring a dynamic equilibrium of forces in the Taiwan Strait. Such a balance requires provision of necessary defense articles and services to Taiwan in accordance with the Taiwan Relations Act to offset an increasingly capable PRC military.

59. Senator LIEBERMAN. How far should we be willing to go with regards to support for Taiwan—funds, weapons, equipment, sales, joint training, TMD, etc.? What about a formal mutual defense pact?

Dr. WOLFOWITZ. The Department of Defense is engaged with Taiwan in several ways to ensure the United States is appropriately prepared to implement relevant sections of the Taiwan Relations Act. The United States actively monitors the security situation in the Taiwan Strait, provides articles and services to Taiwan to ensure it can maintain a sufficient self-defense capability, works with Taiwan on a series of non-hardware related initiatives to address shortcomings in Taiwan's readiness, and maintains capabilities to assist in the defense of Taiwan if required. However, establishment of a formal defense pact would contradict the unofficial nature of our relationship with Taiwan.

#### MISSILE DEFENSE AND CHINA

60. Senator LIEBERMAN. You support NMD. Is this contrary to your previous call for a status quo approach? Can you clarify this, since NMD might spur aggressive actions by China?

Dr. WOLFOWITZ. Missile defense must be designed to protect all 50 states, our allies and friends, and deployed forces overseas from missile attacks by rogue states and from unauthorized or accidental launches. The missile defenses that will be deployed by the U.S. are intended for defense.

Nevertheless, we understand that China has voiced its concerns about the potential implications for its deterrent posture of any future U.S. missile defense system. China has recently expressed a willingness to engage in substantive dialogue on missile defense issues. We welcome and encourage such dialogue.

#### QUESTIONS SUBMITTED BY SENATOR MAX CLELAND

##### U.S. AIRLIFT REQUIREMENTS

61. Senator CLELAND. The recently released Hart-Rudman Commission report places a high priority on the development of expeditionary forces, much of which is dependent on our strategic and tactical airlift capabilities. The Mobility Requirements Study estimates we are woefully short on meeting the future requirement.

With the move away from more forward-deployed forces, airlift and air mobility will continue to be the key ingredient in our responding to future military missions and crisis. Do you agree that we need to focus attention on our airlift needs?

Dr. WOLFOWITZ. The recent Mobility Requirements Study 2005, required by the fiscal year 2000 National Defense Authorization Act, is the most exhaustive study on this subject to date. It provides a comprehensive assessment of our overall mobility requirements in the context of a two major theater war strategy and shows that, under certain extremely demanding conditions, we have insufficient airlift assets to

meet the requirement. Clearly strategic and tactical airlift capability will remain a vital element of our national military strategy, and the results of the Mobility Requirements Study 2005 are a good point of departure for establishing airlift requirements in the context of the current strategy review. Options for meeting airlift requirements, however, need to be carefully considered in a manner that allows them to be balanced with other strategic risk and affordability decisions.

#### MILITARY HEALTH CARE

62. Senator CLELAND. Military health care is a matter of great importance to our service members and this committee. Last year, in response to concerns raised by the Secretary of Defense and the Chairman of the Joint Chiefs, we enacted legislation that eliminates deductibles and co-payments under TRICARE Prime for families of Active Duty service members; provides lifetime health care for military retirees and their families through the TRICARE program; and provides a comprehensive pharmacy benefit for military retirees.

We still hear concerns from our constituents about lack of timely access to health care, portability of benefits as our service members move around, and poor claims processing. What are your priorities for maintaining a working, accessible, properly funded health care system?

Dr. WOLFOWITZ. As you point out, the National Defense Authorization Act for Fiscal Year 2001 includes significant health care benefit enhancements for military beneficiaries, both for families of Active Duty members and for retirees and their families. The Department is working hard to implement these important new programs. In addition, we have made significant strides recently in improving our health care business practices, in areas such as providing a portable health care benefit, exceeding industry standards for claims processing timeliness, and enhancing appointment systems to ease access to care. Our number one priority is to assure medical readiness to support wartime missions; delivery of an excellent peacetime health care benefit on a cost-effective basis is a vital secondary mission.

#### MONTGOMERY GI BILL

63. Senator CLELAND. Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half of these use their benefits, and many who use the benefits do not use all of their entitlement. Many of these soldiers, sailors, airmen, and Marines say they would like to stay in the Service, but feel they have to leave so that they can provide for the education of their spouses and children.

I believe that many of these service members would stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment—an idea supported by the Hart-Rudman Commission report. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

Will you give serious consideration to how the Department of Defense could use the transfer of GI Bill benefits to family members as a retention tool and give me your thoughts on how we best do this?

Dr. WOLFOWITZ. I will certainly give this full consideration. I agree that we must be prepared to adapt our incentive systems to address the changing needs and aspirations of service members.

#### HART-RUDMAN COMMISSION

64. Senator CLELAND. The Hart-Rudman Commission review suggested numerous initiatives to help prepare for the domestic threats that endanger the continental U.S. Several of these initiatives involve reform and restructuring at the Department of Defense in an effort to streamline and make DOD more efficient and effective to address the threats in this new world “disorder.” With your past experience at the Department of Defense, you know of the challenges that face the Department of Defense in this new century. Do you anticipate the need to review and implement any of the suggestions?

Dr. WOLFOWITZ. The Hart-Rudman Commission made an important contribution to the debate about the challenges of the evolving security environment and how the U.S. government should be aligned in order to prepare for future threats, particularly to the U.S. homeland. I welcome the insights of the Commission, whose members represent a vast wealth of experience in the national security arena, in

addition to recommendations from other experts both inside and outside the Department.

PROBLEM ACCOUNTING FOR APPROPRIATED FUNDS

65. Senator CLELAND. You noted in your response to an advance question that “damage to modernization programs is best prevented by timely funding so that the Department does not have to disrupt procurement and RDT&E programs.” However, my distinguished colleague Senator Byrd has recently reminded us that the Pentagon has a longstanding problem accounting for the funds appropriated for its use. As a two-time veteran of senior positions in the Department of Defense, what are your thoughts on the roots of this problem? Do you believe the solutions to this problem are internal to the Department, or is there something Congress can do to facilitate a solution?

Dr. WOLFOWITZ. The Department’s accounting problems are of a very specific nature. We have had no major problem tracking and accounting for appropriated funds in terms of ensuring that no more than the precise amount is spent on specifically the uses for which those funds were appropriated. Indeed, DOD accounting systems were designed exactly for this purpose, and that design is one of the root causes of the accounting problems referred to by Senator Byrd—that problem being that DOD accounting systems cannot yet produce annual financial statements that can receive an unqualified (most favorable) audit opinion. DOD accounting systems were not designed to produce such statements, and now that such statements are required the Department is moving expeditiously to transform its accounting systems to do so. This is an immense challenge, especially since much of the financial data needed for DOD financial statements originates outside the Department’s accounting and finance systems. The massive effort to achieve acceptable financial statements is primarily internal to the Department, but as with all genuine reform the support of Congress remains essential.

[The nomination reference of Dr. Paul D. Wolfowitz follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*February 15, 2001.*

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Paul D. Wolfowitz, of Maryland, to be Deputy Secretary of Defense, vice Rudy F. de Leon, resigned.

[The biographical sketch of Dr. Paul D. Wolfowitz, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. PAUL D. WOLFOWITZ

On February 5, 2001, President Bush announced his intention to nominate Dr. Paul Wolfowitz to be Deputy Secretary of Defense. If confirmed by the Senate, this will be Dr. Wolfowitz’s third tour of duty in the Pentagon.

For the last 7 years, Dr. Wolfowitz has served as Dean and Professor of International Relations at the Paul H. Nitze School of Advanced International Studies (SAIS) of The Johns Hopkins University. SAIS is widely regarded as one of the world’s leading graduate schools of international relations with 750 students, studying on campuses in Washington, DC.; Nanjing, China; and Bologna, Italy. As Dean, he led a successful capital campaign that raised more than \$75 million and doubled the school’s endowment. Also under his leadership, the curriculum and facilities were modernized and new faculty and programs were added to shift the school’s focus from the Cold War to the era of globalization.

From 1989 to 1993, Dr. Wolfowitz served as Under Secretary of Defense for Policy in charge of the 700-person defense policy team that was responsible to Secretary Dick Cheney for matters concerning strategy, plans, and policy. During this period Secretary Wolfowitz and his staff had major responsibilities for the reshaping of strategy and force posture at the end of the Cold War. Key initiatives included the

development of the Regional Defense Strategy, the Base Force, and two presidential nuclear initiatives that led to the elimination of tens of thousands of U.S. and Soviet nuclear weapons. Under his leadership, the Policy Staff also played a major role in reviewing war plans for the Gulf War, and developing and executing plans that successfully raised more than \$50 billion in Allied financial support for the war and prevented Iraq from opening a second front with Israel.

During the Reagan administration, Dr. Wolfowitz served for 3 years as U.S. Ambassador to Indonesia—the fourth largest country in the world and the largest in the Moslem world. There he earned a reputation as a highly popular and effective Ambassador, a tough negotiator on behalf of American intellectual property owners, and a public advocate of political openness and democratic values. During his tenure, Embassy Jakarta was cited as one of the four best-managed embassies inspected in 1988. Prior to that posting, he served 3½ years as Assistant Secretary of State for East Asian and Pacific Affairs, where he was in charge of U.S. relations with more than twenty countries. In addition to contributing to substantial improvements in U.S. relations with Japan and China, Assistant Secretary Wolfowitz played a central role in coordinating the U.S. policy toward the Philippines that supported a peaceful transition from the dictatorship of Ferdinand Marcos to democracy.

Dr. Wolfowitz's previous government service included: 2 years as head of the State Department's Policy Planning Staff (1981–82); an earlier Pentagon tour as Deputy Assistant Secretary of Defense for Regional Programs (1977–80), where he helped create the force that later became the United States Central Command and initiated the Maritime Pre-positioning Ships, the backbone of the initial U.S. deployment 12 years later in Operation Desert Shield; and 4 years (1973–77) in the Arms Control and Disarmament Agency, working on the Strategic Arms Limitation Talks and a number of nuclear nonproliferation issues. His first government service was as a Management Intern at the Bureau of the Budget (1966–67).

Dr. Wolfowitz taught previously at Yale (1970–73) and Johns Hopkins (1981). In 1993, he was the George F. Kennan Professor of National Security Strategy at the National War College. He has written widely on the subject of national strategy and foreign policy and was a member of the advisory boards of the journals *Foreign Affairs* and *National Interest*. Among his many awards for public service are: the Presidential Citizen's Medal, the Department of Defense's Distinguished Public Service Medal, the Department of State's Distinguished Honor Award, the Department of Defense's Distinguished Civilian Service Medal, and the Arms Control and Disarmament Agency's Distinguished Honor Award.

Dr. Wolfowitz received a bachelor's degree from Cornell University (1965) in mathematics, and a doctorate in political science from the University of Chicago (1972). He is the father of Sara, David, and Rachel and lives in Chevy Chase, Maryland.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. Paul D. Wolfowitz in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Paul Dundes Wolfowitz.

2. **Position to which nominated:**

Deputy Secretary, Department of Defense.

3. **Date of nomination:**

February 15, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

December 22, 1943; New York, NY.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Separated since January 1999; Frances Clare Selgin Wolfowitz.

7. **Names and ages of children:**

Sara Elizabeth Wolfowitz, 22.

David Samuel Wolfowitz, 19.

Rachel Dahlia Wolfowitz, 13.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Institution	Dates attended	Degree received	Date granted
Ithaca High School, Ithaca, NY .....	9/58-6/61	.....	.....
Cornell University Ithaca, NY .....	9/61-6/65	AB .....	1965
University of Chicago, Chicago, IL .....	10/65-6/70	Ph.D .....	1972

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Job title	Employer	Location	Dates of employment
Dean .....	Johns Hopkins University School of Advanced International Studies.	Washington, DC .....	January 1994-present.
Professor .....	National Defense University	Washington, DC .....	January 1993-December 1993.
Under Secretary for Policy ....	Department of Defense .....	Washington, DC .....	May 1989-January 1993.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Paul D. Wolfowitz

**TUESDAY, APRIL 24, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 3:40 p.m. in room SD-106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Thurmond, McCain, Inhofe, Hutchinson, Bunning, Levin, Reed, Akaka, Ben Nelson, and Dayton.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Scott W. Stucky, general counsel; and Ann M. Mittermeyer, assistant counsel.

Professional staff members present: Charles S. Abell, John R. Barnes, William C. Greenwalt, Gary M. Hall, Lawrence J. Lanzillotta, George W. Lauffer, Patricia L. Lewis, Cord A. Sterling, and Eric H. Thoemmes.

Minority staff members present: David S. Lyles, staff director for the minority; Gerald J. Leeling, minority counsel; Peter K. Levine, minority counsel; Creighton Greene, professional staff member; and Michael J. McCord, professional staff member.

Staff assistants present: Thomas C. Moore, Suzanne K.L. Ross, and Michele A. Traficante.

Committee members' assistants present: Christopher J. Paul, assistant to Senator McCain; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; Michael P. Ralsky, assistant to Senator Hutchinson; Kristine Fauser, assistant to Senator Collins; David Young, assistant to Senator Bunning; Menda S. Fife, assistant to Senator Kennedy; Christina Evans and Barry Gene Wright, assistants to Senator Byrd; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; Eric Pierce, assistant to Senator Ben Nelson; and Brady King, assistant to Senator Dayton.

**OPENING STATEMENT OF SENATOR CARL LEVIN**

Senator LEVIN. Chairman Warner has asked me to open up the hearing. He has been delayed just a few additional minutes, so we will get going. We meet today to consider the nominations of Dr. Dov Zakheim to be Under Secretary of Defense, Comptroller; Charles Abell to be Assistant Secretary of Defense for Force Management Policy; and Victoria Clarke to be Assistant Secretary of Defense for Public Affairs.

We want to first welcome all of our nominees, and the colleagues of ours who will be introducing them to the committee. I know that Secretary Rumsfeld and Deputy Secretary Wolfowitz want us to proceed expeditiously with these nominations. I think they are probably feeling a bit lonely in the Pentagon these days without the help that you all are going to be providing them, assuming you are confirmed. I know he has been looking forward to getting that assistance. The Department has a lot of important decisions to make. It needs senior civilian leadership in place to help make those decisions.

Dr. Zakheim, we are all anxious to get the Department's fiscal year 2002 budget so that we can do our work here in Congress. The Comptroller, the chief financial officer for the largest department in the Federal Government, is a critical leadership position in the Department of Defense. It is an awesome responsibility. The financial management challenges facing the Department of Defense are enormous. As we've discussed, you are going to be in an important position to address those.

It's always a pleasure to see Charles Abell. He is one of our own staff, who has been nominated for this important position in the administration. His service to this committee and to the Personnel Subcommittee for the last 8 years has been exceptional. Your commitment to the well-being of our military members and their families is well known to us. We will miss your experience and expertise on this committee, but it will be put to good use in the department on behalf of our men and women in uniform and the civilians who serve in the Department of Defense.

Ms. Clarke, you've been nominated to the very important position of public spokesperson for the Department of Defense. If confirmed, the American people will count on you to tell it like it is, like the man who sits to your right is famous for doing. [Laughter.]

A lesser known, but just as important, aspect of the duties of the Assistant Secretary of Defense for Public Affairs, is the responsibility to keep the men and women in the military well-informed. So if you're confirmed, I am confident you will give this duty the attention that it rightfully deserves.

So we have three well-qualified candidates for positions that the Secretary is anxious to fill. We all look forward to hearing from our nominees.

I understand, Dr. Zakheim, your wife, Deborah, and your son, Roger, are here today. We welcome them. Mr. Abell, I understand that your wife, Kathy, is with you today, and we surely welcome her. I understand, Ms. Clarke, that your husband, Brian Graham, and children, Colin, Devon, and Charlie are here, as well as your parents, Charles and Cecilia Clarke, and your sister, Caitlin Clarke. We welcome all of them. Family support is essential in

these positions. You will all be put under great time pressure. There will be too many times when you're not going to be able to get home as promised, and we ask your families for their service when we confirm you for your service.

At this point, I think before I ask the questions that are traditionally asked, I'm going to call upon Senator Thurmond for his opening statement. Following that, I will ask the nominees the standard questions we ask all our nominees, and then we are going to call upon our colleagues to introduce our nominees. Senator Thurmond, please proceed.

#### **STATEMENT OF SENATOR STROM THURMOND**

Senator THURMOND. Thank you very much. Mr. Chairman, I join you in welcoming Dr. Zakheim, Mr. Abell, and Ms. Clarke. Each of them has had a long and distinguished career, either in the private sector or within the government, and I do not expect any surprises on their nominations.

I am especially pleased by Charlie Abell's nomination to be the Assistant Secretary of Defense for Force Management Policy. Charlie has been truly professional in carrying out his responsibilities as a staff member of the Armed Services Committee. He was instrumental in formulating many of the pay and benefit programs that have started to reverse the recruiting and retention programs in our military services. I only regret that the committee's retention program was not enticing enough to keep him here on the committee staff.

To each nominee, I congratulate you on your nomination and on your superb record of public service. Your willingness to serve our Nation in the challenging positions for which you have been nominated speaks highly of you. I wish you all success.

Thank you, Mr. Chairman.

Senator LEVIN. Thank you, Senator. We're going to move directly to the introductions. Let me call first on Senator McCain.

#### **STATEMENT OF SENATOR JOHN MCCAIN**

Senator MCCAIN. Thank you very much, Senator Levin, Senator Thurmond, members of the committee. I have known all three of the nominees. Dr. Zakheim and I had a professional relationship for many years.

I am especially here on behalf of Victoria Clarke, who will, as you mentioned, be the voice of the Department of Defense. This doesn't mean Secretary Rumsfeld can't speak for himself, which he does very eloquently, but obviously, the job of spokesperson is one that requires talent and skills and a certain degree of sensitivity, particularly when we are faced with crises, as we have experienced just recently, some of which entailed the risk or even loss of American lives.

I've known Victoria Clarke and have had the privilege of working with her since 1983. She has been able to balance the responsibilities of a true professional and wife and mother. She not only, I believe, will be an excellent member of the Bush team, but she will also be a role model to other women in America as she has moved up the ladder of success to this very important position.

I recommend her highly. She's a very dear and beloved friend of mine, and I'm very proud of her at this moment that she will take over these very difficult and awesome responsibilities. I hope my colleagues will consider her positively and I look forward to working with her in the years ahead.

I thank you, Mr. Chairman. I thank you for allowing me to speak.

Senator LEVIN. Senator McCain, thank you.

Senator Hutchinson.

#### STATEMENT OF SENATOR TIM HUTCHINSON

Senator HUTCHINSON. Mr. Chairman, I am very honored today to be able to appear before the committee and to introduce someone who doesn't need an introduction to this committee, President Bush's nominee to be Assistant Secretary of Defense for Force Management Policy, Charlie Abell, one that we all love dearly. I understand how lonely Secretary Rumsfeld is getting these days, but I seriously considered putting a hold on the nomination if it would have given us a chance of keeping Charlie around. I would ask unanimous consent that a more lengthy introduction be included in the record.

Charlie served in the Army, in the enlisted ranks, in 1967, became an officer, served two tours in Vietnam, and is highly decorated. The distinguished medals he's received include the Legion of Merit, 4 Meritorious Service Medals, the Purple Heart, 2 Bronze Stars for Valor, 14 Air Medals, including 2 for valor, the Army Commendation Medal for Valor, and the Combat Infantry Badge. So he is highly decorated. But more than that is he joined our staff, and I've had the opportunity to serve with him for the last 2½ years.

We all know him to be knowledgeable, professional, and totally dedicated. He is committed to the welfare of our men and women in uniform. Having had the opportunity to work with him as chairman of the Personnel Subcommittee, I am enthused about his new opportunities, and I know that he will do an outstanding job for those he loves and for the country he serves.

[The prepared statement of Senator Hutchinson follows:]

#### PREPARED STATEMENT BY SENATOR TIM HUTCHINSON

Mr. Chairman, it is an honor for me to appear before the committee. Today, I have the privilege of introducing President Bush's nominee to be the Assistant Secretary of Defense for Force Management Policy, Mr. Charles S. Abell.

In the 2½ years that I have worked with Charlie, I have learned what so many of our colleagues already knew—that Charlie is one of the most patriotic, dedicated, and hardworking public servants in the Nation's capital.

For those who do not know Charlie personally, let me tell them something about his background.

Charlie joined the enlisted ranks of the Army in 1967—it was not long before he became an officer. He served two tours in Vietnam as both a Cobra helicopter pilot and as an infantry platoon leader.

After Vietnam, Charlie served in numerous command and staff positions within the Army, including Congressional Affairs Officer for the Deputy Chief of Staff of Personnel and as a member of the Army Legislative Liaison Office.

The decorations he earned during his distinguished career as a soldier include the Legion of Merit, 4 Meritorious Service Medals, the Purple Heart, 2 Bronze Stars for Valor, 14 Air Medals including 2 for valor, the Army Commendation Medal for Valor, and the Combat Infantryman's Badge.

After retiring as a Lieutenant Colonel, after 26 years in the Army, Charlie joined the staff of this committee.

As the lead staffer on the Personnel Subcommittee, which I now have the privilege of chairing, he was responsible for issues concerning military readiness and quality of life. Included in that not-insignificant portfolio are the topics of manpower; pay and compensation; health care; personnel management issues affecting Active Duty, Reserve and civilian personnel; and nominations, both military and civilian.

During his tenure here on the Hill, Charlie has worked with the present, and former, members of this committee to achieve great things for our men and women in uniform and for our Nation's military retirees. Those accomplishments include:

- Significant pay increases for Active Duty and Reserve service members;
- Improving recruiter access to our Nation's high schools; and,
- Enactment of the Warner/Hutchinson Tricare-For-Life plan, with which our Nation will finally fulfill the decade's-old promise of lifetime healthcare for those who choose to make a career of the Armed Forces.

Now, Charlie is in the position, if confirmed, to take the next logical step in an already distinguished career of public service. From his new vantage point across the Potomac he will be able to build on the successes he helped over the last 9 years on behalf of millions of men and women in uniform, their families, and military retirees.

If confirmed, Charlie will serve as Secretary Rumsfeld's senior policy advisor on matters concerning the management of military and civilian personnel and the welfare of their families.

He will promulgate policies relating to recruiting, retention, career development, compensation, quality of life, equal opportunity and other force management concerns.

By forwarding to us the nomination, President Bush has publically declared to the Nation that he has every confidence that Charlie is the best man for the job. For someone who's relatively new to this town, that decision marks our President as an excellent judge of character and a pretty fast learner.

Mr. Chairman, ladies and gentlemen of the committee, my fellow Americans, I present to you Mr. Charles S. Abell.

Senator LEVIN. Senator Hutchinson, thank you very much.  
Senator Reed.

#### **STATEMENT OF SENATOR JACK REED**

Senator REED. Thank you, Mr. Chairman. I want to welcome all the nominees, but I'm particularly pleased and privileged to be able to introduce Dr. Dov Zakheim.

One of the best ways to take a measure of a person is to debate that person on important issues of great consequence to the Nation, and I had that opportunity last fall at Duke. I became impressed, as we all will become impressed, with Dov's intelligence, his patriotism, and his dedication to this country. We don't agree on everything, but I believe this committee will agree that he is a superbly qualified and prepared nominee to become the next Comptroller of the Department of Defense.

Dr. Zakheim has an extraordinary academic record—after graduating, *summa cum laude*, from Columbia University, he earned his doctorate in economics and politics from Oxford University. Dr. Zakheim's public career began at the Congressional Budget Office, where he was an analyst. In the 1980s, he served in a number of senior Defense Department positions. So he takes great experience to this task.

He became, in 1985, the Deputy Under Secretary of Defense for Planning and Resources. He knows the Department of Defense, and he will bring that experience and that intellect to bear on critical issues of financial management of the Department of Defense.

His skill has been recognized by both Democratic and Republican administrations. The Clinton administration appointed him in 1997 to the Task Force on Defense Reform, and he has had numerous significant positions.

Dr. Zakheim twice has been awarded the distinguished Public Service Medal from the Department of Defense. He received the CBO Director's Award for Outstanding Service, the Director's Award for Outstanding Service for his present firm, System Planning Corporation. He is eminently qualified and prepared for the difficult challenges of Comptroller. I know he will give his all, and he will be tireless in his efforts to improve the management of the Department of Defense. I would urge his rapid approval. Thank you.

Senator LEVIN. Senator Reed, thank you very much. We will start with the opening statements now of our nominees, if they have opening statements. Why don't we call on you first, Dr. Zakheim?

**STATEMENT OF DR. DOV S. ZAKHEIM, NOMINEE TO BE UNDER SECRETARY OF DEFENSE, COMPTROLLER**

Dr. ZAKHEIM. Thank you, Senator Levin, and thank you so much, Senator Reed, for those very kind words.

Senator Levin, members of the committee, it is an honor to come before you as President Bush's nominee to become the next Under Secretary of Defense, Comptroller. I thank President Bush and Secretary Rumsfeld for their confidence in nominating me for this important position. Many people made this honor possible. I especially want to thank my wife, Deborah, and my sons and my parents for their love and support throughout my career. I will try to keep my remarks brief, and I ask that my full statement be included for the record.

Senator LEVIN. It will be. Also, I forgot to mention Senator Hutchinson's statement will be made part of the record, too.

Dr. ZAKHEIM. Over the years, it's been my good fortune to have been guided by sage mentors and thoughtful colleagues. I especially appreciate the opportunities that were afforded me by President Reagan and Secretary of Defense Weinberger during their stewardship over America's security, and Secretary Weinberger's support ever since then.

During my service at the Pentagon, I was also privileged to work for and with two especially talented and brilliant men, Fred Ikle and Richard Perle, who also afforded me wise counsel and support over the years. It was thanks to another good friend, Dr. Paul Wolfowitz, that I first joined the Pentagon in 1981, and I'm delighted that he has returned to the Department of Defense as Secretary Rumsfeld's deputy.

This is an important and challenging time for the Department of Defense. The Cold War may be over, but the international environment is hardly serene. As leader of the free world, the United States bears a special responsibility to protect, not only its interests, but to support those of its friends and allies. Those responsibilities bear most heavily on our military personnel, whose welfare must remain our highest priority, as well as on their civilian colleagues at the DOD.

The office of the Under Secretary of Defense, Comptroller, is especially critical to ensuring a robust national security posture. The Comptroller has to budget and manage funds to achieve the greatest payoff from every taxpayer dollar. The Department faces many tough choices in the area of strategy, military capabilities, as well as infrastructure and support activities. We have to allocate scarce budget dollars to give our fighting forces the greatest advantage on both current and future battlefields as they evolve. I assure you that, if I am confirmed, I will do everything possible to get our uniformed men and women the resources they need to excel in the difficult missions assigned to them.

If confirmed as DOD Comptroller, I also intend to make financial management reform a top priority. We have to improve our management, including management information and accounting systems. Congress and the American people have to have full confidence that the Department maintains the very highest standards in managing and accounting for its funds. We also have to ensure that our planning, programming, and budgeting system remains relevant to the demands of the new century, and we have to rigorously pursue economies and efficiencies wherever we might find them.

As one who has spent 6 years on Capitol Hill, I recognize and profoundly believe that the security of our country depends on wise decisions in both the legislative and executive branches of our government. If confirmed, a key goal of mine would be to foster a close cooperation between the Department of Defense and its oversight committees, in particular. My years in the non-partisan Congressional Budget Office taught me that, on matters of national security, bipartisan cooperation is essential.

Let me close by saying again how honored I am to have been nominated by President Bush for a position of such immense importance for America's future security. I pledge to do my utmost to fulfill the trust placed in me. Thank you.

[The prepared statement of Dr. Zakheim follows:]

PREPARED STATEMENT BY DR. DOV S. ZAKHEIM

Mr. Chairman, Senator Levin, members of the committee, it is an honor to come before you as President Bush's nominee to become the next Under Secretary of Defense (Comptroller). I thank President Bush and Secretary Rumsfeld for their confidence in nominating me for this important position.

Many people made this honor possible. I especially want to thank my wife, Deborah, my sons, and my parents for their unwavering love and support throughout my professional career.

Over the years it has been my good fortune to have been guided by sage mentors and thoughtful colleagues. I particularly appreciate the opportunities afforded me by President Reagan and Secretary of Defense Caspar Weinberger during their extraordinary stewardship over America's security. Secretary Weinberger has also been especially supportive to me since I left the Pentagon, and I will always be grateful to him for writing an exceedingly warm foreword to my book, *The Flight of the Lavi*.

During my service at the Pentagon, I was privileged to work for, and with, two extraordinarily brilliant and talented men, Under Secretary Fred Ikle and Assistant Secretary Richard Perle. Both have afforded me wise counsel and support when I most needed it. It was thanks to another good friend, Dr. Paul Wolfowitz, that I first joined the Pentagon in 1981, and I am delighted that he has returned to the Department as Secretary Rumsfeld's deputy.

This is an important and challenging time for the Department of Defense. The Cold War may be over, but the international environment is hardly serene. As leader of the Free World, the United States bears special responsibility to protect not

only its interests, but to support those of its allies and friends. These responsibilities bear most heavily on our military personnel, whose welfare must remain our highest priority, as well as on their civilian colleagues at the DOD.

The Office of Under Secretary of Defense (Comptroller) is especially critical to ensuring a robust national security posture. The Comptroller must budget and manage funds to achieve the greatest payoff from every taxpayer dollar. The Department faces many tough choices in the areas of strategy, military capabilities, as well as infrastructure and support activities. Scarce budget dollars must be carefully allocated to give our fighting forces the greatest advantage on current and future battlefields as they evolve. I assure you that if confirmed I will do everything possible to get our uniformed men and women the resources they need to excel in the difficult missions assigned them.

If confirmed as DOD Comptroller, I intend to make financial management reform a top priority. We must improve our management, including management information, and accounting systems. My years in the non-partisan Congressional Budget Office taught me that on matters of national security, bipartisan cooperation is essential.

Let me close by saying again how honored I am to have been nominated by President Bush for a position of such immense importance for America's future security. I pledge to do my utmost to fulfill the trust placed in me. Thank you.

Senator LEVIN. Thank you.

Ms. Clarke.

**STATEMENT OF VICTORIA CLARKE, NOMINEE TO BE  
ASSISTANT SECRETARY OF DEFENSE FOR PUBLIC AFFAIRS**

Ms. CLARKE. Thank you very much, Senator Levin, and members of the committee, thank you very much. It is a real honor for me to be here today. I am deeply grateful to President Bush for nominating me to this position, and to Secretary Rumsfeld for giving me the opportunity to serve. I am very grateful to Senator McCain for his remarks. They mean a great deal to me.

As President Bush has said, the Department of Defense is in the business of protecting America's freedom, and the essence of that freedom demands that we join the American people in a discussion of and commitment to how we defend it. This, for me, is a matter of patriotism. It is also my professional philosophy. This committee knows far better than I that the portrait of international security and national defense is vastly different today from what it was even just a few years ago.

As Secretary Rumsfeld has made clear, our challenge is building a military that fits in that portrait. We must attract and retain the very best people to serve. We must use public dollars effectively and efficiently, and we must explore the use of innovative technologies and policies that promote peace and stability. Our challenges change, changing an institution whose roots in our communities and our consciousness runs deeper than perhaps any other. That demands an aggressive program of outreach and education, a national conversation about the challenges, the risk, and the solutions.

If confirmed, I will embrace that challenge in a spirit of openness and honesty with this committee, with our men and women in uni-

form, and with the people of the United States, on whose support this life-or-death challenge for our country ultimately depends.

That is my professional philosophy. It is also my patriotic feeling. I thank the committee, the President, and the Secretary for giving me the opportunity to act on it. Thank you, Senator.

Senator LEVIN. Ms. Clarke, thank you.

Mr. Abell.

**STATEMENT OF CHARLES S. ABELL, NOMINEE TO BE ASSISTANT SECRETARY OF DEFENSE FOR FORCE MANAGEMENT POLICY**

Mr. ABELL. Thank you, sir. Mr. Chairman, Senator Levin, members of the committee, I want to thank you and Senator Hutchinson and Senator Thurmond for the kind words this afternoon. I really appreciate them. I'm honored to have been nominated by the President. I'm honored to appear before this committee today.

If confirmed, I will be privileged to serve in a position that provides for the personnel readiness of the force and for the quality of life for service members, retirees, and their families. It will be an awesome responsibility; however, I look forward to the challenge.

Mr. Chairman, I want to take this opportunity to personally and publicly thank you for your confidence in my abilities and for being a mentor and an inspiration to me during my time here on the staff.

I've had the good fortune to serve with so many of my personal heroes and those whom I have admired throughout my life. I plan to thrill my grandchildren with tales of working on important issues with many noted Americans. Being a part of this staff—of this great committee—has been a much greater experience than I could have ever imagined. I'm excited about the opportunity to serve in the Department of Defense and to continue to work for soldiers, sailors, airmen, and marines.

As a result of my position here as one of your professional staff members, I'm aware of some of the many critical issues and important challenges that I will face as the next Assistant Secretary of Defense for Force Management Policy. I also know that there are challenges that are not yet apparent to me. Mr. Chairman, if confirmed, I will eagerly accept each of these challenges that I will face. I pledge to you and to the men and women who serve our nation that I will work hard to meet these challenges. I will conduct my dealings with the force, my colleagues in the Department of Defense and the administration and Congress in an open and direct manner.

As the members of this committee know, I prefer to be forthright and open when dealing with any issue. If confirmed, I will be the professional this committee has come to know.

As excited as I am for the opportunity that awaits me, leaving the committee staff will be difficult. I've worked on the staff of this committee for more than 8 years. I recall the pride and honor I felt when Senator Thurmond hired me. I fondly remember my first official trip as a member of the committee with you, Mr. Chairman. I've had extraordinary opportunities to be a part of history and to

meet some of the most influential and important people in the world. I've been enriched beyond my greatest expectations.

I will find another occasion to thank my fellow staff members, but I would be remiss if I did not publicly acknowledge the very positive impact that my staff director, Les Brownlee, has had on my life. As everyone knows, this gentleman is truly unique, and I owe much of what I am today to this friendship and his tutelage.

If confirmed, Mr. Chairman, I will serve the soldiers, sailors, airmen, and marines—active, Reserve, retired—and their families to the best of this ability. I will also miss this committee. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Mr. Abell. Senator Levin, thank you for initiating this hearing on time. I had to testify before another committee of the Senate. I might just start my opening remarks following your very thoughtful, very insightful statement to the committee.

#### STATEMENT OF SENATOR JOHN WARNER, CHAIRMAN

Chairman WARNER. We are very proud of you, as we are of our professional staff. We take pride in this committee. Through the 23 years that I've been privileged to be a member—my colleague, Senator Levin, and I came to the Senate together these many years ago, almost a quarter of a century—this committee has enjoyed the finest of professionals on its staff throughout these years, and they have gone on to positions of great responsibility, not only in the public sector, but the private sector. You stand preeminent among those who have served this committee.

I think it would be important for those in attendance today just to know a few facts. You started your career as an enlisted soldier, a private, and concluded with your retirement as a lieutenant colonel. You served as a Cobra attack helicopter pilot. You were decorated as an officer who led an infantry platoon, an infantry company, and attack helicopter units during two tours in Vietnam. I remember that war well because I was then Secretary of the United States Navy, and I know the personal sacrifice that all those who wore the uniform during that period made.

Your decorations include the Legion of Merit, 4 Meritorious Service Medals, the Purple Heart, 2 Bronze Stars for Valor, 14 Air Medals, the Army Commendation Medal for Valor and the Combat Infantryman's Badge. I think that says it all. After your 26-year Army career, you joined the committee in 1993, and you have been a most valuable member of our team. So we wish you well.

I am confident that the Senate will give you the advice and consent the President has sought favorably on your nomination. Would you at this time kindly introduce your family who are present in the hearing room?

Mr. ABELL. Sir, I am accompanied by my wife, Cathy.

Chairman WARNER. We welcome you. Thank you, sir.

Now, Dr. Zakheim, I've come to know you, through the years, with your distinguished career, and you served with the Congressional Budget Office—that's an experience, isn't it?

[Laughter.]

—and in the Department of Defense during the Reagan administration in a number of senior positions from 1981 to 1985. From

1985 to 1987, you served as Deputy Under Secretary of Defense for Planning and Resources and played an active role in the planning, programming, and budget process. In that capacity, you successfully negotiated arms cooperation agreements with various U.S. allies.

Subsequently, you served two terms as the President's appointee to the United States Commission for the Preservation of America's Heritage Abroad. In 1997, former Secretary of Defense Cohen named you to the Task Force on Defense Reform and later named you to the first Board of Visitors of the Department of Defense Overseas Regional Schools and the Defense Science Board Task Force on Impact of DOD Acquisition Policies and on the Health of the Defense Industry.

You currently serve as Corporate Vice President of Systems Planning Corporation, a high-technology research analysis and manufacturing firm. Also, you're Chief Executive Officer of SPC International Corporation, which specializes in political, military, and economic consulting and international analysis—again, a very distinguished public service career. Once again, you volunteered to go back to serve your country with a most exciting team. So I commend you.

Would you introduce the members of your family, please?

Dr. ZAKHEIM. Yes, Mr. Chairman. My wife, Deborah, sitting right behind me and, next to her, one of my sons, Roger.

Chairman WARNER. We welcome you. As I've said many times in the course of these hearings, it is a family affair, serving in the Department of Defense. There are no hours. The clock knoweth no finality. Days go into nights and nights into day. But I must say it was one of the most exciting challenges of my life, the 5 years, 4 months, and 3 days I spent in that building. So when I speak to each of you, I speak to your families, because they are very much a part of the team.

Now, Ms. Clarke served as Press Assistant to Vice President Bush's office early in the 1980s, and later served as Press Secretary to Senator McCain. That's a challenge.

[Laughter.]

I say that with respect to our colleague—working in both the House and Senate offices and then served as Assistant U.S. Trade Representative for Public Affairs and the private-sector liaison under Ambassador Carla Hills in 1992, Press Secretary for President George Bush's re-election campaign in 1992. Ms. Clarke is currently the General Manager of the Washington Office of Hill and Knowlton, one of the most distinguished and venerable institutions of its type in the Nation's capital, and we welcome you. Would you kindly introduce those who have come to join you today?

Ms. CLARKE. Thank you, Mr. Chairman. I have my parents, Dr. and Mrs. Charles Clarke; my sister, Caitlin; my husband, Brian Graham; my son, Colin, who is having his sixth birthday tomorrow; Devon, who is four; Charlie, who is a little over two; and my friend Lorraine Voles, who is graciously helping us out today.

Chairman WARNER. That's lovely. Those kids are beautifully well-behaved and turned out, as we say in the military, for parade dress.

Well, we thank you for considering, again, public service and for undertaking it as an exemplary parent with the duties at home and the duties in the office, and all three of you are serving on, I think, what will be one of the most exciting teams—I don't say this, Republican and Democrat, because I've worked with all the teams in these 23 years we've been here—but you're going to be on an exciting team and the cutting edge of history in our Department of Defense. So I wish you well.

Now, the committee has standard questions which we propound to each of our nominees, and I will do so on behalf of the committee and ask each of you to respond.

Have you adhered to applicable laws and regulations governing conflict of interest? Mr. Abell.

Mr. ABELL. Yes, sir.

Chairman WARNER. Dr. Zakheim.

Dr. ZAKHEIM. Yes, sir.

Chairman WARNER. Ms. Clarke.

Ms. CLARKE. Yes, sir.

Chairman WARNER. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Ms. CLARKE. No, sir.

Dr. ZAKHEIM. No, sir.

Mr. ABELL. No, sir.

Chairman WARNER. Will you ensure your staff complies with the deadlines established for requested communications, including questions for the record in the hearings? Charlie, I want you to answer that loud and clear.

[Laughter.]

Mr. ABELL. Yes, sir.

Dr. ZAKHEIM. Yes, sir.

Ms. CLARKE. Yes, sir.

Chairman WARNER. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Ms. CLARKE. Yes, sir.

Dr. ZAKHEIM. Yes, sir.

Mr. ABELL. Yes, sir.

Chairman WARNER. Would those witnesses be protected from reprisal for their testimony or briefings?

Ms. CLARKE. Yes, sir.

Dr. ZAKHEIM. Yes, sir.

Mr. ABELL. Yes, sir.

Chairman WARNER. Senator Levin, why don't you start the questioning period here on behalf of the membership?

Senator LEVIN. Thank you, Mr. Chairman. Dr. Zakheim, does the administration plan to file a detailed budget for defense for the year 2002?

Dr. ZAKHEIM. To the best of my knowledge, they plan to do so. I don't have those details myself, obviously.

Senator LEVIN. Do you know when they plan to do that?

Dr. ZAKHEIM. I do not at this time.

Senator LEVIN. Do you know whether the administration plans to request any supplemental funding for defense for fiscal year 2001?

Dr. ZAKHEIM. I believe that is under active consideration, but I don't know the final answer to that one, sir.

Senator LEVIN. When will that decision be made, whether or not to do it? Do you know?

Dr. ZAKHEIM. I don't know the exact date. If confirmed, I suspect that I'll be part of that decision-making process.

Senator LEVIN. Do you have any idea as to how much funding would be requested, if it's requested?

Dr. ZAKHEIM. Not at this time, sir, no.

Senator LEVIN. You've written in the past, Dr. Zakheim, on the need for additional base closures.

Dr. ZAKHEIM. Yes, sir.

Senator LEVIN. Do you believe there is excess infrastructure in the Defense Department today? If so, are there unfunded needs within the Department that could benefit by redirecting resources away from the excess infrastructure?

Dr. ZAKHEIM. I believe the infrastructure is in excess of the force structure, yes, sir.

Senator LEVIN. Does that mean it's in excess, you believe, of what is needed?

Dr. ZAKHEIM. I believe that it is. I think we have to look closely at the details, of course. But yes, I believe that there is an excess.

Senator LEVIN. Have previous rounds of base closures, in your opinion, resulted in significant reductions in DOD costs that have made resources available for higher priorities?

Dr. ZAKHEIM. As I understand it, GAO and CBO have said as much. They have never put a dollar figure on that, though.

Senator LEVIN. Do you believe that it is true that there have been significant savings over time from previous rounds of base closures?

Dr. ZAKHEIM. I haven't done the analysis. I believe there are savings; but since I haven't done the numbers, I don't know how big they are.

Senator LEVIN. Dr. Zakheim, you've also written that peacekeeping is a "strategically marginal" use of U.S. defense funds. You have advocated, "withdrawing from much of the peacekeeping business," so that funds can be used for other needs. Do you believe we should withdraw our forces unilaterally from the following places: Bosnia, Kosovo, Sinai?

Dr. ZAKHEIM. With regard to Bosnia and Kosovo, I think that it's a function of consultation with allies. The "unilateral" word is key here. We shouldn't do anything unilaterally. The events in the last few months, particularly in Macedonia, demonstrated that this is really a very sensitive region. I believe the same holds true for the Sinai. Clearly, both Israel and—

Senator THURMOND. Speak a little bit louder. I didn't hear you.

Dr. ZAKHEIM. I'm sorry, Senator. What I just, Senator—can you hear me now, sir? What I just said was that the word "unilateral" is key here, that on Kosovo and Bosnia, we can't just pull out without consultation with allies. The events in Macedonia have indicated how sensitive that region is. So these issues are a function of what is happening on the ground.

I believe the same applies to the Sinai. The Israelis and the Egyptians both are deeply concerned about how we approach this process. So it will certainly have to involve consultation, Senator.

Senator LEVIN. I'm glad to hear those answers. It is somewhat reassuring, both given prior positions, but, in any event, given current circumstances, I think those are reassuring answers, at least for me.

Dr. Zakheim, when there are differences between the amounts that are authorized by us and the amounts that are appropriated by the appropriators for specific programs, will you work with the defense committees of Congress to identify and resolve such differences between authorization and appropriation reports prior to obligation?

Dr. ZAKHEIM. We have to, and I know it's been the Department's practice all along, to try to work with all the oversight committees and resolve these matters as amicably and as efficiently as possible, and I am committed to consultation with the committees on a case-by-case basis to resolve these matters to everyone's satisfaction.

Senator LEVIN. Thank you. On the financial management end of your work, you and we all know the Department faces serious financial management problems. Because these problems are widespread, they can't be solved at one time, but require higher-level attention. I was pleased to read in your answers to the committee's advance questions that you are, in your words, fully committed to improve financial management in the Department of Defense. Could you give us just an idea, in your judgment, as to what needs to be done. What steps do you plan to take to improve financial management at the Department?

Dr. ZAKHEIM. Senator, there really are some very serious problems, whether it's a matter of clean audits, whether it's a matter of proper training, whether it's a matter of inventory management or management information. I'm coming out of the private sector, and when you're in the private sector, these sorts of matters are second nature. You can't run a business without having the kind of information that is being sought from the Department of Defense.

If I were confirmed, it's a top priority for me to do a number of things—first, to reorganize the Comptroller's office to bring in some first-rate people as deputies to the Comptroller so that we can have focus on management reform and on management initiatives.

Second, I would hope, if confirmed, to bring in outsiders, people with a financial management background, former CFOs and the like, who could provide what you might call mid-term—mid-course guidance on a regular basis to see how we're doing.

Finally, I want to work with this committee and with other interested Members of Congress who have very valuable input and have made a very big difference over the years in passing a variety of financial management acts that have to be really fulfilled.

Senator LEVIN. Just one last question for you and my time is up. Do you have any plans to reorganize the Office of the Comptroller; and if so, what types of changes would you make?

Dr. ZAKHEIM. If confirmed, Senator, I would very much like to do that. I believe that it would be in everyone's best interest to have

at least one, and probably two, Deputy Under Secretaries who focus specifically on financial management issues, and then a third one who focuses on program budget issues. Financial management is simply not being dealt with as smoothly and as capably, in my view, as has the program budget side, and it really needs a lot of work. We need competent, excellent people to do this, and I'm committed to doing this, if confirmed.

Senator LEVIN. Thank you. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator Levin. For the record, the chair of this committee, together with the ranking member, has the responsibility to review the material that is forwarded on all nominees from the White House to the United States Senate through this committee. Senator Levin and I have reviewed that material. We took it upon ourselves to have a briefing in executive session on three nominees, and that has been completed. Do you have anything further to add—but we reviewed this material and it met our criteria. Am I correct in that?

Senator LEVIN. There may be an additional executive session, if possible.

Chairman WARNER. I'm going to momentarily defer to my other senators, but I cannot let go saying that, one, a very valued staff member of this committee is to do a transfer from this committee to the Department of Defense to work under your aegis as your principal deputy. We wish to recommend him very highly. He is an extraordinary, able, well-trained professional, and it's been my experience—and I think my staff, who share these views—that the staff of the Pentagon and your department have served their country very well. While you certainly have the right to do certain reorganization, we would want you to do so knowing that this committee has very high respect for their performance in their respective duties.

Senator Levin, do you have a statement? Then I'll yield to Senator Bunning, because I'm going to stay here for a period of time. Senator, do you have a statement you'd like to make? Just a brief announcement?

Senator THURMOND. I will pass on the opportunity to ask questions of our nominees. I have complete confidence in their abilities and will support their nominations.

Chairman WARNER. I thank you.

Now, Senator Bunning, you take my—

Senator BUNNING. Thank you, Mr. Chairman. First of all, I want to thank all of you for coming.

The most important thing I can convey to you today is the importance of providing, here in Congress to the members of this committee, timely, accurate information. If an administration official is asked a question, we need that official to provide us with accurate information or we cannot do our jobs. If confirmed, I look forward to working with all of you.

Dr. Zakheim, there have been many reports of the deterioration of our readiness in the armed services. Do you believe that the proposed budget is sufficient to adequately resource our force at their current levels of commitment?

Dr. ZAKHEIM. Well, Senator, Secretary Rumsfeld is conducting the strategic review right now, and the budget submission for 2002

is going to reflect that review. So, in a sense, I can't really comment on the relationship other than to say that, clearly Secretary Rumsfeld is going to take into account exactly the concerns you've talked about.

Senator BUNNING. It's my understanding that there's going to be a request from the Department of Defense for a supplemental appropriation bill. Do you have that same understanding?

Dr. ZAKHEIM. I believe that it is under active consideration. I'm not aware yet of any timing or sizing of it.

Senator BUNNING. You're not aware of any sizing or timing.

Dr. ZAKHEIM. Not yet, no, sir.

Senator BUNNING. Gee, that's funny, because we are, and you're about to ask us to confirm you. You're not in any loop at all?

Dr. ZAKHEIM. Well, Senator, again, I'm briefed. People have tried to educate and get me up to speed, but on this particular decision loop, I am simply not aware of any final decision on either of those matters, Senator.

Chairman WARNER. The practice of the Department, Senator, is the nominee has to await the confirmation process before the Secretary of Defense can call on you to be an active participant in the decision making.

Senator BUNNING. I understand that. But, in other words, if he's had a briefing on the proposed budget and/or a possible supplemental, I thought maybe he might share some of that information.

Today's *Washington Times* reports the Secretary of Defense is forming an executive committee of senior civilian leaders, including the Comptroller, to implement the transformation policy. What would be the specific function of that committee, and what would the Comptroller's role be?

Dr. ZAKHEIM. Again, I have not been given details as to exactly what the committee will do, except in the most general sense that you described. The Comptroller is also a chief financial officer and, in that respect, obviously has input into acquisition policy. I presume that that is what the article is alluding to.

Senator BUNNING. Senator Levin brought up BRAC and a possibility of another BRAC, and you were pretty firm in your statement that you didn't have a handle on any savings, if they occurred, from the first two rounds, other than to say that you thought that some savings might have occurred.

Before I ever look at another BRAC, you're going to have to convince me that there were actual savings in the first two rounds. I don't think there's any question that the size of the force doesn't fit the facilities; but sometimes—as I just stopped on Midway Island on the way home from Taiwan—sometimes what is shut down is still operating. I say that only to point out that Midway had been BRAC-ed in 1996; and yet there is a big need on Midway for refueling and doing a lot of other things that the military needs to have done.

So I want you to be prepared, if you are ready to recommend BRAC to us again, that you show us some substantial savings from the first two rounds. Let me ask a couple of other questions.

Chairman WARNER. Senator, you take such time as you need and then we'll turn to our other colleague momentarily.

Senator BUNNING. Yes, I want to ask our staff member—a number of years ago, General Mundy, the Commandant of the Marine Corps, proposed to no longer enlist anyone who is already married. One of the objectives behind this was to reduce the pressure placed on newly-enlisted personnel, particularly given the high number of days per year they are deployed away from home—and I can speak from personal experience, with a son in the Air Force. Do you feel that this would be an effective way to reduce stress on our enlisted personnel during their initial enlistments?

Mr. ABELL. Senator, the short answer is no. I think it's a fact that more and more of our young soldiers, sailors, airmen, and marines are enlisting with existing families. Even a greater number acquire a family shortly after enlistment. You're right, it is stressful. I have a great deal of confidence in the abilities of those young men and women to handle that stress, and I have a great deal of confidence in their chain of command to assist them in that endeavor.

Senator BUNNING. Then why are we falling short in every service on our enlistment goals?

Mr. ABELL. Sir, I think recruiting—recruiting especially, but retention, as well—is a very tough job. Currently, we enjoy a very robust economy. I think that probably contributes more. The opportunities available to young men and women today, especially the high quality young men and women we seek for the military, are probably unmatched. I think that is the difficulty, not so much family.

Senator BUNNING. Do you think our current force structure is large enough to assume the commitments that we have made presently?

Mr. ABELL. Senator, I think there's no doubt the current force structure is stressed and overtaxed by its missions. Whether it's the right size or not, I think, is going to be one of the outcomes that we will see from Secretary Rumsfeld's several studies, and I look forward to seeing the details of that—of those studies before I could give you a definitive answer on that.

Senator BUNNING. OK. Ms. Clarke, the Department of Defense usually uses individual Social Security numbers as their service-identification numbers. Recently, there have been some reports of identity theft from active duty military members. Given the Social Security numbers may be more accessible to outside parties, Privacy Act requirements notwithstanding, how do you plan to minimize the danger to service members from this crime?

Ms. CLARKE. Senator, I don't have enough information about that particular issue to address today, but I do think, when it comes to the Privacy Act, that one of the utmost priorities of my department is to respect and protect the privacy of individuals. I will do everything possible, if confirmed, to ensure that I and my staff are fully trained and sensitized to that protection and respect we should give to individual privacy. I would be happy to take the question for the record and get back to you with an answer.

Senator BUNNING. Well, the question I have is, why does the military continuously use the Social Security numbers as an ID number, when most of the banks, most of the driver's licenses, most other people are starting to phase that out since the access

to the Social Security number and the maiden name of the mother allows access to your Social Security records?

Ms. CLARKE. I don't have an answer for you, Senator, but I would be happy to get you one.

[The information follows:]

The Department of Defense shares your concern about the potential misuse of social security numbers and the need to protect the privacy of the men and women of our Armed Forces. While Defense Department policies and practices do not appear to have contributed to misuse, we will continue to be vigilant in safeguarding such information.

The issue of using the social security number (SSN) as the service identification number, a practice first begun in the 1960s, was recently studied by both the Defense Department and the General Accounting Office. In addition to identity theft, we studied the potential use of the SSN to obtain information that could be used against captured or detained personnel. However, given the ubiquitous access to personal information via the Internet, the senior officials who studied this issue determined that removal of the SSN and substitution of another number would not remove or even markedly reduce this threat. Further, any such attempts would likely waste hundreds of millions of dollars while not providing any significant protection for servicemembers.

This issue poses a difficult challenge, but we remain committed to protecting the privacy of servicemembers and will vigilantly safeguard personal information. We take very seriously our responsibility to protect social security numbers and limit access to only those uses permitted by law.

Senator BUNNING. OK. During the recent incident with the U.S.S. *Greeneville*, the Navy was criticized for initially providing misleading and inaccurate information. How do you plan to address this in similar situations in the future?

Ms. CLARKE. Senator, if confirmed, I hope one of the mottos of my department will be "maximum disclosure with minimal delay." I think one of the priorities for the Department is to disseminate news and information, the good and bad, as quickly and as accurately as possible.

Senator BUNNING. We are counting on you to do just that.

Ms. CLARKE. Yes, sir.

Senator BUNNING. Thank you, Mr. Chairman.

Chairman WARNER. I thank you, Senator, and particularly for the question about Social Security. I think that this committee will follow your lead on that issue and look into that question with some thoroughness.

Senator BUNNING. Thank you, because, as Chairman of the Social Security Subcommittee in the other body, that was one of my primary concerns, and that now you can tell the bank to go you-know-where if they ask for your Social Security number.

Chairman WARNER. We will look into that.

Senator Akaka.

Senator AKAKA. Thank you, Mr. Chairman. I, too, am pleased to be participating in this hearing and want to welcome the families of the nominees here to the hearing, and to tell you I was impressed with introductions that were given by our Senators of each one of you, which tells me that the President made some good choices of well-qualified people, and I look forward to working with you as we move forward with this new administration.

In advance questions that we received, Dr. Zakheim, you provided the committee—you indicated that you expect Secretary Rumsfeld to charge you—and I'd like to quote this loud and clear—"to do everything possible from every budget dollar." That is a high

calling, and I agree with your assessment that accurate and timely financial management information is critical for managers across the Department to ensure accountability and the most effective use of taxpayers' dollars, and I then realize why you suggested reorganization of some of the top-level people under you.

My question is a large one that has been around. I would just ask you one question, and then ask some of each of the others. My question to you, Dr. Zakheim is, how long do you think it will take before the Department can provide Congress with an accurate accounting of DOD expenditures?

Dr. ZAKHEIM. I can answer it the following way. I have been told that it will take many years to do that. Many years is not a good enough answer for me. I would hope that Congress will be in a position to receive cleaner audits, far more timely information, certainly within the next few years—in other words, hopefully, if confirmed, while I'm still around there.

Senator AKAKA. I do, too. I've enjoyed working with you, Mr. Abell, during the past few years, when I was not a member here on this committee, but we worked in other ways, and I really appreciate what you've done to help me in other ways. I'm sure that you will do your best to address the challenges facing the Assistant Secretary for Force Management and Policy.

I agree with your assessment that, while recruitment is essential, retention is critical to force readiness. In your answers to questions by the committee, you referred to "balancing deployments and military training requirements with the stability necessary for long-term health of military families." I took that off—a quote. So my question to you is, if confirmed, how would you address this issue?

Mr. ABELL. Well, Senator, this is a tough issue. It is one that the military services have talked to us about while I've served on the committee for many years. We—the committee and Congress—have put into effect some legislation requiring that the deployments now be tracked on an individual basis and that the individuals be apprised of how many days they have been deployed, and that those deployments be managed by senior officers.

I think as this procedure gets implemented, just getting visibility on the subject will help a lot. But as we do get the visibility of how many days soldiers, sailors, airmen, and marines are actually deployed, we will get a good feel for the types of units, the types of military specialties and the types of missions that are consuming these service members' time. I think then we'll be able to make some judgments as to how to better balance the needs of the family, the needs of the individual, and the needs of the service.

Senator AKAKA. Thank you very much. Ms. Clarke, I liked your proposal that, if confirmed, your motto would be, and I quote, "maximum disclosure exposure and minimum delay." I agree that accuracy is very important in dealing with the dissemination of information, as evidenced by recent events that have occurred in the past few months. In my case, many of these have occurred in the Pacific and Asian areas. How do you propose to engage and gain the support of the public as the Department of Defense addresses the threats of the 21st century?

Ms. CLARKE. I think there are two answers, Senator. The first part is to make sure, on a regular, consistent basis, in as timely and accurate a fashion as possible, you give them complete information, the good and the bad, about what is going on. I think that is an absolute priority.

At the same time, I think it's critical that we do something that probably hasn't been done for quite some time. That is, on an ongoing basis, engage the American people, not just the men and women in uniform and their families, although I think they're absolutely critical as well, but engage the American people in a conversation and a dialogue, if you will, about the risks we face in the 21st century, about the kinds of changes that might be appropriate. The challenges are too great, and the issues too serious, not to engage all of them in that.

So if the first motto of the Department, I hope, will be "maximum disclosure and minimum delay," I hope another motto that people will come to think about is "outreach, outreach, outreach." I think we should be talking to and responding to and educating and making aware everyone we can find. Talk to them about the risks, about the solutions, talk to them about the commitments these men and women make. It's very telling, you asked many questions about the people who are actually serving, and the stresses and the pressures on them. I think it's very important the American people see, up close and personal, the kind of commitment these men and women are willing to make, the kinds of challenges they face and the kinds of risks they face, as we've seen over the last few weeks. Increasingly, there are few people in society who have much real-life experience with the military. So I think it's really important that we focus on that outreach so they can see what's going on.

Senator AKAKA. Thank you very much for your responses, and I congratulate you on your nominations. Thank you very much, Mr. Chairman.

Chairman WARNER. Senator Reed, I'm going to be the wrap up, so I'm going to let all members go ahead. You go right ahead.

Senator REED. Thank you very much, Mr. Chairman.

Chairman WARNER. Then to Senator Dayton, and then we'll go into another round of questions if there are others.

Senator REED. Let me first address a question to Mr. Abell. But before I do that, let me associate myself with all the high praise that you richly deserve. You've been a key member of this committee's staff, and you've served every member with great diligence and professionalism, Charlie. It's a mixed blessing; we're glad for you, but sorry to see you go.

Let me address a question. We often spend a great deal of time about the recruitment and retention within the uniformed services, but I think you're going to be facing a real challenge with respect to recruitment of civilian Department of Defense officials and retaining a very qualified workforce. I wonder if you've given any thought to what you might do.

Mr. ABELL. Yes, Senator, I have. I'm concerned about that. There are a number of senior civilians who will be retiring. I'm concerned about the developmental programs that enable folks to be developed professionally to fill those positions. I'm concerned about

whether or not Federal civil service is attractive to men and women out in America, just like the military service is, and I look forward to getting into those issues. I'm not as familiar with those as I am with the military personnel policies, and so it is going to be a matter of some focus to me to roll up my sleeves and get involved in it.

Senator REED. Well, we have every confidence you will roll up your sleeves.

Dr. Zakheim, again, welcome. One of the major initiatives that has been taking place over the last two decades has been an attempt to foster more "jointness" in the Department of Defense, and we have made some progress with uniformed officers serving in joint assignments with a requirement for promotion to have a joint assignment. But I think in the area of management systems and procurement systems, in the financial guts of DOD, we have made very little progress in "jointness." Could you mention how you perceive the problem and what your instincts are at this moment?

Dr. ZAKHEIM. Certainly, Senator. First, again, thanks so much for the very kind words. I really do appreciate them.

Certainly, one cannot say that on financial management we've received anything like a Goldwater-Nichols. Of course, it was this committee that was very much behind that. We have "jointness" in the military that was unprecedented when I came to the Pentagon in 1981. I believe that the only way one can achieve anything remotely like that in the financial management side of the Department is by conveying the sense of high-level attention. The Secretary of Defense is personally committed to making this happen. If I am confirmed, I'm personally committed to making this happen. I hope to work with the team of people who will focus on this full-time.

In addition, the Secretary of Defense has made it clear that he wants the service secretaries to work as a team. One of the highest priorities in that team effort is getting coordinated financial management. So I believe with that degree of top-level involvement, we will make some progress.

Senator REED. I know it's very early. In fact, I presume you really have been barred from any significant discussions about planning as it goes on today in the Pentagon. That is a correct presumption, isn't it?

Dr. ZAKHEIM. Yes.

Senator REED. But do you anticipate, given your background, that legislation would be required to effectuate the kind of integration of financial measures and systems that you anticipate?

Dr. ZAKHEIM. It may well be, in certain respects, and I would hope to work with this committee and with other cognizant committees to identify those sorts of requirements. It's very important that the Department work very closely with Congress on these matters. Certainly, if I'm confirmed, I intend to make this not just an occasional practice, but a regular one.

Senator REED. Thank you very much, Dr. Zakheim. Ms. Clarke, best wishes. I'm sure you're going to do a fabulous job.

Ms. CLARKE. Thank you.

Senator REED. You also have a problem of "jointness," which is you have three services that have their own public affairs oper-

ations. Do you have a plan at the moment to either do more integration or more decentralization, or less?

Ms. CLARKE. Sir, I've actually had the opportunity to meet with the heads of public affairs from the three services in my private-sector life, and—

Chairman WARNER. Let me interrupt. There are four services—

Ms. CLARKE. Yes.

Chairman WARNER. The United States Marine Corps, I say to my graduate of the West Point Academy here—[Laughter.]

Excuse me for the interruption.

Senator REED. Mr. Chairman, I obviously stand corrected. I don't know what came over me. [Laughter.]

Chairman WARNER. All right. What came over Ms. Clarke? She picked right up on the same response. [Laughter.]

Senator REED. Well, she's in an awkward position. She has to be polite. I should be accurate. Forgive me.

Senator LEVIN. Actually, you were really testing Ms. Clarke, and she came through.

Senator REED. She came through. She was wonderful.

Senator LEVIN. It was a very conscious effort. I've seen him do that before. He really knew there were four services, but he wanted to see just how much you knew. [Laughter.]

Senator REED. Well, what I—I misspoke. There are three service secretaries. Chairman Warner is right—I misspoke. Chairman Warner is always right. That's a good rule on this committee, by the way. [Laughter.]

Ms. CLARKE. As I've been told many times by those in the Navy, there is no secretary of the Marines, is there—but there are four heads of Public Affairs, and they are all very talented, very professional people, and I have had the opportunity to meet with them. If confirmed, I look forward to working with them closely. I think the focus on "jointness" is absolutely appropriate and absolutely vital, so I look forward to working with them.

I have not thought through—because I did not want to presume anything—I haven't thought through the structure, but I have thought, in general terms, about trying to find a process, trying to find a way to work more closely together.

Senator REED. Thank you. Just one final question. Dr. Zakheim, you have spent a lifetime studying strategic issues and bringing to that study, not just academic theoretical instincts, but also the knowledge of budgets and how they work, how they're put together. I'm just wondering about your view, as we look ahead, the budget you're seeing emerging, is that adequate to do modernization and then attempt, if feasible, to do some very expensive projects, like national missile defense?

Dr. ZAKHEIM. Well, the Secretary of Defense wants very much to have a top-down approach to this whole matter—that is to say, to lay out the strategy and then to coordinate the budgets with that strategy. So, in fact, right now, he has a strategic review that is ongoing; and hopefully, the budgets and the program would then reflect that review. If confirmed, I would hope very much to participate in that activity, but we're putting first things first.

Senator REED. Thank you very much. Thank you, Mr. Chairman.

Chairman WARNER. Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman. Ms. Clarke, I won't use any numbers in my questioning or comments, but I want to second what Senator Bunning said about—I'm new to this committee, and when I read your remarks there that there is a Principles of Information, I made a note to myself to get a copy of that, because I'm not aware that—what I imagine they must be, and what your remarks have suggested is followed in practice. The U.S.S. *Greeneville* incident, to me, was a classic case of providing as little information as absolutely necessary. Except for watching the television news, investigative reports, and the newspapers, I don't think a lot of it would have come to light. So I certainly support his comments and urge you to act accordingly.

Similarly with the bombing of the Iraq radar installations, I remember my staff picking that up on CNN and trying to find somewhere to call and inquire as I was about to walk into a Minnesota defense establishment and not being able to even get a courtesy of reply. So I would say good luck to you. You have a long way to go.

Ms. CLARKE. Thank you, Senator. I will need the support. The Principles of Information, which I'd be happy to provide, do state clearly that it's the utmost responsibility to release news and information in as timely and accurate a fashion as possible. The only time you withhold information, according to the Principles, is if it would adversely affect national security or it would threaten the privacy or the safety of the men and women in uniform.

I absolutely believe that, as many people say, bad news doesn't get better with age; so get it out there, and get it out there accurately.

Senator DAYTON. Well, I would like to receive a copy of the Principles. My solution would be to get a direct phone number for your office. But in either respect, I'm—

Ms. CLARKE. You can have it.

Senator DAYTON.—encouraged by what you said.

Mr. Abell, I note your comments about the importance of recruiting and retaining top-qualified military personnel, and I assume that applies to the Department, as well. Could you elaborate a bit on what you propose to do, or what you contemplate, in terms of—especially in making life better for the families of men and women in our service and improving the retention of them?

Mr. ABELL. Senator, I think, first, recruiting and retention are a matter of constant vigilance. It is my experience that anytime that a service takes its eye off of either of those two tasks, it is inevitable that they have suffered. So I will be, if confirmed, one who pushes for maintaining that constant vigilance.

I also believe that the services are now—have responded well to some problems in the recent past and are being very innovative and visionary in their approaches to recruiting and to retention, and they are to be congratulated. I think the results, both last year and the projected results for this year—we just had a hearing this morning in the Personnel Subcommittee—are very encouraging, and they reflect well on the hard work of a lot of people. I think we need to keep looking for the fresh way to address these problems with a crisp delivery of a good message.

As for the quality of life of our families—again, very important for retention—it is one of the focuses of Secretary Rumsfeld’s strategic review. I have not been briefed on their progress, and I look forward to receiving that brief, if confirmed.

Senator DAYTON. I would just note that, in the budget process, there were a couple of amendments, including the Chairman’s, which was adopted, which provided additional funds which could be used for, among other purposes, those improvements.

I was at the National Training Center in California during the recess and asked a couple of the commanding generals there what they thought were the greatest needs. They both—one said, “I’m an armaments expert, but the quality of life for the pay benefits and standards of living for our families is what would be most valuable and supportive of my mission.” So I look forward to your returning and to the administration coming forward, whether it’s a supplemental appropriation or future requests, and really take advantage of the support of the members of this committee for those kinds of improvements.

Mr. ABELL. Thank you, sir.

Senator DAYTON. I would add, as part of that—and I noted with interest your referencing the health benefits dilemma that many reservists and National Guard members face. In Minnesota, we have reservists and members of the Guard who were called up for a period of 3 to 5 months, and the economic hardships which they and their families encountered, health being one of them—again, I would hope and urge that they not be forgotten when it comes to these kinds of financial and other improvements.

Mr. ABELL. I assure you, Senator, I will look at the total force.

Senator DAYTON. Thank you. Dr. Zakheim, when Secretary Rumsfeld has met with us, he has cited his concern about the length of time and increasing length of time from the authorization and design of these weapons systems to their deployment now, some getting to be some 8 to 10 years. I wonder if you’ve had the chance to think about what kind of financial procedures—I know from the standpoint of military contractors in Minnesota, it’s often very time consuming and contributes to these overall delays, getting swift billing and receipts and the like.

Conversely, on the other side, according to Senator Byrd and others that have longer experience than I, it’s almost astronomical amounts of money that can’t be accounted for within the system. So we have this anomaly that, on the one hand, it seems that many of the procedures and requirements just extend delays, but they don’t end up accounting for the money. Do you have a way to reconcile and solve those problems?

Dr. ZAKHEIM. Well, it’s not an easy challenge, Senator. I understand that, in the matter of what Senator Byrd is very concerned about—and he mentions, I think, \$4½ trillion—there are technical answers to that question, but I think there is more than a germ of truth to his concern. If confirmed, one of my highest priorities would certainly be to, in particular, work to make sure that the various different sources of information are all congruent, because it is my impression—and I do have to study this more, Senator—but it is my impression that the various—what are called feeder

systems and various sources of information simply don't speak to each other, and that is where a lot of this falls between the cracks.

As to your first point, Senator, regarding the acquisition cycle, I am fully aware of Secretary Rumsfeld's concerns. There are some studies going on, as part of the overall strategic review, to look at this particular question. Obviously, how one deals with the funding of these programs is an integral part of it.

So, if confirmed, I very much would hope to be involved in reconciling the financial side to the pure mechanics of the acquisition side so that the program can be speeded up.

Senator DAYTON. Thank you. I would appreciate your sharing those reports with me when they become available. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator. Senator Bunning, do you have a question, too? Senator Levin? All right. You go, then I'll do wrap-up.

Senator LEVIN. Thank you. I appreciate your yielding to me, Mr. Chairman, so I could leave in a few minutes.

First, Ms. Clarke, last year, the editor of *Stars and Stripes* resigned because he was not allowed to publish a story even after the story was published in the *Washington Post*. I'm wondering whether or not you believe that *Stars and Stripes* should enjoy the same freedom to publish as other U.S. newspapers.

Ms. CLARKE. Absolutely, Senator. I think *Stars and Stripes* should be as independent and as credible as possible. It provides a very valuable service to the men and women in uniform and their families who serve overseas. It gives them news and information that they want, and they need and deserve to know that it is absolutely credible and independent. I think the safeguards are there. If confirmed, I would make sure the safeguards are enforced.

Chairman WARNER. That's encouraging to hear that. I concur in your response.

Senator LEVIN. There is some real concern about that here, which you've just alleviated.

Mr. Abell, what actions are you going to take to enhance recruiter access to secondary schools? This is a big part of our recruiting issue.

Mr. ABELL. Yes, sir. As you're aware, sir, as you recall, in last year's defense authorization bill, there was a provision that actually requires recruiter access unless the local school board takes some action. That provision is not effective until July 2002. This morning in the hearing, recruiters reported to us that their access was improving as a result of that, but they still sought more support. I think there are some things that we can do to encourage school systems to be more open to recruiters between now and 2002. Then in 2002, we'll follow the implementation of that provision.

Senator LEVIN. What initiatives would you propose to improve the employment of spouses of our service members? That also is a big part of retention.

Mr. ABELL. Yes, sir. It's a difficult problem and one that, as I've traveled on the committee's staff, we find, at almost every location, is brought to our attention. There are a number of things that could be done, Senator—more education, tuition assistance for

spouses. I, if confirmed, look forward to working with local civic organizations and chambers of commerce on initiatives like that to see what we can do.

Senator LEVIN. There's been some evidence at least—perhaps, anecdotal evidence—that we're beginning to lose the support of employers of our Reserve component personnel because of the deployments that we have seen. Any plans to address those concerns?

Mr. ABELL. Senator, I've heard the same anecdotes. I, if confirmed, would like to work very closely with the Assistant Secretary for Reserve Affairs to examine this and try to determine the causal factors and actually determine—change it from anecdote to evidence to find out what the real problem is and then address that problem. It may be one of communication, it may be one of over-deploying certain units and not others.

Senator LEVIN. If confirmed, will you recommend a medal for children who sit through these confirmation hearings? [Laughter.]

Ms. Clarke, I must tell you, you have really extraordinary children. They have been wonderful. I can't take my eyes off them. We will call it the "Clarke Medal," if Mr. Abell is able to produce that. I just want to thank all of you. I shouldn't single out family members. You're all really deserving of medals for many reasons, but your children have really been extraordinary. So please give them all of our thanks.

Ms. CLARKE. Thank you, Senator.

Senator LEVIN. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator Levin. The committee really enjoys its responsibilities in the confirmation process. It gives us an opportunity to share, not only views and elicit responses, but we really are appreciative of the overall family contribution to this public service. I thank you, Senator Levin.

I will start with you, Ms. Clarke. Crisis management—it's just remarkable how your predecessors from time to time really are on the point at all hours of the day and night. Secretary Rumsfeld, I think, has a very good policy. He's been very careful in keeping Congress informed, certainly this committee—I can speak for the Senate side—in consultation with members of this committee and others about decisions that he's making.

But then we have the tragic incident of the accident with the Chinese aircraft. I was called early in the morning, as were other members of this committee. I'm sure those responsibilities will fall on you. Tell us a bit about how you're going to go about this, because often you are the point person, particularly when the military families had their loved ones, at the end of the long voyage, or flight, whatever the case may be, at some remote part of the world and trouble is there—the anxiety in their hearts—you recognize that, being a family person, yourself.

Ms. CLARKE. Yes, sir.

Chairman WARNER. Tell us a bit about how you're going to approach that responsibility.

Ms. CLARKE. Certainly, Mr. Chairman. I hesitate to quote from somebody from just one service, but I think it was General MacArthur who said, "The key to success and victory is preparation." I think that holds true across the board, including crisis management, including being prepared for the inevitable crises.

If confirmed, one of the first things I want to do is to look into what is the planning, what processes do we have in place, and who is responsible for making sure the public affairs aspect of these incidents is addressed at the earliest possible position. I know there are some things in place, but I want to give it the utmost attention to ensure, when things do happen, the right people know, and the American people know as quickly as possible. So it's a matter of planning and process.

Chairman WARNER. Would you elaborate a little bit? By the way, I don't question General MacArthur's quote, but Admiral Jellico used to say, "All preparation for naval battles starts in the engine room." In those days, they battened the hatches, and everybody in the engine room knew they were not going to come out and they had better stoke those old coal boilers and get full power for the captain to maneuver his ship. I've always enjoyed military history, and I hope that you share that curiosity and find a few moments to probe the magnificent contributions, certainly of those who have worn the uniform of this country for generations past. Congress—how do you propose to deal with Congress? Now, there's a long history about relationships with Congress and I would hope this Department sets a new high record for fairness and firmness, when necessary.

Ms. CLARKE. Well, Mr. Chairman, I will work closely with my legislative counterpart to make sure that you, this committee, the staff, and 535 Members of Congress get as much information as quickly as possible. Just by way of insight to how passionately I feel about this, I did work for John McCain for 6½ years, and every day was a delight; but I know how important it is to be kept informed by the agencies, so I'll make that a priority.

Chairman WARNER. Also, I must say, you had the privilege of working with our former president, George Bush. I know of no finer American. I really have the greatest admiration for him, and I envy you for your close relationship with him.

Ms. CLARKE. It was an honor to work for him.

Chairman WARNER. It was mentioned in the hearing today, the problems that we're having with recruiting and retention, and the stories you relate and how you relate them will have a direct impact. I'm sure the secretary-to-be Abell can work with you on that, because he has studied it from afar, and now he will be in the responsible position on that. Do you have any special insights into that problem?

Ms. CLARKE. Yes, Mr. Chairman. Two years ago, I was fortunate to work on a recruiting study. It started out as a very narrow look at the advertising that was being used by the recruiting commands, and then it became a broader look at the recruiting marketing. We spent 6 very intense months working with the services, working with everybody, from the Secretary on down, on how we could improve the marketing on recruiting efforts. One of the things that was so extraordinary to us—we came about it by chance, and we made part of the research—is we interviewed everybody from the Secretary on down to the rank and file to the general public. There was very little consistency expressed about the role of the U.S. military—very little consistency. It's very hard to go out there and

recruit when people, including people in uniform, don't have a real clear picture of what they're about, about what their mission is.

So I think it's absolutely critical, and part of my agenda will be, to make sure the American people do know what the role of the U.S. military is in the 21st century. I think that will help with recruiting and retention.

Chairman WARNER. Well, that's a good response, because that is a key thing that we're going to have to deal with. There's a tremendous investment the American taxpayers make in the training of our service persons. We're so fortunate, when numbers of them decide to repeat their tours of duty, in the case of enlisted or, indeed, in the case of the officers, to go ahead and accept another promotion with the obligation of active duty associated. So I wish you luck.

The other—and I think I'd better speak and you just listen—but, again, having had some experience in the Department and watching it from this side now for these many years, there's a certain degree of independence that a Secretary of Defense should and does accord to the Service Secretaries and their respective chiefs, but from time to time, we see examples of how a military department will go out on an issue and then problems begin to arise.

I'm not being critical, but recently the Army made decisions with regard to the simplest of things, the beret, and we were besieged on Capitol Hill. Then, of course, they could not have foreseen the tragic problem with China. That exacerbated it. Then had to go back through a reassessment. I would hope that the Secretary and yourself can work with these departments on certain decisions which have a high profile of public interest and do everything possible to go ahead and implement that decision and do it by laying a careful base of understanding before it is rolled out.

Ms. CLARKE. Mr. Chairman, if confirmed, I hope that one of the things I can do is inject the public affairs sensitivities, if you will, at the earliest stages to prevent just those sorts of problems.

Chairman WARNER. Well, that's wonderful. I'm very reassured by your responses. We haven't heard a peep from the back row yet, so I guess—

Ms. CLARKE. Well, my colleagues are actually being very patient, because we're hearing lots of peeps back here. They're being very patient. [Laughter.]

Chairman WARNER. Dr. Zakheim, we had a marvelous conversation the other day—it's always enjoyable to have those calls from the nominees—and you reflected, and I would like to have the record reflect, your comments to me about one of your predecessors, Dr. John Hamre. He is just so respected by this committee. My parting comment was to you, call him up every now and then when things are going tough and say, "How did you deal with this?"

Dr. ZAKHEIM. Mr. Chairman, for the record then, I have known John Hamre since he left graduate school, and I know he served this committee with distinction. John Hamre is one of the finest people—not just public servants, but people who I have ever come across. The man has truly a heart of gold. He demonstrates that in very quiet ways. He is not a showboater. The CSIS, the Center for Strategic and International Studies, of which I happen to be a senior fellow, is lucky to have him as President. This is one of the

finest people in this city. Actually, it was you, Mr. Chairman, who said, "No one has a bad word to say about John." The only people that don't have bad things said about them are people who are exceedingly good, and I value him as a friend.

Chairman WARNER. That he is. He, of course, served in your position, then went on to be the number two man in the Department, and he stayed on for part of the transition to—when he passed the mantle over to another distinguished House member, who became Deputy Secretary of Defense, so he served his country well.

In the course of working with Dr. Hamre, I took an initiative along the following lines. This committee enacted legislation last year to pay interest on service contracts that DFAS takes more than 30 days to pay, and I would hope that this committee has your commitment that you will continue to work to resolve this problem with the intent of reaching an on-time payment rate of these accounts at 100 percent. Do we have that?

Dr. ZAKHEIM. Well, Mr. Chairman, I'm not expert in this. It's obviously a very important issue to this committee, and I intend to look into it and certainly to carry out all commitments the Department has made.

Chairman WARNER. There's really a broader issue, and that is I have seen, through the years, a diminution in the infrastructure that supports our national defense—fewer companies. We're down now to one major manufacturer of our civil aircraft. In years past, the military aircraft programs produced prototypes, then operational aircraft and the derivatives found their way into civilian aviation, just to give one example. Quite frankly, I've stayed very close to this industry, and they're telling me, in a polite way, "We're struggling with so much DOD regulation and red tape, why don't we just go and devote more of our assets of our corporation and our manpower of the corporation to performing lucrative, less complicated contracts, payment on time, in the civilian private sector?" Therefore, you have to be conscious of that.

Dr. ZAKHEIM. Mr. Chairman, I served on the Defense Science Board Task Force on the health of the defense industry, and, frankly, they weren't as polite to us about this as they were to you. It is not just a matter of those companies that are working with the Defense Department and putting up with, as you put it, red tape; it's also a lot of very talented companies and people that don't want to touch the Defense Department at all. Here, we have a high-tech revolution going on, and very few of those companies want to have any business with DOD.

We heard that in spades, Mr. Chairman, and I'm deeply concerned about it, and I know the Secretary of Defense is, as well. Certainly if confirmed, I intend, to the extent that the Comptroller gets into these matters, to do something about that.

Chairman WARNER. Well, in fact, the budget process has been singled out often as the major contributor to lengthening the acquisition process.

Dr. ZAKHEIM. That is very—unfortunately, Mr. Chairman, is often the case, and what we need are stable budgets. We need budgets that are predictable for industry. Corporate planners also have to think ahead. This has to be a partnership. So, Mr. Chairman, I am certainly aware of your concern, and I do share it.

Chairman WARNER. Thank you. Now, Mr. Abell, this committee has made some significant progress over the years here, following Chairman Thurmond and with the help of my distinguished ranking member. We have increased pay. We're in a remarkable step forward in military healthcare, both active and retired. Now that you're leaving, are you going to leave behind a little memo as to what's next? Are you going to help us, as you did lead in those legislative efforts, with what's next? Housing comes to mind. The problems associated with base maintenance which, in effect, relates to the quality of life on base. What is next, Mr. Abell?

Mr. ABELL. I think you have hit some of them, Senator. Clearly, the pay always remains an issue, and will as long as there is a robust economy. Housing, both bachelor and family quarters, we know are not adequate now within the Department of Defense, and there are a number of programs under way, some just beginning, actually, to improve that housing.

I'm, again, aware that that's a focus of some of Secretary Rumsfeld's efforts; and to the extent that can be accelerated, I look forward to working with those issues. Again, sir, we're going to have to keep on the deployment issue. One of the things we hear when we talk to service members is that they're away much too much.

Chairman WARNER. Away from family—you had better add that key phrase, "away from family." They all recognize, when they wear that uniform with great pride, the risks associated, but we have had a deployment situation over the past 6 or 8 years which, numerically, has been more than any previous president and, indeed, the combination of several of them. Am I correct in that? What is the statistic you recall?

Mr. ABELL. Senator, I can't quote it directly off the top of my head, but my recollection is that in the past 8 years, they've deployed more than any other time in history. That's my recollection.

Chairman WARNER. That's correct. We will always be there in response to our own security needs and those of our allies. But I hope that we can work to reduce those deployments.

But let's talk about what's next. I would like to see greater partnering with the private sector, in the case of housing. Maybe we can further enhancements with healthcare. What are your views on that?

Mr. ABELL. Senator, we already know that the Department can't provide enough healthcare with its internal assets, the medical departments of the three services. TRICARE is all about purchasing healthcare from the private sector. So we have to be more efficient about that, and more effective, but that clearly is a step in that direction.

This committee has pioneered many of the public-private ventures, as far as family housing. I was privileged, this past week, to look at initiatives and the results of those initiatives in Texas and in California and in Washington State, some very promising opportunities there, also some problems that still need to be addressed as we begin, really, the thrust of those initiatives. I look forward to working with the committee on those issues and on others.

There are other areas in which the public-private ventures will be explored, as well. Morale, welfare, and recreation facilities come to mind. There are certainly opportunities there, I believe.

Chairman WARNER. Well, I am reassured by that. Dr. Zakheim, you do more than just sign checks and hand them over to the Secretary. I hope that he brings you into whatever little board of governors he constitutes, or whatever you want to call the organization in DOD, and that you will be given a strong voice, and he will lend an ear, because you understand how, in years past, the comptrollers have been called upon to take as much money as they can out of procurement and move it in to fill the gaps in the expenditures—on overseas deployments, for example. Mr. Abell knows that history very well.

I hope that you can say, “Now, Mr. Secretary, we are way behind in the modernization of our forces, and that has a direct correlation to retention, lifestyle, the whole thing,” because when an individual raises their hand to take the oath of office to serve in the U.S. military, that person is relying on a commitment to Congress to give them the best weapons available—maybe not the most expensive or exotic, but the best available—and they should not be required to take spare parts out of existing equipment to put in other equipment to meet their readiness requirements, and things of this nature.

So put your foot down, think of the military in the future. Procurement is the lifeblood for today’s and tomorrow’s military, and we cannot under-fund that account. We’re going to watch. Guess what? We’re going to hold you accountable. Is that understood?

Dr. ZAKHEIM. That is very well understood, Mr. Chairman. I happen, personally, to share your views on this one. I’ve actually written about this on more than one occasion. Thankfully, Mr. Rumsfeld, the Secretary of Defense, feels very strongly the same way, so that, if confirmed, I do not believe I will be beating against a shut door when I raise those issues. This is widely felt by the senior leadership of the Department. We simply cannot shortchange the future to fund the present. It’s as simple as that.

Chairman WARNER. All right. We will keep the record open for questions by the members through 12 noon tomorrow, should other members who, because of commitments, were not able to get here today. I would hope the nominees would respond, because I’m anxious to seek floor confirmation as early as possible.

It may be we can move you as a group, or singularly, whatever the case may be. There is no significance to be drawn by the fact that all can’t be moved at once, but we’re going to try and do it, because Secretary Rumsfeld has been very patient. But this committee has had, if I may say on behalf of every member of the committee, treated all nominees very carefully, but expeditiously where we can, and we are anxious to have you join the team with the advice and consent of the United States Senate.

