*Answer.* As an independent civilian agency, Selective Service's principal interface with DOD is the Office of the Secretary of Defense. Joint and service manpower officials express their needs up their chain to OSD. This said, Selective Service has historically responded to the services on service-unique issues. For example, the SSS has been assisting individual service recruiting efforts by placing rotational recruiting messages for the Active and Reserve components on registration acknowledgment cards mailed to more than 38,000 men each week. As Director, I will meet with the service secretaries as necessary. The services support the SSS by placing 450 National Guard and Reserve officers in Selective Service assignments and assisting with the registration of young men.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Director of the Selective Service System?

*Answer.* There are four: getting the registration message out to the public; moving the registration compliance rate back into the 90 percent range from the current level of 88 percent; maintaining readiness to conduct a fair and equitable draft; and defending the system against challenges to its survival from those who believe that our Nation no longer needs the SSS.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* To heighten awareness of the registration requirement among men 18 through 26 years old, I would focus more mass mailings to targeted shortfall areas, augmented with public service advertising. This would expand the reach and frequency of the registration message. In support of this approach, I would add momentum and sustainability by encouraging more states to link driver's licenses and permits to the federal registration requirement. Finally, I would conduct a top to bottom review of all mobilization programs to determine the exact costs for readiness and whether the proper level of readiness has been achieved. Selective Service needs only to be as ready and capable as is necessary to fulfill its responsibilities. With the foregoing accomplished, justification for survival of the agency and its missions would be self-evident.

#### MOST SERIOUS PROBLEMS

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Selective Service System?

*Answer.* I believe they are two: eroding public awareness of the federal registration requirement and a no-growth budget.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* One of my first actions would be to spend 90 to 120 days assessing the structure and organization of the system. Given the sizeable agency investment in information technology over several years, Selective Service need not be organized

and operating as it was coming out of deep standby in 1980. Through a smarter realignment of programs and people, and capitalizing upon automation already in place throughout the agency, the resources should be available for reprogramming in sync with my priorities. I realize that Selective Service is not a growth industry, so any re-direction or new priorities must be accomplished within existing resources.

#### PROPOSALS FOR CHANGE

*Question.* In recent years arguments have been made, based on the cost of Selective Service and the manpower requirements of the armed forces, that the Selective Service System should be dismantled. Legislation has been introduced in the 107th Congress that would suspend the registration requirement and the activities of civilian local boards and require the Director of Selective Service to report regarding the development of a viable standby registration program for use only during national emergencies. If confirmed, how would you respond to these proposals?

*Answer.* Similar legislation has been introduced and debated periodically over the last several years. Each and every time, both the administration and Congress have decided that it was in the country's best interests to continue Selective Service and the registration of young men. The SSS remains an important national security asset. I believe that this support by each administration and every Congress over 20 years is proof positive that those knowledgeable of military manpower issues appreciate that the agency is America's only proven, time-tested mechanism to expand our armed forces during a crisis. Maintaining the capability to conduct a fair and equitable draft costs very little and just makes good sense.

#### PERFORMANCE OF THE SELECTIVE SERVICE SYSTEM

*Question.* How accurate is the address information of Selective Service registrants in the prime induction group?

*Answer.* It is highly accurate because Selective Service employs the same program as the U.S. Postal Service—the National Change of Address System. In addition, this program is supplemented with changes provided by the registrant himself from our acknowledgment mailing to him at his residence, through changes a registrant mails using a card at any post office, from changes he provides by telephone, and with address updates he supplies on the internet.

*Question.* What steps is the Selective Service System taking to ensure the accuracy of this address information?

*Answer.* As stated before, Selective Service uses the same system that the U.S. Postal Service employs—the National Change of Address System—to track changes in addresses. There is no more comprehensive or accurate system available. The agency is primarily concerned with having accurate addresses for men reaching age 20, because these men would be the first to be called in a future draft. Every December, a tape file of young men who will turn 20 in the coming year, including those with undeliverable addresses, is sent to a vendor licensed by the Postal Service. The records of registrants are matched against the National Change of Address data base which contains all change of address notices filed at post offices in the U.S. by the public during the prior 36 months. As matches against the file are processed, address updates are applied to the SSS data base. This program confirms the accuracy of more than two million registrant records annually, thereby ensuring that prime draft eligible men can be reached in the event of a national emergency.

*Question.* At this time, how long would it take the military services' training base to be in a position to accept and begin training significant numbers of registrants?

*Answer.* The Department of Defense has told us that the training base would be expanded in time to absorb draftees at 193 days after notification to SSS to activate the draft.

*Question.* What are your views on the military requirement for continued registration?

*Answer.* I, together with the leadership responsible for national security policy, believe that retaining peacetime registration is a low cost, unintrusive insurance policy to deal with circumstances we might not fully foresee or have planned for. Plus it is a cost-effective deterrent and reminder to potential aggressors of America's proven military potential and national resolve. Registration is working. Our experience demonstrates that there is no resistance to registering. If a young man is aware of this legal requirement, he will comply. Our challenge is to get the awareness of the requirement out to where young men are especially if they are out of the mainstream. Registration is not only a hedge against underestimating the number of men needed to fight a future war, it is the last remaining link between society-at-large and the all-volunteer military.

*Question.* What would be the effect of suspension of registration on the organization, staffing, and budget of the Selective Service System?

*Answer.* The GAO looked at options to the current registration program in 1997 and determined that were registration to be terminated, there would be a reduction in authorized and assigned civilian and military personnel within the SSS by about one-third. The associated dollars would be about \$8.2 million, or about one-third of the current agency budget. The GAO made no recommendations for change.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Absolutely. I see it as a matter of integrity and principle that the agency head be the facilitator between Selective Service and Congress in an ongoing dialogue. I've mentioned public awareness of the registration requirement, but the other type of awareness is agency awareness by the oversight committees. This can only be achieved if I am responsive, and I intend to be responsive.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* If the committee desires the personal views of Al Rascon, it just has to ask.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Director, Selective Service System?

*Answer.* If confirmed, I envision my job as Director to be the lead in the exchange of information between the committee and Selective Service. Selective Service is a public agency doing the public's business. It can only retain its programmatic credibility if what it does is open to public view—and this means Congress.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* I assure you that I and Selective Service will continue to be forthright and responsive in any communications to or from a committee.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. Unfortunately there are many of our citizens, including some in Congress, who believe that the Selective Service has outlived its usefulness. Other than registration for the draft, how does the Selective Service contribute to national security, specifically the all volunteer force?

Mr. RASCON. Selective Service is the only proven, time-tested mechanism to expand our armed forces during crisis. The President and Congress know that it is a low cost, unintrusive insurance policy to deal with circumstances we might not fully foresee or have planned for. Plus it is a most cost-effective deterrent and reminder to potential aggressors of America's proven military potential. But the immediate aid to the all volunteer force is our joint Selective Service/Defense Department mailing. Because we contact about 2 million young men each year to provide them with their Selective Service Number, we have redesigned our official registration acknowledgment card to allow inclusion of a joint service recruiting piece which has a return postcard for further information. Defense likes this assistance because its message goes to 70,000 military age men every 2 weeks—to accurate addresses in a vehicle which must be opened by the young man. Each postcard received by Defense is a timely "lead" for its recruiter.

2. Senator THURMOND. What would be the impact of placing the Selective Service into "deep standby" and suspending the registration program?

Mr. RASCON. There would be several negative impacts. First, the ability of the United States to conduct a fair and equitable draft would be compromised for at least one year while a complete registrant database is being created from scratch. Second, there are no guarantees that trained personnel and time-proven policies and procedures would be available when needed. Third, any reconstitution of Selective Service would take precious time as the Nation cobbled together an operating orga-

nization from practically nothing. Finally, whatever is the resulting agency it might not pass constitutional muster—exactly at the moment when it is needed most. Consequently, the cost-effective insurance policy which Selective Service represents remains relevant today and into the future.

[The nomination reference of Alfred V. Rascon follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 30, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Alfred V. Rascon, of California, to be Director of Selective Service, vice Gil Coronado, resigned.

[The biographical sketch of Alfred V. Rascon, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF ALFRED V. RASCON

Alfred V. Rascon is a Medal of Honor Recipient, who was born in Mexico, immigrating to the United States as a young boy with his parents, settling in Southern California. In 1963, out of high school, wanting to give something back to this country, he joined the Army at 17 years of age. In May 1965, as an Army paratrooper he deployed with the 173d Airborne Brigade to South Vietnam. During his tour of duty in Vietnam, he was seriously wounded for the second time in March 1966, during Operation "Silver City." Because of his heroic actions on 16 March, he was presented of this Nation's highest award for valor, the Medal of Honor, belatedly given to him by President Clinton on 8 February 2000.

In 1966, due to his combat injuries, he was honorably discharge from the Army. From the fall of 1966 to August 1969, he worked and attended college full-time. In 1967, he became a U.S. naturalized citizen. He rejoined the Army and graduated from the Army's Infantry Officers Candidate School, Fort Benning, Georgia in February 1970, commissioned as a Second Lieutenant of Infantry. From 1970 through 1976, he served in a number of combat arms assignments, both in the United States and overseas, including a second tour in South Vietnam as a military advisor. Because of previous combat-related injuries in Vietnam, he was honorably discharged from active duty. However, in late 1976, because of his previous assignments as a foreign military liaison officer, he accepted a position as a U.S. Army military liaison officer in the Republic of Panama, serving until 1984.