So I wish each of you well. You’re going to take a front-row seat on some of the greatest challenges facing this country and the world, and I think each of you are ably competent to fulfill your offices. Good luck.

[Whereupon, at 5:15 p.m., the hearing was adjourned.]

[Prepared questions submitted to Dr. Dov S. Zakheim by Chairman Warner prior to the hearing with answers supplied follow:]

MARCH 21, 2001.

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

DOV S. ZAKHEIM.

cc: Senator Carl Levin,  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes I do. The establishment of the combatant commands, the delineation of responsibilities, and most importantly, the focus on "jointness" outlined in the Department of Defense Reorganization Act of 1986 has enhanced the readiness and warfighting capabilities of the U.S. Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have strengthened the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders, and significantly improved the ability of the Department to protect America's security and further its vital interests. The reforms have helped improve the interaction among the services in conducting military operations by making joint operations the norm.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I would consider each of the goals noted below to be an important aspect of these defense reforms. Each one has enhanced the ability of the Department of Defense to carry out its assigned responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Do you anticipate that the Department of Defense will submit legislative proposals to amend Goldwater-Nichols?

*Answer.* If confirmed, I will work as appropriate with the Secretary and with the committee to review the extent to which the reforms have been implemented and the extent to which they have achieved their stated goals. As Secretary Rumsfeld has noted, we would consult with Congress on any changes that might be appropriate.

*Question.* If so, what areas do you plan to address in these proposals?

*Answer.* It would be premature to offer any thoughts on the question at this time.

##### RELATIONSHIPS

*Question.* What do you see as the relationship between the Under Secretary of Defense, Comptroller and each of the following?

The Secretary of Defense.

Answer. The Under Secretary of Defense (Comptroller) is the principal assistant and advisor to the Secretary and Deputy Secretary of Defense on fiscal and budgetary matters. The Under Secretary (Comptroller) also performs such other duties as the Secretary or Deputy Secretary may prescribe.

*Question.* The Deputy Secretary of Defense.

Answer. Please see the answer above.

*Question.* The other Under Secretaries of Defense.

Answer. My relationship with all other senior officials of the Department will, for the most part, be based on the role described above. If confirmed, I will work closely with the other Under Secretaries to carry out the policies and guidance of the Secretary and Deputy Secretary.

*Question.* The Assistant Secretaries of Defense.

Answer. My relationship with the Assistant Secretaries of Defense and other senior officials of the Office of the Secretary of Defense would be similar to that described above in relation to the other Under Secretaries of Defense.

*Question.* The Chairman of the Joint Chiefs of Staff.

Answer. The Chairman of the Joint Chiefs of Staff is the principal military advisor to the President, the National Security Council, and the Secretary of Defense. If confirmed, I intend to work closely with the Chairman.

*Question.* The Vice Chairman of the Joint Chiefs of Staff.

Answer. The Vice Chairman of the Joint Chiefs of Staff has a vital role in developing and implementing joint plans, programs, and policies for the Services. If confirmed, I anticipate working closely with the Vice Chairman.

*Question.* The Secretaries of the Military Departments.

Answer. The Secretaries of the Military Departments carry out the policies of the President and the Secretary of Defense in their respective Military Departments and formulate recommendations to the Secretary and to Congress relating to their Military Departments and the Department of Defense. If confirmed, I intend to work closely with the Secretaries of the Military Departments, and specifically, their Assistant Secretaries for Financial Management. I will assure that they are aware of the President's and the Secretary of Defense's policies and priorities and assist them in contributing to the successful development and implementation of effective DOD policies and programs.

*Question.* The Assistant Secretaries of the Military Departments for Financial Management.

Answer. In the role of Comptroller and Chief Financial Officer for the Department, I will, if confirmed, work closely with the Assistant Secretaries of the Military Departments for Financial Management in the development and execution of the budgetary and fiscal policies and initiatives of the President and the Secretary of Defense.

*Question.* The Inspector General.

Answer. As the Department's Comptroller and Chief Financial Officer, I will, if confirmed, consider it my responsibility to support the Department of Defense Inspector General (DODIG) in carrying out his or her duties as set forth in the Inspector General Act.

#### DUTIES OF THE COMPTROLLER

*Question.* The duties of the Comptroller of the Department of Defense are set forth in Section 137 of Title 10, United States Code, and in DOD Directive 5118.3. Among the duties prescribed in statute, which were codified in the Goldwater-Nichols Act, are advising and assisting the Secretary of Defense in "supervising and directing the preparation of budget estimates of the Department of Defense," establishing and supervising Department of Defense accounting policies, and supervising the expenditure of Department of Defense funds.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

Answer. I expect that he will charge me to do everything possible to derive the greatest national security benefit from every budget dollar. With respect to financial management, he will want me to get our books in order and work to ensure that all DOD support activities meet the needs of our combat forces.

*Question.* What background and experience do you possess that you believe qualifies you to perform the duties of the Comptroller?

Answer. My previous appointments in the Department of Defense required daily and extensive involvement in budget issues. For over 20 years I have been enmeshed in the defense questions that surround the budget process. I have led and managed offices with responsibilities similar to those in the Comptroller organization.

*Question.* Do you believe that there are any steps that you need to take to enhance your expertise to perform these duties?

*Answer.* Since informed of my nomination, I have worked extensively to further increase my expertise for this position.

*Question.* Do you expect Secretary Rumsfeld to make any changes in the duties of the Comptroller as set out in DOD Directive 5118.3?

*Answer.* It would be premature to offer any thoughts on the question at this time.

#### CHIEF FINANCIAL OFFICER

*Question.* Does Secretary Rumsfeld intend to continue to designate you, if confirmed as the Comptroller, as the Chief Financial Officer of the Department of Defense?

*Answer.* Yes, if I am confirmed, I will be the Department's Chief Financial Officer.

*Question.* If so, what would be your major responsibilities as Chief Financial Officer?

*Answer.* If I am confirmed, I will report directly to the Secretary regarding overall financial management matters within the Department. As Chief Financial Officer of the Department, I will be entrusted with the oversight, design, development and implementation of accounting and financial management systems within the Department. These responsibilities complement the Comptroller's oversight responsibilities of broad budget and programming activities within the Department.

*Question.* Does Secretary Rumsfeld intend to transfer any responsibilities now assigned to the Comptroller by law or regulation to the Chief Financial Officer?

*Answer.* No. The Secretary does not intend to transfer any of the Chief Financial Officer responsibilities.

#### FINANCIAL MANAGEMENT AND ACCOUNTABILITY

*Question.* DOD's financial management deficiencies have been the subject of many audit reports over the past 10 or more years. Each year, we hear about various strategies and initiatives the Department or its components are undertaking to correct these deficiencies, yet the issues still remain and the data continues to be unreliable.

What do you plan to do to provide the needed leadership and commitment necessary to ensure results and improve financial management in the Department?

*Answer.* I am fully committed to improving financial management in the Department of Defense. Secretary Rumsfeld has stated that improving the quality of financial management information is one of his highest priorities. If confirmed, I intend to solicit the direct involvement of the Secretary and the Deputy Secretary to instill a sense of urgency in the Department's senior leadership. Second, I intend to draw from successful private sector models in the development and implementation of modern financial management processes and systems.

*Question.* The Chief Financial Officers Act, as amended, requires the annual preparation and audit of financial statements for Federal agencies. However, the DOD Inspector General and GAO's financial audit results have continually pointed out serious internal control weaknesses concerning hundreds of billions of dollars of material and equipment, as well as billions of dollars of errors in the Department's financial records.

Do you believe in the importance of following basic internal control procedures, and how will you correct this situation?

*Answer.* Effective internal controls are an absolute necessity. If confirmed, I intend to ensure that effective internal controls are embedded in all of the Department's financial management processes and systems. The internal controls in the non-financial feeder systems, such as property and inventory, must also be strengthened. I look forward to the results of the independent review of the Department's financial management problems that Secretary Rumsfeld has initiated.

*Question.* If you are confirmed as the Comptroller for the Department of Defense you will be responsible for a budget of approximately \$310 billion.

What do you consider to be the top financial management issues to be addressed by the Department over the next 5 years?

*Answer.* One of the most important financial management issues facing the Department of Defense is the need for accurate and timely financial management information. Managers across the Department must have better information on the costs of operations and programs in order to ensure accountability and the most effective use of the taxpayers dollars. Obviously, measure of progress toward this goal will be to achieve a clean audit opinion on the Department's financial statements. However, the Department must have processes and systems that do more than prepare accurate financial statements once a year. The Department's financial manage-

ment systems must be able to provide managers with accurate information at appropriate levels of aggregation that will facilitate fiscally sound decision-making.

I believe that the Department must focus on implementing compliant automated financial management and feeder systems. The large volume of transactions and the extensive number of organizational elements necessitates an automated solution. Unfortunately, fielding compliant accounting and financial management systems on time and within budget has been a major departmental weakness. As part of a systems implementation effort, the Department must also address the lack of standardization in its financial management data structures. The lack of standard data structures has been a significant impediment to the development and implementation of effective financial management systems.

*Question.* To effectively evaluate the management of an organization you need to have a clear set of standards to use as criteria. DOD has no shortage of financial management plans. However, we have seen minimal progress in terms of implementing real improvements in the Department's financial operations.

What are the most important performance measurements you would use to evaluate changes in the Department's financial operations to determine if its plans and initiatives are being implemented as intended and the anticipated results are being achieved?

*Answer.* I believe that managers should be held accountable for meeting established goals and objectives. The Defense Finance and Accounting Service (DFAS) has an extensive set of performance metrics that are used to gauge the effectiveness of its operations. If confirmed, I will review the DFAS metrics and make changes where appropriate. However, since much of the data needed for effective financial management originates outside of the DFAS, additional performance measures may be needed. I will also work with the Secretary and the DOD Components to establish performance measures, as appropriate, for each of the functional areas—such as real property accountability and maintenance, inventory accuracy and valuation—that must provide data to the financial management systems. Those performance measures would address both operational outcomes as well as systems implementation objectives.

*Question.* Some have suggested that because of the far-reaching and entrenched nature of the Department's financial management problems, an independent outside oversight board of experts, or an audit committee, may be necessary to help lead the Department in its financial management reform efforts. Such a high level board could be established to provide counsel, oversight, and perspective to DOD's reform efforts. Audit committees have been used in the private sector for decades. These committees have been instrumental in identifying potential problems in an entity's financial statements as they are audited.

Would you advocate that DOD establish such a board or audit committee?

*Answer.* Secretary Rumsfeld has initiated a study to review and analyze the Department's financial management operations. The study will result in recommendations to the Secretary. Until the results of the study are available, it would be premature for me to address specific proposals.

*Question.* If so, what are your views on the composition, reporting level, authorities and responsibilities of such a board?

*Answer.* In preparing for this confirmation hearing, I have been informed that the Department has a number of boards and committees already in existence. If I am confirmed as Comptroller of the Department, I will evaluate the effectiveness of these existing boards and committees. I will also review the results of the study authorized by Secretary Rumsfeld to assess the situation at the Department of Defense. After I have reviewed these existing boards and committees, and have reviewed the recommendations contained in the study, I will be able to address specifics related to the need for such a board.

*Question.* DOD leadership has acknowledged that the Department confronts financial management problems deeply grounded in bureaucratic practices that developed and evolved in a piecemeal fashion over a period of decades to accommodate many different DOD component organizations, each with its own parochial interests and history. As a result, each of the military services now operates unique, nonstandard financial processes and systems. The Department has reported that an estimated 80 percent of the data needed for sound financial management comes from systems owned and operated not by the DOD Comptroller and Defense Finance and Accounting Service (DFAS), but by other organizations throughout DOD that are accountable to the secretaries of the military services or other DOD component heads.

What additional authority or organizational changes, if any, will you seek to ensure that you have the authority you need to implement DOD-wide financial management improvements?

Answer. Improving the Department's financial management operations is one of Secretary Rumsfeld's top priorities. If confirmed, I will review the organizational structures impacting the delivery of effective financial management information. However, it would be premature for me to make any specific recommendations related to organizational changes or additional authority.

*Question.* What would be your strategy to work with the Office of the Secretary of Defense and the military services to effectively bring about the fundamental changes needed in the Department's financial management operations?

Answer. If confirmed, I will assume the responsibilities as the Department's Chief Financial Officer. As the CFO, I will lead the effort to improve the Department's financial management operations. I believe in matrix management and will work with other senior officials in the Office of the Secretary of Defense and the Military Departments to develop and implement the changes that are needed. If need be, I will not hesitate to call upon the Secretary or Deputy Secretary for support and assistance.

#### BUDGETING

*Question.* Recently, the Department's Planning, Programming, and Budgeting System (PPBS) has come under criticism. A recent commission, which included a number of former Defense officials and former GAO Comptroller General Bowsler, argued that PPBS has become a hindrance, essentially causing much of the current planning and budgeting problems in DOD. One of the commission's principle findings was that instead of charting a strategic course for the military services, PPBS has bred bureaucracies that now serve to simply channel consistent percentage shares of DOD's annual budget to the military services.

What are your views on the PPBS process?

Answer. I believe that three principles must shape the Department's approach to planning, programming, and budgeting.

First, the process must provide the Secretary and Deputy Secretary a vehicle for addressing major resource issues in a business-like manner. The process must (and will) adapt itself to the agenda and style of the top decision-makers, and must likewise change with the times, as required to serve their needs.

Second, the process should emulate the ongoing strategic defense review by presenting to the Secretary and Deputy Secretary decision packages that offer coherent alternatives, each of which specifies the essential elements of plans, programs, and fiscal guidance required for its implementation.

Third, the process should be seamless. The data supporting both programming and budgeting activities must be congruent and reflect the same underlying major decisions. The two processes must be properly coordinated and integrated so as to ensure that major decisions made by the Secretary and Deputy Secretary are carried out.

*Question.* In your opinion, is it fundamentally flawed?

Answer. I would refer you to my answer to the question above. I believe that the PPBS process must be adapted to the requirements of the administration. It's premature to consider any potential changes until the Secretary's reviews have been accomplished.

*Question.* What, if any, reforms or changes would you make in this area, if confirmed?

Answer. As described above, I believe that the PPBS must adapt to serve the Secretary's needs. Until completion of the review process that the Secretary has directed, it would be premature to identify specific actions.

*Question.* It has been reported that the Defense Planning Guidance is produced far too late to provide any useful guidance to the services in producing their POMs and budgets.

What can be done to make internal DOD planning guidance more useful and timely?

Answer. If confirmed, this is an area that I will be looking at closely with the Secretary and Deputy Secretary of Defense. The President and the Secretary are very interested in reviewing the Department's strategy before proceeding with resource allocation decisions for the budget or future years. This focus on upfront "top down" planning will lead to additional emphasis on planning guidance to ensure that all elements of the Department can address the Secretary's strategic priorities.

#### SYSTEMS/INFORMATION TECHNOLOGY

*Question.* DOD has acknowledged that its current financial management systems do not comply with Federal financial management systems requirements and were not designed to collect data in accordance with generally accepted accounting prin-

ciples. Last year, DOD reported that it did not expect to have the necessary systems in place to be able to prepare financial statements that could comply with generally accepted accounting principles before fiscal year 2003.

Where does this area fit in your list of priorities?

Answer. Achieving compliant financial management systems—incorporating the associated feeder systems (such as personnel and logistics systems)—is perhaps the most critical step in the effort to produce effective financial management information and auditable financial statements. Without systems that comply with: (1) Federal financial systems requirements; (2) Federal accounting standards; and (3) use of the United States Government Standard General Ledger at the transaction level, the Department will not be able to produce accurate financial statements on a timely and consistent basis. Ensuring that the proper emphasis is applied to this effort will be one of my top priorities if confirmed.

*Question.* What will be your strategy for ensuring that the Department's systems reengineering efforts supporting the DOD's financial operations are carried out in the context of an overall operations concept—a concept that encompasses all functional areas?

Answer. The Department is committed to improving its financial operations and meeting Federal financial management systems requirements.

The Secretary has initiated a study to review and analyze the Department's financial management operations. The study will yield recommendations to the Secretary for specific proposals to improve DOD financial management. Clearly, DOD must focus its attention on improving or replacing systems in order to provide reliable, useful and timely financial information. Decision-makers need the most accurate financial information to evaluate outputs, services, costs, efficiency, productivity and other essential management indicators. Such information is a vital tool for holding managers accountable. Once the review is complete, I will be in a better position to formulate a strategy to ensure that DOD's system reengineering efforts indeed are framed within the context of an overall operations concept.

*Question.* Many of the financial management improvement initiatives the Department of Defense is implementing are aimed at implementing standard systems across all DOD components.

What are your views on standardizing accounting systems and related financial information across the Department?

Answer. I am in favor of standardization when it makes sense to do so. Obviously, there are efficiencies and economies associated with standardizing financial processes, practices, systems, and operations. If confirmed, I plan to review carefully the issue of standardization.

*Question.* Continuing concerns over escalating weapon system costs have served to highlight the need for timely and reliable financial reporting. DOD itself has acknowledged that the lack of a cost accounting system is the single largest impediment to controlling and managing weapon system costs.

If confirmed, what steps do you plan to take to ensure that Congress receives timely and reliable information on the costs associated with the acquisition, management and disposal of its weapon systems?

Answer. I recognize that Congress is deeply concerned that it does not receive reliable and timely cost information related to all facets of weapons systems programs, from acquisition to disposal. I am determined to improve upon the current situation. If confirmed, I would work with the Office of the Under Secretary of Defense (Acquisition, Technology, and Logistics) to coordinate efforts to provide the data Congress requires for its own decision-making processes.

#### HUMAN CAPITAL

*Question.* In response to the Defense Acquisition Workforce Improvement Act of 1991, DOD has taken action directed at improving the professionalism of its acquisition workforce. This was brought about as a result of the need to better ensure that DOD's acquisition workforce was well versed in the rapidly changing technical skills needed to keep abreast of acquisition trends. A key part of the effort to upgrade the professionalism (technical currency) of DOD's acquisition workforce was the requirement that each acquisition official receive a minimum of 80 hours of continuous learning every 2 years. While DOD has stated that this should be a goal for financial management personnel, it has not made it a requirement because of uncertainties over whether necessary funding would be available.

What are your views on the merits of establishing a requirement that all DOD financial management personnel receive a minimum of 80 hours of continuous learning every 2 years?

Answer. Within any profession, there is significant value derived from training to maintain currency and technical proficiency. Today, an increasing number of DOD financial management personnel are seeking financial management certification. Some of these certification programs require 80 hours of relevant training every 2 years in order to maintain those certifications.

I intend to encourage all DOD financial management personnel to become certified through one or more of the programs already available, and to maintain that certification through ongoing training and education throughout their careers.

*Question.* If confirmed, what actions would you take to ensure that DOD's financial management personnel keep abreast of emerging technologies and developments in financial management?

Answer. If confirmed, I intend to work with the Secretary to see that adequate funding is made available to train the Department's financial management workforce and maintain the highest standards of performance. In that regard, I will examine options for reimbursing individuals for their professional certification costs as a means of extending the benefits of such training to all DOD military and civilian personnel in the financial management workforce. Working with the Under Secretary of Defense (Personnel and Readiness) and the DOD Component Senior Financial Managers, I intend to pursue the establishment of specific training and education standards for professional financial managers. Such standards eventually should be used as a factor in future hiring and promotion decisions. I also will actively encourage DOD financial management personnel to take advantage of the excellent existing financial management professional development opportunities.

#### RESEARCH AND DEVELOPMENT ISSUES

*Question.* In the past, Pentagon sponsored science and technology programs made this country the world's undisputed super power with the development of smart munitions, stealth aircraft, and sophisticated spy satellites. Today, the number of Pentagon sponsored programs continue to be reduced because of shrinking budgets and the red tape involved in doing business with the government.

Do you believe the funding level for science and technology is adequate or is there a need for more specific science and technology funding?

Answer. The president's budget includes a \$2.6 billion initiative (\$20 billion over 5 years) to fund R&D of new technologies. Among areas in which new investment might be made include: new weapons and intelligence systems; improvements to the laboratory and test range infrastructure; and technologies aimed at reducing the costs of weapons and intelligence.

I would seek Secretary of Defense approval for funding the Science and Technology (S&T) program at a level that ensures the technological superiority of our Armed Forces. Since the mid-1990s, the percentage of the Department's request for S&T compared to the overall defense budget has declined from 3.1 percent to 2.5 percent. I will seek to provide the resources needed to meet the administration's goal of developing new generations of technology and maintaining our technological edge.

*Question.* The Department of Defense science and technology programs are generally oriented toward "breadboard" valuation of technologies in a laboratory, not the demonstration of technologies in an operational environment. While the Department of Defense has a few demonstration programs that assist in technology transition, including Advanced Technology Demonstrations, Advanced Concept Technology Demonstrations, and Experiments (both joint and Service-specific), there is not a source of funding in the Department that is specifically dedicated to bridging the gap between science and technology programs and acquisition programs.

Do you believe that the Department should establish a program specifically dedicated to demonstrating technologies in an operational environment, to help provide the Department's acquisition programs with technologies that are sufficiently mature to be put into an efficient manner?

Answer. I am aware of the importance of evaluating technologies outside the laboratory. DOD is currently studying additional innovative ways of doing so, and I await the product of these study efforts to determine what new programs might be warranted.

#### INVENTORY MANAGEMENT

*Question.* Do you believe DOD has adequate controls over, and financial information on, its inventory?

Answer. The Department's inventory processes have undergone extensive reviews during the last decade, and the result has been more in-depth control and accountability over the physical inventory. There is a need to integrate the financial, acqui-

sition and logistics information regarding inventory and related materials. Consequently, a significant effort has recently been initiated to evaluate and improve the Department's management information, to include its physical inventory and financial records.

*Question.* If not, what steps would you take, if confirmed, to improve inventory management?

*Answer.* As DOD modernizes its information technology systems, it has the opportunity more closely to connect the financial, procurement and logistics data on the material in inventory. I believe that the Department already has laid the foundation for an in-depth evaluation of this issue.

Therefore, it would be premature for me to make any specific recommendations for improvement prior to completion of that analysis.

#### AUTHORIZATION FOR NATIONAL DEFENSE PROGRAMS

*Question.* Do you believe that an authorization pursuant to Section 114 of Title 10, U.S.C. is necessary before funds for operations and maintenance, procurement, research and development, and military construction may be made available for obligation by the Department of Defense?

*Answer.* The problem of appropriated not authorized spending has been a complication for the Department of Defense for many years. If confirmed as the Department's Comptroller, my goal would be to respect the prerogatives of all our oversight committees. I believe our national security is supported best through consensus-building on U.S. defense needs among DOD leaders and all our oversight committees. If confirmed, I would work toward supporting such a consensus in every way I could.

#### OBLIGATION OF FUNDS

*Question.* On occasion, the Comptroller has withheld funds for programs added by Congress to the defense budget request.

Do you intend to continue this policy?

*Answer.* As I understand the Department's current practice, the Comptroller conducts an assessment of the manner in which additional funding supports a Defense mission, how it fits within current approved program plans, and whether it will create a future funding requirement. This practice seems consistent with the Comptroller's responsibility to establish and supervise the execution of policies and procedures relating to the expenditure of DOD funds.

#### DEFENSE MANAGEMENT REFORMS

*Question.* Over the past decade, the Department of Defense has initiated a series of management reform initiatives (the Defense Reform Initiative being the most recent) to improve the efficiency and effectiveness of defense operations. As these initiatives were unveiled, DOD forecast significant cost savings and, in many cases, the assumed savings were then deducted from the budgets of the Services in advance of implementation of the reforms. Unfortunately, the actual savings were lower than anticipated. Not achieving these savings goals has resulted in unplanned expenditures that promote additional budget instability.

How and when should the Department incorporate anticipated savings from proposed defense reform efforts into its budget plans?

*Answer.* In some cases it may be appropriate to incorporate anticipated savings in budget plans. Nevertheless, any efforts to do so must be undertaken with considerable caution so as to avoid anticipating savings that ultimately are not realized.

#### OVERPAYMENTS

*Question.* Some in Congress have called for mandatory use of recovery auditing techniques either by internal DOD auditors or outside private contractors.

Do you agree that such an approach is needed?

*Answer.* The Department of Defense has several years of experience with recovery auditing. Based on that experience, I support the use and expansion of recovery auditing. If confirmed, I will look at the Department's implementation to see that it is working in the best interest of the taxpayers, and consider the whether mandatory recovery should be examined.

With respect to the question as to whether recovery auditing should be performed internally or by an outside firm, I believe that such a determination should be made on a case-by-case basis. Where access to a vendor's financial records is required, such reviews should be performed by the Defense Contract Audit Agency.

## ACQUISITION REFORM

*Question.* During his nomination hearing, Secretary Rumsfeld stated that the need to swiftly introduce new weapons systems is paramount. He further went on to say that the present acquisition system is ill-suited to an era of rapid technological advances and pervasive proliferation. One of the constraints in reducing acquisition cycle time is the present budget process. The life cycles of some of the technologies necessary for DOD transformation are sometimes shorter than the time it takes for DOD to obtain the funding to transition these technologies into useful capabilities.

What type of budgetary reforms, if any, do you see as necessary to improve the way DOD buys weapons systems and enhance the Department's ability to incorporate technology faster, better and cheaper?

*Answer.* Innovative techniques such as transition funding and expanded budgetary flexibility could allow rapid transition from experiments to weapons systems and rapid technology insertion. Two-year appropriations and internal budget stability between milestones might also provide stability for acquisition programs, and I know it is under review in Congress.

## BASE CLOSURE SAVINGS

*Question.* You have stated that you believe additional base closures are needed to bring the Department's base structure in line with its force structure.

In your view, have the previous base closure rounds resulted in significant reductions in DOD costs that made resources available for higher priorities?

*Answer.* It is important that savings from base closures be real and meaningful as we strive to ensure that force structure and infrastructure are properly aligned. The DOD and the General Accounting Office have concluded that savings from base closures are "substantial."

*Question.* If similar savings result from future base closures or realignments, do you believe there are unfunded needs within the Department that could benefit by redirecting resources away from excess infrastructure?

*Answer.* The President's budget blueprint discusses excess infrastructure capacity and the need to consider that as an element of shaping the military more efficiently. As the Secretary indicated in his response to advance questions from this committee, we will withhold an assessment of the need for future base closure rounds until after the completion of the defense review.

## GOVERNMENT PERFORMANCE AND RESULTS ACT (GPRA)

*Question.* If confirmed as Comptroller, what would your responsibilities be with respect to DOD implementation of the requirements of the GPRA to set specific performance goals and measure progress toward meeting them?

*Answer.* As Comptroller, I will be responsible for coordinating the Department's budget development. I will also oversee the implementation of GPRA within DOD. GPRA will be fully integrated with DOD's Planning, Programming, and Budgeting System (PPBS), and will reflect the key performance goals of the Department.

*Question.* What additional steps can the Department take to fulfill the goals of the GPRA to link budget inputs to measurable performance outputs?

*Answer.* I believe that the Department's annual GPRA performance plans and reports should continue to provide an executive-level view of the results we expect from the budget. The output measures we select should reflect our objective to maintain a quality force that is well trained and equipped to execute the new defense strategy. Once we complete our strategic review, I look forward to providing Congress with the Department's performance plan for the new defense budget, and discussing with you how we will use performance measures to track the Department's results during budget execution.

## PEACEKEEPING AND USE OF SUPPLEMENTALS TO FUND CONTINGENCY OPERATIONS

*Question.* You have stated that peacekeeping is a "strategically marginal" use of U.S. defense funds and advocated "withdrawing from much of the peacekeeping business" so that funds could be used for other needs. You cited the Bosnia mission as "the most egregious example" of a peacekeeping mission that cost more than originally projected.

Is it your view that the United States should refuse to provide ground troops to participate in peacekeeping missions, either unilaterally or with our allies?

*Answer.* U.S. forces should participate in peace operations when we deem it to be in our national interests. Even then, participation should occur when the operation

has clear objectives, a coherent strategy, a reasonable chance of success, acceptable command and control arrangements, and an exit strategy.

*Question.* If so would you advocate U.S. withdrawal from any current deployments?

*Answer.* All ongoing operations should be continually reviewed to ensure that the nature of our participation remains consistent with our interests and that we are likely to achieve U.S. objectives. Completing such a review is one of the President's and Secretary's priorities.

*Question.* When unanticipated contingency operations do arise, whether peacekeeping or high intensity combat operations such as Operation Allied Force in Kosovo, do you believe the Department and Congress should continue to use the existing process of funding the incremental costs of such operations through ad hoc supplementals, or do you intend to propose an alternative approach?

*Answer.* Ad hoc supplementals traditionally were employed to meet necessary but unforeseen costs. It would be best to restrict supplementals to this traditional model and provide funding for ongoing operations as much as possible within the regular budgeting process.

*Question.* Does the administration intend to include unanticipated emergency defense needs in the National Emergency Reserve account proposed in the President's budget blueprint?

*Answer.* The President has identified the Reserve for true emergencies and it remains to be determined how that will be structured. If confirmed, I will work with the Secretary and other agencies to ensure the fund is established and developed as appropriate.

#### ENVIRONMENTAL CLEANUP

*Question.* You have described environmental cleanup and compliance on defense installations as an example of "non-defense programs in the defense budget".

Do you advocate removing these costs from the DOD budget?

*Answer.* As Secretary Rumsfeld testified during his confirmation, we need a comprehensive approach to satisfy both our readiness needs and the legal and moral responsibilities as stewards of public lands. Twenty-five years ago, environmental regulations were in their infancy, and the cost of compliance was negligible in the DOD budget. Things are much different today. Regulations have multiplied. America's attitude toward the environment has changed. Our national tolerance for pollution has significantly decreased. Environmental cleanup and compliance are not core missions of national defense any more than they are core missions of General Motors, IBM, or the U.S. Department of Agriculture; however, they are a cost of doing business today. There may be opportunities to achieve savings by outsourcing or privatization, but still meet our stewardship responsibilities. Without further review, however, it would be premature to suggest any alternative.

*Question.* Do you believe that it would be practical to remove environmental compliance funding for DOD facilities from the DOD budget?

*Answer.* Environmental compliance costs should remain in the DOD budget where there is a causal connection between compliance and contamination. Early planning in weapons systems development and other acquisitions now consider compliance costs in life-cycle cost accounting to encourage smarter choices early in the programs, and reduce unexpected cleanup costs in the end. As is the case with industry, compliance costs should be incorporated in the business model to provide better visibility of true life-cycle cost. Such early planning would also consider noise, air quality, and other compliance issues to ensure systems can be fielded at our current bases and ranges without significant impact to the environment or surrounding communities. Completely decoupling compliance and cleanup by removing them from the DOD budget would make it difficult to encourage this type of early planning.

*Question.* Do you believe the Department should not be required to pay for environmental damage it causes?

*Answer.* Relieving DOD from the requirement to pay for environmental damage it causes could seriously erode public trust, which could lead to restrictions on necessary training and readiness activities.

*Question.* What incentives would it create for DOD activities if we were to relieve the Department of the requirement to pay for the damage?

*Answer.* See response above.

#### INCREMENTAL FUNDING

*Question.* In the fiscal year 2000 budget request, the previous administration proposed to shift from the traditional full funding of military construction projects to

an incremental funding approach. This proposal was unanimously rejected by the four congressional defense committees. Congress has itself abandoned the full funding approach for the construction of some naval vessels.

What are your views regarding full funding versus incremental funding?

Answer. Full funding for capital acquisition programs provides discipline to the Department's internal programming process. If confirmed, however, I will give careful consideration to innovative methods of meeting future requirements and look forward to working with this committee.

#### SAVINGS FROM COMPETITION

*Question.* DOD has substantially increased the number of public-private competitions in recent years in order to achieve greater efficiency and effectiveness while reducing costs. Studies have shown that DOD saves money regardless of which side wins the competition.

Do you believe that outsourcing of work currently performed by government civilians should be assessed through public-private competition or conducted on a non-competitive basis?

Answer. Opening government functions to competition to the fullest extent possible is the best way to ensure market-based pricing, encourage innovation, and maintain fairness between the public and private sectors. In assessing outsourcing, I believe the Department should use an open competitive process (considering both public and private sources) to choose the providers, except in very limited circumstances.

*Question.* What steps should the Department undertake to measure the actual savings achieved after such competitions?

Answer. The Department must continue to improve the accuracy and responsiveness of this system to allow real time monitoring of savings and performance from such competitions. I understand that the Department recently updated its tracking software for public-private competitions conducted in accordance with OMB Circular A-76. The Commercial Activities Management Information System (CAMIS) tracks each competition separately and includes various elements of the competition that are critical to give us feedback on the process (e.g., bids, savings, actual contract costs, affected employees, functions being competed).

#### WORKING CAPITAL FUNDS

*Question.* Are there any changes you would recommend in the policies governing working capital funds in the Department of Defense?

Answer. Working capital funds have proved to be a successful tool for identifying the full cost of operations and for encouraging cost efficiency in commercial and industrial type functions within the Department. If confirmed, I will closely review all of the Department's financial programs, and where appropriate, assess any required policy changes to working capital funds.

*Question.* Do you believe the scope of activities funded through working capital funds should be increased or decreased?

Answer. During the 1990s there have been four major reviews of working capital funds and their policies and procedures. The most recent studies were conducted in 1997 and again during 1999-2000. These studies included a review of the functions now included within the working capital funds. In the context of the overall review of the Department's financial programs, however, this issue may need to be revisited once again.

#### CAPITAL BUDGETING

*Question.* The President's budget blueprint released last month advocated capital planning for information technology budgets.

Does the administration plan to examine the expansion of capital budgeting for the Department of Defense outside the relatively small amounts currently programmed in the working capital funds?

Answer. This is a matter for further review in the context of the ongoing studies. At this time, I do not believe that the Department will expand capital budgeting beyond the working capital funds. The Department of Defense already employs the principle of capital planning in that it considers life-cycle costs, schedule and performance prior to proceeding with a capital investment. Moreover DOD evaluates capital investment decisions against capital planning criteria. For example, the Department budgets for capital investments, including IT investments, separately from personnel and operation and maintenance expenses.

## OUTLAY ESTIMATING DIFFERENCES

*Question.* In the past 3 years, outlay estimating differences between the Department of Defense and Office of Management and Budget estimates prepared in the executive branch and the Congressional Budget Office estimates used by the legislative branch have grown to record levels.

If confirmed as Comptroller, will you ensure that your office makes every effort to work with OMB and CBO to minimize these estimating differences?

*Answer.* If confirmed, I will ensure that my office continues to strive to improve its estimating of outlays, and will continue to make every effort possible to work with both OMB and CBO to minimize estimating differences in the future.

## MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Under Secretary of Defense, Comptroller?

*Answer.* I believe that there are two primary challenges confronting the next Comptroller:

First, the Comptroller must prepare and manage a budget that simultaneously supports the welfare and morale of our men and women in uniform; finances the operational requirements of our forces; supports a forward looking research and modernization program to meet the challenges of the new century, and does all of the foregoing within constrained resources.

Second, the Comptroller must reform the Department's financial management system. Only through such reform can the departmental leadership have ready access to necessary information and accounts that are critical both for executing the defense program in the most efficient manner possible, and for ensuring that programmatic choices are more easily identified and implemented.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will work closely with the office of Program Analysis and Evaluation to formulate a program and budget that addresses the multiple needs I outlined in the answer above. In addition, if confirmed, I will consider possible organizational changes in order to strengthen top level management in the Comptroller's office. In particular, these changes would seek to foster rapid improvements to the management of the Department's finances, particularly its accounting and management information systems, as well as a more comprehensive approach to solutions that out-sourcing might offer.

## MOST SERIOUS PROBLEMS

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Department of Defense?

*Answer.* The Department of Defense has experienced a weakening of the linkage between overall strategy, programs, and budgets. In addition, the Department has been underfunded, despite the relief offered by supplemental appropriations. Indeed, the need to resort to supplemental appropriations to cover shortfalls of projected budgetary needs itself has distorted the nature of the budgetary process. Finally, the Department of Defense continues to suffer from the absence of an adequate management information system, and from inadequate financial management systems, especially accounting systems.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* If confirmed as Comptroller, I would work closely with other offices in OSD and the Services to craft programs and budgets that respond to the results of Secretary Rumsfeld's strategy review.

If confirmed, I hope to oversee the preparation of defense budgets that adequately fund the programs the Department seeks to implement, thereby minimizing the need for maintaining the current, and in my view unhealthy, over-reliance on supplemental appropriations.

Finally, as I indicated in my previous answer, I am considering management changes in the top level of the Comptroller's office to focus more attention and, more important, to implement, changes to the Department's financial management systems. If confirmed, I would move quickly to evaluate organizational alternatives and implement a preferred solution. I would also hope to have initiated new management reforms before the end of this fiscal year or shortly thereafter.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of Defense, Comptroller?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Question for the record with answer supplied follows:]

## QUESTION SUBMITTED BY SENATOR MARY L. LANDRIEU

Senator LANDRIEU. Dr. Zakheim, as ranking member of the Senate Appropriations District of Columbia Subcommittee, I was surprised to learn that the Department of Defense has refused to pay over \$28 million it owes for water and sewer services provided by the District of Columbia between 1990 and 2001. I'm sure you're not aware of this but I want you to know that DOD is the only Executive Branch agency that has failed to comply with Public Law 101-168, as amended, which requires Federal agencies to make payment in full for water and sewer services provided by the District. On July 25, 2000, GAO issued a legal opinion stating that Federal agencies are required to make the payments and have no discretion to do otherwise. DOD has maintained that the District's estimates of water and sewer usage are excessive and based on poor metering, yet they refused to permit newer, more accurate meters to be installed until March 2001, citing security concerns.

It is my understanding that the Comptroller's office and DOD IG are aware of this issue and, once confirmed, I would like you to personally look into this matter and provide this committee, within 30 days of confirmation, a plan for making payment in full on these overdue bills.

Dr. ZAKHEIM. Over the past year this office has been actively engaged in seeking a solution to this issue. The table that follows provides detailed information on the current status of the DC Water Bill. To understand the whole problem it is useful to consider separately the portion of the bill attributable to customers located in Maryland and DC and the portion associated with users in Northern Virginia.

**DC Water Bill  
History and Latest FY 2001 Billing**

	Cumulative Arrearage SOY	Billing	Payments to date	4 <sup>th</sup> Quarter Payment	Prior year payments	Cumulative Arrearage EOY
<b><u>DoD in DC and Maryland</u></b>	<b>15,385,391</b>	<b>5,637,600</b>	<b>4,115,108</b>	<b>1,522,492</b>	<b>3,500,000</b>	<b>11,914,535</b>

<b><u>Federal Govt in VA</u></b>	<b>-</b>	<b>1,014,341</b>	<b>65,000</b>	<b>949,341</b>	<b>-</b>	<b>-</b>
Dept. of Interior - US Park Service	-	706,282	-	706,282	-	-
VA - Arlington National Cemetery	-	308,059	65,000	243,059	-	-

DOD customers in DC and Maryland have been charged for water and sewage services using meter readings. The DOD customers disputing the bill use one or more of the following arguments: (1) the meters are broken or inaccurate, (2) the practice of adjusting current year estimated billings for actual use from 3 years prior is unsupportable, and/or (3) the Department of Treasury has not fully credited them for actual payments. It turns out each of these arguments is insufficient grounds to withhold full payment. The Treasury is working with the Navy to track down payments that may have not been properly applied to the DC Water account. In any event, the Components have been directed to pay in full the amount they owe for fiscal year 2001. They are also working to identify unobligated prior year balances that can be used to pay off arrearages.

DOD customers in Northern Virginia receive water from DC WASA through two conduits that run underneath the Key Bridge and pump water into the Federally Owned Water Main (FOWM). Federal customers on the FOWM include the Army (Fort Myer), the Department of Veterans Affairs (Arlington National Cemetery), Washington Headquarters Services (the Pentagon Reservation), and the Department of Interior (National Park Service sites along the George Washington Parkway). The Ronald Reagan National Airport also receives water off of the FOWM and is separately billed by DC WASA. The DOD has disputed the Treasury billing for DOD in Virginia because there was no attempt made to allocate the bill to the separate Federal users in Virginia. Until May of this year, Treasury issued three invoices (Fort Myer, Washington Headquarters Service (for the Pentagon) and Arlington National Cemetery) charging each entity the full amount. The Treasury invoices made no attempt to separately allocate use by customer on the FOWM. The three entities received this bill and paid Treasury what they each estimated they owed. When added together, the three payments fell far short of the total billed and resulted in annual arrearages of approximately \$1.0 million a year.

The DC WASA has been working to develop a methodology for allocating the Virginia billing to Federal customers. As a result of their work, the Treasury issued to all the Virginia customers a revised fiscal year 2001 bill with separate estimates for each DOD customer. For the first time, Treasury has issued an invoice to the Department of the Interior for National Park Service customers in Northern Virginia. The efforts of DC WASA to provide estimated allotments goes a long way toward solving the most intractable aspect of this problem. Using the same estimates of customer use in Northern Virginia, Treasury intends to allocate the prior year arrearages to the four Federal customers.

DOD customers will pay the full revised fiscal year 2001 bill by the July 2, 2001 due date. The Components have also been directed to pay off as much of the prior year arrearages as possible by the end of fiscal year 2001. Depending on how aggressively the Components reduce their prior year arrearages, and how successful they (especially the Navy) are in working with Treasury to properly credit all their payments, any remaining balance due will be a current year bill. Given the challenges the Department faces in the current fiscal year, we propose to direct the Components to pay off the entire past due amounts next year using fiscal year 2002 funds. For the portion of the past due bill attributable to WHS as executive agency for the Pentagon Reservation, we propose that they levy the bill to the Pentagon tenants by applying a surcharge to fiscal year 2002 rent billings.

---

[The nomination reference of Dr. Dov S. Zakheim follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*March 13, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. Dov S. Zakheim of Maryland, to be Under Secretary of Defense (Comptroller), vice William J. Lynn III, resigned.

---

[The biographical sketch of Dr. Dov S. Zakheim, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF DR. DOV S. ZAKHEIM

Dov S. Zakheim is Corporate Vice President of System Planning Corporation (SPC), a high technology, research, analysis and manufacturing firm based in Arlington, Virginia. He is also Chief Executive Officer of SPC International Corporation, a subsidiary of SPC that specializes in political, military and economic consulting, and international sales and analysis. He is an Adjunct Senior Fellow for Asian Studies of the Council on Foreign Relations, and Adjunct Scholar of the Heritage Foundation, and a Senior Advisor at the Center for International and Strategic Studies.

Dr. Zakheim was born and raised in New York City. He is a graduate of Columbia University, New York, where he earned his B.A., Summa Cum Laude, and was elected to Phi Beta Kappa. Dr. Zakheim also studied at the London School of Economics. Dr. Zakheim earned his doctorate in economics and politics at St. Antony's College, University of Oxford, where he was a National Science Foundation Graduate Fellow, a Columbia College Kellett Fellow, and a post-doctoral Research Fellow. He has served as Adjunct Professor at Yeshiva University; the National War College and Columbia University, where he taught classes in planning and programming for national security; and at Trinity College, Hartford, CT, where he was also a Presidential Scholar.

In 1997 he was appointed by former Secretary of Defense William Cohen to the Task Force on Defense Reform. In May 1998 Secretary Cohen named him to the first Board of Visitors of the Department of Defense Overseas Regional Schools. In February 2000 he was appointed to the Defense Science Board Task Force on the Impact of DOD Acquisition Policies on the Health of the Defense Industry. During the 2000 presidential campaign Dr. Zakheim was a senior foreign policy advisor to Gov. George W. Bush.

From 1985 until March 1987, Dr. Zakheim was Deputy Under Secretary of Defense for Planning and Resources. In that capacity, he played an active role in the Department's planning, programming and budget process, as well as DOD's system acquisition and strategic planning processes. Dr. Zakheim guided Department of Defense policy in a number of international economic fora and also successfully negotiated numerous arms cooperation agreements with various U.S. allies. Dr. Zakheim served for two terms as former President George Bush's appointee to the United States Commission for the Preservation of America's Heritage Abroad.

Dr. Zakheim also served in the Reagan administration in a variety of other senior Department of Defense posts from 1981 through 1985. He had previously been Principal Analyst with the National Security and International Affairs Division of the Congressional Budget Office.

Dr. Zakheim writes, lectures, and provides media commentary on national defense and foreign policy issues domestically and internationally, including appearances on major U.S. network news telecasts, CNN's Newshour and Larry King Live, BBC Arab and World Service, and Israeli, Swedish and Japanese television. He is a columnist for the *Jerusalem Post*, a regular contributor to *Defense News*, and an editorial board member of *Israel Affairs*, *The Round Table* (the Commonwealth Journal of International Affairs) and *Cooperation and Conflict* (Nordic Journal of International Studies). He is the author of *Flight of the Lavi: Inside a U.S.-Israeli Crisis* (Brassey's, 1996), *Congress and National Security in the Post-Cold War Era* (The Nixon Center, 1998), *Toward A Fortress Europe?* (Center for Strategic and International Studies, 2000) and has published numerous articles and chapters in books on planning, programming and budgetary issues and other national security concerns.

Dr. Zakheim has twice been awarded the Department of Defense Distinguished Public Service Medal (1986 and 1987) and is also the recipient of the Congressional Budget Office Director's Award for Outstanding Service (1979), and the SPC Director's Award for Outstanding Service (1997).

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Dr. Dov S. Zakheim in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Dov S. Zakheim.

2. **Position to which nominated:**  
Under Secretary of Defense and Comptroller.

3. **Date of nomination:**  
March 13, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
December 18, 1948; Brooklyn, New York.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Deborah Bing Zakheim.

7. **Names and ages of children:**  
Keith Zakheim, 26; Roger Zakheim, 23; Scott Zakheim, 18; Stepson Benjamin Lowy, 21.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Yeshiva University High School, 9/62-6/66; N.Y. Regents Diploma.

Columbia College, Columbia University, 9/67-6/70; B.A. 6/70.

Jewish Theological Seminary, 9/67-6/68 and 9/69-6/70.

London School of Economics, 9/68-6/69; year abroad.

Jews College, University of London 9/68-6/69; year abroad.

St. Antony's College, Oxford University, 9/70-6/74; Ph.D. 6/74.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Corporate Vice President, System Planning Corporation, Arlington, VA, 3/87 to present.

Chief Executive Officer, SPC International Corp., Arlington, VA, 1989 to present.

Adjunct Presidential Fellow, Trinity College, Hartford, CT, fall 1998.

Adjunct Professor of Political Science, Stern College for Women at Yeshiva University, New York, NY, fall 1995.

Adjunct Professor of International and Public Affairs, Columbia University, New York, NY, spring 1995 and fall 1996.

Adjunct Professor, National War College, Washington, DC., fall 1992.

10. **Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Consultant to the Secretary of Defense and Under Secretary for Policy.

2000—Member, Defense Science Board Task Force on the Impact of DOD Acquisition Policies on the Health of the Defense Industry.

1998—Present—Member, Board of Visitors of the Department of Defense Overseas Regional Schools.

1997—Secretary of Defense Task Force on Defense Reform.

Fall 1992—Adjunct Professor, National War College.

1985–87—Deputy Under Secretary of Defense for Planning and Resources.

1984–85—Assistant Under Secretary of Defense (Policy/Resources).

1982–83—Special Assistant to Under Secretary of Defense (Policy).

1981–82—Special Assistant to Assistant Secretary of Defense (International Security Policy).

1978–81—Principal Analyst, National Security and International Affairs division, Congressional Budget Office.

1975–78—Associate Analyst, National Security and International Affairs Division, Congressional Budget Office.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

System Planning Corporation: Corporate Vice President 1987-present.

SPC International Corp. (subsidiary of System Planning Corporation): CEO 1989–present.

Northrop-Grumman Electronic Sensors and Systems Sector: Member, Advisory Board.

Trinity College: Presidential Fellow, Fall 1998.

Columbia College, Columbia University: Adjunct Professor of International and Public Affairs, spring 1995 and fall 1996.

Stern College for Women, Yeshiva University: Adjunct Professor of Political Science, fall 1995.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Foreign Policy Research Institute: member, Board of Trustees.

Nixon Center for Peace and Freedom: member, Advisory Board.

Center for Security Policy: member, Advisory Board.

Council on Foreign Relations: Adjunct Fellow.

Heritage Foundation: Adjunct Scholar.

Center for Strategic and International Studies: Senior Advisor.

Search for Common Ground: Board member.

Israel Affairs (Academic Journal): member, Advisory Board.

The Roundtable. Commonwealth Journal of International Affairs: member, Advisory board.

Conflict and Cooperation (Nordic Journal of International Studies): member, Advisory Board.

Friends of the Jewish Chapel, United States Naval Academy: Board member.

American Friends of Beth Hatefusoith (Museum of the Diaspora): Board Member.

American Jewish Committee: Member, National Advisory Committee.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

National Republican Senatorial Committee: Life member.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

\$2,000 to the campaign of Governor George W. Bush.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Phi Beta Kappa.

New York State Regents Scholarship.

National Science Foundation Graduate Fellow.

Columbia College Kellett Fellow.

Post-doctoral Research Fellow, St. Antony's College.

Twice awarded the Department of Defense Distinguished Public Service Medal.

Congressional Budget Office Director's Award for Outstanding Service.

System Planning Corporation Director's Award for Outstanding Service.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.  
Retained in committee files.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.  
Retained in committee files.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. DOV S. ZAKHEIM.

This 14th day of March, 2001.

[The nomination of Dr. Dov S. Zakheim was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 1, 2001.]

---

[Prepared questions submitted to Charles S. Abell by Chairman Warner prior to the hearing with answers supplied follow:]

APRIL 12, 2001.

Hon. JOHN WARNER,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Thank you for providing me the opportunity to respond to your questions on defense policy issues. Enclosed are my responses.

I look forward to my appearance before the Senate Armed Services Committee and I stand ready to answer any further questions you may have.

Sincerely,

CHARLES S. ABELL.

cc: Senator Carl Levin,  
*Ranking Minority Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support the implementation of the defense reforms. The establishment of the unified and specified combatant commands, the delineation of responsibilities, and most importantly, the focus on "jointness" outlined in the Goldwater-Nichols Department of Defense Reorganization Act of 1986, has enhanced the readiness and warfighting capabilities of the U.S. Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have changed the way the Department of Defense works by strengthening the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders, and significantly improving the ability of the Department to execute America's national security strategy. The reforms have helped improve communication, joint operations and interoperability—we have strengthened the Armed Forces through these reforms through joint planning and execution of operations.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I would consider each of the goals noted below to be an important aspect of these defense reforms. Each one has enhanced the ability of the Department of Defense to carry out its assigned responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

#### DUTIES

*Question.* Section 138 of Title 10, United States Code, provides that the duties of the Assistant Secretary of Defense for Force Management Policy are to be prescribed by the Secretary of Defense.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

*Answer.* If confirmed, I believe that Secretary Rumsfeld would intend that I be his senior policy advisor on matters concerning the management of military and civilian personnel and the welfare of their families. I would expect to work under the direction of the USD(P&R) to promulgate and oversee policies relating to recruiting, retention, career development, compensation, quality of life, equal opportunity and other force management concerns. I understand the duties of the Assistant Secretary are prescribed in DOD Directive 5124.5 and that I would perform duties as set forth in that Directive.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the Assistant Secretary of Defense for Force Management Policy?

*Answer.* Certainly recruiting and retaining men and women with the capability and character to ensure success in a demanding national security environment are the greatest challenges. They are challenges the Department faces in both its military and civilian forces.

As the number of individuals in the American public who have military experience declines, and as high school students increasingly choose to pursue other opportunities upon graduation, the Department of Defense must be able to compete for talented young people. The Department also needs to retain the best of its force, particularly in such fields as aviation and information technology. Providing a strong quality of life for service members and their families and a quality of service that inspires and motivates top performance is critical to that effort. In addition, we must acknowledge that today's youth have different expectations of the work experience. The All Volunteer Force has served America well. We need to ensure that we have the right tools to manage this force for the future.

The Department also needs to take actions to revitalize its civilian workforce. Due to the increasing numbers of civilians reaching retirement eligibility, it is necessary to ensure that there is a base of workers with the qualifications needed to manage the complex programs and technologies of today and of the future. Managers need to have the tools to recruit, retain, and develop the future workforce.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will review current policies and initiatives in the above areas to determine their effectiveness and where adjustments may need to be made

to accomplish these goals. I also expect to incorporate the results of Secretary Rumsfeld's ongoing quality of life review into an overall strategy to address these issues.

#### RESERVE COMPONENT HEALTH CARE

*Question.* The Department of Defense is relying more on the Reserve components as it attempts to reduce the operational tempo of the Active Forces. Although the Department of Defense has made great strides in integrating the Reserve components into the Total Force and providing for the individual reservist, families of Reserve component service members still face challenges when the spouse is called to active duty. Among those challenges is medical care. Although the law allows for continuing health care under a civilian employer, the cost to a Reserve member may become prohibitive. If the member elects military health care for his family while on active duty, it may require a change in health care provider.

What are your views regarding this dilemma facing our reservists?

*Answer.* Under the Uniformed Services Employment and Reemployment Rights Act, employers must allow reservist employees to continue under their civilian employer-sponsored healthcare plan for up to 18 months; however, the employer does not have to continue his share of the premium, compelling the reservist to pick up the entire premium cost and administrative fees. Deployment is stressful enough for Reserve families. Changing health care systems and possibly health care providers adds to that stress. The Deputy Secretary of Defense recently announced a policy to support DOD civilian employees called to active duty in support of contingency operations. I believe we should explore options to similarly support all reservists.

#### EMPLOYMENT OF MILITARY SPOUSES

*Question.* The military community includes more than 700,000 spouses. These spouses play an important role in the retention of their military sponsors. Many of these spouses work, whether it is for economic needs or to sustain their profession. Many more spouses would like to work, however, the constant moving associated with military life, in many cases, precludes a meaningful career or profession.

In your view, what actions can the Department take to provide increased employment opportunities for military spouses?

*Answer.* There is no doubt we need to do more for spouses. Most military spouses are currently working or looking for work. Many spouses want a career, but are limited because of frequent relocations. I believe it is critical that the Department address this issue, and if confirmed, I would ask for an assessment of spouse employment issues leading to recommendations for improvement. I do think there is more we can do to assist relocating spouses who are seeking employment, particularly through partnerships with major employers. Part of this assessment would be to identify policy changes that might make it easier to pursue employment within the Department of Defense. However, I believe we also need to continue to explore partnerships with major employers, the degree to which our spouses have skills to match their employment needs, and whether there is any way we can help provide a better match of skills-to-need for America's employers.

#### FAMILY SUPPORT

*Question.* Approximately two-thirds of our military families live off of the military installation. Since deployment and family separation are two of the most demanding parts of military life, the Department of Defense must ensure that it provides the same level of support to families that live off the installation as it does to those who live on base.

In your view, does the Department have adequate programs in place to ensure support for those families off the installation?

*Answer.* Over the past years, the Department of Defense has done a superb job designing and delivering programs to support military families. I am not aware of any specific concerns regarding support to off-base families, but I believe the Department can do more for these families by leveraging technology to deliver services and information through the Internet. I also believe it is important to ensure that our families can communicate in this manner during deployments. I also think it would be important to create strong and effective partnerships with local communities and non-profit organizations to deliver assistance and services.

#### CIVILIAN PERSONNEL MANAGEMENT

*Question.* The management of civilian employees in DOD has largely been done on a hit-or-miss basis, particularly with respect to senior-level employees.

Has the Department conducted any audit of Senior Executive Service positions?

Answer. I am not aware of any specific audits the Department of Defense may have conducted of its senior workforce. The President has asked Federal agencies to establish procedures to review and approve hiring decisions for supervisory and managerial jobs. As I understand it, this guidance is being implemented within the Department of Defense.

*Question.* In your opinion, are there sufficient opportunities for advancement within the Department for senior career civilians?

Answer. I am sure that the demands of the Department of Defense continually create opportunities for talented people. With an increasing number of civilians becoming eligible for retirement over the next several years, an increased number of opportunities for advancement should become available.

#### JUDGE ADVOCATE CONTINUATION PAY

*Question.* The Department has now had some experience with implementation of the Judge Advocate Continuation Pay which was authorized in the National Defense Authorization Act for Fiscal Year 2000.

Has this special pay performed its intended purpose of retaining mid-career judge advocates?

Answer. It is my understanding that DOD is encouraged by the initial results of the Judge Advocate Continuation Pay and that in some cases the take-rate has been even higher than expected.

*Question.* Is further legislation needed?

Answer. This is something I plan to take a close look at, if confirmed. It is my understanding that the bonus is working well to retain those who already are serving. Whether the quality and quantity of new accessions are sufficient to meet future needs is a matter of equal importance.

#### OFFICER MANAGEMENT ISSUES

*Question.* Do you believe the officer corps has confidence in the integrity of the officer promotion system in the military services?

Answer. Yes. I believe the majority of officers serving in our military services today have confidence in the integrity of the officer promotion system.

*Question.* What role would you, as Assistant Secretary of Defense for Force Management Policy, expect to play in the officer promotion system?

Answer. If I am confirmed, I intend to be completely involved in providing policy oversight of the officer promotion process. I expect to be directly responsible to the Under Secretary of Defense for Personnel and Readiness in carrying out his duties and responsibilities with regard to the officer promotion system, and to ensure the Department has provided clear policy guidance to the military services which provides for reliability and consistency in the selection board process.

*Question.* What role would you, as Assistant Secretary of Defense for Force Management Policy, expect to play in the general officer management and nomination process?

Answer. If confirmed, I expect to be involved in the general and flag officer promotion process. I will be responsible to the Under Secretary of Defense for Personnel and Readiness to provide oversight of the Department's efforts to comply with and implement applicable laws and policies in the general and flag officer management and nomination process.

*Question.* If confirmed, would you make the matter of senior officer investigations a priority for your review and action?

Answer. Yes. I will place a priority on the timeliness and thoroughness of investigations of senior officers in conjunction with promotion and retirement actions.

*Question.* If confirmed, what actions would you take to ensure that the services provide timely notice of potentially adverse information regarding nominees for general and flag officer promotions?

Answer. If confirmed, I will fully commit to providing oversight of the adverse information reporting process to ensure the committee is provided proper and timely notification of ongoing investigations and potentially adverse information pertaining to nominees for general and flag officer promotion.

#### RECOUPMENT

*Question.* There are at least 19 separate provisions of law concerning the service obligation incurred by individuals for government funded education, training programs, and various bonuses. Your predecessor testified that he would review these legislative provisions and recommend legislative changes to bring order and consistency to these requirements. To date, no such recommendations have been received.

Do you support recoupment of the residual value of an education, training program or bonus paid in return for a service commitment?

Answer. Yes, as a general rule, when the service commitment was not carried out and the military member was clear about this possibility as part of his or her military contract.

*Question.* Will you assure this committee that, if confirmed, you would conduct the review your predecessor agreed to conduct and recommend appropriate legislative changes?

Answer. If confirmed, I will review recoupment policies and provide the Secretary with my judgment as to the need for any needed legislative changes.

#### RECRUITING AND RETENTION

*Question.* The end of year statistics assessing the military services' success in recruiting and retention were released by the Department of Defense in October 2000. These figures, while not as bad as earlier predictions, do not in all cases achieve the authorized end strengths.

What steps would you take, if confirmed, to assist the services in meeting their recruiting and retention goals?

Answer. First, with regard to recruiting, I would take full advantage of the change to last year's Authorization Act sponsored by Senator Hutchinson. I would help the services gain access to high schools by personally and productively engaging with local educational agencies, in cooperation with state agencies and the Department of Education, to ensure current laws are followed. I also would ensure that the services are working under a coordinated plan, to ensure that school officials fully understand the opportunities military service offers to their graduates. Finally, I would ensure that we have aligned plans and resources in a way that allows us to effectively penetrate the growing college market.

Clearly we must be successful in recruiting quality people, but continued attention to what it takes to keep them serving is essential for force readiness. We must not lose sight of the fact that retention is not just about the service members, but about their families as well. Quality of life is key to retaining a service member and his or her family. Our men and women in uniform recognize they will never become wealthy as a member of the Armed Forces, but they expect a standard of living with opportunities for individual and family growth comparable to their civilian counterparts. Consequently, I would ensure we keep a sharp focus on pay and compensation issues.

Pay and compensation alone will not address all the problems service members face. Service members understand time away is part of the profession, but I believe we should carefully balance deployments and the associated military training requirements with the stability necessary for the long-term health of military families. A continued focus on enhancing predictability, distributing missions carefully within the "Total Force," and protecting quality of life during the inter-deployment period is critical.

There is no single solution to guarantee the level of retention required to ensure a ready force. Retaining our best people will require a combination of initiatives aimed at enhancing the quality of family life and quality of service conditions.

*Question.* Recent emphasis regarding recruiting and retention has been focused on the active component. The Reserve components are facing even greater challenges in these areas. What steps would you take, if confirmed, to assist the Reserve components in achieving their recruiting and retention goals?

Answer. To maintain a world class fighting force, we must rely on the Reserve component of the "Total Force." We can't have one without the other.

With regard to Reserve recruiting, I would ensure that opportunities in the Reserve components are well known to those individuals from the active services who choose to separate voluntarily, as a means of keeping them in uniform. I also would ensure that "lessons learned" and best business practices are effectively exchanged between the active and Reserve components. The same is true with respect to assisting the Reserve components with achieving their retention goals.

#### ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax the most serious biological weapon threat to our military force. Tasteless, odorless, colorless and difficult to detect, anthrax is easy to produce in large quantities and remains viable over long periods of time. The Anthrax Vaccine Immunization Program (AVIP) was initiated by the previous Secretary of Defense after the recommendation of the Chairman, the Joint Chiefs of Staff and the Commanders of Korea and Central Command. To date, more than 500,000 members have been inoculated using over 2 million doses. Since

July 2000, the program has undergone two slowdowns because of limited quantities of FDA-approved vaccine.

If confirmed, and if additional FDA-approved vaccine becomes available, do you plan to reimplement and continue the Anthrax Vaccination Immunization Policy?

Answer. As I understand it, Secretary Cohen decided to implement this program on the advice of the Chairman of the Joint Chiefs of Staff and the Commander-in-Chief, Central Command and Commander-in-Chief, U.S. Forces Korea. If confirmed, I expect to examine, with my colleagues in the Department, all aspects of the program carefully to determine the best approach.

*Question.* How do you believe the Department should respond to service members who refuse to take the vaccine when required to do so?

Answer. I know anthrax kills. I am convinced that our enemies have the ability to deliver anthrax spores on our forces. I believe it would be irresponsible not to take every step possible to protect our service members from any known threat. In providing such protection, it is important that the Department and the military services earn the trust of service members that the protective measures are safe and effective. I believe that the Department will ensure that the current and any future anthrax immunization will be safe, effective and have been approved by the appropriate government agencies. I also believe that the Department is committed to pursue new vaccine technologies in order to protect our military personnel against anthrax and other biological agents or disease.

#### HOMOSEXUAL CONDUCT POLICY

*Question.* The current Department of Defense Homosexual Conduct Policy went into effect in February 1994 after months of congressional hearings and debate resulting in the enactment of a Federal statute. Although there have been some changes in how this policy has been implemented, the basic policy has not been changed.

Do you believe the current policy is effective? If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes would you propose?

Answer. I believe that the statute in this area is very clear. Consistent with Secretary Rumsfeld's previous statement, and with what President Bush said during the campaign, there are no plans to recommend changes to either current law or policy.

*Question.* A DOD working group of senior military and civilian representatives from each of the military services recently proposed an action plan to address the problem of harassment based on perceived sexual orientation and other issues raised by the Inspector General. The review resulted in a 13-point action plan to eliminate all forms of harassment. The Department announced that it would issue a Department-wide directive on this subject.

Do you support the 13-point plan issued by the Secretary's working group? Will you ensure that the Department issues and enforces an appropriate directive to implement and enforce the plan?

Answer. I believe that harassment in any form is inconsistent with military values and needs to be dealt with quickly and effectively by military leaders. If confirmed, I will review the findings of the working group and recommend actions that should be taken as a result.

#### MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlement. Many of these soldiers, sailors, airmen, and marines say they would like to stay in the service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members would stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

If confirmed, will you give serious consideration to how the Department of Defense could use the transfer of unused GI Bill benefits to family members as a retention tool and provide your thoughts on how we best do this?

Answer. This is a serious proposal and one, among others, we should carefully consider.

## GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individual's life in the military, is structured and defined differently by each service. Men training for direct ground combat positions in the Army and Marine Corps train in all-male units. Men and women training to serve in positions that are open to women in the Army, Navy, and Air Force train in gender-integrated units. Men and women in the Marine Corps are segregated at boot camp, then integrated during subsequent training.

Do you believe the current DOD policy of allowing each of the services to establish its own policy for gender integration in basic training is effective?

*Answer.* I believe the test of whether basic training is accomplishing its goal is whether it is producing the qualified soldiers, sailors, airmen, and marines required for our forces and the fleet. Service Chiefs and CINCs are the best judge of recruits coming out of basic training. If confirmed, I would like to consult with these senior leaders for their assessment.

*Question.* If confirmed, would you propose changes to the DOD or service policies? If so, what changes will you propose?

*Answer.* As noted above, I would want to consult with the Service Chiefs and CINCs before making any recommendations to the Secretary.

## CONCURRENT RECEIPT

*Question.* Military retirees with disabilities incurred during their military service are eligible to receive military retired pay from the Department of Defense and veterans' disability compensation from the Department of Veterans' Affairs. However, current law requires that military retired pay be reduced by the amount of the veterans' benefits. Military retirement pay and disability compensation were earned and awarded for different purposes. Military retirees earned their retirement by dedicating 20 or more years of service to our Nation's defense. Disability compensation is awarded to compensate veterans for injuries incurred in the line of duty.

If confirmed, would you support a change in the law to permit disabled military retirees to receive their full retired pay as well as their disability compensation?

*Answer.* I recognize that this is a long-standing concern of military retirees and the Department of Defense alike. I am aware that the Department has traditionally opposed the idea of concurrent receipt. If concurrent receipt were to be approved there would be a funding impact within the Department, which would affect quality of life and readiness programs.

## CONVERSION OF MILITARY POSITIONS TO CIVILIAN POSITIONS

*Question.* Whenever Defense organizations undergo staffing changes, a review is conducted to determine which positions are "military essential" and which positions can be converted to civilian positions. However, there is no systematic process to review positions in organizations not experiencing such a change to determine whether military positions should be converted to civilian positions. In 1997, GAO, using DOD and service guidance, determined that 14 percent of active duty officer positions were candidates for military to civilian conversion.

If confirmed, would you initiate a review of military positions to determine whether they are truly "military essential" and identify those that can be converted to civilian positions?

*Answer.* If confirmed, I would carefully examine all aspects of this issue, including any previous studies, to determine whether further reviews are necessary.

## MANAGEMENT OF THE CONGRESSIONAL FELLOWSHIP PROGRAM

*Question.* For the past several years, the committee has expressed concern about the management of legislative fellows by the military departments and the Department of Defense.

If confirmed, would you review the Department's policies pertaining to the management of legislative fellows and provide the committee your assessment of which management reforms have been implemented and which require additional action?

*Answer.* Yes.

*Question.* What are your personal views on the value and current management of the legislative fellowship program within the Department of Defense? Specifically, in your opinion are legislative fellowships awarded to deserving military or civilian personnel?

*Answer.* I believe the legislative fellowship program is an excellent opportunity for outstanding individuals, both military and civilian, to observe and gain an understanding of the legislative branch of government. I believe legislative fellowships

are generally awarded to deserving military and civilian personnel with demonstrated potential to benefit from the experience.

*Question.* Following their fellowship, are legislative fellows assigned to positions in their service in which the experience and knowledge they gained during their fellowship is used effectively?

*Answer.* The Department's directive makes clear that the intent of the legislative fellowship program is to assign fellows to follow-on tours in which the education gained by the fellowship can be used. If confirmed, I will take steps to ensure, that to the maximum extent possible, the military services are assigning legislative fellows to positions in which his or her experience will contribute to the Department or his or her service.

*Question.* In your opinion, is it appropriate under the authority in Title 10, United States Code, for Reserve component full-time support personnel to participate in the legislative fellowship program?

*Answer.* Participation of Reserve component full-time support personnel in the legislative fellowship program is appropriate only to the extent that the fellowship and follow-on assignment are consistent with the authorities in Title 10, United States Code.

*Question.* If so, how does such an assignment enhance the readiness of the Reserve components as required by title 10?

*Answer.* While there may be full-time support positions for which the experiences of the fellowship could be helpful, if confirmed, I would review the Department's policy to ensure consistency with title 10.

*Question.* In your opinion, is it appropriate to bring a Reserve component member on active duty solely to participate in a legislative fellowship program?

*Answer.* Again, there may be occasions when it is appropriate to bring a Reserve component member on active duty but, if confirmed, I would want to review the Department's policy.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for Force Management Policy?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

Senator SANTORUM. Mr. Abell, the 99th Regional Support Command (99th RSC), located near Pittsburgh, and Naval Air Station Joint Reserve Base, Willow Grove, located near Philadelphia, have each sought my support for the construction of a new commissary to serve members of their respective military communities.

I had previously raised the issue of a new commissary for the 99th RSC with Richard Beale, the then-director of the Defense Commissary Agency (DeCA), and received a less than adequate response from General Beale. Do I have your assurance that you will work with DeCA to see that requests for the construction of new commissaries in eastern and western Pennsylvania are given appropriate attention and consideration?

Mr. ABELL. Yes, I will make sure the DeCA and the Commissary Operating Board give appropriate attention and consideration to requests for new commissaries in those locations.

Senator SANTORUM. Mr. Abell, currently, disabled military retirees who receive disability compensation have a portion of their retired pay reduced equal to the amount of the compensation. Many in the military community believe this is tantamount to forcing disabled retirees to pay their own disability compensation.

It is my understanding that Senator Hutchinson and Senator Warner support efforts to allow military retirees to receive both their full retirement pay and their full disability pay. It is also my understanding that the cost of this change is significant. In his fiscal year 2002 views and estimates letter to Budget Committee Chairman Domenici, Senator Warner indicated that changing this provision of law will cost \$3.8 billion a year in mandatory spending.

With additional funds needed for military health care costs, pay raises, real property maintenance, and recruiting initiatives, where do you believe the concurrent receipt problem fits with other unfunded or underfunded priorities?

Mr. ABELL. The issue of concurrent receipt is one that presents some challenges and deserves further review. There is a perception on the part of some retirees that they must pay for their own disability compensation. This perception is rooted in the requirement that retired military personnel must waive some or all of their retired pay in order to receive VA disability compensation. However, the law is clear in its prohibition against concurrent receipt. While the law may be clear, I believe the important nature of the matter merits reconsideration and a comprehensive review. I plan to make such a review as soon as possible.

Senator SANTORUM. Mr. Abell, Section 334 of H.R. 4205, the National Defense Authorization Act for Fiscal Year 2001, authorized the sale of magazines and other periodicals as an authorized merchandise category for sale in commissaries. In addition, conferees to the legislation directed the Secretary of Defense to promulgate policy guidance that would limit the display of magazines and other periodicals in commissaries to the immediate area of the checkout lanes.

A constituent company has shared information with my office indicating that DeCA has initiated the process of promulgating guidance on the display of magazines and other periodicals in commissaries. Do I have your assurance that you will work with DeCA and Maj. Gen. Robert Courter to see that the magazine publishing industry has the opportunity to have their views and perspective on DeCA's draft guidance heard?

Mr. ABELL. Yes, DeCA has invited a number of publishers to a meeting to share information on how the industry operates, DeCA requirements, and doing business with the Government.

---

[The nomination reference of Charles S. Abell follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*March 29, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Charles S. Abell of Virginia, to be an Assistant Secretary of Defense, vice Alphonso Maldon, Jr., resigned.

---

[The biographical sketch of Charles S. Abell, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF CHARLES S. ABELL

For the past 8 years, Mr. Charles S. Abell has served as a professional staff member of the Senate Armed Services Committee.

Mr. Abell joined the Armed Services Committee staff in 1993, after a 26-year career in the Army that began as an enlisted soldier and concluded with his retirement as a Lieutenant Colonel.

He was the lead staffer for the Subcommittee on Personnel, responsible for issues concerning military readiness and quality of life. Included in this are manpower; pay and compensation; and personnel management issues affecting active duty, Reserve and civilian personnel; health care; nominations, both military and civilian appointees; and the organization and functions within the Department of Defense.

He worked on codification of the “Don’t ask, don’t tell” policy prohibiting open homosexuals from serving in the military and legislation concerning the assignment of women. In recent years, he has had the primary committee responsibility for a broad array of important initiatives aimed at restoring cost-of-living adjustment (COLA) equity for military retirees and survivors; improving the military health care program; upgrading Survivor Benefit Plan coverage; and enhancing pay, allowances and retirement programs for Active Duty and Reserve members and TRICARE-For-Life, guaranteeing all retirees coverage within TRICARE, the military health care system.

During his Army career, Mr. Abell was a Cobra attack helicopter pilot—a decorated officer who led an infantry platoon, an infantry company and attack helicopter units during two tours in Vietnam. He also served command and staff positions at each level of the Army.

Mr. Abell earned a Bachelor of Science in Political Science from the University of Tampa and a Master of Science in Human Resource Management from Columbus University.

Mr. Abell’s decorations include the Legion of Merit, 4 Meritorious Service Medals, the Purple Heart, 2 Bronze Stars for Valor, 14 Air Medals, 2 for valor, the Army Commendation Medal for valor, and the Combat Infantryman’s Badge.

He is married to Cathy Abell and resides in Fairfax, Virginia.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Charles S. Abell in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Charles S. Abell.

2. **Position to which nominated:**  
Assistant Secretary of Defense for Force Management Policy.

3. **Date of nomination:**  
March 29, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee’s executive files.]

5. **Date and place of birth:**  
December 20, 1946; Sayre, Pennsylvania.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to Cathy (McCaffrey) Abell.

**7. Names and ages of children:**

Jennifer Ann; 25.

**8. Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Wyoming Seminary High School—1962–1964—High School Diploma.

Wake Forest University—1964–1966—None.

University of Tampa—1975–1976—B.S.

Columbus University—1998–1999—M.S.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

United States Army Officer—1966–1992.

Senate Armed Services Committee.

228 Russell Senate Office Building.

Washington, DC. 20510.

Professional Staff Member—1993–Present.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Life Member, The Retired Officers Association.

Life Member, National Rifle Association.

**13. Political affiliations and activities:****(a)** List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

**(b)** List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

**(c)** Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

\$500.00 to Bush/Cheney For President—August 1999.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Alpha Chi National Honor Society.

Militia Award, Enlisted Association of the National Guard of the United States—1994.

TROA Meritorious Service Award, The Retired Officers Association; two awards—2000 and 2001.

Order of Military Medical Merit, Army Medical Department—1998.

Award of Merit, The Military Coalition—1998.

Friend of the Regiment, Army Medical Department—1997.

**Military Awards:**

Legion of Merit, two awards.

Bronze Star with “V” device, two awards.

Purple Heart.

Meritorious Service Medal, four awards.

Air Medal with “V” device, 15 awards.

Army Commendation Medal with “V” device, two awards.

Good Conduct Medal.

National Defense Service Medal.

Armed Forces Reserve Medal.

Overseas Service Ribbon, two awards.

Vietnam Campaign Medal.

Combat Infantryman's Badge.

Army Aviator Wings.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.  
None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.  
None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?  
Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

CHARLES S. ABELL.

This 12th day of March, 2001.

[The nomination of Charles S. Abell was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 3, 2001.]

---

[Prepared questions submitted to Victoria Clarke by Chairman Warner prior to the hearing with answers supplied follow:]

APRIL 19, 2001.

Hon. JOHN WARNER,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

VICTORIA CLARKE.

cc: Senator Carl Levin,  
*Ranking Minority Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* The establishment of the unified and specified combatant commands, the delineation of responsibilities, and most importantly, the focus on “jointness” outlined in the Defense Reorganization Act of 1986 have enhanced the readiness and warfighting capabilities of the U.S. Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. These reforms have changed the way the Department of Defense works by strengthening the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders and significantly improving the ability of the Department to protect America's security and further its vital interests. The reforms have helped improve the interaction among the services in conducting military operations by making joint operations the norm.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. I would consider each of the goals noted below to be an important aspect of these defense reforms. Each one has enhanced the ability of the Department of Defense to carry out its assigned responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibilities; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

#### RESPONSIBILITIES

*Question.* If confirmed as the Assistant Secretary of Defense for Public Affairs, what would you view as your principle responsibilities to the Secretary of Defense?

Answer. The Secretary is committed to an ambitious agenda to organize the Department of Defense to more closely reflect and respond to the threats of the 21st century. I believe the involvement and commitment of the American people is absolutely critical to that agenda's successful enactment. If confirmed as the Assistant Secretary of Defense for Public Affairs, my over-arching responsibility to the Secretary would be to help him ensure the effectiveness of the Nation's military by engaging the American people in a national conversation about the threats we face and how we respond to them. Success in building the military of the future absolutely depends on their involvement.

On a day-to-day basis, I would serve as the principal staff assistant and advisor to the Secretary of Defense and the Deputy Secretary of Defense for DOD news media relations, public information, internal information, community relations, public affairs, visual information training, and audiovisual matters.

Department of Defense directives provide that the Assistant Secretary of Defense for Public Affairs will ensure a free flow of news and information to the media, appropriate forums, and the American people, limited only by national security constraints and statutory mandates.

*Question.* What guidelines would you use to determine what information can and cannot be released to the news media and the public?

Answer. The Assistant Secretary of Defense for Public Affairs has responsibility for the security review of Department of Defense materials for publication and release, including testimony before congressional committees.

In keeping with these functions, if confirmed, I will ensure compliance with the established DOD "Principles of Information," which state that the policy of DOD is to make available timely and accurate information in order for the public, Congress, and the news media to assess and understand the facts about national security and defense strategy. I believe the freest possible flow of information—both to the public and in the context of a close working relationship with Congress—will help build the strongest possible public support for a robust national defense that meets the threats of the 21st century.

In addition, if confirmed, I will support the Principles of Information that have long guided the Department's obligations for releasing information. The Principles are published in DODD 5122.5.

*Question.* What policy would you intend to follow in carrying out these responsibilities?

Answer. It is Department of Defense policy to make available timely and accurate information in order for the public, Congress, and the news media to assess and understand the facts about national security and defense strategy. If confirmed, I will ensure that this policy is continued, that DOD works closely with Congress and that

the American people are engaged in and committed to the process of changing our military to keep pace with changing threats.

*Question.* Aside from restrictions related to classified and sensitive-source materials, what restrictions, if any, would you apply in approving material prepared for release by Department of Defense officials?

*Answer.* Information will be made fully and readily available, consistent with statutory requirements, unless its release is precluded by current and valid security classification. The provisions of the Freedom of Information Act will be supported in letter and spirit. Restricting the flow of information to the public, Congress, or members of the Armed Forces would be an impediment to the national consensus I believe must be achieved for effective change to occur.

Information will not be classified or otherwise withheld to protect the government from criticism or embarrassment. Information will be withheld only when disclosure would adversely affect national security or threaten the safety or privacy of the members of the Armed Forces.

A free flow of general and military information will be made available, without censorship or propaganda, to the men and women of the Armed Forces and their family members.

The Assistant Secretary of Defense for Public Affairs should adopt the motto: Maximum Disclosure, Minimum Delay. The Department of Defense's obligation to provide the public with information on its major programs may require detailed public affairs planning and coordination within DOD and with other government agencies. The sole purpose of such activity is to expedite the flow of information to the public. Ensuring accuracy is one of the very few reasons to delay the release of information.

#### NEWS ANALYSIS AND NEWS CLIPPING SERVICE

*Question.* The Assistant Secretary of Defense for Public Affairs has responsibility for overseeing the provision of news analysis and the news clipping services for the Office of the Secretary of Defense, the Joint Staff, and the headquarters of the military departments.

What policy do you intend to follow, if confirmed, in providing news analysis and in determining which news media reports should be disseminated throughout the Pentagon?

*Answer.* The *Early Bird* and its sister publications, the *Supplement* and the *Radio-TV Dialog*, provide the Secretary of Defense and the DOD leadership with news clippings from major news publications. The purpose of this clipping service is to inform the leadership about what the American people are reading and hearing about defense-related activities. If confirmed, my policy will be to ensure that this service provides the leadership with the best information they need to perform their missions and to keep the American people accurately informed about the Department of Defense.

#### STARS AND STRIPES NEWSPAPERS

*Question.* In recent years, there has been much discussion of and policy changes with regard to the independence of the *Stars and Stripes* newspapers.

If confirmed, what would your role and responsibilities be with regard to the *Stars and Stripes* newspapers?

*Answer.* If confirmed, my role will be to provide policy and broad operational guidance to the Director of the American Forces Information Service, who would be my point of contact with the *Stars and Stripes*. He is responsible for the policy, business, financial, operational, and administrative control of the *Stars and Stripes*. My guidance would be directed at ensuring that the *Stars and Stripes* continues to serve as an independent and credible source of news and information to our Armed Forces and their families serving overseas.

*Question.* In your opinion, what is the role of the *Stars and Stripes* newspapers?

*Answer.* The *Stars and Stripes* is a DOD-authorized daily newspaper distributed overseas for the U.S. military community. It provides commercially available U.S. and world news and staff-produced objective reports relevant to the military community. By keeping our troops and their families informed, the newspaper enhances both the readiness and the quality of life of its audience.

The *Stars and Stripes* is needed because no other daily newspaper is available to our troops, wherever they serve overseas, that focuses on the military and the activities of the military community, as well as focusing on the U.S. and world news that is relevant to this audience. In this sense, the *Stars and Stripes* is the hometown newspaper for our overseas servicemen and women and their families.

*Question.* In your opinion, are the *Stars and Stripes* newspapers editorially independent?

Answer. Yes, and there are many safeguards to keep them that way:

- The DOD Directive (5122.11) states that the *Stars and Stripes* is “editorially independent of interference from outside its editorial chain of command.” No one at the American Forces Information Service or in my office sees the content of the newspaper until after publication.
- The directive also mandates the hiring of a highly qualified journalist whose primary responsibility is to ensure the editorial independence of the newspaper.
- The House and Senate Armed Services Committees have provided additional oversight in helping to ensure the success and independence of the *Stars and Stripes*. The *Stars and Stripes* Ombudsman has the right to meet independently with these committees whenever he feels it is necessary.
- The Society for Professional Journalists serves as an unofficial champion of the editorial independence of the newspaper. An SPJ representative is invited to all *Stars and Stripes* Board of Directors meetings.

*Question.* What restrictions, if any, would you recommend be placed on the editorial or reporting staff of the *Stars and Stripes* newspapers?

Answer. The only limitations on the editorial independence of the *Stars and Stripes* are those that are outlined in the DOD Directive. It is my understanding that that directive is currently being staffed throughout the Department of Defense to update it. It was last issued in 1993. If confirmed, I will review it carefully to ensure it meets the standards and objectives I have outlined.

*Question.* The function and responsibilities of the *Stars and Stripes* Ombudsman have been the subject of debate and discussion within the American Forces Information Service and among journalists outside the Department of Defense.

Do you support an independent Ombudsman?

Answer. Absolutely. I view the Ombudsman as a safeguard of the editorial independence of the newspaper and as a valued proponent of the readership in ensuring that information published in the *Stars and Stripes* is fair, accurate, and balanced. The Ombudsman has the independence and stature to serve as an honest broker that can represent and help educate the editorial staff, readers, Commanders, and Public Affairs Officers.

*Question.* What guidance would you provide, if confirmed, with regard to the role, responsibilities and functions of the *Stars and Stripes* Ombudsman?

Answer. If confirmed, I will do everything in my power to support the independence of the Ombudsman. This independence is currently protected by:

- DOD Directive.
- The Ombudsman reports directly to the Director of AFIS. That means he is not subjected to Command or Public Affairs pressures.
- The Ombudsman has direct access to Congress.
- The Ombudsman serves a 3-year fixed term. He can't be fired, and his term cannot be extended. This helps protect his independence.
- The Ombudsman publishes articles in the *Stars and Stripes* whenever he deems it necessary and appropriate. Although he may voluntarily send an advance copy to AFIS Director for comment, the Ombudsman has final authority to publish without being edited.

I support all of these protections.

#### PRESS COVERAGE OF CONTINGENCY OR COMBAT OPERATIONS

*Question.* In the past 10 years, press coverage of contingency and other high and low intensity operations has increased. This increased coverage has, many times, resulted in conflicts between the press corps and military organizations.

If confirmed, how would you resolve the tension between the media's demand for access and the need to protect certain operational details?

Answer. If confirmed, it will be my policy that information will be withheld only when disclosure would adversely affect national security or threaten the safety or privacy of the members of the Armed Forces.

#### FREEDOM OF INFORMATION ACT

*Question.* If confirmed, what would your role and responsibilities be with regard to the Freedom of Information Act?

Answer. As a DOD official, I will fully support the Freedom of Information Act. I will make information readily available, unless its release is precluded because of classification, by law, or other lawful reasons authorized by the act. If information

is releasable and readily available, I will not create obstacles by requiring that a formal FOIA request be submitted. When tasked to provide records in response to a FOIA request, I will make every effort to comply within the time period established by the act and make available all responsive documents under my jurisdiction.

*Question.* If confirmed, what responsibilities would you have under the Privacy Act and how would you fulfill those responsibilities?

*Answer.* It is important to do everything we can to respect and protect the privacy of individuals. It is, therefore, critical that Department of Defense personnel who are charged with communicating with the public or the news media understand the restrictions that the Privacy Act or other law, such as FOIA, impose on the release of information about an individual. If confirmed, it will be my responsibility to balance the need to be responsive to the public's desire for information with the need to prevent any invasion of privacy that may result from the disclosure of information. I intend to fulfill this responsibility by continuing to ensure that the Department's public affairs personnel are adequately and properly trained and understand their obligations under current law. My goal is to sensitize personnel to the importance of avoiding unwarranted invasions of privacy that can result from information disclosures.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Assistant Secretary of Defense for Public Affairs?