From 1984 until his retirement from federal service in January 2001, he served honorably with the Department of Justice's Drug Enforcement Administration, INTERPOL (U.S. National Central Bureau), and the Immigration and Naturalization Service. He recently retired as Inspector General of the Selective Service System, headquartered in Rosslyn, Virginia. He has myriad awards and commendations from U.S. and foreign agencies for his civil and military service.

As a U.S. naturalized citizen of this country, he has been honored by the Washington, DC "American Immigration Lawyers Association and Foundation" for his past contributions in the military. Washington's CATO Institute honored Mr. Rascon in its publication titled: "*In Defense of Nation: The Contributions of Immigrants.*" He was named one of the 200 most influential Hispanics in America by Hispanic Magazine. FOX Family Channel featured him in its premier showing of "*Courage*" featuring heroes from all walks of life.

He is a "*Distinguished Member of the 503d Infantry Regiment,*" a Department of the Army initiative preserving and enhancing Army traditions through inspirational role models of present and past members of the Regiment. He is an inductee in the Army's Officer Candidate School *Hall of Fame*.

He is married to the former Carol Lee Richardson, and has two children. He holds degrees in Management and Liberal Studies.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the

advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Alfred V. Rascon in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Alfred Rascon, Alfred V. Rascon, Alfredo V. Rascon and Alfredo Rascon-Velazquez.

2. **Position to which nominated:**

Director, Selective Service System.

3. **Date of nomination:**

April 30, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

September 10, 1945; Chihuahua, Mexico.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Carol Richardson-Rascon (nee Richardson).

7. **Names and ages of children:**

Amanda V. Rascon, age 13; Alan V. Rascon, age 10.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Bachelor of Science in Liberal Arts, Excelsior (Regents) College, University of New York (June 2001) and Bachelor of Science, Management, California Coast University (June 1985), California.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

1995 to January 2001, Inspector General, Selective Service System, National Headquarters, Arlington, Virginia.

1990 to 1995, Senior Special Agent, U.S. Department of Justice, Immigration and Naturalization Service, Headquarters, Washington, DC.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Intelligence Operations Specialist, U.S. Drug Enforcement Administration; Supervisory Intelligence Research Analyst, Drug Financial Terrorist Section, INTERPOL, U.S. Central Bureau, Washington, DC.; Intelligence Liaison Officer to Republic of Panama Military; 1976 to 1984; U.S. Army Intelligence Officer from 1970 to 1976.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Life member Congressional Medal of Honor Society; Distinguished member of the 503d Infantry Regiment; Life member: Society of the 173d Airborne Brigade; 82nd Airborne Association; VFW; American Legion: Vietnam Veterans of America; 187 Airborne Battle Group.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

Military: Congressional Medal of Honor, Bronze Star with cluster, Air Medal, Purple Heart with cluster, Good Conduct Medal, Master Parachutists' Badge, Combat Medal Badge plus other U.S. military commendations. Republic of Vietnam: Gallantry Cross with Palm, Gallantry Cross with Silver Star, Honor Medal and Staff Service Medal. Honorary member of the 503 Infantry Regiment. 1997 American Immigration Lawyers and American Immigration Law Foundation Immigrant Achievement Award for outstanding contributions to our Nation. 2000 Soldier of the Year award, Veterans of Foreign Wars. Numerous other civic and national awards for military service.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

ALFRED V. RASCON.

This 8th day of May, 2001.

[The nomination of Alfred V. Rascon was reported to the Senate by Senator John Warner on May 21, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on May 22, 2001.]

**NOMINATIONS OF DOUGLAS JAY FEITH TO  
BE UNDER SECRETARY OF DEFENSE FOR  
POLICY; DR. JACK DYER CROUCH II TO BE  
ASSISTANT SECRETARY OF DEFENSE FOR  
INTERNATIONAL SECURITY POLICY; AND  
PETER W. RODMAN TO BE ASSISTANT SEC-  
RETARY OF DEFENSE FOR INTERNATIONAL  
SECURITY AFFAIRS**

---

**TUESDAY, JUNE 5, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:35 a.m. in room SD-106, Dirksen Senate Office Building, Senator John Warner (chairman) presiding.

Committee members present: Senators Warner, Inhofe, Santorum, Roberts, Allard, Sessions, Levin, Kennedy, Cleland, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, and Carnahan.

Other Senators present: Senators Specter and Bond.

Committee staff members present: Romie L. Brownlee, staff director; Judith A. Ansley, deputy staff director; Anita R. Raiford, deputy chief clerk; and Scott W. Stucky, general counsel.

Professional staff members present: Charles W. Alsup, Edward H. Edens IV, Brian R. Green, Mary Alice A. Hayward, Ambrose R. Hock, George W. Lauffer, Patricia L. Lewis, Joseph T. Sixeas, Cord A. Sterling, and Richard F. Walsh.

Minority staff members present: David S. Lyles, staff director for the minority; Madelyn R. Creedon, minority counsel; Richard D. DeBobs, minority counsel; Peter K. Levine, minority counsel; Evelyn N. Farkas, professional staff member; and Richard W. Fieldhouse, professional staff member.

Staff assistants present: Beth Ann Barozie, Kristi M. Freddo, and Michele A. Traficante.

Committee members' assistants present: John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; James P. Dohoney, Jr., assistant to Senator Hutchinson; David Young, assistant to Senator Bunning; Menda S. Fife and Sharon L. Waxman, assistants to Senator Kennedy; Frederick M. Downey, assistant to Senator Lieberman; Andrew Vanlandingham, assistant to Senator

Cleland; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi and Richard Kessler, assistants to Senator Akaka; Peter A. Contostavlos, assistant to Senator Bill Nelson; Eric Pierce, assistant to Senator Ben Nelson; Neal Orringer, assistant to Senator Carnahan; and Brady King, assistant to Senator Dayton.

**OPENING STATEMENT OF SENATOR JOHN WARNER,  
CHAIRMAN**

Chairman WARNER. The hearing will come to order. Thank you. The committee meets today to receive testimony and have the opportunity to place questions to our distinguished panel of nominees. We have before us this morning the nominees who will play a vital role in the policy of the Office of the Secretary of Defense, assuming Senate confirmation. This is an excellent, well-experienced team assembled by Secretary Rumsfeld, and I commend him.

Douglas Jay Feith has been nominated to be Under Secretary of Defense for Policy. Dr. Jack Dyer Crouch II, has been nominated to be Assistant Secretary of Defense for International Security Policy, Peter W. Rodman has been nominated to be Assistant Secretary of Defense for International Security Affairs. We welcome our nominees and their families.

Mr. Feith, will you kindly introduce your family to the committee this morning?

**STATEMENT OF DOUGLAS JAY FEITH, NOMINEE TO BE UNDER  
SECRETARY OF DEFENSE FOR POLICY**

Mr. FEITH. Thank you, Mr. Chairman. I am accompanied today by my father, Doug Feith; my brother, Donald Feith; and my children, Daniel, David, and Dafna. Unfortunately, my wife could not be here this morning. We also have a 5-year-old, Dore, who mercifully decided not to come.

Chairman WARNER. We understand that, but she is here in spirit, because these positions—having had the privilege of serving in the Department myself—the families are very key to your daily operations. Their support is essential, as is their understanding for the long hours involved. It is difficult on the families.

Dr. Crouch, we welcome you. We know you are a long way from Southwest Missouri State University, where your family is at this present time, and again we thank you for your willingness to serve our Nation in this important position.

Now, Mr. Rodman, I understand that your wife is here. Would you be kind enough to introduce your family to the committee?

**STATEMENT OF PETER W. RODMAN, NOMINEE TO BE ASSISTANT  
SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY  
AFFAIRS**

Mr. RODMAN. Thank you very much, Mr. Chairman. I have my wife, Veronique Rodman; my daughter, Theodora; and my son, Nicholas.

Chairman WARNER. We welcome you today.

Mr. Feith, if confirmed, you will be returning for a second tour at the Department of Defense. You served as Deputy Assistant Secretary of Defense for Negotiations Policy in 1984, and as such were responsible for policy related to various arms control negotiations,

including those on conventional force reductions, chemical and biological weapons, nuclear testing, and nuclear nonproliferation issues. Prior to that, you served on the staff of the National Security Council under President Ronald Reagan and, of course, you have had a distinguished career as a counselor. We congratulate you on the President's selection.

Mr. FEITH. Thank you.

Chairman WARNER. Dr. Crouch, if confirmed, you will also be returning to the Department of Defense. From 1990 to 1992, you served as Principal Deputy Assistant Secretary of Defense for International Security Policy. Prior to that service, you worked for the U.S. Arms Control and Disarmament Agency, and you were an advisor to the U.S. delegation on nuclear space talks with the Soviet Union. You are currently Associate Professor of Defense and Strategic Studies at Southwest Missouri State University in Springfield, Missouri.

Mr. Rodman, if confirmed, you will also bring a wealth of experience and accomplishments to the Pentagon. You were a close advisor to Dr. Kissinger on the staff of the National Security Council from 1972 to 1977, and Director of the Department of State's policy planning staff from 1984 to 1986 under Secretary Schultz. You then served as Special Assistant to Presidents Reagan and Bush for National Security Affairs, and as counselor to the National Security Council. That is a very distinguished career.

It is a pleasure to have such qualified nominees before this committee. I believe each of you will excel in the positions to which you have been nominated, if confirmed by the Senate. We welcome you and your families.

Before we hear from the nominees, Senator Levin has some remarks.

#### STATEMENT OF SENATOR CARL LEVIN

Senator LEVIN. Mr. Chairman, thank you. I join you in welcoming our witnesses to the committee this morning. I also want to thank their families for being here since, as you point out, family support is essential in each of these positions where people serve our Nation.

America's foreign and national security policy have always benefited when leaders from different parties have worked together across the political aisle. This committee has a long tradition of bipartisanship, and when the legislative and executive branches work in a cooperative manner, we make our military stronger and we make our Nation more secure.

I have reviewed the records of our nominees. I have a number of concerns about some of the positions which some of them have taken, particularly in their public writings. I look forward to exploring those positions with them this morning. It seems to me that some of the positions are not even consistent with the administration's positions in a number of areas, and I particularly want to explore those areas as well.

So, Mr. Chairman, we are moving on these nominations. As our chairman, I believe you have pressed this committee and the Senate to expeditiously address these nominations at hearings, to then bring those nominations, which have been approved by this com-

mittee in an extraordinarily expeditious fashion, to the floor. I think that bodes well indeed, and I think everybody is grateful for your leadership in this.

Chairman WARNER. Senator Levin, I thank you for your comments. We have as a team, and as a committee, acted as quickly as we could on these nominees.

Senator Specter, will you kindly proceed with respect to your nominee?

**STATEMENT OF HON. ARLEN SPECTER, U.S. SENATOR FROM PENNSYLVANIA**

Senator SPECTER. Yes, thank you very much, Mr. Chairman. It is a pleasure and a privilege to appear before this distinguished committee. I am interested to note at this early hour, just a few minutes after convening, so many members of the committee are here. That is a tribute to the committee.

I am here for the purpose of introducing Douglas J. Feith, a man whom I have known since he was a youngster through association with his father, Doug Feith, who I have known for 30 years or more.

Just a word about Douglas Feith's family background. Doug Feith came to the United States from Eastern Europe, where he survived the Holocaust, one of nine children. His older sister went to Israel in 1933 and was spared. Doug Feith was a member of Menachim Begin's Youth Group, and avoided the fate of some 6 million Jews who were killed in the Holocaust, and came to the United States and has been a Philadelphian for many years. I have known him and noted his community activities and his very solid citizenship. He has produced a very wonderful family, a great American story, 10 grandchildren, and his son, Douglas Feith, is now up for a very important position.

Douglas Feith brings an outstanding academic and professional background to this position. He received his bachelor's degree magna cum laude from Harvard in 1975 and a law degree, again magna cum laude, from Georgetown University Law Center, and has been characterized among those who know him as a brilliant academician.

He has extensive experience in the field, having served in 1981 and 1982 on the staff of the National Security Council as a Middle East Specialist. Then from 1982 to 1984 he was Special Counsel to the Assistant Secretary of Defense, Richard Perle, and in 1984 he was appointed Deputy Assistant Secretary of Defense for Negotiations.

He is a real intellectual, with very extensive practical experience. His writings have appeared on international law and foreign defense policy in some of the country's leading publications. He is currently the managing partner of the law firm of Feith & Zell, which he founded in 1986, so he brings a very rich background to this very important position. I am pleased to be here for a few moments this morning to commend him to you and urge his confirmation.

Chairman WARNER. Senator, we welcome you before this committee, and we thank you for your observations about our attendance; we are a strong committee. We thank you for this very interesting

biographical sketch that you have given of the entire family. Indeed, it is a family that has greatly contributed to our country and shall continue to do so.

Now, one of our valued committee members, Senator Santorum, would also like to speak.

#### STATEMENT OF SENATOR RICK SANTORUM

Senator SANTORUM. Thank you, Mr. Chairman. I do not want to repeat all of the comments of my senior colleague. That is one of the things about being a junior Senator, you just get to say "me too" a lot. Senator Specter has done a marvelous job in detailing Doug and his terrific family and their great contributions to Southeastern Pennsylvania, and Doug's contributions here to the Washington, DC, area since he has been located here after his years of Government service. I want to mention, too, that he was awarded the highest civilian award within the Department of Defense, the Distinguished Public Service Medal.

This is a man who has great integrity, great intellect, and a great passion to serve this country. I know he will do an outstanding job with the Department of Defense, and it is an honor to be able to be here to introduce you to the committee, Doug. Thank you for being here.

[The prepared statement of Senator Santorum follows:]

#### PREPARED STATEMENT BY SENATOR RICK SANTORUM

Chairman Warner, and members of the committee, I am pleased to have the opportunity this morning to introduce Douglas Jay Feith.

Mr. Feith appears before us today as President Bush's nominee for the Under Secretary of Defense for Policy.

A native of Philadelphia, Pennsylvania, Mr. Feith has a long and proud history of public service to this country. In 1981, he served on the staff of the National Security Council as a Middle East specialist, working primarily on Arab-Israeli, Persian Gulf and energy security issues. From 1982 to 1984, he was Special Counsel to Assistant Secretary of Defense Richard Perle.

In 1984, Mr. Feith was appointed Deputy Assistant Secretary of Defense for Negotiations Policy. In that position, he was responsible for policy for various arms control negotiations, including those on conventional forces, Confidence and Security Building Measures in Europe, chemical and biological weapons, nuclear testing, nuclear non-proliferation issues and East-West political relations. For his dedicated service, Douglas Feith was awarded the Department of Defense's highest civilian award, the Distinguished Public Service Medal.

The recipient of an A.B. degree *magna cum laude* from Harvard College and a J.D. degree *magna cum laude* from the Georgetown University Law Center, Douglas Feith has published extensively on matters of international law and on foreign and defense policy. His writings have appeared in the *New York Times*, the *Washington Post*, *The Wall Street Journal*, the *New Republic* and elsewhere.

Currently, Douglas Feith is the Managing Attorney of the law firm Feith & Zell, P.C. of Washington, D.C., which he founded in 1986. In addition, Mr. Feith now serves as the President of the Charles E. Smith Jewish Day school, a K-12 school with 1,400 students.

I believe Mr. Feith's 20-plus years of professional experience and public service to this Nation leave him well suited to the demanding tasks which he will face in the coming years, including providing the Secretary and Deputy Secretary of Defense with advice on the formation of policies to address 21st century threats.

With that, Mr. Chairman, thank you for the opportunity to offer a few words on behalf of Mr. Feith, and I urge the committee to give his nomination every due consideration.

Mr. FEITH. Thank you, Senator.

Chairman WARNER. Thank you very much, Senator Santorum, and again your comments and observations are of great value to the committee.

Senator Bond, I understand that you join us this morning for purposes of your endorsement of one of the candidates.

**STATEMENT OF HON. CHRISTOPHER "KIT" BOND, U.S.  
SENATOR FROM MISSOURI**

Senator BOND. Mr. Chairman, members of the committee, I thank the committee for this opportunity. It is a pleasure to appear before you and to see so many members of the committee here.

My pleasure this morning is to present and commend to you the nomination of my good friend, J.D. Crouch II, who is a Ph.D. and a fellow Missourian. He received his doctoral degree in international relations from the University of Southern California. He has published numerous articles on such topics as ballistic missile defense, the ABM Treaty, nuclear testing, and U.S.-European relations.

As the chairman noted, from 1984 to 1986 he worked as Assistant Director for Strategic Programs of the U.S. Control and Disarmament Agency, and was an advisor to the U.S. delegation on nuclear and space arms talks with the former Soviet Union. He is no stranger to the longer-tenured members and staff of this committee, having served from 1986 to 1990 as military legislative assistant to Senator Malcolm Wallop and staff designee to this committee.

After that, from 1990 to 1992, he was Principal Deputy Assistant Secretary of Defense for International Security Policy in the first Bush administration. He currently is Associate Professor of Defense and Strategic Studies at Southwest Missouri's State University, and I would say he has been a valuable advisor informally to me on defense matters.

I also want to point out in addition to his outstanding Government service, his academic background and his publication of numerous articles. He has very solid grounding in the real world. He serves as a Reserve deputy sheriff in Christian County, Missouri, a member of the multi-county special response team, and lives in Nixa, Missouri, home of the world-famous Nixa Succor Day Fish Fry. Should any of you wish to be further advised on it, he is, I understand, an expert on succor-digging, which is a very important sport in Southwest Missouri, and he has that additional background.

I do believe his experience, both in academia and Government, well-qualify him for this position, and it is my hearty recommendation that the committee act favorably on his nomination.

Chairman WARNER. Thank you very much, Senator. That insight into the candidate and also your endorsement is of great value to the committee. We thank you very much.

Senator Carnahan, we understand you would like to make a few comments.

**STATEMENT OF SENATOR JEAN CARNAHAN**

Senator CARNAHAN. Yes, thank you, Mr. Chairman.

I want to welcome this distinguished panel today. It is especially rewarding to have with us today a nominee from the State of Missouri for the position of Assistant Secretary of Defense for International Security Policy. This position has a wide range of responsibilities, ranging from developing regional defense policies to overseeing international security cooperation.

With such a wide variety of duties, we are fortunate to have a nominee with such a diverse background. Dr. Crouch hails from, as Senator Bond pointed out, the great Town of Nixa, but he is also well-known in Washington and in the security policy debate. Not only did he serve as Principal Deputy Assistant Secretary for International Security Policy (ISP) in the previous Bush administration, but he has worked on arms control and defense policy in Congress and the executive branch.