*Answer.* The major challenge confronting the Department as a whole is to build a military that reflects the threats of the 21st century. The extraordinary degree of change that will be necessary to succeed demands, in turn, the full engagement and support of the American people.

That challenge is complicated by several factors. On the one hand, as a frank practical matter, the sheer proliferation of news outlets combined with the instantaneous and constant news cycle demand daunting effort just to keep up. On the other hand, the level of interest in military matters should be viewed as a potential opportunity. Fewer and fewer Americans have much, if any, contact with men and women in uniform. Not knowing can too easily evolve into not caring. Especially today, with threats to national security both grave and new, it is absolutely critical that Americans know both the threats we face and the heroic sacrifices our troops are making to meet them.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* Given the scope of change and challenge facing DOD, we must wage a full-scale communications campaign aimed at engaging the American people in a conversation on and commitment to a military built for the 21st century. We must educate Americans about what the military faces and the change we need. That means reaching out to every sector of society.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for Public Affairs?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Question for the record with answer supplied follows:]

## QUESTION SUBMITTED BY SENATOR JIM BUNNING

Senator BUNNING. The Department of Defense uses an individual's Social Security number as their service identification number. Recently, there have been some reports of identity theft from active duty military members. Privacy Act requirements notwithstanding, anecdotal evidence suggests that it is actually fairly easy to get the Social Security numbers of active duty military personnel, easier than for most civilians

What is your plan to stop the use of Social Security numbers as military identification numbers?

Ms. CLARKE.

PUBLIC AFFAIRS

ASSISTANT SECRETARY OF DEFENSE  
1400 DEFENSE PENTAGON  
WASHINGTON, DC 20301-1400

May 30, 2001

Honorable James Bunning  
United States Senate  
502 Senate Hart Office Building  
Second Street and Constitution Avenue, NE  
Washington, D.C. 20510-1703

Dear Senator Bunning:

First of all, thank you very much for your interest in my confirmation process, including the courtesy call from your office.

Secondly, I apologize for the delay in responding to your question at my April 24 hearing. Before giving you a response, I wanted to make sure I understood fully the concerns you have regarding the continued use of Social Security Account Numbers as the military ID number as well as DoD activity thus far.

Most concerns within the DoD deal primarily with possible threats to individuals who are captured or detained, more than identity theft. A senior group of DoD officials examined the issue and concluded that the removal of the SSAN and substitution of another number does not remove or even markedly reduce the threats. Simply with a name and little else, it is relatively easy to obtain an individual's social security number via the Internet. Additionally, a new number would quickly become linked to the SSAN in Internet-accessible data bases. Thus, the Department might potentially spend hundreds of millions of dollars to change systems without gaining additional protection.

The Defense Intelligence Agency (DIA) will release soon an unclassified version of a similar study with similar conclusions.

I hope the information is useful Senator Bunning, and that I have adequately addressed your question. Please contact me at (703) 697-9312 if I can provide more information.

Sincerely,

Victoria Clarke  
Assistant Secretary of Defense  
for Public Affairs

[The nomination reference of Victoria Clarke follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 5, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Victoria Clarke of Maryland, to be Assistant Secretary of Defense, vice Kenneth H. Bacon, resigned.

---

[The biographical sketch of Victoria Clarke, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF VICTORIA CLARKE

## CURRENT POSITION

Victoria Clarke is the General Manager of the Washington, DC office of Hill and Knowlton. She is responsible for the oversight of all Washington practice area operations. (November, 1999–present).

## PRIOR HISTORY

Prior to joining Hill and Knowlton, Ms. Clarke was the President of Bozell Eskew Advertising, an issues and advocacy advertising firm that is a division of BSMG Worldwide, Inc. The firm produced advertising for PhRMA, Microsoft, the National Cable Television Association, the Steel Industry and others. (December 1998–November 1999).

Previously, Ms. Clarke served for 6 years with the National Cable Television Association (NCTA), leaving with the position of Vice President for Public Affairs and Strategic Counsel.

Ms. Clarke has an extensive history in public policy. Starting as a press assistant in Vice President Bush's office in 1982, she continued on to the position of press secretary to Senator John McCain (R–AZ), working in both his House and Senate offices. Following that Ms. Clarke was the assistant U.S. Trade Representative for Public Affairs and Private Sector Liaison under Ambassador Carla Hills and in 1992 she was the Press Secretary for President George Bush's re-election campaign.

## OTHER INFORMATION

Ms. Clarke serves on the Board of Directors for the District of Columbia Special Olympics and the National Foreign Trade Council. In addition, she serves on the Board of Trustees for the Washington Educational Television Association (WETA). She is married and has three children.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Victoria Clarke in connection with her nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Victoria Clarke.

2. **Position to which nominated:**

Assistant Secretary of Defense for Public Affairs.

3. **Date of nomination:**

April 5, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

May 18, 1959; Pittsburgh, PA.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to James Brian Graham.

7. **Names and ages of children:**

Colin Charles Graham, 5; Devon Grady Graham, 4; Charles William Graham, 2.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

George Washington University (9/79-6/82).

Received B.A. in Journalism (6/82).

North Carolina State University (9/77-5/79).

Sewickley Academy (9/75-6/77).

Received high school diploma (6/77).

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

11/99-present: General Manager of Hill & Knowlton (Washington, DC).

12/98-11/99: President of Bozell/Eskew Advertising (Washington, DC).

9/93-11/98: Vice President for Public Affairs at the National Cable TV Assoc. (Washington, DC).

4/93-9/93: Consultant for Edelman Public Relations (Washington, DC).

12/92-4/93: Self-employed consultant (Washington, DC).

1/92-11/92: Press Secretary for Bush-Quayle 1992 (Washington, DC).

11/89-1/92: Assistant U.S. Trade Representative for Public Affairs and Private Sector Liaison.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

1999: Conducted a review of recruiting advertising for the Department of Defense.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corpora-

tion, company, firm, partnership, or other business enterprise, educational or other institution.

General Manager and member of U.S. Management Committee for Hill & Knowlton.

Member of Board of Trustees for WETA (Public Broadcasting).

Member of Board of Directors for DC Special Olympics.

Member of Board of the National Foreign Trade Council.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

None.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

1996: I provided media relations support for 2 weeks for the Dole-Kemp campaign. I used vacation time from my job (then: NCTA) and was not paid for the work.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Retained in committee files.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

1996—Named Woman of the Year by the Women in Cable & Telecommunications Assoc.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

VICTORIA CLARKE.

This 1st day of March, 2001.

[The nomination of Victoria Clarke was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 17, 2001.]

**NOMINATIONS OF EDWARD C. ALDRIDGE TO BE UNDER SECRETARY OF DEFENSE FOR ACQUISITION AND TECHNOLOGY; WILLIAM J. HAYNES II TO BE GENERAL COUNSEL OF THE DEPARTMENT OF DEFENSE; AND POWELL A. MOORE TO BE ASSISTANT SECRETARY OF DEFENSE FOR LEGISLATIVE AFFAIRS**

---

**THURSDAY, APRIL 26, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:39 a.m. in room SD-106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Bunning, Levin, Cleland, and Dayton.

Other Senators present: Senator Thompson.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Scott W. Stucky, general counsel; and Ann M. Mittermeyer, assistant counsel.

Professional staff members present: Charles S. Abell, John R. Barnes, William C. Greenwalt, Gary M. Hall, Carolyn M. Hanna, George W. Lauffer, Patricia L. Lewis, Thomas L. MacKenzie, Cord A. Sterling, and Eric H. Thoemmes.

Minority staff members present: David S. Lyles, staff director for the minority; Madelyn R. Creedon, minority counsel; and Gerald J. Leeling, minority counsel.

Professional staff members present: Daniel J. Cox, Jr., Creighton Greene, Michael J. McCord, and Terence P. Szuplat.

Staff assistants present: Beth Ann Barozie, Shekinah Z. Hill, and Michele A. Traficante.

Committee members' assistants present: J. Mark Powers, assistant to Senator Inhofe; George M. Bernier, III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders and Charles Cogar, assistants to Senator Allard; Kristine Fauser, assistant to Senator Collins; David Young, assistant to Senator Bunning; Christina Evans and Barry Gene (B.G.) Wright, assistants to Senator Byrd; Andrew Vanlandingham, assistant to Senator Cleland; and Eric Pierce, assistant to Senator Ben Nelson.

**OPENING STATEMENT OF SENATOR JOHN WARNER,  
CHAIRMAN**

Chairman WARNER. Good morning, everyone. The committee meets today to receive testimony concerning three civilian nominees for the Department of Defense: Edward C. Aldridge, nominated to be Under Secretary of Defense for Acquisition and Technology; William J. Haynes II to be General Counsel of the Department of Defense; and Powell A. Moore to be Assistant Secretary of Defense for Legislative Affairs. We welcome you.

Mr. Aldridge, I understand that your wife Jodie, your daughter and her husband, Laura and Jeff Boyd, and friend Gale Henderson are here. Would you introduce them, please?

Mr. ALDRIDGE. Yes, sir, they are sitting to my right.

Chairman WARNER. All present and accounted for. You did bring reinforcements, didn't you?

Mr. Haynes, I understand your wife and daughter Sarah and sons Will and Taylor are with you today. Would you kindly introduce them?

Mr. HAYNES. Yes, sir. They are right behind me.

Chairman WARNER. All present and accounted for.

Mr. Moore, I understand that your son, Allen, and Pam Brookenauer are with you today. We welcome you.

This is a very important event, to which families are always welcome. The committee is pleased when they attend, because each of you are undertaking responsibilities in a Department which knows no hours, and knows no time when they can go home, and therefore the families in every respect are a very active participant in these challenging positions to which you have been nominated, so we welcome you. As you are all aware, the families support the individuals in these senior positions in our Government, and we appreciate the support that they will contribute.

Mr. Aldridge has had a distinguished career, and served in a variety of positions in the Department of Defense and private industry for over 30 years.

Mr. Haynes has been active in public service and private sector endeavors. President George Bush, Sr. appointed Mr. Haynes as General Counsel of the Department of the Army in 1990, a position he served in for 3 years. He is currently a partner in the Washington Office of Jenner & Block, where he represents corporate and individual clients. In the mid-1990s, Mr. Haynes served as Staff Vice President and Associate General Counsel for General Dynamics Corporation. He served on advisory committees of the American Bar Association and Maryville College in Tennessee, and on a National Academy of Sciences Naval Studies Board. Mr. Haynes has also worked for a relief organization and performed pro bono work in the D.C. court system.

Mr. Moore is currently the Chief of Staff of our distinguished colleague, Senator Fred Thompson. He has served in that position since 1998. He has been active in public policy affairs in Washington for more than 30 years, serving as Assistant Secretary of State for Intergovernmental Legislative Affairs under President Reagan, and on the White House staff under Presidents Nixon, Ford, and Reagan.

Mr. Moore began his Washington career in 1966 as Press Secretary to Senator Richard B. Russell of Georgia, the chairman of this committee, and then he moved on, first serving as Deputy Director of Public Information for the Department of Justice, and later as a member of the White House legislative staff. He returned to Government service for the Reagan administration, serving as Deputy Assistant to the President for Legislative Affairs. He has worked on numerous presidential campaigns, and represented business interests as Vice President for Legislative Affairs for Lockheed Corporation, and as a consultant.

Our nominees today have a wealth of experience which they bring to the Department of Defense, and as taxpayers and citizens of this country, we are grateful to each of you and your families for offering additional service.

Senator Levin.

#### STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, let me join you in welcoming our nominees, Mr. Aldridge, Mr. Haynes, and Mr. Moore. I want to extend a warm welcome to them and congratulate them on their nominations. I look forward to their service. All three nominees come to us with a strong background of public service.

Mr. Aldridge has previously served as Secretary of the Air Force; Mr. Haynes has served as General Counsel of the Army; and Mr. Moore served as Assistant Secretary of State for Intergovernmental Affairs and Legislative Affairs, and in senior staff positions here in the Senate, including, as was indicated, as Senator Thompson's Chief of Staff.

We know our nominees from many capacities and we welcome them all. We thank you for your dedication to public service. We thank your families in advance for the sacrifice they are going to be making as a result of the long hours and hard work that your new jobs are going to entail.

Mr. Aldridge, if confirmed as Under Secretary of Defense for Acquisition and Technology, you are going to take on some of the most challenging issues in the Department of Defense, including the effective management of the Department's major weapons programs, the revitalization of defense science and technology, the continuation of acquisition reform and logistics modernization, and the even-handed management of public-private competition. This job is a very difficult and challenging one. It is one that many of us on this committee, indeed, even not on this committee, such as Chairman Thompson on the Senate Governmental Affairs Committee, have spent a lot of time trying to bring some common-sense practices to and to bring greater efficiency to.

Mr. Haynes and Mr. Moore, if confirmed, you are both going to be serving in important positions of public trust. This committee relies on the Assistant Secretary for Legislative Affairs to provide us complete and timely information on the Department's planned activities. What is less known is that we also rely heavily upon the General Counsel to ensure that the laws we write are fully and faithfully executed and to make sure that the military justice system works well.

Again, I want to thank your families. I notice, Mr. Haynes, that you have three children with you today.

Mr. HAYNES. Yes, sir.

Senator LEVIN. At least you were able to get the tie on one of your boys.

Mr. HAYNES. It is a struggle. [Laughter.]

Senator LEVIN. My heart goes out to him. [Laughter.]

I want to commend your younger boy for his courage and tenacity. I'm probably going to get in trouble with his parents for saying this, but I am with him. [Laughter.]

That probably is going to make it more difficult to ever get a tie on him in the future, but at any rate, we are delighted that you and your family are here. That is true with all of the families as well.

Chairman WARNER. I suggest we recognize our colleague, Senator Thompson. We are delighted to have you here.

**STATEMENT OF HON. FRED THOMPSON, U.S. SENATOR FROM TENNESSEE**

Senator THOMPSON. Thank you very much, Senator Levin. I want to thank you and Chairman Warner for letting me appear before you here today. I appear before you with very mixed emotions that I will probably soon be losing my Chief of Staff, Powell Moore. I told Powell that I would support him here today, but I am reserving my right to place a hold on his nomination later. [Laughter.]

As I said when President Bush nominated him, my loss is certainly the country's gain. His nomination to be Assistant Secretary of Defense for Legislative Affairs will be just the latest chapter in a distinguished career of public service that began nearly 35 years ago. Powell was born in Georgia, though he has grown into a fine Tennessean, attended the University of Georgia, and served for 3½ years in the United States Army.

Now, Powell majored in journalism and even served as a weekly newspaper editor before coming to Washington. He began his service as Press Secretary for Senator Richard Russell, as the Chairman pointed out. He then joined the Nixon administration, serving as Deputy Director of Public Information for the Justice Department, and later as a member of the White House legislative affairs staff. He left the White House in 1975, but returned 6 years later to serve as Deputy Assistant for Legislative Affairs to President Reagan, a role in which he managed the Senate component of legislative affairs at the White House.

In January 1982, President Reagan nominated him to be Assistant Secretary of State for Intergovernmental and Legislative Affairs, and in this role he traveled with congressional delegations to more than 35 countries, and participated in meetings between congressional leaders and 19 heads of state.

Powell eventually entered the private sector, and answered the call of public service again in 1998, when I asked him to serve as my Chief of Staff. I had come to know Powell back in 1973, during the Watergate days, when I was counsel to the Watergate Committee and Senator Baker. He was friends with Senator Baker, and Senator Baker's staff, and I got to know him then. Powell has been a friend ever since that time, so when I was in need, I felt that

his experience and counsel would be a tremendous asset to me, and I was certainly right in that regard. I will miss his wisdom and his leadership and his counsel, as will my staff, some of whom are here today.

I would like to say I was surprised when I learned that Powell was being called back into the executive branch, but I was not. I knew that President Bush wanted to assemble the strongest team possible, and it was obvious that there would be a place on that team for Powell Moore, so I am proud to introduce him here today.

I want to also welcome a second Tennessean here today, William J. Haynes, who we also claim, who is up for position of General Counsel in the Department of Defense. His parents are Tennesseans.

So most of your panel here today, Mr. Chairman, have strong Tennessee connections, and I want to thank you for your consideration to me and for your consideration for Powell Moore, who I think is and has been for many years a very strong public servant. I think the country is fortunate, with what we put people through nowadays across the board, and we are looking at the presidential appointment initiative, because it is taking longer and longer to qualify good people for service.

It took President Clinton, I believe, about 8 months to get his cabinet together. This will probably take a year. It is therefore becoming more and more difficult to get good people to even come forward for public service, and the kind of people you have at this table here today I think attest to the fact that we are still getting good people who are willing to give a part of their time to serve their country, and I am delighted to see that, and I appreciate what this committee is doing in that regard.

Thank you very much.

Senator LEVIN. Senator Thompson, thank you, and also thank you for your leadership in trying to see if we cannot streamline this process somewhat. I just left the Secretary of Defense earlier this morning. He was going through what it is like to be waiting over in the Pentagon for his assistants to come on board. You are taking a leadership role in seeing if we cannot reverse this trend, because it is just simply untenable that we could operate a Government for up to a year with such skeleton crews as we are forcing on our Secretaries. Thank you for that.

Chairman Warner, I am delighted to call on you.

Chairman WARNER. Thank you. I think it is a distinct privilege for me to come down and join this distinguished group of nominees and have the privilege of introducing an old friend and a man whom I have admired for many years. Pete Aldridge has been nominated to be Under Secretary of Defense for Acquisition and Technology. The position is one of the most important in the Department, and was established by Congress at the recommendation of the 1986 President's Blue Ribbon Commission on Defense Management, the Packard Commission, to place a senior official in charge of defense acquisition, to improve the effectiveness and efficiency of acquisition management.

Earlier this morning, I had the opportunity to meet with former Secretary of Defense Melvin Laird. I had the privilege of serving with him and Dave Packard, and you wear the mantle of this posi-

tion for a team, the Laird-Packard team, which I have always felt was second to none in the history of our Department. Secretary Laird wishes you the usual, get on with your business and do your job right. He was rather blunt. [Laughter.]

Mr. Aldridge was Secretary of the Air Force at the time of the creation of the position of Under Secretary of Defense for Acquisition and Technology. He brings an historical perspective of the need for the position that he has been nominated for, as well as first-hand insight into the difficulties of exercising more centralized oversight and control over an acquisition process which is executed primarily by the services and the defense agencies.

Mr. Aldridge is currently Chief Executive Officer of the Aerospace Corporation. He came to this position from McDonnell Douglas Electronic Systems Company, where he served as President from 1988 to 1992. He was confirmed as the 16th Secretary of the United States Air Force in June 1986, and led the Department until 1988.

Mr. Aldridge has served in a variety of positions within the Department of Defense and private industry, in addition to those previously mentioned, for over 30 years, including positions as Advisor to the Strategic Arms Limitations Talks in Helsinki and in Vienna; as a Senior Manager with the LTV Aerospace Corporation; as the Senior Management Associate in the Office of Management and Budget; as a Deputy Assistant Secretary for Strategic Programs; Vice President of the National Policy and Strategic Systems Group for the Systems Planning Corporation; and as Under Secretary of the U.S. Air Force. He has a long and distinguished record of achievement, including numerous awards and honors, including the Secretary of Defense Meritorious Civilian Service Award, Distinguished Civilian Service Award, and Distinguished Public Service Award, among many others.

Mr. Aldridge has an exceptional record of public service. He has the necessary experience and the background to tackle the difficult tasks that await him in this position. This is not an easy job, as every member of our committee recognizes. Every sailor, soldier, airman, and marine will depend upon him to ensure that the equipment placed in their hands is the best that it can be.

Every taxpayer will depend upon him to ensure that this is all done at the least possible cost. I trust, and indeed I have confidence in him, to work hard to meet these objectives, so Mr. Aldridge, I wish you well. You are on your own. [Laughter.]

Senator LEVIN. Chairman Warner suggested I proceed now to ask each of you if you have an opening statement. Mr. Aldridge.

**STATEMENT OF EDWARD C. ALDRIDGE, NOMINEE TO BE UNDER SECRETARY OF DEFENSE FOR ACQUISITION AND TECHNOLOGY**

Mr. ALDRIDGE. Yes, sir. I have provided a little longer statement for the record, sir. I would like just to summarize that this morning.

Chairman Warner, Senator Levin, members of the Armed Services Committee, it is indeed an honor and a privilege to appear before this committee once again. I am very grateful to the President and the Secretary of Defense for the confidence and trust they have

shown in me by nominating me for this very important position and level of responsibility within the Department of Defense.

Mr. Chairman, I very much appreciate your very kind introduction, especially the introduction of my wife, daughter, son-in-law, and executive assistant. They all provide significant support to my life and my career.

If confirmed, this will be my fourth tour in the Pentagon, and the third time I have appeared before this committee in the nomination process. My first appearance was in 1981, when I was nominated by President Reagan to be the Under Secretary of the Air Force. The second appearance was in 1986, when I had been nominated to be the Secretary of the Air Force.

After leaving the Secretary of the Air Force position in 1988, I spent 3 years as President of McDonnell Douglas Electronic Systems Company, and for the last 9 years I have been President and Chief Executive Officer of the Aerospace Corporation. I believe my 23 years of experience in the aerospace industry and 17 years of experience in prior Government positions will be valuable in conducting the responsibilities of the office for which I have been nominated.

Secretary Rumsfeld and Deputy Secretary Wolfowitz, during their confirmation hearings, outlined the national security goals of the President and five key objectives of the Department of Defense. I strongly support these goals and objectives, and if confirmed, will do everything in my power to assure that they are accomplished.

I have established five goals for myself and the organization I will be honored to lead, if confirmed. These goals, if accomplished, will contribute directly to the goals and objectives of the President and Secretary of Defense.

The first goal is to achieve credibility and efficiency in the acquisition and logistics support process. Too many cost overruns, schedule slippage, and performance failures have deteriorated our credibility and the effective management of sophisticated weapons systems. While improvements are being made, our logistics support system is not responsive for our warfighters, and is archaic with respect to commercial standards of parts supply and support. We need to attack cycle times, introduce stability in our programs, and apply good business practices to achieve efficiencies.

The second goal is to revitalize the quality and morale of the acquisition workforce. The morale of our acquisition workforce in military and civilian is low. Some of our best people are leaving, and we cannot recruit good people as replacements in the numbers we need. The average age of the workforce is growing, and 50 percent of them will be eligible for retirement in the next 4 years. We need to let this workforce know how valuable they are, and how much they are appreciated. In 1990, Congress passed the Defense Acquisition Workforce Improvement Act, the purpose of which was to improve the quality and effectiveness of the DOD's acquisition process by enhancing the capabilities of the acquisition workforce. We need to ensure that we are fully utilizing the internal flexibilities provided by this act.

The third goal is to improve the health of the defense industrial base. If we are to have the very best military forces in the world, we must have the very best industrial base which supply these

forces, their training aids, and their spare parts. We want to encourage technology investment in the industry and enhance competition with stronger and more innovative companies, and encourage increased efficiency by removing excess capacity and implementing good business practices, and we must not forget our small and disadvantaged businesses in this process.

The fourth goal is to rationalize the weapons systems and infrastructure with the new defense strategy. A revised defense strategy is being developed. When that work is complete, we will need to ensure working with the military departments and other elements of the Office of the Secretary that our science and technology programs, weapons systems, acquisition plans, logistics support systems, and basing structure support the revised defense strategy.

The fifth and final goal is to initiate high-leverage technologies to create the weapons systems and strategies of the future. We must identify and initiate weapons system and information technologies to provide high leverage and major military advantage in conflict. Such new capabilities could also influence a change in strategy.

To achieve these five goals, we require a responsive organization within the Department, with a decisive and active leadership. That starts with a Secretary of Defense who has already demonstrated these attributes. If confirmed, I will also attempt to reflect these attributes. In addition, I hope to be working more closely than ever before with the secretaries of military departments on acquisition and logistics support matters.

If confirmed, it will be my intent to be actively involved with the committee members and staff to improve the process, quality, and efficiency of how we procure and support the weapons systems of our Armed Forces. Again, I want to thank the President and the Secretary of Defense for their confidence and trust that they have shown in me to be nominated for this distinguished and important position.

Mr. Chairman, and members of the committee, I thank you for your time and attention, and I look forward to your questions.

[The prepared statement of Mr. Aldridge follows:]

PREPARED STATEMENT OF E.C. "PETE" ALDRIDGE

Chairman Warner, Senator Levin, Members of the Armed Services Committee, it is indeed an honor and privilege to appear before this committee once again. I am very grateful to the President and the Secretary of Defense for the confidence and trust they have shown in me by nominating me for this very important position and level of responsibility within the Department of Defense. I had the honor of working directly for Don Rumsfeld during his first tour as Secretary of Defense and will be equally honored, if confirmed, to work with him again.

If confirmed, this will be my fourth tour in the Pentagon, and the third time I have appeared before this committee in the nomination process. My first appearance was in 1981, when I had been nominated by President Reagan to be the Under Secretary of the Air Force. This committee voted favorably on my nomination and I was confirmed by the Senate in August 1981. At that time we were facing many of the same problems in the military that we see today. President Reagan, supported by the strong efforts of this committee, added significant funds to the Department for modernization, spare parts, improved maintenance, military pay, and new technologies. Those funds were well spent. We fought a major war 10 years ago with the superior forces and capabilities purchased during this buildup period, and 20 years later much of the legacy systems acquired during this period remain in our inventory today.

As Under Secretary of the Air Force I had the dual honor of serving both as the deputy to the Secretary of the Air Force and as the Director of the National Reconnaissance Office, working for both the Secretary of Defense and the Director of Central Intelligence.

In early 1986, when I appeared before this committee for the second time, I had been nominated to be the Secretary of the Air Force. This committee voted to confirm me once again. We had reached the peak in Defense funding in 1985 and began the decline in spending that has lasted until now. During my tour in this position, we rolled out the B-2 stealth bomber, exposed the existence of the F-117, rebuilt the expendable space launch vehicle industry, and started the Advanced Tactical Fighter, which is now the F-22. With an exchange of visits between the military leaders of the Soviet Union and United States, we began to see the "cracks" form in the structure of the Soviet Union.

After leaving the Secretary of the Air Force position in 1988, I spent 3 years as President of the McDonnell Douglas Electronic Systems Company, developing electronic systems for aircraft, helicopter, spacecraft and command and control systems. For the last 9 years I have been President and Chief Executive Officer of The Aerospace Corporation, a non-profit corporation supporting the Nation's military and civilian space program.

I believe my experience in the aerospace industry and in prior government positions will be valuable in conduct of the responsibilities of the office for which I have been nominated.

Secretary Rumsfeld and Deputy Secretary Wolfowitz, during their confirmation hearings, outlined the National security goals of the President and the five key objectives of the Department of Defense. I strongly support these goals and objectives and, if confirmed, will do everything in my power to assure that they are accomplished.

I have established five goals for myself and the organization I will be honored to lead, if confirmed. These goals, if accomplished, will contribute directly to the goals and objectives of the President and Secretary of Defense.

The first goal is to *Achieve Credibility and Efficiency in the Acquisition and Logistics Support Process*. Too many cost overruns, schedule slippage, and performance failures have deteriorated our credibility in the effective management of sophisticated weapon systems. While improvements are being made, our logistics support system is not responsive enough for our warfighters, and is archaic with respect to commercial standards of parts supply and support. We need to attack cycle times, introduce stability in our programs, and apply good business practices to achieve efficiencies. We must look at: (a) streamlining the internal decision processes on weapons acquisition, (b) establishing realistic pricing, spiral development and cost-as-an-independent variable (CAIV) as mandatory features of every program acquisition, (c) expanding multi-year contracting for procurement and development, (d) introducing electronic business systems throughout the acquisition and logistics community, (e) privatizing non-core support functions, (f) achieving excellence in the acquisition of services, and (g) moving to more performance-based contracts for both services and supplies.

As Deputy Secretary Wolfowitz stated in his confirmation hearing "We need to seek greater efficiencies not only to safeguard the taxpayer's money, but also because that will allow us to create better weapons systems and invest more in the cutting edge of our Nation's defenses." We need to work closely with Congress to make this happen.

The second goal is to *Revitalize the Quality and Morale of the Acquisition Workforce*. The morale of our acquisition workforce, military and civilian, is low; some of our best people are leaving and we cannot recruit good people as replacements in the numbers we need. The average age of the workforce is growing and 50 percent of them will be eligible for retirement in the next 4 years. We need to let this workforce know how valuable they are and how much they are appreciated. Rigorous civilian human capital planning for the future is essential as we face more demanding skill requirements for future, high technology weapon systems. Congress authorized the Secretary of Defense to provide direct hiring authority to the Defense Laboratory Directors, to allow them to compete better with the private sector for scientific talent. This addresses one part of the problem, but we should be searching for additional solutions to improve the quality and morale of the entire acquisition workforce. In 1990, Congress passed the Defense Acquisition Workforce Improvement Act (DAWIA), the purpose of which was to improve the quality and effectiveness of DOD's acquisition process by enhancing the capabilities of the acquisition workforce. We need to ensure that we are fully utilizing the internal flexibilities provided by this act as well as making maximum use of our education and training capabilities, to include continuous learning for the acquisition workforce.

The third goal is to *Improve the Health of the Defense Industrial Base*. If we are to have the best military forces in the world, we must have the very best industrial base which supply these forces, their training aids and their spare parts. We want to encourage technology investment in the industry, enhance competition with stronger and more innovative companies, and encourage increased efficiency by removing excess capacity and implementing good business practices. In response to many studies on this issue we can do a lot to help the defense industry improve their business viability, to the advantage of industry and to the advantage of the Department of Defense. A stronger, more viable industry encourages technology investment and is more attractive for recruiting and retention of good people. We need to address cash flow and profit policies, barriers to commercial companies doing business with the Department, expedited and proper export control processes, and more incentives for companies to reduce unnecessary costs. We also need to address the development and quality of our small and disadvantaged business contractors, another key part of our overall industrial base.

The fourth goal is to *Rationalize the Weapon Systems and Infrastructure With the New Defense Strategy*. A revised Defense Strategy is being developed. When that work is complete, we will need to ensure, working with the Military Departments and other elements of the Office of the Secretary, that our science and technology programs, weapons systems and acquisition plans, logistics support systems and basing structure support the revised Defense strategy. We will review all the acquisition programs to ensure consistency with the strategy—recommending for elimination those that are not consistent and recommending those on-going and new programs that should be funded. For those programs that are to be included in the Defense budget, we must ensure that the acquisition strategies and plans are consistent with the needs of the warfighters. The final step in this goal will be to adapt the Defense infrastructure to support the strategy and the resulting force structure.

The fifth, and final, goal is to *Initiate High Leverage Technologies to Create the Weapon Systems and Strategies of the Future*. We must identify and initiate weapon system and information technologies to provide high leverage and major military advantage in conflict. Such new capabilities could also influence a change in strategy. We will be looking at rebalancing the activities of the Defense Advanced Research Projects Agency (DARPA) toward high leverage, higher risk technologies, increasing the number of Advance Concept Technology Demonstrations (ACTDs) and taking advantage of commercial innovations, especially in information technology. An increase in Science and Technology funding across the Military Departments and DOD agencies will stimulate more innovative thinking on “war winning” technologies and concepts.

To achieve these five goals will require a responsive organization within the Department with decisive and active leadership. That starts with the Secretary of Defense, who has already demonstrated these attributes. If confirmed, I will also attempt to reflect these attributes. In addition, I hope to be working more closely than ever before with the Secretaries of the Military Departments on acquisition and logistic support matters.

Many of the actions I have outlined we can do with authorities already existing within the Department, and, if confirmed, I will work toward these as expeditiously as possible. Other initiatives will require statutory and regulatory changes to remove the barriers to good and efficient acquisition and logistics support management. If confirmed, I will need the help of this committee and others in Congress to remove these barriers and to achieve the goals we have established for ourselves. It will be my intent to be actively involved with the committee members and staff to improve the process, quality and efficiency of how we procure and support the weapon systems of our Armed Forces.

Again, I want to thank the President and the Secretary of Defense for their confidence and trust they have shown in me to be nominated for this distinguished and important position.

Mr. Chairman and members of the committee, I thank you for your time and attention. I look forward to your questions.

Chairman WARNER. Thank you very much, Mr. Aldridge. That was an excellent opening statement.

Mr. Moore.

**STATEMENT OF POWELL A. MOORE, NOMINEE TO BE ASSISTANT SECRETARY OF DEFENSE FOR LEGISLATIVE AFFAIRS**

Mr. MOORE. Mr. Chairman, I have no opening statement, but I would like to offer a few expressions of appreciation, if I may.

First and foremost, I would like to thank you and Senator Levin for your prompt consideration of these nominations. The fact that these nominations arrived here on Monday after a recess and then you were having this hearing today certainly indicates an intention on the part, and a record on the part of this committee to cooperate with this administration. I certainly would offer my expressions of appreciation for that spirit of cooperation.

As Senator Thompson pointed out, about 34½ years almost to the day, I started work for the chairman of this committee, and I learned very early about its bipartisan spirit and its bipartisan approach to public policy, and I know that that bipartisan spirit has existed for a long time.

Let me say that if I am confirmed to be the Assistant Secretary for Legislative Affairs, it would be my intention to make sure that the Department of Defense fosters that spirit of bipartisanship that has always characterized this committee.

Second, I would like to offer my appreciation to the President for nominating me to this position. I would like to thank the Secretary of Defense for recommending me for this position. I think the President has demonstrated that he intends to assemble the best, or he has assembled the best possible cabinet available, especially when he selected Secretary Rumsfeld to be his Secretary of Defense. I think Secretary Rumsfeld has the qualities, the character, the integrity, and the judgment to truly make a historic member of the presidential cabinet.

Finally, I would like to thank Senator Fred Thompson not just for his kind comments today, but also for the opportunity that he provided me 3 years ago to return to public service. I think the experience as his Chief of Staff has certainly been a wonderful experience for me and a truly beneficial experience for me, and I would like to suggest that I know of no one who sacrifices more in the cause of public service than Senator Fred Thompson does. He has a lot of options, in view of his exceptional capabilities and qualities, for a more lucrative existence, and an easier existence, but he chooses public service, and I think the Nation benefits from the fact that he chooses public service, and I offer my appreciation to him.

I look forward, if confirmed, to working with this committee and you, Mr. Chairman, and you, Senator Levin, and I am prepared to answer your questions.

Chairman WARNER. Thank you again. That was a very moving statement, and we recognize your long service to your country, and indeed to this institution, the United States Senate, and the taxpayers are fortunate, as is this country, to have you once again volunteer to go back into the harness. We wish you well.

Now, Mr. Haynes, I observe that both you and Mr. Aldridge are returning to the Department. I do not want to get personal about it, but I love that Department. I spent 5 years plus at it, and there have been times in my career that my heart is tugged to go back, so I thank you for taking this opportunity to go back. I know the

challenges in that Department are second to none anywhere in our whole Federal system, so I wish you well, both of you. Please proceed, Mr. Haynes, for any statement that you might wish to make.

**STATEMENT OF WILLIAM J. HAYNES II, NOMINEE TO BE  
GENERAL COUNSEL OF THE DEPARTMENT OF DEFENSE**

Mr. HAYNES. Thank you, Mr. Chairman, Senator Levin. I also want to thank Senator Thompson for his kind words.

Senators, it is an honor to be back before this committee today to be considered to be the next General Counsel of the Department of Defense. If confirmed, I look forward to working with you and your staffs on behalf of our country, and for our men and women in uniform. I am deeply grateful to President Bush for nominating me for this office, and to Secretary Rumsfeld for this opportunity to join his team.

As I said to Secretary Rumsfeld in one of our discussions about the privilege of service, my family is the most important motivation and foundation for me in going forward. I am happy that most of them are here today. Not here are my parents, retired Colonel Jim Haynes, and Caroline Haynes, Tennesseans now and South Carolinians always, who continue to be sources of inspiration and example for me.

With me today are my children, of whom I am very proud. They represent for me the next generation whose security and freedom we all hope to ensure. Indeed, they may be the ones who have to fight if we are less than perfectly successful in meeting our challenges. Meg, my wife of 19 years and partner for a lifetime, is my most important source of sustenance and focus for commitment. I thank them for their support in this opportunity to serve.

Finally, I thank this committee and staff for your significant efforts to schedule this hearing so quickly. We are all eager to get started, if confirmed.

Chairman WARNER. Thank you very much. Senator Levin and members of the committee, I am just sitting here thinking, Secretary Rumsfeld, previous Secretary of Defense; Secretary Wolfowitz served in the Department of Defense; Dov Zakheim served in the Department of Defense; now two more. I do not think there is any other Department or agency in our Federal Government that has a record that reflects the challenges of work there to which you and others have responded time and time again. It is very unique.

We thank you for your expressions of confidence in this committee and its work as a separate coequal branch of the Government, the Senate has the advice and consent role, and we have, Senator Levin and I and each member of this committee, tried very hard to move as swiftly as we can, but carefully and thoroughly with regard to the nominations that our President has forwarded to the Senate. We have conducted open sessions, and we have conducted executive sessions on those matters which we regard as personal to each individual as nominee. We will have an executive session following this hearing today with respect to certain nominees, and so we have to move very swiftly.

Now, at this point, I would like to enter into the record a statement provided by our former chairman, Senator Sam Nunn, rec-

ognizing your accomplishments, Mr. Moore, and the trust that he has in you to fulfill the obligation of the office to which you have been appointed. Following Senator Nunn's statement, I would also enter into the record the opening statement of Senator Strom Thurmond.

[The prepared statement of former Senator Nunn follows:]

PREPARED STATEMENT BY FORMER SENATOR SAM NUNN

Mr. Chairman, Senator Levin, and members of the Senate Armed Services Committee, it is a privilege to join my former colleague, Senator Fred Thompson, in strongly supporting the nomination of Powell Moore for the position of Assistant Secretary of Defense for Legislative Affairs.

I know that Powell will fully justify the confidence that the President and Secretary of Defense have expressed in him. In Powell Moore, we have a member of our Senate Armed Services Committee family, as he started his government career with then-Chairman of the SASC, the late Senator Richard Russell of Georgia. The committee has been blessed over the years with truly remarkable staff, and Powell certainly was one of the best.

My unhesitating support for Powell Moore is based on a major aspect of his distinguished career—the combination of a solid grasp of national security issues with remarkable experience and understanding in the area of executive-legislative relations.

I know the Chairman, and other members believe, as I do, that it is extremely important that our overall national security and foreign policy be conducted within a bipartisan framework. This has been a hallmark of the SASC over the years and is continued by the current leaders, Chairman Warner and Senator Levin.

Powell Moore recognizes and supports this tenet as he learned this firsthand from Senator Russell who himself considered bipartisan statesmanship as an inviolate principle.

Powell worked closely with Senator Russell and learned this approach and the issues well. He cemented this understanding in subsequent jobs in the executive branch, in the legislative branch, and over a decade of highly successful years in the private sector.

Mr. Chairman and members of the committee, Powell Moore understands the issues, he understands the need for a bipartisan approach, and he understands the "two way street" that is essential for the proper implementation and the long-term support and continuity of a sound national security policy. I am sure most people on this committee know Powell Moore personally and recognize firsthand his superb capabilities in this area.

Powell's knowledge and skills were cultivated in his hometown of Milledgeville, Georgia and during his days at the University of Georgia. I have known Powell and his family for many years and know that he has the best interest of this nation as his guiding principle. His parents were close to another American who shared that goal, my great-uncle, Congressman Carl Vinson, also of Milledgeville, Georgia.

Powell has a difficult and challenging job ahead as do members of this committee. Many complex national security issues will be before Congress that will take a great deal of skill, knowledge, understanding, and cooperation between the two branches.

I am confident that Powell is more than qualified for this important task. I want to offer my personal congratulations to Powell, his family, and his very proud relatives in Milledgeville, Georgia.

I thank the committee for this opportunity and I welcome the opportunity to support Powell Moore's nomination.

PREPARED STATEMENT BY SENATOR STROM THURMOND

Mr. Chairman, I join you in welcoming Mr. Aldridge, Mr. Haynes, and Mr. Moore. Our Nation is fortunate to have individuals such as these nominees willing to take on the challenges of serving in key positions and to undergo the scrutiny of the nomination process. Although some have criticized the nomination process as being too burdensome, I believe that the confirmation of Presidential appointees is one of the Senate's most important tasks and one that should not be taken lightly.

Mr. Chairman, we have three able nominees before the committee this morning. Mr. Aldridge has a distinguished record both in government and the private sector. He has appeared before this committee often most notably as the Secretary of the Air Force in the Reagan administration. Mr. Haynes has served as the Army Gen-

eral Counsel and has extensive corporate legal experience. Mr. Moore is well known to all who have served in the Senate for his service to Senator Richard Russell and now Senator Thompson. He also has distinguished himself in various positions in the Department of State and the White House.

Mr. Chairman, I look forward to hearing from the nominees and I wish them all success.

Thank you, Mr. Chairman.

Chairman WARNER. The committee has asked each of our witnesses a series of advance policy questions, and they have responded to those questions. Without objection, I shall put them into the record at the appropriate location.

Senator Levin and I, as Chairman and Ranking Member, have examined very carefully certain background material as forwarded by the Counsel for the President. In my judgment, each of the nominees has a record which brings no reason for any further consideration in terms of any question of their background. Do you share that view, Mr. Levin?

Senator LEVIN. I do.

Chairman WARNER. We will be looking into one aspect in executive session, however, with respect to two of the nominees. Now, the standard questions that are posed by this committee to each of the nominees, you have heard them before, since you have been here, but we will go again. Have you adhered to the applicable laws and regulations governing conflict of interest?

Mr. MOORE. Yes, sir.

Mr. ALDRIDGE. Yes, sir.

Mr. HAYNES. Yes, sir.

Chairman WARNER. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Mr. HAYNES. No, sir.

Mr. ALDRIDGE. No, sir.

Mr. MOORE. No, sir.

Chairman WARNER. Will you ensure your staff complies with deadlines for requested communications, including questions for the record?

Mr. HAYNES. Yes, sir.

Mr. ALDRIDGE. Yes, sir.

Mr. MOORE. Yes, sir.

Chairman WARNER. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Mr. MOORE. Yes, sir.

Mr. ALDRIDGE. Yes, sir.

Mr. HAYNES. Yes, sir.

Chairman WARNER. Will those witnesses be protected from reprisals for their testimony or briefings?

Mr. MOORE. Yes, sir.

Mr. ALDRIDGE. Yes, sir.

Mr. HAYNES. Yes, sir.

Chairman WARNER. All right. We thank you very much. Senator Levin, why don't you lead off with your questions.

Senator LEVIN. Thank you, Mr. Chairman.

As the chairman mentioned, we have received a letter from Sam Nunn, which is a very strong letter of recommendation for you, Mr. Moore. I notice in his statement, which the chairman has made a

part of the record, that you come from the same town as Senator Nunn's great uncle, Congressman Carl Vinson, Milledgeville—am I pronouncing it correctly?

Mr. MOORE. Yes, sir.

Senator LEVIN. I am glad Senator Cleland is here, because of that connection. He is going to tell us later where Milledgeville is. [Laughter.]

There must be something about Georgia which produces the kind of heroes we have seen, with your former boss, as a matter of fact, Senator Russell. We have a true hero here in our midst today in Senator Cleland, Senator Nunn, Congressman Vinson—there must be something magic down in Georgia. I hope you will export it.

Mr. MOORE. They all come from small towns, Senator Levin.

Senator CLELAND. Would the Senator yield?

Senator LEVIN. I would be happy to yield.

Senator CLELAND. I might say that with all due respect to the great Carl Vinson and the distinguished panelist here, Mr. Moore, Milledgeville is the site of a State insane asylum. [Laughter.]

Senator LEVIN. There is no way to follow that one up without getting into trouble. I am just sorry that the chairman talked about throwing some light on this subject earlier today [Laughter.]

Chairman WARNER. Would you yield for a moment?

Senator LEVIN. I would be happy to.

Chairman WARNER. Our colleague from Georgia is second to none, and he knows exactly when and how to use his humor, but I know the way to Milledgeville. When I was Secretary of the Navy we had a problem, a very serious one, and I received a summons to go to Milledgeville with the Chief of Naval Operations.

There we received, I think, one of the historic lectures from a man who served in Congress for 50 years, and walked out of his congressional office exactly to the day, 50 years, having served first as chairman, I believe, of the Naval Affairs Committee, and then as the House Armed Services Committee for, I do not know how many years he was chairman of those two committees, but I always remember when I was in the Department of Defense Mr. Laird said there is one man that I will follow anywhere in this world, and it was Uncle Carl Vinson.

Mr. MOORE. I do not think people who knew him referred to him as Carl. Senator Nunn, of course, referred to him as Uncle Carl, but, of course, he was his uncle. The rest of us called him Mr. Vinson, or Mr. Chairman.

Senator LEVIN. First, Mr. Moore, let me ask you this question. We have had a number of nominees in recent weeks tell us that they do not know when the administration is going to be submitting the details of the fiscal year 2002 defense budget. They cannot say whether or not the administration is going to be submitting a supplemental request for fiscal year 2001.

We all want to work with the Department to strengthen our military, but we cannot begin our authorization process until the administration submits that detailed budget. I am wondering whether you will tell us, when confirmed, as soon as you can on a regular basis, as to what the plans of the administration are for submitting that 2002 budget and any 2001 supplemental.

Mr. MOORE. Senator Levin, I think that all nominees have been very cautious about making any assumptions about Senate confirmation, and I think that is entirely appropriate, so most of the people who have appeared before you as nominees have truly not been read into the exact plans for a supplemental. Let me say that if I am confirmed, that I will cooperate with you and the chairman and this committee to the maximum extent possible, including keeping you informed on progress and developments related to supplementals and any adjustments that may be made in the 2002 budget.

Senator LEVIN. Thank you. I believe there have been 20 separate advisory panels that are now participating in various aspects of Secretary Rumsfeld's strategic review. Will you, if confirmed, ensure that this committee is provided information regarding the structure, membership, purpose, and findings of those panels?

Mr. MOORE. If confirmed, yes, sir, I will make every effort to make sure that the committee is properly informed.

Senator LEVIN. About those aspects?

Mr. MOORE. Yes, sir.

Senator LEVIN. This is for you, Mr. Aldridge. Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the last few decades averages between 8 and 9 years. Others have said that that cycle can go from 15 to 20 years. The Secretary has said that the cycle time simply does not respond to urgent challenges arising, and to rapidly emerging technological developments. I think all of us would surely agree with that. I am wondering what your thoughts are on specific steps the Department might take to reduce that cycle time for major acquisition programs.

Mr. ALDRIDGE. Yes, sir. There have been many studies done on this particular problem, the Defense Science Board, various independent committees, and if confirmed, I will strongly work toward getting the cycle times down. Many of the previous studies have talked about a concept called spiral development, or evolutionary development. Rather than trying to go for the ultimate configuration right off the bat, it is better to accept a slightly lesser version or capability of a particular weapons system, and that can be done much faster and allow that weapons system to evolve with time.

It reduces risk, it gets weapons systems in the hands of our troops faster, usually the systems are designed to be lower cost so you can get rid of the older system that would tend to be more expensive, so cycle times have a very positive impact. Reducing cycle times has very positive impacts upon the capabilities of our forces, and if confirmed, I plan to attack that aggressively. As I pointed out, one of my goals that I had in mind, if confirmed to this job, is to go after that for acquisition as well as logistics.

Senator LEVIN. After you have had a chance to get settled and review the studies, would you give us a specific plan for reducing that acquisition cycle at some point this year? Would you do that?

Mr. ALDRIDGE. Yes, sir, if confirmed into the job, that is one of my goals and, in fact, we are developing some metrics to measure how well we are doing, and I can share that with the committee as well.

Senator LEVIN. In addition to the metrics about how well you are doing, can you give us the specific steps as to how to achieve those goals that you are going to take after you have had a chance to do these reviews?

Mr. ALDRIDGE. Yes, sir, when and if I am confirmed.

Senator LEVIN. Thank you.

Secretary Rumsfeld indicated that the administration is going to seek to reduce cost by privatizing non-core defense activities. The Department has said in the past that it benefits from public-private competition regardless of whether the competition is won by the public sector or by the private sector. Others have made the point that it is unfair to take jobs from public employees without giving them an opportunity to compete for the work. Would you agree that private-public competition is an essential precondition to the privatization of noncore functions that are currently using DOD employees?

Mr. ALDRIDGE. Yes, sir.

Senator LEVIN. One last question, and this goes to you, Mr. Haynes, and it relates to the needs of defense laboratories to have direct hiring authority in order that they can compete with industry for the best and brightest personnel. The committee has twice enacted legislation giving the Department this direct hiring authority, but the Department has yet to use it.

I am wondering whether you will work with Mr. Aldridge and others, Mr. Haynes, to address any legal objections that there may be to using this authority so that we can give the laboratory directors the authority that they need.

Mr. HAYNES. Yes, Senator Levin. If confirmed, I will hope to be working very closely with Secretary Aldridge. It is one of my most intense hopes to provide the leadership of the Department with a range of authorities, and if the Department is not utilizing some authority that it can to accomplish objectives the President and the Secretary have laid out, then we absolutely should pursue that.

Senator LEVIN. Will you take a specific look at that authority?

Mr. HAYNES. Yes, sir.

Senator LEVIN. Thank you, Mr. Chairman.

Chairman WARNER. Senator Bunning, why don't you go ahead. I have quite a bit to cover later.

Senator BUNNING. Thank you, Mr. Chairman. Thank you, gentlemen, for coming to see us. As I told the nominees that were before us, yesterday or the day before—

Chairman WARNER. Excuse me, by the way, I am glad you mentioned that. In consultation with the Ranking Member, we would hope to have a vote today of the committee on those nominees.

Senator LEVIN. The ones that were before us on Wednesday?

Chairman WARNER. Yes. We will notify the committee.

Senator BUNNING. —I told them the same thing, that I would like to relate to you that the most important thing I can convey to you is the importance of providing us here in Congress with timely, accurate information. If we ask one of you a question, or if you are here to report on an issue within your purview, accuracy is vital, and I repeat that. Accuracy is vital.

We have had people appear before committees of jurisdiction and not have accurate information so therefore we made bad judgments

because of inaccurate information. Congress cannot do its job without good information. If you are confirmed, I am looking forward to working with you to see to it that we do get accurate information.

I just have a few questions, Mr. Chairman. This is for Mr. Aldridge. If confirmed, will the Army's recent decision, at an estimated cost of approximately \$26 million to purchase berets from China, fall within your jurisdiction?

Mr. ALDRIDGE. Yes, sir, and if confirmed, the process of that purchase went through the Defense Logistics Agency, and that is under the control of the Under Secretary for Acquisition and Technology.

Senator BUNNING. What is your view of the Army's decision to circumvent the Buy America requirement and go to China for the purchase?

Mr. ALDRIDGE. Sir, I was not involved with that decision at all.

Senator BUNNING. I know you were not.

Mr. ALDRIDGE. I am not sure what the rationale was for that decision. My understanding is the Army asked the Defense Logistics Agency to purchase the berets and they went through a process, which I understand from the discussions was appropriate. I have read that somewhere in the newspaper, but the decision as to exactly why they did that, I cannot answer why they took foreign sources.

Senator BUNNING. If confirmed, do you intend to do anything about it?

Mr. ALDRIDGE. It will fall within my purview, if confirmed, to address the issues, any remaining issues on that purchase, if I am confirmed for the office.

Senator BUNNING. Mr. Haynes, events such as the World Trade Center bombing and Oklahoma City bombing have highlighted the domestic terrorist threat to the United States. To respond to this threat, various agencies of the executive branch have been planning and conducting exercises to work out effective responses to terrorist incidents. An example of this is the toppo exercise that was conducted in three cities last May.

One issue to be worked out involves the role the military is to play in the domestic support of law enforcement during such an incident. This support is allowed under special circumstances by the posse comitatus—that is good, you can tell I am not a lawyer, thank God—act and other similar laws. How do you plan to ensure that the military can provide effective support to law enforcement during a domestic terrorist attack while ensuring they don't violate the Constitution and the laws of the United States in the process?

Mr. HAYNES. Senator, the key to that question, I think, is planning and thought beforehand. One of those delicate issues in constitutional democracy is the relationship between the Armed Forces and the civilian leadership. The scenario you describe, as horrible as it is, presents that very delicate question perhaps in its most severe light, so careful planning beforehand to ensure that military support under such circumstances is always under civilian control is going to be paramount. I can assure you, if confirmed, that will be a very important issue for me, and the legal community should and absolutely must be involved in that planning process.

Senator BUNNING. One last question. A topic that has come up in recent years is information warfare: the ability to conduct an attack against someone's computer system. In recent years, the Department of Defense has been working on how these capabilities would apply under the international laws of armed conflict.

The Department of Defense has since transferred the responsibility for information warfare, or, as it is sometimes called, information operations, to Space Command, an operational command. This has at least indicated the possibility of the capability to conduct such an operation. What is your view regarding how information operations fit into the law of armed conflict?

Mr. HAYNES. My view is a developing one, Senator, as is the entire field of information warfare. The concept is relatively new. It has ripened since the last time I was in public service, although I was involved in a panel with the Naval Studies Board in the early 1990s to address some of these issues.

The short answer is that each circumstance will present novel issues and require very delicate and sophisticated analysis. It is something we are going to have to address in the future and, if confirmed, that is going to be one of the top priorities for all of us: to figure out how to incorporate that into the roles and missions of the Department of Defense, and where it is to be placed.

Senator BUNNING. Well, I intend, after you are confirmed, and I expect you to be confirmed, to follow up on that specific question again, because I think that is a vulnerable and most important part of your job.

Mr. HAYNES. I look forward to working with you and your staff.

Senator BUNNING. Thank you very much, Mr. Chairman.

Chairman WARNER. Thank you, Senator, a very interesting line of questions. If my colleagues would bear with me a minute, that question of the Army berets, you know what disturbed me, and I communicated some certain thoughts to the Chief of Staff of the Army and others about that, but the issue of awarding that contract to China certainly is one that has to be examined. In hindsight, I would not say that the Chief of Staff of the Army or others who handled that could have foreseen in any way the problems that ensued thereafter between our country and China. I am happy to go into that with you, but I know that decision has to bear heavily on their thoughts and minds today.

Senator BUNNING. Mr. Chairman, I did not even think in relationship to the fact that we have had an incident with China, just the fact that there would be a contract awarded to China in the situation that we have a Buy American clause in all procurement, if we can Buy American first.

Chairman WARNER. I share the Senator's views, because that hat is a symbol of great military tradition. Anyway, I just wanted to say I have great respect for the Chief of Staff of the Army, and while we may have differences on the policy decisions, I certainly think he should not bear that one.

Now we will turn to our distinguished colleague, Mr. Dayton. I am going to do the wrap-up and let all the other members have their opportunity first.

Senator DAYTON. Thank you, Mr. Chairman, and I thank the nominees for their willingness to serve our country once again, and

since you have provided excellent responses to the prepared questions and previous questions, I will not belabor those subjects. I just have a couple of questions.

Mr. Aldridge, you bring a unique perspective, having served as the head of one of the service branches and also previously in the Department of Defense itself, and now with the position you are coming into. I wonder if you could from both those perspectives assess the benefits and the weaknesses of having essentially very separate weapons development procurement systems within the respective branches.

Do you see any opportunities or benefits from increased coordination or consolidation of those, or do you think they are best kept separate?

Mr. ALDRIDGE. Sir, the Goldwater-Nichols Act changed the approach that the Department of Defense had with regard to weapons systems acquisition. It dictated that there would be a more centralized approach to weapons acquisition than in prior years. It established the Under Secretary for, at that time, Acquisition and Technology, which has now been designated Acquisition, Technology, and Logistics.

The approach that the Secretary has in his new position with the current Secretary of Defense is to encourage much closer cooperation between the acquisition and logistics community within the Department of Defense, with the services, and has formulated an approach that I would hope to follow through on, if confirmed, to work very closely with the service secretaries in this regard. He has clearly indicated that that is what he expects of this position, and I certainly support his views on that regard, and if confirmed, I would carry them out.

Senator DAYTON. A related question, sir, one of the questions about the lack of financial and physical inventory controls and accounting capabilities, you referenced the difficulty with the so-called feeder systems coming up. Obviously, the consolidated information is only as good as the individual components.

Do you see that as a bottom-up kind of problem, though, and is there any kind of—again, given the separation and a system as complicated and mammoth as the institutions and the branches, is there any hope that we will ever get to a point where we have a uniform system and better accounting, better management, and fiscal controls?

Mr. ALDRIDGE. Sir, I think it is essential that we have such capabilities, and it is a two-way street. It is a bottoms-up, which is to make sure the feeder systems are consistent and providing consistent information as it moves up the chain, but I will tell you, I think it is also a leadership question. This type of modification to our finance and accounting system is going to take very strong top leadership to get it, to make it happen.

It is clear that some kind of directive to achieve such a capability within a finite period of time, and having that monitored by the Secretary of Defense and the other DOD leadership, is going to be absolutely essential.

Senator DAYTON. Well, reading through the questions and getting an understanding of the scope of your responsibilities, I wish you well. You have a mammoth task in front of you.

Mr. Moore, one question. I would second Senator Bunning's concerns that at our previous hearing this week with then the nominee for Assistant Secretary of Public Affairs, Victoria Clarke, about the accuracy and reliability and the speed of information provided to Members of Congress, do you see a role for your office in that effort and, if so, how would you work with the Secretary for Public Affairs?

Mr. MOORE. Senator Dayton, I see that as a primary role. The Office of Legislative Affairs has a responsibility to make sure that this committee and all of Congress receives information on a timely basis that is accurate, and that it comes on a bipartisan basis, and that would certainly be my strongest commitment, to make sure that the committee is informed and that Congress is informed.

I recognize that it is important that Victoria Clarke and I work very closely together, because one of the challenges in legislative affairs these days is to make sure that Members of Congress are not surprised in getting ahead of the flow of information in today's world, where information spins around so rapidly, and sometimes announced by the Department and other times not announced by the Department. It is a challenge to get ahead of the public flow of information, but it is my commitment to make sure that Congress is well-informed, and that we avoid surprises.

Senator DAYTON. Thank you.

Mr. Haynes, I am not an attorney. I will not even try to comprehend the scope of your responsibilities, but I wish you well. [Laughter.]

Thank you, Mr. Chairman.

Chairman WARNER. I thank you very much. Our colleague from Georgia.

Senator CLELAND. Thank you very much, Mr. Chairman. I just want to say that it is an honor to be here with Powell Moore, who has risen higher than any former escapee of a mental institution. [Laughter.]

We are just honored to be with you Powell. I would ask unanimous consent that a letter endorsing Powell Moore for this position from Senator Zell Miller be entered into the record?

Chairman WARNER. Without objection.

[The information referred to follows:]

PREPARED STATEMENT BY SENATOR ZELL MILLER

I am pleased and honored to endorse Powell A. Moore for the position of Assistant Secretary of Defense for Legislative Affairs. To say that he is eminently qualified for this position would be an understatement. His distinctive record of public and private service is across a spectrum of military service, politics, journalism, and industry.

A native Georgian, he has served as a key staff member with such notable politicians as Senator Richard B. Russell and President Ronald Reagan. Most recently, he has served as the Chief of Staff for the distinguished Senator from Tennessee, Fred Thompson.

For more than 30 years, Powell Moore has been active in Washington public policy affairs, and his breadth and depth of experience will be a tremendous asset to the Department of Defense. I look forward to his service as the Assistant Secretary of Defense for Legislative Affairs, and enthusiastically recommend that this esteemed committee confirm this appointment.

Senator CLELAND. I had actually intended, Mr. Moore, to be here to introduce you but I had another committee engagement. I think

it is marvelous that you have strung together such a magnificent set of public service accomplishments, particularly in regard to this committee. Dick Russell was one of my great heroes in life, and for you to start off your career here in Washington with him on his staff is a great tribute to you.

Then, of course, the endorsement by Senator Nunn, a former chairman of this committee, and then of course coming from Milledgeville—we laugh and joke, but Milledgeville is, of course, the home of Carl Vinson, and he is legendary there in that State.

May I just say, it is an honor to support you, and I wish you well in your activities.

Mr. MOORE. Thank you.

Senator CLELAND. May I say now, Mr. Aldridge, it is my role to be the skunk at the picnic here. I do not relish this role. I want you to know that my respect for you is a great respect for your public service and for your willingness to offer yourself for public service once again. May I say to you that my questions and the tone of my questions are nothing personal, but it rises out of a frustration that I had with several issues in the 5 years that I have been here.

I am sorry that you and I were not able to meet before this hearing. I hope we will be able to meet privately and go over some of these issues, because quite frankly, in all honesty, my support for your nomination is contingent upon successful answers to questions that I have. We have been trying to get out of this committee for a number of years, answers regarding logistical support for the Air Force, particularly in terms of air logistics centers.

I would like to get it straight first of all, did you say that this position was once formerly Under Secretary for Acquisition, Technology, and Logistics, and now it is just Acquisition and Technology?

Mr. ALDRIDGE. No, sir. It was originally created as Acquisition and Technology, and it has been augmented to include, now, logistics, Deputy Under Secretary for Logistics and Materiel Readiness that now reports to the Office of the Under Secretary.

Senator CLELAND. So your position that you seek is Under Secretary for Acquisition, Technology, and Logistics?

Mr. ALDRIDGE. Yes, sir.

Senator CLELAND. Which brings me directly to my point.

In recent years, both the House Armed Services Committee and the Senate Armed Services Committee have expressed our views that the services were outsourcing to the private sector work on weapons systems we considered vital to the national security.

The requirement to maintain a core capability in the public sector was written into law—written into law—for fiscal year 1998 to ensure that we could perform maintenance, repair, and long-term sustainment of our critical weapons systems during a time of war or national crisis, and we have been through several moments of national crisis just since I have been on this committee. One was Milosevic, two was Saddam Hussein.

When it comes to aircraft which we relied on heavily in those engagements, we have established our great air logistics centers to perform this role. You might want to check it out, but I understand

that this country has never gone to war without a depot system, either branch.

When I was a young lieutenant, signal officer with the First Air Cavalry Division in Vietnam, as a matter of fact, my mission was to provide communications for logistical support, and what that meant was, sometimes aircraft, helicopters in this instance, went all the way back to the States for depot maintenance, and in some cases my radio systems went all the way back to depot maintenance and came back adjusted or finer tuned for the war we were fighting, so depot maintenance is the way we go to war and the way we fight.

The acquisition function has a profound effect on these centers, as we are in an age when the procurement of a system such as, say, the C-17 includes stipulations that determine how and where those systems may be maintained.

Since I have been on the committee, my colleagues and I have worked hard to protect the essential capabilities that reside in our air logistics centers. We included provisions in the fiscal year 1998 and fiscal year 1999 authorization acts, passed this committee, passed the Senate, passed Congress, signed into law by the President, that required the DOD to take specific steps to define core capabilities, the ability of the services to go to war. That is what I determine is a core capability, to preserve the level of maintenance in these public depots and to establish plans for the maintenance of some specific systems in these depots.

I am here today to tell you that I think the work of this committee and Congress in this arena has been ignored by your predecessors. You were not part of the sins of the past, but it is your turn in the barrel now. I intend to ensure that this does not occur again. In an age when the technology of our systems is changing rapidly and in profound ways, the failure to define a core capability that specifically includes newer systems, the failure to assign a portion of the maintenance work load on newer high-tech systems, to our air logistics centers, and the failure to develop a long-range plan for preserving the work load at these centers, threatens the continued viability of this key leg of our defense infrastructure.

I know you have recently been nominated to the post, and I do not hold you accountable for what went on in the past. I also know you have familiarity with these issues, so I have some questions for you that I must have answered.

The first involves a definition of core capability. It is my understanding that the term, core, includes specific weapons systems such as the C-17. The GAO has criticized the Air Force for not doing enough to establish an in-house maintenance capability for the C-17. We are almost 8 years into the operational life of that system. None of the maintenance on this system is being done in our air logistics centers.

Do you define core capability to include the specific systems that are essential and widely used in the conduct of military operations?

Mr. ALDRIDGE. Yes, sir.

Senator CLELAND. Thank you. Will you ensure that the DOD complies with the intent of Congress in this regard?

Mr. ALDRIDGE. If confirmed, yes, sir.

Senator CLELAND. Thank you.

My second issue concerns the long-term strategy for assigning work to our air logistics centers. I and many of my colleagues believe that the long-term strategy for ALC work should include new weapons systems, but the DOD and the services are content to place work on older weapons systems in the depots and ALCs. This allows the services to say to Congress, well, the depots are full, they could not possibly handle the work of other systems, hence, they justify their own argument to out-source and, in so doing, they are actually undermining the future viability of our public maintenance facilities.

Will you ensure that the DOD develops and implements expeditiously a long-term strategy for maintenance of new weapons systems that assigns work on the systems to our ALCs from the date they enter our inventory?

Mr. ALDRIDGE. Sir, if confirmed—I cannot address the specifics of how all of that will come out. I will agree that we need a long-term plan for how we are going to address the weapons systems support for our military forces, and I will, if confirmed, agree to undertake such a long-term plan. How that will come out, I cannot predict.

Senator CLELAND. Thank you very much. I appreciate that answer in good faith. I, in good faith, will have to withhold my support for your nomination until you and I actually meet privately and personally to go over these key points, because these are central to the question of whether or not I support your nomination.

Thank you very much, Mr. Chairman.

Chairman WARNER. Do you wish another minute or two of time, Senator?

Senator CLELAND. No, sir. I think time spent with the nominee, Mr. Aldridge, could best be spent privately and personally as we go over some of these sensitive matters.

Chairman WARNER. Very well, and the nominee will make himself available. I will take a few questions, and then if other Senators wish to continue, I would be happy to recognize them.

Now, Mr. Moore, I have had the pleasure of knowing you for many years, and consider you a very valued personal friend, so I want the record to reflect that. You have observed through a series of presidencies the relationship between the executive branch and the legislative branch on the subject of consultation, and that subject is particularly important as it relates to matters of national security.

It primarily involves the Departments of State and Defense. I think there is wisely no clear definition laid down. Each President will establish his or her, whatever the case may be, guidelines in the future. What advice would you give to the current Secretary of Defense, who is very knowledgeable on this himself, and have you had an opportunity to discuss that issue with him? I feel that it is a very important function that you will be the, I think, principal advisor to the Secretary, and I hope that you will strengthen the subject of consultation and increase the effectiveness of it. What views do you have?

Mr. MOORE. I agree with you on the importance of consultation, Mr. Chairman, and I would comment that consultation is a con-

tinuing proposition and should not be done episodically when we have a problem or an emergency of some kind.

It should be done on a continuing basis, and it is essential to the effective operation of the Department of Defense, it is essential to the effective execution of a national security and foreign policy to have an open line of communication, especially with the leadership of Congress, the Chairman of the Armed Services Committee especially, and the Ranking Minority Member of the Armed Services Committee. There should be a continuing dialogue, and it should not be done episodically.

Chairman WARNER. I appreciate that. I would say to date, Secretary Rumsfeld and Secretary Wolfowitz have, I think, been very respectful of this subject, and others in the Department, and we have had excellent working relationships between this committee and those who are observing the Secretary at the moment. I felt that John Veroneau and Sandi Stuart, who preceded you in this position, both executed that responsibility with great expertise.

Mr. MOORE. I have spent some time with both of them over the past several weeks, and continue to stay in touch with both of them. I would point out that Secretary Rumsfeld, like several of his predecessors, including the Secretary under whom you served, Secretary Laird, is himself a former Member of the House of Representatives. He was also a former staffer, and I think he has a special appreciation for the importance of maintaining a dialogue and consultation between the two branches.

I think, based upon what I have heard—I have not been engaged in the process in advance of confirmation—that he has been very diligent in staying in touch with the House and the Senate since he was confirmed a couple of months ago.

Chairman WARNER. I thank you.

Now, Mr. Aldridge, the shrinking industrial base is of great concern to all of us, as I know you are likewise concerned. You will be the principal advisor to the Secretary of Defense and the President on this subject. It is brought about, frankly, because of declining defense budgets for a dozen or more years under both Republican and Democratic administrations, but this is a dangerous world, and our national defense can really be no stronger than the industrial base's capacity to provide, first the research and development, and then the systems that are needed to meet today and tomorrow and well into the future the adversaries and the threats posed.

We are also facing a unique situation in that the one-world market is inducing overseas firms to buy subsidiaries here in the United States and to go into direct competition with the industrial base in this country. I think it would be wise if we reflected a few minutes on that and this committee received your views on that subject.

Mr. ALDRIDGE. Yes, sir, I share all of those views. This position is awesome in that respect. We have seen just recently an issue on naval shipbuilding that is going to be a very critical—

Chairman WARNER. I purposely do not bring that up, because you may have a responsibility in that.

Mr. ALDRIDGE. Yes, sir, and it is something that has to be looked at very carefully. The health of our industrial base is very impor-

tant, as I pointed out in one of the goals that I would like to pursue, if confirmed. The health has to do with not only the health of the prime contractors but of the second-tier contractors, the health of our smaller and disadvantaged businesses. They make up over 98 percent of our industrial base and a significant amount of funding.

All of those are factors that we must take into account and make sure that we address these mergers and acquisitions in a way that we certainly can preserve our national security and the future competitiveness of our industrial base, and health. All of those are key factors in the decision process, and it is one that is extremely important.

As I point out, the capabilities of our Armed Forces are critically dependent upon our industrial base to provide those equipments and spare parts and training aides that make them work effectively. It is a very critical part of our responsibility and, if confirmed in this position, I will address it at the very highest priority.

Chairman WARNER. Well, given your background, you are uniquely qualified to work on this issue. I hope that you will find the time to listen to the CEOs and others of American industry and give them an audience.

Mr. ALDRIDGE. Yes, sir, I plan to do so.

Chairman WARNER. They deserve it, because so often in my visits with them I hear that we are less inclined to do defense business. It is just too difficult to do business with the Department.

The delays in receiving the payments, that is another subject that I monitor very carefully here, and will be working with you on, and there is plenty of business in the private sector, but if we lose their cooperation and their insight and their long, many years of contribution, it is irreplaceable, so keep an eye on it, and also for this committee.

I am proud to say that I have taken somewhat of a leadership role, have put in a series of laws about set-asides, set-asides to enable the burgeoning number of small businesses, many of them with women or CEOs of principal stockholders or minorities, and to the best of my knowledge, those programs have been successful and have returned not only a great value to the American taxpayer through their productivity, but I think they have enabled these firms to take root and to grow, and I hope that you will be respectful of that process.

Mr. ALDRIDGE. Yes, sir. As I stated in my opening comments, that is clearly one of the areas we must pay attention to.

Chairman WARNER. The procurement process, again, many firms are just totally frustrated with the difficulty there, and are looking elsewhere to do their business. You have covered that today, and I think quite satisfactorily, but this committee will work on it a great deal.

Now, to our chief counsel here, you may not know the answer to this question but you can take it for the record, and that is, prior to leaving office, President Clinton signed a treaty establishing an international criminal court. The Pentagon has been very concerned, this Senator has been concerned, Senator Helms and others here in the Senate are very concerned, that the terms and conditions of that treaty leave some doubt as to the ability to protect

men and women in uniform as they carry out the orders of the commander in chief beyond our shores.

Now, the Senate has, I think, very wisely and properly not yet rendered its advice and consent on that treaty. Do you have any knowledge of it? Have you looked into it, and will you do so in the future?

Mr. HAYNES. Senator, I have some limited knowledge of it from reading the newspapers. I have not been part of the process. It gives me great concern as well, and I can assure you I will be looking at it.

Chairman WARNER. I would urge that if this question comes forward at such time, that you stay in close consultation not only with your Secretary but if confirmed, with Assistant Secretary for Legislative Affairs Moore, because at this point in time I think it unlikely that the Senate would give its advice and consent. I rarely make those predictions, but in this case we are grievously concerned about it.

When we send men and women into harm's way to carry out the orders of the commander in chief of this country, and in conjunction with the service of our allies, we have to give them the maximum protection when they return home, hopefully safe and sound, having fulfilled their responsibilities, and they should not be then subjected to, I think, any court of law unless there is clear evidence of malfeasance or wrongdoing.

Mr. HAYNES. Senator, if confirmed, I would look forward to working with you on that.

Chairman WARNER. Thank you very much.

Mr. Aldridge, one of the principal criticisms of the Department of Defense is that the military services continue to pursue their individual systems from logistics to data management, which increases cost, and I suppose some say hinders interoperability. Although there have been efforts to remove these service stovepipes in the past, they continue to exist.

I am a firm believer in the three Departments, the Army, the Navy, and the Air Force. I think a certain amount of competition between them, and a certain amount of independence, and a certain amount of individuality is in the best interests of our country's overall national defense, but certainly on the question of interoperability that has been an old issue around here, and I would hope you would address that. Do you have views on that?

Mr. ALDRIDGE. Yes, sir, I share all the views you just outlined. To have an Air Force and a Navy, two aircraft who cannot talk to each other seems somewhat silly, and I think this has to be part of our acquisition process, that when a weapons system comes before the Defense Acquisition Board for determining its baseline program, interoperability has to be one of those criteria that has to be addressed, to show by the program managers how this is going to be done, otherwise the program does not get approved. It has to be almost that serious, I believe. I strongly believe that.

If confirmed in this position, I will do everything in my power to make interoperability one of the criteria, just as range and payload and things of that nature, the tanks or ships or any of the systems we buy, the criteria for interoperability has to be a key element of

its performance, and I would intend to do that, if confirmed for this position.

Chairman WARNER. Your predecessors have struggled with it. Much remains to be done.

Mr. ALDRIDGE. Yes, sir. It will not be an easy job.

Chairman WARNER. Well, you tackle it and do what you can, and you will get support from this committee.

Now, I am going to read a rather complicated question here. I think you would be well-advised just to listen, and at this time I will not elicit further response from you. At this very moment it may well be the Senate will turn to a piece of legislation. I wish to comment on it in the question and then, if confirmed hereafter, you will be given the responsibility to deal with this issue.

In your answers to pre-hearing questions you state that, and I quote, the ready availability of information technology, satellite surveillance, weapons of mass destruction technologies, and the trained personnel to utilize them, present a clear challenge to the U.S. military dominance, and that, quote, the U.S. is the largest technology producer, and therefore it must protect its most sensitive technologies, end quote.

The Senate may shortly be turning to the Export Administration Act. This issue is very timely. I am of the view myself, personally, that it would be wise not to bring this up at this time, given the fluidity of our relationship with a major overseas acquirer of U.S. technology, namely China. I think that situation should settle down.

Furthermore, I think, wisely, the administration has looked at dealing with this subject in an executive order, and I think out of deference to our President the opportunity should be given to the administration to issue that order, and then Congress determine, in its own infinite wisdom, whether or not further legislation is needed, but I wish to put you on alert for that one.

Mr. ALDRIDGE. Yes, sir.

Chairman WARNER. Mr. Moore—it is interesting how fast time moves, and technology. While I am on that subject, you know the relationship between the Department and Congress is based on a continuing dialogue. At this time of the Internet, controlling the flow of information puts a challenge to us. In the year of the Internet, how do you anticipate you will control the flow of information between the Department and Congress?

Mr. MOORE. Mr. Chairman, it is a subject I have thought about, and I intend to look into. If I am confirmed, and get to the Department of Defense, it is going to be a high priority with me. I recognize that we are in a different age, and we need to bring ourselves up-to-date. I am not exactly sure what kind of web page the Office of Legislative Affairs has, but I intend to look into it, and it offers a lot of advantages in the flow of information, and I intend to take full advantage of those advantages.

When I arrived in Senator Thompson's office almost 3 years ago, I made it a high priority to establish a good web page for Senator Thompson, and a couple of years ago he received a prize for having one of the best in the Senate, and so with that record, I think I have demonstrated that I recognize the importance of using the Internet to dispense information and also to obtain information,

and I intend to work very hard to bring the Office of Legislative Affairs into the 21st century in that regard.

Chairman WARNER. Well, it has come on very rapidly. It is there, it is growing, and I have to tell you, I have an 11-year-old grandson that reads my web page and sends me e-mails on it continuously, so I am on alert status.

Mr. MOORE. Well, I like your advice, and I look forward to the advice of other members of the committee in that regard also, if I am confirmed.

Chairman WARNER. Mr. Haynes, does your office possess the in-house technical expertise to deal with the new areas of law such as cyber law, which will be of great concern in the future? I hope that if you find there are some deficiencies, that you remedy those and do your very best to get up to speed on it.

Cyber security is a subject that is of great concern to this committee and, indeed, this committee last year initiated a scholarship program for the inducement of young persons to undertake a specific education in the area of cyber security at Government expense, in return for a commitment to either go into uniform and/or the civilian part of the military to serve as advisors to the Department on this subject. Do you have any views on this?

Mr. HAYNES. Well, Senator, it is an exciting area in all disciplines, and law is no exception. I found it quite useful to use the Internet in my own private practice, increasingly so, but there is a long way to go. One of the benefits of the whole medium is that it seems to be boundless in its opportunity, but there are dangers, as you point out, and the law has to be attentive to that, and that is something that I hope to spend a lot of time on, if confirmed.

Chairman WARNER. Attention has been focused recently on the implications of increasing the average age and retirement in the Government's civilian workforce. It is a very important part of the Department of Defense. It is often overlooked because of the higher visibility of those in uniform.

There are some fears that the Government will lose its most qualified and experienced personnel, and we will be disadvantaged because of existing civilian pay scales and other factors in attracting highly qualified replacements, and the question goes to all three of you, what steps would you hope to initiate to alleviate this problem? Why don't you start off, Mr. Haynes.

Mr. HAYNES. Well, Senator, we are mortal, and you cannot stop the passage of time. People are going to want to retire. The key to addressing that problem is not limited to law. It is making sure that we get junior people well-trained, and try to hang on to their expertise and capture the institutional knowledge that exists in the system.

Chairman WARNER. Thank you. Mr. Aldridge.

Mr. ALDRIDGE. Yes, sir. I share your concern. I have noticed in the acquisition workforce, we have lost 50 percent of the acquisition workforce since 1990 as a result of coming down. We have not hired young people because they just do not fill the jobs, and so the workforce tends to age with time.

That is a real serious problem, because the demands that are going to be placed upon our civilian workforce are going to be increasing in the future as new technologies, as you point out, are

so rapidly appearing. The challenges of new weapons systems, the challenges of making sure that the Government gets the proper equipment from our contractors, and the dealings with the industrial world are all very serious activities.

Congress did pass a law, I think Senator Levin mentioned, about giving the laboratories some individual hiring authorities to bring in some new scientists and engineers, and the Department has not been, I guess, addressing that in any degree.

I would intend, if confirmed, to look into that matter to see why hasn't the Department responded to that flexibility that exists, and maybe we can even look at flexibilities that go beyond just the laboratories, to give people the incentives to bring in new people into this workforce. I think it is an extremely important issue.

Again, I put that as one of my goals, if confirmed in the position, to address the quality and morale of the acquisition workforce. I think it is a very important issue we need to address.

Chairman WARNER. We must remember that the civilian workforce, whether it is acquisition or anywhere else in the Department, they are full partners in that Department and in no way have any second-class status, and we have to be ever watchful to correctly and rightfully give to them that partnership status.

Mr. ALDRIDGE. Yes, sir.

Chairman WARNER. Do you have anything to add on that?

Mr. MOORE. Mr. Chairman, if confirmed as Assistant Secretary for Legislative Affairs, it would be my intention to work with this committee and work with other committees of Congress, like the Committee on Governmental Affairs, to address the pay and benefit issues that might be an impediment to public service.

I would also say that, beyond that, while we want to address the pay and benefit issues, I think we need to create a sense of pride in public service and to attract the best and the brightest.

Chairman WARNER. Let us say, create a greater sense of pride.

Mr. MOORE. A greater sense of pride, yes, sir. That expresses it better.

Chairman WARNER. I thank you.

Senator Dayton, do you have any further questions?

Senator DAYTON. No, I do not, Mr. Chairman. I would just like to compliment the nominees on their excellent responses, and also compliment them on their families. They have been wonderfully supportive and patient, and your children, Mr. Haynes, are extremely well-behaved. [Laughter.]

Chairman WARNER. We have had an excellent hearing. I look forward to these hearings for confirmation. We do it very thoroughly, very carefully. We will have an executive session of this committee in 222 Russell, and I wish each of you well, together with your families. We are adjourned.

[Whereupon, at 11:12 a.m., the committee adjourned.]

[Prepared questions submitted to Edward C. Aldridge by Chairman Warner prior to the hearing with answers supplied follow:]

April 24, 2001.

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

EDWARD C. ALDRIDGE.

cc: Honorable Carl Levin,  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms? What is your view of the extent to which these defense reforms have been implemented? What do you consider to be the most important aspects of these defense reforms?

*Answer.* Yes, the goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

*Answer.* Yes, I support full implementation of the Goldwater-Nichols reforms and agree with its goals. The enactment of Goldwater-Nichols significantly improved the organization of the Department of Defense, focused our joint warfighting capabilities, and enhanced the military advice received by the Secretary. If confirmed, I will fully support the intent of the reforms and advocate policies that will facilitate joint operations, streamline acquisition management and oversight, and enhance the department's ability to respond to our 21st century national security challenges.

##### DUTIES

*Question.* Section 133 of Title 10, United States Code, describes the duties of the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD(ATL)).

Assuming you are confirmed, do you expect that Secretary Rumsfeld will prescribe additional duties for you?

*Answer.* I am sure as I become even more familiar with the issues and the organization there may be additional duties that the Secretary will ask me to do.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties and those outlined in the law and applicable DOD directives?

*Answer.* I have served in various assignments in the Pentagon, working in planning and evaluation, analysis of strategic systems, and as the Secretary of the Air Force, and also at the Office of Management and Budget. Additionally, I have experience in the private sector at Systems Planning Corporation, LTV Aerospace, McDonnell Douglas Electronic Systems, and, most recently, as the Chief Executive Officer of The Aerospace Corporation. I believe the combination of my government service along with my private sector experience provides me with the best understanding of both worlds.

*Question.* Do you believe that there are any additional steps that you need to take to enhance your expertise to perform these duties?

*Answer.* I think the main thing I need to do now is to learn and understand more completely current issues and challenges facing the Department today.

*Question.* Section 133(a) of Title 10, United States Code states, "The Under Secretary shall be appointed from among persons who have an extensive management background in the private sector."

Describe how your background qualifies you to meet this requirement.

Answer. My private sector management background consists of serving in various management roles to include Vice President at Systems Planning Corporation, responsible for strategic and conventional forces and strategic planning; President of McDonnell Douglas Electronic Systems Company; and Chief Executive Officer of The Aerospace Corporation. This corporation is dedicated to solving critical national problems through science and technology. I believe this experience provides me with the insight and abilities I will need to perform this new assignment, if I am confirmed.

#### MAJOR WEAPON SYSTEM ACQUISITION

*Question.* Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the past several decades averages between 8 and 9 years. Others have stated that the cycle time may be as long as 15 to 20 years. The Secretary stated that this cycle time is not sufficiently responsive to urgent new challenges and rapidly emerging technological developments.

What specific steps could the Department of Defense take to reduce cycle time for major acquisition programs?

Answer. The Department is committed to delivering advanced technology to the warfighter faster. Reduced acquisition cycle time can be achieved through: (1) rapid acquisition with demonstrated technology; (2) time-phased requirements and evolutionary development; and (3) integrated test and evaluation. If confirmed, I would work to implement these techniques.

*Question.* Do you believe that incremental or phased acquisition approaches could help address this problem?

Answer. Yes. Evolutionary acquisition based on time-phased requirements is an effective approach worth pursuing where appropriate.

*Question.* One of the features of the Department's acquisition system that is frequently criticized is the extensive "concurrency," or overlap between the development and production phases of major weapon system acquisition programs.

Where and under what conditions should concurrency be used in the development and production phases of DOD's major weapon system acquisition programs?

Answer. Concurrency should be used in the development and production phases of major weapon system acquisition programs when there are near-term threats that must be addressed; and as one methodology to help reduce cycle time. For example, combining developmental testing and operational testing—when it makes sense—is a form of concurrency that can have very beneficial results in acquisition streamlining.

*Question.* Do you believe there has been too much concurrency?

Answer. The amount of concurrency in a program is essentially a business judgment—balancing risk (technology maturity, etc.) and early fielding (cycle time reduction) capability for the warfighter.

*Question.* If so, what steps should be taken to reduce concurrency?

Answer. The acquisition strategy should specifically address the benefits and risks associated with reducing lead-time through.

*Question.* Over the last 3 years, the General Accounting Office has prepared a series of reports for this committee, comparing the DOD acquisition practices with those of the private sector. The GAO's leading conclusion has been that private sector programs are more successful in large part because they consistently require a high level of maturity for new technologies before such technologies are incorporated into product development programs. Department of Defense Instruction 5000.2, which governs the acquisition of major weapon systems, was recently re-written to require that new technologies be demonstrated in a relevant environment (preferably an operational environment) before they may be incorporated into DOD acquisition programs.

Are you familiar with the revised version of DOD Instruction 5000.2 and, if so, what are your views on this revision?

Answer. Yes, I am familiar with the revised DOD Instruction 5000.2 and believe that it is a good first step in the right direction in responding to the GAO's conclusions.

*Question.* Do you believe that the process of testing and demonstrating new technologies is more efficiently conducted in the context of major acquisition programs, or in stand-alone technology programs?