What is truly extraordinary is Dr. Crouch's accomplishments outside of the beltway, miles away in his beautiful mountain valley Town of Nixa. Dr. Crouch devotes 20 hours a month to Christian County as a reserve sheriff, he is a full-time graduate professor at Southwest Missouri State, he is cofounder of a groundbreaking Internet company, and has helped raise his two kids along with his wife, Kristin.

I was truly impressed to learn that last year he saved a man's life by pulling him from a burning car wreck and treating him for shock until medics arrived, and for his valiant heroics he earned the honor of reserve deputy of the year. I am glad to see that the President has honored Missouri in selecting Dr. Crouch for this crucial post in the administration.

I know that this hearing will serve as a meaningful hearing for discussing the views of Dr. Crouch and the other panelists before this committee, and I will look forward to hearing the testimony and thank the chairman for allowing me the privilege of introducing my fellow Missourian.

Chairman WARNER. You are a very valued member of this committee, and that was an extremely well-spoken and forceful endorsement of this distinguished nominee.

Senator CARNAHAN. Thank you, Mr. Chairman.

Chairman WARNER. We thank you very much.

At this time, I insert for the record the opening statement of Senator Strom Thurmond.

[The prepared statement of Senator Thurmond follows:]

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman.

Mr. Feith, Dr. Crouch, Mr. Rodman, congratulations to each of you on your nomination. The fact that you are appearing before this committee this morning speaks highly of your credentials and the faith that both the President and Secretary Rumsfeld have in your ability to take on the challenges of the office for which they have nominated you. I wish you success and urge you to keep an open dialogue with this committee.

Thank you, Mr. Chairman.

Chairman WARNER. The committee, in accordance with its procedure, has asked a series of policy questions of each of our nominees. Their responses to those questions will be placed in the record at the appropriate location without objection.

I have also, together with my distinguished Ranking Member, examined a series of documents forwarded as a matter of routine from the White House counsel, and we likewise find those to be in order.

Now I shall ask questions which were propounded by this committee to each of the nominees. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Dr. CROUCH. No, sir.

Mr. RODMAN. No, sir.

Mr. FEITH. No, sir.

Chairman WARNER. Will you ensure your staff complies with deadlines established for requested communications, including questions for the record in the hearings?

Dr. CROUCH. Yes, sir.

Mr. FEITH. Yes, sir.

Mr. RODMAN. Yes.

Chairman WARNER. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Dr. CROUCH. Yes, sir.

Mr. FEITH. Yes.

Mr. RODMAN. Yes.

Chairman WARNER. Will those witnesses be protected from any possible reprisals for their testimony or briefings to the Congress of the United States?

Dr. CROUCH. Yes, sir.

Mr. FEITH. Yes.

Mr. RODMAN. Yes.

Chairman WARNER. Thank you very much.

I must depart to join our Majority Leader. We have some matters we have to address today. I hope to return before this hearing is concluded, but in my absence, my distinguished colleague from Oklahoma will preside, together with the Ranking Member. We will now open this series of nominations with Mr. Feith. Will you start off? Thank you very much.

Mr. FEITH. Thank you, Mr. Chairman.

Mr. Chairman, Senator Levin, and other members of the Armed Services Committee, given the size of the panel and the shortness of time, I would like to dispense with any formal opening statement. I would like to say, however, that I am honored to appear before you, and I thank President George W. Bush for nominating me and the Secretary of Defense, Donald Rumsfeld, for supporting me for the position of Under Secretary of Defense for Policy.

To serve our country in such a capacity is an exhilarating and gratifying prospect. If confirmed, I will work to help keep the United States strong and at peace with healthy ties to our allies and friends abroad. I would also like to express my thanks to Senator Specter and Senator Santorum for their kindness in introducing me. I look forward to the committee's questions. Thank you.

Senator INHOFE. Thank you, Mr. Feith.

Dr. Crouch.

Dr. CROUCH. Thank you, Mr. Chairman, Senator Levin, members of the Senate Armed Services Committee, distinguished colleagues, and honored guests. I, too, will be extremely brief. I know the com-

mittee is interested in getting to questions. I want to state that it is quite a pleasure and an honor to be before this committee seeking confirmation for the position of Assistant Secretary of Defense for International Security Policy.

Among my fondest memories of Government were the 4 years I spent here, working for the United States Senate and supporting Senator Wallop on this committee. While a great many things have changed in the world since those days, the bipartisan spirit in which this committee works towards the advancement of the national security of the United States remains. If confirmed, I look forward to working closely with the committee and its staff towards those shared goals.

I would also like to thank both Senator Carnahan and Senator Bond for their very gracious introduction of me this morning. I would like to express my gratitude and my appreciation to the President and Secretary Rumsfeld for the confidence they have shown in me in making this nomination.

If confirmed, I will return to public service from private life eager to tackle the challenges and issues that confront the Department of Defense, this committee, and the Nation. There is much to do, and we must all work together to get it done.

Finally, I would like to thank my many friends, and especially my family—my wife, Kristin, my daughter, Lara, and my son, Jake—who could not be here today, for the support and encouragement that they have given me in seeking this opportunity.

Thank you, Mr. Chairman, and I look forward to answering the committee's questions.

Senator INHOFE. Thank you, Dr. Crouch.

Mr. Rodman.

Mr. RODMAN. Thank you. In the same spirit, I want to thank Chairman Warner, Senator Levin, and all the members of this committee for your courtesy to us all this morning. I am deeply honored that President Bush and Secretary Rumsfeld have chosen to nominate me for what is one of the most exciting jobs, I think, in the U.S. Government. If I am confirmed in that position, I look forward to working with this committee in the spirit that was expressed earlier by Chairman Warner and Senator Levin, the spirit of bipartisanship.

There are some issues so vital to our Nation that we cannot be effective in meeting those challenges unless Congress and the President are working together, and the parties are working together, so I look forward, if I am confirmed, to working with this committee to meet the challenges that lie ahead of us all.

Thank you very much.

Senator INHOFE. Thank you, Mr. Rodman.

I would ask members of the committee to try to hold their remarks and their questions to 6 minutes, so perhaps we can get another round in, but I am not sure we will be able to do that.

We will start with Senator Levin.

Senator LEVIN. Mr. Chairman, thank you. First, Mr. Feith, let me ask you about a memorandum of January 1999. This is what you wrote relative to the Antiballistic Missile (ABM) Treaty's existence. Quote, following the extinction of the Union of Soviet Socialist Republics, the Antiballistic Missile Treaty of 1972 did not be-

come a treaty between the United States and the Russian Federation. Rather, as a bilateral nondispositive treaty, the ABM Treaty of 1972 between the United States and the USSR ceased to exist, close quote.

Now, is it your opinion that the ABM Treaty has ceased to exist, that it is not in force, and that neither the United States nor Russia have any obligation under it or are bound by it?

Mr. FEITH. Senator Levin, I stand by the legal analysis that you cited. President Bush has made it clear that this administration is going to continue to adhere—is adhering to the terms of the ABM Treaty. He has also stated that in order to create the missile defenses that he is intent on creating to protect the United States and our troops abroad and our allies and friends, we are at some point going to have to move beyond the constraints of the ABM Treaty.

The decision on when the United States would do that, and how it would be done, and after consultations with whom, those issues remain open, and the decisions will be made by the President, and I will be pleased to support the President's policy.

Senator LEVIN. Does it remain your opinion, however, that the ABM Treaty no longer exists? Is that your opinion?

Mr. FEITH. As I said, the analysis that I wrote, I believed and I think it is correct, but the United States can continue to adhere to the terms of the ABM Treaty, as the President has said he is doing.

Senator LEVIN. Is it also, then, your opinion that all other bilateral, nondispositive treaties between the USSR and the United States no longer exist?

Mr. FEITH. Under the doctrine that was cited in that lengthy legal memorandum to which you have referred, that would apply to the bilateral, nondispositive agreements. It specifically applies to those agreements that were approved by the Senate.

In other words, nothing prevents the executive branch from making with Russia the agreements that the executive branch made with the Soviet Union, and just continuing those agreements. The essence of what I was saying in that legal memorandum is that if the United States wants to remake an agreement with the Russian Federation that we had with the Soviet Union, the United States Government can do that, but the Senate has a very important role in treaty-making, and an agreement like that can be made with the Russian Federation only if the Senate has given its advice and consent to ratification.

Senator LEVIN. I want to just go through a number of bilateral, nondispositive agreements with you that were made when the Soviet Union existed and ask you whether or not, then, they no longer exist, as you just testified, in the absence of their being reentered into by this current or by a subsequent administration to the collapse of the Soviet Union.

An agreement relating to the privileges and immunities of all members of our embassies and their families that was entered into in 1978, did that cease to exist when the Soviet Union ceased to exist, in the absence of it being remade between a subsequent American administration and Russia?

Mr. FEITH. Senator, that treaty does not appear on the rather short list of treaties that it is my understanding were fitted within those terms, in other words, bilateral, nondispositive agreements that were approved by the Senate.

Senator LEVIN. If there was an agreement made by the executive branch which was nondispositive, as you phrased it, and bilateral, you just said that that agreement would have to be remade, and what I am saying is, if there was not a subsequent treaty or agreement after the collapse of the Soviet Union, is it then not your position that, in the absence of that agreement being reentered into, that it no longer exists?