Answer. The process should be a combination of both. For example, I believe the DOD Science and Technology (S&T) community should encourage initiatives—such as Advanced Technology Demonstrations (ATDs)—that are designed to accelerate the transition from the S&T base to useful military products. These types of initia-

tives are executed more in the context of major acquisition programs. Yet, basic and applied research—more characteristic of stand-alone technology programs—are still the foundation for equipping tomorrow's warfighter with technologically superior weaponry.

*Question.* Would the DOD's major acquisition programs be more successful if the Department were to follow the commercial model and mature its technologies with research and development funds before they are incorporated into product development programs?

*Answer.* The DOD acquisition process depicts three major activity phases: technology development, system development, and production. "Technology" is separate from "system" development with more emphasis on mature technology. As a result of a single system development phase, entry is made with more matured concepts and technologies.

*Question.* The *Washington Post* reported on March 11 that the Department of Defense has been soliciting allies to make contributions to help pay for research and development on the Joint Strike Fighter. According to the article: "Using a sliding scale similar to the 'angels' and 'patrons' list of a theater company, the Pentagon is offering select allies the chance to contribute anywhere from \$2 billion for a 'Level One' partnership to \$250 million for a 'Level Three' stake in the Joint Strike Fighter. In return, the allies can put their officers on teams developing key areas of technology or even have a say in which contractor—Lockheed Martin or Boeing—would build the plane."

Do you believe that it is appropriate for the Department of Defense to "sell" foreign governments access to its technology development teams (or to grant such access in return for monetary contributions)?

*Answer.* The Department of Defense has a long history of successful cooperative development programs with our allies, as exemplified by the F-16 program. Foreign development investments are negotiated on a case-by-case basis, with technology access subject to National Disclosure Policy.

*Question.* Are you aware of any legal authority that would permit the Department of Defense to allow a foreign government—or any other entity outside the U.S. government—to have a say in the selection of a source for a Federal contract?

*Answer.* The Department of Defense has the legal authority to enter into cooperative development programs, to include allowing foreign government representatives to participate in the source selection process in some fashion. In the case of the Joint Strike Fighter, the United Kingdom will be represented in the source selection process, in an evaluation and advisory capacity only.

*Question.* Are you concerned that this effort could limit the flexibility of the Department of Defense to reshape the defense budget in accordance with the results of the Secretary's strategic review and quadrennial defense review?

*Answer.* The Secretary's strategic review is taking into consideration many factors, and it is premature to speculate on the decisions to be drawn. Among the factors to be considered should be the international implications of such programs as the Joint Strike Fighter.

#### TEST AND EVALUATION

*Question.* The Department has frequently been criticized for failing to adequately test its major weapon systems before they go into production. In recent years, the Department has given the Director of Operational Test and Evaluation increased authority over developmental testing.

Would you agree that a strong, independent Director of Operational Test and Evaluation is critical to the success of the Department's acquisition programs?

*Answer.* A strong, independent Director of Operational Test and Evaluation is critical to ensuring the Department's acquisition programs are realistically and adequately tested in their intended operational environment. As an independent voice, the Director of Operational Test and Evaluation provides operational test and evaluation results to the Secretary of Defense, other decision-makers in the Department, and Congress before they proceed beyond low rate initial production.

*Question.* Do you believe that supervisory authority over developmental testing is an appropriate role for the Director of Operational Test and Evaluation, or could this role compromise the Director's independence?

*Answer.* The Director, Operational Test and Evaluation does not have a supervisory position over developmental test and evaluation.

*Question.* Developmental test and evaluation and operational test and evaluation are separate, yet complementary, elements in the acquisition process. Developmental test and evaluation is an integral part of system engineering designed to verify performance or to discover anomalies; and, through a test-fix-test process, as-

sure the system design and mitigate technical risk. Operational test and evaluation is used to determine a system's military effectiveness and suitability in its intended operating environment.

Do we need to take any steps to ensure that developmental testing is realistic, and is used for its intended purpose of identifying and addressing potential weaknesses in an acquisition program at an early stage?

Answer. There are several steps we can take to ensure developmental test and evaluation is realistic and used for its intended purpose. Developmental test and evaluation is a critical element of the acquisition process. There needs to be a balance between focused developmental test and evaluation and schedules that will sufficiently mitigate program risk. This needs to be done while ensuring a high probability of successfully completing operational test and evaluation the first time around and fielding systems that meet warfighter requirements.

We should get the testers involved early to ensure that an adequate test and evaluation program is defined, addressed, and maintained in both program budget and schedule. We need to devote sufficient resources to conduct well-planned test programs and execute the program properly.

We need to increase discipline in the developmental test and evaluation process by assuring systems have passed their exit criteria and demonstrated a fundamental core capability in developmental test and evaluation before entering initial operational test and evaluation.

#### ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. The DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has essentially remained constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on effective program management, and if so, how do you plan to address this problem?

Answer. I am concerned about the effects of the reductions on the acquisition workforce. As the Department continues to emphasize contracting out and competitive sourcing, the skills, training, and experience of the acquisition workforce will be critical in effectively managing these contracts. In addition, I am concerned that the DOD may be faced with a significant demographic challenge as 50 percent of the acquisition workforce will be eligible to retire in the next 5 years.

*Question.* Does our current acquisition workforce have the quality and training to adapt to new acquisition reforms, as well as to the increased workload and responsibility for managing privatization efforts?

Answer. The morale of the workforce after 10 years of downsizing is a concern to me, as is having a workforce with the right size and skills. I will ensure the development of a strategic human resource plan that includes educating the current workforce by using modernized web-based training, and includes maximizing current hiring and recruiting authorities to attract new talent. If confirmed, I will capitalize on web-based learning techniques for continuous learning with increased emphasis on commercial practices to accelerate acquisition and logistics excellence and enable more cross functional training.

#### SCIENCE AND TECHNOLOGY

*Question.* The Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 established the goal of increasing the budget for the defense science and technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. This goal was not met in the fiscal year 2000 and fiscal year 2001 budget requests. In his speech at the Citadel last year, then-Governor Bush spoke of his support for increased research and development spending and a strong and stable technology base.

Do you believe that a substantial increase in the Department's science and technology budget is needed?

Answer. Yes, I believe the Department's Science and Technology (S&T) budget needs to be increased, consistent with the President's blueprint and balanced with other DOD needs to ensure the technological superiority of our Armed Forces. We need to emphasize revolutionary concepts in the S&T budget to provide more dramatic advances in capabilities that the President seeks.

*Question.* Congress has authorized the Department to give laboratory directors direct hiring authority to enable them to compete more effectively with the private

sector for top scientific and engineering talent. To date, the Department has been reluctant to use this authority.

Do you support giving the Department's laboratory directors the authority to make direct hires without having to go through a lengthy review process, which can take up to 18 months?

Answer. Yes. Our laboratories are vital for our Nation's development of future, essential warfighting capabilities.

#### LOGISTICS TRANSFORMATION

*Question.* Over the last 10 years, the Defense Logistics Agency has placed an increasing emphasis on approaches such as prime vendor agreements, virtual prime vendor agreements, and direct vendor delivery to streamline the Department's logistics systems for commercial items such as medical supplies, clothing and subsistence, and common hardware items.

Do you support commercial practices such as these that rely increasingly on the private sector to meet the Department's logistics needs?

Do you believe that these types of logistics practices can appropriately be expanded to the delivery of non-commercial items, such as aircraft spare parts?

Answer. First I strongly support use of commercial practices in defense logistics, where it makes *sense* from a warfighter's perspective.

The second part of your question (applying those commercial practices to non-commercial items) is a bit more vexing. Our challenge is defense-unique items, such as fighter aircraft parts, which tend to be low-volume, high-cost items, often provided by sole-source manufacturers. Therefore, a natural market does not exist. At this juncture, I believe the DOD should continue adopting innovative support methods, taking advantage of industry- and government-tested best practices. This approach employs corporate contracts, supply chain management techniques, emerging business technologies, and DOD-leveraged buying power.

#### COMPETITIVE SOURCING

*Question.* Over the past several years, the DOD has increased its reliance on the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort while others have expressed concern that core activities are being jeopardized by reducing our reliance on military personnel and civilian employees of the Federal Government.

What approach would you recommend to balance maintaining necessary capabilities and outsourcing?

Answer. The private sector is only offered the opportunity to compete to provide services previously performed by Government employees when the activity has been determined to be commercial in nature and not inherently governmental. They only win such competitions when Government analysis of their offer determines that they can provide a more cost-effective solution than can the Government workforce. Thus, procedures are in place to provide the most effective support possible to the men and women of our armed services as well as the American taxpayer. I advocate opening all appropriate commercial activities to competition.

*Question.* Do you believe that public-private competition results in significant savings to the Department, and if so, how?

Answer. Many studies have found that public-private competition generates real savings regardless of whether the Government workforce or private sector wins the competition. These savings are generally reflective of reduced manpower dedicated to the activity, a result made possible through adapting better business practices.

*Question.* OMB Circular A-76, which establishes the guidelines for privatizing most government functions, is slated for scrutiny by a congressionally mandated panel of government and private experts in this area. The panel, chaired by the Comptroller General, is scheduled to report to Congress with specific policy and legislative reforms and recommendations for changing the way the government conducts out-sourcing decisions and implements them.

What is your view of the current A-76 process?

Answer. The A-76 process is lengthy and complex, having evolved over time to ensure fairness. I would like to see the process simplified, and if confirmed, will be involved in the panel you mention and am optimistic that we will identify improvements.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

Answer. Public-private competition has proven to be the most effective option. However, there are situations where Government workforce competition is not appropriate, for example when the Department identifies a new requirement and there

is no Government workforce currently performing the activity. In that case, where the work is commercial in nature, a competition among private sector participants ensures the Government achieves the best value.

#### INFORMATION TECHNOLOGY

*Question.* There appears to be potential overlap between the responsibilities of the USD(ATL) and the Chief Information Officer (currently ASD(C<sup>3</sup>I)) with regards to information technology acquisition.

How do you anticipate sharing responsibilities with the CIO to ensure effective acquisition of information technology?

*Answer.* I am familiar with the Department's Klinger-Cohen Act and CIO responsibilities. If confirmed, I will establish the appropriate relationship between the CIO and Office of the USD(AT&L).

*Question.* What is your assessment of the Department's ability to rapidly assimilate these commercial technologies?

*Answer.* I believe the Department is well aware of the rapid growth and opportunities available with use of commercial technologies and has the necessary incentives to increase access and to incorporate this technology as soon as possible.

*Question.* Is a growing DOD dependence on commercial information technology a positive or negative development?

*Answer.* The proper and effective application by DOD of commercial information technology is a must for the Department. The benefits outweigh the risks. Those risks that are identified will be addressed in a comprehensive manner.

#### THE DEFENSE INDUSTRIAL BASE

*Question.* Some have argued that in many categories the current industrial base may no longer be able to support the "winner-take-all" competitions of the past.

How can we obtain the benefits of competition given the current limited number of contractors?

*Answer.* The Department has multiple approaches to help us meet the challenge of maintaining competition in our consolidated defense industry. The DOD has established a formal, rigorous, and centralized review process for mergers and acquisitions. I also understand that the DOD has in place a series of policies directed at enhancing acquisition management insight of the industry, and of the competitive effects of DOD buying actions. Finally, the Department has expressed support for pro-competitive, security enhancing industrial linkages between U.S. defense firms and firms located in coalition partner countries. These industrial linkages can facilitate trans-Atlantic competition and keep markets open on both sides of the Atlantic as industries consolidate and rationalize assets.

*Question.* Do you support further consolidation of the defense industry?

*Answer.* The question of the Department's position on further consolidation of the defense industry can best be answered on a case-by-case basis. The competitiveness and financial health of each industrial sector are different with different characteristics to consider.

*Question.* A November 2000 report by the Defense Science Board on the health of the defense industry identified some significant issues associated with under-investment and consolidation.

What is your view of the specific recommendations of the Defense Science Board study?

*Answer.* We must do what is necessary to retain a robust and competitive industrial base. I share many of the ideas addressed in the Defense Science Board study.

*Question.* What is your view of the current state of the U.S. defense industry?

*Answer.* The defense industry still provides the best products and services to our warfighters and I believe it will continue to provide those products and services in the future. Over the last year, market valuations for defense firms have rebounded from a very poor performing year.

*Question.* Should the DOD assess providing incentives to further reduce the number of facilities or is this best left to market forces?

*Answer.* While it is better to let the market forces provide the incentives for business decisions of our defense firms, I believe there are some actions the Department can take to increase the incentives for rationalizing inefficient operations.

#### FOREIGN ACQUISITIONS

*Question.* In an era of global markets that are open to foreign investment and rapid technological innovation, understanding the impact that foreign acquisitions of U.S. manufacturers have on U.S. national security is becoming increasingly important. While the President has the authority to block foreign acquisitions of U.S.

manufacturers if these acquisitions might threaten national security, only one acquisition has been blocked since 1988. It is also important that decision-makers understand the impact acquisitions have on the ability of the U.S. defense industrial base to support the Department of Defense programs. In recent years, foreign-owned companies have been purchasing a variety of U.S. defense manufacturers.

What is your position on foreign investment in the U.S. defense sector?

Answer. In general, I favor foreign investment in the U.S. whether it be for defense industries or non-defense industries, so long as this investment does not pose threats to national security. For some time our military operations have been conducted in a trans-Atlantic, multi-national coalition environment. If we are to achieve both our U.S. national security goals and our common strategic objectives with our allies, it makes sense for the U.S. to take advantage of economic globalization.

*Question.* What are your views on the responsibility of the Department of Defense to monitor and oversee potential acquisitions of U.S. firms by foreign buyers?

Answer. Since foreign acquisitions of U.S. defense firms could directly affect both the reliability of suppliers to the DOD weapons acquisition process as well as the transfer of technology under development in the DOD, we need to oversee and monitor developments in this area. Fortunately, there is statutory and regulatory guidance to assist the DOD and the USD(AT&L) in carrying out these responsibilities.

*Question.* What standard should be applied to determine if a foreign acquisition threatens national security?

Answer. There are some key factors that we must consider. First, how critical is the technology, whether weapons or manufacturing technology, possessed by the firm being acquired? Second, is this technology already available to potential U.S. adversaries and countries of concern? Third, what do intelligence assessments tell us about the risks of unauthorized disclosure, especially to third countries, of this classified or export controlled technology, based on what we know about both the acquiring firm and the acquiring country? Fourth, do we have alternative domestic suppliers of the products and services produced and manufacturing technology possessed by the firm to be acquired and how high are the costs of new entry if that was necessary down the road? Fifth, are we confident that the acquiring firm will continue whatever level of capital and R&D investments we think are necessary to meet DOD needs and are we confident that the new owner will be a reliable supplier to the DOD in terms of quality product or service? Sixth, does the DOD have available through the foreign ownership, control, or influence (FOCI) program and other means, enforceable measures that will adequately mitigate and risks of the acquisition in any of the above areas? Decisions in specific cases depend on the interaction of all these factors.

*Question.* When a U.S. manufacturer is acquired by a foreign owner, there are no mechanisms in place to prevent foreign-owned companies from moving a U.S. manufacturing capability overseas.

What do you plan to do to ensure that the U.S. does not lose critical manufacturing capabilities as a result of foreign acquisitions?

Answer. There are two things which should be done regarding this issue. First, in each merger or acquisition transaction, we need good analysis on what vulnerabilities exist for national security in case of a move offshore involving not just manufacturing facilities, but R&D facilities as well. This should employ the factors I have already listed above. The risk of a move of production or R&D facilities offshore is not the same in each case. Second, we need constant monitoring of our defense industrial base in critical technology and manufacturing areas to anticipate where we think vulnerabilities exist so that we can take actions to help ensure that future supply is reliable.

*Question.* What are your plans for strengthening the Defense Department's oversight role to ensure that U.S. national security is not compromised from future foreign acquisitions within U.S. industries?

Answer. Actually, this oversight involves both evaluation of proposed transactions and working with allied governments to ensure that their national standards for security oversight meet our standards. As for individual transactions, if confirmed, I would be committed to seeing that we maintain good communications within the DOD and between the DOD and the Treasury Department CFIUS staff on transactions that have not had voluntary filings. I am committed to seeing that AT&L's particular interests in avoiding unauthorized transfer of controlled technology and ensuring reliable suppliers to the DOD in the future are given sufficient consideration in the DOD's CFIUS reviews.

## FOREIGN INDUSTRIAL COOPERATION

*Question.* Do you believe that there should be greater cooperation and even integration between defense industries in Europe and the U.S.? If so, how can such cooperation be facilitated?

*Answer.* I support greater transatlantic defense industrial cooperation. More cooperative endeavors such as teaming, joint ventures and even mergers and acquisitions can produce beneficial synergies, efficient use of limited resources, and healthy competition, so long as it occurs in a positive and constructive manner.

## GLOBALIZATION

*Question.* In a recent report on globalization, the Defense Science Board observed: "The general diffusion of technological know-how and commercial availability of strategic or enabling technologies (advanced machine tools, high-performance computing, manufacturing of biotechnology products) will likely yield rapid advances in indigenous weapons production capability. States will be able to achieve dramatic increases in military capability by acquiring, via the burgeoning commercial space industry, whole ranges of C<sup>3</sup>ISR (command, control, communications, intelligence, surveillance, and reconnaissance) capabilities heretofore available only to great powers. The strategic significance of a global military-technological leveling cannot be overstated. It presents a direct challenge to perhaps the fundamental assumption underlying the modern concept of U.S. military superiority: that the United States enjoys disproportionately greater access to advanced technology than its potential adversaries."

Do you agree with these assessments, and if so, how do you propose that the U.S. maintain its military superiority in the future in light of these trends?

*Answer.* I agree with the Defense Science Board assessments.

The ready availability of information technology, satellite surveillance, weapons of mass destruction technologies, etc., and the trained personnel to utilize them presents a clear challenge to U.S. military dominance. The foes our forces may meet on the battlefields of the future will be more technologically adept and dangerous than they are today. In cooperation with State, Commerce, and others, the Department should continue its constructive approach to curbing the global proliferation of these technologies. The U.S., as the largest technology producer, must protect its most sensitive technologies. The U.S. should also continue the long-standing practice of releasing sensitive technologies, when warranted, to our closest allies in a time-phased approach, thus helping to preserve our technological lead. We must also work with our technologically advanced allies to improve their national export control practices to prevent inappropriate transfers of military and sensitive commercial technologies.

## INTELLECTUAL PROPERTY

*Question.* Many observers have said that one of the major disincentives for commercial companies interested in doing business with the Department of Defense is the difficulty of protecting their intellectual property under a government contract. On January 4, 2001, the Pentagon issued guidance to improve the Department's handling of intellectual property rights in order to attract commercial entities to defense contracts.

Are you familiar with this guidance and, if so, what are your views of this revised policy?

*Answer.* I believe the question is referring to a January 5, 2001, memorandum issued by the Principal Deputy Under Secretary of Defense for Acquisition, Technology, and Logistics.

I support all of the steps outlined in this memorandum.

## MULTIYEAR PROCUREMENTS

*Question.* Providing a stable funding profile for defense programs is absolutely essential to effective program management and performance, for both the DOD and the defense industry. One already tested means of increasing program funding stability is the use of multiyear contracts.

Please provide your views on multiyear procurements.

*Answer.* Where appropriate, multiyear procurements can reduce the production cost associated with weapon systems. Multiyear contracting is also an effective strategy in the procurement of less than major systems, and in contracting for various categories of services (e.g., base services such as ground maintenance; specialized training requiring high quality instructor skills).

*Question.* How will you treat proposals to renegotiate a multiyear procurement?

Answer. With great caution. Multiyear procurement will remain an effective tool only if the parties to multiyear contracts live up to the long-term commitment they made. Neither industry nor Congress will be interested in entering into multiyear contracts unless each can rely on the other to follow through as planned. If circumstances change significantly enough to force renegotiation of a multiyear contract, I would expect any such recommendation to be fully supported by a description of what changed, why the changes necessitate renegotiation of the contract, how the benefits of the multiyear contract, including reduced cost, will be preserved to the extent possible in the renegotiation, and what will be done to preclude perturbing the contract in the future.

## SMALL BUSINESS ISSUES

*Question.* For the last 2 decades, the Department of Defense has been subject to statutory goals for contracting with small businesses and minority small businesses. More recently, additional goals have been added for contracting with women-owned businesses and businesses owned by disabled veterans. A number of programs have been put in place to help the Department achieve these goals.

Do you believe that these goals serve a valid purpose in the Department of Defense contracting system?

Answer. Yes, I believe statutory goals serve to highlight congressional concerns which the Department of Defense is obligated to carry out as efficiently and effectively as possible.

*Question.* Do you support the so-called "rule of two", which provides that if two or more small businesses are capable of performing a contract, competition will be limited to small business?

Answer. Yes, I do support the "rule of two."

*Question.* Do you support the Section 8(a) program under which the Department sets aside certain contracts for performance by small disadvantaged businesses?

Answer. Yes, I do. The 8(a) program has been an important program in developing small disadvantaged business (SDB) firms to participate fully in the procurement opportunities the Department offers. It also allows 8(a) firms to become solid sources of supplies and services on a continuing basis.

*Question.* Do you support the Department of Defense mentor-protégé program, under which major defense contractors provide advice and assistance to small disadvantaged businesses and women-owned businesses seeking to do business with the Department of Defense?

Answer. Yes, I fully support the mentor-protégé program. From my point of view, the mentor-protégé program has become one of the more innovative programs to develop valued suppliers for the DOD and its prime contractors.

*Question.* Would you recommend the extension of the program?

Answer. Yes, I would certainly recommend an extension of the program.

*Question.* What is your view of contract "bundling"?

Answer. I am aware that contract bundling impacts upon small businesses and support the current statutory and regulatory coverage that requires the Department to ensure that we anticipate that there will be measurably substantial benefits accruing to the DOD prior to proceeding with a bundled action.

*Question.* Do you believe that there is a value to having small businesses contract directly with the Federal Government, rather than being relegated to the role of subcontractors?

Answer. There is value to the Department in having small business concerns participate in both roles, as prime contractors and as subcontractors. Small business concerns offer the Department and its prime contractors the opportunity to access the innovation, competitiveness, and responsiveness that have always been the hallmark of U.S. small business concerns. Small business concerns play a substantial and important role in the Defense industrial base and we should continue to support them in both prime and subcontracting roles.

*Question.* Do you believe that the standard adopted by Congress for approving bundling is the appropriate one, or would you recommend that this standard be modified?

Answer. If confirmed, I will review this matter carefully and work the Secretary and this committee to ascertain if the Department should recommend any modifications.

## FEEDER SYSTEMS

*Question.* For years, the Department of Defense has been unable to ensure proper accountability and control over its physical assets, proper accounting for the costs of operations, and proper recording and reconciling of disbursements. In the view

of many, the Department will not be able to get its financial house in order until it has identified and addressed problems with the so-called "feeder systems" that provide much of the information used by the Department's finance and accounting systems. These "feeder systems" include procurement and acquisition systems under the control of the Under Secretary for Acquisition, Technology, and Logistics.

Do you agree that it must be a high priority for the Department of Defense to develop systems that can properly account for costs and disbursements?

Answer. Yes. Developing DOD systems that properly account for the costs of DOD operations and acquisitions is a high priority and critically important to sound decision-making.

*Question.* Would you make it a high priority to work with the DOD Comptroller, the Chief Information Officer, and the military services to ensure that the Department's acquisition systems include appropriate management controls and provide reliable data that can be used for both acquisition management and financial management purposes?

Answer. Yes.

#### DEFENSE ACQUISITION BOARD

*Question.* There are a number of decisions which will require a Defense Acquisition Board (DAB) review in the next 6 months.

Do you foresee any near- or long-term changes in the membership or procedures for DAB reviews?

Answer. If confirmed, I intend to review the membership and procedures of the DAB as part of my broader review of acquisition organizations and processes.

#### PRIVATIZED HOUSING INITIATIVES

*Question.* Under the current Department of Defense organization, the Under Secretary of Defense for Acquisition, Technology, and Logistics is responsible for military housing policies and the privatization initiatives.

a. In your opinion, are the current initiatives sufficient to address the problems with aging and substandard military housing?

b. What changes or new initiatives, either policy-based or statutorily, would you recommend to improve the efficiency and effectiveness of the housing privatization program?

Answer. The authorities included in the Military Housing Privatization Initiative enacted in 1996 are critical to revitalizing inadequate military housing and to help satisfy overall housing requirements. The Department of Defense has established the goal of revitalizing all inadequate housing in its inventory by 2010. Privatization is an important element of the strategy that will allow the Department to meet this important quality-of-life goal.

If confirmed, I will review the program to determine the lessons learned from the 10 projects already awarded, and to disseminate information about the most cost-effective ways to use the authorities in the wide variety of conditions encountered at different locations.

#### TRANSFORMATION

*Question.* Over the last year, the military departments have described or initiated plans to transform so that they will be better able to deal with a wide range of anticipated 21st century national security challenges.

What are your views of the transformation initiatives within the Department as they are currently understood?

Answer. Already, the military departments have taken actions to transform themselves to be more adaptive, flexible, and suited to the spectrum of future warfighting challenges. These efforts are essential to maintaining future military relevance and superiority.

*Question.* Are you concerned that these initiatives appear to be "self-defined" by the services without direct participation of the Secretary of Defense or the Chairman, Joint Chiefs of Staff?

Answer. The Secretary has embarked on a study to determine the most appropriate next steps in the transformation process. As I understand it, as with his other ongoing studies, his transformation review has included input from the services and independent assessments from others.

*Question.* Recognizing that a fundamental change of the military services will be expensive and understanding that "legacy" modernization programs were significantly underfunded before these transformation initiatives began, what would you do to ensure that a proper balance of resources is maintained between the two efforts?

Answer. The balance of resource investments between transformation initiatives and so-called “legacy” modernization programs will always be a difficult one, since we must take all these decisions under considerable uncertainty about the future. Many of the legacy systems will be with us for a long time into that future, and during that time will continue to be essential to our warfighting readiness. We need to take prudent steps to sustain and upgrade them to be more useful for the widest range of schemes for modern warfare. It is also important to work to reduce the ownership costs for these systems, since these costs have historically eroded our ability to adequately support investment in future systems. Likewise, we must look very carefully at investments in new systems intended for replacement of the legacy forces.

#### COST ESTIMATING

*Question.* As programs move forward to critical decision points, there often seems to be a wide disparity between the cost estimates provided by service analysts and those of the Cost Advisory Improvement Group (OSD–CAIG). If confirmed, you will be the Milestone Decision Authority when a program requests a decision at a Defense Acquisition Board.

How do you intend to handle the issue of projected costs when the estimates may widely differ?

Answer. If confirmed, I intend to rely on the independent estimate provided by the CAIG to assess the service’s projected cost for the program. I will ensure that the reasons for differences between the service estimate and the CAIG estimate are understood prior to making a decision at a Defense Acquisition Board.

*Question.* In your view, what are the major challenges confronting the next Under Secretary of Defense for Acquisition, Technology, and Logistics?

Answer. There are many challenges that confront me, if confirmed, and they run the full spectrum of my prospective responsibilities:

- Reviewing the Department’s Acquisition, Technology, and Logistics organizations and processes with an eye towards achieving greater availability and efficiency.
- Improving the quality of the acquisition workforce and implementing programs to maintain a viable workforce in the face of significant challenges over the next decade.
- Improving the health of the defense industrial base.
- Determining the appropriate level of resources for infrastructure, and considering what is appropriate when rationalized against the needs of military strategy, readiness, and weapons system investment and sustainment.
- Fostering leap-ahead technologies, which could alter the strategic balance.

*Question.* If confirmed, what plans do you have for addressing these challenges?

Answer. There are no quick, easy solutions to resolve these challenges. If confirmed, I plan to establish definitive goals and metrics to address these challenges and implement comprehensive programs that will achieve progress in each of these goals.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of Defense for Acquisition, Technology, and Logistics?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

MILITARY SPECIFICATIONS

1. Senator THURMOND. Although military hardware must meet certain specifications to survive in combat conditions, much of the equipment does not have to meet these standards. I understand that these military standards drastically increase the cost of development and procurement. In your view, is the Department of Defense relying too much on military specifications when commercial off-the-shelf items could fulfill the requirements?

Mr. ALDRIDGE. Yes, I believe the Department of Defense has made significant progress in reducing its reliance on unique military specifications; however, more can and must be done. Since 1994, the Department has canceled 9,600 military specifications and standards and inactivated another 8,100, which are to be used only to support legacy systems and equipment. Today, 53 percent of the specifications and standards used by the DOD are either non-government standards prepared by private sector standards developing organizations or are commercial item descriptions; however, the DOD still relies on 7,900 unique military standards and specifications. Current DOD actions are directed toward greater use of commercial standards on legacy parts through single process initiatives and procurement reform, which has been included in the recent update to DODD 5000.1. If confirmed, I will continue to support the maximum use of commercial and international standards and commercial items where appropriate.

GLOBAL HAWK UAV

2. Senator THURMOND. Last week the Global Hawk UAV demonstrated its capability to fly nonstop to Australia. This was a dramatic demonstration of the potential the UAV has to provide a vast array of capabilities ranging from reconnaissance to weapons carriers. What are your views regarding the potential of these vehicles and is the Department pursuing this technology to its full potential?

Mr. ALDRIDGE. The Global Hawk UAV does indeed bring a most promising capability to future military operations. As you have pointed out, the Global Hawk holds great potential in mission areas beyond the traditional reconnaissance role.

The Department is focusing on the reconnaissance mission first for Global Hawk, as this is the logical role. We envision Global Hawk will become the "workhorse" for missions requiring long-range deployment and wide-area surveillance or long sensor dwell over the target area. If Global Hawk demonstrates equivalent capability and availability with the U-2 program, the Air Force will consider drawing down the U-2 force as Global Hawk is fielded. Our current objective is for Global Hawk to achieve equivalent capabilities with the U-2 at the end of this decade. However, the Department is currently looking at several acceleration options, in terms of production rate, payload capacity, and mission capabilities, which could move this timetable forward.

The high altitude endurance Global Hawk has the potential to bring a new dimension of support to the warfighter. The Department is posturing itself to field this new UAV capability in the very near future. We are also assessing future payloads, for other mission areas, as they mature to determine their suitability and applicability for integration onto the Global Hawk UAV.

INSTALLATION READINESS

3. Senator THURMOND. If you are confirmed as the Under Secretary of Defense for Acquisition and Technology, you not only will have the responsibility for overseeing the modernization of our Armed Forces, but also its installations. Although the modernization piece of your job will present challenges, our installations may be a bigger challenge. Last year the Department found that 60 percent of military bases have facilities rated C-3 or C-4 for readiness, which indicates the potential for not being able to carry out a mission. How do you intend to prioritize the issue of installation readiness?

Mr. ALDRIDGE. As your question implies, the Department's installations play a critical role in supporting our Armed Forces in the conduct of their wartime missions. Unfortunately, the Installation Readiness Report as of the end of fiscal year 2000 indicated that now 69 percent of all ratings are either C-3 or C-4.

If confirmed, I will endeavor to ensure the Department gives high priority to improving the condition and readiness of defense facilities. I believe we must accelerate the recapitalization of those facilities with deficiencies that may prevent or interrupt the mission, those facilities rated C-3 or C-4. Further, I believe the Department must fully sustain its facilities, restore and modernize inadequate ones, and eliminate facilities we no longer need. To enhance the stewardship of our facilities, I will work with the military services and defense agencies on directing additional resources into fixing the facilities' problems so that the Department has the installations and facilities available when and where needed, with capabilities to effectively and efficiently support DOD missions. Quality of life and workplaces for our servicemembers and their families is critical to readiness and retention, and I will work to ensure our military installations support our forces and their missions.

---

QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

BERRY AMENDMENT

4. Senator SESSIONS. I am sure you are aware of the fiasco surrounding the purchase of the black berets and its relation to the Berry amendment. The Berry amendment in this case was circumvented when an artificially short deadline was set to procure these berets. This deadline prevented many American companies from bidding on this multi-million dollar purchase, and therefore allowed the manufacture of these berets to move overseas to countries such as Communist China and Sri Lanka. What is your position on the Berry amendment, and what will you do in your position to ensure the spirit of "Buy American" in the Berry amendment is honored in the future?

Mr. ALDRIDGE. I support the central requirements of the Berry amendment. The Department is considering proposing modifications to the Berry amendment to clarify the amendment and to make it easier for the Department's suppliers to comply with the amendment.

SHIP PROCUREMENT AND INDUSTRY STABILITY

5. Senator SESSIONS. In my position as Chairman of the Seapower Subcommittee of the Senate Armed Services Committee, I recently chaired a hearing with representatives of the American shipbuilding industry and the overwhelming refrain I heard from these gentlemen is that their industry needs stability and predictability in the procurement and contracting of military ships. Many ideas have been floated on how to achieve this and associated cost savings. I want to hear from you what you feel is the best way to procure ships and ensure cost savings to the American taxpayer and stability to industry?

Mr. ALDRIDGE. Shipbuilders can build ships more efficiently, optimizing the scheduling of their facilities and resources involved in the construction of ships if they have a known backlog of reliable business. The Navy can provide such stability, and the taxpayer can benefit from the resulting lower costs, when Congress authorized multiyear procurements and provides advance procurement funding to enable Economic Order Quantity purchasing of components and subsystems.

The Department has used multiyear procurement successfully in the past 20 years to reduce defense system production cost. Multiyear procurement is a very useful acquisition strategy when a program has achieved stability. Statute establishes that the prerequisites to using a multiyear contract include stable requirements, a stable design for the product being procured, technical risks low enough to make realistic estimates of the cost of the contract, and anticipated cost avoidance through the use of a multiyear contract. Statute also requires there to be sufficient agency commitment to the program to expect the agency head to request funding for the multiyear contract at the level required to avoid contract cancellation. Where these circumstances exist, I will strongly encourage the use of multiyear contracts to reduce the production cost associated with weapon systems, including ships.

Permitting the Department to budget to only a limited portion of the aggregate cancellation ceilings in the Shipbuilding and Conversion, Navy, accounts, would allow management of risk at the aggregate level without straining budgets unduly. Effective use of these techniques requires discipline on the part of both the executive and legislative branches, to agree upon a plan and stick with it for several years at a time. The benefits include better prices for the taxpayer, more stability for the companies and their employees, and less turmoil all around.

## NAVY SHIP FLEET SIZE AND INDUSTRY HEALTH

6. Senator SESSIONS. Currently the Navy states it has a need for at least a “300-plus” ship fleet. Yet, during the past administration our ship building rates were such as to generate a 220-ship fleet. Obviously there are severe ramifications to this trend. Industry told me that they currently have the capability to build to a 300-plus-ship fleet, but will shed this overhead soon if it appears that we will continue on the trend to a 220-ship Navy. This worries me. We as a nation cannot afford to lose this industrial capability. Do you have an idea as to what size of fleet is adequate and what plans do you have to keep our warship building industry healthy?

Mr. ALDRIDGE. The Secretary of Defense submitted a 30-Year Shipbuilding Plan Report to Congress in June 2000, which provided the required shipbuilding procurement rate and ship mix to sustain the present fleet size. Long-term procurement rates of 8–10 ships per year are needed to sustain the current fleet size and meet the force structure requirements. Continuing to procure six ships per year as reflected in the fiscal year 2002 budget will have three negative effects. First, it will create a “bow wave” of future-shipbuilding procurement requirements, for which it will be increasingly difficult to allocate scarce procurement account resources. Second, it will create additional stress on fleet maintenance budgets to sustain the service lives of aging and increasingly obsolescent ships to maintain force structure. Third, the lower shipbuilding rates of this year’s budget and the increased shipbuilding rates in future years will create a layoff-hiring cycle within the shipbuilding industry, which will result in increased cost to the Government for future ship construction. This will exacerbate the previously mentioned procurement and maintenance affordability problem and causes further stress to the “top line” of future Navy budgets.

Our shipbuilding plan is barely adequate to sustain the remaining Naval shipbuilding industrial base including the suppliers that provide supporting equipment and associated engineering services. Our plan provides the best available balance between the Department’s requirements and available resources. The innovative teaming strategy approved by Congress for the construction of four *Virginia* Class submarines, advance procurement for the fiscal year 2002 and fiscal year 2003 *Virginia* Class submarines, and the next DDG 51 multiyear procurement contract, all highlight acquisition strategies aimed at lowering costs, reducing disruptions from hiring and layoff cycles, while maintaining level employment, and encouraging capital investments. Our shipbuilding plan maintains both the LPD 17 and the Auxiliary Dry Cargo Vessel (T-AKE) programs that, in spite of recent adjustments in annual acquisition quantities, will help the auxiliary vessel manufacturers capitalize on past and current program efficiencies. These actions constitute the Navy’s near term effort to ensure the long-term ability of the shipbuilding industry to support our future construction programs.

As noted in the November 2000 Report to Congress submitted by the Secretary of the Navy updating the 1993 *Arleigh Burke* Destroyer Industrial Base Study, both of the destroyer shipbuilders will have to book unprecedented amounts of additional, non-U.S. Navy work in order to maintain their workforces during the transition from DDG 51 to DD(X) production. This assessment was based on the shipbuilding profile presented in the fiscal year 2001 budget submission. However, the cumulative effect of actions taken in the fiscal year 2002 budget request including the acceleration of the 58th DDG 51 Class ship to fiscal year 2002, coupled with congressional action on the LPD 17 program in fiscal year 2001 and the Navy’s action in the President’s Budget for Fiscal Year 2002, make the industrial base forecast even more challenging than that reflected in the November 2000 report. The acceleration of the 58th DDG 51 Class ship to fiscal year 2002 sustains the surface combatant industrial base in the near term but exacerbates the industrial base situation, documented by the report, between the end of DDG 51 production and the beginning of DD(X) production. This situation demands closer attention. I also note that the risks of the destroyer production transition are not confined to the shipbuilding industrial base. Second tier suppliers of shipboard equipment used on destroyers and other warships also will be affected to varying degrees. Possible effects could be higher unit costs for associated equipment for other Navy shipbuilding programs or a corporate decision to scale back or stop production. Neither of these consequences is in the best interest of the Navy or the country.

## QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

## MISSILE DEFENSE

7. Senator COLLINS. What are your views on a realistic time frame for research and development and eventual deployment of theater and national missile defenses? What do you see as the pros and cons for missile interceptors, which are land-, sea-, or even space-based?

Mr. ALDRIDGE. Historically, a weapon system of the scale and complexity of missile defense spends many years in research and development. In the case of missile defenses, our development process uses a disciplined approach to ensure that our response incorporates technologies to meet the challenges of a constantly evolving threat at an acceptable risk level. Although we have made significant progress in demonstrating the technologies that enable hit-to-kill performance, this leads to numerous challenges that can extend the time for research and development.

The Secretary continues to review the Department's ballistic missile defense architecture. As the President said in his speech of May 1, 2001, this review will "examine all available technologies and basing modes for effective missile defenses that could protect the United States." This review is considering numerous options for basing interceptors (land, sea, and/or space) and will identify more specific deployment schedules. I expect that the Secretary will share the results of that review with you when it is complete.

## MILITARY USE OF SPACE AND CRITICAL SPACE TECHNOLOGIES

8. Senator COLLINS. I understand that improving military space systems and military use of space will be high priorities for defense over the next several years. Space control and space-based strike capability research and development programs—like the spaceplane, Clementine 2, and KEASAT—were proposed to develop and demonstrate technologies needed to protect our space assets and transform our own deep strike capability through space. Do you support these programs and do you have plans to expand research on technologies critical to space operations?

Mr. ALDRIDGE. Yes, I support expanded research on technologies that are critical to space operations. The Department has recently concluded a broad area review in the area of space control in order to provide guidance to the services on technology investments in this mission area. Critical areas identified through this review and other recently completed studies identified responsive launch, space-based operations/logistics, miniaturization, space-based space surveillance, and temporary/reversible counter space-based communications and electro-optical systems as areas that may benefit from additional resources.

The Department continues to work closely with the National Aeronautics and Space Administration (NASA) on the development and demonstration of reusable launch vehicle technology that could support the future development of a military spaceplane. The Department is currently performing a requirement review and military utility analysis for the recently canceled X-33 and X-34 technology demonstration programs. The results from these reviews will define the efforts the Department supports for near-term investment.

In fiscal year 1998 the Department of Defense restructured the Clementine 2 program to incorporate it within the existing micro-satellite technology program. In cooperation with other government organizations, the micro-satellite technology development program will focus on pervasive technologies for miniaturization and micro-satellites such as: multifunctional structures for affordability and flexibility, light-weight power generation, and storage; advanced processors; high precision, high efficiency thrusters, autonomous reconfiguration; and open architecture satellites with standard interfaces. These technologies will be developed, packaged, and demonstrated for their utility in future missions such as inspection, surveillance, and remote servicing operations.

The Kinetic Energy Anti-Satellite (KEASAT) technology demonstration has been solely funded since 1993 through congressionally directed funds. The effort is currently developing three kill vehicles through flight qualified status, scheduled to be complete in fiscal year 2002. The Department currently places a higher emphasis on temporary/reversible space negation systems, but will complete the technology demonstration of the KEASAT kill vehicles to a status of flight qualified, with the capability to conduct a flight test within 1 year of a decision to do so.

## R&amp;D PRIORITIES TO TRANSFORM MILITARY FORCES

9. Senator COLLINS. The Pentagon's budget blueprint proposes an additional \$2.6 billion for research and development and missile defense. Without pre-empting the strategic review and budget to be issued in the upcoming month(s), what are some of your priorities for R&D initiatives to transform our military forces?

Mr. ALDRIDGE. I intend to increase the development of our ballistic missile defense program. Part of this increase will go toward the space component. Another part will be to continue development of existing ground-based systems. We also need to continue to strive to balance technology development to support a wide range of potential operational capabilities.

To accomplish this, funding increases are necessary. The Department's R&D initiative will also include an increase in investment for basic research and Defense Advanced Research Projects Agency. Also, our strategic initiatives will focus on new capabilities like target defeat, urban terrain operations, network centric warfare, space, autonomous unmanned systems, advanced power, nanotechnology, and directed energy. This will increase our lethality, survivability, maneuverability, and supportability for the future military force.

## EUROPEAN UNION "GALILEO" SATELLITE NAVIGATION SYSTEM

10. Senator COLLINS. The European Union is unilaterally putting hundreds of millions of dollars into their "Galileo" satellite navigation system in order to compete with the United States' highly successful Global Positioning System (GPS). Do you think that we can reach common ground with the Europeans, our NATO partners, to modernize a single satellite navigation system based on GPS? Do you believe that this is now in the best interest of the United States to do so?

Mr. ALDRIDGE. The April 2001 European Union Transport Ministry approval of a Galileo program report indicates a continuing commitment to pursuing the development of the civil-based Galileo system. Consultations with the European Union on possible cooperation opportunities between GPS and Galileo are being lead by the Department of State. However, I do not believe the Europeans will be able to acquire a civil-based capability as wide-ranging as GPS for anywhere near the amount of money they state the Galileo system will cost (3.2 billion euros or \$2.75 billion).

From a military perspective, NATO remains committed to using military GPS services and the DOD continues to work within NATO to ensure that modernized GPS services satisfy mutual military requirements. The U.S. is modernizing GPS to provide enhanced capabilities for both civil and military users. One of the challenges for the U.S. and our allies is to develop capabilities to deny civil satellite navigation services during times of crisis and thereby avoid having those services misused against U.S. and allied military forces. Although the European Union's (EU) initiative to develop Galileo is advertised as providing civil only services, there are clear benefits to be gained in reaching common ground on how these civil Galileo services will be implemented. For this reason, continuing dialogue with the EU is in the best interest of the U.S.

## QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

## NETWORK CENTRIC WARFARE

11. Senator LIEBERMAN. Given the significant potential of network centric warfare to exploit the power of information and information technology to achieve battlefield dominance, how do you plan to: direct requirements generation and acquisition such that the Armed Forces will be able to realize a truly network-centric force; carry out a joint experimentation program to develop new operational concepts which take full advantage of the advances in network-centric capabilities; and ensure that OSD and the services place the requisite priority on development of the associated technologies?

Mr. ALDRIDGE. While I believe that the coupling between the requirements generation process and acquisition process is more robust now than ever before, I will continue to support enhancements of their relationship as well as the improvement of each process. The present DOD course is a good one. The DOD major systems acquisition directive 5000 and the JS requirements generation process directive, 3170, were generated hand-in-glove. These are the governing regulations for systems acquisition. Additionally, the Vice Chairman of the JCS sits on the Defense Acquisition Board as it reviews programs. One of the requirements by both directives is the interoperability of systems, expressed as a program key performance pa-

parameter and reflected in the operational requirements documents of major programs. Within interoperability are contained the requirements for each system to comply to various DOD-wide architectures that directly enhance network-centric warfare performance affecting all our services and allies.

As you may be aware, the DOD has in place a number of activities that deal with experimentation of new ideas and joint matters. These include joint warfighting experiments, joint test and evaluation to develop training tactics and procedures, advanced concept technology demonstrations (ACTDs), and so on. An example of these is the ACTD called Coalition Aerial Surveillance and Reconnaissance (CAESAR), which provides interoperability of ground moving target indicator assets of the U.S. and seven of our allies and will be demonstrated via NATO military exercises. Another example is the Network-Centric Collaborative Targeting (NCCT) ACTD. NCCT includes numerous sensor types and is developing and applying network-centric techniques, collaborative concepts, and front-end processing to multi-service intelligence, surveillance, and reconnaissance assets to provide target-quality information on time-critical targets. From the results of this and other similar demonstrations and experiments, the Department will gain residual capabilities and valuable experience that will help us execute programs and similar initiatives.

One of the initiatives I will undertake is to increase the emphasis on our defense technology base. I also plan to monitor the progress we make on our tech base activity via the various tools that will be available to me. One of these tools is the Department's S&T reliance process, which includes the conduct of technology area review and assessments. These assessments involve panels composed of members from the DOD, academia, and industry. They are chartered to review various technology areas, such as information systems technology. Recommendations from these panels are presented to senior Defense officials, including the top service science and technology representatives. They in turn take appropriate action (i.e., enforce adjustments to investments) to ensure the services and agencies place the requisite priority on the development of associated technologies that support the concept of network-centric warfare. In addition to defense-unique technology, we need to leverage the commercial sector technology. The commercial sector offers great opportunities in information and communication technologies, which are in the heart of network-centric warfare. We can take advantage of these sectors to get better results faster and less costly.

#### INTEROPERABILITY ISSUES

12. Senator LIEBERMAN. Would you find it advisable that any program which deals with interoperability issues (communications, sensors, logistics) be handled through the Joint Requirements Oversight Committee?

Mr. ALDRIDGE. All programs that have Interoperability Key Performance Parameters (KPPs) must be certified by the J-6 per CJCSI 6212.01B "Interoperability and Supportability of National Security Systems, and Information Technology Systems," dated 8 May 2000 and/or CJCSI 370.01B "Requirements Generation System," dated 15 April 2001. CJCSI 6212.01B Enclosure A, Paragraph A, specifies J-6 will "Conduct an interoperability requirements certification of Mission Need Statement (MNS), Capstone Requirements Document (CRD) and Operational Requirements Document (ORD), regardless of Acquisition Category (ACAT) level." CJCSI 3170.01B Enclosure B-4, Paragraph 4A, states that all "Unresolved interoperability issues will be forwarded by the J-6 to the Military Communications Electronics Board (MCEB) for resolution. The MCEB will ensure that unresolved issues resulting from interoperability assessments are presented to the Joint Requirements Oversight Council (JROC) for resolution." Currently, the JROC oversees the interoperability aspects of all ACAT I and special oversight programs. Additionally, the chairman of the JROC is a member of the Defense Acquisition Board (DAB). Expanding the scope of JROC programs to include all programs that deal with interoperability is not advisable, due to practical limitations of the council's time and attention. The current practice of J-6 interoperability certifications for all programs, regardless of ACAT and jointness and the added oversight of the MCEB, is seen as an adequate process at this time.

#### REVITALIZING DOD LABORATORIES

13. Senator LIEBERMAN. In the past several years, we have been particularly concerned about personnel and management issues in DARPA and the service laboratories. We have worked hard to provide legislative relief in the form of several innovation provisions aimed specifically at improving the ability to recruit and retain

high-quality personnel. These provisions include both the pilot program for revitalizing DOD laboratories and civilian personnel provisions (fiscal year 1999 Section 246, fiscal year 2000 Section 245), and a provision to expand the experimental civilian personnel program (fiscal year 2001 Sections 1113 and 1114). How do you intend to implement these provisions and are there other ideas you have regarding strategies to revitalize the laboratories? With cooperation from Congress, do you feel that you can make noteworthy progress towards revitalizing the labs through incremental improvements such as the ones previously mentioned, or do you foresee the need for a major reform of the civil service?

Mr. ALDRIDGE. As we put the administration's defense team in place, revitalization of the defense labs and workforce is a priority discussion and action area for us. Implementation activities have begun in earnest for each of the authorities granted through the various public law provisions. Throughout the implementation process we will keep an eye toward discovering and defining areas that can benefit from continued interaction with and cooperation of Congress. As a select example of progress, our pilot lab in the Air Force has successfully initiated a scholars program and a distinguished space industry fellows program to infuse new ideas and enthusiasm to their mission area and workforce. DARPA is aggressively seeking new employees using the special hiring authority under Sections 1102 and 1113. As we go forward, I am confident that we will make progress in lab revitalization. I do not foresee, at present, a need for a major civil service reform to accomplish the revitalization. But, I will be attentive to this issue and will seek assistance if current civil service law becomes an insurmountable barrier to defense lab revitalization.

#### S&T LEADERSHIP

14. Senator LIEBERMAN. Particularly given the trends towards transformation and the implementation of network-centric warfare, it is my opinion that we need very strong leadership in S&T both in the services and in OSD. How do you plan to ensure the voice of the S&T leadership is prevalent in the highest levels of the DOD? Will you hold formal briefings to the Secretary or the Joint Chiefs on both S&T and T&E programs? Also, at what point should we anticipate the appointment of key S&T personnel including the DARPA Director, Deputy Director of Research and Engineering, and DUSD S&T?

Mr. ALDRIDGE. I agree that the Department needs strong leadership in S&T in both the services and the Office of the Secretary of Defense. I intend to be the strong voice for S&T within the Department, and am establishing a management structure to ensure the visibility of technology throughout the Department. On 30 May, the President announced the nomination of Michael Wynne to be the Principal Deputy Under Secretary of Defense for Acquisition and Technology. We are also working to quickly announce other key technology leaders in the new administration. The process of selecting and nominating individuals to key positions is a long process. We have named individuals for the positions above the DDR&E, DARPA Director, and DUSD(S&T), so nomination of people for the critical technology oversight positions is imminent. Finally, I do not intend to hold formal periodic briefings to the Secretary and Service Chiefs on both the S&T and T&E programs, but instead, pledge to make S&T a critical recurring element of the DOD acquisition program.

#### MISSILE DEFENSE

15. Senator LIEBERMAN. The administration has emphasized the commitment to Defense R&D, and has included \$2.6 billion of additional R&D funding for fiscal year 2002. How much of this increase do you anticipate will go towards supporting R&D for National Missile Defense? Of that amount, will it be used strictly for R&D or do you anticipate that a portion will be directed towards T&E in BMDO?

Mr. ALDRIDGE. The Secretary continues to review the Department's ballistic missile defense architecture. This review will revise the Department's budget request for fiscal year 2002. We have not yet decided how much of fiscal year 2002 increase will be allocated toward R&D. As soon as we have completed those deliberations we will share the results with you.

#### DARPA TRANSITION STRATEGIES

16. Senator LIEBERMAN. Although DARPA has long been recognized as a major leader in developing revolutionary military technologies, there has been some con-

cern lately that, due to the lack of an effective transition mechanism, many of these promising technologies are not fully leveraged in the services. How do you intend to address these concerns?

Mr. ALDRIDGE. While there is little empirical evidence available by which to judge transition performance, it is clear that transition is a formidable challenge. Few would argue that it is not something the DOD could do better. Although this challenge is naturally exacerbated for DARPA because of its mission of high-risk, high-payoff research and its position outside the services, I feel that it is crucial that DARPA stay focused on revolutionary technology.

DARPA requires a broad array of transition strategies to match the diversity of the technology it develops. It has recently begun implementing three thrusts to improve these strategies. The first is to build on what we know works, such as jointly funding programs with the services and establishing joint DARPA-service program offices. The second is to better understand how DARPA technologies have transitioned in the past, so that those lessons may be reapplied. The third is to actively explore other transition initiatives around the DOD, such as those of the Navy's Chief Technology Officer and Advanced Concept Technology Demonstrations, to see if they can provide additional pathways for DARPA technology.

DARPA is working carefully to augment its transition strategies while not diluting the Agency's critical focus on revolutionary technology. As Under Secretary, I intend to continue a high level of attention to DARPA's revolutionary technology development as well as to its technology transition efforts.

#### DOD'S HIGHEST PRIORITY RESEARCH AREAS

17. Senator LIEBERMAN. In the Fiscal Year 2000 National Defense Authorization Act, Section 241, Congress requested a report on emerging operational concepts and technological objectives for research and development. We hoped this report would elucidate the DOD's priorities and serve as a roadmap in establishing current research investment strategy. Either reflecting the results of this report or from your own perspective, could you briefly summarize the DOD's highest priority research areas?

Mr. ALDRIDGE. A significant focus of the Department's S&T program should be prioritized around research areas that best support our strategy for the future military. These high priority research areas include: nanoscience; advanced materials; directed energy; advanced power; and human-centered systems research that can aid in decision-making under stress, provide more realistic training, and optimize human-information interfaces and performance. These foci are in addition to science and technology for existing "hard problems" facing the Department which include: time critical targets; chemical and biological weapons defense; cruise and ballistic missile defense; and military operations in urban terrain. Finally, the Department is in the process of identifying additional research areas with the potential for revolutionary payoff. These areas include: fuller dominance of space; autonomous uninhabited vehicles; and network-centric warfare.

18. Senator LIEBERMAN. If confirmed, you will be responsible for a large spectrum of defense issues. How do you propose to manage this office given the disparate areas of responsibility?

Mr. ALDRIDGE. First, I plan to establish five new goals to more effectively and efficiently address the large spectrum of defense issues. The five new goals are: (1) achieve credibility and effectiveness in the acquisition and logistics support process; (2) revitalize the quality and morale of the DOD acquisition, technology, and logistics workforce; (3) improve the health of the defense industrial base; (4) rationalize the weapon systems and infrastructure with defense strategy; and (5) initiate high leverage technologies to create the warfighting capabilities, systems, and strategies of the future.

I plan to achieve these goals through such initiatives as: increasing the empowerment of the workforce; establishing a metrics system to measure progress toward the attainment of these goals; reorganizing the acquisition, technology, and logistics organization along functional lines to more effectively address the issues and to facilitate accurate and timely decision-making; providing full funding for the programs—to the greatest extent possible—in concert with adhering to more realistic cost estimates and establishing prudent management/risk reserves; and working closely with Congress to restore credibility to the entire acquisition and logistics process.

In sum, I plan to lead the acquisition, technology, and logistics organization into a new era of "acquisition excellence" by changing the environment, reducing cycle

time, improving the process, linking human resources, and monitoring progress with metrics.

## A-76 PROCESS

19. Senator LIEBERMAN. The A-76 process is perceived as a very bureaucratic system without the expected savings. Do you have any thoughts about the process and what improvements would you pursue?

Mr. ALDRIDGE. While I agree that the process is very complex and lengthy, I must disagree with any characterization that it does not provide savings. The worst that can be said is that we need to improve the accuracy of our measurements of savings. Numerous independent reviews have validated that we are reaping very real savings.

A-76 competitions, although complex and contentious, do provide a proven method for managers to determine the most cost-effective operation of commercial functions through public/private competition.

I am hopeful that through participation in the Commercial Activities Panel chaired by the Comptroller General, we will realize significant improvements and recommend elimination of obstacles that unduly burden our processes and efforts to become more cost-effective.

## QUESTION SUBMITTED BY SENATOR JEAN CARNAHAN

20. Senator CARNAHAN. I am advised that the National Imagery and Mapping Agency (NIMA) has proposed that work performed by 600 Federal employees at installations in Missouri and Maryland be directly converted to contractor performance without a public-private competition under OMB Circular A-76. Public-private competitions serve the dual purposes of ensuring that the government obtains the lowest price available for services and providing skilled Federal employees the opportunity to compete to keep their jobs.

What is the justification for converting these jobs to the private sector through a sole source award without any competitive bidding of any sort, let alone a public-private competition? What are the cost savings to NIMA that would be achieved by the direct conversion? How can these cost savings be determined without a public-private competition?

Do you believe the Office of the Secretary of Defense should provide oversight over direct conversions such as the one proposed by NIMA?

Mr. ALDRIDGE. NIMA is considering contracting with an Alaska Native Corporation, under the Small Business Administration's 8(a) program, for certain information technology and information services functions. Such a direct conversion is consistent with OMB Circular A-76 and section 8014 of the 2001 Department of Defense Appropriations Act, Public Law 106-259. While NIMA estimates manpower reductions of 20 percent phased in through the life of the contract, no conversion will be undertaken for these functions unless efficiencies and savings will result. NIMA also anticipates that this conversion can be made with no reduction in force or other involuntary personnel action. OSD oversees outsourcing decisions for compliance with applicable policy.

[The nomination reference of Edward C. Aldridge follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 23, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Edward C. Aldridge, of Virginia, to be Under Secretary of Defense for Acquisition and Technology, vice Jacques Gansler.

[The biographical sketch of Edward C. Aldridge, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF EDWARD C. ALDRIDGE

The Honorable E.C. "Pete" Aldridge, Jr., is currently Chief Executive Officer of The Aerospace Corporation, an independent, nonprofit organization dedicated to solving critical national problems through science and technology. He came to Aerospace from McDonnell Douglas Electronic Systems Company, where he served as President from 1988 to 1992. In June 1986, he was confirmed as the 16th Secretary of the United States Air Force, a department he led until 1988.

Edward C. Aldridge was born in Houston in 1938 and spent his youth in Shreveport, LA. He received a bachelor of science degree in aeronautical engineering from Texas Agricultural and Mechanical University in 1960 and a masters of science degree, also in aeronautical engineering, from the Georgia Institute of Technology in 1962.

Mr. Aldridge began work at the Defense Department in 1967, joining the staff of the Assistant Secretary of Defense for Systems Analysis as an Operations Research Analyst and then served as Director of the Strategic Defensive Division until 1972. He also served as an advisor to the Strategic Arms Limitation Talks in Helsinki and in Vienna.

He re-entered private industry in 1972 as a Senior Manager with LTV Aerospace Corp. in Dallas for a year, until he was named Senior Management Associate in the Office of Management and Budget, Executive Office of the President, in Washington, DC.

Returning to the Department of Defense in 1974, Mr. Aldridge served as Deputy Assistant Secretary of Defense for Strategic Programs until 1976. He was then selected to be the Director of Planning and Evaluation, a Principal Advisor to the Secretary of Defense in the planning and program evaluation of U.S. military forces and support structure.

In 1977, Mr. Aldridge once again joined the private sector, assuming the role of Vice President of National Policy and Strategic Systems Group for the Systems Planning Corp. in Arlington, VA. In that position, he was responsible for the corporation's study and analysis activities in the areas of strategic and conventional forces and long-range strategic planning.

In August 1981, he became Under Secretary of the Air Force, with the responsibility for providing overall direction, guidance, and supervision for the National Reconnaissance Office (NRO) and the Air Force space program, including launch and on-orbit operations, and planning for future space capabilities. Mr. Aldridge was also an astronaut in training in preparation for his participation as a payload specialist on the first planned mission from Vandenberg Air Force Base, CA, which was canceled because of the Challenger accident.

Mr. Aldridge has a long and distinguished record of achievement. His outstanding work has earned him numerous awards and honors, including the Secretary of Defense Meritorious Civilian Service Award, the Department of Defense Distinguished Civilian Service Award, and the Department of Defense Distinguished Public Service Award, among many others.

Mr. Aldridge also maintains active ties with various defense-, industry-, and aerospace-related groups. In many of these groups he has held leadership roles. His affiliations include: former President and Fellow, American Institute of Aeronautics and Astronautics (AIM), and Chair, AIAA Foundation Board; Member, Defense Science Board; National Director and Life Member, Air Force Association; and Member of the Board of Directors, Air Force Academy Foundation, among many others.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Edward C. Aldridge in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Edward Cleveland Aldridge, Jr.; Nickname: Pete.

2. **Position to which nominated:**

Under Secretary of Defense (Acquisition and Technology), Office of the Secretary of Defense.

3. **Date of nomination:**

April 23, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

August 18, 1938; Houston, Texas.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Joanne Knotts.

7. **Names and ages of children:**

Michael C. Aldridge, 41; David L. Aldridge, 39; Mark R. Aldridge, 31; Lori L. Boyd (Stepdaughter), 33.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Texas A&M University, 1956-60, Bachelor of Science in Aeronautical Engineering, 1960.

Georgia Institute of Technology, 1960-61, Masters of Science in Aeronautical Engineering, 1962.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

President and Chief Executive Officer, The Aerospace Corporation, El Segundo, CA and Arlington, VA, March 1992 to Present.

President, McDonnell Douglas Electronic Systems Company, McLean, VA, December 1988-March 1992.

Secretary of the Air Force, Department of the Air Force, The Pentagon, Washington, DC, June 1986-December 1988.

Under Secretary of the Air Force, Department of the Air Force, The Pentagon, Washington, DC, August 1981-June 1986.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Member of the Defense Science Board (DSB), Department of Defense.

Former Member of the National Security Telecommunications Advisory Council.

Former Member of Advisory Committee on the Future of NASA.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

The Aerospace Corporation, El Segundo, CA —President and CEO, Member of the Board of Trustees.

United Industrial Corporation, New York, NY—Member of the Board of Directors.

AAI Corporation, Hunt Valley, MD—Member of the Board of Directors.

Charles S. Draper Laboratory, Boston, MA—Member of the Corporation.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

American Institute of Aeronautics and Astronautics—Life Member.

Air Force Association—Life Member.

International Academy of Astronautics—Member.

United States Space Foundation, Colorado Springs, CO—Member of the Board of Directors.

Air Force Academy Foundation, Colorado Springs, CO—Member of the Board of Directors.

Air Force Aid Society, Washington, DC—Member of the Board of Directors.

Air Force Memorial Committee—Member.

Wolf Trap Foundation, Vienna, VA—Member of the Board of Directors.

Washington Golf and Country Club—Member.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

George W. Bush for President.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Delta Air Lines Scholarship—Georgia Institute of Technology

DOD Distinguished Public Service Award (1977, 1987, 1988)

Secretary of Defense Meritorious Civilian Service Award (1972)

Air Force Exceptional Civilian Service Award (1986)

Army Distinguished Civilian Service Award (1988)

Navy Distinguished Public Service Award (1988)

National Intelligence Distinguished Service Award (1989)

National Reconnaissance Office Distinguished Service Medal (1997)

Rotary National Award for Space Achievement (1993)

National Space Club Robert H. Goddard Memorial Trophy (1987)

Air Force Association Jimmy Doolittle Fellow (1985)

Air Force Association Ira Eaker Fellow (1986, 1987)

Air Force Academy Foundation Distinguished American Award (1987, 1988)

Air Force Association Max Kriendler Award (1988)

Air Force Association W. Stuart Symington Award (1988)

Air Force Association Gen. Bernard Schriever Award (1986)

American Institute of Aeronautics and Astronautics George M. Low Space Transportation Award (1989)

National Security Industrial Association James V. Hartinger Award (1987)

National Defense Industrial Association Bob Hope Distinguished Citizen Award (1998)

National Guard Association Harry S. Truman Award (1988)

American Astronautical Society Military Astronautics Award (1985)

College of Engineering Honor Alumnus, Texas A&M University (1985)

Texas A&M Corps of Cadets Hall of Fame (1998)

Engineering Hall of Fame, Georgia Institute of Technology (1997)

Armed Forces Council of Chicago Distinguished Civilian Service Citation (1987)

Brazilian Air Force "Merito Aeronautico" (Legion of Merit) (1986)

Honorary Member, U.S. Air Force Thunderbirds

Tau Beta Pi, Sigma Gamma Tau, and Sigma Xi (Honorary Societies)

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

“Defense Against the U.S. Cruise Missile”, *Journal of Defense Research*, 1979  
 “Assured Access: The Bureaucratic Space War”, *Goddard Historical Essay*, National Space Club, 1989

“Military Space Systems”, *Ohio State University Annual Defense Report*, 1990  
 “Consistency: A Vital Ingredient for National Security Space Programs”, *DEFENSE*, 1988

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

There have been no formal speeches related to the position for which I have been nominated.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

#### SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

EDWARD C. ALDRIDGE.

This 23rd day of April, 2001.

[The nomination of Edward C. Aldridge was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 8, 2001.]

---

[Prepared questions submitted to William J. Haynes II by Chairman Warner prior to the hearing with answers supplied follow:]

*April 24, 2001.*

Hon. JOHN WARNER,  
 Chairman, Committee on Armed Services,  
 United States Senate,  
 Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are my answers to the questions of the Senate Armed Services Committee in connection with my nomination to be the General Counsel of the Department of Defense.

I welcome the opportunity to respond to the committee’s questions and look forward to appearing before you during my confirmation hearing. If I can provide additional information, I would be happy to do so.

Sincerely,

WILLIAM J. HAYNES II.

Enclosure.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. You have had an opportunity to observe the implementation and impact of those reforms, particularly in your earlier appointment as the General Counsel of the Army.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. Though I have been away from the Department for more than 8 years, it is my impression that the Department of Defense has worked diligently and effectively to implement the Goldwater-Nichols DOD Reorganization Act of 1986, as amended, and the Special Operations reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. Important aspects of these defense reforms include: clearly prescribing the chain of military command from the President to the Secretary of Defense, and from the Secretary of Defense to the Combatant Commander; clearly defining the role of the Chairman of the Joint Chiefs of Staff as the principal military adviser to the President, the Secretary of Defense, and the National Security Council; designating the Chairman as the spokesman for the combatant commanders, subject to the authority, direction, and control of the Secretary of Defense; defining the authority and responsibility of the combatant commanders; and streamlining the operations of the Joint Staff. Strengthening civilian control over the military and clarifying the relationships among the Secretary of Defense, the secretaries of the military departments, the Joint Chiefs of Staff, and the combatant commanders are also clearly important.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

#### RELATIONSHIPS

*Question.* What do you see as both the formal and informal relationship between the General Counsel of the Department of Defense and the following offices: the Secretary of Defense; the Under Secretaries of Defense; the Assistant Secretaries of Defense; the Chairman of the Joint Chiefs of Staff; the Counsels for the Defense Agencies; the Legal Advisor to the Chairman of the Joint Chiefs of Staff; the Staff Judge Advocates to the Commanders of Combatant Commands; the Counsel to the Inspector General; the General Counsels of the Military Departments; the Judge Advocates General; the Joint Service Committee on Military Justice; the Comptroller General; the United States Court of Appeals for the Armed Forces; and the Code Committee established under Article 146 of the Uniform Code of Military Justice.

Answer. The Secretary of Defense, as the head of the Department, is the most senior official to whom the DOD General Counsel provides advice. As General Counsel of the Department of the Army, I had many opportunities to observe the relationship between the DOD General Counsel and the Secretary of Defense. I view the General Counsel as the Secretary's principal adviser on the full breadth of legal issues faced by the Department. The General Counsel can also serve the Secretary by providing objective advice on policy initiatives. In addition, the General Counsel performs such functions as the Secretary may prescribe.

The DOD General Counsel should work closely with the Under Secretaries, both personally and through the General Counsel's staff, in assisting them to achieve their policy and programmatic goals within the parameters established by law.

The DOD General Counsel provides legal advice directly to the Assistant Secretaries and through the General Counsel's staff.

While the Chairman of the Joint Chiefs of Staff relies primarily upon his Legal Counsel for legal support, the Chairman and the DOD General Counsel should work closely on the broad range of matters affecting the Department.

Under DOD Directive 5145.1, which is the regulatory charter of the DOD General Counsel, and DOD Directive 5145.4, which charters the Defense Legal Services Agency (DLSA), the DOD General Counsel also serves as the Director of DLSA. The General Counsels of the Defense agencies and DOD field activities are part of DLSA, and thus report to the DOD General Counsel. The DOD General Counsel and the Office of the DOD General Counsel work closely with the Defense agency and

DOD field activity General Counsel offices, with frequent informal discussions of legal issues and exchanges of information. On a more formal level, the DOD General Counsel, primarily through his or her functional Deputy General Counsels, supervises the Defense agency and DOD field activity General Counsels, providing professional guidance, supervision, and coordination.

The Legal Counsel to the Chairman, a military lawyer in the grade of Colonel or Navy Captain, provides legal advice and services to the Chairman and the Joint Staff. The DOD General Counsel and the Chairman's Legal Counsel cooperate fully in assuring that the officials whom their respective offices advise are well-served. In particular, I understand that the DOD General Counsel and the Chairman's Legal Counsel meet frequently to discuss issues of mutual concern and to exchange information.

The DOD General Counsel's relationship to the Staff Judge Advocates of the Combatant Commands is, for the most part, through the Chairman's Legal Counsel. There are also frequent informal contacts between the Office of the DOD General Counsel and the Staff Judge Advocates of the Combatant Commands. In addition, the General Counsel serves as the Designated Agency Ethics Official for DOD. As the Deputy Designated Agency Ethics Officials for their respective Combatant Commands, the staff judge advocates report to the General Counsel with respect to standards of conduct matters. The General Counsel's Standards of Conduct Office conducts reviews of the Combatant Commands' ethics programs.

I understand that at least some aspects of the relationship between the DOD General Counsel and the DOD Inspector General are described in a memorandum of understanding with respect to the delivery of legal services to the Inspector General. The Deputy General Counsel (Inspector General) advises the Inspector General on audits and investigations and the interpretation of statutes and regulations, in particular, and regarding all matters, of any kind, that relate to the programs, duties, functions, or responsibilities of the Inspector General, while remaining an integral part of Office of the DOD General Counsel.

The General Counsels of the Military Departments serve as chief legal officers of their respective departments, and each reports to the Secretary of his or her respective department. As the Secretaries of the Military Departments are subject to the authority, direction, and control of the Secretary of Defense, necessarily the General Counsel of the Department of Defense should meet regularly and work closely with the General Counsels of the Military Departments.

The Judge Advocates General report ultimately to their respective Military Department Secretaries. They provide legal services in a variety of areas, and have unique responsibilities for military justice. As the chief legal officer of the Department of Defense, the DOD General Counsel works closely with the Judge Advocates General and meets with the Judge Advocates General on a regular basis.

The Joint Service Committee on Military Justice was created within the DOD "to assist the President in fulfilling his responsibilities under the UCMJ in prescribing rules and procedures for the trial of courts-martial that are uniform insofar as practicable and apply the principles of law and rules of evidence generally recognized in the trial of criminal cases in the United States district courts." (DOD Dir. 5500.17; Art. 36, UCMJ) The committee consists of representatives of the Judge Advocates General of the Military Departments, the Staff Judge Advocate to the Commandant of the Marine Corps, and the Chief Counsel of the Coast Guard. The DOD General Counsel designates a non-voting representative to the Joint Service Committee. Under DOD Directive 5500.17, the Joint Service Committee on Military Justice conducts an annual review of the Manual for Courts-Martial. The Joint Service Committee considers developments in the Federal criminal code, the Federal Rules of Criminal Procedure, the Federal Rules of Evidence, and judicial decisions in its review. The committee's recommendations for amendments to the Manual are in the form of proposed Executive Orders. In addition, the Joint Service Committee prepares legislative proposals that are subject to the established DOD coordination process.

The Comptroller General's duties include investigating the receipt, disbursement, and use of public money; evaluating government programs; auditing agency financial transactions; reporting on the use of public funds; and reviewing bid protests. The DOD General Counsel provides legal advice to DOD officials whenever the Department of Defense is involved in these matters. The DOD General Counsel also supports the DOD Inspector General, who is the central liaison between the Department of Defense and the Comptroller General. Further, an agency head may request an opinion from the Comptroller General on questions involving payments and vouchers. The DOD General Counsel may submit such questions to the Comptroller General on behalf of the Secretary of Defense. On an informal basis, the Office of

the DOD General Counsel enjoys a very good relationship with the Comptroller General's office, which facilitates dialogue and informal consultation.

Pursuant to Article I of the Constitution, Congress established the Court of Appeals for the Armed Forces in Article 141 of the Uniform Code of Military Justice, 10 U.S.C. 941. Article 141 provides that "[t]he court is located for administrative purposes only in the Department of Defense," emphasizing its judicial independence from the Department of Defense. Traditionally, the DOD General Counsel serves as an informal liaison with the court for the Department.

The Code Committee consists of the Judges of the United States Court of Appeals for the Armed Forces, the Judge Advocates General of the Military Departments, the Chief Counsel of the Coast Guard, the Staff Judge Advocate to the Commandant of the Marine Corps, and two recognized authorities on military justice appointed by the Secretary of Defense from public life. On at least an annual basis, the Code Committee comprehensively surveys the operation of the Uniform Code of Military Justice, reporting its findings to the Senate and House Committees on Armed Services, the Secretary of Defense, the Secretaries of the Military Departments, and the Secretary of Transportation. While the DOD General Counsel has no formal relationship to the Code Committee, he or she provides informal support as the Code Committee desires. In addition, the DOD General Counsel informs the Code Committee with respect to the activities and recommendations of the Joint Service Committee on Military Justice.

#### QUALIFICATIONS

*Question.* Section 140 of Title 10, United States Code, provides that the General Counsel is the chief legal officer of the Department of Defense and that the General Counsel shall perform such functions as the Secretary of Defense may prescribe.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

Answer. I anticipate that Secretary Rumsfeld would ask me to perform all of the duties assigned to the DOD General Counsel by statute and DOD directives. If confirmed, I would expect, among many other functions, to provide legal advice to the Secretary and Deputy Secretary of Defense and other DOD officials, supervise the Office of the DOD General Counsel and the Defense Legal Services Agency, and work closely with the senior legal officials of the military departments, all in an effort to provide the very best legal services possible throughout the Department of Defense.

#### LEGAL OPINIONS

*Question.* Will the legal opinions of your office be binding on all lawyers within the Department of Defense?

Answer. Under 10 U.S.C. 140(b) and DOD Directive 5145.1 (codified at 32 C.F.R. part 394), the DOD General Counsel is the chief legal officer of the Department of Defense. Consequently, the legal opinions of the Office of General Counsel are binding on all lawyers in the Department.

*Question.* How will you ensure that such legal opinions are available to lawyers in the various components of the Department of Defense?

Answer. I am advised that the opinions of the Office of General Counsel are disseminated throughout the Department of Defense in the ordinary course of business. If confirmed, I would of course expect to continue this practice. In addition, I would be receptive to appropriate efforts to make the office's opinions available electronically.

#### MILITARY JUSTICE MATTERS

*Question.* Since Article 6 of the Uniformed Code of Military Justice gives primary jurisdiction over military justice to the Judge Advocates General, how do you see your functions in this area with regard to those officials?

Answer. In Article 6, Congress gave the Judge Advocates General the responsibility to "make frequent inspections in the field in supervision of the administration of military justice." If confirmed, I will meet regularly with the Judge Advocates General and provide support to them in carrying out this important responsibility and ensuring the integrity of the military justice process.

*Question.* In your view, how should the General Counsel approach military justice matters—both in terms of specific cases and general policy issues to provide useful advice without generating problems of unlawful command influence?

Answer. The DOD General Counsel ordinarily has no role to play in specific military justice cases. Decisions in these cases are made by the commander of the accused, the convening authority, the military judge, and court members. The Service

Courts of Criminal Appeals and the U.S. Court of Appeals for the Armed Forces (USCAAF) provide appellate review of cases arising under the Uniform Code of Military Justice. The General Counsel, like the Secretary of Defense and other senior civilian and military officials of the Department, must avoid any action that may affect or appear to affect the outcome of any case. I share the USCAAF's view that unlawful command influence can be a "mortal enemy" of military justice. The DOD General Counsel helps to ensure that the military justice system and its judicial officers are not subjected to inappropriate external pressures that may threaten or be perceived to threaten the independence of the military's judicial system or the commander's UCMJ discretion in maintaining good order and discipline.

The DOD General Counsel plays a major role in developing military justice policy. The General Counsel performs this role primarily through the Joint Service Committee on Military Justice, which conducts an annual review of the Manual for Courts-Martial and other assigned special reviews of military justice issues of importance to the Department, through liaison responsibilities with the Code Committee, through the DOD legislative process by which proposed legislation to amend the Uniform Code of Military Justice is submitted to Congress, and through coordination on the issuance of DOD guidance establishing policy in such related areas as victim and witness assistance, confinement of military prisoners, and criminal investigation policies.

#### PROCESSING THE ANNUAL DEPARTMENT OF DEFENSE LEGISLATIVE REQUEST

*Question.* One of the current responsibilities of the General Counsel of the Department of Defense is to coordinate the Department's legislative program and to provide the Department's views on legislative proposals initiated from outside the Department.

What actions will you take to ensure that the Department's legislative proposals are submitted in a timely manner to ensure ample opportunity for consideration before markup of the National Defense Authorization Act?

Answer. I am advised that the Department's "omnibus" approach to the development of the departmental legislation program has matured during the past few years. It seems an efficient and fair method for the examination and consideration of legislative initiatives. It is also more efficient, allowing the Department to provide proposed legislation to Congress in a timely manner.

If confirmed, I intend to work to improve efficiency and discipline in the Department's approach and to achieve prompt interagency coordination on the Department's legislative initiatives.

*Question.* What actions will you take to ensure Congress receives the Department's views on other proposed legislation in a timely manner?

Answer. I understand Congress' need for timely comments from the Department. If confirmed, I will be attentive to the need to provide views on all bills in a timely manner.

#### JUDICIAL REVIEW

*Question.* What is your understanding of the appropriate role of the Article III courts in the review of military activities?

Answer. The Constitution provides that Congress and the President have the power to control the military. The nature of this power, and the role of the Article III courts in defining or limiting it, have been addressed repeatedly by the Supreme Court. As a general proposition, the Court has explained that "it would be difficult to think of a clearer example of the type of governmental action that was intended to be left to the political branches directly responsible—as the judicial branch is not—to the electoral process." *Gilligan v. Morgan*, 413 U.S. 1, 4 (1973).

Many courts and scholars have long recognized that courts should be reluctant to intrude into the constitutional responsibilities of the President and Congress for the Armed Forces, in which the professional judgments made are unique and subject to carefully defined control. "[J]udges are not given the task of running the Army . . . . Orderly government requires that the judiciary be as scrupulous not to intervene in legitimate Army matters as the Army must be scrupulous not to intervene in judicial matters." *Orloff v. Willoughby*, 345 U.S. 83, 93–94 (1953). "[I]t is difficult to conceive of an area of governmental activity in which the courts have less competence. The complex, subtle, and professional decisions . . . are essentially professional military judgments, subject always to civilian control of the legislative and executive branches." *Gilligan v. Morgan*, 413 U.S. at 10.

The courts have held that the great majority of internal military decisions are not subject to judicial review. See *Sebra v. Neville*, 801 F.2d 1135 (9th Cir. 1986); *Mindes v. Seaman*, 453 F.2d 197 (5th Cir. 1971). In the narrow range of cases in

which judicial review of military activities occurs, the courts must give great deference to executive and legislative judgments on military matters. *Loving v. United States*, 517 U.S. 748, 767 (1996).

## CLIENT

*Question.* In your opinion, who is the client of the General Counsel of the Department of Defense?

*Answer.* The client of the DOD General Counsel is the Department of Defense.

## LEGAL ETHICS

*Question.* What is your understanding of the action a Department of Defense attorney should take if the attorney becomes aware of improper activities by a Department of Defense official who has sought the attorney's legal advice and the official is unwilling to follow the attorney's advice?

*Answer.* Working diligently to ensure the faithful execution of the laws is the duty of every DOD attorney. If any DOD attorney learns of improper activities by an official who has sought his or her legal advice but is unwilling to follow it, the attorney should immediately notify his or her legal supervisor (or the senior lawyer in the next higher level of his organization) concerning the improper activities. The professional chain of communication on legal matters provides the means to take the matter as high as it needs to go in the errant official's supervisory chain to ensure that corrective action is taken promptly.

*Question.* Do you believe that the present limits on *pro bono* activities of government attorneys are generally correct as a matter of policy or does the policy need to be reviewed?

*Answer.* I am unaware of any concerns by Department of Defense attorneys regarding limitations on their *pro bono* activities. If I am confirmed, I will be attentive to any issues in this area, and recommend appropriate changes in policy if warranted.

*Question.* In your view, do the laws, regulations, and guidelines that establish the rules of professional responsibility for attorneys in the Department of Defense provide adequate guidance?

*Answer.* I have not reviewed this issue, but I am advised that the laws, regulations, and guidelines that establish the rules of professional responsibility for attorneys in the Department of Defense provide adequate guidance. All DOD attorneys are members of the Bar of a State or the District of Columbia. Thus, they are subject to the rules of their respective Bars. Attorneys in the military departments and a number of other components are also bound by the rules of professional responsibility of those components.

## ROLE IN THE OFFICER PROMOTION AND CONFIRMATION PROCESS

*Question.* In your view, what is the role of the General Counsel of the Department of Defense in ensuring the integrity of the officer promotion process?

*Answer.* Under Subchapter 1 of Chapter 36, Title 10, United States Code, initial responsibility for the proper functioning of the promotion selection process as that process is applicable to individual selection boards resides with the Secretary of the military department concerned. All reports of promotion selection boards are processed through the Office of the Department of Defense General Counsel prior to final action on the report by the Secretary or Deputy Secretary of Defense. The DOD General Counsel must satisfy himself or herself that there has been adherence by the military departments to the statutory standards prescribed in Chapter 36 and that the work product of each individual selection board, as embodied in its report, is in conformity with statutory requirements. If, in a given case, the DOD General Counsel concludes upon the review of a selection board report that there has been a failure to adhere to the statutory standards, either generally or with regard to a particular officer being considered for promotion, the DOD General Counsel should advise the Secretary of Defense concerning the perceived irregularities. Further, the Office of General Counsel, in providing advice to the Office of the Assistant Secretary of Defense for Force Management Policy, helps to ensure that departmental policies dealing with the promotion of officers, as promulgated in DOD Directives and Instructions, fairly and accurately reflect the provisions of law set out in chapter 36.

*Question.* What is the role of the General Counsel of the Department of Defense in reviewing and providing potentially adverse information pertaining to a nomination to the Senate Armed Services Committee?

*Answer.* If adverse information is attributed to a prospective nominee, the DOD General Counsel should satisfy himself or herself that the evidence in the investiga-

tive file supports the description of the adverse information attributed to the officer being considered for nomination. In addition, the DOD General Counsel should raise issues regarding such adverse information with officials in the appropriate service and OSD when warranted. When the adverse information attributed to an officer is unusual or otherwise raises issues that are out of the ordinary, the DOD General Counsel should give the Secretary of Defense the benefit of the General Counsel's own evaluation of the significance of the adverse information with regard to the qualifications of the officer to serve in the grade or position to which he or she may be nominated. The DOD General Counsel should work within the Department to ensure that such adverse information is appropriately reported to the Senate Armed Services Committee through established channels, and all written communications forwarded to the committee pertaining to adverse information attributed to an officer recommended for nomination should be reviewed by the DOD General Counsel. Ultimately, the Department's adverse information reporting system must ensure that the committee receives timely notification of ongoing investigations and potentially adverse information pertaining to nominees for flag and general officer appointment.

#### LITIGATION INVOLVING THE DEPARTMENT OF DEFENSE

*Question.* In your opinion, what is the relationship between the Department of Defense and the Department of Justice with respect to litigation involving the Department of Defense?

*Answer.* Attorneys who represent the Defense Department or its components work directly with the Department of Justice counsel in cases in which the Department of Defense, or one or more of its components or its officials, is a party or has an interest. The Department of Justice has the statutory responsibility to represent the United States, its agencies, and its officers, including the Department of Defense, in all litigation matters. See 28 U.S.C. Section 516. Nonetheless, attorneys representing DOD review pleadings before they are filed with the courts, conduct and direct discovery, participate in making major litigation decisions, and in some cases become a part of the trial team. It is my understanding that attorneys from the Departments of Defense and Justice work closely to represent the Department and the United States in all respects.

*Question.* Is the present arrangement satisfactory, or does the Department need more independence to conduct its own litigation?

*Answer.* I am not aware of any need to change the present arrangement.

#### COURT OF APPEALS DECISION

*Question.* On January 4, 2000, the United States Court of Appeals for the District of Columbia Circuit decided the case of *National Center for Manufacturing Sciences v. Department of Defense*, 199 F. 3d 507 (D.C. Cir. 2000). The court concluded that "Because of the existence of 10 U.S.C. Section 114, it is clear that any monies appropriated for NCMS by Congress for research must be authorized before they can be appropriated and distributed"; and "Because 10 U.S.C. Section 114(a)(2) requires authorization of these funds before they become available, appropriation alone is insufficient."

What is your view of the court's decision in this case and its implications regarding the obligation of funds that are appropriated, but not authorized?

*Answer.* The case in question affirmed the district court's decision to grant the government's motion to dismiss for failure to state a claim. The basis for the decision was the fact that in the Department's Fiscal Year 1995 Authorization Act, Congress effectively rescinded the unreleased portion of a fiscal year 1994 funding earmark for the National Center for Manufacturing Sciences (NCMS). Accordingly, the court concluded that NCMS had no legal entitlement to the funds claimed.

Based on the court's opinion, it appears that all parties to this litigation, and the court, viewed the funds in issue to have been authorized by Congress. Thus, the "appropriated not authorized" issue was not squarely presented for decision in this case, but was addressed only as a collateral matter. Situations where funds have been appropriated but not authorized are often complex and may involve unique statutory language. As a result, I would anticipate that the Department will continue its practice of working closely with our oversight committees whenever these issues are presented.