Mr. FEITH. This question that you are raising about the succession of those agreements is often handled by informal processes between the Government, and the decision of the executive branch to maintain those agreements is often considered effective in maintaining them.

Senator LEVIN. In the absence of such an explicit decision, have those agreements all lapsed?

Mr. FEITH. I think the position that the United States Government has taken was to continue agreements that it could continue with Russia, and so I believe that the executive agreements, as opposed to the treaties that received Senate approval, in most cases I would suppose—I am not an expert on the long list of those agreements, but I believe that the general position is that they continued, by choice of the executive branch.

Senator LEVIN. So that in summary, then, the treaties, in your opinion, have all lapsed if they are bilateral, nondispositive treaties.

Mr. FEITH. That is what this 250-year-old doctrine says.

Senator LEVIN. That is your current legal opinion?

Mr. FEITH. That is the legal opinion that I wrote. I think it is worth noting that if I am confirmed, Senator, for this position, I will be providing policy advice and not legal advice to the Secretary of Defense. But the legal memorandum cited a venerable legal doctrine that says that such bilateral agreements lapse by operation of law when one of the two parties becomes extinct.

Senator LEVIN. It is a simple question. Does that remain your current opinion?

Mr. FEITH. Yes. I stand by the analysis that I wrote.

Senator LEVIN. My time is up. Thank you.

Senator INHOFE. Thank you, Senator Levin.

Mr. Feith, why don't you just take a few moments here and outline your past experience in negotiating and implementing arms control agreements.

Mr. FEITH. Mr. Chairman, I think that arms control agreements can and do serve our national interests. Each proposed treaty or unilateral action in this field, I believe, needs to be evaluated to determine whether its net effect is positive. The kinds of considerations for a proposed treaty or agreement that I think are relevant is whether it serves the national interest, whether its goal is in the national interest, whether its terms will accomplish its purpose, whether it is verifiable, how likely is it that we will be able to enforce its compliance if the treaty is violated, and if there are collateral benefits of the treaty even if other parties violate it.

In the work that I did in the Government, I helped bring into being some arms control agreements, in particular the missile technology control regime and the Stockholm agreement on what was called confidence and security-building measures in Europe. It was essentially about notification of military exercises.

I also played a role in the Dayton peace negotiations. I think there are a number of arms control agreements that have well-served the national interest, and there are others that I have been critical of. I think that this is something that has to be handled in a nonideological, pragmatic fashion, weighing the merits of each case.

Senator INHOFE. Thank you, Mr. Feith.

Recently, a new word has appeared in a characterization. The Bush administration has been called unilateralist, because it has expressed a concern about some treaties such as the Kyoto Treaty and the ABM Treaty that are supported by some of our adversaries as well as some of our allies. Whereas I believe we should work with our allies and other countries to gain their support, I do not believe we should allow them to keep American families at risk as new threats emerge.

How should we approach these countries to gain their support in modifying existing arms control agreements where necessary, and what action should we take if such support cannot be achieved?

Mr. FEITH. Mr. Chairman, I believe that an important element of our strength as a Nation is the set of relationships, the set of treaty ties we have with allies and other ties that we have with our friends abroad. If confirmed, I would devote myself to keeping those relationships healthy through consultations and cooperation.

Unilateralism, or isolationism, in my view, would not serve us well as a national security policy. What President Bush has said is that he will always act in a way that he believes serves the U.S. national interest even if he believes that other countries prefer that he acts differently, and I think that is sensible. I do not, in fact, see how any President could declare otherwise. But that does not mean that the Bush administration is unilateralist. It does not mean that the administration prefers to act alone. In my view, I think it is clear that this administration values our alliances, and appreciates the importance of creating as broad a base as possible of support for U.S. policies.

Senator INHOFE. I am going to read some quotes that go back to 1995, and I could have started earlier, but because of the constrictions of time it is not possible, and the CIA reports the weapon proliferation threat of 1995 is at least 20 countries—this is 1995. At least 20 countries, nearly half of them in the Middle East and South Asia, already have or may be developing weapons of mass destruction and ballistic missile delivery systems. Five countries, North Korea, Iran, Iraq, Libya, and Syria, pose the greatest threat because of the grave nature of their weapons of mass destruction programs. All five already have or are developing ballistic missiles that could threaten the United States.

Three years later, this is General Chuck Horner, who was the Director of the Desert Storm Air Command, quote: we need missile defenses now. Every day we delay deployment encourages our potential enemies to develop or acquire long-range missiles. I know

first-hand that a ballistic missile is an ultimate form of terror. We could not stop them during Operation Desert Storm, and we cannot stop them now, end quote.

In 1998, when we had the commission that I think had probably the nine greatest, most qualified experts in this field, they said the United States might well have little or no warning before operational deployment. This reflects the reality of an environment in which there may be little or no warning.

Then, when General Welch was before our committee, Senator Levin, he was asked some questions, and he talked about the deterrence that we have and how this has changed in recent times. He said we had confidence in deterrence in the past because we understood those that we were deterring. We had high confidence that we knew what they valued, and we had high confidence that we knew how to hold that at risk, and I have to tell you, I have no such confidence regarding the kind of threats we face today. I simply do not know what deters those particular kinds of threats.

Henry Kissinger, who was the architect of the ABM Treaty, I can remember not too long ago he made the statement that it is nuts to make a virtue out of our vulnerability.

In light of all of these experts, in the last 7 years, talking about the nature of the threat that is out there, about the fact that we have to develop as soon as we can possibly develop and deploy a national missile defense system, can any of the three of you think of any reason we should not proceed with that deployment? Why don't you each respond.

Dr. CROUCH. I believe that the President has made it clear that he believes that missile defense is going to be an important component of our overall defense strategy in dealing with the kinds of emerging threats that you have well outlined, Senator, and if confirmed, I would strongly support the administration's efforts to do that, and so I absolutely think it is vital.

I think one of the interesting paradigm shifts, if you will, that we are in from the Cold War to this period is that we are now in a position where we may have to determine whether other countries may be deploying ballistic missiles and weapons of mass destruction that will deter the use of American military capability, and the key aspect, a key example of that, it seems to me, was the Operation Desert Storm situation. What would have happened if Saddam Hussein had had a weapon of mass destruction, particularly a nuclear weapon, on top of those missiles?

Senator INHOFE. My time has expired, and I would only comment that he made it very clear after that was over, he said, if we had waited 10 years to go into Kuwait, America would not have come in. We would have had the ability to deploy such a missile.

Just a real quick response, the other two.

Mr. FEITH. I agree with what Dr. Crouch just said, and I do think it is wise that the President has resolved to create missile defenses.

Senator INHOFE. Thank you.

Senator Kennedy.

Senator KENNEDY. Thank you. Mr. Feith, you are familiar with what Secretary of State James Baker said—was he incorrect in January 1992, when shortly after the collapse of the Soviet Union

he said, "I made the point to President Yeltsin that the United States remains committed to the ABM. We expect the States of the Commonwealth to abide by all the international treaties and obligations that were entered into by the former Soviet Union, including the ABM Treaty."

Mr. FEITH. Senator, I think that that was an expression of a desire to maintain a number of the—

Senator KENNEDY. Let me state it again. I am asking you whether it is correct that he said, "I made the point to President Yeltsin the United States remains committed to the ABM. We expect the States of the Commonwealth to abide by all the international treaties and obligations that were entered into by the former Soviet Union, including the ABM Treaty." Now, was he making a mistake or not, when he made that statement?

Mr. FEITH. No.

Senator KENNEDY. So it was not an incorrect statement for him to make?

Mr. FEITH. I think it is correct as far as it goes.

Senator KENNEDY. Well, I think it goes—that is fine. That is good, with regard to the ABM Treaty.

Now, Mr. Feith, on the issues of Plan Colombia, concerns have been raised about the collusion between the Colombian armed forces and the illegal paramilitaries. Given the significant funding our country is providing to the armed forces, what goals do you think are achievable in Colombia?

Mr. FEITH. Senator, the focus of the Defense Department's activities in support of Plan Colombia is assisting the Colombian forces in dealing with their counterdrug work. This is a very difficult activity. It is performed by the Defense Department pursuant to statute, and there is a great sensitivity to keeping the focus on what the law would have the Department focus on, which is the counterdrug activity, and not to be drawn into entry into the civil war in Colombia.

Senator KENNEDY. Do you believe American interests in Colombia are worth putting the armed forces personnel at risk?

Mr. FEITH. As I said, this is a judgment that is made as a matter of law. Congress has legislated that we are going to assist—

Senator KENNEDY. I am trying to find out what your views are. What are your views on that issue? Do you think it is worth putting the personnel at risk, and then, I am going to ask you what about the civilians? Do you think they are? We ought to be able to find out what your views are on this Plan Colombia.

Mr. FEITH. Senator, there is a national interest in dealing with the very serious drug problem. Weighing the different factors requires a mastery of the facts of the case that I do not yet have. If confirmed, I would be in a position to have an independent evaluation of that. I do know that this is an obligation, and I do know the Department of Defense is fulfilling the statutory requirement.

Senator KENNEDY. Mr. Crouch, in your 1995 article in the *Journal*, "Comparative Strategy," you criticized the Clinton administration's policy in North Korea's nuclear weapons program and proposed the following steps:

- Strengthen U.S. forces stationed in South Korea, in recognition of the threat, to bolster U.S. deterrent;

- Redeploy American nuclear weapons to South Korea to demonstrate our nuclear commitment to a U.S. ally and maintain the means at hand to respond to a North Korean attack;
- Begin immediate plans with South Korea and Japan to develop and deploy a missile defense adequate to the task of dealing with long-range nuclear-armed missiles;
- Set a firm date for destruction of North Korea's nuclear complex and its long-range missile production facilities;
- Absent positive, visible steps by the North Korean regime towards this end, authorize destruction of as much of this complex as possible by U.S. and allied air power.

Would not this be dangerously provocative to a nation that already fears aggression from the United States and South Korea?

Dr. CROUCH. I remain concerned about the situation in Korea, Senator, but I believe that the international situation has changed greatly since 1994. At that time, I am sure that the committee will remember that tensions on the Korean peninsula were running very high. There was a considerable uncertainty about the stability of the North—

Senator KENNEDY. Well, you do not support that, then, today?

Dr. CROUCH. No. Today, I do not believe that those actions would be necessary, because I believe the international environment has changed substantially.

Senator KENNEDY. Mr. Feith, you stated that investment in the Cooperative Threat Reduction (CTR), the Nunn-Lugar program and other U.S. proliferation programs, should not become a means by which Russia frees the resources to finance its military modernization program. Is there any evidence to show that Russia is doing this? Are you advocating elimination of the program?

Mr. FEITH. No, on the contrary, Senator, I support the program. I think that the destruction of the weapons of the former Soviet Union is in the U.S. national interest. I think that it is important that the Defense Department select wisely the particular programs that we are going to fund with the moneys appropriated by Congress, and that we make sure that we manage them well, but I strongly support the program in principle, and I think that there is much good that comes from it.

Senator KENNEDY. Mr. Feith, do you have any reaction, then, to the fact that the administration cut \$140 million from the Department's funding of the CTR program? Do you think it was wise to cut that money in their budget proposals?

Mr. FEITH. I may be in error, but I do not believe that the Defense Department funding was cut.

Senator KENNEDY. I believe it is the Energy Department. The Energy Department cut the program by \$140 million. I understand that you generally support the program, is that correct?

Mr. FEITH. Yes, I do, sir.

Senator KENNEDY. Dr. Crouch, do you as well?

Dr. CROUCH. Absolutely, sir.

Senator KENNEDY. Thank you, Mr. Chairman.

Senator INHOFE. Thank you, Senator Kennedy.

Senator Allard.

Senator ALLARD. Mr. Chairman, thank you. I want to state briefly that I do not think that we can argue with the academic or professional qualifications of these three men to hold these respective positions, Doug Feith for Under Secretary of Defense for Policy, J.D. Crouch for Assistant Secretary of Defense for International Security Policy, and Peter Rodman for Assistant Secretary of Defense for International Security Affairs. I want to thank each nominee for taking the time to drop by my office and visit with me personally, and as a result of those conversations, I think that they bring a lot to those positions and they will be a credit to the administration.

Mr. Chairman, I would like to thank you for holding these hearings, and I look forward to getting them into their jobs as soon as possible, as well as moving the three nominees that we will be hearing from on Thursday.

Having said that, Dr. Crouch, the administration is contemplating many changes in regards to the export controls, and Congress has the Export Administration Act (EAA) on its plate at this time. Could you give me your views on export controls, and what changes do we need to the system, and then your views on the administration's changes on the EAA, if possible?

Dr. CROUCH. This is an area, Senator, that I expect I am going to need to do some study, if confirmed. It is not an area that I have spent a great deal of time studying, but I would say the following things. One is, I think that export controls are an essential aspect of our national security. I strongly support export controls. I also believe that we can do a better job in making export controls a facet of our counterproliferation policy, but I believe that it is going to take both the Department working with this committee and other relevant committees in the Senate to do that.

My understanding of the legislation—and I am again not an expert on that legislation, but my understanding of the legislation referred to is that the administration supports that legislation in its current form, and from what I understand of it, I certainly support it in its current form as well.

Senator ALLARD. Mr. Feith, there is some discussion, I believe, as to whether they would move national space policy, particularly the issue referring to commercial use in space, perhaps, to your area. Do you have any insight on that that you can share with the committee?

Mr. FEITH. Senator, the range of export control issues, as I understand it, is currently under review, and one aspect of that review would be looking at these commercial space issues, but they are not being, as I understand it, singled out. There is a comprehensive review underway.

Senator ALLARD. Do you have any thoughts that you would like to share with the committee in that regard?

Mr. FEITH. My general thoughts on export controls are in line with those of Dr. Crouch. The problem has become much harder lately than it was in the days when I was first exposed to the field, almost 20 years ago during the Reagan administration.

During the Cold War, many of the leading technologies were military technologies, and they were distinctly military. Now, many highly militarily relevant technologies are dual-use, and many of the most advanced technologies are in the commercial sphere rath-

er than the military sphere, and so many militarily significant technologies are very widespread. It makes the problem of export controls substantially more difficult than it was once upon a time.

I know that if I am confirmed, we are going to have a lot of very hard thinking to do about the best ways to improve the export control system. It is a very difficult problem, but it is worth a lot of mental effort, because ultimately controlling the spread of dangerous technologies is a high priority, in my view, a national security interest of the country.

Senator ALLARD. Mr. Feith, I would like to hear you talk a little bit about your feelings about the advantages of a strategic relationship in which both the United States and Russia reduce their nuclear arsenals, not as a result of negotiated agreements, but as a matter of unilateral policy.

Mr. FEITH. Senator, the President has said that the United States is going to make offensive nuclear force reductions. The administration, as I understand it, is developing the concept of a framework, a new framework of relationships, a new framework for the relationship with Russia. The President alluded to this in his National Defense University speech.

The exact nature of that framework, and whether it includes agreements or parallel actions or unilateral actions, or a combination thereof, is something that is being developed, as I understand it now, within the administration in—that is one of the subjects that has been the subject of consultations with our allies that high-level administration officials recently conducted. Secretary Rumsfeld is in Europe right now, and I am confident that when he goes to the NATO defense ministerial he will be discussing that subject there.

I think it is too early to say exactly what the context will be for those reductions, but the President has made it clear that he does not want to retain a larger offensive nuclear force than the United States needs, and wants to address this subject, together with missile defense issues, in a cooperative spirit with Russia.

Senator ALLARD. You support the President in that?

Mr. FEITH. I strongly support that.

Senator ALLARD. Mr. Chairman, I see my time has expired.

Senator INHOFE. Thank you, Senator Allard.

Senator Cleland.

Senator CLELAND. Thank you very much. Thank you, gentlemen, for being on the panel today.

Mr. Feith, were you ever in the American military?

Mr. FEITH. No, sir.

Senator CLELAND. You expect to be the Under Secretary of Defense for Policy, but were never in the American military?

Mr. FEITH. If confirmed, yes, sir.

Senator CLELAND. I understand that you have written extensively about war and peace. In an article in 1988 in the *Washington Times*, you said, "If international law is a bad joke, if treaties can be violated profitably and with impunity, then arms control too becomes a joke, with the laugh being on States that comply with treaty obligations." Do you still think that treaties are a joke?

Mr. FEITH. Senator, I was saying that they should not be a joke. I was saying that I take treaties, I take international law very seriously.

I have devoted a large part of my career to studying the subject and thinking about it, and I am a strong advocate of the United States complying with its treaty obligations, entering into treaty obligations with the greatest seriousness of mind, because we will and we do, and we should comply with our treaty obligations. I was highlighting the fact that unfortunately many treaties, excellent treaties, treaties that would be a fine thing if they achieved their intended purpose, are violated by other countries, and that it is incumbent on the United States to do whatever we can to enforce compliance with those treaties, lest they become a joke. I was making an argument for taking international law and arms control agreements seriously. I was not at all mocking them. I was saying it is important that nobody mock them.

Senator CLELAND. In 1988 you authored an article in which you criticized the effort of President Reagan to put together the Intermediate Nuclear Forces Treaty with Russia. That treaty passed the Senate by 93 to 5. Did you support that treaty at the time?

Mr. FEITH. Yes, I did, Senator.

Senator CLELAND. Let me ask you this. The Chemical Weapons Convention, you wrote in 1994 in the *New Republic*, "The Chemical Weapons Convention is a bad treaty, one that will likely increase the risk of chemical warfare around the world." Do you still believe that?

Mr. FEITH. Senator, I opposed ratification of the Chemical Weapons Convention because I did not think it would achieve its purpose. Its purpose is one that I strongly supported. I testified twice before the Senate Foreign Relations Committee on the treaty and said that I strongly supported the purposes of the treaty. I would be delighted if chemical weapons were abolished from the world.

There was a serious debate, and reasonable people were on both sides of that debate, over the question of whether the Chemical Weapons Convention would achieve the result that I believe both sides of the debate favored, which was the elimination of chemical weapons from the world. I had doubts about the treaty's effectiveness, but the treaty is now the law of the land and, if confirmed, I would work to make that treaty as effective as it can be, because I think that the goal of it is entirely admirable.

Senator CLELAND. That treaty was negotiated by President Bush.

Is it your opinion that the ABM Treaty has collapsed, or is no longer valid?