#### ROLE IN MILITARY PERSONNEL POLICY MATTERS

*Question.* What role, if any, should the General Counsel play in military personnel policy and individual cases, including cases before the service boards for the correction of military records?

Answer. The range of issues potentially requiring legal advice from the DOD General Counsel's office is very broad. I am advised that attorneys within the Office of General Counsel frequently become involved with policy issues pertaining to military personnel, both with regard to individual cases and to the application of the Department's personnel policies throughout the services. I believe that the General Counsel should, in appropriate cases, make his or her views about individual cases and the development and application of personnel policies known to the Department's senior leadership, so that individual cases are resolved fairly and that overall policies are developed uniformly, fairly, and in conformance with law.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next General Counsel of the Department of Defense?

Answer. If confirmed, my priorities will follow those of the President and the Secretary of Defense. Consequently, among the major challenges will be to serve the Secretary and his leadership team as advisor, counselor, and advocate in addressing those priorities. Moreover, the Department's routine functions and missions are so vast and unpredictable that it is difficult to anticipate specific questions that will arise.

*Question.* If confirmed, what plans do you have for addressing these challenges?

Answer. I am convinced that the attorneys and staff of the legal community of the Department of Defense have addressed their responsibilities very capably in the past. If confirmed, I will work to ensure that the Department's lawyers continue to provide sound, professional, and responsive legal advice to our clients concerning not only these legal issues, but also the numerous other issues that the Department of Defense confronts on any given day.

#### MOST SERIOUS PROBLEMS

*Question.* What do you consider to be the most serious problems in the performance of the functions of the General Counsel of the Department of Defense?

Answer. I am aware of no serious problems in this area.

*Question.* What management actions and time lines would you establish to address these problems?

Answer. If confirmed, I will focus on assuring that the legal community of the Department of Defense provides quality, timely, and sound legal advice and counsel.

*Question.* What do you see as the greatest legal problems facing the Department in the coming year?

Answer. Please see my response to "Major Challenges," above.

*Question.* Does the Office of the General Counsel have the resources to deal with these problems and do its everyday work?

Answer. If I am confirmed, I will be sensitive to the requirement to ensure that the Office of General Counsel has adequate resources. If I determine that those resources need augmentation, I will recommend appropriate increases.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the General Counsel of the Department of Defense?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. Although the potential of additional U.S. military action has diminished, what is the established mechanism to ensure that all deployments of U.S. Armed Forces are brought to the attention of the DOD General Counsel so that the consultation and reporting provisions of the War Powers Resolution is implemented?

Mr. HAYNES. There is an established mechanism within the Department of Defense to ensure that the General Counsel reviews all orders that involve the possible deployment of U.S. Armed Forces in situations in which consultation and reporting consistent with the War Powers Resolution may be warranted. Operational planning processes and administrative procedures ensure that all relevant officials in the Office of the Secretary of Defense and the Office of the Chairman of the Joint Chiefs of Staff are aware of the requirement for General Counsel review of such deployments.

2. Senator THURMOND. In 1985, a comprehensive Department of Defense "Joint Study on Religious Matters" concluded that application of the Religious Freedom Restoration Act style "strict scrutiny" standard to religious practice in the military "would be a standing invitation to a wholesale civilian judicial review of internal military affairs. . . . Adoption of the civilian 'strict scrutiny' standard poses grave dangers to military discipline and interferes with the ability of the military to perform its mission." What are your views regarding the implications of applying the "strict scrutiny" standard to religious practices in the military?

Mr. HAYNES. The 1985 Department of Defense "Joint Study on Religious Matters" did not oppose accommodation of religious practices. The study recommended against a mandatory standard that required military commanders to accommodate religious practices without taking into consideration the requirements of military duty. As the courts have consistently held, the military is, by necessity, a specialized society separate from civilian society. Accommodation standards require a different application in the military than may be applied in a civilian context. The study concluded that it seems unlikely that the courts will use the same strict scrutiny test in the military context they use in the civilian context. Furthermore, the study concluded that the courts would likely continue to give deference to the military in matters of military requirements, discipline and military expertise. I believe we have found this to be the case. The Department has not experienced the wholesale civilian judicial review of internal military affairs that those conducting the study may have envisioned. Similarly, the concerns have not materialized regarding grave dangers to military discipline and interference with the ability of the military to perform its mission. Department of Defense Directive 1300.17, "Accommodation of Religious Practices Within the Military Services," has proved successful in balancing the religious interests of its personnel with the military necessity for readiness, unit cohesion, standards, and discipline.

While "strict scrutiny" is a high standard, the religious beliefs and practices of our military members are important personal interests that should not be taken lightly. When military necessity and the standards of good order and discipline require restrictive action based on compelling military interests, the courts have historically afforded the military the appropriate deference that is due. Moreover, commanders are not reporting adverse impacts on military discipline or mission accomplishment.

3. Senator THURMOND. We all have read stories in the press criticizing the military justice system and the Uniform Code of Military Justice. Often these articles are sensationalized and written by people who have no understanding of the system. How would you characterize the military justice system?

Mr. HAYNES. I believe much of the criticism of the military justice system as a whole is, in large part, due to the fact that many members of the media, jurists, and general public have no actual experience with the administration of military justice or the military judicial system. I would characterize the military justice system as a progressive system of laws and procedures that measures well against other judicial systems.

We recently observed the 50th anniversary of the Uniform Code of Military Justice (UCMJ), a great step forward in military jurisprudence and the protection of rights afforded our service members. Starting with the creation of a court of appeals, composed of civilian judges, in 1951 (now the United States Court of Appeals for the Armed Forces), the authorization of discretionary review of courts-martial by the U.S. Supreme Court, and the transformation of the courts-martial process into a judicial system, military justice can take pride in its evolution. The individual

rights afforded our men and women in uniform, and the due process provided in our court-martial procedures, are significant levels of achievement. However, no judicial system should be regarded as perfect. By doing so, we would preclude all interest in making improvements and tend to overlook, rather than address, problems. For these reasons, it is important that the Department continues to work with both the Code Committee, established by Article 146, UCMJ, and the Joint Service Committee on Military Justice, established by DOD Directive. Both committees perform crucial functions. The Code Committee conducts an annual review of the operation of the UCMJ, and the Joint Service Committee on Military Justice provides an annual review of the Manual for Courts-Martial procedures.

While some specific issues or areas may warrant further review, the military justice system as a whole is operating as Congress intended and as required to meet the needs of the military for good order and discipline.

---

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

4. Senator LIEBERMAN. What are your priorities regarding OSD General Counsel?

Mr. HAYNES. As the DOD General Counsel, I will strive to ensure that the Department of Defense receives legal services, grounded on fidelity to the law, that reflect careful and thorough analysis, are sensitive to the crucial mission of the Department and the Secretary's policy objectives, and provide, whenever possible a range of legally appropriate options for the consideration of decisionmakers.

5. Senator LIEBERMAN. DOD's Alternate Dispute Resolution (ADR) Program (resolution of disputes in the earliest stage feasible, by the fastest and least expensive method, and at the lowest organizational level) continues to grow and offer less costly means of dispute resolution. What changes or enhancements, if any, will you make to the ADR Program?

Mr. HAYNES. I am a strong proponent of using ADR to resolve disputes as early as possible in the course of a dispute. I am aware that ADR is already being used to a greater extent than ever before and in more areas throughout the Defense Department. I am learning that the ADR programs in the various DOD components vary in their size and scope, and that the components are generally buoyed by their successes and are seeking further encouragement and support for their ADR programs.

As General Counsel, I will actively promote the use of ADR. All Defense Department components will be encouraged to support efforts both to use ADR early and to move from a focus on ADR as a tool of lawyers to conflict management as a business objective of the entire component. My focus will be to reinforce appropriate use of ADR in all DOD components. I will emphasize to senior leadership in all components the need to deepen the penetration of ADR and will encourage them to continue to make progress in improving their ADR programs.

In managing the ADR program, my office will concentrate on improving the evaluation of the ADR programs in the Department, sharing lessons learned among the components, and implementing recent legislation on pilot projects for employing ADR.

---

QUESTION SUBMITTED BY SENATOR JEAN CARNAHAN

6. Senator CARNAHAN. I am advised that the National Imagery and Mapping Agency (NIMA) has proposed that work performed by 600 Federal employees at installations in Missouri and Maryland be directly converted to contractor performance without a public-private competition under OMB Circular A-76. According to NIMA, the apparent authority for this conversion is 10 U.S.C. 8014. But that statute does not contain an exemption from the blanket requirement to conduct an A-76 study.

Please provide an explanation of the legal authority under which NIMA proposes to conduct a direct conversion of these jobs, cite the specific provisions of Circular A-76 that allow such a conversion, and provide the documents supporting that the appropriate procedures have been followed by NIMA in this instance.

Mr. HAYNES. This responds to your request that I review the procedures for outsourcing certain information technology (IT) and information services (IS) functions at the National Imagery and Mapping Agency (NIMA).

For some time NIMA management has been reviewing its IT and IS functions to determine which should be performed only by government employees (i.e., "core" functions), and which could be performed otherwise. Industry analysts and consultants under contract to NIMA conducted part of this review. In response to the re-

sulting recommendations, NIMA management has determined that the IT and IS functions currently performed by approximately 1,100 government employees plus a number of contractors could be restructured to provide more efficient and less costly operations.

NIMA management has determined that 500 of the employees are performing core functions. The functions performed by the remaining 600 employees, as well as those performed under 12 contracts, are currently being evaluated to determine whether to consolidate them into a single prime contract with some number of sub-contracts. Working with the Small Business Administration (SBA), NIMA has identified an 8(a) contractor with the potential to serve as the prime contractor. SBA's 8(a) program provides preferential procurement opportunities to developing small, disadvantaged businesses meeting certain social and economic criteria. The 8(a) firm is currently developing its proposal for performing and subcontracting the work and will deliver that proposal to NIMA in late July. NIMA intends to spend August evaluating the proposal. If the decision is made to award a contract, the award would not be made before September 15, 2001, with performance transition commencing October 1, 2001.

NIMA management's principal concerns in approaching this potential outsourcing have been continued customer support and the preservation and protection of its skilled workforce. NIMA's mission will not tolerate employee uncertainty and disruption. Moreover, management recognizes that any contractor's performance would benefit from the unique qualifications of the current NIMA employees, including their security clearances. Management expects that most of the 600 employees whose functions are included in this initiative may be interested in private sector employment. Indeed, NIMA is considering using voluntary separation incentive payments to assist these employees in the transition. For these reasons, part of NIMA's requirement that the 8(a) contractor must include in its proposal is the voluntary transition of current NIMA IT and IS employees to the contractor's employment over the course of 5 to 7 years. This requirement should enable NIMA to convert these functions to contract performance with no reduction-in-force or other involuntary personnel actions, and permit employees the full range of normal employment options. NIMA's expectation is that over the 5-year transition period, current NIMA employees will be able individually to decide whether and when to accept employment with the contractor or to remain at NIMA by reassignment within the agency.

The 8(a) firm currently under consideration is an Alaskan Native Corporation. Consequently, a cost comparison under OMB Circular A-76 is not required, nor is the analysis required under section 8014 of the Department of Defense Appropriations Act, 2001, Public Law 106-259. Section 8014 also exempts firms that are "under 51 percent ownership by an Indian tribe," such as this 8(a) firm, from the reporting and analysis requirements of section 2461 of Title 10, United States Code. Nevertheless, NIMA's final decision to award a contract to outsource these IT and IS functions will be made upon NIMA's determination that such a decision will produce efficiencies and cost savings.

I am satisfied that appropriate legal procedures have been followed. Your request for a suspension of NIMA's activities is unnecessary, as NIMA is still collecting information, and will not be in a position to make a decision before September 15, 2001. As for your request for consultation, NIMA management would be pleased to provide a discussion of their approach to you or your staff at your convenience. Commander Jim Fraser, Director, Senate Affairs, Office of the Assistant Secretary of Defense (Legislative Affairs), 703-695-7104, can make the necessary arrangements.

---

[The nomination reference of William J. Haynes II follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 23, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

William J. Haynes II, of Tennessee, to be General Counsel of the Department of Defense, vice Douglas A. Dworkin.

[The biographical sketch of William J. Haynes II, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF WILLIAM J. HAYNES II

Born in Waco, Texas, Jim Haynes was raised in a United States Air Force family. Mr. Haynes earned his B.A. degree on an Army R.O.T.C. scholarship at Davidson College, where he was elected to membership in Phi Beta Kappa and Omicron Delta Kappa, and earned his J.D. degree from Harvard Law School. After law school, Mr. Haynes clerked for U.S. District Judge James B. McMillan in Charlotte, North Carolina. He then served 4 years on active duty as an officer in the United States Army, leaving for private practice.

In 1990, President George Bush appointed Mr. Haynes General Counsel of the Department of the Army, a post he held for 3 years. As chief legal officer of the Army, Mr. Haynes was ultimately responsible for all legal matters confronting the Army, and for professional oversight of the military and civilian lawyers of the Army.

Mr. Haynes is a partner in the Washington, D.C. office of Jenner & Block, where he represents corporate and individual clients, providing a range of legal services and counseling. For 3 years in the mid-1990s, he was Staff Vice President and Associate General Counsel for General Dynamics Corporation; part of that time he also served as General Counsel of General Dynamics' Marine Group.

In private life, Mr. Haynes is active in public service. He recently concluded his service on the Advisory Committee to the Standing Committee on Law and National Security of the American Bar Association. He is "outside" General Counsel for the Army Engineer Association. He is a Member of the National Advisory Committee for Maryville College in Tennessee. He has served on a panel of the National Academy of Sciences' Naval Studies Board. From February through April 1999, Mr. Haynes provided pro bono legal services to a non-governmental relief organization, Mercy Corps International, from its offices in Central Asia. Mr. Haynes has represented defendants, pro bono, in the District of Columbia court system, and he currently advises several non-profit enterprises.

Mr. Haynes is licensed to practice law in the District of Columbia and in the States of Georgia and North Carolina. He is listed in *Who's Who in America*, and *Who's Who in American Law*. He holds an honorary Doctor of Laws from Stetson University, where he delivered the commencement address in May 1999.

Mr. Haynes is married to Margaret Campbell Haynes of Newnan, Georgia. Mr. and Mrs. Haynes have three children: Will, Sarah, and Taylor.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by William J. Haynes II in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
William James Haynes II.
2. **Position to which nominated:**  
General Counsel of the Department of Defense.
3. **Date of nomination:**  
April 23, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
March 30, 1958; Waco, Texas.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Margaret Frances Campbell Haynes.
7. **Names and ages of children:**  
William James Haynes III (age 14), Sarah Insley Haynes (age 12); Taylor Bynum Haynes (age 9).
8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.  
Harvard Law School, J.D. 1983, Cambridge, MA.  
Davidson College, B.A. 1980, Davidson, NC.  
Parkway High School, Diploma 1976, Bossier City, LA.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
May 1999 to present: Partner, Jenner & Block (law firm), 601 13th Street, NW., Washington, DC.  
February–April 1999: Volunteer Consultant, Mercy Corps International (relief organization), Almaty, Kazakhstan.  
July 1996–January 1999: Staff VP and Associate General Counsel, GC of Marine Group (1997–1998), General Dynamics Corporation, 3190 Fairview Park Drive, Falls Church, VA.  
April 1993–July 1996: Partner, Jenner & Block (law firm).  
March 1990–January 1993: General Counsel of the Department of the Army, Washington, DC.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
Dec. 2000–Feb. 2001: Policy Coordinator (volunteer), Federal Emergency Management Agency, Bush-Cheney Transition.  
1993: Consultant, Information Warfare Panel (*pro bono*), Naval Studies Board, National Academy of Sciences.  
Nov. 1989–March 1990: Special Assistant to the General Counsel, Department of Defense.  
January 1989–April 1989: Counsel to the Transition, Department of Defense.  
October 1984–Dec. 1988: Officer (eventually Captain), United States Army.  
Sept 1983–Sept. 1984: Law Clerk, Judge James B. McMillan, U.S. District Judge (W.D.N.C.).
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.  
Partner, Jenner & Block (law firm).  
Member, Maryville College National Advisory Council.
12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
Member, American Bar Association.  
Member, Army Navy Club.  
General Counsel, Army Engineer Association.  
Member, Phi Beta Kappa.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member, Republican Party.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Bush for President, Inc.—\$500.00 (July 2000)

Bush for President, Inc.—\$250.00 (February 2000)

Friends of George Allen—\$500.00 (May 2000)

Quayle 2000—\$250.00 (May 1999)

Leahy for U.S. Senator Committee—\$250.00 (May 1998)

Snowe for Senate—\$250.00 (March 1998)

Shelby for U.S. Senate—\$300.00 (October 1997)

George W. Bush for Governor—small, unknown amounts (1995/6 and 1998?)

Various small contributions to the Republican National Committee over the years.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Honorary Doctor of Laws, Stetson University (1999).

Decoration for Distinguished Civilian Service (Department of the Army) (1992).

Meritorious Service Medal (with Oak Leaf cluster) (1986, 1988).

Army ROTC Scholarship (1976–1980).

Phi Beta Kappa (1980).

Omicron Delta Kappa (1980).

Eagle Scout (1971).

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

“The Value of Wetlands as Wetlands: The Case for Mitigation Banking,” 23 *Environmental Law Reporter* 10261, Vol. XXIII, No. 5, May 1993. (Co-authored with Royal C. Gardner.)

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None relevant to this position.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

WILLIAM J. HAYNES II.

This 18th day of April, 2001.

[The nomination of William J. Haynes II was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 17, 2001.]

---

[Prepared questions submitted to Powell A. Moore by Chairman Warner prior to the hearing with answers supplied follow:]

April 24, 2001.

Hon. JOHN WARNER,  
*Chairman, Committee on Armed Services,  
 United States Senate,  
 Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

POWELL A. MOORE.

cc: Honorable Carl Levin,  
*Ranking Minority Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes. The establishment of the unified and specified combatant commands, the delineation of responsibilities, and most importantly, the focus on "jointness" outlined in the Defense Reorganization Act of 1986 has enhanced the readiness and warfighting capabilities of our Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have changed the way the Department of Defense works by strengthening the role of the Chairman of the Joint Chiefs of Staff and the combatant commanders, and significantly improving the ability of the Department to protect America's security and further its vital interests. The reforms have helped improve the interaction among the services in conducting military operations by making joint operations the norm.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I would consider each of the goals noted below to be an important aspect of these defense reforms. Each one has enhanced the ability of the Department of Defense to carry out its assigned responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

RELATIONSHIPS

*Question.* If confirmed, what would be your relationship with: the Secretary of Defense; the Deputy Secretary of Defense; the Under Secretaries and Assistant Secretaries of Defense; the General Counsel of the Department of Defense; the Inspector General of the Department of Defense; the Defense Agencies; and the legislative affairs officers of the military departments and the Joint Staff.

*Answer.* If confirmed, I will function as the principal staff assistant to the Secretary on congressional matters. Under the Secretary's direction, I will be responsible for Department legislative program coordination, congressional liaison in various forms, participation of departmental witnesses in congressional hearings, responses to congressional inquiries, and Department support of congressional travel.

If confirmed, my relationship with the Deputy Secretary of Defense will be substantially the same as that described above with respect to the Secretary of Defense.

If confirmed, my relationship with the Under Secretaries of Defense and the Assistant Secretaries will be to serve as principal advisor regarding liaison and communications with Congress.

If confirmed, my relationship with the General Counsel will be based on my role as principal staff assistant to the Secretary of Defense on congressional matters. Identifying legal issues inherent in legislative matters and obtaining the views and recommendations of the General Counsel is central to the effective performance of my duties. If confirmed, I will fully support the General Counsel in the development of the DOD legislative program and coordination of Department positions on proposed legislation, including the preparation and submission of annual legislative proposals.

If confirmed, I will be fully cooperative and supportive of the Inspector General's mission.

If confirmed, I will provide overall guidance to the individual Defense Agencies with respect to the Department's legislative issues. I will ensure that the agencies are responsive to congressional inquiries, and have a thorough understanding of the Department's legislative initiatives and the Secretary's position on issues.

By Title 10 and Department of Defense Directive, ultimate responsibility for supervision of legislative liaison activities throughout the Department is vested in the Assistant Secretary of Defense for Legislative Affairs. If confirmed, I will work closely with the legislative affairs offices of the Military Departments and the Joint Staff and will continue to foster a climate of effective cooperation and mutual support.

*Question.* Within the Office of the Secretary of Defense, the defense agencies, and the combatant commanders, there are numerous offices that have their own congressional liaison personnel.

What will you do to ensure that your office is the focal point for all of the Department of Defense for dealing with Congress?

Answer. If confirmed, I will meet regularly with representatives of all components of the Department to ensure full coordination on all legislative matters. It will continue to be our goal that all legislative affairs activities of the Department are coordinated through the OSD Legislative Affairs Office.

#### DUTIES

*Question.* Section 138 of Title 10, United States Code, provides that the principal duty of the Assistant Secretary of Defense for Legislative Affairs is the overall supervision of legislative affairs of the Department of Defense. Other duties are to be prescribed by the Secretary of Defense.

Should you be confirmed as the Assistant Secretary of Defense for Legislative Affairs, what would you view as your principal responsibilities to the Secretary of Defense?

Answer. My principal responsibility will be to ensure that the Secretary, Deputy Secretary, and key principals in the Department of Defense are fully aware of congressional interests, concerns, and initiatives. If confirmed, I will work closely with our oversight committees of Congress and the various components of the Department of Defense to ensure that the Department's policies are properly articulated and that issues raised by Congress are clearly understood and addressed by the Department.

*Question.* Assuming you are confirmed, what other duties do you expect that Secretary Rumsfeld will prescribe for you?

Answer. If confirmed, my responsibilities will encompass the full spectrum of legislative activities and concerns for the Department. While this will be my primary focus, I will certainly take on any other duties prescribed by Secretary Rumsfeld.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges confronting the Assistant Secretary of Defense for Legislative Affairs?

Answer. If confirmed, one of the greatest challenges I will face is to ensure the continued flow of timely, accurate, and relevant information to Congress on all defense-related issues. As we shape our military force to meet the challenges of the 21st century, it is essential that the administration and Department remain fully engaged with Congress and that we maintain a bipartisan consensus on defense matters and national security issues.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I expect to meet on a daily basis with senior Department leadership to ensure that our legislative priorities are fully coordinated, and that the Secretary, Deputy Secretary, and senior Department leadership receive timely and valuable advice on all legislative issues. While it is essential that the lines of communication remain open between the Department and our oversight committees and Senate/House leadership, it is equally important that we are aware of the prior-

ities and responsive to the defense-related concerns of other congressional committees and members.

*Question.* What do you consider to be the most serious problems in the military services' relationships with Congress?

*Answer.* As we consider the necessary steps to shape and transform our military to meet the demands of a new century, the services will play a central role in the necessary dialogue with Congress. If confirmed, I expect to work closely with the Legislative Affairs Service Chiefs and the Joint Staff to meet and address the challenges ahead. Addressing issues such as readiness, military pay and retirement, health care, technological advances, and emerging threats will require close coordination, not only within the Department of Defense but also between the executive and legislative branches.

*Question.* If confirmed, what management action and timetables would you establish to address these problems?

*Answer.* If confirmed, I will work closely with the services and the Joint Staff to address the challenges noted above.

#### ROLE OF CONGRESS IN NATIONAL SECURITY POLICY

*Question.* In your opinion, what is the role of Congress in setting national security policy?

*Answer.* The Constitution charges Congress with raising, maintaining, and regulating the Armed Forces. The development and execution of our national security policy must be a shared responsibility. The administration and Department will work closely with Congress as we shape our military forces to meet the demands of the 21st century. If confirmed, I look forward to working with this committee and Congress to further the cooperative engagement that has long been the standard, and to forge and maintain a bipartisan consensus on national defense issues.

#### LIAISON WITH THE APPROPRIATIONS COMMITTEE

*Question.* The liaison with the Appropriations Committees is currently carried out through the Office of the Under Secretary of Defense, Comptroller, not through the Office of the Assistant Secretary of Defense for Legislative Affairs.

Do you believe that this arrangement allows you to carry out your responsibility under Section 138 of Title 10, United States Code?

*Answer.* Ultimate responsibility for the supervision of legislative liaison activities throughout the Department of Defense is vested in the Assistant Secretary of Defense for Legislative Affairs. If confirmed, I plan to work closely with the Office of the Under Secretary of Defense/Comptroller, as well as all other relevant offices within the Department, the Joint Staff, and the services to ensure that our legislative priorities in all matters are fully understood and coordinated.

*Question.* Based on your experience, does the fact that there are two separate offices within the Office of the Secretary of Defense dealing with Congress create coordination problems?

*Answer.* Our goal will be that the legislative priorities and concerns of the Department are fully coordinated, not only within the Pentagon but also with Congress. It's extremely important that we continue to foster a very close working relationship with both the authorizing and appropriating defense committees.

*Question.* Do you believe that the current practice of a separate liaison between the Appropriations Committees, the Office of the Secretary of Defense and the budget offices of the military services should be continued or should all legislative affairs activities be consolidated under the Assistant Secretary of Defense for Legislative Affairs?

*Answer.* If confirmed, I will coordinate closely with the Comptroller and with all oversight committees to ensure the Department speaks with one voice before Congress.

*Question.* What do you anticipate would be your relationship with the Appropriations Committees?

*Answer.* Policy issues of importance to the Department require the support of both the authorization and appropriations committees. If confirmed, it will be my responsibility to ensure that we are responsive to the needs of all of our oversight committees.

#### PROVIDING CONGRESS WITH TIMELY INFORMATION

*Question.* What steps would you take to ensure that the appropriate congressional officials and committees are provided with timely notification and relevant information concerning international crises, the use of United States military forces, and incidents involving Department of Defense personnel and equipment?

Answer. If confirmed, I will ensure that this continues to be a top priority for the Department. It is critical that timely, accurate, and relevant information is provided to members, committees, and staff.

#### MONITORING LEGISLATION AFFECTING THE DEPARTMENT OF DEFENSE

*Question.* The Committees on Armed Services of the Senate and the House of Representatives have principal oversight responsibility in Congress for Department of Defense activities. However, there is a great deal of legislation considered by other congressional committees that specifically affects the Department of Defense or that affects government agencies in general and which may have a substantial impact on the Department of Defense.

What steps would you establish to ensure that you and the Secretary of Defense are kept informed of all legislation that may have an impact on the Department of Defense?

Answer. It is essential that we focus not only on the legislative priorities of our oversight committees, but also on relevant legislation considered by other congressional committees. We must work closely with our counterparts at the State Department, the National Security Council, and other federal agencies to ensure that defense-related issues and concerns are fully addressed. If confirmed, I will ensure that my staff members maintain a network of contacts on all congressional committees and strive to learn of all legislative proposals that could impact the Department.

*Question.* If confirmed, would you ensure that the Committees on Armed Services are alerted to all legislative matters of interest to the Department in a timely manner?

Answer. Yes.

#### NOMINATIONS

*Question.* What role would you, as Assistant Secretary of Defense for Legislative Affairs, expect to play in the military and civilian nomination process?

Answer. If confirmed, I would expect to play a primary role in the civilian nomination process, ensuring that all nominees are prepared to meet the many requirements of the confirmation process. In the military nomination process, I would expect to work closely with the Chairman of the Joint Chiefs and the services in preparing key military nominees for confirmation.

#### MANAGEMENT OF THE CONGRESSIONAL FELLOWSHIP PROGRAM

*Question.* What are your personal views on the value and current management of the legislative fellowship program within the Department of Defense? Specifically, in your opinion are legislative fellowships awarded to deserving military or civilian personnel?

Answer. While my personal knowledge of this subject is limited, it is my understanding that the legislative fellowship program has proven to be a valuable and effective vehicle for educating Department personnel on the workings of the legislative branch. Competition for these positions is keen, and it is my impression that these fellowships are awarded to fully deserving military and civilian personnel. If confirmed, I will obtain more information about the legislative fellowship program to ensure my office has visibility in its operation.

*Question.* As Assistant Secretary of Defense for Legislative Affairs, would you have any part in the selection of military or civilian personnel to be a legislative fellow?

Answer. No. I have been advised that selection of the personnel is a service responsibility, and that oversight of the program is provided by the Assistant Secretary of Defense for Force Management Policy (ASD/FMP).

*Question.* As Assistant Secretary of Defense for Legislative Affairs, would you have any part in the utilization assignments for military and civilian fellows upon completion of their fellowship?

Answer. No. This also is a responsibility of the respective services, taking into account the necessary professional development of each individual completing the fellowship as well as the needs of the services.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for Legislative Affairs?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

DEPARTMENT COORDINATION

1. Senator THURMOND. One of the more significant challenges of your office is to ensure that the Department speaks with one voice on major policy issues. How do you plan to address this vexing problem?

Mr. MOORE. First, I plan to meet regularly with representatives of all components of the Department to ensure full coordination on all legislative matters. It will continue to be our goal that all legislative affairs activities of the Department are coordinated through the OSD Legislative Affairs Office. Within the interagency coordination process, we must work closely with our counterparts at the State Department, the National Security Council, and other federal agencies to ensure that our defense-related issues and concerns are fully addressed. In general, one of the greatest challenges we face is to ensure the continued flow of timely, accurate, and relevant information to Congress on all defense-related issues. As we complete our strategic review and consider the steps necessary to reshape our military force to meet the challenges of the 21st century, it is essential that the administration and Department remain fully engaged with Congress and that we continue to forge a bipartisan consensus on defense matters and national security issues. It is also essential that we focus not only on the legislative priorities of our oversight committees, but also on legislation considered by other congressional committees and members.

CONGRESS AND THE DEPARTMENT OF DEFENSE

2. Senator THURMOND. Your long and distinguished career serving both Congress and the executive branch, allowed you to be a witness to the changes in the relationship between Congress and the Department of Defense.

What in your judgment had been the most significant change in this relationship since you first joined Senator Russell's office in 1966? How does this change affect your role as ASD for Legislative Affairs, if you are confirmed for that position?

Mr. MOORE. We are now in an information age where news is available around the clock. Given the tremendous challenge we face in staying ahead of this expansive media coverage, it has become even more important for the Department to keep open the lines of communication with Congress at all levels. Our relationship with Congress is based on a continuing dialogue, and effectively managing the timely flow of information is essential. For example, I recognize the importance of using the Internet to dispense and to obtain information, and I intend to work very hard to bring the Office of Legislative Affairs into the 21st century in that regard. Despite our many technological advances, however, our guiding principle in the Department of keeping Congress well-informed in a timely manner has not changed.

---

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

STRATEGIC REVIEW

3. Senator LIEBERMAN. Upon the completion of the strategic review, what proposals do you have to help relay those recommendations?

Mr. MOORE. The Defense review is an iterative process that will be ongoing. The findings and recommendations of the various elements of the Defense review will serve as road maps for key issues that must be considered during the QDR process, and subsequently, in the development of future budget requests. It is important that we communicate the results of our Defense review in a timely manner when information is available. For example, we will look to schedule member and staff briefings when the various elements of the review have been completed. Throughout this process, I will work closely with the Secretary, Deputy Secretary, and senior leadership in the Department to ensure that we keep open the lines of communication with Congress.

#### NOMINATION PROCESS

4. Senator LIEBERMAN. Do you plan to recommend changes to the nomination process?

Mr. MOORE. As Assistant Secretary of Defense for Legislative Affairs, I will do everything I can to ensure that all of the President's nominees for positions in the Department of Defense move through the confirmation process as expeditiously as possible. At this point, it would be premature for me to consider any recommendations for changes to the nomination process.

#### LEGISLATIVE FELLOW PROGRAM

5. Senator LIEBERMAN. What is your opinion of the legislative fellow program and will you pursue changes to the program?

Mr. MOORE. While my personal knowledge of this subject is limited, it is my understanding that the legislative fellowship program has proven to be a valuable and effective vehicle for educating Department personnel on the workings of the legislative branch. Competition for these positions is keen, and it is my impression that these fellowships are awarded to fully deserving military and civilian personnel. It is my understanding that selection of the personnel is a service responsibility, and that the Assistant Secretary of Defense for Force Management Policy (ASD/FMP) provides oversight of the program. I will make it a priority to obtain more information about the legislative fellowship program to ensure my office has visibility in its operation. At this point, it would be premature for me to consider any possible changes to the program.

---

[The nomination reference of Powell A. Moore follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 23, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Powell A. Moore, of Georgia, to be an Assistant Secretary of Defense, vice John K. Veroneau.

---

[The biographical sketch of Powell A. Moore, which was transmitted to the committee at the time the nomination was referred, follows:]

#### BIOGRAPHICAL SKETCH OF POWELL A. MOORE

Powell A. Moore is Chief of Staff for Senator Fred D. Thompson, Republican of Tennessee and Chairman of the Senate Committee on Governmental Affairs. He has held this position since September 1, 1998.

Active in public policy affairs in Washington for more than 30 years, Moore is a former Assistant Secretary of State for Intergovernmental and Legislative Affairs under President Reagan and has served on the White House staff under Presidents Nixon, Ford, and Reagan.

Moore began his Washington career in 1966 as Press Secretary to Senator Richard B. Russell of Georgia and served in this capacity until Senator Russell's death in January 1971. He then joined the Nixon Administration, first serving as Deputy

Director of Public Information for the Department of Justice and later as a member of the White House Legislative Affairs staff.

He left the White House in 1975, and for the subsequent 6 years, engaged in government relations and legislative affairs consulting, representing a variety of corporations and associations.

Moore returned to the White House in January 1981 on the day following Ronald Reagan's inauguration as the 40th President of the United States. As Deputy Assistant to the President for Legislative Affairs during 1981, he managed the Senate component of the legislative affairs office at the White House.

In January 1982, President Reagan nominated him to be Assistant Secretary of State for Intergovernmental and Legislative Affairs, and he was confirmed by the Senate on February 4, 1982. As Assistant Secretary of State, Moore traveled with congressional delegations to more than 35 countries and participated in meetings between U.S. congressional leaders and 19 heads of state.

During his service in two key legislative affairs positions of the Reagan administration, he assisted President Reagan in realizing a number of significant legislative achievements. He managed the Senate confirmation strategy for several of President Reagan's high level nominations, including the historic nomination of Associate Justice Sandra Day O'Connor.

Moore worked on the presidential campaign staffs of Richard Nixon in 1972, Gerald Ford in 1976, and Ronald Reagan in 1980. He also worked as a volunteer for the presidential campaigns of George Bush in 1988 and 1992, Bob Dole in 1996 and George W. Bush in 2000.

After leaving government in late 1983 and before returning in 1998, Moore advised and represented business interests as Vice President for Legislative Affairs of the Lockheed Corporation and as a consultant. In this capacity, he compiled a substantial list of measurable public policy achievements on behalf of a wide variety of clients.

Moore was born in Milledgeville, Georgia, on January 5, 1938. He graduated from the University of Georgia in Athens in 1959 after attending preparatory school at Georgia Military College in Milledgeville. The University of Georgia's Henry W. Grady School of Journalism selected him as its Outstanding Alumnus for 1985, and he was similarly honored by Georgia Military College in 1986. After graduation, he was commissioned as an officer in the United States Army where he served for 3½ years with tours in Baumholder, Germany, and Fort Benning, Georgia. After leaving the Army and before coming to Washington, he worked as a weekly newspaper editor in Georgia.

Moore lives in Alexandria, Virginia and has a daughter, Mrs. Frances M. Preston of Greensboro, North Carolina; a son, Allen Moore of Alexandria, Virginia; and three grandsons.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Powell A. Moore in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Powell Allen Moore.

2. **Position to which nominated:**  
Assistant Secretary of Defense for Legislative Affairs.

3. **Date of nomination:**  
April 23, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
January 5, 1938; Milledgeville, Georgia.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Divorced.

7. **Names and ages of children:**  
Frances Van Moore Preston, age 34 (born on April 19, 1967); Powell Allen Moore, Junior, age 31 (born on December 6, 1969).

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

Georgia Military College (high school division), Milledgeville, Georgia from September 1951 until June 1955.

Georgia Military College (junior college division), Milledgeville, Georgia from September 1955 until June 1956.

Georgia College, Milledgeville, Georgia from June 1956 until August 1956.

University of Georgia, Athens, Georgia from September 1957 until March 1959; Bachelor of Arts degree in Journalism, June 1959.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

June 1989 until February 1993, self employed consultant, 1133 Connecticut Avenue, NW., Washington, DC.

February 1993 until February 1998, Senior Principal and Managing Director, Capitoline International Group, 1615 L Street, NW., Washington, DC 20036.

February 1998 until August 1998, Senior Vice President, Global USA, Inc., 2121 K Street, NW., Washington, DC 20037.

September 1998 until present, Chief of Staff, Office of Senator Fred Thompson, Washington, DC.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

March 1959 until August 1962, Infantry Officer, United States Army, Fort Benning, Georgia and Baumholder, Germany.

October 1966 until March 1971, Press Secretary to Senator Richard B. Russell, Washington, DC.

March 1971 until May 1972, Deputy Director of Public Information, Department of Justice, Washington, DC.

March 1973 until January 1975, Deputy Special Assistant to the President, The White House, Washington, DC.

January 1981 until February 1982, Deputy Assistant to the President, The White House, Washington, DC.

February 1982 until August 1983, Assistant Secretary of State for Legislative Affairs, Washington, DC.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Metropolitan Club of Washington, DC; Belle Haven Country Club, Alexandria, Virginia; 116 Club, Washington, DC.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

August 1996, Official Proceedings Staff, Republican National Convention, San Diego, California.

September 1, 1998 to present, Political Fund Designee, Tennesseans for Thompson, Nashville, Tennessee/Washington, DC.

February 2000, Volunteer Surrogate Program Manager, McCain 2000 Committee, Alexandria, Virginia.

August 2000, Official Proceedings Staff, Republican National Committee, Philadelphia, Pennsylvania.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

03/11/96 - Isakson for Senate Committee - \$500.00.  
 04/17/96 - Republican Network to Elect Women (RENEW) - \$250.00.  
 04/22/96 - Helms for Senate Committee - \$500.00.  
 04/22/96 - Congressman Chris Cox Committee - \$250.00.  
 05/02/96 - Re-elect Thurmond Committee - \$1,000.00.  
 05/02/96 - Friends of John Warner 96 Committee - \$1,000.00.  
 06/12/96 - Chambliss for Congress Committee - \$500.00.  
 07/12/96 - Sheila Frahm for U.S. Senate Committee - \$250.00.  
 07/18/96 - Coverdell Good Government Committee - \$250.00.  
 09/09/96 - Bereuter for Congress Committee - \$250.00.  
 09/11/96 - Guy Milner for Senate Committee - \$500.00.  
 10/01/97 - Friends of Jim Bunning Committee - \$250.00.  
 03/03/97 - The Tom Sawyer Committee - \$100.00.  
 03/05/97 - Craig for U.S. Senate Committee - \$500.00.  
 05/15/97 - Coverdell Good Government Committee - \$500.00.  
 10/01/97 - Coverdell Good Government Committee - \$250.00.  
 10/20/97 - Republican Party of Virginia - \$150.00.  
 10/30/97 - Coverdell Good Government Committee - \$250.00.  
 11/14/97 - Stevens for Senate Committee - \$250.00.  
 12/04/97 - Rustoven for Senate Committee - \$250.00.  
 05/07/98 - Bob Kerrey for U.S. Senate Committee - \$500.00.  
 06/22/98 - Northern Lights Political Action Committee - \$250.00.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

None.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

To the best of my recollection, everything I have written since coming to Washington more than 34 years ago has been written in the name of clients or public officials for whom I worked. I do not recall anything that has been published in my name. When I was a young man in my mid-twenties, more than 36 years ago, I was a weekly newspaper editor in Milledgeville, Georgia. In this capacity, I routinely wrote news articles, editorials, and a weekly column, but I do not have practical access to these writings.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

June 6, 1998 - Commencement Address - Georgia Military College, Milledgeville, Georgia. [Nominee responded and the information is contained in the committee's executive files.]

August 11, 1999 - U.S. Capitol Historical Society, Washington, DC, Subject: Richard B. Russell as part of a series on the Members of Congress for whom the six Congressional office buildings are named. [Nominee responded and the information is contained in the committee's executive files.]

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

POWELL A. MOORE.

This 23rd day of April, 2001.

[The nomination of Powell A. Moore was reported to the Senate by Senator John Warner on May 1, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 1, 2001.]

## PENDING MILITARY NOMINATIONS

TUESDAY, MAY 1, 2001

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 10:20 a.m., in room SH-216, Hart Senate Office Building, Senator John Warner (chairman of the committee) presiding.

Committee members present: Senators Warner, Inhofe, Santorum, Roberts, Allard, Sessions, Collins, Bunning, Levin, Lieberman, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, and Dayton.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Anita R. Raiford, deputy chief clerk; and Scott W. Stucky, general counsel.

Professional staff members present: Charles S. Abell, Charles W. Alsup, John R. Barnes, Ambrose R. Hock, George W. Lauffer, Patricia L. Lewis, Thomas L. MacKenzie, and Richard F. Walsh.

Minority staff members present: David S. Lyles, staff director for the minority; Peter K. Levine, minority counsel; Creighton Greene, professional staff member; and Michael J. McCord, professional staff member.

Staff assistants present: Beth Ann Barozie, Thomas C. Moore, Jennifer L. Naccari, and Michele A. Traficante.

Committee members' assistants present: Dino L. Carluccio, assistant to Senator Smith; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders and Charles Cogar, assistants to Senator Allard; Arch Galloway II and Scott Douglass, assistants to Senator Sessions; Kristine Fauser, assistant to Senator Collins; Derek Maurer, assistant to Senator Bunning; Menda S. Fife, assistant to Senator Kennedy; Barry Gene (B.G.) Wright, assistant to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; William K. Sutey, assistant to Senator Bill Nelson; and Brady King, assistant to Senator Dayton.

Chairman WARNER. I would like the committee to consider the following nominations for voting and hopefully sending these nominations to the floor.

First, Edward C. Aldridge, to be Under Secretary of Defense for Acquisition and Technology; Dr. Dov Zackheim, to be Under Secretary of Defense, Comptroller; Charles S. Abell, former member of our committee staff, to be Assistant Secretary of Defense for Force Management Policy; Ms. Victoria Clark, to be Assistant Secretary

of Defense for Public Affairs; William J. Haynes II, to be General Counsel to the Department of Defense; and Powell A. Moore, to be Assistant Secretary of Defense for Legislative Affairs.

I advise the committee that we have had hearings on all of them. The record has been before the committee for several days. No questions have been raised by any committee member or anyone else.

We are also ready to consider 773 pending military nominations. These nominations have been before the committee the required length of time. No objection has been raised regarding them.

I ask unanimous consent that we consider these nominations en bloc.

I ask first, Senator Levin, do you have any comment?

Senator LEVIN. No. I would support that and so move.

Senator BUNNING. Mr. Chairman?

Chairman WARNER. Yes.

Senator BUNNING. Mr. Chairman, I would just like to inquire of the 773 military nominations if we have had any adverse material submitted with any of them.

Chairman WARNER. Not the 773, but there is one individual that was a part of the block submitted by the President that has been deleted for further consideration by the committee.

Senator BUNNING. So, all 773 have no adverse information?

Chairman WARNER. That is correct.

Senator BUNNING. OK, thank you.

Chairman WARNER. Any further comment by members of the committee?

[No response.]

If not, all those in favor, say aye.

[A chorus of ayes.]

Opposed?

[No response.]

The ayes have it. The nominations are approved by the committee. They will be sent to the floor. I will be meeting with the Majority Leader in the hopes that we can schedule these at an early date.

I thank you.

[Nominations referred to follow:]

1. In the Army there are 482 appointments to the grade of colonel (list begins with Donald M. Adkins) (Reference No. 160).

2. Rear Admiral Malcolm I. Fages, USN to be appointed to the grade of vice admiral (Reference No. 206).

3. In the USAF there are 55 appointments to the grade of colonel (list begins with Gregory O. Allen) (Reference No. 207).

4. In the ARNG there are 3 appointments to the grade of colonel (list begins with James R. Guise) (Reference No. 208).

5. In the USA there are 2 appointments to the grade of colonel (list begins with Michael Child) (Reference No. 209).

6. In the Marine Corps Reserve there are 5 appointments to the grade of colonel (list begins with Walter T. Ellingson) (Reference No. 210).

7. In the Naval Reserve there are 2 appointments to the grade of captain (list begins with Manuel E. R. Alsina) (Reference No. 211).

8. Rear Admiral Keith W. Lippert, USN to be appointed to the grade of vice admiral (Reference No. 218).

9. In the USAF there are 4 appointments to the grade of colonel and below (list begins with Steven D. Carey) (Reference No. 224).

10. In the ARNG there is 1 appointment to the grade of colonel (Joe L. Smothers) (Reference No. 225).

11. In the ARNG there are 9 appointments to the grade of colonel (list begins with Louis A. Abbenante) (Reference No. 226).

12. In the USMC there are 15 appointments to the grade of lieutenant colonel (list begins with Dennis G. Adams) (Reference No. 227).

13. In the USMC there are 33 appointments to the grade of major (list begins with Charles E. Brown) (Reference No. 228).

14. In the Naval Reserves there is 1 appointment to the grade of captain (David C. Barton) (Reference No. 229).

15. In the USN there is 1 appointment to the grade of lieutenant commander (James W. Hudson) (Reference No. 230).

16. In the USN there is 1 appointment to the grade of lieutenant commander (Sheila C. Hecht) (Reference No. 231).

17. In the USN there is 1 appointment to the grade of lieutenant commander (Paul R. Faneuf) (Reference No. 232).

18. In the USN there are 2 appointments to the grade of lieutenant commander (list begins with Daniel L. Bower) (Reference No. 233).

19. In the USN there are 9 appointments to the grade of lieutenant (list begins with Kyle P. Durand) (Reference No. 234).

20. In the USN there are 17 appointments to the grade of captain and below (list begins with Eduardo C. Cuison) (Reference No. 235).

21. In the USA there are 121 appointments to the grade of colonel and below (list begins with Margretta M. Diemer) (Reference No. 244).

22. Major General Donald A. Lamontagne, USAF to be appointed to the grade of lieutenant general (Reference No. 252).

23. Lieutenant General Lance W. Lord, USAF to be reappointed to the grade of lieutenant general (Reference No. 253).

24. Major General Brian A. Arnold, USAF to be appointed to the grade of lieutenant general (Reference No. 254).

25. Major General Timothy A. Kinnan, USAF to be appointed to the grade of lieutenant general (Reference No. 255).

26. Major General Richard V. Reynolds, USAF to be appointed to the grade of lieutenant general (Reference No. 256).

27. Lieutenant General William J. Begert, USAF to be appointed to the grade of general (Reference No. 257).

28. Major General Garry L. Parks, USMC to be appointed to the grade of lieutenant general (Reference No. 259).

TOTAL: 773

[The nomination reference of Edward C. Aldridge follows:]

NOMINATION REFERENCE AND REPORT

Powell A. Moore, of Georgia, to be an Assistant Secretary of Defense, vice John K. Veroneau.

[Whereupon, at 10:22 a.m., the committee recessed, to resume in open public hearing.]

**NOMINATIONS OF DR. DAVID S.C. CHU TO BE UNDER SECRETARY OF DEFENSE FOR PERSONNEL AND READINESS; THOMAS E. WHITE, JR., TO BE SECRETARY OF THE ARMY; GORDON R. ENGLAND TO BE SECRETARY OF THE NAVY; DR. JAMES G. ROCHE TO BE SECRETARY OF THE AIR FORCE; AND ALFRED V. RASCON TO BE DIRECTOR OF SELECTIVE SERVICE**

THURSDAY, MAY 10, 2001

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 10:06 a.m., in room SD-342, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, McCain, Smith, Inhofe, Allard, Hutchinson, Collins, Levin, Cleland, Bill Nelson, and Carnahan.

Other Senators present: Senators Kay Bailey Hutchison, Phil Gramm, Paul Sarbanes, and Barbara Mikulski.

Also present: Representative Roscoe Bartlett.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; and Scott W. Stucky, general counsel.

Professional staff members present: George W. Lauffer, Patricia L. Lewis, Thomas L. MacKenzie, Cord A. Sterling, and Richard F. Walsh.

Minority staff members present: David S. Lyles, staff director for the minority; Madelyn R. Creedon, minority counsel; Gerald J. Leeling, minority counsel; Peter K. Levine, minority counsel; Daniel J. Cox, Jr., professional staff member; Creighton Greene, professional staff member; and Michael J. McCord, professional staff member.

Staff assistants present: Kristi M. Freddo, Suzanne K.L. Ross, and Michele A. Traficante.

Committee members' assistants present: Christopher J. Paul, assistant to Senator McCain; Margaret Hemenway, assistant to Senator Smith; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Michael P. Ralsky, assistant to Senator Hutchinson; Scott Douglass, assistant to Senator

Sessions; Kristine Fauser, assistant to Senator Collins; David Young, assistant to Senator Bunning; Andrew Vanlandingham, assistant to Senator Cleland; Elizabeth King, assistant to Senator Reed; and Peter A. Contostavlos, assistant to Senator Bill Nelson.

**OPENING STATEMENT OF SENATOR JOHN WARNER,  
CHAIRMAN**

Senator INHOFE. Mr. Chairman, I chair the Transportation and Infrastructure Committee, one of the committees you used to chair, and we had already set for this exact time our reauthorization hearing, so there are several who will be going back and forth. We regret it. I just wanted to mention that.

Chairman WARNER. We also apologize to many who desired to be in this hearing room. We do the best we can here in the Senate, and due to the number of hearings we are having, we were unable to get a larger room. Nevertheless, members of the committee welcome this distinguished group of nominees. I have visited with all and congratulations are going to our President and Secretary of Defense.

We have Dr. David Chu, who has been nominated to be Under Secretary of Defense for Personnel and Readiness; Thomas E. White, Jr., to be Secretary of the Army; Gordon R. England, to be Secretary of the Navy; Dr. James G. Roche, to be Secretary of the Air Force; and Alfred V. Rascon, to be Director of the Selective Service. We welcome you all.

Dr. Chu, I understand you have here members of your family. Would you kindly introduce them and ask them to stand up, please.

Dr. CHU. Thank you, Mr. Chairman. My wife; our daughter, Carolyn; and our son, Jonathan.

Chairman WARNER. We welcome you this morning. These are very important hearings. They are landmark events not only in the lives of nominees, but the families. Families are very much a part of the team that works with the Secretary of Defense. I had breakfast with the Secretary earlier this morning, and he is full of energy. He suggested I get back here in time to get started. I am anxious to have you join him.

Mr. White, I understand that you have family here, too, if you would be kind enough to introduce them.

Mr. WHITE. Thank you, Mr. Chairman. I am joined by my wife, Susan, and our daughter, Kate.

Chairman WARNER. Mr. England, I understand you have your wife.

Mr. ENGLAND. Yes, sir, I do. I have my wife, Dottie, with me. Thank you, sir.

Chairman WARNER. We welcome you.

Dr. ROCHE.

Dr. ROCHE. Thank you, Mr. Chairman. I have my bride, Diane, and our daughter, Heather. Thank you, sir.

Chairman WARNER. Mr. Rascon.

Mr. RASCON. Sir, I have my wife, Carol; my daughter, Amanda; and my son, Alan.

Chairman WARNER. I am going to put the balance of my statement into the record, and following my statement, the prepared

statements of Senators Thurmond, Santorum, and Allard. We want to move here quickly this morning. Generally just a summary of the distinguished biographies that each of you have and bring to bear in these positions.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

The committee will come to order.

The committee meets today to receive testimony concerning five very important nominations.

I am pleased that we have before the committee this morning the nominees to serve as the civilian leaders of all three military departments an important part of the fine "board of directors" Secretary Rumsfeld is assembling to help him run the Department. We are also pleased to have two nominees for other key positions. Assuming Senate confirmation—which I support—you will be joining an excellent, experienced team at the Pentagon.

Dr. David S.C. Chu has been nominated to be Under Secretary of Defense for Personnel and Readiness, Thomas E. White, Jr., to be Secretary of the Army, Gordon R. England to be Secretary of the Navy, Dr. James G. Roche to be Secretary of the Air Force, and Alfred V. Rascon to be Director of Selective Service.

We welcome the nominees and their families.

Dr. Chu, I understand that your wife, Dr. Laura Tosi, your daughter Carolyn, and your son Jonathan are here with you today.

Mr. White, I understand that your wife Susan and daughter Katie are here with you today.

Mr. England, I understand that your wife Dottie is with you today.

Dr. Roche, I understand that your wife Diane and daughter Heather are here with you today.

Mr. Rascon, I understand your wife Carol Richardson-Rascon, daughter Amanda, and son Alan are here with you. I am also informed today is Alan's 10th birthday, so please accept my congratulations.

Family support is critical to the success of individuals in senior positions in our government and we appreciate the support and sacrifices of the families of these distinguished nominees.

Dr. Chu you are returning for a second tour at the Pentagon. Dr. Chu began his public service career as the Director of Program Analysis and Evaluation in the Office of the Secretary of Defense during the Reagan administration. He was then appointed Assistant Secretary of Defense for Program Analysis and Evaluation by President George Bush Senior. Dr. Chu is currently the Vice President of RAND's Army Research Division and Director of the Arroyo Center. He has had a distinguished career in both the public and private sector.

Thomas E. White, Jr., also possesses both a notable private sector career and an equally distinguished Army career, which began as a commissioned officer upon graduation from West Point in 1967. He then went on to serve his country in uniform for 23 years, including 2 years of service in combat operations in Vietnam. He retired as a Brigadier General in 1990. He is currently serving as the Vice Chairman at Enron Energy Services.

Gordon R. England has had a distinguished career in business, beginning as an engineer working on the Gemini space program with the Honeywell Corporation. He then held several important positions with the General Dynamics and Lockheed Martin Corporations working on programs vital to the armed services. He has served as a member of the Defense Science Board and on the USO's Board of Governors. Mr. England recently departed the position of Executive Vice President of General Dynamics, where he served for 4 years.

Dr. James G. Roche began his career with 23 years of active duty service in the Navy. He commanded the destroyer U.S.S. *Buchanan* (DDG-14), and held senior policy positions within the Departments of Defense and State prior to retiring in 1983 at the rank of captain. I recall with pleasure his service on this committee as Minority Staff Director under Senator Scoop Jackson. He is currently the Corporate Vice President and President of the Electronic Sensors and Systems Sector with the Northrop Grumman Corporation. I am pleased such a distinguished individual would once again answer the call to public service.

I extend a particularly warm welcome to our final nominee, Alfred V. Rascon, a recipient of the Congressional Medal of Honor. In 1966, as an Army medic, "Doc" Rascon demonstrated extraordinary valor in saving the lives of his fellow soldiers during combat in Long Khanh, Vietnam. It is a testament to his bravery that his

former platoon mates, upon hearing that Mr. Rascon's nomination for the Medal of Honor had been lost, doggedly pursued it to fruition. He has subsequently had a distinguished career serving his country as a Special Agent with the Immigration and Naturalization Service and as an Intelligence Operations Specialist with the Drug Enforcement Agency. Most recently he served as Inspector General of the Selective Service.

Our nominees have a wealth of experience, and I believe each of them will excel in the positions to which they have been nominated. We welcome our nominees and their families and look forward to their comments and responses today.

---

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman.

Mr. Chairman, I join you and the ranking member, Senator Levin, in welcoming our distinguished group of nominees. I am especially pleased that we are considering the nominations to fill the positions of the service secretaries. As the Department is finalizing the budget for the fiscal year 2002, it is essential that a secretary that can speak with total authority represents the service at the bargaining table.

Dr. Chu, I want to welcome you back before the committee. You have a distinguished record and have been a voice to be reckoned with during your prior tour in the Department of Defense. I hope you will not shirk from speaking out after you are confirmed to the important position of Under Secretary of Defense for Personnel and Readiness.

Dr. Roche, Mr. England, Mr. White, I had the pleasure of meeting with each of you and want to reemphasize my support for your nominations. You will be taking the helm of your respective services at the critical juncture during which President Bush and Secretary Rumsfeld will transform our National Security Strategy and military services to meet the challenges of an ever-changing world. I am confident you will instill a new era of doing business within the Department and reverse the declining readiness and quality of life.

Mr. Rascon, the Selective Service System is the only time-proven means of mobilizing this Nation's manpower for a significant crisis. I view the Selective Service as the country's third tier of defense after the volunteer Active and Reserve Forces. Your challenge will be no less great than that of the service secretaries.

Mr. Chairman, I join you in congratulating each of our nominees. I also want to thank them for their willingness to take on the challenges of the position for which they have been nominated. More importantly, I want to express my appreciation for both the professional and personal sacrifices they are making to serve our Nation and the men and women who proudly wear the uniforms of the United States military.

Thank you, Mr. Chairman.

---

PREPARED STATEMENT BY SENATOR RICK SANTORUM

Chairman Warner, thank you for convening this important hearing. As our committee has heard from both the Secretary of Defense and the Deputy Secretary of Defense, the confirmation process has been painstakingly slow. Today's hearing will go a long way towards providing top-flight civilian leadership in key positions in the Pentagon.

As we have heard, President Bush and Secretary of Defense Rumsfeld have argued that the military must be more efficient in buying weapons and providing health care, housing and other services to its personnel. For that reason, the President's nomination of several former business executives for positions within the Pentagon is widely viewed as a first step towards new management policies.

This philosophy is apparent with the nomination of Jim Roche to be Secretary of the Air Force, Gordon England to be Secretary of the Navy, and Thomas White to be Secretary of the Army. As the Chairman of the Airland Subcommittee, I have frequently heard that the Pentagon doesn't understand or appreciate the needs of our defense industrial base. Each of the service secretary nominees has experience in the defense industry and is well-equipped to work with our industry as we begin the process of transforming our military capabilities to meet 21st century threats.

While not members of industry, Dr. Chu and Mr. Rascon have impressive public sector service records and are by all accounts well-qualified for the positions to which they have been nominated.

I look forward to a productive working relationship with each of today's nominees.

## PREPARED STATEMENT BY SENATOR WAYNE ALLARD

Thank you Mr. Chairman.

I want to thank all of you for coming here today. The duties that you have agreed to accept responsibility for are very important to the United States and I appreciate your willingness to take them on. I look forward to hearing your perception of the current readiness and relevance of our forces and hearing your thoughts on updating and improving them.

As the Strategic Subcommittee Chairman, I am particularly interested in your concerns as they relate to our strategic forces and their ability to defend the "homeland" and support the CINCs.

Every time my pager goes off I am reminded of the importance of space operations to our economy and to the defense of this great nation. Earlier this week Secretary Rumsfeld provided us with his assessment of the report of the Commission to Assess United States National Security Space Management and Organization. I am very pleased with Secretary Rumsfeld's recommendations. Many of these recommendations were encouraged by the NRO Commission and Space Commission and stressed by me during his confirmation hearing. He is recognizing the long-term security needs of our Nation and unlike some Senators I think this is the smart thing to do.

So, gentlemen, I thank you for your willingness to serve, and I look forward to hearing what you have to say.

Chairman WARNER. Senator Levin.

**STATEMENT OF SENATOR CARL LEVIN**

Senator LEVIN. Mr. Chairman, I am going to put my statements about each of our nominees into the record as well. They are well-qualified, and I look forward to having them at this hearing. I also want to add my thanks to their families for the contributions that they will be making to the service of each of these nominees. I believe also if I could just say one additional quick comment that Mr. Rascon is a Medal of Honor winner, is that correct?

Mr. RASCON. Yes, sir.

[The prepared statement of Senator Levin follows:]

## PREPARED STATEMENT BY SENATOR CARL LEVIN

Mr. Chairman, I join you in welcoming our nominees to the committee this morning. I also want to extend a warm welcome to their families who are with them today.

Dr. Chu, nominated to be the Under Secretary of Defense for Personnel and Readiness, comes to us from Rand. Rand is known for high-quality, objective research on national security issues. Dr. Chu, once you are confirmed, you change from the position of making recommendations in a more or less academic environment to a position of putting those recommendations into practice.

Mr. White comes to us from the Enron Corporation. *Fortune* magazine has named Enron "America's Most Innovative Company" for 6 consecutive years. Mr. White, I hope that you bring that same innovation to the Army as you lead it through its transformation. I also want to congratulate Mr. White for having the good sense to be born in Detroit, Michigan. It is always nice to see native Michiganders appointed to high positions.

Mr. England comes to us from the General Dynamics Corporation, where he recently served as vice president and where he was responsible for two major sectors of the corporation. His biography reflects his steady hand at managing many different programs. Mr. England, your experience at managing these diverse programs will serve you well as you manage the air, land, and sea functions of the Navy.

Dr. Roche comes to us from Northrop Grumman. He has quite a list of notable accomplishments, culminating in his service as corporate vice president and president, Electronic Sensors and Systems Sector of Northrop Grumman. I'm convinced that the single most important experience that prepared him for his positions of great responsibility was his service as the Democratic Staff Director for this committee, where he was trained by Senators Scoop Jackson and Sam Nunn.

Mr. Rascon recently retired as the Inspector General of the Selective Service System. This service should give him great insight into the responsibilities of the position for which he has been nominated. I would be remiss if I didn't mention that

Mr. Rascon has been awarded the Medal of Honor for acts of valor as an Army medic in Vietnam. Mr. Rascon, it is indeed an honor to be here with you today.

Mr. Chairman, we have five well-qualified candidates for important positions that the President is anxious to fill. I look forward to hearing from our nominees and acting on their nominations in the near future. Thank you.

Senator LEVIN. I just probably shouldn't say anything about any of these nominees because I have good things to say about all of them. It is always an honor to be in the presence of someone who has shown the kind of extraordinary valor that is reflected in the Medal of Honor.

Mr. RASCON. Thank you very much, sir.

Chairman WARNER. I certainly associate myself with those remarks. I know the Secretary well. He wishes you well this morning.

Mr. RASCON. Thank you very much.

Chairman WARNER. My colleagues, do you have any comments? Then we will ask our distinguished colleague, the senior Senator from Maryland, to begin.

#### **STATEMENT OF PAUL S. SARBANES, U.S. SENATOR FROM MARYLAND**

Senator SARBANES. Thank you very much, Mr. Chairman, members of the committee. Recognizing the time constraints you are operating under, to which the Chairman alluded, I'll be very brief. I have to take a couple of moments to say good things about Jim Roche. This is an absolutely superb nomination, and I can't think of anyone better qualified to be the Secretary of the Air Force.

He has had an incredibly distinguished career, including more than two decades of service in the United States Navy. He was even the Democratic staff director of this committee at one point, so for all the staffs sitting back there at the chairs, this is what eventually might transpire.

He has done an absolutely superb job at Northrop Grumman. He has actually received a Ph.D. in management from the Harvard Business School. He has put a lot of those practices on line in his corporate work at Northrop Grumman for almost two decades now and he has done what is recognized in the corporate world as an outstanding job of leadership.

The people at Northrop Grumman in our State all testified to the superb example that he sets, and I can't tell you how pleased we are. We are going to lose him, and we regret that, lose him in the sense of having him as a leading corporate citizen in the State, but of course, the Nation will gain tremendously.

One of the things he does is he takes his business colleagues around, and instructs them on a lot of military command, including visiting famous battlefields. Jim's been quoted as saying the business relevance of studying military command is clear. No soldier ever lost a battle. Officers lose battles. No employee ever bankrupted a company. Executives ruin companies. That is just one example of the kind of innovative thinking that he has brought to his responsibilities. The Air Force, the Nation, and the country are going to benefit greatly from his leadership, and I have just come this morning to endorse him in a the very strongest terms.

Thank you very much, Mr. Chairman.

Chairman WARNER. We also have the other distinguished Senator from Maryland with us. Senator Mikulski. We welcome you.

**STATEMENT OF BARBARA A. MIKULSKI, U.S. SENATOR FROM MARYLAND**

Senator MIKULSKI. Good morning, Senator Warner, Senator Levin, and other members of the committee. I am here to enthusiastically introduce Dr. Jim Roche to the committee, as well as also introduce Alfred Rascon, who is also a brother Marylander.

In terms of Dr. Roche's nomination, Senator Sarbanes has outlined the experience. In knowing Dr. Roche as both a corporate executive, as well as a real citizen of Maryland through his civic engagement, I was struck in getting to know him by his extensive background.

He has great knowledge of the military. He has combat experience, both in the military and then in his role as a Senate staffer on both the Intelligence and Armed Services Committees. That is another kind of combat experience. It will be great to have someone who understands the role of Congress and brings great expertise to the position.

What I have noticed, and also in our many conversations, is that Dr. Roche understands the issues facing today's military, as one who served and yet at the same time had to provide the new technologies, the new smart weapons. He understands the tremendous demands on our military and the changing face of military families. He has been acknowledged as one of the most creative intellectuals in the aerospace community by his colleagues and by industry analysts. Also in terms of his own community involvement, he has absolutely engaged in not only helping those left out and left behind by groups like United Way, but as a mentor, as an involver in higher education to really look at how we can raise this next generation of young people to be the most intellectually capable and dedicated to service.

I asked Dr. Roche a few weeks ago why he was considering leaving his job as an executive to take this. I said, you are in charge of your life. You are in charge of your calendar. You have worked hard all of your life, and you know what he said? He says you have to have a burning affection for the United States of America, and for the kids who we ask to go to war, and I'd like to play a role for them. So we think he will be an outstanding Secretary of the Air Force and look forward to introducing him and voting for him.

Also, Alfred Rascon comes to you today as a Congressional Medal of Honor winner. As a former DEA agent, as a resident of Maryland who has been active in many ways in the leadership of our Nation and our country, he is a defender. He is a protector. He is a fighter. The Selective Service needs to be re-energized. As the appropriator on the Appropriations Committee's VA-HUD Subcommittee, I look forward to working with him to re-energize it. We believe his leadership will rekindle even a greater sense of what young people need to have as service to the Nation.

So as the junior Senator from Maryland, I couldn't be prouder of bringing these two men to your attention.

Chairman WARNER. You certainly come through in your statement. The committee welcomes our two colleagues from Maryland

and thank you for your valuable contributions. I note the presence of the distinguished senior Senator from the State of Texas, Mr. Gramm.

**STATEMENT OF PHIL GRAMM, U.S. SENATOR FROM TEXAS**

Senator GRAMM. Mr. Chairman, thank you very much. It's a great honor for me to be back before the Armed Services Committee, a committee which I had the privilege to serve on for 6 years.

I am here to introduce and recommend a Texan, Tom White, to this committee. Tom is Vice Chairman of Enron Energy Services and leads a management team that runs the largest retail energy business in America.

He is a 1967 engineering graduate of the United States Military Academy. He has a Masters of Science degree in operations research from the U.S. Naval Postgraduate School. He attended the War College. He served with distinction in Vietnam. He retired as a general officer before coming to Enron, and he has that rare combination of practical experience in the military and proven leadership in the private sector of the economy. I think it is fair to say, Mr. Chairman, that Tom White is one of the most outstanding managers in corporate America.

I thanked him earlier this morning for being willing to give up tremendous earning power to come and serve the country, and I want to commend him to you. He is what we would call in Texas a top hand. He is the kind of guy you want when you want something done. I have no doubt in my mind, Mr. Chairman, that he will do an outstanding job as Secretary of the Army.

He is a person that knows how to manage people and resources, and when our job is taking the money we have and building the finest Army we can build with those resources, I don't have any doubt in my mind that Tom White can do an outstanding job, and therefore I commend him to you.

Chairman WARNER. Thank you, Senator Gramm.  
Congressman Bartlett.

**STATEMENT OF ROSCOE G. BARTLETT, U.S. REPRESENTATIVE FROM MARYLAND**

Mr. BARTLETT. Thank you very much. I have a statement for the record if that might be entered.

Chairman WARNER. Without objection, we will include it.  
[The prepared statement of Mr. Bartlett follows:]

PREPARED STATEMENT BY REPRESENTATIVE ROSCOE BARTLETT

Members of the Senate Armed Service Committee, I take great pleasure in introducing to you President Bush's nominee for Director of the Selective Service, Alfred Rascon. He is also one of my most honored and decorated constituents.

Alfred V. Rascon is a Medal of Honor Recipient, who was born in Chihuahua, Mexico. His parents immigrated to the United States, settling in Oxnard, California, where Mr. Rascon attended elementary and high school. His strong desire to give back to our country led Alfred to enlist in the U.S. Army. Mr. Rascon served our country faithfully during the Vietnam War, and his heroic actions during his service there resulted in presentation of this Nation's highest award for valor, the Medal of Honor. It was belatedly presented to him by former President Clinton on February 8, 2000.

Mr. Rascon received the Congressional Medal of Honor for his gallantry during the Vietnam War. He served as a Specialist Four medic to a reconnaissance platoon in the 173rd Airborne Brigade. On March 16, 1966, Mr. Rascon's platoon came

under heavy fire from numerically superior force while moving to reinforce another battalion. Disregarding his own safety, Mr. Rascon ran to assist his fellow soldiers under heavy enemy fire. He was wounded numerous times. Three separate times, he fell on fellow soldiers using his own body to shield them from heavy machine gun and grenade attacks. He recovered ammunition, so that his comrades would not be overrun. Though severely wounded, he continued to search for other wounded comrades to assist. He later refused aid for himself or evacuation and continued to provide assistance to his fellow soldiers until he collapsed.

The paperwork for Mr. Rascon's original recommendation for the Congressional Medal of Honor was lost in the Pentagon. It was only recognized recently due to the efforts of members of his platoon, who testify to this day that they are alive only because of Mr. Rascon's heroism. I was pleased to assist in remediating this problem and even more pleased to learn that he has been nominated for Director of the Selective Service.

From 1983 to the present, Mr. Rascon has served honorably as a government civil servant. He has worked with Department of Justice, Drug Enforcement Administration, INTERPOL (U.S. National Central Bureau), and the Immigration and Naturalization Service. He recently retired as Inspector General of the Selective Service System, headquartered in Rosslyn, Virginia. He has received myriad awards and commendations from U.S. and foreign agencies for his civil and military service. Alfred Rascon truly embodies the values that make America great and would be a valuable asset to this administration.

We live in a world today where too many of the role models of our children commit notorious acts or act totally out of self-interest. It is men such as Alfred Rascon who show us what role models are supposed to be. He regarded the lives of others as more important than his own and acted totally out of his care for them. He did not seek attention when his paperwork was lost in the Pentagon. Indeed, in no way has he ever tried to glorify himself or take credit for his actions. His friends and those whose lives he had saved in Vietnam had to bring to light the fact that his heroism had gone unrewarded by his country.

We must constantly remind ourselves and educate our children that we are privileged to live in the greatest and most free country on Earth only because of the service and sacrifices of brave individuals, such as Alfred Rascon. Our country can never truly reward this man or those like him who have sacrificed so much for us. The only thing we can do is to never forget them.

We are very fortunate to have a man like Mr. Rascon serving our country. His service to our country, both in the military and as a civil servant, has been exemplary. I would like to take this opportunity to thank him for his service and for his willingness to continue his service to our Nation.

I would also like to thank the committee and Alfred for allowing me to introduce him today.

Mr. BARTLETT. Thank you very much. Let me just speak briefly then.

I am really pleased today to be able to introduce to you Alfred Rascon, who is not only a great American hero, he is also my constituent. He was born in Mexico, came to this country with his parents. Before he was a citizen of this country because he appreciated so much what he found here, he entered our armed services and served in Vietnam. While there as a medic, the group he was with was involved in a heavy firefight, and although he was a medic, he threw his body over the bodies of several of his comrades to protect them. He went out and retrieved a gun and ammunition and he probably was credited with saving many lives, not just by his heroic action in shielding them with his body, but also retrieving guns and ammunition so that they had more firepower.

The paperwork for his Medal of Honor was lost. Never once did he come forward to say "why wasn't I recognized for this." It was his buddies who came forward years later to make the statement, "why wasn't he recognized." I am pleased to have had a part in remedying that inequity and just a couple of years ago, I attended the Medal of Honor ceremony where he was given the Medal of

Honor and you know, what a great individual and what an opportunity we have.

Now I am really pleased to introduce him to you as the head of the Selective Service. He has exemplified all of those things that our forefathers came here to fight for. We talk about role models for our kids today. Many of our role models fail us. Alfred Rascon has not failed us. He is a role model we can all be proud of and I don't think we could do better for an individual to head this very important service. Thank you very much.

Chairman WARNER. Congressman Bartlett, thank you for joining us and for giving us those facts. There is not a person in this room or anyone watching the proceeding from afar that isn't humbled and deeply moved by being in the presence of this distinguished American hero.

Thank you.

We will now proceed to have the opening statements from our witnesses. Senator Levin and I have reviewed your policy questions. Senator Levin and I also as a matter of our routine reviewed the communications from the White House counsel with regard to your backgrounds, and we find all that material in order. Any question on that?

Senator LEVIN. No.

Chairman WARNER. Dr. Chu, if you will proceed.

**STATEMENT OF DR. DAVID S.C. CHU, NOMINEE TO BE UNDER SECRETARY OF DEFENSE FOR PERSONNEL AND READINESS**

Dr. CHU. Mr. Chairman, I have no statement for the record but with your permission, I would like to make some brief openings remarks.

Mr. Chairman, Senator Levin, members of the committee, it is indeed an honor to appear before you this morning as the President's nominee for Under Secretary of Defense for Personnel and Readiness.

I would like to thank the President for nominating me for this position and Secretary Rumsfeld for his guidance, confidence, and support. I'd also like to thank this committee for all it has done over the years for the men and women of our armed forces. If I am confirmed, I look forward to working with the committee to meet the many challenges in front of us. Finally, I'd like to thank my family for its support as I have pursued earlier and may now again pursue a career in public service. I am very grateful to them for their affection and their willingness to support my service. Thank you, sir.

Chairman WARNER. Thank you, Dr. Chu. The committee is privileged this morning to have joining us the distinguished junior Senator from the State of Texas and I'll be happy to receive your statement.

**STATEMENT OF KAY BAILEY HUTCHISON, U.S. SENATOR FROM TEXAS**

Senator HUTCHISON. Thank you, Chairman Warner. When the hearing was delayed, I was chairing a meeting of the Aviation Subcommittee.

Chairman WARNER. I recognize that. We are glad you are here.

Senator HUTCHISON. I appreciate so much your taking me out of order so that I can——

Chairman WARNER. You are very much in order. The senior Senator just left the room.

Senator LEVIN. Your timing is really perfect in the matter.

Senator HUTCHISON. Since Senator Rockefeller is now in charge of the Senate Aviation Subcommittee, I need to return fast. No telling what's going to come out of our subcommittee today. Seriously, I am so pleased to be here for my friend, Gordon England, who has been nominated for Secretary of the Navy. He and his wife Dottie have been long-time friends of mine in Texas.

But more important than that, he is the most qualified person to serve in this position and in the Pentagon because of his long-time experience and expertise in engineering and just the equipment that we are going to need as we go into the next century.

I first came to know him when he headed General Dynamics and later Lockheed, where the world's best tactical fighter is made, the F-16. That program, of course, has been a model for Air Force procurement. I am confident that he will bring the same leadership to the Navy. After Gordon left Lockheed, he became Executive Vice President of General Dynamics Corporation, responsible for information systems and international sales.

During his career, which began as an engineer on the Gemini space program, and as an avionics design engineer, he served in many positions within the industry, including President of General Dynamics Land Systems, producing land combat vehicles, and President of its Fort Worth aircraft company and Executive Vice President of the Combat Systems Group.

Mr. England's wealth of knowledge and experience alone more than qualifies him for this new responsibility. But more important even than all of that is his personal commitment to our strong national security, his vision, his character. Throughout his career, he has not only been able to overcome challenges, but to bring a caring and empathetic approach in dealing with the work force.

During the period of difficult cutbacks in the Fort Worth defense industry, he helped to create the city's business assistance center, which helps people start or expand businesses. I think in the coming years, the Pentagon is going to have to make hard, tough choices about tactical aviation, shipbuilding, and the host of modernization and transformation issues. Here in Congress, it is critical that we have trust and confidence in the leadership making these calls. Gordon England is precisely the kind of visionary leader that the Navy needs, and I am very honored that he has been nominated by the President and given that confidence and I assure you that he will serve with distinction.

Chairman WARNER. I thank the Senator from Texas very much for that valuable contribution.

Senator HUTCHISON. Mr. Chairman, could I just take leave for 1 minute to mention Tom White. Tom is not a Texan exactly, but he has chosen God's country for the last 10 years. So I want to say that he is not technically a Texan.

Senator LEVIN. He was born in Detroit, by the way, so he left God's country.

Senator HUTCHISON. He left God's country as soon as he could, Senator Levin. But seriously, he will be an outstanding Secretary of the Army. He is going to be introduced by others as well as you, Senator Levin. But he has had a wonderful military career. He graduated from West Point, rose to the rank of Brigadier General and I can't think of a better person to be entrusted in the position of Secretary of the Army.

Thank you.

Chairman WARNER. Thank you very much, Senator.

Mr. White.

**STATEMENT OF THOMAS E. WHITE, JR., NOMINEE TO BE  
SECRETARY OF THE ARMY**

Mr. WHITE. Chairman Warner, Senator Levin, members of the Armed Services Committee, I am deeply honored and privileged to appear before this committee. I am also extremely grateful to the President and the Secretary of Defense for the confidence and the trust they have shown in nominating me to serve as the 18th Secretary of the Army.

Mr. Chairman, I sincerely appreciate your very kind introduction and that of Senator Gramm and Senator Hutchison, and especially the introduction of my wife, Susan, and our daughter, Katie, who are here with us today. They, along with our two sons, Tommy and Chuck, are my supporting foundation as we contemplate this new phase in our lives.

Mr. Chairman, I look forward to any questions you and the committee have for me concerning this nomination. I ask that my written opening statement be submitted for the record so that we might have more time for discussion.

[The prepared statement of Mr. White follows:]

PREPARED STATEMENT BY THOMAS E. WHITE, JR.

Chairman Warner, Senator Levin, members of the Armed Services Committee, I am deeply honored and privileged to appear before this committee. I am also extremely grateful to the President and Secretary of Defense for the confidence and trust they have shown in me by nominating me to serve as the 18th Secretary of the Army.

Mr. Chairman, I sincerely appreciate your very kind introduction, especially the introduction of my wife, Susan, and our daughter, Katie. They, along with our two sons, Tommy and Chuck, are my supporting foundation as we contemplate this new phase in our lives.

If confirmed, this will be my first opportunity to serve in the Pentagon in a position subject to confirmation by this committee. I am fortunate to have had other valuable experiences in the Army, in the Pentagon, and in senior leadership positions in industry that will allow me to bring a thorough knowledge of the Department and an understanding of best business practices to the very important responsibilities of the office for which I have been nominated.

During my 23 years of active Army service, which included two tours in Vietnam, command of the 11th Armored Cavalry Regiment in Germany, a number of assignments on the Army Staff, and finally, duty as the executive assistant to then Chairman of the Joint Chiefs of Staff, General Powell, I personally witnessed many changes in the Army.

I saw the Army's low points consistently counterbalanced by the dedication, courage, and commitment of our soldiers. I saw the Army right-size and down-size. I saw and participated in the transformation of our Army from the Vietnam Army to the Cold War Army. Our Army today is once again an Army in transformation, as it must be, to meet our important responsibilities for the security of our Nation in the new century. Seen in the context of the 225-year history of our Army, this imperative to change is not new.

I would like to add however, that my most enduring lessons over the years were provided by the individual sacrifices and contributions of the American men and women I was privileged to lead, in peace and in war. We have a very serious obligation to all of them—active, reserve, guard, civilian, and veteran—for they are the foundation of every capability we pursue. As the President reminded us, peace is earned by the hard and often dangerous work of our men and women in uniform. The old adage that people are not “in the Army,” they “are the Army” has never been more true. Taking care of people is a sacred duty I will bear if confirmed as Secretary.

During their confirmation hearings, both Secretary Rumsfeld and Deputy Secretary Wolfowitz eloquently described the changes our world, our Nation and our military have undergone in the last quarter century. They also described the President’s three national security goals and the five key supporting objectives of the Department of Defense. I am fully committed to these goals and objectives and will lead the Army’s efforts to ensure they are integrated with our sister services and completely accomplished.

I would like to share with this committee the objectives I will pursue in support of the President and the Secretary of Defense, as we work together to make the Army’s vision a reality.

The first objective is to invest in people. We must attract, develop and retain America’s best and brightest. We must provide for the quality of life and well being of soldiers, Department of Defense civilians, veterans, and their families. We must manage personnel turbulence and improve the predictability and stability in the lives of soldiers and families. We must expand and develop educational opportunities to promote the continuous personal and professional learning required to take maximum advantage of technological advances. We must continue to make the diversity of our people a competitive advantage. We must achieve high-quality standards for installations and housing, through a series of initiatives such as the Army’s Residential Communities Initiative. Finally, we must advance the development of bold and innovative leaders. In short, there is no more important investment than our investment in people—it is an imperative.

The second objective is to assure readiness. American forces have always proven their unflinching ability to adapt to new conditions, stretch limited resources to sustain operations over extended periods of time, and always . . . always . . . accomplish their mission. Too often however, we have paid a high price in human life during the initial phases of almost every combat operation because we were not ready for the changes we faced. Today, the pace of change is faster and conditions more uncertain than ever. Assuring readiness today means a full commitment to modernizing our equipment and weapons to maintain the qualitative edge afforded by advances in technology, recapitalizing the systems we need in the near- and mid-term, fully integrating the Active and Reserve components, fully manning our combat and support units, managing the mission cycle of units to improve the operational and personnel tempo of our people and systems, and improving our ability to operate in a joint and combined arena. I am committed to readiness in the broadest sense.

The third objective is to transform the entire Army. Transformation encompasses every aspect of our Army. It is more than merely divesting ourselves of obsolete systems and purchasing new ones. It is more than just an interim armored vehicle, or a beret, or a Future Combat System. Every aspect of the Army—doctrine, organization, training, leadership, materiel and equipment, recruiting and advertising, acquisition, infrastructure, and much more—must all change together in a holistic manner. The force characteristics we require to maintain strategic dominance—responsiveness, deployability, agility, versatility, lethality, survivability, and sustainability—can only be achieved if we transform the entire Army—and we will.

The final objective is adopting sound business practices. The first three objectives I mentioned can be accomplished—for a price. But that price must be affordable. We must share the burden of achieving the military capabilities America needs and do so in an affordable manner. To that end I will take a hard look at opportunities for increased outsourcing and privatization of non-core functions. We owe it to every American to improve the manner in which we use our resources. We owe it to every American to give our soldiers the capabilities they need to fight, win, and live to fight again.

Mr. Chairman, I thank you for the opportunity to testify today and for the committee’s consideration of my nomination. Let me close by saying once again how honored I am to have been nominated by President Bush for this position. If confirmed, I pledge to do my utmost to fulfill the trust and confidence placed in me by the President, the Secretary of Defense, and the men and women of our Army.

Chairman WARNER. Your statement and the statements of all will be admitted in their entirety in today's record.

Mr. WHITE. Thank you, Mr. Chairman.

Chairman WARNER. Mr. England.

**STATEMENT OF GORDON R. ENGLAND, NOMINEE TO BE  
SECRETARY OF THE NAVY**

Mr. ENGLAND. Mr. Chairman and members of the committee. It is my honor to be here today to seek confirmation as the 72nd Secretary of the Navy. I want to thank Senator Hutchison for being here and for her kind words. I would also like to express my appreciation to the President and Secretary Rumsfeld for this opportunity to serve our Nation, our sailors, and our marines.

I fully support their efforts to build a military more relevant to the threats and opportunities of the 21st century. If confirmed, I will work closely with this committee and Congress in bringing about this transformation and in ensuring the security of our great country. I thank you for your kind attention. I do look forward to your questions, and Mr. Chairman, I do have a prepared statement for the record. Thank you.

[The prepared statement of Mr. England follows:]

PREPARED STATEMENT BY GORDON R. ENGLAND

Mr. Chairman, members of the committee, it's my distinct honor to appear before you today in seeking confirmation as the 72nd Secretary of the Navy. I also want to express my appreciation to the President and to Secretary Rumsfeld for this opportunity to serve our Nation and our sailors and marines. I fully support the President and the Secretary of Defense in their efforts to build a military more relevant to the threats and opportunities of the 21st century. Should I be confirmed, I look forward to working with this committee and Congress to bring about this transformation within the Department of the Navy.

If confirmed, I plan to initiate four strategic thrusts in support of the President's vision. These initiatives center on combat capability, people, technology, and business practices.

Regarding combat capability, as this committee well knows, the primary purpose of the Navy and Marine Corps is to deter, train for, and when necessary, fight and win our Nation's battles. In remaining faithful to this charge, combat capability which includes readiness, must be our primary emphasis. If necessary resources will be shifted to meet this objective. In all our decision-making, we will ask the question, "Does this task, program, organization or facility materially contribute to improving our combat capability?" Likewise we will recognize that what has worked in the past may not always succeed in the future. Therefore, the Department will invest more in technical and doctrinal experimentation, and in new and different ways of accomplishing our mission. Our mission will be joint—One Team, One Fight. Along with our sister services and allies, we will organize, equip, and train to fight jointly.

People are our most important and valuable resource. While this has long been widely touted in the naval service, we can do a better job of practicing what we preach. A ship pier side has absolutely no asset value to this Nation without a well-trained and highly motivated crew. Our Nation's investment in carriers, ships, submarines, aircraft, and other advanced technology systems will be squandered if we do not aggressively demonstrate our commitment to people. To tackle this, I will emphasize "Quality of Service"—achieving a higher quality workplace as well as a higher quality of life for our sailors, marines, active duty and Reserve, and civilians and all of their families. The goal will be to create an environment where our men and women can excel at their chosen profession, unimpeded by factors that divert their attention from work and sap their morale. This includes competitive compensation and quality housing, workplace resources, health care, and training, with an operational tempo that considers the individual, as well as family and community. This environment is based on attuned leadership throughout our command structure that encourages information to flow freely up and down the organization, and that values the knowledge and expertise of the total force. Everyone in the De-

partment of the Navy needs to recognize that while some positions carry a greater burden, all of our people are equal and important. No one should be discounted because of rank or years of service. At the end of the day, our sailors, marines, and civilians should know that their contribution is important and feel that their work is both stimulating and rewarding.

The application of advanced technology is central to our Nation's military strength. Unfortunately, the application of technology in the military has for a generation lagged its commercial availability, sometimes by several iterations. This is most pronounced in our combat systems, but also includes technology for training testing and management systems. This lag is inconsistent with the effort led by President Bush and Secretary Rumsfeld to restructure defense for a new national security environment.

Should I be confirmed, I will focus on several areas to address this problem. First, the Navy Department needs to draw a technological advantage from the full spectrum of American businesses and universities. To gain this broad participation, the unique DOD acquisition system, with its myriad rules and regulations, needs to be simplified and streamlined. It must and will come more into alignment with commercial practices. The Department will be proactive in supporting the Under Secretary for Acquisition in implementing these changes. Second, layers of bureaucratic decision-making, with their inherent time delays, will be streamlined. Third, "spiral development," the fielding of available technology with planned evolution to a final configuration, will further speed the introduction of new technology into service.

Finally, if confirmed, I will strive to improve the efficiency and effectiveness of DOD and DoN business practices. While the Navy Department serves a national purpose with overarching goals well beyond the commercial objectives of markets and profit, many commercial business practices are still applicable.

Over the past few years, it appears that the gap between government and industry business practices has widened, with two negative consequences: First, inefficient Departmental processes have led to ineffective results, generally due to unaffordable solutions. Second, commercial companies have largely deserted the DOD while traditional defense companies have started to diversify into commercial business. By improving business practices we should be able to shift more dollars into combat capability and expand our buying power through increased competition.

Should I be confirmed, several management techniques will be implemented to systematically improve business practices. First, we need an activity based costing system to provide the actual cost of our activities and programs. Managers will then be able to make informed decisions before committing valuable resources. Second, we will implement comprehensive measures and metrics at all levels of the organization. We will measure what we do and evaluate our performance against established metrics. Third, our management team will be process oriented. We will improve processes to improve products, rather than working on products exclusively.

In summary, my agenda is to substantially improve our combat capability, enrich the lives of our people, swiftly incorporate technology across our total operation, and dramatically improve our business practices. Each of these thrusts is interrelated, so implementation will be systematic rather than piecemeal. These efforts will be difficult and challenging and the support of this committee will be essential and greatly appreciated.

If confirmed, I will work closely with Congress on matters affecting our Navy and Marine Corps and the security of our great Nation. Thank you for your kind attention. I look forward to your questions.

Chairman WARNER. Dr. Roche.

**STATEMENT OF DR. JAMES G. ROCHE, NOMINEE TO BE  
SECRETARY OF THE AIR FORCE**

Dr. ROCHE. Good morning, Mr. Chairman.

Mr. Chairman, Senator Levin, distinguished members of the committee, it is truly an honor and privilege to appear before you today as the President's nominee to serve as the 20th Secretary of the Air Force. We are the junior and newest service. I especially would like to thank Senators Sarbanes and Mikulski for their kind remarks. They mean a great deal to me. Senator Sarbanes, you have spent 25 years trying to educate me, and I hope I can live up to your expectations. I am deeply grateful for President Bush for nominating me to this post, for Secretary Rumsfeld for giving me

the opportunity to continue to serve my country in this vital position on his team. I very much appreciate their support and confidence they placed in me to lead the United States Air Force as Secretary, if I am confirmed.

Mr. Chairman, I would also like to thank all who have helped me in this nomination process, in the office of Secretary of Defense, in Northrop Grumman, the U.S. Air Force, and especially my wife, Diane, daughter, Heather, and this committee especially for expediting my appearance here today. I owe my appreciation to David Lyles and Les Brownlee. I don't think I would have been as competent as they have been in moving something as quickly on your behalf as they have. I very much appreciate what they did. I look forward to working very closely with this committee and with these key leaders of your staff, sir. With your permission then, Mr. Chairman, I would like to have the remainder of my remarks placed in the record.

[The prepared statement of Dr. Roche follows:]

PREPARED STATEMENT BY DR. JAMES G. ROCHE

Mr. Chairman, Senator Levin, distinguished members of the committee, it is truly an honor and a privilege to appear before you today as the President's nominee to serve as the 20th Secretary of the Air Force. I want to thank Senator Mikulski for her kind remarks—they mean a great deal to me. I am deeply grateful to President Bush for nominating me to this post, and to Secretary Rumsfeld for giving me the opportunity to continue to serve my country in this vital position on his team. I deeply appreciate their support and the confidence they have placed in me to lead the United States Air Force as its Secretary, if I am confirmed.

I also would like to thank all who have helped me in the nomination process, both in OSD and in the U.S. Air Force, and especially this committee for expediting my appearance for today's hearing.

With your permission, Mr. Chairman, I will make a few opening remarks and request that my prepared statement be included in the record.

Mr. Chairman, throughout my 23 years wearing the uniform of the United States Navy, and in my subsequent years working with the Armed Services—either on the staff of this committee or the Senate Select Committee on Intelligence, or as a member of our defense and aerospace industry—what has impressed me the most about our Nation's Armed Services is the quality of the individuals who voluntarily serve. For instance, it strikes me that members of the Air Force team have earned their world-class reputation because of their commitment to the highest standards of excellence;

Because they have earned the support and confidence of the people and the elected representatives of the greatest Nation on earth;

Because they have harnessed the talents and technologies of America's defense industrial base;

Finally, because they have forged a seamless team among the truly outstanding enlisted members, officers, civilians, Air National Guardsmen, and reservists. They, above all, are the reason why I am so honored to be nominated to this post, and why I will be committed to this job with every fiber of my being, if I am fortunate enough to be confirmed by the Senate.

Mr. Chairman, I am proud of my service in the world's finest Navy, and I feel fortunate to have had the opportunity to contribute in some small way to our National security as a business person with the Northrop Grumman Corporation for the past 17 years. I am especially honored to have led the extraordinary men and women of Northrop Grumman's Electronic Sensors and Systems Sector. But I am tremendously excited at the prospect that, if confirmed, I may be counted as a member and leader of the U.S. Air Force.

I want to thank you, Mr. Chairman, Senator Levin and the members of this committee, for your outstanding support to each of the Armed Services. I, more than most, realize the critical importance of the relationship between this committee and our Armed Services. For instance, every major touchstone in our Nation's proud aerospace legacy may be linked in some tangible way to a deliberation, or a question raised, or a decision made by this committee. The relationships between the Air Force and the members of this committee, as well as with your counterparts in the

House of Representatives, are key to its past successes. Maintaining and building upon these relationships, I believe, will be the core enablers of our future accomplishments. If confirmed, I would solicit your counsel and guidance—not just your support and approval. This, for me, is a matter of “coming home” to this committee, the esteemed members of which—on both sides of the aisle—taught me so much during my service here.

Secretary Rumsfeld has made it very clear that, despite the strategic and technological strengths embodied in our Armed Services, we are in an era in which a sound strategic calculus compels us to review—and perhaps, to rethink—our defense posture in a changed security environment. If confirmed as Secretary of the Air Force, I would expect to be judged against the following four goals that I proposed for myself to Secretary Rumsfeld:

First, the Air Force, as well as its sister Services, is obliged by the changed national security environment to fashion, along with our allies and friends, a deterrence posture that matches those changed conditions . . . and tomorrow’s challenges, however uncertain they may appear to us. We must continue to renew, or build anew, a force structure that, when teamed in joint or combined operations, will be effective in keeping peace and preserving freedom in this century, not the last one. I look forward to the opportunity to lead the Air Force, work with the Department of Defense, and solicit your views to adapt Air Force strategy and force structure for the future. This forward-looking focus will inspire members of the Air Force with a renewed sense of their noble calling, enabling airmen to connect with the core reasons why they put on the uniform each day, come to work, and put their lives on the line for the security of our great Nation.

Second, this committee is well aware that one of the urgent tasks facing the Air Force leadership is to deepen and enrich the bonds of trust with the men and women who serve our Nation on the Air Force team. We must be able to attract and retain the very best individual to serve—and then take care of them and their families—both military and civilian. Some very good work has been done—again, with your tremendous support—to identify and recruit quality people while maintaining stringent Air Force standards; but we must capitalize on those efforts now and redouble our efforts on retention and development. We must foster a culture of career aspiration among Air Force officers and enlisted personnel—whether they be pilots or aircrew, space operators or navigators, aircraft maintenance technicians or para-rescue jumpers. The range of military aerospace careers is broad and rich with opportunity.

But we often fall short on staying power, on keeping our people informed, engaged and motivated throughout their careers. I view this as the Air Force’s most critical challenge because, in my experience in naval command and in business, I have had it proven over and over that people remain the most important resource of any organization. Force readiness, sustainability, mission performance—all of these depend on developing the best composition of quality individuals on the team, and on motivating each and every member of the service with an unparalleled *esprit de corps*.

Our Nation demanded a great deal from Air Force people in the past decade—and that team responded brilliantly. From global humanitarian operations to Operation ALLIED FORCE, the citizens of the United States justifiably can be proud of their Air Force. In the midst of a transition to a 40-percent smaller force deploying over 3 times as much as in the previous decade, aerospace leaders have adapted the Air Force to make it truly expeditionary. This has been a remarkable accomplishment, and a tremendous contribution to a secure, global peace. It uniquely situates the Air Force in a position to harness the economic and technological advantages in this era, in order to preserve our Nation’s leadership in the next.

But in order to get there, we must accelerate our drive to become more modern and more efficient as an organization. This is the crux of my third goal: Air Force process, organization, structures—all of these need to be reexamined in the light of lessons learned and new realities. It is time to assess whether the sweeping organizational and process changes implemented in the last decade have produced their intended results. Considering the current global scene; the Air Force’s transition to a smaller, busier force; and the near completion of its adaptation to an expeditionary force, I am confident we have much to gain by identifying and eliminating any inefficiencies that either remain or have resulted from all of the changes. The Air Force must also work with its depots to help them become more world-class—in costs as well as in quality. I would look to identify and bring best practices from government and industry to bear on our management of the service. As I stated earlier, I would welcome this committee’s views, if confirmed, on policies, practices, or processes the Air Force should evaluate that might yield compelling efficiencies and cost savings.

Fourth, I hope to have the opportunity to influence in a constructive manner the acquisition policies and processes so as to insure innovation and competitive vibrancy within our essential defense industrial base over the long haul. Using public dollars effectively and efficiently, we are obliged to assure the American people, our forces abroad, and our friends and allies that we will be able to continue to defend our interests in the decades to come. But this will require a new focus in Air Force and Department of Defense acquisition policies and practices. As Secretary Rumsfeld has said, "Simply tinkering with the present acquisition system will not provide the innovation and speed necessary to satisfy future military needs and take advantage of powerful new technologies."

Nor does the current acquisition process always provide the necessary incentives to motivate the defense industry to become more efficient and deliver the most cost-effective goods and services. Worst of all, however, is the potential loss of innovation and technological advancement that might stem from the dramatically shrunken industrial base.

The Air Force today benefits from innovations and technologies developed over the years by many, many aerospace companies—some of them very small. But today, those "many" companies have been whittled down to just a few large, bureaucratic, and in some cases, seemingly vertically integrated, corporations, pursuing fewer and fewer new programs. The Air Force must begin a concerted process to find ways to incentivize and motivate contractors, large and small, to become more competitive, efficient and innovative, and to take full advantage of the fast-paced technological and business-process changes occurring in this century's information-dominated economy.

Mr. Chairman, if confirmed, I look forward to the prospect of an active, constructive relationship with you and this committee. Along with guidance from Secretary Rumsfeld, I will need your help, counsel, and support. I am sincerely honored to have the opportunity to be considered for this post on one of the most creative, experienced, and respected teams the world has known—the United States Air Force. Again, I want to express my appreciation to President Bush and Secretary Rumsfeld for their confidence and trust in me. I thank you, Mr. Chairman, Senator Levin, and the members of this committee.

Chairman WARNER. Mr. Rascon.

**STATEMENT OF ALFRED V. RASCON, NOMINEE TO BE  
DIRECTOR OF SELECTIVE SERVICE**

Mr. RASCON. Chairman Warner, and other members of this great committee. I too have an opening statement, but I'll make it quick and I'll make it short.

Chairman WARNER. Take your time. Take all the time you need.

Mr. RASCON. I am really humbled to be here before all of you and most of all, in having the privilege to be nominated by the President for this great position of Director of Selective Service. Pending Senate confirmation, I look forward to working with every one of you.

The Selective Service ends up being a system that remains and should remain in this country for many years to come. Being a veteran and having been in the face of death and the face of war, I understand that at times, we may not want a draft, but it is necessary, and at times it is necessary to maintain the listing of young men, of young men who will be ready and be prepared to fight for this country.

As such, sir, I have a prepared statement, and I'll just leave it for the record.

[The prepared statement of Mr. Rascon follows:]

PREPARED STATEMENT BY ALFRED V. RASCON

Chairman Warner, Ranking Member Levin, and members of the committee:

I am humbled that President Bush has expressed his confidence in me to become the next Director of Selective Service. Pending Senate confirmation, I look forward to serving my country once again.

As Director, I would be returning to the Agency from which I retired just 3 months ago after 38 years of Federal service in the Army and with several Department of Justice agencies including the DEA, the INS, and Interpol.

At one time or another, I think most of us have dreamt about being placed in charge of the organization where we worked. If we worked there for a while, we appreciate which aspects of the system and organizational culture are top notch, but we can also identify some things might be done differently and better. If I am confirmed as Director, you will be placing me in a fortunate situation. As a knowledgeable former member of the agency's senior staff, I believe I am highly qualified to preserve the best aspects of a proud Agency that has a distinguished 61-year history, while making improvements to operational efficiency, motivating employees and volunteers, and boosting morale.

The Selective Service System is a superb Federal agency with dedicated people doing terrific work, but there is always room for improvement. I know how the Selective Service System operates. I understand its importance to national defense readiness as America's only proven defense manpower insurance for a major crisis. I stand ready to make any needed improvements to the Agency's structure and defend its budget and necessary existence as a key component of national defense readiness. And, because of personal experiences involving duty, honor, and country in the midst of the horrors of a past war, I also understand and believe in the role that every young man must play with regard to Selective Service. I will encourage the 2 million men reaching age 18 every year in the U.S. that they must live up to their patriotic, legal, and civic obligation to help "provide for the common defense" by registering with Selective Service.

With your support, I stand ready to take up the challenges of this important assignment. I thank you for considering me.

Chairman WARNER. The committee traditionally asks all of our nominees the following questions, and your indication of a yes or a no or such other comments you wish to make. I'll go left to right.

Have you adhered to applicable laws and regulations governing conflict of interest?

Dr. CHU. Yes, sir, I believe I have.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. Yes, sir.

Mr. RASCON. Yes, sir.

Chairman WARNER. Have you assumed any duties or taken any actions which would appear to presume the outcome of the confirmation process?

Dr. CHU. No, sir.

Mr. WHITE. No, sir.

Mr. ENGLAND. No, sir.

Dr. ROCHE. No, sir.

Mr. RASCON. No, sir.

Chairman WARNER. Will you ensure your staff complies with deadlines established for requested communications, including questions for the record in the committee's hearings?

Dr. CHU. Yes, sir.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. Yes, sir.

Mr. RASCON. Yes, sir.

Chairman WARNER. Will you cooperate in providing witnesses in response to congressional requests?

Dr. CHU. Yes, Mr. Chairman.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. Yes, Mr. Chairman.

Mr. RASCON. Yes, sir.

Chairman WARNER. Will those witnesses be protected from any reprisal for their testimony in such appearances or briefings before Congress?

Dr. CHU. Yes, sir.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. Yes, sir. Definitely.

Mr. RASCON. Yes, sir. Absolutely.

Chairman WARNER. I'll defer to my colleague, Senator McCain, for his opening question.

#### STATEMENT OF SENATOR JOHN MCCAIN

Senator MCCAIN. Thank you very much, Mr. Chairman. I'd like to congratulate the nominees and express my appreciation for their willingness to serve. From what I can gather, all these nominations are noncontroversial but should be expedited as quickly as possible to help get about the important issues and challenges that face us in the post-Cold War era.

Mr. England, in February 1996, the United States Navy in a briefing before this committee said the Secretary of the Navy supports competition for attack submarines. On April 25, 2001, this committee was informed by General Dynamics, which said I want to inform you that General Dynamics has tendered an offer to acquire Newport News Shipbuilding. It mentions several points, provides significant savings for the government, both nuclear shipyards will be retained, and will consider highly skilled workers as a national security asset. No layoffs are planned. There is no competition in nuclear shipbuilding nor is it feasible. What is your view?

Mr. ENGLAND. Senator, this is a critical issue. It obviously needs to be examined, but I have not worked in this area, sir. I have not reviewed these facts, but I would be happy to do so, if confirmed, and I will indeed, sir, take this action and get back to you on this subject.

Senator MCCAIN. I remember I said at that time in this committee that there would be a disappearance of competition in nuclear submarines. It is a fundamental economic principle as to how to reduce costs and to provide competition. I would hope you may be able to subscribe to that. The fact is we are not going to have competition in nuclear submarines as was patently obvious as we see this trend continue, which will then increase the cost to the taxpayers.

I'd like to ask the three nominees for Secretary of the Air Force, Army, and Navy, beginning with you, Mr. White, do you believe we still have excess military infrastructure that can and should be reduced in the military?

Mr. WHITE. Senator, I do, based upon a preliminary review of the base structure and recent discussions and also preliminary or previous information that the department has provided.

Senator MCCAIN. Mr. England.

Mr. ENGLAND. Yes, sir. I believe all the studies have indicated since the last BRAC that there is excess infrastructure. Our approach will be to await the outcome of the strategic review, see what's required for the new force going forward, identify if we have

excess at that point in time, and recommend work with this committee in terms of actions that should be taken.

Senator MCCAIN. Dr. Roche.

Dr. ROCHE. Senator, I don't know all the details but certainly my sense from initial briefings are that that there is excess capacity. Where I come from, it is only the sensible thing to do if you have asset that is not earning for you, you close it down, you shut it down, and you get as efficient as you possibly can.

Senator MCCAIN. Mr. White, do you believe it is the best interest of the Defense Department to authorize additional military base closures and realignments to better align our military base structure to meet the requirements of the post-Cold War era?

Mr. WHITE. Yes, I do, Senator, subject, as Mr. England has outlined, to the outcome of the strategic review and decisions on what the appropriate structure is to support that strategy.

Senator MCCAIN. Mr. England.

Mr. ENGLAND. I support the statement that Mr. White has just made, sir.

Senator MCCAIN. Dr. Roche.

Dr. ROCHE. My sense is I would have to take a look at things, talk to Secretary Rumsfeld. I know what his views are, but again, if there is excess capacity, we will find ways to dispose of the excess capacity. BRAC is the way to do it and BRAC should be done.

Senator MCCAIN. Mr. England, do you intend to recuse yourself from decisions that have to do with General Dynamics?

Mr. ENGLAND. I do for those areas specifically where I have knowledge, sir. I cannot do this for my whole tenure, of course.

Senator MCCAIN. Yes, you can, Mr. England.

Mr. ENGLAND. Well, sir, I mean in areas where I have no conflict of interest, I would not expect to recuse myself. Where I do have a conflict, obviously I would, sir. If there is a conflict with prior knowledge or involvement, then I would certainly recuse myself. But if there is no conflict, I certainly would not plan to do that.

Senator MCCAIN. Who makes the suggestion as to that conflict, Mr. England?

Mr. ENGLAND. I expect I would at this point, sir, and can support it. I have agreed to ethically follow the requirements of the Department of Defense. I would do what was ethical and proper to do and if it appeared to be inappropriate, then of course, I would not do it.

Senator MCCAIN. In your view. Mr. England, that is not good enough. I hope that we can have discussions on exactly what your recusal will be before your nomination is approved by the full Senate.

Mr. ENGLAND. Yes, sir.

Senator MCCAIN. It is a very big corporation. You have been involved in a lot of issues that affect national defense, and the American people deserve the elimination of any taint or appearance that you may be involved in an issue that affects the future of the corporation of which you were previously employed, and we apply that standard across the board, Mr. England, not just in your particular case. I want to tell you, we need to work with you to exactly define your role in those decisions affecting General Dynamics before in my view your nomination is approved by the full Senate.

Mr. ENGLAND. Senator, I'll be more than pleased to work with you and your staff. I am pleased to do that, discuss this, and resolve it with you, sir.

Senator MCCAIN. Mr. White, will you not involve yourself in any decisions that include your previous employment with Enron?

Mr. WHITE. I don't plan to and we can discuss that more with you, as Mr. England has suggested.

Senator MCCAIN. Thank you. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Senator McCain. I'll make two observations. One, I forwarded a letter to the Secretary of Defense late yesterday indicating the need for this, Senator, and of course, I'll advise all Senators, of the availability of the earliest possible briefing from the Department of Defense with regard to both merger bids, one by General Dynamics, the other the Northrop Grumman for the Newport News Shipbuilding Company.

It is important for this committee to involve itself in terms of looking at that impact on our national defense and the impact, as the Senator said, on the shrinking industrial base as that relates to competition. So as soon as I am informed of the Secretary's availability of those briefings, I'll make that fact known to the committee.

Senator MCCAIN. I thank the Chairman.

Chairman WARNER. I would point out that Mr. England, you have undertaken to do everything required by the Department of Defense, the OGE, and the committee with regard to your past affiliation with certain employers.

You have retired from General Dynamics and you will divest all the stock in General Dynamics, am I correct on that?

Mr. ENGLAND. Yes, sir, you are correct.

Chairman WARNER. You will purchase a security that will guaranty the ability to pay for a pension?

Mr. ENGLAND. Yes, sir. That's correct.

Chairman WARNER. Thank you very much. The Senator from Georgia.

#### STATEMENT OF SENATOR MAX CLELAND

Senator CLELAND. Thank you very much, Mr. Chairman. May I say that I want to thank you and Senator Levin for calling this important nomination hearing. Given the position of General Dynamics, it reminded me of Golda Meir's statement that she only wanted three generals from the United States—General Electric, General Dynamics, and General Motors. From time to time, we call on our private assets to help us out and that is what really matters.

May I say that I'd like to thank Mr. England and Mr. White and Dr. Roche for coming by to visit with me before the hearing. I am sorry that time didn't permit me to visit with Mr. Chu and Mr. Rascon. We look forward to that opportunity in the near future.

All of you have my support, and I thank you for your service to our country. The nominations that we consider today are critical. These nominees are another layer of civilian control over the military as described by the Constitution. Not the *Atlanta Constitution*, the real Constitution.

Dr. Roche, I do thank you very much for yesterday's visit. I appreciate the discussion we had regarding a bee in my bonnet about

the future of our Air Logistic Centers. You and I agreed that we need to maintain the capability to sustain our current, most important weapons systems, especially our future weapons systems. As you noted, the key to our survival of our ALCs is the partnership, I want to underscore, that partnership between the private sector and the public sector. As I really do look at, shall we say, the total assets of the United States to deal with national security or defense matters, it is obvious we have had a massive shrinking of the American military, about a third since the end of the Cold War and a massive shrinking in the private sector of power, of our, shall we say defense base. It does make sense to me then that these two great entities all focused on defense, public sector and the private sector in effect learn to work together in partnerships and as Ben Franklin said, better to hang together than hang separately. So I do think that the key word in the future for so many aspects of our defense involves the partnership between the public sector and the private sector because I don't think either sector can do it all, and we get the best bang for the buck and the best value for our military servicemen and for our country when we work together, so I just thought I would emphasize that. I think you are on board with that.

Dr. ROCHE. I am, Senator, very much.

Senator CLELAND. Partnership between the private sector and public sector. However, the public portion of this commitment must be real. As such, I would like to again outline some of the commitments that you and I agreed upon yesterday.

One, thank you for your commitment to meet with representatives of the ALCs, visit the ALCs and meet their community partners and appropriate congressional delegation members.

Dr. ROCHE. Yes.

Senator CLELAND. Second, you committed to visit the ALCs which you visited a number of times, I know you have in the past, but we would appreciate that one more time. That's correct?

Dr. ROCHE. Yes. I'll visit as one of the partners on the private side, but if confirmed, this time as the leader on the public side.

Senator CLELAND. I think your expertise on coming across the line and having an understanding of both sides of this partnership is going to be of great value to the United States. You committed to provide a strategic plan for the ALCs as you got into this matter and looked at it from every point of view that you would want to look at it, is that not correct?

Dr. ROCHE. Yes, sir. I also committed to try to get at least a draft to you by the end of this calendar year.

Senator CLELAND. Thank you very much. Finally, you committed to review the Air Force's current strategy, which I don't agree with, of not building weapons in the ALCs. Actually putting the new weapons systems from my point of view, in the ALCs?

Dr. ROCHE. I committed to it. I don't know what it says.

Senator CLELAND. I did notice that we were unfortunately sending a lot of our older facilities, our older weapons systems to the ALCs and the newer weapons systems, the ones that we really rely on when we go to war were not particularly in that chain. Particularly with the C-17 and the F-22. But thank you very much for

your commitment, and I look forward to working with you in that regard.

Any thoughts that you have that you would just like to share about the ALCs? For instance, do you think the Air Force needs its air logistic centers?

Dr. ROCHE. Senator, we absolutely agree. In the long run, the government must have its own facilities, own shipyards, its own ALCs. There is a whole series of reasons that we discussed from technology, being able to maintain technical excellence for companies to move into generations where we have fielded forces and a partnership that I have had as a business person at Northrop Grumman with Warner Robins is one I am very proud of. It has worked very well. I think the issue that we both agree on that I am going to work with you on is twofold. First, how do we get the capital investment into the ALCs so they are ready at the appropriate time. We say we don't know when that appropriate time is when something is in its early stages, an airplane has to stay close to the contract, warranty period or somewhere. Somewhere there has to be a transfer for the long haul maintenance and upgrades in partnership with the private sector to the ALCs.

The second issue that I have asked was that we have to find the careers in the ALCs are something people are proud to do, to be able to attract sharp young people and keep them. I thank you personally for your help in the program that the Air Force has, I just was briefed on in middle Georgia to find some super young people. Now, it is up to individuals like me to make sure the career is good enough so we can keep them.

Senator CLELAND. Just one more question.

Chairman WARNER. Senator, you take your time.

Senator CLELAND. Thank you very much, Mr. Chairman. Mr. White, thank you very much for your service to your country.

Would you like to share with us your plan for committing one true Army out of the three components, active Army, Army National Reserve, and National Guard?

Mr. WHITE. Well, Senator, if confirmed, the historical relationship between the active Army and the Reserve component is a critical one that I intend to promote and sustain. National Guard units are today deploying side-by-side with active component people in Kosovo and other places around the world. The Reserves have been reshaped into a combat service support force which I completely support. It integrates them better into the total force and the affiliation between National Guard divisions and active Army corps I think is a very positive one, so if confirmed, I intend to spend a lot of time with the Reserve components promoting that relationship.

Senator CLELAND. Thank you very much for your insight. You just mentioned in my own home State, the close working relationship between Fort Stewart and the great infantry division there, and the 48th Brigade. They have both shared duties back and forth going back and forth to Kuwait and the Balkans and so forth, and we appreciate your dedication to all three of those branches of our Army.

Let me just ask one question for all our service secretary nominees. An article in the newspaper reports that all services claim

the current budget keeps the military on a death spiral for forced future base closure. I am not a supporter of BRAC, but I do believe there are a number of things the military can do to streamline its infrastructure without closing bases wholesale here in the United States. Two CINCs, General Ralston and General Schwartz, have testified before this committee recently that closing a significant number of bases in both Korea and in Europe would enhance effectiveness, efficiency, and quality of life.

Also, programs such as the facilities reduction program that eliminates excess infrastructure on installations without necessarily closing those installations achieved results without incurring the costs of BRAC.

Are you, Mr. White, willing to support streamlining military infrastructure overseas if it is requested, or at least consider it, if it is requested by the appropriate CINC, as a way to achieve infrastructure savings before we look to close bases here in the United States? Any feeling on that?

Mr. WHITE. Senator, I would certainly support the CINCs' requirement to consider that. The CINCs are our customers, and we would take a hard look at anything they suggest in regard to the infrastructure.

Senator CLELAND. Thank you very much.

Mr. England.

Mr. ENGLAND. I think that is appropriate. They are our customers. We certainly take their recommendations and look at them in the context of those capabilities. I certainly would consider that, sir.

Senator CLELAND. Thank you very much.

Dr. ROCHE. Senator, I believe any excess capacity should be done away with. If it can be done in a sensible way, fine. Whether it is done overseas first or home first, I don't think one should follow the other. I think they should look at any excess capacity and find ways to not ask the taxpayers to be paying for it. The proper means to do it will be requiring a great deal of homework.

Senator CLELAND. We have a distinguished group of panelists today, and they have my support. Thank you very much.

Chairman WARNER. We thank you, Senator. You make a very valuable contribution to this committee and you draw on a wealth of experience. You have served yourself with great heroism in the United States Army.

I am going to take a few minutes, Chairman's prerogative, to make an observation or two and then ask a question or so.

First, in my 23 years here in the United States Senate, coincidentally, my distinguished colleague, Senator Levin and I came to the Senate together, we have watched many wonderful people come into the position to which you have been designated and appointed by the President. I anticipate in due course there will be confirmation by the Senate. But I'd like to say that having had the privilege of being in that seat many years ago, nominated for the position of Secretary of the Navy, and having the intention at that time of serving 2 years, once I was there, I recognized what a great challenge and a great opportunity it was and I spent over 5. So I don't quite know how long your careers will be but don't set a terminal date at this point in time. Because once you are in, you will be

seated in the front row of the greatest action that faces this country and challenge of any of us. You are working with the President of the United States in the role of Commander in Chief of the forces of this Nation, and you are working with the Secretary of Defense.

We convened this hearing in a very friendly atmosphere, convivial handshake among you. Once you are confirmed, you are going to have to take the gloves off and fight for your respective services. When the concept of the Department of Defense was put together roughly in 1947, three military departments were established. From that point on, the service secretary, together with the chief of the service, are principal advocates of that service. But as I reminisced with Secretary Rumsfeld this morning, when I was Secretary of the Navy, he was in the White House and was the top assistant to the President.

You are expected to take on the Secretary of Defense on behalf of everybody from the four stars down to the privates and the sailors and the airmen. Fight hard for resources. Fight hard for your department, and make your department the best within the structure of the totality of the Department of Defense. Dr. Chu has taken a note, and he should, because he is going to be one of the referees. Very often, you have to work through him to get to the Secretary. You will have your one-on-one time with this distinguished Secretary and the Deputy, and all I have to say is to fight hard for your department.

Now, Mr. England.

Mr. ENGLAND. Sir.

Chairman WARNER. On behalf of the Navy, and I have raised this issue this morning with the Secretary. We have a declining number of ships, roughly 315 today. When I sat there 30-plus years ago, we had over 700. We have come down from some high limit, and that is a long way.

Yet, several things have not changed. First and foremost, this Nation is basically an island surrounded by two great oceans. Second, our concept of defense is one of forward deployed defense. We can thank God every day that our shores have not been crossed by an invading force since 1812. But that is because of the protection the seas have given us. The fact is that we engage first and deter threat far beyond our shores in the hopes that whatever may occur can be settled there, if necessary.

Now, the Navy is the lifeline to convey the ground forces and to convey the supplies of the forward deployed armed force. Yet today we have this declining number of ships. The oceans and the need for forward deployment is still there, although wisely, I think, this President will lessen it in a prudent way in consultation with allies.

That is the life line and the link. Also, the economic strength of this country is dependent on overseas trade and the protection of the sea to the world, and that responsibility falls heavily on the United States Navy. Now, do I have your commitment, and do you give it to the committee and indeed Congress, to fight hard to see that that level of ships, whatever it might be, that the President and this Secretary of Defense determine, is obtained and the nec-

essary requests to Congress for authorization to build those ships are submitted?

Mr. ENGLAND. Yes, sir. I can assure you I will work very closely with the Secretary of Defense in support on his strategic review. I frankly do not know the exact number of ships, but it is bothersome that the number has continued to decline, and that at the current rate, my understanding is that we will be down to 240 or thereabouts out in 15 or 20 years. It is an area of great interest to me. It will be one of the very first topics to look at in the shipbuilding account—how we fund those accounts, what the right number of ships should be, and what the right mix of ships should be. So this is one of my priorities, sir. We will look at this as part of the strategic review.

I can assure you if we have needs in those areas, we will definitely come back and seek the advice and counsel and help of this committee. You have my commitment to work with you in that regard. The very highest priority of mine is to look at our shipbuilding accounts, sir.

Chairman WARNER. I thank you. Mr. White, with regard to the Department of the Army, you will find as you go there that the Army has paid the price. This is not a political statement, but in the last many years, as a matter of fact, the declining defense budget started under President Bush, follows our current position and for 12 to 13 years we had consecutive declines in the defense budget. That was reversed some 2 years ago. I commend this committee for its initiatives in reversing that.

The point is in those years of decline, the Department of the Army really had no recourse other than to draw down on their procurement, draw down in many ways on their infrastructure, whether it is the modern weapons or the buildings and the barracks which would deteriorate and indeed in your department. Now, that had to be done to find the funds with which to engage our forces beyond many fronts, notably, heavy expenditures involved in Kosovo. The Army also announced their plan for a transformation. They are recognizing that much of the doctrine, equipment, and other aspects of the Army have properly been devoted to the former Soviet Union, the Warsaw Pact, and the threats in Europe. At the same time, the Army continues to have very heavy obligations on the Korean Peninsula.

Now, with the change of the concept of engaging forces and the diversity of threats, the demise of the Warsaw Pact, and breakup of the Soviet Union, the Army quite properly decided to transform from the bottom up. I ask for your commitment to go in and re-examine what has been done thus far on the concept of that transformation, and where necessary, put your own imprimatur on the President and that of the Secretary of Defense on the success of that transformation. Do you have a comment?

Mr. WHITE. Sir, I completely agree with you. Within the context of the national strategy that the Secretary is developing, we have to make sure the transformation of the Army conforms with that, and does so in a way that gives us the smooth transition from where we currently are to where we must be 10 years from now with the first unit equipped with the new systems coming along and sustained readiness, so the first step in my opinion is agree to

the national strategy, the security strategy, and the land power component of that strategy and then conform the Army's transformation to it, and then get on to making that vision a reality. You have my commitment that that will be a top personal interest of mine.

Chairman WARNER. I think my colleague, Senator Levin, and other members of the committee will observe that in the past 2 or 3 years in consultation with previous secretaries of Defense, we pointed out that the costs of that projected transformation as originally laid down by the previous administration, simply did not match other budgetary considerations. You have to bring into alignment, fight hard for your share of the budget and some more, but you have to bring into alignment the projected costs and the budget allocation being given by the Secretary of Defense.

Mr. WHITE. I will do that, Mr. Chairman.

Chairman WARNER. Dr. Roche, I think you are the first sailor in history ever to take over the Department of the Air Force, am I correct?

Dr. ROCHE. I don't know, Senator. I may be the first dumb sailor to take over the Department of the Air Force, however.

Chairman WARNER. That is a novelty in itself. You have a heavy responsibility in the following: the aging of the aircraft. Again, the Secretary this morning pointed out and the perception that there is no nation that is going to put forward an aircraft comparable to the F-22, the other models of procurement now. Heavy decisions have to be made in that area. I am not suggesting how they are to be made at this point in time.

In my judgment, it is imperative that the United States of America maintain the superiority in the sky.

We could not have achieved our successes in very challenging military operations without air superiority. Similarly, our submariners have made the seas something the United States rules.

The F-22 has the capacity, by virtue of its stealthiness, its super crews, and its advanced weapons and sensors, to really motivate an opponent never to try to build a plane that is going to be comparable. It just isn't going to happen. Presumably, we will build this plane, and we will keep improving it. It also means that an opponent will recognize for the first time that we can have stealth aircraft over opposing territory and be able to attack anything that may be heading towards our troops and meet those aircraft in the enemy's territory, not on our territory.

Dr. ROCHE. That is unique in the history of air warfare, Senator. I very much believe in that program, but there is an issue of aging aircraft across the board that is troubling.

Chairman WARNER. I am now going to yield to Senator Levin. My next round of questions is going to relate to quality of life for the men and women of the armed forces. We cannot hope to achieve any of those goals without their continued commitment which this force has had since its very inception.

Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman. This committee has a relatively new subcommittee, called the Emerging Threats and Capabilities Subcommittee, which is looking at the new threats we face following the end of the Cold War, particularly the terrorist

threats both from nations, individuals, and groups. The subcommittee focuses on the asymmetric threats that we face both here and abroad. This committee has had many hearings on this subject. There are hearings being held now in the Appropriations Committee on the question of how the Federal Government should be organized to meet the terrorist threat and what is the proper role of the Department of Defense in that organization.

As the chairman mentioned, our shores have not been crossed by an invading force for almost 200 years. But our shores have been crossed and breached by terrorists, both on the Atlantic, at the World Trade Center, and in the Pacific with the efforts of some terrorists to come here. They were caught, thank God, before they were able to use their terrorist instruments. That probably had something to do with the events in Seattle which were scheduled. So we do face real new threats. I would just hope that as our new service secretaries you would spend some time focusing on those emerging nontraditional threats. The ones that are real and the ones that have been used. They are not just here. Our shores have been breached, overseas against our forces. The U.S.S. *Cole* is one of the more recent examples. Also, recall the terrorist attacks against our embassies that we had in Africa. I am just wondering whether or not our nominees have any comment on that and whether you agree that you are going to need to spend time and resources addressing these emerging and asymmetric threats that I just described?

Mr. WHITE. Senator, I think it is clearly a matter that requires time and resources. We intend to do our part, if confirmed, to deal with that from an Army perspective. I know Secretary Rumsfeld has discussed this with you in his hearing, as has Deputy Secretary Wolfowitz and we are all concerned about it and we will give it the appropriate attention.

Mr. ENGLAND. Senator Levin, of course, the Navy is already keenly aware of this issue after the U.S.S. *Cole*. I understand that they are taking steps and you have my assurance, if confirmed, sir, that this will definitely be at the top of the agenda. This is obviously a threat, not just here in the United States, but overseas. All of our bases and not just that, but of course families. This is indeed a serious problem and will indeed get my attention and it will receive necessary resources. So if confirmed, we will be working with you, sir.

Dr. ROCHE. Senator, I know that Secretary Rumsfeld and Deputy Secretary Wolfowitz have worried about this problem. As a member of the staff of this committee, I have seared in my mind that there were members of this committee who warned me of terrorism. I can tell you exactly where I was when that explosion occurred. I take this very seriously.

Senator LEVIN. There is going to be a whole focus on modernization, transformation, and more traditional challenges than we had but this is the new great tranche. We are going to need your attention to this at the same time we are trying to transform and at the same time we are trying to modernize and meet the more traditional threats. So, I welcome that commitment on your part to address the emerging threats and the terrorist threats that we have seen and already operate against us.

Dr. Chu, one of the more frequent reasons that have been given by service members for leaving the service is the large amount of time away from home that is currently being demanded. What new initiatives, if any, are you planning if confirmed, to manage this increased personnel tempo?

Dr. CHU. Thank you, Senator. I appreciate that this is often cited and, indeed, I think Congress has provided new legislation on this matter. If confirmed, I look forward to working on this as a priority issue to understand the optempo problem and what we might do best to confront it.

Senator LEVIN. It is been often said that the military recruits individuals, but retains families. Spouse employment is a significant issue when it comes to retaining families. I am wondering what initiatives you are going to take in order to try to improve the situation for spouses?

Dr. CHU. I agree with you, Senator, that the department can do a lot better on this front. I think there are two areas that we can look at more vigorously. One is whether the department could be of greater assistance, specifically regarding opportunities in the federal sector and with the Department of Defense itself. Second, can we harness new technologies available to provide better information and referral sources to these individuals?

Senator LEVIN. Let me ask all of our nominees for service secretary this question. There have been some discussions in the press that Secretary Rumsfeld intends to institute a board of directors-type of approach to manage the services and the services' major appropriations. I am wondering if each of you who have been nominated to a service secretary position would describe your understanding how that board of directors-approach is going to function?

For instance, is the board of directors going to manage major acquisition programs? Will the department, do you believe, be seeking changes in legislation that mandates a direct reporting change for major acquisition programs from the service acquisition executives to the Under Secretary of Defense for Acquisition? What do you understand to be meant by this board of directors approach and how would it apply to major acquisition programs? Why don't we start with you, Dr. Roche?

Dr. ROCHE. Senator, thank you. The secretaries talked about having a senior management committee which would consist of the three of us as you see, plus the Under Secretary of Defense for Acquisition, to be chaired by the Secretary himself and Mr. Wolfowitz. The point of this is to bring together the business part of the department, not the operational part. It is a chance for us to show jointness at the very top, Senator, to work together where we can work together.

There are times when we need to rationalize our research and development programs. By virtue of our backgrounds, we have cross knowledge of the other services. I will be looking to Gordon for his wisdom on things. He may even ask me a question now and then.

The point is we would be working together so that when we have a position, whether it is R&D or something else we go forward. I see no need for change in legislation. This is the executives of the department the Secretary is nominating to you and if we are con-

firmed, to give us a fixed process to improve the processes in the building. So for instance, we are looking at overhead costs of the defense agencies. Can we get that down? Can we find the best practice in reducing costs and be more efficient in our own service to have a share of that? Can we resolve difficulties between the services at our level? We see just lots of examples whereby the close relationship continuing that has been fostered by the way we have gone through Pentagon 101 together, that this is something that is very good. Yes, we will compete and I wish Senator Warner were here because there are times Gordon and I have competed against each other very heavily but we know there are times it is in the best interests of our country to be able to support each other to do the right thing.

Mr. ENGLAND. I think Dr. Roche articulated that very well. Hopefully with the senior management team we will be able to examine policies, procedures, and benefits at the top. We need to be wearing two hats, one as service secretary, one as part of the senior management council. In my own judgment, we do this a lot in the business world for the sake of efficiency and effectiveness. It should be effective as part of managing the Department of Defense and my view was this was necessary, frankly, at least for me to consider coming to this position so that we could indeed look at efficient practices within the Department of Defense. So again, I would echo what Dr. Roche said. This should be very effective. It should not require any change that we know of, at least at this time.

Senator LEVIN. Mr. White.

Mr. WHITE. I agree with what Mr. Roche and Mr. England have said. The concept is to have a small body that operates like the executive committee or the management committee of a corporation and dealing with things that are truly important, particularly from a business perspective for the department, and deal with them in an effective way because this committee will involve all of us on a personal basis without a great deal of staff or bureaucracy associated with it, so I am quite excited about the prospects of it and if confirmed, I look forward to participating in it.

Senator LEVIN. My time is up.

Senator INHOFE. Thank you.

Senator LEVIN. Senator Smith is next.

#### **STATEMENT OF SENATOR JAMES M. INHOFE**

Senator INHOFE. I think we have arranged I will be next. As I said at the very beginning of this, Senator Smith and I are both on another committee. It happens to be a committee that I chair, the Transportation Committee, at the same time so I will try to get my questions in and I won't be able to return, if that is all right.

First of all, Dr. Roche, I'll say to all of you I appreciate the time you have given me and helping me in becoming familiar with you. It is the first time I can remember a team coming in, all of whom know each other and respect each other and will be working together and also working very closely with the uniformed services, so I am just real pleased that all of you are going to be here. We all understand the difficult issue of depot capability. You and I talked about this, Dr. Roche, in my office. I have never, I have always thought that a formula, 50/50, 60/40 is somewhat arbitrary

but nothing better has come along. I understand that while in my absence Senator Cleland asked if you would be willing to make some tours around to become familiar, and I want to make sure that Tinker Air Force base is in that tour.

Dr. ROCHE. Absolutely, Senator.

Senator INHOFE. With this problem, one of the problems we have in the ALCs is everyone agrees we have to keep a core capability in our ALCs and in shop. At the same time, we have not modernized them to the degree that we have to go. If we are to have competition, we would have to do modernization before that can take place. In our new modern platforms, they have been outsourced and those are the platforms that would be most dependent on if a war should come along and I'd like to have your remarks on the record as to your feelings about the future of the ALCs and how you see it.

Dr. ROCHE. As I said earlier, Senator, and I thank you for the question, I believe based on my experience that there will always have to be naval shipyards and ALCs. That the government has to have that. We build equipment now that lasts a very long time. There is a period in the time of life of a system when it has to be close to its contractor. You are making early changes. You are in a warranty period. There is a long period of time of sustained maintenance, sustained overhaul, upgrades, program improvements, et cetera, that typically have relied on the government facilities and I think always will. The key is that this is not us versus them.

My own experience working with Warner Robins and I know the experience of my firm working with Tinker on the B-2 program shows examples of where we both can work together for the betterment of the system. The ALCs will be the long-term institutions that will in fact be doing the maintenance.

You raised two points, sir, that are quite right. First, we have to find a way to modernize the capital equipment without punishing the particular program and loading the costs of that on to a particular program. I don't know the accounting processes that are used in the department, and I'll be learning them, but I think it will be wrong to worry about equipment becoming more expensive.

The second issue that the ALC faces is exactly what is faced by the scientific engineering and by people in the defense industry that we are soon to lose the people who have the corporate memory of how to do this exquisite work, and we are talking about very high-tech in a number of cases. We are going to lose those folks because they are nearing retirement. We have to find ways to attract young people both the defense industry and ALCs and to retain them and in the Air Force itself both civilians and military we have to find ways of having scientists and engineers who are there who can be part of this larger process working with the ALCs.

Senator INHOFE. I appreciate that very much. As Chairman of the Readiness and Management Support Subcommittee, I have been around and done a lot of hands-on work at the various installations around the world. I have come to the conclusion that everything is hemorrhaging, not just one or two things. I am talking about quality of life, modernization, force strength, all of the above, but the Chairman mentioned a couple of things in his questioning

that I had in mind that on some of these systems, there is this euphoric attitude that has always been out there that somehow, well, maybe we have problems in the military but what we have is better than anybody else has. Well, that is not true any more. I was very proud and wanted to get on record with you that General John Jumper, the first one to come up and admit that with the SU series coming out of Russia that some of the people in China at this time, have air-to-air capabilities that we don't have. So modernization is going to be necessary. General White certainly in the area of artillery and rapid fire, we are not number one and we are inferior in our systems. The system that I hear as I go around to the Army bases that is most needed and is the crown jewel right now and that would be the Crusader program. I'd like to have you share with us your feelings about Crusader.

Mr. WHITE. Senator, as you have mentioned, the Army in my history has been traditionally outgunned in indirect fire systems. We never adequately addressed that in the 1970s and 1980s. We have currently fielded a variety of a Howitzer that was first built in the early 1960s. To the extent that the strategic review relies upon land power as a critical component and those decisions have not been made by the Secretary, the ability to deliver long-range precision munitions from an effective modernized launcher to me is critical to the application of land power. So I intend to spend, if confirmed, a great deal of time examining the Crusader program. It is a program the Army has funded within its budget lines and made the sacrifices to do so and it would seem to me that it is fundamental not only to the existing force but the future of the transformed force as we go forward.

Senator INHOFE. Well, I appreciate that. I may be making the same request of you as I did to Dr. Roche to come out and see some things.

Mr. WHITE. I commit to you that I will personally visit Fort Sill and observe the side-by-side comparison as I think Senator Warner and yourself and other members of the committee have done, if confirmed.

Senator INHOFE. I have asked Chairman Warner if I can take a little bit longer since I will not be having a second round. I'll be chairing the other committee. Just real quickly if I could.

Senator LEVIN. Let me ask Senator Nelson. He was next.

Senator INHOFE. Just another couple minutes. First of all, rather than get a long answer here, we may want to ask the answer to be on the record, but, and that is the issue of encroachment. Just in this morning's *Los Angeles Times* it says after 7 years in the Marine Corps, Sergeant Johnny White of Newark, New Jersey has a new skill, tortoise spotting. White is among 30 noncommissioned officers certain to make sure that no desert tortoises are harmed. I have gone to Fort Bragg, to Camp LeJeune, and other places. It is a very serious problem. That is just one form of encroachment. All of your services will be facing this. The one I would single out, I'd like to get your, including you, Dr. Chu, your response to the encroachment problem, what you plan to do about it, including everything including spectrum.

But what I would like to have just from this meeting here and perhaps starting with you, Mr. England, one of the serious en-

croachment problems we have is in our live ranges around the world. They are disappearing, and the most critical one right now for east coast deployment is that of Vieques. We have looked to see and found that there is no alternative site for live fire to Vieques which means if we send our troops over they will be arriving into a battle environment without any live fire training. I would like to know your feeling about Vieques and then the others, if there isn't time, to do it on the record. Because this is not just a Navy issue. If we allow that to be closed because of public pressure, that is going to affect every Air Force range, every Army range, even in my State of Oklahoma, Fort Sill, so if you can respond in terms of the significance of the range of Vieques in your opinion?

Mr. ENGLAND. Senator, my background experience is that all teams scrimmage, whether it is a football team or basketball team. They all have to scrimmage and if you don't have a chance to scrimmage as part of practice, you don't do well when it comes to game time. The discriminator for the United States' Armed Forces is our training. Our training is superb compared to other countries so that is very important to us. The ability to scrimmage before we go into combat is very important, so the range issue is a critical one for all the services. Vieques is perhaps the first one that we have really faced in detail, but this will be an issue that we will have to address across the Department of Defense with my colleagues. It is one that we will have high on our agenda. Complex issues are going to have to be worked, but definitely high on our agenda. It is critical that we be able to train our forces. Vieques is very important because today is the only base we have for the United States Navy and Marine Corps to do combined training.

Senator INHOFE. My time has expired and I thank Senator Nelson for his patience here. I look forward to working with all five of you. I think this is a great unified group that is going to get us out of some of the problems we have right now. Thank you so much. Senator Nelson.

#### STATEMENT OF SENATOR BILL NELSON

Senator BILL NELSON. Where will we train if we don't train in Vieques?

Mr. ENGLAND. That is the issue, sir. We do indeed need facilities to train. I have not myself been able to look at any alternatives. My understanding is that that is a critical issue today because that is the only base we have to do combined training before our sailors and marines are deployed overseas.

Senator BILL NELSON. The United States has given its word with regard to a referendum. The United States being there, and politically working the ground on what is going to be the outcome of the November referendum. If the referendum goes against the United States, we are out, according to our agreement, so what do we do?

Mr. ENGLAND. Senator, I am going to have to defer until I have an opportunity to really get into this. I frankly only today have a perceptual view of this, but I will indeed put this on my agenda.

Senator BILL NELSON. That is fair. If you would share with me your thoughts when you draw that conclusion. I have asked that question of a lot of active duty United States Navy folks and I don't get a definitive answer at this point.

Mr. ENGLAND. Senator, I'll tell you, if and when confirmed, I will definitely work this with you. This is an important subject. Again, I have not had the opportunity to work as I have not been allowed to until confirmed, but if confirmed, I'll definitely get back with you, sir.

Senator BILL NELSON. Let me plant another seed. There is an issue of whether or not we will have a nuclear aircraft carrier stationed in Japan. That, of course, is a sensitive issue from the military standpoint. They would prefer to have a nuclear carrier. But if the decision of the administration is not to replace the carrier that is over there with a nuclear carrier, the likely conventional carrier is the U.S.S. *John F. Kennedy*, which is stationed at this time in Mayport, which is in the City of Jacksonville. My concern at that point, if it is the U.S.S. *Kennedy* that goes to Japan in 2008, that we not have a Navy policy on the east coast that there is only one port for carriers, as opposed to keeping the two ports that we have now. I'd like any of your thoughts on that.

Mr. ENGLAND. Senator, I am not at all familiar with this issue, having not heard this issue discussed, so again, I'll just have to take an action item for you, sir, and get back with you, if confirmed, sir.

Senator BILL NELSON. OK. Do you want to comment or do you want to get back later about the deferring of the procurement of the T-6 training aircraft?

Mr. ENGLAND. I definitely need to get back with you on that, sir.

Senator BILL NELSON. Let me ask all the three service nominees a question that you all can answer. All of you have very distinguished backgrounds, particularly in aerospace and defense. As you come to this position of responsibility leading this portion of the Defense Department, how do you protect against your conflicts of interest with your former employers? Why don't we just start with you, Mr. White.

Mr. WHITE. Well, I think first of all, Senator, we are obligated to follow both the letter and the spirit of the law in terms of potential conflicts. I totally intend to do that. Second, I am coming from an energy company, Enron Corporation, which has a very slight relationship with the Department of the Army and a very small one with the Defense Department. I will personally commit to you to avoid any, even appearance of conflict in terms of any future relationship that Enron might choose to have with the Department or attempt to have with the Department.

Mr. ENGLAND. Senator, my background is General Dynamics, and of course, I am very active in the defense business. I have agreed to divest myself of all of my holdings in General Dynamics, all defense companies, and all companies that do business with the Department of Defense in order to have a surety bond against my retirement. I have two retirements: General Dynamics and Lockheed Martin. Both of those would be bonded so I would have no reliance on those companies. Where there is a conflict of interest, I definitely would recuse myself.

However, General Dynamics is in a lot of businesses and businesses keep consolidating so over time, you move away from much of the knowledge regarding what many of those companies are doing. So where there is an obvious conflict, where there is an obvi-

ous problem, I will recuse myself. But hopefully, there are many situations where you can deal in the real world with these companies as time goes on because there are very few companies left that do defense business in the United States. So I do not believe you can completely recuse yourself from everything dealing with your former company. Certainly where there is an evident conflict, one would recuse oneself, and I would do that, sir, and sever all economic ties to my previous employers.

Dr. ROCHE. Senator, just as when I was the Democratic staff director of this illustrious committee, I severed all my ties with the Navy and there were naval officers that noticed that. We have a mandatory retirement of 65. I am 61. I am too old to return back to my company. I will have sold all stock, all interest, I will have severed all ties and I don't see a situation where I would have to recuse myself under those circumstances because I will abide by the law and I will do the job of the Secretary of the Air Force with Secretary Rumsfeld and under President Bush as ethically as you can imagine.

Senator LEVIN. Just to add one thing, you also are putting up a surety bond?

Dr. ROCHE. Absolutely. Yes.

Senator LEVIN. Relative to your retirement?

Dr. ROCHE. Yes, sir.

Senator LEVIN. Just to complete the record. Thank you.

Senator Carnahan is next. A number of Senators are going to run over and vote and try to get back in time, but Senator Carnahan, I think you have the time here.

#### STATEMENT OF SENATOR JEAN CARNAHAN

Senator CARNAHAN. I would like to thank the distinguished panel here and thank you for the straightforward manner in which you have answered the questions that have been presented to you. Dr. Roche, I'd like to ask you this question. I am concerned about the age of our long-range bomber fleet. The B-52 program is halfway through its 80-year life span. The B-2 program is 30 years old. The average age of these aircrafts is 22 years. Can you tell the members of this committee about the Air Force's plan to sustain our long-range bombing fleet?

Dr. ROCHE. Senator, first of all, coming from Northrop Grumman, we are the builders of the B-2 bomber and my part of the company actually produces the radar for the B-1 bomber and the electronic warfare on the B-52. Up to this point and not presuming confirmation, I keep my day job. I don't know what the Air Force's plan is. I have made sure that they have not briefed me on anything that might be a competitive situation but, if I may offer a personal view, ma'am, one is that we use the word bomber these days really to mean large aircraft. Smaller aircraft are also bombers. We are talking about delivering weapons from the sky to the ground but a bomber, or any airplane that launches a standoff cruise missile, is also a bomber. The average age is between 22 and 25 years as has been briefed to me. I believe, given our desires for range and payload, that we are going to want to have this be a vibrant arm for the future. That consists of a number of things. It consists of appropriately putting the weapons on to provide a mul-

tiplier effect for those platforms, so for instance, there are some exciting proposals in the case of the B-2 bomber to make it an exquisite bomber dropping extraordinary precise weapons and carrying lots of them because we can be so precise, we can go to smaller tonnage.

Similarly, there are proposals to have our B-52s not penetrate but be just big trucks carrying standoff cruise missiles. In the long run, we should be starting, in my own personal opinion, research on an advanced bomber beyond that, one that can go at high speed, one that can go alone, and one that is appropriate for the strategy that will come out of Secretary of Defense Rumsfeld's review.

Senator CARNAHAN. Thank you. I was just wondering, too, how might our aircraft requirements change if the Department of Defense reassesses the current two major theater war strategy?

Dr. ROCHE. It depends on the outcome of the review, ma'am. It is unlikely that we will all of a sudden decide we don't need air power. Air power is there but I believe that one of the things that Secretary Rumsfeld is trying to get us to think through, is what is the basic business of our services, our departments with regard to the strategy. My own sense is the Air Force is the business of global reconnaissance and strike. Strike may be delivering Army troops, but the reconnaissance part is one that you have seen emphasized by Secretary Rumsfeld in the recent weeks by concentrating on space and making it the point that we need space for operations of the Air Force, Army, and Navy. It is at this level that I see change coming. It is a change in the emphasis and I think it is long overdue, ma'am.

Senator CARNAHAN. Mr. England, I understand that the Navy's F-14 program is over three decades old and the Navy is now procuring more F-18s to replace the older generation aircraft. Could you discuss with us your views on the importance of modernizing the Navy?

Mr. ENGLAND. Senator, I am not at all familiar with the plan of replacement. I have not had that insight into the Navy yet, but certainly support modernization for all of our weapons systems, surface, subsurface and air, so modernization is obviously important for the country, for our military. However, I am not familiar with the specifics of any given program.

Senator CARNAHAN. How do you feel that the joint strike fighter will complement the F-18?

Mr. ENGLAND. Senator, I just have not had the briefings to have that conversation. I would be happy to have it with you if confirmed, Senator.

Senator CARNAHAN. One final question, Mr. White. Historically the Army has not always been able to meet its military maintenance and repair requirements. This has caused diversions from base operations and training funds. Should you be confirmed, would you consider this issue as the Army draws up future budget plans?

Mr. WHITE. Senator, I think it is a critical issue to deal with and I will give it my attention.

Senator CARNAHAN. Thank you, Mr. Chairman.

Senator LEVIN. Thank you, Senator Carnahan. Mr. Rascon, on draft registration, do we need to do it any more or do our all-volun-

teer forces seem to be recruiting sufficiently? Our retention is getting better. Why should we maintain this registration process which is costly and doesn't serve any purpose?

Mr. RASCON. Probably the most important thing that we need, we need a deterrent that is going to be there in case something does come about. We end up talking about a situation right now in which this country may face a terrorist threat. It may not. In 1941, we weren't ready for a war. Korea came about. Vietnam came about. We ended up with the fact that we had to come back and get young men ready quickly into the military.

Senator LEVIN. Regardless of whether divestiture is required by law, it has been our policy. Total divestiture rather than recusal because we really want DOD officials to be free to manage the department.

Now, have each of you complied with that policy first of all, or are you going to comply with that policy?

Dr. ROCHE. Yes, sir. All 37,200 stocks, I will not own one of them. Certainly none of the defense stocks or anybody who does business with the Defense Department.

Mr. ENGLAND. Yes, sir.

Dr. CHU. Yes, sir.

Mr. WHITE. Yes, sir.

Senator LEVIN. Nobody who does business with the Defense Department?

Mr. WHITE. Regardless of how de minimis that relationship might be.

Dr. ROCHE. I will divest my Disney stock.

Senator LEVIN. You are going to have to figure out any company that does business with the Federal Government?

Dr. ROCHE. Yes, sir. It is on the Internet. They have been informed they will execute that, if I am confirmed.

Mr. WHITE. Makes you worry about a company that is not on the site.

Senator LEVIN. Makes me worry about the recusal, frankly, because if a company does business with the Defense Department, no matter how little, that isn't on that site, then apparently we are supposed to know about it even though it is not on the site.

Dr. ROCHE. The site is updated periodically and when a financial advisor or those of us who may choose to buy stock, we are required to check that site first.

Senator LEVIN. Is that then the end-all and be-all of that site? If it is not on that site, you are safe? Is that your understanding?

Dr. ROCHE. Yes. We are not going to do anything dumb.

Senator LEVIN. Is that a commitment?

Dr. ROCHE. That is a commitment.

Senator LEVIN. I think there has been some testimony this morning which is slightly different from what we just heard from Mr. England particularly. I think you suggested that you may be recusing yourself relative to matters that General Dynamics has ongoing with the Defense Department even though you totally divested yourself in General Dynamics. I would suggest the following—that this be clarified, that you get us the answers to that question, particularly you, Mr. England, given your answers are slightly different, I believe, than the other nominees. You talk to

your ethics officer in the Defense Department and see precisely what your policy is going to be on that and that you give us a written answer to that question within the next 24 hours, if you can. It shouldn't take you long. I think we do need some clarification from you on that issue because I think if you did disqualify yourself on any matter involving General Dynamics, that would then raise a question about the others who are going to continue or who are not going to disqualify themselves in matters involving their former companies because they totally divested themselves of any interest in those companies.

Mr. ENGLAND. Sir, I will be pleased to give you a written statement. First, let me clarify for you. I will divest myself. I have agreed to this, certainly from every company that does business with the Department of Defense. I have taken all the surety bonds. My only comment was since I recently left General Dynamics, matters that may have been under consideration, that I was involved with while still with the company, those I would recuse myself from because I could have a conflict in terms of knowledge.

Senator LEVIN. What's the conflict if you no longer have an interest in the matter? I don't want to disagree with you. I want you to get some advice from the ethics officer from the Department of Defense on that issue because that may be a different standard than others are applying and we are going to have different standards and that is not going to be helpful. This is an issue which seems to be done in a way which is consistent. There is a policy and I would suggest that you would consult your agency's ethics officer before you are confirmed to get exactly what your position is, and that you share this with your colleagues who are here this morning so that they know exactly what your position is going to be, and provide a written answer to the committee as to what your position is going to be on that.

[The information requested by the committee, as well as a subsequent letter clarifying the committee's position follows:]

10 MAY 2001

Honorable John W. Warner  
Chairman  
Committee on Armed Services  
United States Senate  
Washington, D.C. 20510-6050

Honorable Carl Levin  
Committee on Armed Services  
United States Senate  
Washington, D.C. 20510-6050

Dear Senators Warner and Levin:

I received the attached letter from the Acting General Counsel at the Department of Defense outlining the actions to be taken by me to avoid potential conflicts of interest once I have been confirmed and appointed as Secretary of the Navy. It is my understanding that once I complete all actions required of me within 90 days of my appointment, I will be authorized to participate in all actions to be performed by the Secretary of the Navy including matters involving General Dynamics and Lockheed Martin. I will not be required to recuse myself from any matter as Secretary of the Navy.

Sincerely,

Gordon England

Attachment

GENERAL COUNSEL OF THE DEPARTMENT OF DEFENSE  
1600 DEFENSE PENTAGON  
WASHINGTON, D. C. 20301-1600

MAY 10 2001

Mr. Gordon England  
30 Windward Court  
Fort Worth, TX 76132

Dear Mr. England:

This letter provides additional information to you, as the nominee to be the Secretary of the Navy, regarding potential conflicts of interest with General Dynamics Corporation and Lockheed Martin Corporation.

To avoid conflicts of interest, you have agreed to divest, or otherwise extinguish, all financial interests in those corporations, as well as all other entities that do business with the Department of Defense, within 90 days of your appointment. Until those financial interests are extinguished, you may not participate personally and substantially in any particular matter that would have a direct and predictable effect on the financial interests of those corporations. Afterwards, since you would no longer have a financial interest in those corporations, you would not be required by statute to recuse or disqualify yourself from taking official actions involving those corporations.

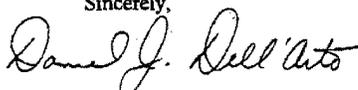

In addition to the conflicts of interest statute set out in section 208 of Title 18, United States Code, you will have a "covered relationship," as defined by §2635.502(b)(1)(iv) of title 5 of the Code of Federal Regulations, with the corporations listed above for a year starting from the date of your resignation from those corporations. Therefore, where circumstances would cause a reasonable person with knowledge of the relevant facts to question your impartiality in a particular matter involving the above corporations or persons represented by them, you may not, for a period of 1 year from the date of your resignation, participate in such particular matters, unless in accordance with section 2635.502(d), it is determined that your participation in a particular matter outweighs the concern over an appearance of a loss of impartiality.

After you sever your affiliations with these entities, such a determination will be made with respect to the described covered relationships. The determination will state that the interest of the Government in your participation in all of the duties that must be performed by the Secretary of the Navy, which may involve particular matters in which the above mentioned entities are or represent specific parties, outweighs the concern that a reasonable person may question your impartiality in the matter. In carrying out your duties, you will be authorized to participate in all of the functions that may be performed by the Secretary of the Navy, notwithstanding that these corporations may be a specific party or represent a specific party to a matter.

In summary, after you sever your financial interests in the above corporations, you will not be required by statute or regulation to disqualify yourself from taking official action that involves either or both of the above corporations.

Sincerely,

A handwritten signature in cursive script that reads "Daniel J. Dell'Orto". The signature is written in black ink and is positioned above the printed name.

## United States Senate

COMMITTEE ON ARMED SERVICES  
 WASHINGTON, DC 20510-6050

May 18, 2001

The Honorable Alberto Gonzales  
 Counsel to the President  
 The White House  
 Washington, D.C. 20502

Dear Judge Gonzales:

In the course of the Armed Services Committee's May 10, 2001, nomination hearing, a number of Senators raised questions and concerns regarding potential conflicts of interest, divestiture, and recusal by the President's nominees to serve as Secretaries of the military departments. We are writing to clarify the Committee's policy on these issues.

As a general matter, the policy of the Committee with respect to senior civilian positions within the Department of Defense is to prefer divestiture to recusal as a means of avoiding potential financial conflicts of interest. The reason for this approach is that excessive recusal may inhibit the official's ability to do the work of the position to which he or she has been appointed. For this reason, the Committee requires nominees for positions subject to Senate confirmation to divest all of their holdings in firms doing business with the Department of Defense and to purchase a surety or insurance policy to sever their reliance upon pensions, deferred compensation, and other interests that cannot be divested. These requirements are more stringent than those imposed by executive branch conflict of interest standards and result in the removal of all financial interest a nominee may have in a company doing business with the Department of Defense.

We are aware that Section 2635.502 of the Executive Branch Standards of Ethical Conduct prohibits an executive branch employee from participating for one year in certain matters regarding an entity with whom the employee has a "covered relationship", even if he or she has divested all financial interest in the entity and therefore has no conflict of interest. The General Counsel of the Department of Defense has waived this requirement on a blanket basis for nominees coming before this Committee based upon a determination, in accordance with the regulatory standard, that the interest of the Government in the nominee's participation in all of the duties of his or her office outweighs the concern that a reasonable person might question his or her impartiality.

We would like to clarify that the Committee does not insist that the recusal requirement in Section 2635.502 be waived for nominees, and that any determination to waive this requirement is the responsibility of the executive branch. If any waiver determination has been made by the Department of Defense regarding a currently pending nomination on the basis of an

understanding that the Committee would insist that such a waiver be granted, we believe that the Department should revisit the issue.

At the same time, we are concerned that the application of the one-year recusal requirement in Section 2635.502 on a "matter-by-matter" basis could be particularly problematic in the case of former officers, directors, or employees of major defense contractors, which contractors have a financial interest in hundreds, if not thousands, of matters coming before the Department. The process of identifying these matters and determining whether or not a recusal or a waiver should be required could be extremely time-consuming and complex.

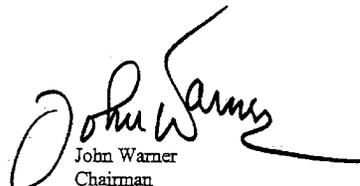

We are also concerned by language in Section 2635.502 which states that a federal employee who receives a waiver from the recusal requirement "may not thereafter disqualify himself from participation in the matter on the basis of an appearance problem." This language appears to eliminate any possibility of a middle ground, under which an appointee could receive a blanket waiver covering routine matters, and still be recused from a particular case in extraordinary circumstances in which the appointee felt it appropriate to do so.

We believe that you should review the requirement of Section 2635.502 for federal employees to recuse themselves on the basis of "covered relationships" (in the absence of financial conflicts of interest), in consultation with the Office of Government Ethics, the Department of Defense, and other appropriate federal agencies. This review should ensure that the rule is written and applied in a manner that effectively evaluates a nominee's conflicts of interest and impartiality on matters relating to "covered relationships," but also ensures the integrity of federal programs and operations without imposing unreasonable limitations on the ability of these employees to do their jobs.

Thank you for your attention to this matter.

Sincerely,

  
Carl Levin  
Ranking Member

  
John Warner  
Chairman

cc: The Honorable Donald Rumsfeld  
Secretary of Defense

Senator LEVIN. My question for each of you is the following. Will you consult with your agency's ethics officers, if confirmed, to determine what circumstances, if any, require you to recuse yourself from specific decisions of importance to either or any of your departments?

Mr. WHITE. I will, Senator.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. I already have, Senator, and there is only one.

Senator LEVIN. My question is will you?

Dr. ROCHE. Yes, sir.

Mr. RASCON. Yes, sir.

Dr. CHU. Yes, sir.

Senator LEVIN. In addition to that, we will need your statement after that consultation prior to confirmation. Share it with your colleagues here and give it to the committee so we can all be following a consistent policy here. My colleagues who were not able to make

it back after the vote, I know are on their way. We are going to recess for a few minutes until one of my colleagues gets back to continue the hearing. Congratulations, and again thank you, and thanks to your families.

[The committee stood in recess.]

#### STATEMENT OF SENATOR SUSAN COLLINS

Senator COLLINS. The committee will come to order. I would note my meteoric rise from least senior member of this committee to the temporary chair. It gives me a great sense of power. I want to first welcome all of you here today and give you my personal thanks for your willingness to serve your country. I am particularly delighted to see my friend, Mr. Rascon, here today.

We first met last December on a trip with then Secretary of Defense Bill Cohen, when we were visiting the troops in Bosnia, Kosovo, Germany, and Macedonia. His telling of the story of how he came to be a Medal of Honor recipient so moved the young men and women who were serving in those very remote outposts. I know his family is very proud of him, and I am delighted that he has been nominated for this position. I also want to note that his son, Alan, is having his birthday today—so this is a very special day indeed.

Mr. England, I want to follow up on some of the comments made by the committee's chairman, Senator Warner. I believe that strong leadership is needed to address the declining naval shipbuilding rate and our shrinking industrial base. You and I had an opportunity to discuss this issue briefly in my office, but the numbers are truly very troubling. The Navy has shrunk from a fleet of 595 ships in 1987 to approximately 315 today, while during that same period, deployments have increased by more than 300 percent. Moreover, the regional CINCs have repeatedly warned that the fleet is stretched perilously thin and needs to be increased, by some estimates, to a 360-ship Navy to meet present mission requirements. Moreover, at the current low rate of production, the cost per ship is going to increase and the efficiency of our yards will go down. The numbers are just as clear as they can be. At the current rate of investment, our Navy is heading toward a 200-ship fleet, which by every study that I have seen is alarmingly inadequate. So I raise this issue publicly with you only to bring to attention to what I see as a critical need for rebuilding and recapitalizing the naval fleet. What are your thoughts on the current rates of production and what are your thoughts on what we need to do to rebuild the fleet?

Mr. ENGLAND. Senator, I know the rates are low in the industrial base. I also understand that is costly. I do know the number of ships is going down and I heard the number of 240 ships at our current rate. I do not know what the size of the fleet should be. I have heard the report that the CINCs have requested 260 ships or thereabouts. So I do not know the specific number. We will wait for the outcome of the strategic review, but shipbuilding is high on my agenda.

This is the United States Navy, so ships, of course, are the foundation of the Navy. I made the comment in your office, without ships it is like a football team without footballs, so we definitely

do need ships in the Navy. That number, I don't know the specific number, but it is high on my agenda. It is a priority. It is an area we will look at very carefully. We will work with Secretary Rumsfeld to define this but if indeed there is a need for ships, I will definitely make it a priority to go work this issue of added ships and working with this committee, with you, and the chairman to do that. So if confirmed, I will definitely work with this committee and on this issue.

Senator COLLINS. Thank you. You mentioned the strategic review that is currently under way. I have been very concerned by press reports which suggest that the DD-21 is being targeted by this review. This is puzzling to me, given that it incorporates the kinds of leap-ahead technologies that Secretary Rumsfeld and the President have embraced. I just want to alert you to the fact that today, along with the majority of the members of the Seapower Subcommittee, including the chair, Senator Sessions, and the ranking minority member, Senator Kennedy, and our majority leader, Senator Trent Lott, that I have sent a letter to Secretary Rumsfeld raising our concerns about press reports that the DD-21 is endangered and putting out what we believe are the very strong reasons for proceeding on schedule with this very important new weapons system. I know you have not had a chance to review this issue, but I did want to alert you to our concerns and to the very strong support that the DD-21 has in this committee and in this Congress and Senate. So I just want to put that on your radar screen as something that I hope you will get back to us on with a very positive response, very early in your tenure as an outstanding naval secretary.

Mr. ENGLAND. Definitely, I will definitely get back with you. I appreciate the effort, Senator. We will respond as quickly as possible.

Senator COLLINS. Let me switch to another issue, Mr. England. Currently, our P-3 aircraft is an integral part of our current war plans' patrol and reconnaissance programs, but the P-3 is getting old. The platform is roughly 25-years-old and while the aircraft avionics upgrades have kept the plane relevant and viable in today's threat environment, many believe the air frame itself is reaching the end of its useful service life. Now, I am aware that there is an ongoing service life assessment program that is studying air frame fatigue issues, and that currently there is an ongoing analysis of alternatives underway to look at a multi-mission aircraft (MMA) as a follow-on to the P-3 program. The CINCs rely on the P-3 to perform their roles and missions every day. I'd like to know what your thoughts are on the MMA program as a follow-on contender for the Navy patrol and reconnaissance missions.

Mr. ENGLAND. Senator, that is definitely an issue I have to look into, if confirmed, and get back with you. I will get back with you and confirm it.

Senator COLLINS. Thank you. Mr. White, all of the services are currently under review to transform and move the military force into the 21st century. I understand the transformation efforts, particularly the Army transformation, are already under way. But there are obviously still opportunities and challenges ahead. The Army, in particular, has been criticized that its current units and

systems are not nimble enough to respond to today's threats. In your judgment, will the current Army transformation plans yield the kinds of military forces and changes that we need to remain capable in the 21st century?

Mr. WHITE. Senator, from my brief review of the transformation plan as it is currently laid out, that is, the central focus of the plan is to produce at least equivalent survivability and revalidate with considerably less strategic weight so that we have a far more agile force. As we shift strategic emphasis from the European theater where it has been during the Cold War to the Pacific theater and the distances stretch and the geography changes, that it is strategic mobility that will be an essential challenge on the Army to outline a transformation program so that the Army can arrive at a first unit equipped in a reasonable time frame at an affordable price. If confirmed, I'll make that a central effort to be personally involved in.

Senator COLLINS. Thank you. I know that my time has expired and the chairman has returned so I will turn over the gavel. I do want to say, Dr. Chu, that I do have a question for you that I am going to submit for the record. It expresses my concern about reports that 50 percent of DOD's civilian acquisition work force is going to be eligible to retire in 2005, and that really concerns me as far as brain drain and loss of expertise to the Department. So for the record, I am submitting a question to you that I would appreciate your answering.

Chairman WARNER. That is a very important subject, and each of our nominees should be fully aware of that fact.

Senator COLLINS. Thank you, Mr. Chairman.

Chairman WARNER. Senator Smith.

#### **STATEMENT OF SENATOR BOB SMITH**

Senator SMITH. Thank you, Mr. Chairman. I must also apologize to the witnesses. A number of us have a simultaneous hearing going on in another committee with Secretary Mineta and we have also had a vote. Welcome to the Senate. Get used to it.

Dr. Chu, there was a report, I am not sure of the date, it may have been yesterday in the *Washington Times* about four recently-authorized or expanded peacekeeping missions in Africa that will account for a huge increase in peacekeeping missions. Officials estimate the final cost of peacekeeping for the 12-month period ending June 30 could rise as high as \$22.6 billion, compared to the \$1.7 billion a year earlier. There was great controversy in the last administration about these peacekeeping missions, specifically a lack of budgeting which ultimately consumed readiness. Are you prepared to deal with this shortcoming in a straightforward manner so that the military readiness programs will not suffer?

Dr. CHU. Yes, Senator. If I am confirmed to this position, I would look forward to exactly that.

Senator SMITH. How would you do that or recommend doing that? Would you do so via a supplemental budget for peacekeeping or budget for it in the defense budget or transfer the role of peacekeeping missions to the State Department?

Dr. CHU. Senator, as your question suggests, President Bush and the current Secretary of Defense have committed themselves to try-

ing to reduce these burdens, not increase them. That is obviously the first step. To the extent that the missions are foreseen, I think it is preferable to build them in the budget. I recognize the Department has tried from time to time to put forward the notion of a contingency fund against unforeseen circumstances of this kind. It has not always gotten a warm reception to that notion, and I think if a contingency line is not feasible, then I think the Department needs more promptly to ask for money in order to deal with it.

Senator SMITH. Gentlemen, there is debate about “peacekeeping” missions—whether or not they are a legitimate role for the military. I think this will be a continuing dialogue as we move forward in the budget process. Unfortunately, I didn’t have the opportunity to sit down and speak with each of you. The wait accompanying your nominations has precluded time to talk privately prior to this hearing. With that in mind, it is not my intent to surprise anyone, but just get it on your radar screen.

Let me start with you, Mr. White. I have had a long-standing interest in the Kinetic Energy Anti-Satellite (KE-ASAT) program. KE-ASAT is a program that we have had under the Army for a number of years. Not to brag or take the blame, but I pretty much kept the program alive single-handedly. For the last 10 years it has been line-item vetoed and reprogrammed. I am concerned because there is another \$40 or \$50 million needed to get three kill vehicles tested. Unfortunately, there are still problems with that program and I want to bring it to your attention. General Shinseki has been very cooperative with me but there are still people in the program who don’t believe in the program and people who do believe in the program who can’t get into the program. That is not good for management of this program. I am concerned because I have thought about it and fought for it for so long that I am about ready to recommend a drastic change. I am ready to say if the Air Force is going to be the lead agency on space and that is the direction of reforms, then maybe it is time to move KE-ASAT out of the Army and put it in the Air Force where someone will believe in the program. I want you to understand my concern and frustration. It is the only program that I know of that can incapacitate a satellite. I know I will be proven right when these kill vehicles are tested. I feel so strongly about it and the way that it has been going that if the recommendations seem to fit and the Army is not going to be supportive of getting this program back on line, then I would suggest looking at the Air Force. I apologize for doing this publicly, but I feel so strongly about this issue.

Mr. WHITE. Senator, if confirmed, if you would give me a chance to examine the program before you took precipitous action, I would appreciate that.

Senator SMITH. I will do that. Again, I think what the Secretary was talking about in his press conference, and I don’t want to put words in his mouth, but the idea was that somehow we need to try to collate things in terms of our space program. Their oversight is spread all over the Defense Department, as responsibility for the programs is spread all over different committees in Congress, but it is an example of a program that I think has been delayed because of actions prior to your tenure, obviously.

Mr. England, let me ask you one question. Military-to-military exchanges are a big controversy now. The Secretary addressed this issue the other day, briefly saying he was going to look at exchanges on a case-by-case basis. The information that I have had on these exchanges over the past several years has been that the military-to-military exchanges seem to benefit the Chinese more than they benefit us. They get to see more than we did. I would ask, when you are confirmed, to take a good, hard look at these military-to-military exchanges to see whether or not they are necessary to provide the Chinese with that kind of access. Given the latest things that have happened on Hainan Island, I would hope that you would look at that policy and whether or not they deserve access to our military installations when they are holding one of our aircraft hostage, if you will, in their country.

Mr. ENGLAND. Senator, I will get involved in this subject. Yes, sir.

Senator SMITH. I think it is one way to get their attention proving we don't tolerate this sort of thing. Could I ask one more question, Mr. Chairman?

Chairman WARNER. Absolutely.

Senator SMITH. I know my time has expired, and I apologize for that. Mr. England, I spoke to your predecessor, Secretary Danzig, briefly before he left office on the LCDR Michael Speicher case—the missing Navy pilot, first pilot shot down at the end of the Persian Gulf War. We can't go into a lot of detail here in an open session, but I just would ask you to receive an intelligence briefing on this and make sure that you are briefed thoroughly. There are some details that are quite astonishing. Secretary Danzig was so concerned about it that he recommended, and President Clinton approved, a change in the status of Commander Speicher from KIA to MIA. An unprecedented action, based on intelligence that had been revisited. I really believe that it is something you need to be briefed on. When you look at the number of issues you are going to have on your plate as you step in there, this could get lost. But, I believe it is a very important issue, and I urge you to look at it very carefully.

Mr. ENGLAND. I will make sure it does not get lost, sir.

Senator SMITH. Thank you, Mr. Chairman.

Chairman WARNER. Thank you, Mr. Smith. I appreciate your coming down from your other hearing. We have been here for 2 consecutive hours. I think it might be advisable if we all stood for 2 or 3 minutes and as soon as I see you back in your seats, we will resume the hearing, which I hope will be 2 or 3 minutes. Thank you.

[The committee stood in recess.]

Chairman WARNER. The committee will come to order. I'll start with Mr. Rascon. I feel very strongly that not only has the President chosen wisely in your nomination, and indeed I think you had a chance to meet with Colonel Les Brownlee, Staff Director of the Armed Services Committee, and who was in that same engagement and wounded 3 days before you. He is a tower of strength on this committee. He has been here for many years. I hope he stays many more. But any way, the Selective Service System is essential. We always have to be reminded that the draft in World War II was ap-

proved by one vote from one single member, one vote that enabled that draft to be put in place just on the eve of Pearl Harbor. Anyway, the oceans have given us a certain amount of protection and time with which to prepare for engagements. We had it in World War II fortunately, but now with modern communication, modern transportation, spread of terrorism, we may not have the luxury of that time, so should a major crisis befall our Nation, we would have to turn immediately to the Selective Service System to provide men and women to come forward to serve in uniform. So, you have a very important function.

Mr. RASCON. Yes, sir.

Chairman WARNER. This committee takes seriously its oversight of your organization and we know that you will have access to me and members of our committee and our staff whenever you deem it necessary.

Mr. RASCON. Thank you very much.

Chairman WARNER. Now, you served as Inspector General of that system. Do you have some recommendations in your mind now that you are likely to bring about in the system, and also, would that require legislation?

Mr. RASCON. If confirmed, the best thing about becoming a director will be the fact that I have been there before. I served there for 5 years and I ended up making observations. It is an agency that is well-equipped to do what it has to do, but there is always room for improvement. I think the most critical thing we have right now is with young men who have to come back and register. We end up with an 88 percentile of individuals registered for the Selective Service. We would hope that we would have it up to at least 90 percent. We find that those individuals who do not register do it with good cause and sometimes we end up with young individuals that are not aware of the fact that that is mandatory for them to do, and once they find out hey, let's do it, and it is really simple. The sad thing about it is that most of the time, these young men are not aware of the fact that they have an obligation to register. I think it is going to be important for us to come back and look at where the weak points are or we have to come back and focus, what state, what county, and make sure that we get the word out to these young men that they have a mandate to register for the Selective Service. I think by doing that, we should be able to come back and facilitate the need to come back and have at least a 90 percentile of individuals registering for the Selective Service once again, sir.

Chairman WARNER. As these service secretaries will be able to advise you hopefully after they are confirmed in their jobs, their challenge to meet the special skills requirements of the respective services is one of the biggest problems they have. We have enjoyed, certainly up until 6 months ago, an extraordinary growth in high-tech industry. Hopefully, that will return because it is on the cutting edge of America. But we are short frequently because of the growth of the civilian sector of high-tech in our military services for individuals who were trained in high-tech. They are given a number of offers when they have to make that critical decision. Do they go on for another 4 years or do they go out with their families and believe me, let me tell you, the decision to stay in the military is

made around the dinner table at night. When I was in uniform sometimes a sergeant made the decision, but that is gone long ago. You may have to have congressional mandates for special skills. It is interesting, I love military history. My father served in World War I as a doctor in the trenches, wounded and highly decorated. I am just so highly proud of his service to the United States. But he was in the United States Army Reserve. The United States Army Reserve was created shortly after the turn of the century for one purpose, and that was to have a cadre of doctors to meet the requirements of this country we faced with a war. Indeed, it did happen in 1917. That is our situation in that war. So you have to be prepared. Have you given some thought to that? That is not going to be an easy one.

Mr. RASCON. I have, sir, personally, because I have worked at the Selective Service and have been exposed to the intelligence community where I was an Army officer, there is a viable threat sometimes that we might not be aware of. I think that is one of the things that is hitting us right now in the head is the fact that if something happens, we have to be ready for anything and any emergencies. We end up with individuals who might be drafted, but again they end up with one common skill. We have to be able to come back and mandate through Congress to have a specialty, such as doctors and nurses, ready to come and be on board in case of a national emergency. If it is mandated, that is something that we will be able to come back and have ready to go, but to me, I think it is very important.

Chairman WARNER. You will, subject to confirmation, shortly make public what you are going to do along those lines, because I think advanced knowledge to the young men and women that if there is a serious problem, because of their skills, they could be among the first to be drafted. Am I not correct?

Mr. RASCON. That's correct, sir. That is why it is important that we talk to each other as when I was in the infantry school: cooperate and graduate. I think that is very important.

Chairman WARNER. That still works.