Mr. FEITH. Senator, I have written with a colleague of mine a lengthy legal memorandum citing a very longstanding 250-year-old doctrine of international law that says that two-party treaties lapse automatically when one of the two parties becomes extinct. The President, however, has said that the United States is complying with the terms of the ABM Treaty. I am happy to support that policy. He has also noted that at some point we are going to be moving beyond the constraints of the ABM Treaty, and he will be making the decision as to the when and how.

Senator CLELAND. With all due respect, if we do not get a handle on nuclear weapons, we will all be extinct.

May I say that you are not hired as the lawyer for the DOD, you are hired for policy. Again, to follow up on Senator Kennedy's question, was Secretary of State Baker right or wrong when he said, "I made the point to President Yeltsin that the United States remains committed to the ABM Treaty." Do you think we should be still committed to the ABM Treaty, or not?

Mr. FEITH. Secretary Baker said that we were committed, and we, as a country, have complied with the terms of the ABM Treaty, and continue to do so to this day.

Senator CLELAND. Regarding the Middle East, you not only opposed the 1993 and subsequent Oslo Accords between Israel and the PLO, but you also suggested that Israel should repudiate or abrogate the Oslo Accords. Is that your view?

Mr. FEITH. Senator, that is not quite what I wrote. What I was saying about the Oslo Accords is that the goal of the Oslo Accords is excellent. If there can be a consensual solution of the Arab-Israeli conflict, that will be a major accomplishment, highly desirable. It would serve the interests of the Palestinians, the Israelis, the United States. The concerns that I expressed about the Oslo process had to do with systematic violations of the Accords that unfortunately neither Israel nor the United States were ever able to remedy, and the failure to remedy those violations created an extremely serious problem, and unfortunately now we are living with some of the consequences of that.

Senator CLELAND. In terms of Iraq, do you still favor a strategy of supporting the Iraqi opposition, including protection by the United States Air Force and necessary U.S. ground troops? Do you think we ought to go into Iraq with United States ground troops?

Mr. FEITH. The United States policy on Iraq, Senator, is now being looked at. The United States has a strong interest, which I know is shared widely on this committee and throughout Congress, in facilitating as best we can the liberation of Iraq. The exact means that are most appropriate at the moment are the subject of review right now.

Senator CLELAND. That is the most disturbing answer of all. As somebody who was committed to a ground force effort in Vietnam with no particular strategy for winning and no particular exit strategy, your answer disturbs me greatly.

Mr. Chairman, my time is up.

Senator INHOFE. Thank you, Senator Cleland.

Senator Roberts.

Senator ROBERTS. Mr. Chairman, I would like to pick up on several topics raised by the distinguished Senator from Massachusetts, and I am sorry that he has left the hearing. I want to talk about the \$100.4 million reduction in the budget on the CTR programs, the IPP programs, the NCI programs, the ISTC programs. That is an explosion of acronyms. Those are all the programs that we have under the Department of Energy (DOE) and the Department of Defense (DOD).

I want to point out that we have \$400 million in the pipeline at the Department of Energy, and we have \$500 million at the Department of Defense for the CTR programs. We spent about \$1.1 billion last time. That comes under the jurisdiction of the Emerging Threats and Capabilities Subcommittee, of which I am Chairman,

at least until 5 p.m. tonight, but there is bipartisan support for these programs by Senator Lugar, Senator Domenici, and Senator Kennedy, and Senator Levin has been outstanding in his support.

We tried to work out a compromise with the House, but we made it contingent—and I am going to ask all three of you what you think about this—on greater transparency in regards to these programs with the Russians, access, and we are working on that, it has been a long, slow road, but we are getting a little better access, greater Russian cooperation, and internal management reform.

One of the problems with these programs is that internal management has been pretty sad. There is another GAO report out in regards to the DOE programs, and we were concerned about a year ago when we found out 70 percent of the money stayed right here in the Department of Energy, as opposed to actually being used in Russia.

I think it is certainly a very positive program, but a program that needs dramatic improvement. I understand the National Security Council is undergoing a review. Any comments, Doug, in regards to the whole proposition? You are for this, but I would assume you are also in favor of transparency, access, greater Russian cooperation, internal management reform, and that at least some of the support of this money should be contingent on those requisite things.

Mr. FEITH. Senator, each of those points sounds sensible.

Senator ROBERTS. Well, thank you. I appreciate that. [Laughter.]

Senator Kennedy also brought up the question in regards to Colombia. I got a little mixed up in terms of his question and your answer. Statutory permission, statutory authority. I think we have the statutory authority, and nobody wants to be in the midst of a civil war, and nobody wants to risk our troops. Senator Cleland has just referred to that. It is one thing to have a cause to fight for. It is another thing to have a cause to fight and die for.

But let me say that we are making some progress, it seems to me, with the drug war and stability in the hemisphere. General Wilhelm, who is the former four-star Marine down there in the Southern Command, pointed out that down there, there are 31 nations, 360 million people, average age 14.

Now, again on the Emerging Threats and Capabilities Subcommittee we have that jurisdiction, and we look at the vital national interests involved here, drugs, immigration, energy, and trade, all four. As a matter of fact, I think it probably rates a higher priority than the Balkans, and I am not going to ask you to get into that. If anybody does not think it does not affect the pump price in Boston or Topeka in terms of energy, take a look at Hector Chavez, who could be the next Fidel Castro in regards to Venezuela. Do not hold me to that if I am ever going to be confirmed for anything, gentlemen. I appreciate that. [Laughter.]

But at any rate, could you comment on that in terms of our strategic national interest, and Doug, you can start off, if you would like. I do not want to risk anybody down there in terms of a civil war, but I think in terms of Colombia and stability of the region, it is very important, is that not right?

Mr. FEITH. Senator, I agree with you that the stability of the whole Andean region, the whole northern part of South America, is an important U.S. national security interest.

One of the reasons that we are in the relatively happy strategic position that the United States now finds itself in after the Cold War is that we have peace in the hemisphere, and on our borders, and making sure that our neighbors remain peaceful and reasonably stable is a very important interest of ours. I think that the items you cited, drugs, immigration, trade, energy, all are important factors that have to be properly weighed in making our policy towards that region.

Senator ROBERTS. I am going to ask Peter, too. Peter, regards from Bob Ellsworth, our former Member of Congress, NATO Ambassador, Assistant Secretary of Defense, Foreign Policy Advisor de luxe and guru. He called me yesterday and said, treat Peter Rodman with all due respect, he is the best, and I agree. Now, with that introduction, what about the Southern Hemisphere.

Mr. RODMAN. Well, thank you, Senator, for including me in the hearing also. [Laughter.]

I am grateful. Well, maybe I should not be grateful.

Senator ROBERTS. Just be careful of what you ask for.

Mr. RODMAN. Yes, be careful what you ask for. That is exactly what I thought. [Laughter.]

No, I am happy to answer that question, and I also want to compliment you and Senator Cleland. I am familiar in a general way with the colloquy which you both engaged in a year ago on the broad question of our national interest, and obviously the Western Hemisphere is an area where we have an enormous national interest and always have, so there is no question that Colombia is one of the biggest, one of the most daunting issues on the agenda. I have to say, if I am confirmed in this position, this will be one of the tough issues that I will have to address, and I am not an expert on Latin America, so I will need to educate myself.

What I have learned as I have tried to read up on this is a lot of questions that we have not faced squarely. Clearly we have an interest in the counterdrug operation, but we also have a broader interest in our relations with these countries, which are now mostly democracies, and in supporting these democratic friends against the challenges they face in the political and security dimension.

But how you disentangle these, or how you keep them together, or whatever, this is an issue I certainly do not have the answer for, because, as has been said, none of us wants to get into a war. The word counterinsurgency scares the hell out of everybody, but we do have an interest in the security, the viability, the strength of a democratic country like Colombia, and unfortunately it has become in part a responsibility of the Department of Defense. All I can say is, I do not have the answers yet, Senator, but I thank you for your kind words, and I know that this is something that has to be at the top of ISA's agenda.

Senator ROBERTS. Mr. Chairman, my time has expired. Let me ask, are we going to have another round? I have an absolutely important question on NATO and a brilliant question in regards to emerging threats and terrorism.

Senator INHOFE. We will do our best, Senator Roberts. Thank you.

Senator ROBERTS. I feel a compelling need for another round, Mr. Chairman.

Senator INHOFE. All right.

Senator Reed.

Senator REED. Thank you very much, Mr. Chairman.

Mr. Feith, let me go back to the issue of the Intermediate Nuclear Force Treaty. You criticize it very severely, and I believe, from looking at your comments, that one of the critical issues is verification, the ability to verify whether the Soviets could, would, in fact, cheat on the treaty, and yet you say today that you support the treaty. Am I led to believe, then, that you would support a treaty that is not absolutely verifiable?

Mr. FEITH. Senator, the evaluation of an arms control agreement is a net assessment, and one weighs the pluses against the minuses. Regarding the INF Treaty, I participated, at the time that the treaty was published, in a study group of five or six people that did an article-by-article review of the INF Treaty that was published by the American Enterprise Institute.

We said in that review that some of us support the treaty, some of us oppose it, but we wanted to just do an analysis and publish what we thought the treaty said, and analyze elements of it, its meaning, identify problems with it, and one of the members of that study group was Richard Perle, who then testified in front of Congress in favor of the treaty, so the study group had people of varying opinions.

I believe that the Senate acted wisely in approving ratification of that treaty, and I think that the treaty has contributed, has been a net benefit to U.S. national security, despite the fact that there were elements of it that were not as strong as other elements.