Mr. RASCON. Yes, sir.

Chairman WARNER. Now Dr. Chu, in your written responses to the committee's questions, do you agree the Selective Service Board should review substantiated relevant information of an adverse nature which could affect the judgment of those having to make the decision on those very important boards and be a part of the deliberative process.

Dr. CHU. Yes, sir.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. Yes, sir.

Mr. RASCON. Yes, sir.

Chairman WARNER. The service secretary plays a very key role in the selection boards and there is nothing really—I wouldn't say nothing, but it is vital to the career of the professional military that those boards be viewed and in actual practice are conducted in a manner to give the maximum degree of objectivity and fairness. Because they, together with their families, that made commitments of periods of time of service, accepted the hardships associ-

ated with that service, indeed the risk associated with it, the separation from family, and there is nothing more exciting that comes along than a promotion this side of the ocean, so take that responsibility as one of your greatest and most important and bear in mind the need to have that fairness, objectivity, and that they have comfort in that.

Success in recruiting requires our most creative and bold thinking. What ideas do each of you have towards improving our recruiting? Dr. Chu.

Dr. CHU. Thank you, Mr. Chairman. My own take on it is that we in the department need to be in tune with what is appealing to the younger generation, which may not always be the same things that appeal to the older. Maintaining a close finger on that pulse is essential to having a successful campaign.

Chairman WARNER. Mr. White.

Mr. WHITE. Senator, the Army has launched a new campaign, the "An Army of One" campaign. I look forward, if confirmed, to getting into the details of that.

Chairman WARNER. I wouldn't accept it at this moment. I don't know where you are going with this testimony. But the other one worked pretty well. So I want you to do some top-to-bottom analysis in your department, if confirmed.

Mr. WHITE. Senator, I intend to. I was there when "Be All You Can Be" had tremendous success. The "An Army of One" has now kicked off, as you have seen. The message is what you call non-traditional. It leads from an older person's perspective.

Chairman WARNER. I wouldn't take that subject right now for yes, sir, brought up in my absence, we are ruling out any discussion on that.

Mr. WHITE. I will review it, Senator, in great detail because it is so important to the service.

Chairman WARNER. Good. I thank you.

Mr. ENGLAND. Senator, it is not just recruiting in the Navy and Marines. What we have is quality of service, which is quality of life and quality of workplace. It is recognizing the individual, the family, the optempo, all those things go together in making an enlisted career, officer career, or even a civilian career with the Navy or Marine Corps. It is going to be one of my very top goals, as I stated in a letter to you, sir. I think this is very important. The pilots are leaving at certain times and it is not just due to the airlines. I am not sure exactly what it is but it is happening in enlisted ranks as well, and it is of concern to me. I know it is of concern to the Chief of Naval Operations as well.

Chairman WARNER. Thank you very much. If you don't succeed, take a look at the man at the end of the table. You don't want to go to that unless it is absolutely essential.

Dr. ROCHE. Yes, sir.

Chairman WARNER. You see that.

Dr. ROCHE. Yes, sir. I have been thinking about your point about doctors.

Chairman WARNER. Yes, sir. We understand each other. Last week, Mr. England, this committee had a very good and thorough hearing on the subject of the V-22 program that was established by Secretary Cohen. That was a panel that came before this com-

mittee after the second fatal tragic mishap of a downed aircraft in an 8-month time span. The panel recommended the program be restructured but that it proceed. I can tell you at this point in time, I think we have to try and move in that way. Now further, what has to be done with Congress and indeed the Secretary of Defense and his staff. But at this time, speaking only for myself, I think it is essential that that program go forward.

That airplane is not only essential for the Marine Corps and for Special Operations Forces, but in my judgment, it is especially for the country in two aspects. I was a member of the committee that conducted the investigation on the efforts of our Nation to rescue the embassy hostages in Iran. That operation was carefully thought through and planned in many ways, but the nail of the shoe of the horse was lost, but the shoe of the horse became lame, and you know that old joke, don't you. Small technical things occurred, some unforeseen weather conditions occurred, but those old helicopters were all we had to go in there, and this aircraft can be used first as a deterrent, and then if necessary, as an action by our military and our enlisted rescue people who are deep inside hostile boundaries, that get in and get out, and again, in this troubled world which we lead and rising terrorism, it is an asset for the United States.

Second, there is a long history in our country of the United States military having forged their research and development on new types of aircraft that after they have become operational, those aircraft have been picked up and adapted by private civil areas, private sector, and developed into some of our major transport today, and other types of aircraft. If we can prove this technology to be safe and it can be utilized eventually by the civilian community, not only in this country, but there is no other technology quite like it in the world, then we have done not only a great service to our military and to our Nation's ability to perform rescue operations and other types of military operations, but we have enhanced the abilities of our civilian aviation perhaps to get a stronger position in the airplane market of a new type of dynamic aircraft, so this precision has many ramifications. Work has to be done.

I think it best at this point in time, not to press you. I just wondered if you might have views that coincide with mine. If not, you can wait until you are confirmed and then you will be back.

Mr. ENGLAND. Senator, just one comment, sir. My only background and experience, of course, is in military aviation, so here is an area where I believe I can bring my own expertise and management experience to bear and I will do that very quickly. When confirmed, I will definitely get involved in the program because I believe I can personally help the program and will do so and look forward to it, sir.

Chairman WARNER. Good. I thank you. Dr. Chu, again, in a wide range of subjects that I covered and two other Members of Congress who were with me in meeting with the Secretary this morning, he is gravely concerned, as he should be, about the Defense Health Program. It is underfunded in the current year by approximately \$1.4 billion. We had a lengthy discussion about the 2001 supplemental budget and the Secretary is committed to that. The

President is now committed to it. You have to work with the OMB to move that forward expeditiously. But a part of that has to be adjusting the existing deficiencies in the military health system. If we don't, military health care services could be curtailed as early as late this summer. I just want to receive your acknowledgment that you are aware of that and that you will put your highest priority on addressing that issue very quickly.

Dr. CHU. Absolutely, Mr. Chairman.

Chairman WARNER. I thank you. Dr. Chu, in your advance policy questions you expressed your knowledge of and support for the Defense Health Program, but we have to also look at the important legislation that this committee put through last year with regard to the retirees, and in no sense should that legislation not be fully and timely implemented. Do I have your assurance, Dr. Chu?

Dr. CHU. Absolutely, sir.

Mr. WHITE. Yes, sir.

Mr. ENGLAND. Yes, sir.

Dr. ROCHE. You have my support, sir.

Chairman WARNER. I know you have an interest in two directions. We have to have a little levity in the system somewhere.

Mr. England, try to listen to me. This is a tough subject but particularly it hits your budget planning and that is in shipbuilding, we have a concept titled advanced appropriations. We have had throughout my career in your department and here in the Senate all kinds of things to apply to the effort to try and not have a full funding impact on the budget. For example, our carriers and our individuals. When you lay the carrier and suddenly your budget has to have that item and it is several billion dollars when we know full well that from keel to launch is a number of years. So Congress is working with the executive branch to see how we can alleviate some of these problems when it comes to budgeting, but not in any way getting around the fundamental reasons for the initial adoption and the full funding concept. So in a little bit of a garbled question, I am telling you that you have to work for this committee and the Appropriations Committee on innovative ideas as to how to fund these very significant programs and do it in a manner that gives them certainty the programs will be carried forward and that your respective departments, I say to each of you, fully recognize the obligation to carry those programs. Is that understood among you?

Mr. ENGLAND. Senator, if confirmed, I am generally committed to working with you.

Chairman WARNER. Dr. Chu is taking some notes because he will be working on that pretty closely. I think we have now covered those questions that I feel are important, for this committee, and eventually, the full Senate, to fully and carefully review these very important nominations. This extraordinary group of individuals that are before us today and their past accomplishments and their potential to serve their country today in these very important positions in these critical times and this world is regrettably becoming more and more a dangerous place. I wish you well. I sort of envy you. I have been asked many times of a 36-year career in public office what is the best job, and Mr. England, it is yours.

Mr. ENGLAND. I have some big footsteps to follow.

Chairman WARNER. During the most intense part of the Vietnam War, and I carry it with me to this day the memory of those periods, the happiness and the not so happiness. Good luck to you and your families.

Mr. ENGLAND. I am looking forward to it, thank you, sir.

Chairman WARNER. The committee stands adjourned.

[Whereupon, at 12:37 p.m., the hearing was adjourned.]

[Prepared questions submitted to Dr. David S.C. Chu by Chairman Warner prior to the hearing with answers supplied follow:]

May 4, 2001.

The Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

DAVID S.C. CHU.

cc: The Hon. Carl Levin  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. Significant progress has been made, and I believe the Department has largely embraced the spirit of the act.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. Reaffirmation and clarification of civilian control, and strengthening the role of the Commanders in Chief of the Unified Commands.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

##### DUTIES

*Question.* Section 136 of Title 10, United States Code, provides that the Under Secretary of Defense for Personnel and Readiness, subject to the authority, direction, and control of the Secretary of Defense, shall perform such duties and exercise such powers as the Secretary of Defense may prescribe in the areas of military readiness, total force management, military and civilian personnel requirements, military and civilian personnel training, military and civilian family matters, exchange, commissary and nonappropriated fund activities, personnel requirements for weapons support, National Guard and Reserve components, and health affairs. As Under Secretary of Defense for Personnel and Readiness, you would be a top leader and manager within the Department of Defense.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

Answer. I would expect the Secretary of Defense to look to Personnel and Readiness for stewardship of the human resources of the Department, and to serve as a principal advisor on and advocate for readiness issues.

*Question.* In carrying out these duties, what would be your relationship with the Assistant Secretary of Defense for Force Management Policy, the Assistant Secretary of Defense for Health Affairs, and the Assistant Secretary of Defense for Reserve Affairs?

Answer. If confirmed, I would hope to work with these officers as a team, to carry out the responsibilities for which the Secretary might hold us responsible, each providing expertise and leadership in his or her area of responsibility.

*Question.* What would be your relationship with the Assistant Secretaries for Manpower and Reserve Affairs in the Army and Navy and the Assistant Secretary of the Air Force for Manpower, Reserve Affairs, Installations, and Environment?

Answer. If confirmed, I would hope that I could look to these officers as my service partners in carrying out the human resource obligations of the Department at large, most especially ensuring that DOD attracts, motivates, and retains the quality people it needs.

#### OFFICER MANAGEMENT ISSUES

*Question.* As the Under Secretary of Defense for Personnel and Readiness, you would have significant responsibilities with regard to officer management policies, the promotion system, and recommending officers for nomination to positions of authority and responsibility.

Do you believe the current Department of Defense procedures and practices for reviewing the records of officers pending nomination by the President are sufficient to ensure the Secretary of Defense and the President can make informed decisions?

Answer. Yes. The Department of Defense views officer appointment actions as matters of the utmost importance. As a result, the procedures and practices regarding the review of officer nomination packages are designed to ensure that the Department thoroughly vets all officer records prior to forwarding their names for consideration by the President.

*Question.* Are these procedures and practices fair and just to the officers involved?

Answer. Yes. The Department's procedures and practices are designed to provide safeguards against unauthorized influence, ensure consistency of board practices, and provide for the active involvement of civilian officials in the process. There are numerous avenues available for redress if any officer feels that he or she has been treated unfairly by the promotion or nomination process.

#### SENIOR OFFICERS

*Question.* What is your opinion of the military's policy of rotating some of its three- and four-star general and flag officers out of joint duty assignments prior to the completion of 2 years, the general rule established in section 664 (a) of Title 10, United States Code?

Answer. As I understand it, the Department of Defense does not have a policy that forces rotation of three- and four-star general and flag officers prior to completion of 2 years in a joint assignment. I want to assure you that I am fully committed to supporting the fundamental tenets of the Goldwater-Nichols Act and to ensuring that our military career management policies and practices meet the requirements of law. If confirmed, I would be pleased to examine whether actual DOD practices diverge from either what Congress mandated or DOD's own policies.

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values. We are frequently asked to confirm the promotion of officers who have substantiated allegations of misconduct that have not been considered by the boards that selected these officers for promotion. At the same time, the services inform us that they have many highly-qualified officers for each available general and flag officer billet.

What steps will you take to ensure that only the most highly-qualified officers are nominated for promotion to general and flag officer rank?

Answer. I believe that DOD's processes should ensure most careful review of the nomination packages of all officers recommended for appointment to general and flag grades at the highest levels of the military and civilian leadership of the department. Nomination packages that include adverse or alleged adverse information should be intensely scrutinized to ensure the officer is qualified to assume the responsibilities of the highest grade and to perform the duties of the position he or she will fill.

At the same time, I believe we must simultaneously guard against the significant downside of being a “zero mistakes organization.” Moreover, many of these men and women have already filled positions of significant responsibility in which they have been called upon to make unpopular decisions. We owe them protection from the effects of frivolous accusations. If confirmed, I will endeavor to ensure that the committee is apprised of adverse information, advise the committee when alleged adverse information becomes known, and ensure that processes enable our best qualified officers to be nominated to general and flag officer grades.

#### READINESS RESPONSIBILITIES

*Question.* Section 136 of Title 10, United States Code, gives the Under Secretary of Defense for Personnel and Readiness certain responsibilities for military readiness. However, some important issues that affect military readiness, such as logistics and materiel readiness, have been placed under the jurisdiction of the Under Secretary for Acquisition, Technology, and Logistics. Furthermore, the secretaries of the military services have the Title 10 responsibility for most readiness issues including training, supplying, and maintaining the military forces.

If confirmed, where would the readiness responsibilities of these other officials end, and where would your readiness responsibilities begin?

*Answer.* While Title 10, United States Code, is very clear regarding the responsibilities of the service secretaries for providing ready forces to our unified commanders in chief, it is equally as clear in defining the role of the Under Secretary for Personnel and Readiness. If I am confirmed as the principal advisor to the Secretary for readiness issues, it would be my job to maintain a comprehensive understanding of all of the components that define the readiness of the Department of Defense to execute any assigned mission, from stabilizing presence to high intensity conflict. I would use the products of our readiness assessment and reporting processes and my oversight responsibility over readiness issues in the budget development and execution processes to ensure our forces remain ready.

*Question.* What specific readiness issues would you and your subordinates be assigned?

*Answer.* If confirmed as the Under Secretary for Personnel and Readiness, I would be the principal advisor to the Secretary regarding the readiness of the Department of Defense and I would ensure that our senior civilian and military leaders not only remain apprised of the readiness issues confronting the Department, but also ensure that critical readiness and capabilities shortfalls continue to be addressed by the Department’s budgeting and execution processes.

*Question.* Would you recommend any changes to the current organization to more effectively align some of these responsibilities?

*Answer.* While making such recommendations at this time would be premature, if confirmed, I would certainly consider recommending prudent refinements to the Department’s readiness oversight and management processes as their necessity becomes clear.

#### CINC IDENTIFIED READINESS DEFICIENCIES

*Question.* Over the last several years, the Quarterly Readiness Reports that your office prepares for Congress have outlined a number of CINC-identified readiness-related deficiencies. Many of these are listed as Category I deficiencies which entail significant warfighting risk to execution of the National Military Strategy. Although these deficiencies have been reported for the past several years, they have not, as yet, been effectively addressed. This has raised concerns that the requirements of the warfighting CINCs are not being incorporated into the military services’ budgets and the Department’s acquisition process.

If confirmed, what actions would you take to ensure that the administration, and the military services in particular, provide the necessary resources to address CINC-identified readiness deficiencies?

*Answer.* Each Category I deficiency should be addressed in the building and review of the service programs, and in their execution plans. As I understand it, the Department is actively engaged in addressing both the long-term “capability shortfalls” as well as traditional service readiness issues.

If confirmed as the Under Secretary for Personnel and Readiness, I would ensure via the Senior Readiness Oversight Council that our senior civilian and military leaders not only remain apprised of the readiness issues confronting the Department, but also that critical readiness and capabilities shortfalls continue to be addressed by the Department’s budgeting process. The Joint Monthly Readiness Review gives a continuing vehicle for assessing deficiencies. If confirmed, I will ensure that P&R remains firmly embedded in this deficiency review process.

## READINESS OF ARMY UNITS IN THE BALKANS

*Question.* Twice in the past 2 years newspaper articles have alleged that Army divisions were “unprepared” or “unfit”. All these cases involved divisions which had a brigade in the Balkans and the rest of the division back at their home station. In each case the troops in the Balkans were doing an excellent job at the tasks they were actually assigned to at the time, but the division as a whole would not have been able to get to a major theater war somewhere else as quickly as they otherwise would have.

When General Clark, the Commander-in-Chief who was using the forces in the Balkans, was asked about this issue at a hearing with this committee last year he said the two divisions reported lower readiness “because of the peculiarity of the Army reporting requirement . . . They were not ready to do something; they were already doing it.” He went on to say that “this anomaly will be corrected.” Since that time the Army has modified its deployment plans so that units engaged in real world missions in the Balkans will not be counted on so early in our war plans.

In your view, do these situations represent a readiness problem, a flaw in the readiness reporting system, or a communication problem?

*Answer.* In my judgment, the readiness reporting system should be structured to capture the ability of our forces to execute major theater war responsibilities. That could lead to the seemingly anomalous situation of a unit performing well in a smaller contingency at the same time that its ability to carry out elements of major war responsibilities is eroding. It may be necessary for DOD to review how it might better structure the readiness reporting system to capture this reality.

*Question.* Is it accurate to say a unit that is doing the job you told it to do and doing it well is not ready?

*Answer.* It may be accurate to say that each unit has been fully and properly trained, manned, and equipped to conduct its deployed missions—and that it has in fact conducted them superbly. At the same time it may also be accurate to say that the training proficiency of a unit for combat missions (e.g., deep attack operations, assault of an objective with fire, and maneuver) may be degraded by an inability to actively train in these tasks over an extended time.

*Question.* Should our readiness ratings reflect both a unit’s capability to do the missions it is actually performing, in addition to its capability to perform the most demanding tasks it may be assigned under the National Military Strategy?

*Answer.* This may be the solution. I was pleased to learn that the Department established a readiness indicator for small-scale contingencies last year. As I understand it, this new readiness-reporting enhancement requires units to report on both their currently deployed mission as well as the missions that the unit was originally designed to undertake.

## OPERATING TEMPO

*Question.* The services have been very concerned in recent years about the impact of the pace of operations, or “OPTEMPO,” on the quality of life of our people in uniform and specifically on their willingness to reenlist.

What steps do you plan to take to address the services’ optempo concerns?

*Answer.* I believe it is widely agreed that the high-tempo level of our service members is potentially detrimental to their quality of life and affects their retention decisions.

If confirmed, I would look forward to making this issue a priority concern, starting with the implementation of Congress’ provision on the matter. I believe this will require improved, more timely reporting systems with which to track accurately the nature and extent of the problem. It may also require a better link to DOD’s survey efforts, in order to improve our understanding of how optempo affects retention and other personnel behaviors.

## IMPROVEMENTS TO READINESS REPORTING SYSTEM

*Question.* Do you believe the current readiness reporting systems can or should be modified to reflect a unit’s ability to perform effectively with the other forces it may need to work with under a unified commander (“joint readiness”), or to predict its readiness (“future readiness”) in addition to reflecting its current state of readiness?

*Answer.* Although I believe DOD’s current system is an effective tool, improvements need to be made, of which these are excellent examples.

*Question.* What steps would you take to address concerns that our current readiness reporting system does not provide this information?

Answer. As I understand it, the congressionally-mandated independent study is expected to offer significant recommendations for improvement. If confirmed, I would look forward to reviewing these recommendations with a critical eye for making meaningful changes that will allow the Department to have a readiness system that reports on the capability of the armed forces to carry out the full range of requirements as indicated by the National Security Strategy. Such a review should pay particular attention to recommendations on improving sustainability reports and reporting by Mission Essential Tasks.

#### ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax to be the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA-approved vaccine.

If confirmed, and if additional FDA-approved vaccine becomes available, do you plan to reimplement and continue the Anthrax Vaccination Immunization Policy?

Answer. It is my understanding that, because of constrained supply, the Department has presently slowed the program. It is also my understanding that current plans call for a return to a phased implementation approach to the program once an adequate supply is again available. I have also been advised that Secretary Rumsfeld will receive a full briefing on the program and will make a decision on its continuation and execution at that time. If confirmed as the Under Secretary of Defense for Personnel and Readiness, I would keep myself apprised of the program so that I could provide the Secretary with an honest and forthright appraisal of the program's effect on personnel and readiness issues.

*Question.* How do you believe the Department should respond to service members who refuse to take the vaccine when required to do so?

Answer. Military personnel are required to take many vaccines. Some are given to all military personnel, while others are for certain occupational groups or geographic assignments. For the affected category of personnel at risk, none of these vaccines is optional or voluntary under current policy.

Service members who refuse to take the vaccine disobey a lawful order and are subject to administrative or disciplinary actions. In these instances, local military commanders apply the principles in the Uniform Code of Military Justice (UCMJ) and the guidance in the Manual for Courts-Martial and Service regulations that apply to other cases involving a refusal to obey a lawful order. This permits a local commander, with no influence from superior officers, to consider each case on its own merits. At the same time, I am sensitive to the widespread suspicion about this vaccine specifically, and about medical force protection generally. If confirmed, I would see it as an urgent task to regain the confidence of service members and their families that the administration of vaccines is in their own best interest.

#### HOMOSEXUAL CONDUCT POLICY

*Question.* The current Department of Defense Homosexual Conduct Policy went into effect in February 1994 after months of congressional hearings and debate resulting in the enactment of a federal statute. Although there have been some changes in how this policy has been implemented, the basic policy has not been changed.

Do you believe that the current policy is effective?

Answer. In general, yes.

*Question.* If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

Answer. Consistent with the Secretary's previous statement, and with what President Bush said during the campaign, I understand that there are no plans to recommend changes to either current law or policy.

*Question.* A DOD working group of senior military and civilian representatives from each of the military services recently proposed an action plan to address the problem of harassment based on perceived sexual orientation and other issues raised by the Inspector General. The review resulted in a 13-point action plan to eliminate all forms of harassment. The Department announced that it would issue a Department-wide directive on this subject.

Do you support the 13-point action plan issued by the Secretary's working group?

Answer. I have not yet had a chance to review the proposed plan but would look forward to doing so, if confirmed.

*Question.* Will you ensure that the Department issues and enforces an appropriate directive to implement and enforce the action plan?

Answer. Harassment in any form is inconsistent with military values and should be handled quickly and effectively by military leaders. If confirmed, I will review the working group's findings and recommend appropriate actions.

## MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlement. Many of these soldiers, sailors, airmen, and marines say they would like to stay in the service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members would stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

If confirmed, will you give serious consideration to how the Department of Defense could use the transfer of unused GI Bill benefits to family members as a retention tool and provide your thoughts on how we best do this?

Answer. If confirmed, I will ensure that we fully explore MGIB transferability as a potential contributor to better retention and improved quality of life.

## DEPARTMENT OF DEFENSE EDUCATIONAL ACTIVITY

*Question.* President Bush has acknowledged that "soldiers enlist, but families reenlist." The Department of Defense Education Activity (DODEA) schools are a key element of the quality of life for our service members and their families.

What role will the DODEA schools play in the administration's effort to improve quality of life for military families?

Answer. Indeed, children's education and success in school are a top priority for military families and for President Bush. If confirmed, I would look forward to examining how DODEA schools contribute to military quality of life.

*Question.* The current pay structure for DODEA teachers was established in 1959. Will you review this pay structure to determine whether it is still adequate and propose changes determined appropriate by your review?

Answer. Yes. If confirmed, I would review the pay structure for DODEA teachers in both domestic and overseas schools and make appropriate recommendations to the Secretary of Defense.

## GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individual's life in the military, is structured and defined differently by each service. Men training for direct ground combat positions in the Army and Marine Corps train in all-male units. Men and women training to serve in positions that are open to women in the Army, Navy, and Air Force train in gender-integrated units. Men and women in the Marine Corps are segregated at boot camp, then integrated during subsequent training.

Do you believe the current DOD policy of allowing each of the services to establish its own policy for gender integration in basic training is effective?

Answer. Each service develops and executes a basic training program to meet its unique mission requirements. In my judgment, service policies with respect to gender integrated training should reflect those requirements.

*Question.* If confirmed, will you propose changes to the DOD or service policies? If so, what changes will you propose?

Answer. The services conduct basic training for one purpose: to produce physically fit, trained, and disciplined soldiers, sailors, airmen, and marines. Changes would be needed if the services cannot meet that goal.

## CONCURRENT RECEIPT

*Question.* Military retirees with disabilities incurred during their military service are eligible to receive military retired pay from the Department of Defense and veterans' disability compensation from the Department of Veterans' Affairs. However, current law requires that military retired pay be reduced by the amount of the veterans' benefits. Military retirement pay and disability compensation were earned and awarded for different purposes. Military retirees earned their retirement by dedicating 20 or more years of service to our Nation's defense. Disability compensation is awarded to compensate veterans for injuries incurred in the line of duty.

If confirmed, would you support a change in the law to permit disabled military retirees to receive their full retired pay as well as their disability compensation?

Answer. If confirmed I would look closely at that issue, if Congress has not already acted on it, and would look forward to working closely with the committee on this important topic.

#### CONVERSION OF MILITARY POSITIONS TO CIVILIAN POSITIONS

*Question.* Whenever Defense organizations undergo staffing changes, a review is conducted to determine which positions are “military essential” and which positions can be converted to civilian positions. However, there is no systematic process to review positions in organizations not experiencing such a change to determine whether military positions should be converted to civilian positions. In 1997, GAO, using DOD and service guidance, determined that 14 percent of active duty officer positions were candidates for military to civilian conversion.

If confirmed, will you initiate a review of military positions to determine whether they are truly “military essential” and identify those that can be converted to civilian positions?

Answer. The Department of Defense has undergone a number of changes since the 1997 GAO review. My understanding is that the Department has conducted a Department-wide review of every military and civilian position with a goal of streamlining the workforce through competition. The Department is using that review as a tool to develop A-76 competition plans and to ensure that both military and civilian essentiality guidelines are applied uniformly throughout the components. If confirmed, I would continue to implement Department policy that mandates a review of military/civilian essentiality.

#### RETENTION

*Question.* Both Congress and the Department of Defense are fully committed to supporting initiatives that improve our military members’ quality of life to influence them to stay in the military. The initiatives include increased compensation and improved housing for families and single personnel. Although these initiatives may increase overall retention, they may not affect retaining those individuals with high demand technical skills. This retention challenge will increase as we train our personnel to support the digitization and automation of our armed forces.

What additional initiatives, other than speciality pay, should the Department consider to increase retention of these highly trained personnel?

Answer. While pay and compensation are critical, retaining a service member and his or her family also depends on high job satisfaction, quality of family life, and quality of service conditions. Controlling personnel tempo, or time away from home, should remain a top priority.

*Question.* In your personal opinion, what is the greatest challenge that must be overcome in regard to retaining mid-grade noncommissioned officers and mid-grade officers?

Answer. DOD recruits a high quality force, provides first class education and training with associated hands-on experience, and places the challenges of leadership and accountability on its people at a very young age. These are talented and seasoned people and civilian employers, who offer high salaries and a more predictable family life, know this and aggressively recruit them.

I believe we can increase the likelihood of retaining these people in today’s strong economy by enhancing job satisfaction—which includes the off-duty as well as the duty environment. High job satisfaction translates to compensation equity, concern for the welfare of families, increased confidence in skills and equipment, and sufficient resources to man and train a world class fighting force.

#### CIVILIAN PERSONNEL

*Question.* The aging of the DOD workforce, combined with constrained hiring during the past several years, has created a significant skill imbalance within the Department.

If additional funding to permit additional hiring is not available, what policies, in your view, must the Department implement to revitalize its workforce?

Answer. I believe this is a serious issue facing the Department and, if confirmed, I intend to conduct a review of all aspects of civilian workforce management. This should include the need for some flexibility in hiring and pay systems.

#### RESERVE COMPONENT DEPLOYMENT

*Question.* There is substantial anecdotal evidence that members of the Reserve and Guard are tiring of extended deployments, and meeting increased resistance to

such deployments from spouses and civilian employers. The Air Force has instituted a program to put some predictability into deployment cycles.

In your opinion, is this a serious problem?

Answer. I do not yet know enough to judge the seriousness of the problem, but if confirmed, I would welcome the opportunity to evaluate it.

*Question.* What initiatives would you propose to address employers' concerns?

Answer. If confirmed, I will meet with employers to better understand their concerns so that the Department can craft policies to address the concerns explicitly. I understand that the Federal Government is the largest single employer of guardsmen and reservists. Therefore, I would work with all Federal agencies to ensure that the Federal Government leads by example. The Deputy Secretary of Defense has taken the first step in this initiative by his recent approval of Defense implementation of an Office of Personnel Management policy encouraging all Federal agencies to pay the employee share of health premiums for Reserve component members serving in support of contingency operations.

*Question.* Do you believe the Air Force program has succeeded in its intent?

Answer. I understand the Air Force's Aerospace Expeditionary Force (AEF) program is potentially helpful, but it's too early to provide a definitive answer.

#### SENIOR EXECUTIVE SERVICE DEVELOPMENT AND TRAINING

*Question.* What are your personal views on the adequacy of training programs for members of the Senior Executive Service in the Department of Defense?

What initiatives would you propose to enhance this training?

Answer. Although I understand some training is provided, I believe DOD can substantially improve the training provided to its Senior Executives and those preparing themselves for the SES. If confirmed, I would look forward to reviewing existing training and see where improvements can be made.

#### MEDICAL BENEFIT AS COMPONENT OF COMPENSATION PACKAGE

*Question.* The military medical benefit has varied over time depending on geographic location, beneficiary category, and available funding. This has caused great confusion and concern for Department of Defense military beneficiaries. A medical benefit is a significant component of a total compensation package. As Under Secretary for Personnel and Readiness, responsibility for this vast program would be under your purview.

If confirmed, how do you envision approaching the totality of the compensation package and the specific medical benefit in that context?

Answer. Providing comprehensive health care benefits is an important part of any compensation package, whether it be for a military service member, or a Federal civilian employee, and health care has always been a critical component of quality of life for active duty families. With passage of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001, Congress extended the TRICARE benefit to our 65-and-over military beneficiaries. The Department's commitment is to provide or arrange for these benefits, demonstrating its long-term commitment to comprehensive health care benefits for all eligible beneficiaries. It is essential for the Department to honor this commitment if it is to compete successfully for the best talent in American society. Were I confirmed as Under Secretary for Personnel and Readiness, working with this committee, I would look forward to taking a results-based approach to both the medical benefit and the total compensation package.

#### DEFENSE HEALTH PROGRAM SHORTFALL

*Question.* As you are well aware from your previous tenure, the Defense medical budget has and continues to experience significant annual shortfalls. The combination of what had been a vague benefit for retirees, a declining medical infrastructure, advances in technology, and a growing retiree population all contributed to substantial difficulty in budgeting adequately for this program.

Now that Congress has clarified its intent with regard to older retirees' entitlement to health care, what steps do you plan to take to ensure appropriate funding levels for the Defense Health Program?

Answer. If confirmed, I am committed to advocating for appropriate funding of the health care program. I believe this starts with an improved ability to forecast future costs and carries all the way through to monitoring the actual execution of the program.

ORGANIZATION OF THE OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE FOR HEALTH AFFAIRS

*Question.* Since at least the 1940s, there has been ongoing discussion of appropriate oversight of the military health care system. From time to time, proposals are evaluated which would consolidate the capabilities of the military departments' medical activities. In fact, in response to DOD review of medical support, funding, and oversight, the Defense Health Program was created in the early 1990s and subsequently a Defense Field Activity, the TRICARE Management Activity, was created to oversee, from a joint perspective, operations of the military health care system. Congress has directed review of a joint military medical command and is awaiting a Department report on such a proposal.

What are your views on an appropriate oversight structure for the military health care program?

*Answer.* RAND reviewed this issue for the Department in support of its response to Congress and recommended that reorganization of the current TRICARE regional structure and empowerment of the lead agent should be the first course of action. I tend to agree with this approach. If confirmed, I would look forward to examining what further steps might be productive, especially as DOD gains experience with Tricare for Life.

FUTURE OF MANAGED CARE SUPPORT CONTRACTS

*Question.* The TRICARE Management Activity manages the contracting process whereby the Department has contracted with five major health care suppliers to provide regional contract support to augment the capabilities of the military health care system. These are billion dollar contracts that have experienced significant growth due to a number of factors which include changing requirements from the Department of Defense and congressional direction. As these contracts come to their termination points, the Department is considering new approaches to acquisition of health care services.

What are your views on the future of purchased health care and what approach do you believe holds the most promise?

*Answer.* The Department is currently reviewing the options for developing the next generation of health care contracts. I understand that numerous studies have been undertaken and a number of outside consultants and experts have been used to identify various contract options. The health care industry has evolved significantly since the early 1990s when the current contract model was developed. If confirmed, I would look forward to helping develop a contract model that is responsive to local health care delivery requirements, recognizes the capability of empowered regional management, and takes advantage of current and emerging business practices for activities like claims processing. It may turn out DOD will need some additional statutory language to write effective contracts of this type, and, if confirmed, I would look forward to working with this committee on that issue should such prove to be the case.

MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Under Secretary of Defense for Personnel and Readiness?

*Answer.* Recruiting and retaining high quality men and women in the right skills to meet mission requirements and to ensure our Nation's military force is able to fulfill our national security requirements. Meeting the readiness challenges in transforming U.S. military forces to a 21st century model.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I would plan to focus on those factors with the greatest influence in producing needed results. I would hope to establish processes, in the best public administration tradition, that permit realizing the desired results as a routine, well-considered business practice, rather than as emergent, "crash" objectives. Among other elements, that may require stronger and more responsive information systems than now exist.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of Defense for Personnel and Readiness?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. In a recent press account, General Shelton said force quality must remain a top priority. He believes military pay is still 10 percent behind private sector wages and argues for a hefty increase soon. How would you rate the need for a significant pay increase, when compared to other competing priorities?

Dr. CHU. The Department is taking a hard look at the structure and levels of military pay in comparison with private sector pay for those with similar levels of education. Analysis conducted by the 9th Quadrennial Review of Military Compensation (QRMC) indicates that pay for mid-grade non-commissioned officers is clearly behind competing pay in the private sector, and targeted raises under consideration for January 2002 are appropriate to begin addressing this problem.

2. Senator THURMOND. There are many individuals in the Department of Defense who believe that the quickest way to achieve savings is to convert civilian-filled government positions to contractor-operated functions. In my judgment, these savings are in most instances illusory.

What reporting system does the Department have to capture the data necessary to quantify these savings?

Dr. CHU. The system that tracks competition initiatives is the Department of Defense Commercial Activities Management Information System (CAMIS). The system tracks costs for each performance period bid. The Department is currently developing enhancements to this system.

3. Senator THURMOND. Based on your service in the Department of Defense during the 1980s as the Director of Program Analysis and Evaluation, what changes have you seen in the relationship between Congress and the Department of Defense in the last 10 years? How will these changes impact your relationship with this committee and Congress?

Dr. CHU. I, of course, am just beginning to develop my relationships with Congress in my new role as the Under Secretary of Defense for Personnel and Readiness. However, my initial impression is that Congress remains as interested and involved in the details of the budget and the implementation of the policies within the Department of Defense as I remember, but the Department is less cohesive in its responses. I look forward to improving our responses, and working closely with this committee, and the other oversight committees, to recognize the nobility of service to the Nation, to develop a new "social compact" with service members and their families, and to develop a human resources strategy that will provide objectives and guidelines for recruiting, training, motivating, and retaining the military and civilian workforce needed to meet the challenges of the 21st century.

---

QUESTION SUBMITTED BY SENATOR SUSAN COLLINS

4. Senator COLLINS. The Acquisition 2005 Task Force Report, "Shaping the Civilian Acquisition Workforce of the Future," highlights that the Department is on the verge of a crisis of a retirement-driven brain drain. According to this report, more than 50 percent of DOD's civilian acquisition workforce will be eligible to retire by 2005, requiring a surge in recruiting at all levels. What plans do you have to ensure that we are recruiting and retaining new talent to step up into these senior leadership positions, as people retire in the near and mid-terms?

Dr. CHU. We share the Senator's concern and sense of urgency. We indeed project losses approaching 50 percent in some key acquisition occupations primarily due to

retirement over the next 5 to 6 years. Overall, we project that 39 percent of the September 1999 civilian acquisition workforce will not be in DOD in 2005.

The cornerstone of our efforts must be strategic workforce planning. Such planning will be a focus of the Quadrennial Defense Review and the process leading up to the submission of the President's Budget Request for Fiscal Year 2003.

We will also be looking at the ability of the civilian personnel system to recruit and appoint the numbers and quality of personnel we need.

At the same time, we will be exploring how best to use the authorities Congress has already given us, and what new authorities we might need. To assist us in the process, RAND developed a workforce projection model and a framework for Defense Components to create workforce shaping plans.

---

QUESTIONS SUBMITTED BY SENATOR MARK DAYTON

5. Senator DAYTON. Presently, DODEA serves approximately 100,000 military students, and public schools serve approximately 500,000 military students. What do you see as the new Educational Opportunities Directorate's (EOD) role in serving these 500,000 students and do you support the EOD and its role?

Dr. CHU. The Educational Opportunities Directorate (EOD) was specifically formed to identify and address problems that military dependent students and their families experience when they relocate due to the reassignment of the military sponsor. Most military dependents, for instance, attend four or five different schools during their years of K-12 schooling. Through the new directorate, we expect to increase communication between public and DOD schools and among military families, military services, and community organizations. We will identify best practices, formulate model policies, and develop strategies to address issues. We will make State and district education leaders aware of the need to deal with issues that are not unique to military dependent students, but that affect many children in a society as mobile as ours has become.

Though the EOD was established to deal with the transition issues of K-12 military dependent students, the Directorate has become a body for dealing with many other educational issues and programs. These include off-duty voluntary education for military personnel, Impact Aid, Troops-to-Teachers, special needs and medically-related services, and transition of military personnel to civilian occupations.

6. Senator DAYTON. Federal funding from the Department of Education to support public schools serving military students is called Impact Aid. In the past, Congress has authorized and appropriated DOD funds to assist school systems receiving Impact Aid funds. From what I have learned from the superintendents of these schools, DOD funding has been critical in assisting them with building construction and renovations, computer purchases, etc. Can you assure this committee and Congress that DOD will continue to support our initiative to assist public schools educating our military's children?

Dr. CHU. The Department understands the issue of financially assisting public schools that enroll military dependent students. Of course, the Defense Department will expeditiously distribute any funds appropriated to it specifically for assisting public schools.

7. Senator DAYTON. I have been advised that when the Federal Government privatizes housing on Federal property, the payment to the contractor by the Federal Government appears on the leave earnings statement (LES) as a payment to the individual, despite the fact that payment is never reported on the individual's W-2 statement. School districts look at the LES for verification of eligibility for the Federal Free and Reduced Lunch program. School superintendents further advise me that, because of this, the children of a military family in privatized housing on Federal property would lose their Free and Reduced Lunch eligibility. Thus, this loss seems to me to be an unintended consequence of privatization. What do you see as the remedy to this?

Dr. CHU. This does appear to be an unintended consequence of our housing privatization efforts and the Department is looking into this issue, but it may require a change of the law to correct it.

8. Senator DAYTON. Currently, we have several incentive pay options that can benefit the service member who is deployed unaccompanied overseas. These include hardship tour, hazardous duty, and combat zone pay, among others. I have spoken to commanders in the field as well as CINCs appearing before this committee. Many of them are concerned that our service members are not being compensated well

enough, particularly for some hardship tours. What is your feeling about our commanders' concerns, and how would you recommend improving the overall compensation "packages" for our service members?

Dr. CHU. The Department is examining whether the current incentive package provided to members is adequate to attract needed volunteers for unaccompanied assignments or even some accompanied assignments overseas. This includes a multi-dimensional effort, comprising of a review by the Secretary's comprehensive study of Quality-of-Life, and by a joint working group co-chaired by P&R and the Joint Staff, to develop incentives to motivate volunteers for difficult-to-staff overseas locations. As required in the Fiscal Year 2001 National Defense Authorization Act, a report on incentives for overseas assignments, as well as affordable recommendations to resolve the problem, will be provided to Congress this fall.

9. Senator DAYTON. The impact of the pace of operations, or "OPTEMPO," on the quality of life of our service members is a major concern. Do you know if the services have established a credible system in "tracking and recording the number of days" a service member is deployed, and has the system caused some unnecessary burden with the CINCs?

Dr. CHU. In accordance with the Fiscal Year 2000 National Defense Authorization Act (Section 923), the services have developed systems to track and report deployed days information on service members. We conducted an independent verification and validation of the early implementation of these systems; our results revealed that the data collection was incomplete. We have relied extensively on our current data systems to capture and report data at a pace and a level of detail well beyond current systems' capabilities. We implemented the perstempo system within current staffing levels and budgets. Creating and supporting this system has proven to be labor-intensive and time-consuming.

With respect to the impact of the perstempo system on the CINCs, some report these additional tracking and reporting requirements are "burdensome" to the extent they must be met with existing budgets and staffing levels. In addition, we know that a number of units may need to deploy some of their members in excess of the 400-day threshold at which the services must start paying their members \$100 per day.

---

[The nomination reference of Dr. David S.C. Chu follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 30, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. David S.C. Chu, of the District of Columbia, to be Under Secretary of Defense for Personnel and Readiness, vice Bernard Daniel Rostker.

---

[The biographical sketch of Dr. David S.C. Chu, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. DAVID S.C. CHU

Dr. Chu is currently the Vice President responsible for RAND's Army Research Division and Director of the Arroyo Center. Previously, he was Director of RAND's Washington Office and Associate Chairman of RAND's Research Staff.

Dr. Chu is a member of the Army Science Board. He served in the Department of Defense as Assistant Secretary and Director for Program Analysis and Evaluation (1981-1993). Earlier, Dr. Chu was the Assistant Director of the Congressional Budget Office for National Security and International Affairs (1978-1981).

Dr. Chu was an economist with RAND from 1970 to 1978, and served in the U.S. Army from 1968-1970.

Dr. Chu was educated at Yale University, receiving his BA in Economics and Mathematics, and his Ph.D. in Economics. He has been awarded the Department of Defense Medal for Distinguished Public Service with Silver Palm and the National Public Service Award of the National Academy of Public Administration, of which he is a Fellow, and on whose Board he serves as Chairman.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. David S.C. Chu in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228  
Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
David S.C. Chu.

2. **Position to which nominated:**  
Under Secretary of Defense for Personnel and Readiness.

3. **Date of nomination:**  
April 30, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
May 28, 1944; New York City, NY.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Laura Tosi.

7. **Names and ages of children:**  
Carolyn, 16; Jonathan, 12.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

AB Davis High School, 1958-61, Diploma; Yale University, 1961-64, BA Economics and Mathematics, 1964; Yale University, 1964-68, MA, Economics, 1965; Yale University, M. Phil, Economics, 1967; Yale University, Ph.D., Economics, 1972.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Vice President, Army Research Div., RAND and Director, Arroyo Center, June 1998-Present.

Director, Washington Office, and Associate Chairman of the Research Staff, RAND, March 1996-June 1998.

Director, Washington Research Department, RAND, January 1994-March 1996.

Senior Fellow, RAND, January 1993-January 1994.

Assistant Secretary of Defense (Program Analysis and Evaluation) July 1988-January 1993, and Director, Program Analysis and Evaluation, Office of the Secretary of Defense, Department of Defense, May 1981-July 1988.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Member, Army Science Board.

Member, Task Force on Defense Reform.

Member, Defense Science Board Task on DOD Acquisition Policies and their Effect on the Health and Competitiveness of the U.S. Defense Industry.

Member, Defense Science Board Task Force on Military Personnel Information Management.

Member, Naval War College Advisory Board.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Vice President, Army Research Division, RAND.

Chairman, Board of Directors, National Academy of Public Administration.

Member, Board of Trustees, National Presbyterian School.

Member, Advisory Council, Defense Systems Management College Alumni Association.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Member, American Economic Association.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Bush-Cheney Recount \$100.00.

DC Republican Committee \$125.00.

Bush for President \$150.00.

Republican Senatorial Inner Circle \$150.00.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Phi Beta Kappa.

Honorary Woodrow Wilson Fellow.

National Science Foundation Fellow.

Foreign Area Fellowship Program Fellow.

Army Commendation Medal, Bronze Star.

Elmer B. Staats Award, National Capital Area Chapter, American Society for Public Administration, 1986.

Department of Defense Medal for Distinguished Public Service, 1987; Bronze Palm, 1988; Silver Palm, 1993.

National Public Service Award, American Society of Public Administration, 1990.

Vance R. Wanner Memorial Award of the Military Operations Research Society, 1993.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None (speeches delivered from outlines).

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B-F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. DAVID S.C. CHU.

This 10th day of May, 2001.

[The nomination of Dr. David S.C. Chu was reported to the Senate by Senator John Warner on May 21, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 26, 2001.]

[Prepared questions submitted to Thomas E. White, Jr., by Chairman Warner prior to the hearing with answers supplied follow:]

May 9, 2001.

The Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

THOMAS E. WHITE, JR.

cc: The Hon. Carl Levin,  
Ranking Minority Member.

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I fully support the Department of Defense Reorganization Act of 1986 and related Special Operations initiatives for defense reform.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* From what I have learned to date, these defense reforms have been implemented and have achieved the desired results. Having said that, I believe it is important, and consistent with the intent of the reform legislation, that the Army continues to assess and modify its operations and internal procedures to meet the challenges of a dynamic security environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of these reforms were strengthening civilian control, streamlining the operational chain of command, improving the efficiency in the use of defense resources, improving the military advice provided to the National Command Authorities, clarifying authority for combatant commanders, and enhancing the effectiveness of military operations.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I fully support the congressional goals reflected in the Department of Defense Reorganization Act of 1986 and other related defense reform legislation.

## DUTIES

*Question.* Section 3013 of Title 10, United States Code, describes the duties of the Secretary of the Army.

Assuming you are confirmed, do you expect that Secretary Rumsfeld will prescribe additional duties for you?

Answer. I anticipate that the Secretary of Defense will prescribe specific duties for me that will support his responsibility to ensure that the Department of Defense successfully accomplishes the many demanding and varied missions entrusted to it. If confirmed, I will carry out these additional duties to the best of my ability.

*Question.* If so, what do you expect those additional duties will be?

Answer. If confirmed, I will communicate directly and openly with the Secretary of Defense regarding the Army's capabilities to accomplish those functions that are most appropriately delegated to it.

*Question.* What duties and responsibilities do you plan to assign to the Under Secretary of the Army?

Answer. If confirmed, I will review the current assignment of functions, responsibilities, and duties within the Army Secretariat and determine the capacities in which the Under Secretary can most appropriately support my efforts to ensure that the Department of the Army is efficiently administered in accordance with the policies promulgated by the Office of the Secretary of Defense.

*Question.* In carrying out your duties, how will you work with the Assistant Secretary of the Army for Manpower and Reserve Affairs; the Assistant Secretary of the Army for Installations and Environment; the Assistant Secretary of the Army for Financial Management; the Assistant Secretary of the Army for Acquisition, Logistics, and Technology; the Assistant Secretary of the Army for Civil Works; and the General Counsel?

Answer. If confirmed, I will establish and maintain close, professional relationships with each of the Assistant Secretaries and the General Counsel. I will encourage direct and open communication among these officials and will foster an environment of cooperative teamwork within the Secretariat and with the Army staff.

## WEAPONS OF MASS DESTRUCTION—CIVIL SUPPORT TEAMS (WMD—CST)

*Question.* The January 31, 2001, Department of Defense Inspector General audit report titled *Management of National Guard Weapons of Mass Destruction—Civil Support Teams* is extremely critical of the management of the WMD—CST program.

If confirmed, do you intend to play an active role in getting that program back on course?

Answer. Yes. If confirmed, I am committed to ensuring that the teams are properly manned, equipped, trained, and prepared to accomplish all mission requirements.

## QUALITY OF LIFE PROGRAM INITIATIVE

*Question.* The Army is planning on consolidating all of its "quality of life" programs under one single program. The service is making this change with the expectation that quality of life programs would become a more visible and integral part of the yearly funding request.

Do you believe that such a plan is important to the success of the Army's quality of life program?

Answer. Absolutely. First, we must ensure that we are maximizing the impact of available resources. Second, we need to do a better job of articulating the linkage between readiness and well-being as well as our resource requirements in this vital area.

## READINESS

*Question.* Over the last few years we have seen increasing evidence that the readiness of the U.S. armed forces has begun to deteriorate as a result of the over-commitment of an under-resourced military. The Joint Chiefs have testified that the military services will require a \$48 to \$58 billion funding increase if the Department is to restore readiness and modernize for the future.

What do you view as the major readiness challenges that would have to be addressed and, if confirmed, how would you approach these issues?

Answer. If confirmed, I will review the requirements and available resources and to ensure that the Army is trained and ready to execute strategies for today and the future.

## ENVIRONMENT

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as “encroachment” issues. These include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, transfer of radio frequency spectrum from the Department of Defense to the wireless communications industry, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

In your opinion, how serious are these problems to the Army?

*Answer.* In my opinion, these problems are very serious. If confirmed, I will work with this committee, other services, and OSD to develop sound strategies for dealing with each of these problems.

*Question.* If confirmed, what actions would you propose to ensure these issues do not prevent your service from effectively training and operating both at home and abroad?

*Answer.* My strategy is to comply with environmental laws, work for measures to integrate range management with our defense mission and environmental obligations, and continue to seek a balanced application of environmental statutes affecting training.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Would you agree that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

*Answer.* Yes, I agree. I will work to ensure that the Army remains committed to complying with Federal, State, and local regulations and laws.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

*Answer.* No. However, I believe we need a better dialog between Federal, State, and local law and rulemakers and the Army. Other than times of national emergency, the Army should have no special exemptions. What we do want is more opportunity to explain impacts on our mission before the Federal, State, or local law or regulations are enacted.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

*Answer.* Yes, I do. The American public expects the Department of Defense, the Army, and all federal agencies to meet the same standards as civilian facilities.

*Question.* The Department of Defense faces a bill for the clean-up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars, and could well be in the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

*Answer.* It is impossible to generalize regarding issues of public safety. If confirmed, I will ensure the Army complies with the law.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department’s long-term clean-up liability and the time required to complete such clean-up?

*Answer.* If confirmed, I welcome the opportunity to look into this difficult and critical issue as well.

## COMMERCIAL VERSUS MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* The Federal Government is currently conducting a series of studies to determine a band of frequencies that can be used for the operation of third generation wireless communications devices. As a part of this overall effort, the Department of Defense is conducting a study to determine the cost and operational impact that would result if the military services were to surrender the use of the 1755–1850 MHz band of frequencies on which they currently operate their equipment. As the Department of Defense’s information requirements increase with the advances taking place in weapon system technology, the Department’s requirements for frequency access will also increase. However, the commercial sector is also experienc-

ing increased requirements for frequency spectrum to meet the demands of the American consumers. Spectrum is a finite resource and we have to ensure it is utilized in the most efficient and beneficial manner possible.

If confirmed, what actions would you take to review your service's total spectrum requirements and ensure that new systems are designed to ensure efficient spectrum utilization by the Department of Defense?

Answer. If confirmed, I will continue to support and encourage the research, development, and acquisition of systems that efficiently use the radio frequency spectrum in compliance with national spectrum policy.

*Question.* If confirmed, what actions would you take if the study currently being conducted within the Department of Defense determines that there will be a significant cost and operational impact if the military services surrender the 1755–1850 MHz band of frequencies?

Answer. If confirmed, I will familiarize myself with the results of the study and provide my assessment of its impact on Army warfighting capability to the office of the Secretary of Defense. I also look forward to working with the committee to address these challenges.

#### ACQUISITION REFORM

*Question.* Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the past several decades averages between 8 and 9 years. Others have stated that the cycle time may be as long as 15 to 20 years. The Secretary stated that this cycle time is not sufficiently responsive to urgent new challenges and rapidly emerging technological developments.

What are your thoughts on specific steps that can be taken to reduce the cycle time for major acquisition programs?

Answer. If confirmed, I will look at methods to reduce cycle time. I look forward to working with the committee on this issue.

*Question.* Do you see a need for any changes to the existing acquisition structure and/or acquisition chain of command?

Answer. The Army acquisition structure currently complies with the Goldwater-Nichols Act. If confirmed, I will carefully review this area, and recommend any changes that may be warranted.

#### ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has remained essentially constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on program management, and if so, how do you plan to address this problem?

Answer. Yes, I am concerned. If confirmed, I will look into this important issue.

*Question.* As the DOD continues to emphasize contracting out and competitive sourcing, the skills, training, and experience of the acquisition workforce will be critical in effectively managing these contracts. In addition, the Department's Acquisition Workforce 2005 Task Force has reported that DOD will be faced with a significant demographic challenge as 50 percent of the remaining acquisition workforce will be eligible to retire in the next 5 years.

Do you believe the current acquisition workforce has the quality and training to not only adapt to new acquisition reforms, but to the increased workload and responsibility from managing privatization efforts?

Answer. The acquisition workforce has done a phenomenal job of stepping up to the workload driven by increased outsourcing and privatization efforts. If confirmed, I will diligently work to get our people the training to ensure they are able to work smarter not just harder.

#### BASE REALIGNMENT AND CLOSURE

*Question.* Over the past several years, various departmental witnesses have testified that there is excess defense infrastructure and requested Congress to authorize another round of base closures.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

Answer. Yes. If confirmed, I will look for excess capacity and make recommendations to consolidate or combine functions.

## SERVICE STOVEPIPES

*Question.* One of the principal criticisms of the Department of Defense is that the military services continue to pursue their individual systems—from logistics to data management—which increases costs and hinders interoperability. Although there have been efforts to remove these service stovepipes in the past, they continue to exist.

If confirmed, what actions would you take to eliminate service-unique systems where systems could be developed to serve all of the services?

Answer. If confirmed, I will fully support interoperability among the services.

## OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Do you believe that outsourcing of non-core activities can yield substantial savings for the Department of Defense?

Answer. There are functions that can and should be performed by the private sector due to their expertise and technical capabilities.

*Question.* Do you agree that public-private competition is an essential precursor to any outsourcing effort in the Department of Defense?

Answer. Yes.

## MILITARY FAMILY HOUSING

*Question.* In response to a continuing shortfall in funding for family housing construction and repair, the Department proposed the Military Housing Privatization Initiative as one part of their program to upgrade all military housing to standard by 2010. Although Congress enacted this authority in the National Defense Authorization Act for Fiscal Year 1996, the services have not made the anticipated progress in the privatization effort.

What are your views on the role of military family housing in recruiting and retention?

Answer. I think that adequate housing for soldiers and families is an important quality of life issue for soldiers. Maintaining and sustaining safe, attractive, and convenient housing for our soldiers and their families is one of the Army's continuing challenges.

*Question.* Do you support the goal of upgrading all military family housing in your service to established standards by 2010?

Answer. Yes.

## ARMY MODERNIZATION

*Question.* Continued high operations tempo and inadequate modernization funding are taking a toll on the Army. Without sufficient modernization, the Nation could find itself putting soldiers in "harm's way" without the tools they need to perform their mission and ensure their own safety.

If confirmed, how would you go about establishing the level of procurement and R&D funding required to sufficiently modernize our legacy force, field and operate an interim force, and develop an objective force over the next 5 years?

Answer. If confirmed, I will support balanced modernization, seeking to develop and field combat-capable units through an appropriate mix of selective fielding of new equipment, rebuilding and upgrading existing equipment, and preserving needed elements of current equipment.

## DEFENSE LABORATORIES

*Question.* Congress has authorized the Department to give laboratory directors direct hiring authority to enable them to compete for scientific and engineering talent. To date, the Department has been reluctant to use this authority.

Do you support giving the Department's laboratory directors the authority to make direct hires without having to go through an 18-month review process?

Answer. Yes. I don't know the details but, if confirmed, I will look into the process.

## ARMY TRANSFORMATION

*Question.* This committee has commended General Shinseki for his bold initiative to fundamentally change the Army to be better able to respond to future threats. While there is widespread support for the long-term transformation of the Army, there are significant concerns about the near-term initiative to field an interim force designed to meet what are described as "critical" operational shortfalls. Despite assertions that Interim Brigade Combat Teams are a "full spectrum" force, to many

these forces appear to be largely designed for peacekeeping activities and Army descriptions confirm that these forces are “optimized” for peacekeeping. A recent Army information paper notes, “Funding for transformation, while greatly increased, remains far short of validated requirements. Achieving Secretary of Defense guidance for the Army transformation while maintaining readiness and sustaining people programs cannot be accomplished without additional resources.” Finally, “without new funds, the Army cannot maintain readiness and achieve the transformation.”

How can the Army justify a proposed multi-billion dollar investment in an “interim” force with such looming modernization challenges for both the legacy force and future objective force?

Answer. It is my understanding that the interim force fills a near-term capabilities gap that the Army must address in order to maintain readiness.

*Question.* How would you prioritize funding requirements between legacy force shortfalls (necessary to meet the national military strategy today), objective force requirements, and interim force requirements?

Answer. All three legs of the transformation are important and interdependent. However, if we are to transform, we must first maintain our focus on the S&T necessary to develop the objective force. The legacy force guarantees our near-term readiness and gives us the luxury of being able to transform. Finally, the interim force enables us to bridge a capabilities gap that exists today and has existed for the past decade.

*Question.* Do you see any options for achieving an interim operational capability less expensively through organizational, doctrinal, or tactical changes?

Answer. No, the operational gap we face stems from having two types of forces: light infantry that is deployable but not survivable enough, and heavy forces that are lethal and survivable but not deployable enough. We need this interim force to bridge the gap in operational capabilities, and that means providing lethal, survivable, and deployable platforms to our lighter forces.

*Question.* Do you agree with the assessment of the previous Secretary of the Army that Army transformation cannot be achieved without increasing the Army’s share of the defense budget?

Answer. Secretary Rumsfeld is currently in the process of conducting strategic defense reviews. I wholeheartedly support his efforts and I look forward to assisting him in this process. That will shape the national security and military strategies and desired military capabilities.

*Question.* Do you believe that the Army has shortchanged future readiness to fund near-term readiness requirements?

Answer. One of the main benefits of Secretary Rumsfeld’s reviews will be to address the trade-offs between current operations and long-term investments to ensure we do not jeopardize our future defense capabilities.

*Question.* Section 113 of the National Defense Authorization Act for Fiscal Year 2001 requires the Secretary of the Army to conduct a comparative evaluation of interim armored vehicles selected for the fielding of interim brigade combat teams with equipment already in the Army inventory.

Will you comply with the spirit and intent of this law to carry out a side-by-side comparative operational evaluation of units similarly organized, trained, and equipped, other than for the differences in medium armored vehicles?

Answer. Yes.

#### PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes.

*Question.* If confirmed, what actions would you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If confirmed, I will ensure that Army personnel fully understand the scope and application of the Whistleblower Act. Educating senior leaders on the need to protect service members from reprisal is one of my top priorities. I will uti-

lize my Inspectors General to conduct teaching and training, thus preventing acts of reprisal. I will ensure that the Army workforce is educated on the law.

#### OFFICER PROMOTION SYSTEM

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values. We are frequently asked to confirm the promotion of officers who have substantiated allegations of misconduct that have not been considered by the boards that selected these officers for promotion. At the same time, the services inform us that they have many highly qualified officers for each available general and flag officer billet.

What steps would you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

*Answer.* I understand, and share, your concern. If confirmed, I will continue to ensure that the Army nominates only those officers who display the highest values and warrant promotion to the general officer ranks.

#### INVESTMENT IN INFRASTRUCTURE

*Question.* Witnesses appearing before the committee in recent years have testified that the military services under-invest in their facilities compared to private industry standards. Decades of under-investment in our installations have led to increasing backlogs of facility maintenance needs, created substandard living and working conditions, and made it harder to take advantage of new technologies that could increase productivity.

Based on your private sector experience, do you believe the Department of the Army is investing enough in its infrastructure?

*Answer.* Based on the existing condition of the Army's aging facilities, it is apparent that not enough is invested in its infrastructure. Facilities continue to degrade each year and without additional real property maintenance resources there is the need to replace major components rather than repair existing ones and this will be more expensive.

*Question.* How does the Army's investment in its infrastructure compare to what you are used to in the private sector?

*Answer.* The private sector is driven by a profit incentive and a return on investment to its corporate shareholders for publicly traded companies. While the momentum may differ, there are analogies and common techniques that can be applied.

*Question.* What steps would you plan to take to address this issue?

*Answer.* If confirmed, I support RPM as one of the top priorities for additional funding, continuing to reduce the Army's RPM requirement by demolishing excess facilities, and privatizing utility systems, and continuing to explore opportunities for partnerships with the private sector.

#### CIVILIAN CONTROL OF THE MILITARY

*Question.* Press reports indicate that increasing civilian control of the military services will be a priority of this administration.

What changes would you recommend to Secretary Rumsfeld to make in your duties and responsibilities or those of the Under Secretary or Assistant Secretaries in your department?

*Answer.* If confirmed, I will look at duties and responsibilities and make any recommendations which may be warranted.

*Question.* Section 3014(c) of Title 10 requires that the Office of the Secretary of the Army have sole responsibility for Acquisition, Auditing, Comptroller (including Financial Management), Information Management, Inspector General, Legislative Affairs, and Public Affairs.

If confirmed, would you review each of these functional areas to ensure that the Army is in compliance with the statutory requirement?

*Answer.* Yes.

*Question.* The services have traditionally had a uniformed flag rank officer rather than the Assistant Secretary for Financial Management supervise their budget office. Do you intend to follow this arrangement or do you plan to increase civilian control over your service's budget decisions?

*Answer.* If confirmed, I intend to retain a general officer to supervise the budget office, and I will continue to exercise civilian control through the Assistant Secretary for Financial Management and Comptroller. I believe civilian control of the Army is well-understood and acknowledged, and I value the blend of experience and skills in an organization with both military and civilian professionals.

*Question.* The service secretaries have traditionally delegated management of readiness to the uniformed services. What role do you intend to play in readiness issues?

*Answer.* I believe the Secretary of the Army has a very real and active role in providing for the readiness across the service. I am very aware of the wide range of issues affecting readiness in the Army to include unit readiness status, infrastructure requirements, strategic mobility, the ongoing transformation effort, quality of life issues for our soldiers and families, and the impacts of funding levels. I anticipate working closely with the uniformed leadership to address these challenges in the current political and economic environment, particularly as changes in our national military strategy may evolve and impact the Army.

#### CIVILIAN WORKFORCE

*Question.* What steps would you plan to take to bring new people with the desired skills into our civilian workforce as more and more of the current workforce is becoming retirement eligible?

*Answer.* If confirmed, I will examine all civilian workforce planning and shaping initiatives to help us cope with an aging workforce and tight labor markets.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Secretary of the Army?

*Answer.* I believe the major challenge the next Secretary of the Army will face is change. The challenges the Army faces are similar to those of the other services as we collectively readjust our organizations to the threats our country faces. I see the next Secretary of the Army's charge as one to manage and maintain the momentum of changes that will assure our Army's preeminence in the 21st century to deter threats and defend our national security interest and do it within the joint community.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I think the Army must attract, develop, and retain America's best and brightest, while providing for their quality of life and well-being. The Army must assure readiness, while transforming itself into an Army capable of dominance along the full spectrum of military operations in the 21st century.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Secretary of the Army?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### EXCESS FACILITIES

1. Senator THURMOND. Although the four previous base closure rounds have closed or realigned over 90 major and 200 minor military installations, the Department indicates that there is still excess capacity. The immediate reaction to this excess is that we must have additional base closures to eliminate the excess. I am not convinced that base closure is the only solution. I believe we should use this capac-

ity to our advantage. We can work with the private sector to use this property on a dual-use basis and at the same time retain the facility for future surge capacity.

What are your views on the potential of leasing excess facilities to the private sector?

Mr. WHITE. I believe that, under the right economic circumstances, there is a great potential for the dual-use of some of our excess capacity. It depends largely on the attractiveness of the individual military properties for private sector use and the willingness of the private sector to invest in those properties. We are aggressively pursuing new opportunities under the guidance of the oversight committees. Our goal is to reduce maintenance and repair requirements while retaining long-term access to our properties.

However, dual-use cannot solve the Army's excess capacity problem. In addition to leasing, excess capacity offers an opportunity to achieve economies in installation operations and in improved business processes through realignment of activities. To realize the benefits of significant realignment actions requires Base Realignment and Closure (BRAC) authorization. BRAC provides a practical means for significant restructuring and restationing of Army forces not possible otherwise. Past BRAC consolidation created new synergies in training such as the Maneuver Support Center at Fort Leonard Wood, Missouri. BRAC also allows for recapitalization of Army assets by making possible the construction of state-of-the-art facilities at gaining installations and enhancing the synergy achieved through consolidation of training, research and development, cross-service activities, etc.

#### AC/RC RELATIONSHIP

2. Senator THURMOND. Although the relationship between the active Army and its Reserve components has improved, it is still a strained relationship. Unfortunately, in the past the civilian leadership of the Army has not taken a proactive role in resolving this festering problem. If confirmed as the Secretary of the Army, what actions will you take toward improving the relationship between the active and Reserve components of our Army?

Mr. WHITE. I am strongly committed to the full integration of the Active and Reserve components. General Shinseki and I will make full use of such vehicles as the Army Reserve Forces Policy Committee and the Reserve Component Coordination Council to identify and eliminate existing or potential barriers to integration. We will also continue to develop initiatives to solidify the separate components.

I look forward to working with you and Congress to put programs and policies in place that will further meld the unique strengths of the Army's Active and Reserve components.

#### JOB SATISFACTION

3. Senator THURMOND. Last summer a report based on polling and focus groups with more than 3,000 commissioned Army officers revealed deep frustration with their senior leaders and peacekeeping assignments. More than two-thirds of the officers in a survey sample agreed with the statement, "I see no possibility for continued job satisfaction in the Army."

Although the Chief of Staff, General Shinseki, has taken action to resolve some issues, there is a continuing concern within the ranks.

As a former troop commander, are you concerned about the results of this survey? How do you plan to address the issue, if confirmed?

Mr. WHITE. I am deeply concerned about the morale and job satisfaction of our officers. Over the past year, the Army has intensively studied the causes behind increased attrition. A task force completed work on the issue last year and developed several recommendations. The following initiatives are intended to directly address junior officer attrition and morale:

1. Improve strategic communications with the field through the use of universal email accounts and a central website for officer business;
2. Implement a system to measure and track personnel tempo (perstempo) and consider perstempo when making assignment decisions;
3. Expand assignment options following the Captains Career Course (CCC);
4. Develop increased opportunities for advanced education; and
5. For CCC graduates being assigned to short-tour areas, guarantee follow-on assignments to tactical units where they can satisfy branch qualification requirements.

The good news is that captain retention has improved and the continuation rate appears to have normalized somewhat over the preceding 2 years. However, we still need to retain 350 more captains of the approximately 2,100 that separate annually. The Army has made progress this year, with 184 fewer losses to date than projected. Clearly, it is too early to declare success, but the attrition situation indicates we are making progress in improving the standing of the Army in comparison to other employment opportunities.

The Army will remain focused on this important issue and seek to maintain the positive momentum achieved thus far.

#### SUSTAINMENT, RESTORATION, AND MODERNIZATION

4. Senator THURMOND. According to the General Accounting Office, by 1992 the military had accumulated an estimated \$8.9 billion in deferred maintenance. By 1998 that had grown to \$14.6 billion. It now exceeds \$16.0 billion and is growing. Last year in his testimony before Congress, the GAO's Neil Curtain said, "There really is a risk of losing the value of those (military) facilities. Real property maintenance is in disarray." I would like your views on the priority you will be placing on installation readiness and eliminating this backlog in maintenance and repair.

Mr. WHITE. The Army's \$17.8 billion sustainment, restoration, and modernization (SRM) backlog is a top challenge, and we are treating it as such. The backlog will continue to grow if SRM sustainment funding is less than 100 percent of the requirement. However, to improve SRM funding requires 10 years of a top-line increase to overall Army funding because of the interplay between funding for operational tempo and SRM. We have restricted migration from optempo to pay other bills, and so we are seeking to improve SRM funding over the Future Years Defense Plan. Additional funding would be used to fund annual sustainment at 100 percent, begin restoration of failing facilities that will reduce existing backlog, and modernize facilities to meet the new standards. This is one of the Army's highest priorities.

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

##### LANDPOWER

5. Senator SANTORUM. Recent press reports about the ongoing strategic reviews in the Department of Defense initiated by Secretary Rumsfeld have suggested that the Army will not play the prominent role it played as a component of our national military strategy in the past. In fact, some reports have suggested that a significant reduction in land forces will result after the results of these reviews are made public.

What are your views of the role of landpower for future national security challenges? Do you believe we can afford to significantly reduce our ground forces and still be able to respond to the wide range of defense challenges facing our Nation? What role do you intend to play in overseeing change within the Department for the Nation's premier land force?

Mr. WHITE. Let me first begin by saying that it is critical that our security strategy remain grounded in the pursuit of our enduring global national interests and responsibilities. To protect and advance those interests, and fulfill our responsibilities, the armed forces must be able to deter potential challengers, reassure friends and allies, compel adversaries who seek to do us harm, and support civil authorities at home and abroad. While we must be selective and focused in how and where we employ our armed forces, we should expect the National Command Authorities will employ force, particularly the Army, in a manner consistent with the interests at stake.

Our global interests and responsibilities, as well as two centuries of experience, show a clear need for land forces to remain at the core of future joint operations. To protect and advance those interests, land forces provide a broad array of capabilities for meeting the diverse security challenges our Nation now faces. Their flexibility and adaptability provide the National Command Authorities with a wide range of military options to meet these diverse challenges. By their very presence, land forces communicate the strongest signal of America's strategic intentions and commitments. Through peacetime military engagement, security assistance, and combined exercises with foreign security forces, U.S. land forces cement alliances, coalitions, and strategic partnerships. The ability of land forces to conduct forcible entry—by air and sea—coupled with their unique capability to sustain ground campaigns are central aspects in the deterrent value of the joint force. When deterrence fails, landpower is the decisive component of conventional forces. The nature of con-

flict and war is enduring. Land forces compel adversaries to cease hostile or destabilizing action. While dominance of sea, air, space, and the electro-magnetic spectrum are key enablers, land dominance alone brings hostilities to a decisive conclusion by establishing and maintaining favorable security conditions that allow for more comprehensive and enduring solutions to complex crises. Furthermore, land forces provide the broad range of capabilities required to support civil authorities at home and abroad, whether responding to natural disaster, providing missile defense, or mitigating the consequences of an attack on the homeland. Finally, in addition to the obvious direct role in our national security, land forces contribute to our national well-being and that of our friends and allies by providing a secure and stable environment that is essential for economic growth and prosperity. Given our national interests, the range of defense challenges we face now and could realistically face in the coming decades, I do not believe we can afford to significantly reduce our ground strength; however, we can transform it to better meet these challenges.

The Army is nearly 2 years into a comprehensive transformation to become more agile and responsive across the full spectrum of military operations. This transformation is driven by both changes in the strategic and operational environments, as well as the promise afforded by advanced technology. I intend to make sure that Army transformation fully supports our national military strategy and gets the share of the Defense resources needed to ensure the U.S. Army remains the best in the world. This will be my top priority.

#### MODERNIZATION FINANCING

6. Senator SANTORUM. Your credentials for the position are impressive and we have high hopes for you as the next Secretary of the Army. Your success as a former Army general officer and your most recent success in the business world put you in a unique position to contribute toward our national defense. This committee has had a number of concerns about Army modernization over the last couple of years due to inadequate resources for force modernization which has resulted in inadequate modernization plans.

In business, I would assume that you would not tolerate a business plan that could not possibly be supported by the best case projections of revenues. Additionally, if a subordinate came to you with an inadequately resourced business plan and told you that he was going to pursue two additional goals that would also require extensive resources, I suspect you would send him back to the drawing board to restructure the plan to more adequately reflect available, or projected, resources. We appear to have a similar situation with the Army today.

How do you intend to address the clear imbalances between resources and modernization plans in the Army today?

Mr. WHITE. Over the past 2 years, the Army's investment strategy reflects a paradigm shift from resourcing legacy capabilities to resourcing the transformation to the objective force. The Army has already made tradeoffs, killing or restructuring 18 programs in the last 16 months, and investing over \$9 billion in interim and objective force capabilities. In collaboration with the Defense Advanced Research Projects Agency, the Army is aggressively funding the science and technology efforts leading to the design and development of our Future Combat System. We have also funded the system design and development of more mature systems, such as Comanche. Additionally, we have focused our enhancements of the legacy force by identifying and prioritizing those systems that have applicability to the objective force, such as tactical unmanned aerial vehicles.

Ultimately, Army transformation is about capabilities, not resources. For those systems that are crucial to today's readiness, but will not transition to the objective force, we will only invest the amount necessary to modernize and selectively upgrade. For example, in our ground maneuver systems, we will only upgrade the number of Abrams tanks and Bradley fighting vehicles that are needed for the Counterattack Corps. The remainder of the force will have less modernized systems, depending on priorities. The same logic has been applied to our aviation fleet. We will upgrade fewer Apaches to the AH-64D Longbow model, while the remainder of the fleet will retain recapitalized AH-64As with reliability improvements. The Army has adopted this strategy of selective recapitalization to generate the investment capital necessary to field objective force formations beginning in fiscal year 2010, while retaining the ability to fight and win on any battlefield, against any adversary, throughout the period of transformation.

## GRIZZLY REQUIREMENT

7. Senator SANTORUM. Is the requirement for an in-stride, complex-obstacle breaching capability still valid, even though the Army failed to fund the Grizzly program last year? Without Grizzly how will the requirement for the counter offensive force be met?

Mr. WHITE. Yes, the requirement for an in-stride, complex obstacle breaching capability as offered by the Grizzly is still valid. However, due to funding constraints associated with transformation, the Grizzly program remains unfunded and is one of our unfunded priorities for legacy systems. Without Grizzly, the Army will be forced to continue its current time-consuming breaching technique that requires a coordinated operation of equipment and soldiers exposed to hostile fire.

8. Senator SANTORUM. Last year Congress approved \$15 million for the continued development of the Grizzly program. We understand this money has not yet been released to the Army and, therefore, not available for the Grizzly program. The Army is currently considering related transformation and budgetary prioritization issues. In recognition of last year's highly successful test results, would you agree this fiscal year 2001 Grizzly money should be obtained so the development of this program can continue until a final decision has been made?

Mr. WHITE. Despite last year's successful tests, the Army decided to terminate the program based on an assessment of affordability and acceptance of operational risk against higher transformation priorities. Because the Army will not fund Grizzly to support transformation, it would not be useful to obtain the \$15 million in fiscal year 2001 to support the program. In addition, the \$15 million would pay less than 40 percent of the requirement for fiscal year 2001. The unfinanced requirement for Grizzly this year is \$40 million.

It should be noted, however, that the Army still has a valid requirement for a breacher with in-stride, complex obstacle breaching capability.

---

 QUESTIONS SUBMITTED BY SENATOR WAYNE ALLARD

## CHEMICAL DEMILITARIZATION PROGRAM

9. Senator ALLARD. The Army is busy cleaning up the Rocky Mountain Arsenal in Colorado. An example of their efforts was the great job of disposing of Sarin gas bomblets they came across during the clean-up. Unfortunately, the Army expects to find more bomblets.

Will you ensure that the Army continues to take the steps necessary to ensure they find and dispose of all these munitions? What technologies is the Army researching and developing for the destruction of unexploded ordinances such as those at the Arsenal?

Mr. WHITE. The Army has prepared a plan for clearing the debris pile at Rocky Mountain Arsenal, which the State of Colorado has approved. The Army is currently executing this plan and expects to complete this work by mid-July 2001. The Army is continuing to test the Explosive Destruction System (EDS) and has temporarily returned it to Aberdeen Proving Ground, Maryland, to complete operational testing, which is scheduled to end in mid-July 2001. The EDS will remain available for the disposal of future bomblet finds at Rocky Mountain Arsenal. While refining the EDS, the Army is also researching several other technologies for the destruction of unexploded ordnance including plasma arc, gas phase chemical reduction, super critical water oxidation, a cerium intermediary process, wet air oxidation, persulfate oxidation, catalytic transfer hydrogenation, and a variety of blast chamber technologies.

10. Senator ALLARD. Will you continue to support all efforts to properly and quickly dispose of the chemical weapons at the Pueblo Army Depot?

Mr. WHITE. Yes. The Army's efforts will continue to focus on disposing of the stockpile at Pueblo Army Depot as quickly as possible, while ensuring that all safety and environmental compliance requirements are fully met. I believe that we have an obligation to eliminate the public risk caused by the continued storage of the chemical weapons as quickly as possible at Pueblo Army Depot and the other stockpile storage sites. The way to accomplish this is to ensure adequate funding, utilize the most effective and proven technologies available today, and move forward with all preparations in an aggressive and systematic manner.

11. Senator ALLARD. What are the consequences of not achieving the 2007 Chemical Weapons Convention (CWC) deadline, both internationally and programmatically?

Mr. WHITE. First, let me state that I will in no way pursue a treaty deadline if the pursuit of that deadline means putting people at a higher risk. That said, the Army remains deeply committed to fulfilling the requirements outlined by the CWC to destroy the chemical stockpile by April 29, 2007. In fact, the U.S. is well ahead in complying with the next intermediate deadline—destruction of 20 percent of the agent tonnage at entry into force of the treaty, by April 29, 2002. This milestone should be reached within the next 2 months.

As the Department has indicated in the past, the longer the stockpile remains in storage, the greater the risk of a catastrophic event (tornado, earthquake, aircraft crashing into an igloo, etc.) occurring at any given site. So, from a programmatic perspective, destruction of the chemical stockpile as early as possible has been, and continues to be, a major thrust of the chemical demilitarization effort, CWC time-tables notwithstanding.

With regard to international consequences, Article XIII of the CWC states that the Conference of States Parties has the authority to take necessary measures to ensure compliance with this convention and to redress and remedy any situation, which contravenes the provisions of this convention. These measures include sanctions consistent with international law. It should be noted that there are provisions for a CWC signatory to seek a 5-year extension to the April 2007 deadline. The Department will continue to strive to meet its requirements in a manner compliant with international agreements while ensuring safety to the demilitarization workers, the communities near the disposal facilities, and the environment.

#### CAVALRY REGIMENTS

12. Senator ALLARD. Armored cavalry regiments are a highly important and capable part of our force structure, particularly as the Army transforms to a more lighter and lethal force. Can you give me your thoughts on the need to maintain cavalry regiments, such as the 3rd Armored Cavalry Regiment at Fort Carson?

Mr. WHITE. Cavalry regiments play a critical role in fulfilling the Army's current and future ability to execute the national military strategy and meeting Commander in Chief (CINC) requirements.

Armored cavalry regiments (ACRs), both Active and Reserve component, are among a select few Army forces which are dual-apportioned for regional contingency planning for both major theater wars, a function of their importance to the CINCs.

The ACR is specifically designed, with regard to force structure and capabilities, to perform certain doctrinal tasks that are not typically assigned to a heavy division maneuver brigade. Doctrinally, the ACR operates as part of a joint task force or corps to which it is assigned. It is the corps commander's "eyes and ears."

Currently there are four corps in the Army, but only three deployable cavalry regiments to support them. The 2nd Light Cavalry Regiment is aligned with XVIII Corps, the 3rd Armored Cavalry Regiment is aligned with III Corps (the Counter Attack Corps), and the 278th Armored Cavalry Regiment, Tennessee Army National Guard, may operate with both I Corps and V Corps.

As part of the Army's transformation, the U.S. Army Training and Doctrine Command is examining the ability of interim forces to perform traditional cavalry missions as well as requirements for an interim cavalry regiment within the transforming Army.

#### SPACE COMMISSION RECOMMENDATIONS

13. Senator ALLARD. Secretary Rumsfeld announced his recommendations regarding our military space organization as encouraged by the Space and National Reconnaissance Office Commissions. Please comment on the importance of outer space and space activities to the national security and economic well-being of the United States, as well as our allies and friends. Do you foresee any need for legislative changes to accomplish these recommendations? Please comment on the Secretary's recommendations specifically as it relates to your service.

Mr. WHITE. As the Secretary of Defense outlined in his press conference on May 8, 2001, the Nation's operations in space have made us both dependent and vulnerable. The Space Commission was undertaken to ensure that the management and organization of our national security space program reflects the importance of space to the Nation. The focus of the Space Commission recommendations centers on the organization and management of space activities, which affect the Air Force. The

Air Force and the National Reconnaissance Office have established approximately 14 integrated product teams (IPT) to examine the major topics outlined in the Space Commission Report. These include executive agency, space acquisition executive, requirements, technology, major force program, and the realignment of Air Force headquarters and field commands. Although these efforts are in the initial phase, the Army is an active member of the IPTs to ensure that the Army's equities are adequately addressed. The Army believes that space is an inherently joint environment in which Army space operations will significantly improve its ability to conduct decisive and sustained ground operations in support of national security strategy objectives. As we continue our examinations, we will be better able to determine specific impacts to the Army.

---

QUESTIONS SUBMITTED BY SENATOR JIM BUNNING

CHEMICAL DEMILITARIZATION PROGRAM

14. Senator BUNNING. At a recent Senate Defense Appropriations Subcommittee hearing which reviewed the Chemical Demilitarization Program, testimony was given which called into question the Army's ability to meet cost and schedule goals. This begs the question of whether they are having equal difficulty meeting important safety requirements.

Are you prepared to use the influence of your office to ensure that this program is run in the safest and most transparent manner possible?

Mr. WHITE. I agree that the Army has experienced challenges in meeting its cost and schedule goals; however, the portion of this growth has come from the commitment to meeting important safety and environmental protection requirements. Since the start of this program, the Army has seen a number of changes in both safety and environmental protection regulations and laws. The commitment has been and will always be to meet all safety and environmental regulations and laws. This commitment continues to create pressure on costs and schedules.

I recognize the importance of eliminating public risk caused by continued storage as quickly as possible by destroying the stockpile. I believe the Army is utilizing the most effective and proven methods to destroy the stockpile and our goal is to continue to destroy the stockpile in a way that is safe and protective of the public, the workers, and the environment as quickly as possible. I will ensure that all decisions to be made that impact the local communities are clearly and openly communicated, and that public input is consistently sought.

15. Senator BUNNING. What steps would you take if you became aware that officials from the Chemical Demilitarization Program were intentionally providing misleading information to Congress and the public?

Mr. WHITE. First, let me say that I will not tolerate such behavior from any of the staff under my direction. If evidence of intentional misleading were brought to my attention, I would take the appropriate legal action consistent with Army and Department of Defense policy.

16. Senator BUNNING. I am deeply concerned for the safety of the 55,000 people who live near the chemical weapons stockpile in the Blue Grass Army Depot. Their lives would be seriously endangered if anything went wrong during this destruction process.

If confirmed, what steps will you take to ensure that this program is run in the safest manner possible?

Mr. WHITE. I recognize and understand your concern. Safety will continue to be our highest priority in performing this mission. There are three measures I will take to ensure that the destruction process is operated as safely as possible. First, I will insist that any facility built at Blue Grass be of the highest quality of design and construction. Second, the facility will be fully tested and the workers will be trained to the highest standards before any operations begin. Finally, after the first two steps are accomplished, I will ensure that the operations of the facility are continuously reviewed to ensure safety and environmental standards are met for the life of the facility.

17. Senator BUNNING. Do you consider incineration to be the most modern technology available for the destruction of chemical weapons?

Mr. WHITE. I believe that there are a number of ways to destroy the chemical weapons; however, I also believe that we need to utilize technologies that are proven and safe, can handle the diversity of munitions in our stockpile, and can do it in

a timely manner. Presently, incineration has been shown that it can meet these requirements. Utilizing incineration, the Army has destroyed over 14,238,000 pounds of chemical agent, which equates to over 22.6 percent of the United States stockpile destroyed. Incineration is also extremely effective in destroying chemical agents at better than a 99.999 percent destruction and removal efficiency. The Army will continue to evaluate alternative technologies, but continues to support incineration as the safest and most effective way to destroy the full spectrum of munitions and agents at our stockpiles that have multiple munition types. If and when other technology solutions are developed that are shown to be as safe and can be implemented at the same or lower cost as incineration, the Army will definitely consider the use of alternative technologies.

18. Senator BUNNING. What are your alternate plans if the community near Blue Grass objects to incineration as the method to destroy the chemical weapons?

Mr. WHITE. The public has several opportunities to become involved at Blue Grass during the technology selection process. Currently, an environmental impact statement (EIS) is being prepared. This EIS will look at the impact to the environment caused by the disposal technologies, including incineration. A public meeting was held in January with the purpose of gathering comments from the general public. Before the EIS is completed in May 2002, the public will have two more opportunities to provide comments and concerns. The preliminary draft is due to be completed this fall and will be available for public review and comment at that time. The public will be able to review and comment on the final draft that is due this coming winter.

In addition, the Resource Conservation and Recovery Act requires that the Army submit a permit application. Prior to submitting the application, the Army will hold a public meeting. The permit application details the process and will be available for public review and comment. The Clean Air Act also requires a permit application that the public can review and comment upon. In addition, the Army operates an extensive public outreach and information program within the community.

All of these public involvement avenues will be used to support the selection of the most appropriate technology for Blue Grass. No matter which technology is chosen, I will ensure that the Army continues to work with the local community to address their concerns and inform and involve them meaningfully in the disposal program.

---

#### QUESTIONS SUBMITTED BY SENATOR MARK DAYTON

##### CRUSADER TECHNOLOGIES

19. Senator DAYTON. As I see it, the Army has made a significant investment in state-of-the-art, 21st century technologies in the Crusader program. Those technologies, when demonstrated in Crusader, will place the Army well on its way to achieving its transformation goals and realizing its future combat platform, the Future Combat System. If you don't complete Crusader, how will the Army attempt to mature those technologies, demonstrate their combat utility, and maintain your aggressive transformation time line?

Mr. WHITE. Crusader is a vital technology carrier for our transformation and future combat systems. In fact, it is the only system currently in development with over two dozen new technologies being integrated onboard a single ground combat platform for the first time. As the Army moves toward fielding Crusader, we will continue to develop, refine, and validate the doctrine and tactics that rely on cockpit automation, robotics, and information exploitation, in lieu of soldier-performed tasks that will also be applied in our future combat systems. In addition to developing the integrated crew cockpit, robotic munitions handling, projectile tracking radar, advanced composites, light metal fabrication techniques, and various protection and susceptibility reduction technologies, Crusader will prove out many of the sophisticated modeling, simulation, design, and integration processes that will provide the foundation for these future combat systems.

Absent Crusader, many of the advanced technologies and processes currently being developed by Crusader with application to our future combat systems will have to be developed by the individual systems or supported in the technology base. This defers the risks and transfers the burden for maturation of these technologies and processes from Crusader to the technology base and future systems. Additionally, this increases the resources required by the technology base and future combat systems to meet our transformation timeline.

20. Senator DAYTON. It would appear that the Army has narrowly characterized Crusader as a legacy force system, destined to support your one remaining mechanized corps. Yet, when we look at what the Army is proposing in its transformation, I see that the dependence upon long-range, precision strike capabilities growing, not diminishing for your interim brigade combat teams and your objective force. Your light, mobile platforms will want to avoid direct fire exchanges and destroy enemy systems long before they engage. Isn't that what Crusader is designed to do? With its improved strategic deployability, wouldn't the Army want to augment these new formations with small numbers of rapidly deployable Crusaders? So why isn't Crusader identified among your transformation systems, like Comanche?

Mr. WHITE. Crusader is specifically designed to meet the requirements of our transforming Army. Crusader is the cannon artillery that our legacy force's counter-attack corps requires to accomplish its mission during the transformation. When added to the Abrams M1A2 System Enhancement Program tank, Bradley A3 fighting vehicle, M270A1 missile launcher, and Apache Longbow, Crusader completes the array of combat systems required for the counterattack corps to gain and maintain combat overmatch against potential foes during the transformation. Crusader's long-range precision fires, survivability, and lethality make it a candidate for augmenting our interim force based on mission requirements. Additionally, while Crusader is not a part of our objective force, it could potentially fight with or in support of this future force from the initial fielding of the future combat systems in 2008 through approximately 2030 according to our current projections. As the Army begins to field the objective force, the Crusaders will cascade and replace the Paladin howitzers and field artillery ammunition support vehicles, fielded today in the corps artillery units.

---

[The nomination reference of Thomas E. White, Jr., follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
May 1, 2001.

*Ordered*, That the following nomination be referred to the Committee on Armed Services:

Thomas E. White, Jr., of Texas, to be Secretary of the Army, vice Louis Caldera.

---

[The biographical sketch of Thomas E. White, Jr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF THOMAS E. WHITE, JR.

Thomas E. White, Jr., is Vice Chairman of Enron Energy Services, the Enron Corp. subsidiary responsible for providing energy outsource solutions to commercial and industrial customers throughout the United States. He is also a member of Enron's Executive Committee.

Mr. White is responsible for the delivery component of energy management services, which include commodity management; purchasing, maintaining, and operating energy assets; developing and implementing energy information services; capital management; and facilities management. Enron is one of the world's leading electricity, natural gas, and communications companies. With revenues of \$101 billion in 2000, Enron markets electricity and natural gas, delivers physical commodities, and financial and risk management services to customers around the world. *Fortune* magazine has named Enron "America's Most Innovative Company" for 6 consecutive years.

Mr. White joined Enron Corp. in 1990 as Vice President of Operations for Enron Power Corp., a subsidiary of Enron, after a 23-year career in the United States Army. In 1991 he was named Chairman and CEO of Enron Power Corp. During his tenure, Enron Power Corp. completed the world's largest natural gas fired co-generation plant at Teesside in the United Kingdom in 1993.

From 1993 to 1998, Mr. White was Chairman and CEO of Enron Operations Corp. Mr. White's duties included the operation of some 44,000 miles of natural gas pipelines, including the largest integrated system in the United States. In addition, he had management responsibility for the operation of 26 plants, including 18 in the United States and 8 in foreign countries stretching from Argentina to the Phil-

ippines. Mr. White also was responsible for Enron Engineering and Construction Company, which managed an extensive construction portfolio with domestic and international projects.

Mr. White retired as a Brigadier General from the United States Army in July 1990. Highlights of his military service include:

- Two years of service in combat operations in Vietnam.
- Extensive command experience, culminating in command of the 11th Armored Cavalry Regiment of V Corps in U.S. Army Europe, which included responsibility for 6,000 soldiers, 10,000 family members, and four different major installations.
- High-level staff assignments included service on several special task forces chartered by the Chief of Staff of the United States Army. Those task forces addressed critical defense issues including development of the M1 Abrams Tank, formulation of operational doctrine for large units, and the development of an Armor/Anti-Armor program budgeted at \$2 billion per year.
- Served as Executive Assistant to the Chairman of the Joint Chiefs of Staff.
- Military decorations and awards include the Distinguished Service Medal, Silver Star, and Legion of Merit (with 3 Oak Leaf Clusters).

Mr. White holds a bachelor's degree in engineering from the United States Military Academy and a master's degree in operations research from the Naval Post Graduate School in Monterey, California.

Mr. White has been married to his wife Susan for 31 years. They have two sons and a daughter. Mr. White was born in Detroit, Michigan, on December 14, 1943.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Thomas E. White, Jr., in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228  
Washington, DC 20510-6050  
(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Thomas Eugene White, Jr.
2. **Position to which nominated:**  
Secretary of the Army.
3. **Date of nomination:**  
May 1, 2001.
4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

December 14, 1943; Detroit, Michigan.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to Susan Elizabeth Adams White.

**7. Names and ages of children:**

Thomas E. White III, 30; Charles F. White, 26; Kathleen H. White, 24.

**8. Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

High School: Cass Technical High School, Detroit, Michigan, 1957–1961; graduated with diploma, June 1961.

College: Wayne State University, Detroit, Michigan, 1961–1963; No degree.

United States Military Academy, West Point, NY, 1963–1967; BS/Engineering, June 1967.

Graduate: United States Naval Postgraduate School, Monterey, CA, 1973–1974; MS/Operations Research 1974.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

March 1991–June 1993—Chairman/CEO Enron Power Corp., Houston, TX.

June 1993–Dec. 1996—Chairman/CEO Enron Operations Corp., Houston, TX.

Jan. 1997–Apr. 1998—Chairman/CEO Enron Ventures Corp., Houston, TX.

Apr. 1998–present—Vice Chairman/CEO Enron Energy Services, Houston, TX.

**10. Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Enron Energy Services and other Enron subsidiaries—Vice Chairman, Officer, Director.

Catalytica Energy Systems, Inc.—Director.

Greater Houston Area Chapter American Red Cross—Vice Chairman.

T.E. White Family Limited Partnership—General Partner.

DLJ Private Equity Partners Fund II—Limited Partner.

WSW 1996 Exchange Fund, LP—Limited Partner.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Jewish-Institute for National Security Affairs—Member.

Business Executives for National Security—Member.

Greater Houston Area Chapter American Red Cross—Vice Chairman.

Association of the United States Army—Member.

Blackhorse Association—Member.

11th Armored Cavalry Regiment Veterans of Vietnam and Cambodia—Member.

Association of Graduates United States Military Academy—Member.

Woodlands, Texas Country Club—Member.

Naples National Golf Club, Naples, FL—Member.

Maroon Creek Country Club, Aspen, CO—Member.

Aspen Mountain Club, Aspen, CO—Member.

Caribou Club, Aspen, CO—Member.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member—Republican Party.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

1996—Enron Political Action Committee—\$1,800

1996—Bob Dole for President Campaign—\$2,000

1997—Enron Political Action Committee—\$1,800

- 1998—Enron Political Action Committee—\$1,800
- 1999—Enron Political Action Committee—\$2,000
- 2000—George W. Bush for President Campaign—\$2,000
- 2000—Enron Political Action Committee—\$2,000

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

- Military Medals (Army)*
- Army Distinguished Service Medal
- Grand Merit Cross of the Federal Republic of Germany
- Silver Star
- Legion of Merit (4)
- Distinguished Flying Cross
- Bronze Star w/“V” Device (4)
- Meritorious Service Medal
- Air Medals w/“V” Device
- Army Commendation Medal w/“V” Device (3)
- Army Achievement Medal

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

THOMAS E. WHITE, JR.

This 21st day of March, 2001.

[The nomination of Thomas E. White, Jr., was reported to the Senate by Senator John Warner on May 21, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 24, 2001.]

---

[Prepared questions submitted to Gordon R. England by Chairman Warner prior to the hearing with answers supplied follow:]

May 9, 2001.

The Hon. JOHN WARNER,  
*Chairman, Committee on Armed Services,*  
*United States Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

GORDON R. ENGLAND.

cc: The Hon. Carl Levin  
*Ranking Minority Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been accepted and implemented and that they have clarified the responsibilities and authorities of the Secretary of Defense, the secretaries of the military departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs. The effectiveness of our joint warfighting forces has improved as a result of these reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* In my view, the most significant value of these reforms has been to strengthen joint warfighting. Our military is stronger and more lethal because our services can work better together. If confirmed, I will maintain and extend the Navy's commitment to the principles of joint warfare including interoperability and joint doctrine.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

## DUTIES

*Question.* Section 5013 of Title 10, United States Code, describes the duties of the Secretary of the Navy.

Assuming you are confirmed, do you expect that Secretary Rumsfeld will prescribe additional duties for you?

*Answer.* The Secretary's Management Committee consisting of the Deputy Secretary of Defense, three service secretaries, and Under Secretary of Defense for Acquisition, Technology, and Logistics has been discussed as an operating model for the Department of Defense. If implemented by the Secretary of Defense, this would constitute new assignment for the service secretaries. As of this point in time, I am not aware of any other additional duties.

*Question.* If so, what do you expect those additional duties will be?

*Answer.* I am not aware of any such additional duties, except for the Secretary's Management Committee.

*Question.* What duties and responsibilities do you plan to assign to the Under Secretary of the Navy?

*Answer.* The Under Secretary of the Navy is to keep the Department on track and focused on the stated top priorities, keeping me informed of any impediments to success. I expect the Under Secretary of the Navy to monitor and maintain the priorities I have set for the Department and take the lead on any item in need of special attention.

*Question.* In carrying out your duties, how will you work with the Assistant Secretary of the Navy for Manpower and Reserve Affairs; the Assistant Secretary of the Navy for Installations and Environment; the Assistant Secretary of the Navy for Financial Management and Comptroller of the Navy; the Assistant Secretary of the Navy for Research, Development, and Acquisition; and the General Counsel?

*Answer.* If confirmed, I intend to work closely and directly with the Assistant Secretaries of the Navy and the General Counsel to ensure the Department maintains a clear focus on the priorities set forth by the Secretary of Defense and myself consistent with the appropriate laws and Title 10 of the U.S. Code. My plan is to encourage teamwork within the Department of the Navy; therefore we will have a

number of integrated product teams, both within civilian leadership and between civilian leadership and their military counterparts.

#### SCIENCE AND TECHNOLOGY

*Question.* The Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 established the goal of increasing the budget for the Defense Science and Technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. This goal was not met in the fiscal year 2000 nor in the fiscal year 2001 budget requests. In President-Elect Bush's speech at the Citadel he spoke of his support for a strong and stable technology base.

Do you believe that a substantial increase in the Department's S&T budget is needed?

Answer. Science and technology is important. If confirmed, I will review to ensure the Department and nation's needs are met.

*Question.* The defense laboratories are facing a future of continued reductions in research and support personnel. This trend, if unchecked, could result in a loss of "critical mass" in research efforts across a number of areas critical to future programs. This situation is further complicated by the fact that in the current economy, the Department is vying with industry for the best and the brightest high tech personnel, but is unable to compete on salary and quality of work. Finally, the process for hiring can take up to 18 months as opposed to direct hiring in industry.

If confirmed, how would you intend to attract and retain scientists and engineers for your laboratories?

Answer. This is a matter that requires my review and attention.

*Question.* Congress has authorized the Department to give laboratory directors direct hiring authority to enable them to compete for scientific and engineering talent. To date, the Department has been reluctant to use this authority.

Do you support giving the Department's laboratory directors the authority to make direct hires without having to go through an 18-month review process?

Answer. The Department is in the process of developing a waiver process to implement the authority for direct hiring that Congress provided under Section 245 of the Fiscal Year 2000 Defense Authorization Act. I support this authority and believe it will improve the workforce and the efficiency of DOD laboratories. At the same time, we need to examine the total laboratory structure within the DON, DOD, and DOE to maximize efficiency and effectiveness of these resources.

#### ACQUISITION REFORM

*Question.* Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the past several decades averages between 8 and 9 years. Others have stated that the cycle time may be as long as 15 to 20 years. The Secretary stated that this cycle time is not sufficiently responsive to urgent new challenges and rapidly emerging technological developments.

What are your thoughts on specific steps that can be taken to reduce the cycle time for major acquisition programs?

Answer. I would implement "spiral acquisition." By doing so, we can employ technology faster, at less risk, and less cost than current acquisition approaches.

*Question.* Do you see a need for any changes to the existing acquisition structure and/or acquisition chain of command?

Answer. Based on the long timelines and costs of current acquisitions, it would certainly appear that changes to the current acquisition structure may be necessary. If confirmed, I will become familiar with the current acquisition structure and the chain of command, and propose changes if appropriate.

#### ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has remained essentially constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on program management, and if so, how do you plan to address this problem?

Answer. Perhaps. While on the surface this appears to be a growing problem, this may not be as severe if we modify our acquisition processes. This subject will be examined as acquisition reforms are implemented in DOD.

*Question.* As the DOD continues to emphasize contracting out and competitive sourcing, the skills, training, and experience of the acquisition workforce will be

critical in effectively managing these contracts. In addition, the Department's Acquisition Workforce 2005 Task Force has reported that DOD will be faced with a significant demographic challenge as 50 percent of the remaining acquisition workforce will be eligible to retire in the next 5 years.

Do you believe the current acquisition workforce has the quality and training to not only adapt to new acquisition reforms, but to the increased workload and responsibility from managing privatization efforts?

Answer. While the current acquisition workforce is made up of high quality and well-trained personnel, the Department will need to continue to examine needs in this area. If confirmed, I will seek to increase the emphasis on creating a continuous learning environment for the acquisition workforce, to seek out and introduce best commercial practices, and to streamline our recruiting and hiring practices in order to be competitive with industry in attracting new talent.

#### READINESS

*Question.* Over the last few years we have seen increasing evidence that the readiness of the U.S. armed forces has begun to deteriorate as a result of the over-commitment of an under-resourced military. The Joint Chiefs have testified that the military services will require a \$48 to \$58 billion funding increase if the Department is to restore readiness and modernize for the future. The former Secretary of the Air Force recently stated that an increase of \$100 billion would be required each year.

What do you view as the major readiness challenges that will have to be addressed and, if confirmed, how will you approach these issues?

Answer. If confirmed, the priority of this office will be to increase the combat capability which includes readiness of the Navy and Marine Corps and the interoperability of this capability with the other services and allies. I will work with the Chief of Naval Operations and Commandant of the Marine Corps to understand their perspective and efforts in providing sailors and marines with the tools necessary to accomplish their mission.

#### CINC-IDENTIFIED READINESS DEFICIENCIES

*Question.* The latest Quarterly Readiness Report to Congress identified numerous CINC-identified readiness-related deficiencies. Many of these are listed as Category I deficiencies which entail significant warfighting risk to execution of the national military strategy. Most of the specific deficiencies have been reported for the past several years and have not as yet been effectively addressed.

If confirmed, what actions will you take to ensure that the Navy provides the necessary resources to address these CINC-identified readiness deficiencies?

Answer. Navy has worked to mitigate CINC readiness deficiencies. If confirmed, I would continue that effort.

#### ENVIRONMENT

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment" issues. These include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, transfer of radio frequency spectrum from the Department of Defense to the wireless communications industry, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

In your opinion, how serious are these problems for the Navy?

Answer. Encroachment is a problem that grows more serious each day. The commanders have been trying to accommodate encroachment pressures by altering their training plans and procedures. While many of these individual accommodations may not appear serious, the cumulative effect could diminish readiness in the form of a fighting force less prepared than it should be. The effects of encroachment are most often seen as decreased days for training, restrictions on the location and timing for training, and limitations on the types of training.

*Question.* If confirmed, what actions will you propose to ensure that these issues do not prevent your service from effectively training and operating both at home and abroad?

Answer. The Department of Defense and the military services are working with other federal agencies to identify and resolve as many encroachment issues as possible. If confirmed, I will continue this effort.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and

subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Would you agree that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

Answer. Yes, in many respects, the Department of the Navy is just like any other big business and must give priority to complying with environmental legal requirements. It is vital that the Navy and Marine Corps comply with environmental protection requirements and budget appropriately. If confirmed, I also will look for opportunities to be proactive rather than reactive. For example, achieving compliance through pollution prevention is the preferred method of business.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

Answer. In general, no. Most of the activities of the Navy and Marine Corps, particularly those associated with operating installations, can and must comply with environmental laws like the private sector. However, application of some environmental laws and regulations to militarily unique training actions should be examined and may require some regulatory accommodations to ensure national security.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

Answer. In general, I support the principle that DOD facilities should be subject to the same standards as comparably situated civilian facilities. However, there are circumstances where environmental regulations must be tailored to accommodate the unique military mission or special circumstances related to military training while still protecting the environment. A good example is the Military Munitions Rule whereby excess military munitions were recognized as a special type of waste that should not be regulated like civilian wastes under the Resource Conservation and Recovery Act.

*Question.* The Department of Defense faces a bill for the clean-up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars, and could well be in the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

Answer. If confirmed, I will work with the other services and the Secretary of Defense, in consultation with Congress, to solve this critical question.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department's long-term clean-up liability (and the time required to complete such clean-up)?

Answer. If confirmed, I welcome the opportunity to look into this difficult and critical issue as well.

*Question.* How would you address the prospect of reducing the cost to the Department of environmental compliance?

Answer. As private industry and the Department of Defense have found, the preferred method for cost reduction is through pollution prevention. If confirmed, I will examine various ways to ensure environmental compliance while reducing costs.

*Question.* Maritime resource protection laws, executive orders, and interpretations of Federal and State environmental regulations have affected the conduct of maritime operations, and Navy test and training activities.

If confirmed as Secretary of the Navy, what measures would you take to preserve fleet operations and training exercises under the current regulatory and statutory framework?

Answer. I am not yet familiar with the various laws and regulations involving environmental compliance. If confirmed, I will acquaint myself with these laws and take action as appropriate.

#### VIEQUES

*Question.* Over the past 2 years, naval forces deploying from the East Coast of the United States have been prevented from conducting live-fire training on the Navy's training range on Vieques, Puerto Rico, which has had a degraded impact on the readiness of these forces to execute their wartime missions. An agreement was reached in 2000, and legislation passed to implement that agreement, that provided for the return of the western portion of the island, economic aid, and a restoration of live-fire training. Unfortunately, the current Governor of Puerto Rico

does not appear to be abiding by the terms of this agreement and has stated that she wants the Navy to cease operations immediately.

Do you agree with the Chief of Naval Operations and the Commandant of the Marine Corps that Vieques is essential to the readiness of East Coast naval forces?

Answer. Yes. The Island of Vieques provides an unequalled environment for training and evaluation of Navy and Marine Corps personnel and equipment in land, sea, air, and amphibious warfare. This combined arms training and evaluation is an essential step in attaining sufficient pre-deployment levels of readiness.

*Question.* If confirmed, what actions would you take to ensure that the Navy and Marine Corps receive necessary live-fire training on Vieques?

Answer. Under the terms of the Fiscal Year 2001 National Defense Authorization Act, the Department of the Navy will only resume live-fire training on Vieques if a majority of the registered voters in Vieques endorse our continued use of the range at a referendum scheduled for 6 November 2001. Until then, I support the continued training at Vieques with non-explosive ordnance in accordance with the Act and the agreement reached in January 2000 between the President and the Governor of Puerto Rico.

*Question.* Do you support the agreement the Navy reached with Governor Rossello regarding Vieques?

Answer. It is my understanding the Navy supports the agreement. I personally have not had sufficient briefings to have a position.

*Question.* If confirmed, do you intend to continue to comply with that agreement or will you seek to negotiate a new agreement or pursue a different course of action?

Answer. If confirmed, resolution of this issue will be a high priority. I will obtain additional information in order to understand all aspects of this situation.

#### OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Over the past several years the Department of Defense has increased its reliance upon the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort, believing that outsourcing will yield significant savings that can be used to modernize the military.

Do you believe that the military services need to retain a core capability to perform certain activities such as equipment maintenance, and what approach would you take to allocate workloads between the public and private sector?

Answer. If confirmed, I will strive to ensure that military core capabilities are retained, as necessary, to achieve the proper balance between public and private sector support.

*Question.* Do you believe that outsourcing can yield substantial savings for the Department of Defense?

Answer. If confirmed, I will work with my staff and welcome the opportunity to work with this committee to evaluate the effectiveness of this outsourcing.

*Question.* Do you agree that public-private competition is an essential precursor to any outsourcing effort in the Department of Defense?

Answer. If confirmed, I welcome the opportunity to work with my staff and the committee to evaluate the issue of public-private competition and whether it generates significantly greater savings.

#### COMMERCIAL VS. MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* The Federal Government is currently conducting a series of studies to determine a band of frequencies that can be used for the operation of third generation wireless communications devices. As a part of this overall effort, the Department of Defense is conducting a study to determine the cost and operational impact that would result if the military services were to surrender the use of the 1755–1850 MHz band of frequencies on which they currently operate their equipment. As the Department of Defense's information requirements increase with the advances taking place in weapon system technology, the Department's requirements for frequency access will also increase. However, the commercial sector is also experiencing increased requirements for frequency spectrum to meet the demands of the American consumers. Spectrum is a finite resource and we have to ensure it is utilized in the most efficient and beneficial manner possible.

If confirmed, what actions would you take to review your service's total spectrum requirements and ensure that new systems are designed to ensure efficient spectrum utilization by the Department of Defense?

Answer. It is evident that the military does have bona fide requirements for spectrum utilization. Without unique military bandwidth, the whole effort for integrated command, control, and intelligence across the services will be jeopardized. If confirmed, I will work with the other services and DOD to address this issues.

*Question.* If confirmed, what actions would you take if the study currently being conducted within the Department of Defense determines that there will be a significant cost and operational impact if the military services surrender the 1755–1850 MHz band of frequencies?

*Answer.* If confirmed, I will need to be thoroughly briefed on the study to fully appreciate its findings.

#### BASE REALIGNMENT AND CLOSURE

*Question.* Over the past several years, various departmental officials have testified that there is excess defense infrastructure and have requested Congress to authorize another round of base closure.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* Any discussion of where there may be excess capacity must await the completion of the Secretary of Defense Strategic Review, which will identify a vision of how we must reshape the Department of Defense to best meet the threats of today and tomorrow to our Nation. Implementing this new defense vision will likely involve a shift in the focus and priorities of the military departments, including its supporting shore establishment.

#### SERVICE STOVEPIPES

*Question.* One of the principal criticisms of the Department of Defense is that the military services continue to pursue their individual systems—from logistics to data management—which increases costs and hinders interoperability. Although there have been efforts to remove these service stovepipes in the past, they continue to exist.

If confirmed, what actions will you take to eliminate service unique systems where systems could be developed to serve all of the services?

*Answer.* If confirmed, I will work with the other service secretaries to ensure a high degree of interoperability between our systems.

#### MILITARY FAMILY HOUSING

*Question.* In response to a continuing shortfall in funding for family housing construction and repair, the Department proposed the Military Housing Privatization Initiative as one part of their program to upgrade all military housing to standard by 2010. Although Congress enacted this authority in the National Defense Authorization Act for Fiscal Year 1996, the services have not made the anticipated progress in the privatization effort.

What role, if any, do you believe military family housing has in recruiting and retention?

*Answer.* Our sailors and marines need to know that their families are safely and comfortably housed while they are deployed and serving our Nation. As such, to the extent that we can improve the quality of life of our members, such improvements should contribute to overall satisfaction and, ultimately, positively affect recruiting and retention.

*Question.* Do you support the goal for upgrading all military family housing in your service to established standards by 2010?

*Answer.* Yes.

*Question.* Would you support providing the necessary resources to achieve this goal?

*Answer.* Yes

#### MODERNIZATION

*Question.* Do you believe that the Navy and the Marine Corps have been provided sufficient resources to maintain current readiness, recapitalize, and modernize to the level needed?

*Answer.* I have not had an opportunity to review the resources, and, if confirmed, I will provide more firm input after I have had time to better understand the issues.

*Question.* If not, what would be the effect of continuing current funding levels and what steps do you plan to take to avoid these problems?

*Answer.* If confirmed, I will work closely within Department of the Navy, and with SECDEF staff and Congress, to better determine and fund current and future requirements. At the same time, I expect to improve the efficiency of business practices within DON to free up additional funds for modernization and maintenance.

## CAPABILITIES DELIVERED AT FLEET INTRODUCTION

*Question.* The Navy's newest tactical aircraft, the F/A-18E/F, may be scheduled for its first deployment in advance of receiving some of the subsystems that were originally scheduled to be a part of the aircraft package.

Do you believe that it is appropriate to send new systems to deploying forces, where the systems' capabilities fall short of what had been planned for delivery at the time of initial operational capability?

*Answer.* Although not familiar with the specifics of the F/A-18E/F, the concept is consistent with a "spiral development" approach, where systems are deployed to the field that provide significant benefit over existing systems but continue to evolve to meet final operational capability.

## JOINT STRIKE FIGHTER

*Question.* The Navy's first stealthy, carrier-launched tactical aircraft will be the Joint Strike Fighter.

Do you believe that the Navy will be able to afford this program on the current schedule in light of the many other needs for recapitalization?

*Answer.* The naval service has a stated requirement for the Joint Strike Fighter. My understanding is that JSF research, development, test, and evaluation is fully funded throughout the FYDP, however, the outcome of this program may be influenced by the outcome of the Secretary of Defense strategic reviews.

## MARINE CORPS ENLISTED RETENTION

*Question.* The retention of quality young privates and sergeants is important to the Marine Corps. This service has exceeded its retention goals so far this year.

What will your direction be to the Marine Corps to ensure that this positive trend continues?

*Answer.* If confirmed, I will encourage the Marine Corps to build upon success. Young marines thrive on challenge and a sense of adventure. Retaining quality marines is critical to the Corps' readiness. If confirmed, I will encourage the Marine Corps to pursue those quality of life issues and the challenging training regimen that has been so successful.

## NAVAL GUN FIRE SUPPORT

*Question.* Do you concur with the Navy and Marine Corps operational requirement for the Navy to provide fire support from the sea to the Marine Corps, the Army, or other expeditionary forces?

*Answer.* Yes, I do concur. From both the Navy and Marine Corps perspectives, Operational Maneuver From the Sea (OMFTS) concepts have placed an increasing emphasis on the need for capable Naval Surface Fire Support (NSFS) assets. I realize that sea-based NSFS will be required to support joint operations, and integrate with expeditionary forces (whether Marine, Army, or other) operating over an extended littoral battlespace.

## NAVY SUPPORT OF MARINE CORPS REQUIREMENTS

*Question.* The Commandant of the Marine Corps and the Chief of Naval Operations sometimes have differing views on how to implement key operational concepts, such as logistics from the sea. For instance, the Commandant may want to minimize his footprint ashore, which would require additional ships. Concurrently, the CNO may be struggling to find the resources to operate and recapitalize the present force structure and may not have the resources to support the Commandant's path to operating in the future.

How would you intend to arbitrate such differences of opinion between the Navy and the Marine Corps?

*Answer.* I am of the opinion that the Navy and Marine Corps form a unique operational team, serving a vital role in the defense of the nation and our interests. If confirmed, I intend to have both the Chief of Naval Operations and the Commandant of the Marine Corps as partners with me in demonstrating that we are "One team, one fight." I will encourage coordination and teamwork, ensuring that we work together at all levels.

## PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communica-

tions to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes.

*Question.* If confirmed, what actions would you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If confirmed, I will be vigilant in ensuring that military members whose actions are protected by the Act are not subject to illegal reprisals or retaliation. I also understand that the current Department of the Navy practice is to brief the requirements of the Act to all prospective commanding officers and executive officers, and address the requirements of the Act in the curriculum of eight separate courses of instruction for Navy and Marine Corps personnel. If confirmed, I will ensure that this emphasis on the Act in formal Navy training courses will continue.

#### OFFICER PROMOTION SYSTEM

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values. We are frequently asked to confirm the promotion of officers who have substantiated allegations of misconduct that have not been considered by the boards that selected these officers for promotion. At the same time, the services inform us that they have many highly qualified officers for each available general and flag officer billet.

What steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

Answer. The strength of our Navy rests on the moral and ethical foundation of its leaders. If confirmed, I will place great value and emphasis on integrity as I instruct selection boards in their duties.

I will expect and require high integrity and true commitment to Navy core values of honor, courage, and commitment. While some errors in performance are experiences that can be learned from and contribute to the strength and growth of an officer, faults relating to lack of integrity will be of great concern and will be intensely scrutinized in determining if that officer is qualified for promotion.

#### INVESTMENT IN INFRASTRUCTURE

*Question.* Witnesses appearing before the committee in recent years have testified that the military services under-invest in their facilities compared to private industry standards. Decades of under-investment in our installations have led to increasing backlogs of facility maintenance needs, created substandard living and working conditions, and made it harder to take advantage of new technologies that could increase productivity.

Based on your private sector experience, do you believe the Department of the Navy is investing enough in its infrastructure?

Answer. I recognize that it has been a difficult challenge for the Department of the Navy to sufficiently invest in its infrastructure. My understanding is that independent studies have shown that the Department of the Navy's infrastructure investment is below industry levels. One approach to ensuring sufficient investment in infrastructure is to be sure that the Department has no excess infrastructure to be maintained.

*Question.* How does the Navy's investment in its infrastructure compare to what you are used to in the private sector?

Answer. The private sector depreciates its assets based on useful life. This would appear to be reasonable criteria for the Department of the Navy. As such, the investment account should equal the depreciation for each year unless more efficient processes are implemented.

*Question.* What steps would you plan to take to address this issue?

Answer. Upon completion of the strategic review, if confirmed, I will work with the Secretary of Defense to resource the required infrastructure to support the new national military strategy. The Department will need to apply commercial methods and industry practices to match facility requirements with our Navy and Marine Corps "product lines" and resource our infrastructure accordingly.

## CIVILIAN CONTROL OF THE MILITARY

*Question.* Press reports indicate that increasing civilian control of the military services will be a priority of this administration.

What changes would you recommend to Secretary Rumsfeld to make in your duties and responsibilities or those of the Under Secretary or assistant secretaries in your department?

*Answer.* None at this time.

*Question.* Section 5014(c) of Title 10 requires that the Office of the Secretary of the Navy have sole responsibility for Acquisition, Auditing, Comptroller (including Financial Management), Information Management, Inspector General, Legislative Affairs, and Public Affairs.

If confirmed, would you review each of these functional areas to ensure that the Navy is in compliance with the statutory requirement?

*Answer.* Yes.

*Question.* The services have traditionally had a uniformed flag rank officer rather than the Assistant Secretary for Financial Management supervise their budget office.

Do you intend to follow this arrangement or do you plan to increase civilian control over your service's budget decisions?

*Answer.* The Assistant Secretary of the Navy for Financial Management has the authority and responsibility for budget matters for the Department of the Navy.

*Question.* The service secretaries have traditionally delegated management of readiness to the uniformed services.

What role do you intend to play in readiness issues?

*Answer.* I intend to play an active role, closely working with the naval services on this vitally important issue.

## CIVILIAN WORKFORCE

*Question.* What steps would you plan to take to bring new people with the desired skills into our civilian workforce as more and more of the current workforce is becoming retirement eligible?

*Answer.* I believe renewal of the civilian workforce must be a primary objective if we are to meet future readiness requirements across the total force. If confirmed, I will support current initiatives to standardize and professionalize the recruitment efforts of Navy and Marine Corps commands; work with DOD on legislative and regulatory changes to streamline the employment and workforce restructuring processes; and support efforts to build strong career program alliances across the Department.

## MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Secretary of the Navy?

*Answer.* I believe that the greatest challenges currently facing the Department are:

- **Combat Capability**—The primary purpose of the Navy and Marine Corps is to deter, train for, and when necessary, fight and win our Nation's battles and wars. To remain faithful to this charge, combat capability, which includes readiness, must be our primary emphasis. If necessary, resources will be shifted to meet this objective.
- **People**—Our most valuable resource. I will emphasize "quality of service"—achieving a quality workplace as well as a quality of life for our sailors, marines, civilians, and their families. Our thrust will be to create an environment of excellence.
- **Technology and Interoperability**—Application of advanced technology is the foundation of our Nation's military strength. Unfortunately, the application of technology has almost always lagged the availability of technology, sometimes by several generations.
- **Efficiency**—Application of more effective management techniques to systematically improve the efficiency of the Department.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* My written statement to the committee includes my initial steps to address these challenges. If confirmed, these steps will be promptly initiated.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Secretary of the Navy?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. According to the General Accounting Office, by 1992 the military had accumulated an estimated \$8.9 billion in deferred maintenance. By 1998 that had grown to \$14.6 billion. It now exceeds \$16.0 billion and is growing. Last year in his testimony before Congress, the GAO's Neil Curtain said, "there really is a risk of losing the value of those (military) facilities. Real property maintenance is in disarray."

I would like your views on the priority you will be placing on installation readiness and eliminating this backlog in maintenance and repair.

Mr. ENGLAND. I agree with the recent DOD Inspector General assessment that the backlog of maintenance and repair is one of the top ten management challenges facing the Department of Defense. It is imperative that we fully sustain our facility inventory and halt the slide in installation readiness.

2. Senator THURMOND. According to your biography, as a member of the Defense Science Board, you were a principal contributor to the section 912c Report to Congress with broad recommendations for defense reform.

Based on that experience, what management reforms do you consider the most important to improve the operation of the Department of Defense?

Mr. ENGLAND. As noted in the Section 912c Report to Congress, there are significant cost and personnel savings to be realized through acquisition reform. Better integration of our research and development organizations with industry, and the use of innovative performance-based contracting practices and outsourcing initiatives offer the potential for increased efficiencies in streamlining both cost burdens and workforce requirements. I believe that we may benefit from further review and use of these methods and processes in other areas of our operations, such as medical activities and personnel activities.

3. Senator THURMOND. For a number of years, the prevailing ethic in the military has been that you better not make a mistake because a single error of any significance can blight your career. Your predecessor, Secretary Danzig, said that, "this is really hurting us and we have to stop doing this."

How do you feel about the "zero defect mentality?"

Mr. ENGLAND. The zero defect mentality not only is an impediment to the effective and accurate flow of communication to all levels of a command, it also perpetuates an atmosphere of micromanagement that is detrimental to retention. It is all too human to make mistakes as one develops in any profession. The leadership challenge is to be sure that individuals and commands learn from the mistake and take responsibility for their actions. It is important, however, to clearly distinguish between poor judgment or recklessness and an honest mistake. Accountability of persons in leadership positions for actions taken, or not taken, must be enforced and where necessary, disciplinary actions taken. Yet when honest mistakes or decisions with less than optimal information were made, the result need be examined in a

non-emotional setting. This serves to not only clearly determine what happened and why, but also ultimately to educate others.

---

QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

4. Senator SANTORUM. The Joint Strike Fighter is approaching a major decision point, with a source selection and entry into engineering and manufacturing development (EMD). Do you feel the program can receive the stable funding required for it to meet its goals in light of other programs competing for limited resources, e.g. F-22 in the case of the Air Force and FA-18E/F in the case of the Navy?

Mr. ENGLAND. The Secretary of Defense is currently conducting a comprehensive strategic review of the Department's near- and long-term requirements. The results from that review will be incorporated into the Quadrennial Defense Review to provide the appropriate prioritization of our programs to meet those requirements. The allocation of Department resources will be based on that prioritization.

5. Senator SANTORUM. A constituent company, Erie Forge & Steel, Inc., plays an important role in producing propeller shafts for the U.S. Navy. Figures provided by the Navy note that Erie Forge & Steel delivered approximately 80 percent of the finished propulsion shafts used by the Navy. Erie Forge and Steel is one of only two manufacturers in the United States capable of totally manufacturing (cradle to grave) shafts for Trident submarines.

The Navy notes that while some contractors can produce rough forging and others can perform the machining, only Erie Forge & Steel, on the east coast, and Jorgensen Forge, on the west coast, are capable of performing the total work package. The Navy notes that the most critical process for shaft section production is the finish machining process, which accounts for 60 percent of the work required to manufacture a shaft section.

Regrettably, Erie Forge & Steel is not immune from the dislocation and economic pressures that are impacting our domestic steel producing industry. Erie Forge & Steel has applied for a loan as part of the Emergency Steel Loan Guarantee Act of 1999, in response to unfair dumping of foreign steel. Clearly, it would not be in the best national security interests of this country if the Navy were to lose the capabilities provided by Erie Forge & Steel.

Do I have your assurance that you will look into the situation that is impacting Erie Forge & Steel and report back to me on how the Navy might work with the company to get through this period of financial difficulty?

Mr. ENGLAND. The Navy will be conducting an in-depth analysis this year regarding the capacities and capabilities of Erie Forge, Lehigh Heavy Forge, Jorgensen, and other companies to gain a better understanding of the impact on the industrial base due to the possible loss of Erie Forge & Steel capacity for Navy propulsion shafting. The Navy's findings will be forwarded to you as they become available.

6. Senator SANTORUM. A new Pentagon report to Congress on the state of the U.S. naval ship propeller industry says that while the U.S. Navy's future requirement for ship propellers could be met by a government-owned foundry, not enough Navy work would remain to support the private-sector industrial base.

Naval shipbuilding projections confirm the government cannot provide enough work to sustain the two U.S. facilities capable of casting large ship and submarine propellers, indicating the domestic propeller industrial base is too fragile to risk losing Navy procurement dollars to overseas competitors.

The report defines the U.S. ship propeller industrial base as comprised of two firms: the Naval Foundry and Propeller Center, Philadelphia, a Navy-owned facility capable of meeting the Navy propeller requirement during the next 6 years; and Rolls-Royce Naval Marine Inc., Walpole, Massachusetts, which has a foundry in Pascagoula, Mississippi.

Do you agree with me that the Naval Foundry and Propeller Center at Philadelphia is a national asset? What steps or actions do you believe must be taken by the Navy to ensure the viability of our American ship propeller industrial base, particularly the Naval Foundry and Propeller Center in Philadelphia?

Mr. ENGLAND. Naval Foundry and Propeller Center is an important asset to the Navy's shipbuilding program. The Navy can continue to direct sufficient work to the Center to maintain their minimum sustaining rate. Although they are primarily a submarine propulsor manufacturer, the Navy is prepared to direct surface ship work to the Center as done with AOE 6 propellers in the early 1990s. The viability of the American ship propeller base is primarily affected by ship construction build

rates. An increased build rate will provide stabilizing influences on the propeller industrial base.

---

QUESTION SUBMITTED BY SENATOR WAYNE ALLARD

7. Senator ALLARD. Secretary Rumsfeld announced his recommendations regarding our military space organization as encouraged by the Space and NRO Commissions. Please comment on the Secretary's recommendations specifically as it relates to your service.

Mr. ENGLAND. The Department of the Navy concurs with the Space Commission conclusions and Secretary Rumsfeld's recommendations. We look forward to continuing our active role in implementing those recommendations to better enable joint land, air, and maritime warfighting use of space and space assets. The Navy, like our sister services, relies heavily upon the use of space for combat operations. Naval combat operations are critically dependent upon space for precise navigation; satellite communications; time critical intelligence, surveillance and reconnaissance, targeting and weaponeering; and meteorology and oceanography. Therefore, for the naval service, the final measure of the new national security space organization's worth will be its ability to balance and fulfill our warfighting requirements properly.

We intend to work closely with all of the stakeholders and the Office of the Secretary of Defense to clearly define the new organization's policy, requirements, and acquisition processes. We see significant opportunities in this new organization to improve the use of space and space assets. We are fully committed and ready to participate by providing the necessary Navy and Marine Corps expertise.

---

QUESTION SUBMITTED BY SENATOR JEFF SESSIONS

8. Senator SESSIONS. Secretary Rumsfeld has indicated that he is interested in using advanced technologies (already on the shelf) to dramatically increase the capability and performance of existing weapons systems like Harpoon.

It is my understanding that the Navy has supported the development of a Harpoon upgrade for export. It seems to me that this kind of technology upgrade might make sense for the Navy. Do you have any views on this matter? If not, would you look into this matter, and then get back to me?

Mr. ENGLAND. The Navy entered into an innovative cooperative agreement with Boeing to oversee and support development and test of the Harpoon upgrades. Foreign military sales of the Harpoon upgrades will commence this year. The decision to retrofit U.S. Navy Harpoon systems with these upgrades will be contingent upon prioritized operational requirements and availability of resources to meet those priorities.

---

[The nomination reference of Gordon R. England follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 30, 2001.*

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Gordon R. England, of Texas, to be Secretary of the Navy, vice Richard Danzig.

---

[The biographical sketch of Gordon R. England, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF GORDON R. ENGLAND

Mr. England served as Executive Vice President of General Dynamics Corporation from 1997 until 2001 and was responsible for two major sectors of the corporation: Information Systems and International. Previously he had served as Executive Vice President of the Combat Systems Group, President of General Dynamics Fort Worth Aircraft Company and before that he served as President of General Dynamics Land Systems Company producing land combat vehicles.

Mr. England began his career with Honeywell Corporation working as an engineer on the Gemini space program before joining General Dynamics in 1966 as an avionics design engineer in the Fort Worth aircraft division. He also worked as a program manager with Litton Industries on the Navy's E-2C Hawkeye aircraft.

Following various engineering and management positions with GD Fort Worth, Mr. England became President of GD Land Systems company. Shortly afterwards he returned to Fort Worth as President of that division and as Executive Vice President of the corporation in 1991. He served in these roles until 1993 when Lockheed Martin purchased the Fort Worth division, after which he continued to serve as President of Lockheed's aircraft company from 1993 to 1995.

Mr. England established a mergers and acquisitions consulting firm following his retirement from Lockheed Martin in 1995 and operated that business until his selection as Executive Vice President of General Dynamics in 1997.

A native of Baltimore, he graduated from the University of Maryland in 1961 with a bachelor's degree in electrical engineering. In 1975 he earned a master's degree in business administration from the M.J. Neeley School of Business at Texas Christian University. He is a member of the following honorary societies: Beta Gamma Sigma (business), Omicron Delta Kappa (leadership), and Eta Kappa Nu (Engineering).

Mr. England has served as a member of the Defense Science Board and as Vice Chairman of the National Research Council Committee on the Future of the U.S. Aerospace Industry. He has also been actively involved in a variety of civic and charitable organizations, including Goodwill International where he served as Vice Chairman of the Board of Directors, the USO's board of governors, and as a member of the board of visitors at TCU and other universities.

He has received numerous professional and service awards from many organizations, including the Boy Scouts of America, National Defense Industrial Association, and the National Management Association. He was selected as an IEEE Centennial awardee and is a member of the Aviation Heritage Hall of Fame.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Gordon R. England in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Gordon Richard England.
2. **Position to which nominated:**  
Secretary of the Navy.

**3. Date of nomination:**

May 1, 2001.

**4. Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

September 15, 1937; Baltimore, Maryland.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to Dorothy Hennlein England.

**7. Names and ages of children:**

Gordon England, Jr., 38; Margaret K. Rankin, 35; Marisa C. Walpert, 28.

**8. Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Mount St. Joseph High School, Baltimore, Maryland, Diploma—June 1955.

University of Maryland, College Park, Maryland, BSEE (Electrical Engineering)—June 1961.

Texas Christian University, Fort Worth, Texas, MBA—May 1975.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Vice President, R&D, General Dynamics Land Systems, Sterling Heights, Michigan, July 1986 to December 1990.

President and General Manager, General Dynamics Land Systems, Sterling Heights, Michigan, January 1991 to July 1991.

President and General Manager, General Dynamics Fort Worth Company, July 1991 to March 1993.

President, Lockheed Fort Worth Company, March 1993 to March 1995.

Self employed, GRE Consultants, Inc., Fort Worth, Texas, March 1995 to March 1997.

Executive Vice President, General Dynamics Corporation, Falls Church, Virginia, March 1997 to March 2001.

**10. Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Benbrook Texas City Council and mayor pro tem, 1982–1986, no party affiliation.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

General Dynamics Corporation, Officer & Executive Vice President.

GMM Investments, Ltd. (family partnership), General Partner.

Boeing Company, Consultant.

Texas Christian University, Member of Board of Visitors, Neeley School of Business.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

United Service Organization (USO), Member of Board.

National Defense Industrial Association, Member of Board.

Goodwill Industries of Fort Worth, Member of Board.

National Research Council, Vice Chairman of Study on the Future of U.S. Aerospace Infrastructure.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

GD PAC contributions (withheld from paycheck)

1997—\$2,600

1998—\$2,600

1999—\$2,600

2000—\$2,600  
2001—\$1,000

**Personal Contributions**

2000—Johnson for Congress 2000—\$1,000  
2000—Texas Freedom Fund—\$1,000  
2000—Friends of Max Cleland—\$1,000  
2000—Tiaht for Congress—\$1,000  
2000—Re-election Campaign of Cong. Chet Edwards—\$1,000  
2000—Common Sense, Common Solutions PAC—\$500  
2000—Lazio 2000—\$2,000  
2000—RNC Victory 2000—\$2,000  
2000—Texas Freedom Fund PAC, Inc.—\$1,000  
2000—Kay Granger Campaign Fund—\$1,000  
2000—Kay Granger Campaign Fund—\$1,000 (by Dorothy H. England)  
1999—Texas Freedom Pac—\$1,000  
1999—Murtha for Congress—\$1,000  
1999—Kay Granger for Congress—\$1,000  
1999—Joe Barton for Congress—\$1,000  
1999—Kay Granger Campaign Fund—\$500  
1999—Re-election Campaign of Cong. Todd Tiaht—\$1,000  
1998—Snowe for U.S. Senate—\$1,000  
1998—Leahy for U.S. Senate—\$1,000  
1998—Carol Keaton Rylander Campaign (Texas)—\$500  
1998—Leahy for U.S. Senate—\$1,000  
1998—Governor Bush Committee—\$500  
1998—Murtha for Congress—\$500  
1998—6th District Republican Association—\$1,000  
1998—National Republic Congressional Committee Operation Breakout—\$10,000  
1997—Shelby for U.S. Senate—\$1,000  
1997—Kennedy for U.S. Senate—\$500  
1997—Governor Bush Committee—\$1,000  
1997—Joe Barton for Congress—\$2,000  
1997—Kay Granger for Congress—\$2,000  
1997—Kay Granger Campaign—\$2,000  
1996—Friends of Ed Harrison—\$1,000  
1996—Re-Elect Sheriff Williams—\$250  
1996—RNC—Victory 1996—\$1,000  
1996—Republican National Committee—\$1,000  
1996—Gramm 1996 Senate Re-Election Campaign—\$1,000  
1996—Kay Bailey Hutchison for Senate Committee—\$4,000  
1996—Norman Robbins for School Board—\$500  
1996—Kay Granger for Congress—\$1,000  
1996—Campaign to Elect Elaine Klos—\$100  
1996—Democratic National Party—\$500  
1996—Kay Granger for Congress—\$1,000  
1996—Wendy Davis for City Council—\$500  
1996—Norman Robbins for School Board—\$500  
1996—Joe Barton for Congress—\$1,000  
1996—Joe Barton for Congress—\$1,000  
1996—David Williams for Sheriff—\$250

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Silver Knight of Management Award, National Management Association.  
Silver Beaver Award, Boy Scouts of America.  
Silver Award, National Defense Industrial Association.  
Selected to Aviation Heritage Hall of Fame.  
Institute of Electrical and Electronics Engineering Centennial Awardee.  
Member, Beta Gamma Sigma (business).  
Member, Omicron Delta Kappa (leadership).  
Member, Eta Kappa Nu (engineering).

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.  
None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

GORDON R. ENGLAND.

This 30th day of April, 2001.

[The nomination of Gordon R. England was reported to the Senate by Senator John Warner on May 21, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 22, 2001.]

---

[Prepared questions submitted to Dr. James G. Roche by Chairman Warner prior to hearing with answers supplied follow:]

May 9, 2001.

The Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

JAMES G. ROCHE.

cc: The Hon. Carl Levin  
Ranking Minority Member.

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

What is your view of the extent to which these defense reforms have been implemented?

What do you consider to be the most important aspects of these defense reforms?

The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support full implementation of the Goldwater-Nichols reforms and agree with its goals. The enactment of Goldwater-Nichols significantly improved the

organization of the Department of Defense, focused our joint warfighting capabilities, enhanced the military advice received by the Secretary of Defense, and increased the integration of service capabilities.

#### DUTIES

*Question.* Section 8013 of Title 10, United States Code, outlines the duties of the Secretary of the Air Force, subject to the authority, direction, and control of the Secretary of Defense.

Assuming you are confirmed, what duties do you expect that Secretary Rumsfeld will prescribe for you?

Answer. Subject to the authority, direction, and control of the Secretary of Defense, the Secretary of the Air Force, pursuant to 10 U.S.C. Section 8013, is responsible for and has the authority necessary to conduct all affairs of the Department of the Air Force. These functions include organizing, supplying, equipping, training, maintaining, and administering. If confirmed as Secretary of the Air Force, I would expect the Secretary of Defense to assign me duties consistent with these responsibilities.

*Question.* What duties and responsibilities do you plan to assign to the Under Secretary of the Air Force?

Answer. As stated above, the Secretary of the Air Force is responsible for and has the authority necessary to conduct all affairs of the Department of the Air Force. If confirmed, the Under Secretary will partner with me to execute these responsibilities. Beyond a focus on space activities as has been designated by the Secretary of Defense, the duties of the Under Secretary are expected to evolve to maximize the capabilities of the leadership team. If confirmed, I will be pleased to keep you informed in this area.

*Question.* In carrying out your duties, how will you work with the Assistant Secretary of Air Force for Manpower, Reserve Affairs, Installations, and Environment; the Assistant Secretary of the Air Force for Financial Management and Comptroller; the Assistant Secretary of the Air Force for Acquisition; the Assistant Secretary of the Air Force for Space; and the General Counsel?

Answer. If confirmed, Under Secretary of the Air Force, the General Counsel, the Assistant Secretaries of the Air Force, along with the Air Force Chief of Staff, will form the nucleus of my leadership team. I will foster a close working relationship with them on matters within their areas of responsibility in order to more effectively manage the Department of the Air Force.

#### SCIENCE AND TECHNOLOGY

*Question.* The Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 established the goal of increasing the budget for the Department of Defense Science and Technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. The Air Force has been criticized for shrinking its science and technology program, rather than expanding it. In President-Elect Bush's speech at the Citadel, he spoke of his support for a strong and stable technology base.

Do you believe that a substantial increase in the Air Force's science and technology budget is needed?

Answer. There is always more that can be done to exploit the rapid advance of technology to enable our forces to more effectively and safely conduct operations. However, as with all investments, the S&T program needs must be balanced with the systems acquisition requirements and the operational and maintenance demands within the Air Force topline funding allocation. This process of balancing priorities is a continuing effort among the Air Force senior leadership.

*Question.* Congress has authorized the Department to give laboratory directors direct hiring authority to enable them to compete for scientific and engineering talent. To date, the Department has been reluctant to use this authority.

Do you support giving the Department's laboratory directors the authority to make direct hires without having to go through an 18-month review process?

Answer. I support flexibility in both hiring and compensation that will allow the Department of Defense to attract and retain highly skilled scientists and engineers who can meet the dynamic technological challenges of the 21st century. Such flexibility is needed to help level the playing field with private industry. Although I have not had the opportunity to look at specific hiring authorities in detail, if confirmed, I will certainly focus on the challenges the Air Force faces.

## PRIVATIZATION

*Question.* With the encouragement of Congress, the Department of Defense is fully engaged in the privatization of many of its support functions. Among the most significant privatization efforts are military family housing and utility systems, although there are hundreds of other examples.

What in your judgment are the risks and benefits of the privatization initiatives?

*Answer.* Clearly our objective should be to provide quality housing for our hard working men and women in uniform and their families. Quality of life is important to all of our airmen and is an essential element required to maintain the high caliber of personnel needed to operate our high tech Air Force. If confirmed, I will welcome the opportunity to look at this to ensure we provide quality housing for our men and women in uniform and their families.

*Question.* In your judgment, is there a point when privatization will affect readiness?

*Answer.* If confirmed, I will make this particular issue a priority. I certainly welcome the opportunity to work with the committee to maintain an open dialogue to address this issue.

## OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Do you believe that outsourcing of non-core activities can yield substantial savings for the Department of Defense?

*Answer.* I understand there are numerous studies on the effectiveness of outsourcing. If confirmed, I will work with my staff and welcome the opportunity to work with this committee to evaluate the effectiveness of outsourcing.

*Question.* Do you agree that public-private competition is an essential precursor to any outsourcing effort in the Department of Defense?

*Answer.* If confirmed, I welcome the opportunity to work with my staff and this committee to evaluate the issue of public-private competition and whether it does generate significantly greater savings.

## PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

*Answer.* Most definitely, I wholeheartedly support prohibiting any such actions.

*Question.* If confirmed, what actions will you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

*Answer.* If confirmed, I will ensure that the Air Force Inspector General, who works directly for the Secretary of the Air Force, continues to personally brief every Air Force course for new general officers, new wing commanders, and new group commanders, emphasizing the need for these leadership groups to constantly and consistently enforce the Whistleblowers' Protection Act, a key tenet in the department's inspector general process.

## OFFICER PROMOTION SYSTEM

*Question.* In the previous decade, the Air Force had serious problems with its officer promotion system, some of which are the subject of ongoing litigation.

Are you familiar with these problems? Do you believe any changes are needed in the Air Force officer promotion system?

*Answer.* No, I have no detailed understanding of these particular issues. However, if confirmed, I will work with my staff and this committee to review the existing promotion processes and make improvements, when required.

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values. We are frequently asked to confirm the promotion of officers who have substantiated allegation of misconduct that have not been considered by the boards that selected these officers for promotion. At the same time, the services inform us that they have many highly qualified officers for each available general and flag officer billet.

What steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

Answer. If confirmed, I will work this particular issue hard. I will ensure my staff maintains an open dialogue with this committee on these critical general officers matters.

#### MODERNIZATION

*Question.* Operational support costs for existing aircraft platforms continue to rise as mission capable rates have declined. As this has happened, funds have been moved from research and development and new procurement to operation and maintenance to meet current readiness requirements.

Absent changes in the force structure, unless there is an infusion of funding above what is expected, how can the Air Force afford its planned tactical aircraft modernization program?

Answer. The Secretary of Defense has an ongoing strategic review of key modernization programs within the Department. If confirmed, I welcome the opportunity to work with this committee to discuss the results of the review and its impact on the existing Air Force tactical aircraft programs.

#### PRECISION WEAPONS

*Question.* There has been an increasing dependence on standoff precision weaponry over the past decade. Operation Allied Force caused us to expend sizeable portions of the inventories of some of these weapons.

Do you think the Air Force has an executable, affordable plan to acquire the weaponry required to support the national military strategy?

Answer. I understand the Air Force does. However, if I am confirmed, the current Air Force plan will be reviewed in light of the Secretary of Defense's strategic review.

#### SPACE

*Question.* If the Air Force becomes the Executive Agent for the Department of Defense for Space, how will you ensure that each of the military services' unique requirements are met, in addition to shared requirements?

Answer. As DOD's Executive Agent for Space, the Air Force will continue to work closely with our sister services and Joint Staff to ensure unique and shared requirements are addressed. I believe consolidating management of the Department's overall space program will facilitate an improved response to requirements and affordability.

*Question.* Do you believe the Air Force should have veto or approval authority over the space budget of a sister service?

Answer. I don't expect the Air Force to have or exercise that kind of authority over another service's space budget. However, a key intent of the Space Commission's recommendation to consolidate space organization and management is to bring greater accountability and transparency to military space programs. In that regard, if confirmed, I and the Under Secretary of the Air Force will work closely with the Department and our service counterparts to ensure space acquisition planning, programming and budgeting activities are closely linked.

*Question.* Do you support creation of an Under Secretary of the Air Force for Space?

Answer. I support the Secretary of Defense's announcement that the Under Secretary of the Air Force be dual-hatted as the Air Force Acquisition Executive for Space and as the Director of the NRO.

#### STRATEGIC SYSTEMS

*Question.* Do you support the prompt retirement of the peacekeeper ICBM?

Answer. Commensurate with the outcome of the Secretary of Defense's strategic review, if confirmed, I look forward to working with the committee as well as the Department on this issue.

*Question.* What are your views on the Air Force requirement for long-range bombers?

Answer. The Air Force is committed to sustaining and modernizing our long-range strike capabilities to meet our current and future wartime commitments. Bombers have inherent strengths of range, payload (standoff, precision and non-precision), flexibility, and responsiveness that bring vital capabilities required in virtually all combat environments. Subject to the outcome of the ongoing strategic review, and if confirmed, I commit to a thorough analysis of this mission area.

## INTELLIGENCE SYSTEMS

*Question.* Will you ensure that the Air Force works closely with the intelligence community and the United States Strategic Command to ensure that intelligence sensors, such as the V-sensor on GPS and SABRS on SBIRS, are included on Air Force satellites?

*Answer.* The Air Force's close and continuing cooperation with the Intelligence Community and U.S. Strategic Command is essential. If confirmed, I will work with these mission partners, and others as appropriate, to balance performance, cost, and schedule factors when evaluating Air Force satellites as hosts for intelligence sensors.

## ACQUISITION REFORM

*Question.* Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the past several decades averages between 8 and 9 years. Others have stated that the cycle time may be as long as 15 to 20 years. The Secretary stated that this cycle time is not sufficiently responsive to urgent new challenges and rapidly emerging technological developments.

What are your thoughts on specific steps that can be taken to reduce the cycle time for major acquisition programs?

*Answer.* It is my understanding the Air Force is currently implementing recommendations resulting from the Air Force Cycle Time Reduction Program. Key among the focus areas is the ability to rapidly select and approve development and fielding of demonstrated technologies.

*Question.* Do you see a need for any changes to the existing acquisition structure and/or acquisition chain of command?

*Answer.* If confirmed, I will closely work with my service secretary's colleagues and the Under Secretary of Defense for Acquisition to address the variety of issues that impact our acquisition structure and acquisition chain of command.

## ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has remained essentially constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on program management, and if so, how do you plan to address this problem?

*Answer.* It is my understanding the Air Force is proactively working, in conjunction with OSD, to minimize the impact of the reductions on our acquisition mission. If confirmed, I'll conduct a complete bottom-up review of the Air Force acquisition workforce to identify the right skills and employee mix (active duty military, civilian, Air National Guard, Reserve, and contractor) required to meet the needs of the warfighters.

*Question.* As the DOD continues to emphasize contracting out and competitive sourcing, the skills, training, and experience of the acquisition workforce will be critical in effectively managing these contracts. In addition, the Department's Acquisition Workforce 2005 Task Force has reported that DOD will be faced with a significant demographic challenge, as 50 percent of the remaining acquisition workforce will be eligible to retire in the next 5 years.

Do you believe the current acquisition workforce has the quality and training to not only adapt to new acquisition reforms, but also respond successfully to the increased workload and responsibility from managing privatization efforts?

*Answer.* The acquisition workforce has done a phenomenal job of stepping up to the workload driven by increased outsourcing and privatization efforts. If confirmed, I will diligently work to get our people the training to ensure they are able to work smarter, not just harder.

## SERVICE STOVEPIPE

*Question.* One of the principal criticisms of the Department of Defense is that the military services continue to pursue their individual systems—from logistics to data management—which increases costs and hinders interoperability. Although there have been efforts to remove these service stovepipes in the past, they continue to exist.

If confirmed, what actions will you take to eliminate service unique systems where systems could be developed to serve all of the services?

Answer. Pending the outcome of the Secretary of Defense's strategic review and if confirmed, I will enthusiastically work with my service secretary colleagues, the Under Secretary of Defense for Acquisition, as well as the Department and this committee to address this critical issue and enhance and maximize interoperability.

## AIR FORCE RETENTION

*Question.* Last year, the Air Force experienced retention problems. It was the only service that missed its enlisted retention goals in the 1st, 2nd, and 3rd term retention categories.

What do you consider to be the most critical factor causing Air Force retention problems?

Answer. I strongly believe that the great men and women of the United States Air Force are our most valuable resource. If confirmed, I pledge to the committee that this will be one of my highest priorities. There are many reasons our people choose to leave the service. I commit to making the Air Force an even better place to work and live so we may retain the people who want to serve our Nation. I look forward to working with this committee on this issue.

*Question.* If confirmed, what would you do to ensure that fiscal year 2001 retention goals are attained?

Answer. The approach to the retention problem has to be balanced, since the issue is not driven by one factor. I understand that while service to the Nation is the primary reason people join the Air Force and the primary reason they stay, there are many factors that affect their decisions to leave. Once again, if confirmed, I pledge to this committee that one of my highest priorities will be the magnificent men and women of the United States Air Force.

## END STRENGTH

*Question.* In the National Defense Authorization Act for Fiscal Year 2001, the end strength of the Air Force was established at 357,000. The committee has since learned that the Air Force may have little chance of achieving this end strength.

If confirmed, what steps will you take to ensure that the Air Force achieves its fiscal year 2001 end strength?

Answer. I understand the Air Force has implemented many initiatives to address recruiting and retention. Included in these are more recruiters, paid advertising, increased and targeted bonuses, etc. I'm aware this committee has been very helpful in addressing solutions to aid the end strength issue and, if confirmed, I look forward to working with this committee in finding further answers to this problem.

## ENVIRONMENT

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment" issues. These include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, transfer of radio frequency spectrum from the Department of Defense to the wireless communications industry, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

In your opinion, how serious are these problems to the Air Force?

Answer. I understand base, training range, and spectrum encroachment issues are a serious challenge to sustaining mission readiness. I expect there are increasing challenges not only with our current level of operations, but also with the bed-down of new weapon systems or realignments. If confirmed, I will make this a priority in working within the Department and with this committee to ensure required access.

*Question.* If confirmed, what actions would you propose to ensure these issues do not prevent your service from effectively training and operating both at home and abroad?

Answer. I believe there must be a balance between test, training, and readiness requirements and responsible stewardship. If confirmed, I will foster the development and maintenance of partnerships with our sister services, civilian government agencies, tribal governments, and other stakeholders that serve to address areas of mutual interest in order to sustain our required access to ranges and airspace.

*Question.* Commercial air traffic is expected to increase 6 percent annually and military airspace use will also increase with the next generation of high performance weapon systems. As a result of the pressures associated with commercial air traffic congestion, noise, and environmental concerns, the acquisition and use of spe-

cial use airspace has evolved into a challenging endeavor for all of the military departments.

How would you meet such challenges to ensure the acquisition and use of critical airspace for military training?

Answer. I understand that the senior members of the DOD Policy Board on Federal Aviation along with the Department of Transportation/FAA are currently determining a plan for effective joint FAA–DOD interaction. If confirmed, I will ensure this open dialogue continues.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Would you agree that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

Answer. Yes, I believe we need to maintain positive, productive relationships and comply with current agreements.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

Answer. No.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that Federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

Answer. Yes.

*Question.* The Department of Defense faces a bill for the clean-up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars, and could be well be in to the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

Answer. If confirmed, I will work within the Department and with the Air Force Major Commands to address this critical issue.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department's long-term clean-up liability (and the time required to complete such cleanup)?

Answer. If confirmed, I welcome the opportunity to look into this difficult and critical issue.

#### COMMERCIAL VERSUS MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* The Federal Government is currently conducting a series of studies to determine a band of frequencies that can be used for the operation of third generation wireless communications devices. As a part of this overall effort, the Department of Defense is conducting a study to determine the cost and operational impact that would result if the military services were to surrender the use of the 1755–1850 MHz band of frequencies on which they currently operate their equipment. As the Department of Defense's information requirements increase with the advances taking place in weapon system technology, the Department's requirement for frequency access will also increase. However, the commercial sector is also experiencing increased requirements for frequency spectrum to meet the demands of the American consumers. Spectrum is a finite resource and we have to ensure it is utilized in the most efficient and beneficial manner possible.

If confirmed, what actions would you take to review your service's total spectrum requirements and ensure that new systems are designed to ensure efficient spectrum utilization by the Department of Defense?

Answer. If confirmed, I will encourage the research, development, and acquisition of systems that efficiently use the radio frequency spectrum in support of national security. I will work within the Department to address national spectrum use standards for both government and private industry.

*Question.* If confirmed, what actions would you take if the study currently being conducted within the Department of Defense determines that there will be a significant cost and operational impact if the military services surrender the 1755–1850 MHz band of frequencies?

Answer. If confirmed, I will familiarize myself with the results of the study and provide my assessment of its impact on Air Force warfighting capability to the office

of the Secretary of Defense. I also look forward to working with the committee to address these challenges.

#### BASE REALIGNMENT AND CLOSURE

*Question.* Over the past several years, various departmental witnesses have testified that there is excess defense infrastructure and requested Congress to authorize another round of base closure.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* If confirmed, I look forward to working within the Department and with this committee to address the recommendations of the Secretary of Defense's strategic review as they relate to force sizing and force beddown options.

#### INVESTMENT IN INFRASTRUCTURE

*Question.* Witnesses appearing before the committee in recent years have testified that the military services under-invest in their facilities compared to private industry standards. Decades of under-investment in our installations have led to increasing backlogs of facility maintenance needs, created substandard living and working conditions, and made it harder to take advantage of new technologies that could increase productivity.

Based on your private sector experience, do you believe the Department of the Air Force is investing enough in its infrastructure? How does the Air Force's investments in its infrastructure compare to what you are used to in the private sector? What steps would you plan to take to address this issue?

*Answer.* I believe it will be necessary to re-evaluate our funding levels once the Secretary of Defense's strategic review is complete and we understand our force structure needs and the basing network required. If confirmed, I welcome the opportunity to address this issue.

#### CIVILIAN CONTROL OF THE MILITARY

*Question.* Press reports indicate that increasing civilian control of the military services will be a priority of this administration.

What changes do you and Secretary Rumsfeld plan to make in your duties and responsibilities or those of the Under Secretary or assistant secretaries in your department?

*Answer.* If confirmed, I expect to meet with Secretary Rumsfeld to discuss his expectations for my participation as a member of his management team. Based on this guidance, I will make changes in the duties and responsibilities of the Under Secretary and assistant secretaries, if needed.

*Question.* Section 8014(c) of Title 10 requires that the Office of the Secretary of the Air Force have sole responsibility for Acquisition, Auditing, Comptroller (including Financial Management), Information Management, Inspector General, Legislative Affairs, and Public Affairs.

If confirmed, will you review each of these functional areas to ensure that the Air Force is in compliance with the statutory requirement?

*Answer.* Yes.

*Question.* The services have traditionally had a uniformed flag rank officer rather than the Assistant Secretary of Financial Management run their budget office. Do you intend to follow this arrangement or do you plan to increase civilian control over your service's budget decisions?

*Answer.* If confirmed, I will carefully review the current arrangement and its effectiveness.

*Question.* The service secretaries have traditionally delegated management of readiness to the uniformed services. What role do you intend to play in readiness issues?

*Answer.* If confirmed, I will work closely with the Air Force Chief of Staff and the Air Force Major Commands to review the readiness of our forces. I would expect to be fully involved in any readiness issues faced by the Air Force.

#### CIVILIAN WORKFORCE

*Question.* What steps would you plan to take to bring new people with the desired skills into our civilian workforce as more and more of the current workforce is becoming retirement eligible?

*Answer.* If confirmed, I will support initiatives to address this critical issue. I particularly welcome any and all suggestions on how to provide needed responsiveness

and agility in managing our civilian workforce. I also look forward to working with Congress on these challenges.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Secretary of the Air Force?

*Answer.* If confirmed as the next Secretary of the Air Force, I have four major priorities. First, in accordance with Secretary Rumsfeld's security review, the Air Force needs to evaluate and build the most appropriate aerospace strategy for today's national security environment. Second, the Air Force must do better at retaining Air Force people, both uniformed and civilian. Third, the Air Force must find better ways to organize, while improving the effectiveness and efficiency of its processes. This includes bringing the best practices found within both the government and industry to bear in its own business dealings. Finally, the Air Force must pay special attention to the shrinking military-industrial base and evaluate ways to improve its current acquisition processes to ensure innovative future capabilities for the Nation.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I plan on working closely with Congress, Secretary Rumsfeld, and the other service secretaries to comprehensively address these challenges, develop definitive goals, and measure our progress towards solving them.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that the committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities, as the Secretary of the Air Force?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communication of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### AFFORDABLE RE-CAPITALIZATION

1. Senator THURMOND. According to a January 2001 article, the Air Force wants to spend an additional \$8 billion per year for 11 years to rebuild its rapidly aging fleet of fighters, tankers, airlifters, and reconnaissance/intelligence-gathering aircraft at a rate of 150–170 per year. Do you believe \$8 billion per year for aircraft is affordable, when the Air Force, as well as the other services, has critical shortfalls in real property maintenance and training funds?

Dr. ROCHE. It is my understanding that many of the Air Force's readiness concerns are attributed to the aging aircraft fleet. It seems reasonable that the costs of maintaining older aircraft will continue to increase. At some point, it may be cheaper to replace the aging aircraft than to modernize them. If confirmed, evaluating the proper balance between all the competing priorities in a constrained budget will be one of my top priorities.

##### ROLE OF UNMANNED COMBAT AIR VEHICLES

2. Senator THURMOND. As the Air Force is looking into the future and the replacement of its aging aircraft fleet, what role do you see for "unmanned combat air vehicles?"

Dr. ROCHE. I agree with the President's point that we must look to new and future technologies, and leverage their capabilities. Our recent warfare successes in Kosovo and Iraq are building an expectation of minimizing both friendly and adversary casualties in warfare. Unmanned combat air vehicles with precision strike capability would seem to be the technological response to meet these two requirements. However, I think we must also consider new capabilities and technologies against historical precedence. If I am confirmed, I will carefully evaluate how the unmanned combat air vehicle fits into the Air Force and our national security strategy.

#### REFORMING OPERATIONS OF DEPARTMENT OF DEFENSE

3. Senator THURMOND. According to press accounts, the panels appointed by Secretary Rumsfeld to review our national security strategy and the operations of the Department of Defense are developing a wealth of recommendations. Based upon your long association with the Department of Defense, what in your personal view is the highest priority reform you would propose to improve the operation of the Department of Defense?

Dr. ROCHE. If confirmed as the next Secretary of the Air Force, I believe the most important reformation of the Department of Defense is to work jointly with the Secretary of Defense and the other service secretaries on all issues important to our national interests. Joint operations are a critical facet of our military structure, for history confirms that military action requires both strategic and operational unity of effort. To me this means unity of operations in air, space, and information warfare—as well as on land and in the sea. As the Secretary of the Air Force, I also believe it is my charge to represent the best interests of the Air Force in all decision matters, but wholeheartedly support the final decisions made by the President and Secretary of Defense.

#### LEASING OF EXCESS FACILITIES

4. Senator THURMOND. Although the four previous base closure rounds have closed or realigned over 90 major and 200 minor military installations, the Department indicates that there is still excess capacity. The immediate reaction to this excess is that we must have additional base closures to eliminate the excess. I am not convinced that base closure is the only solution. I believe we should use this capacity to our advantage. We can work with the private sector to use this property on a dual-use basis and at the same time retain the facility for future surge capacity.

What are your views on the potential of leasing excess facilities to the private sector?

Dr. ROCHE. I am concerned that excess infrastructure and facilities take crucial dollars away from people, readiness, and modernization programs. In business, we normally divest capital that does not contribute to the goals and profit of our operation. With this in mind, if I am confirmed, I will look toward balancing the need to preserve facilities for future requirements with all the costs and options to accomplish this.

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

##### F-22 TESTING PROGRESS

5. Senator SANTORUM. Last year, Congress allowed a 1½ percent “cushion” above the F-22 cap for engineering, manufacturing, and development, if it was required to ensure adequate test content in the program. The committee has received a letter from the former Director of Operational Test and Evaluation stating that these additional funds would be required for testing of the F-22.

What is your impression of the progress being made by the F-22 in testing? Specifically, is testing proceeding at a rate adequate to ensure the aircraft will be adequately tested, while coming in under the caps?

Dr. ROCHE. I believe the F-22 attributes of speed, stealth, super-cruise, and precision targeting provide a generational leap in military capability, and the procurement of this platform will remain unrivaled for many years to come. However, cost overruns and test inefficiencies concern me greatly. If confirmed as Secretary of the Air Force, one of my major priorities, working with the Under Secretary of Defense for Acquisition and the other service secretaries, will be to improve the effectiveness and efficiency of the acquisition and test processes.

## JOINT STRIKE FIGHTER FUNDING

6. Senator SANTORUM. The Joint Strike Fighter is approaching a major decision point, with a source selection and entry into engineering and manufacturing development (EMD). Do you feel the program can receive the stable funding required for it to meet its goals in light of other programs competing for limited resources, e.g. F-22 in the case of the Air Force and FA-18E/F in the case of the Navy?

Dr. ROCHE. If confirmed, I will diligently evaluate how to balance the modernization needs of the Air Force with its other budgetary requirements in order to meet the resulting guidance from the Secretary of Defense's strategic review.

## NATIONAL EDUCATION CENTER FOR WOMEN IN BUSINESS

7. Senator SANTORUM. Congress appropriated \$4 million in fiscal year 2000, and another \$4 million in fiscal year 2001, for the Air Force's Manufacturing Technical Assistance Pilot Program (MTAPP), whereby \$2 million each year was to fund MTAPP work at the National Education Center for Women in Business (NECWB) at Seton Hill College. To date, only 5 percent of the \$4 million that Congress, by law, directed to fund the NECWB's important work has actually reached this center. What steps will you take to ensure that these dollars fund the NECWB in a timely and efficient manner?

Dr. ROCHE. In fiscal year 2000, the Air Force spent over \$1.2 million in Pennsylvania to comply with the express intent of Congress that \$2 million be utilized to expand the MTAPP in that State. The entire amount was not obligated in fiscal year 2000 due to the late arrival of program funding, which shortened the performance period, and significant delays involving the prime contractor's effort to match Seton Hill College's capabilities as a subcontractor to the contract statement of work.

Fiscal year 2002 funds were received even later than previous years and this is the final execution year of the pilot program contract; therefore, period of performance for fiscal year 2002 funds is extremely truncated. However, we are hopeful that Seton Hill College will be able to make a valuable contribution to the MTAPP program. An on-line training reference guide was to be offered to Seton Hill as a subcontract through the MTAPP prime contractor, Mid.Tec., in fiscal year 2002. We are hopeful that Seton Hill will submit a cost-effective proposal on the subcontract effort.

## QUESTION SUBMITTED BY SENATOR WAYNE ALLARD

## MILITARY SPACE ORGANIZATION

8. Senator ALLARD. Secretary Rumsfeld announced his recommendations regarding our military space organization as encouraged by the Space and NRO Commissions.

Please comment on the importance of outer space and space activities to our national security and economic well-being of the United States, as well as our allies and friends. Do you foresee any need for legislative changes to accomplish these recommendations?

Dr. ROCHE. I want to thank this esteemed committee for all of their support to this Nation's military space programs—they have become, in my mind, one of the foundational aspects of the aerospace superiority our Nation enjoys. I have reviewed the Space and NRO Commissions' recommendations and I agree that the future of our aerospace superiority depends in large part on how well we can respond to and implement those recommendations. If confirmed, I will work to implement those recommendations that pertain to the Air Force.

## QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

## BUDGET PRIORITIES

9. Senator COLLINS. I think many Members of this committee are struggling with trying to understand not only the details, but also the broad outline of the defense strategy that is being developed in the Pentagon under Secretary Rumsfeld as part of this ongoing strategic review. Obviously, the broad strategy will eventually include some details on individual systems. It seems, however, that the top priorities for Secretary Rumsfeld are generally intelligence gathering, space, and missile defense.

This concerns me very much. While those may be correct and valuable, I am concerned that focusing on too narrow a picture will allow other, equally important and equally broad priorities to get left behind. If you are confirmed, what do you envision your budget priorities for the Air Force to be—not Secretary Rumsfeld's—but yours? How do you intend to voice those priorities in an administration where important budget decisions are being made right now?

Dr. ROCHE. If I am confirmed as Secretary of the Air Force, one of my first priorities will be to delve deeply into and participate in the defense review processes begun by Secretary Rumsfeld. It goes without saying that the world environment has changed dramatically in the last 12 years, and the entire defense establishment has yet to appropriately respond and adapt to this new environment. I look forward to the opportunity to help shape our Nation's defense strategy for the future.

MODERNIZATION—BUDGET PRIORITIES

10. Senator COLLINS. I am especially concerned for the modernization of our tactical air fleets and strategic airlift programs—programs like the F-22, the Joint Strike Fighter, and the C-17. What is your view of these programs as budget priorities in this new defense strategy?

Dr. ROCHE. The outcome of Secretary Rumsfeld's defense reviews and their corresponding new strategy may affect the roles, responsibilities, and requirements of our Nation's Air Force. If confirmed as Secretary of the Air Force, I will work with Secretary Rumsfeld to achieve the best balance between the competing priorities necessary to fulfill the new defense strategy.

[The nomination reference of Dr. James G. Roche follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
May 7, 2001.

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. James G. Roche, of Maryland, to be Secretary of the Air Force, vice F. Whitten Peters.

[The biographical sketch of Dr. James G. Roche, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. JAMES G. ROCHE

Dr. James G. Roche has served as Corporate Vice President and President, Electronic Sensors and Systems Sector of Northrop Grumman Corporation from 1996 to present. He was the Corporate Vice President and General Manager of the Electronics Sensors and Systems Division (the former Westinghouse Electronics Systems Group) from March 1996. The current sector, established in 1998, combines all the electronics businesses of the Northrop Grumman Corporation.

Dr. Roche has previously served as the Corporate Vice President and Chief Advanced Development, Planning, and Public Affairs Officer responsible for the company's Advanced Technology and Development Center, Business Strategy Group, the Washington Analysis Center, State Relations and Public Affairs Department. He led the transition team responsible for merging the Northrop, Grumman, and Vought Corporations, as well as the integration of the Westinghouse defense business. Formerly, he was the Assistant to the Chairman, President, and Chief Executive Officer. Before July 1989, he was the Vice President and Director of the Northrop Analysis Center in Washington DC.

He served 23 years in the U.S. Navy, retiring in the rank of captain in 1983. While in the Navy, he held several positions, to include Principal Deputy Director of the State Department's Policy Planning Staff; Senior Professional Staff Member of the U.S. Senate Select Committee on Intelligence; and Assistant Director for the Defense Department's Office of Net Assessment. He commanded the U.S.S. *Buchanan*, a guided missile destroyer, and is a winner of the Arleigh Burke Fleet Tro-

phy for the most improved combat unit in the Pacific. Before joining Northrop Grumman, he was the Democratic Staff Director of the U.S. Senate Armed Services Committee.

A native of New York, he graduated from the Illinois Institute of Technology in 1960 with a bachelor's degree in language, literature, and philosophy. In 1966 he earned a Master of Science degree in operations research from the U.S. Naval Postgraduate School, Monterey, Calif. In 1972 he earned a doctorate degree in business administration from the Harvard Graduate School of Business Administration, Cambridge, Mass.

Dr. Roche has served as a member of the Secretary of Defense's Policy Board and is a member of the Council on Foreign Relations. He was the President of the Board of the World Affairs Council of Washington, DC, and he is on the Board of Visitors of the University of Maryland.

Dr. Roche has been awarded various campaign ribbons and military medals to include the Legion of Merit.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Dr. James G. Roche in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
James Gerard Roche.
2. **Position to which nominated:**  
Secretary of the Air Force.
3. **Date of nomination:**  
May 7, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
16 December 1939; Brooklyn, New York.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Diane Mikula.
7. **Names and ages of children:**  
Heather Anne Roche, 32.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

St. Anthony's High School, 1952–1956.

Loyola University, September 1956 to June 1957.

Illinois Institute of Technology, September 1957 to June 1960. BS in June 1960.

Naval Postgraduate School, March 1964 to October 1966. MS in October 1966.

Harvard Business School, June 1968 to June 1972. DBA in June 1972.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Corporate Vice President and Assistant to the Chairman, President, and Chief Executive Officer of Northrop Corporation, 1991.

Corporate Vice President and Chief Advanced Development, Planning, and Public Affairs Officer, Northrop Corporation, 1993.

Corporate Vice President and General Manager, Electronic Sensors and Systems Division, Northrop Grumman Corporation, 1996.

Corporate Vice President and President, Electronic Sensors and Systems Sector, Northrop Grumman Corporation, 1998.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Career U.S. Navy, 1960–1983.

OSD, Office of Net Assessment, 1975–1979.

Senate Select Committee on Intelligence, Professional Staff Member, 1979–1981.

Department of State, Principal Deputy Director, Policy Planning Staff, 1981–1983.

Senate Committee on Armed Services, Staff Director for the Minority, 1983–1984.

Consultant to OSD, Office of Net Assessment, without compensation, 1985–Present.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Chairman of the Board, Center for Strategic and Budgetary Assessment.

Member of the Board of Trustees and Government Relations Committee, College Park Foundation, University of Maryland.

Member of the Board of Visitors and Governors, St. John's College.

Member of the Board of Trustees, Naval Institute Foundation.

Member of the Board of Trustees, Maryland Historical Society.

Member of the Board of Directors, Historic Annapolis Foundation.

Member of the Board of Advisors, Washington Institute for Near East Studies.

Member of the Board of Visitors for U.S. JFCOM of the Rand Corporation.

Member of the Donors Forum on International Affairs.

Member, Board of Advisors, Center for Security Policy.

Member of the Executive Advisory Council, Friends of the Jewish Chapel, U.S. Naval Academy.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Aerospace Industries Association.

Association of U.S. Army.

American Helicopter Society.

International Institute for Strategic Studies.

Conquistadores del Cielo.

Council on Foreign Relations.

National Aeronautics Association.

Naval Surface Warfare Association.

Naval Submarine Association.

American-Israeli Public Affairs Commission.

Fleet Reserve Association.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Northrop Grumman Political Action Committee, \$1,000, 2000.

Howard Berman, "Berman for Congress," \$300, 1999.

Parris Glendening, "Glendening for Governor" \$2,000, 1998.

Howard Berman, "Berman for Congress" \$500, 1998.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Various military medals, including Legion of Merit.

Governor's Arts Award, State of Maryland, 2000.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Opinion Essay, Defense Daily International, June 9, 2000. "*The Anticipated Odeon Report and Competition in the Defense Industry.*"

Article, with Barry Watts, The Journal of Strategic Studies, June 1991, Frank Cass, London. "*Choosing Analytic Measures.*"

Chapter, Staying the Course: Henry M. Jackson and National Security, 1987, University of Washington Press. "*Jackson: Foreign Affairs Generalist.*"

Earlier works on Net Assessment with Barry Watts and George Pickett.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

Israeli Air Force 50th Anniversary Conference in Tel Aviv, June 1998. "*Tactical Air Sensors: Some Thoughts on the Future.*"

Lockheed Martin Israel Conference 2000, Ft. Worth, Texas, May 2000. "*U.S.-Israeli Industrial Cooperation.*"

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JAMES G. ROCHE.

This 7th day of May, 2001.

[The nomination of Dr. James G. Roche was reported to the Senate by Senator John Warner on May 21, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 24, 2001.]

---

[Prepared questions submitted to Alfred V. Rascon by Chairman Warner prior to the hearing with answers supplied follow:]

---

QUESTIONS AND RESPONSES

DUTIES

*Question.* If confirmed as the Director of Selective Service, what would you view as your principal responsibilities and duties?

*Answer.* The principal responsibilities of the Director are noted in the Military Selective Service Act: to be ready to provide both trained and untrained manpower to

the Armed Forces in the number and time frames requested by the Department of Defense, and to be prepared to manage an Alternative Service Program for those men classified as conscientious objectors. This charter implies that Selective Service be organized, staffed, and trained to perform these tasks.

#### RELATIONSHIPS

*Question.* The mission of the Selective Service System (SSS) is to provide needed manpower to the Defense Department in time of national emergency.

What will your relationship be to the Secretary of Defense, the Under Secretary of Defense for Personnel and Readiness, and the Assistant Secretary of Defense for Force Management Policy?

*Answer.* It is clear that the chief customer of the Selective Service "product" is the Department of Defense. As is the case today, Selective Service receives its guidance on the numbers of conscripts that may be required in a crisis, as well as the desired time frames from the manpower planners at the Department of Defense. The Agency's primary contact within DOD is with the Assistant Secretary for Force Management Policy in the Office of the Under Secretary for Personnel and Readiness. We work very closely with the Military Entrance Processing Command, which also comes under this structure and, in fact, share a Joint Computer Center at Great Lakes, Illinois. As necessary, there is also direct liaison with the Office of the Secretary of Defense regarding SSS policy issues. Over many years, these relationships have worked well and I will ensure that they continue.

*Question.* What will your relationship be to the assistant secretaries for manpower in the military services; the uniformed personnel chiefs of the military services; and the manpower officials in the Joint Staff?