Senator REED. I raise the question because in the context of our recent debate on the Comprehensive Test Ban Treaty, one position that was advanced by many opponents was the fact that they could not be absolutely verified, that there was a certain merit, of course, to having a treaty, but it could not be absolutely verified.

First of all, let me ask for the record, what was your position on the Comprehensive Test Ban Treaty, and what was the reason, if you opposed it, that you opposed it?

Mr. FEITH. Senator, I opposed ratification of the Comprehensive Test Ban Treaty, for the reasons that Secretary Rumsfeld has highlighted: that there were serious verification problems with it, that the verification problems were significant, that there were issues of the military significance of explosions that could not be effectively detected, monitored.

Also, there were serious questions about whether we could maintain a safe and reliable and effective nuclear deterrent in the absence of testing, and Secretary Rumsfeld has highlighted those as problems. I think that again the Senate acted wisely in withholding its support for ratification of the Comprehensive Test Ban Treaty.

Senator REED. In that light, would you recommend the departure from the current moratorium on testing, and engagement in testing of nuclear weapons by the United States?

Mr. FEITH. No, Senator. At the moment, the Bush administration is maintaining that moratorium, and I am happy to support that policy.

Senator REED. Dr. Crouch, the same question. Would you recommend a departure from the moratorium on testing, and engagement in testing nuclear weapons?

Dr. CROUCH. I think you may know, Senator, that I am on record, having supported nuclear testing in the past, I believe that nuclear testing has played a vital role in maintaining the security and safety of our nuclear weapons.

However, there is a review going on right now of not just the issue of testing, but our entire nuclear infrastructure, stockpile and the like, and in the context of that review I think this issue is going to be taken up.

I support the President's position today, which is that we will maintain the moratorium on nuclear testing. I think one of the issues, if I were confirmed, that I would have to be very involved in is looking at the question, for example, of what are the alternatives to testing. How effective would a stockpile stewardship program be in maintaining the infrastructure and the ability to test, for example.

One of the things that the Secretary highlighted that I think is very important is, how do you maintain the personnel, that is to say, the people who know how to do these things, in an age where the number of nuclear weapons, obviously, as the President said, are going to go down. It seems to me that in some respects, that as we bring that stockpile down, which I support consistent with our national security goals, we rely more and more on fewer numbers and fewer types of weapons. It is essential that those weapons be safe, we understand their effects, we understand their reliability. It is an issue that I am going to have to take very seriously and will take very seriously, if confirmed. I will look at it. I would not rule it out at this point, but I do not think I could say yes, positively, at this point, I am going to recommend that.

Senator REED. I believe that you have seriously considered this issue before, when you came to a much more definitive conclusion that you would urge testing, but I thank you for your answer, Doctor. Thank you very much.

Thank you, Mr. Feith. Mr. Rodman, I am sorry. [Laughter.]

Senator INHOFE. Thank you, Senator Reed.

Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman. I want to thank each of you for your service to your country over the years, and the fact that you have written and been engaged in matters of important public policy over the years should be something we are thankful for, that you have been able and willing to sign your name to articles, to engage in some of the most important issues facing our country. As the years go by, not everything I have ever written I am pleased with, and I am sure the same will be true for you.

Dr. Crouch, how many years ago did you write this legal opinion about the existence of the Soviet Union?

Mr. FEITH. I think, Senator, it was I who wrote that.

Senator SESSIONS. Mr. Feith, excuse me, yes. How many years ago was that?

Mr. FEITH. I believe it was published in 1999.

Senator SESSIONS. Regardless, my thinking is simply this—I did not think it would be that many years ago, but I guess my thought is simply this. You were writing a legal opinion about a matter that is, I think, undisputed. No good lawyer could come out with a different opinion on this.

Somebody may think we ought to continue this treaty, but I am not at all of the belief that you could rationally conclude that we are bound to a treaty with a dead empire that is, in fact, extinct, that is so totally different, Russia today, smaller, a friendly power, a democracy compared to the Union of Soviet Socialist Republics that threatened the world and democracy for 50 years. So to me I think you did the right thing on your legal opinion and should not be criticized for it.

We have been talking some about unilateralism, and I know members of the world community, whoever they are, express concern that the United States is acting unilaterally. I remember, I was at a North Atlantic Assembly meeting with delegates from other parliaments around the world, and met with a member of the House of Lords.

He suggested we should not be involved in the Balkans without a vote of the United Nations, and I responded to him, sir, if the United Kingdom were in serious trouble, would you prefer that the decision be made on whether or not to deploy the United States military to defend the United Kingdom by the United Nations or by the United States? He acknowledged that was a valid consideration.

I am concerned that in recent years we have felt an almost politically correct need to subordinate our national interest to world bodies that may not be always rational in their conclusions. I think it is important that we maintain our ability to utilize the power that the American people sacrifice to create, so that we can use it in our just national interest, in the interests of the world.

Mr. Rodman, you have been ignored on this. How do you feel about this unilateralism theory?

Mr. RODMAN. Senator, I share your broad sentiment. The President and Congress, particularly the Senate, share vital constitutional responsibilities for the national interests of the United States which they cannot delegate to anyone else.

I also want to say that I agree with some things Doug said a few moments ago, particularly in the area of treaties, but the main point is, even though we are predominant, we benefit from working with others. This President, in fact, not only in this campaign, but more recently, has put enormous emphasis on the importance of working with allies, working with others, sharing responsibility if we can with others, so we benefit from that, but in the last analysis, particularly where vital issues of national security are concerned, we cannot delegate the decision to others, and the United Nations again can be a useful supplement to our policy.

It is a way of engaging other countries on issues where we want to cooperate, and we want others to join, but there will always be decisions, cases where we have our own decision, and others may

disagree, but we have to try to persuade and so forth. But there will be cases where we will do things that others will not agree with. We try to minimize it, but we cannot delegate our sovereign responsibility.

Senator SESSIONS. Mr. Feith and Dr. Crouch, would you agree that ultimately the use of American power is the responsibility of the Government of the United States, and that we ought not to subordinate our ability to utilize our power, except through the treaty-making power, to other groups around the world?

Mr. FEITH. Senator, I think that your citing of the treaty-making power is an important point, because it highlights the wisdom of the Founding Fathers in making decisions of that importance about using force, key issues of national defense and national sovereignty, subject to the cooperative process of the Senate's advice and consent on treaties. I certainly agree with you that the Senate has an extremely important role to play in deciding whether it is in the national interest for us to bind ourselves to other countries on matters of that importance.

Dr. CROUCH. Yes, Senator, I share the views that have been articulated by my colleagues here. I think that the issue of unilateralism is one that this President has done a very good job of demonstrating that he is committed to working with allies.

He has been very engaged so far, and the administration, in my view, has been very engaged so far in consultations across a wide range of issues, not just on specific topics. I think that it seems to me if I can add one thought here, is that we are not just another country. We have a leadership role to play, and that does not mean that we run around telling other countries what to do. I do not think that this administration has done that, or certainly would do that. It certainly would not be any guidance that I would provide. I think that we must exercise that leadership role, and I would not want that called unilateralism. I would rather it be called leadership.

Senator SESSIONS. Well said. I agree with that. I think it is exceedingly important that we work with our allies and friends around the world, but at the same time, we need to know and the world needs to know that we are capable of making our own critical, independent decision if need be. One former Clinton administration official who testified here wrote that we talk about a post-world war strategy. He said when we talk about a post-world war strategy, it is an admission we have not developed one yet.

I think it is a challenge that each of you will have to think clearly about the myriad of problems, this different world we are in, this post-Soviet world, and to help us develop a policy that all parties, all people in this country can unite behind, and that will preserve and protect and defend the great freedoms of this United States, and promote peace throughout the world and economic prosperity.

I am excited about your nominations. I think it is going to be a refreshing change in the Defense Department. You have great opportunities to make some historic progress. I wish you the best, and assure you I will do my best to help you.

Senator INHOFE. Should we interpret that as that you are going to vote in support?

Senator SESSIONS. You certainly can, Mr. Chairman.

Senator INHOFE. Senator Nelson.

Senator BEN NELSON. Thank you very much, Mr. Chairman.

Mr. Feith, one could have concluded from many of your writings in your legal memorandum that you do not think very much of arms agreements or treaties, and some people have suggested that maybe some of your views may even get nearly off the chart. I would not suggest that confirmation conversion here, but there does seem to be a shift in your thoughts about the arguments. The bright line of opinion seems to pale a little bit under examination. I will be anxious to know what your policy advice will be to the White House, if you are confirmed.

Perhaps Senator Roberts will be long remembered for the Roberts Rule which he introduced today, and that is—always have a disclaimer associated with any writings in case you come before this committee or any other committee for confirmation.

What I would like to do is ask a little bit more about Plan Colombia. I know that you said that you have not had the opportunity to get into it to any great extent, but in terms of policy—and I am not trying to set this up because it could be any or all of the above—is it a civil war, is it a drug war, is it nation-building, is it being the world policeman, is it any or all of those, or is it something else—civil war, drug war, nation-building, or being the world policeman?

Mr. FEITH. Senator, I think that the problem in Colombia is all of the above, and probably a few more things you could list.

Senator BEN NELSON. Is it appropriate for us to be in any of those roles, or all of those roles?

Mr. FEITH. As I understand it, Senator, our role right now is focused on the counterdrug activities of the Colombian armed forces. It is difficult to draw very neat lines between these different areas you have highlighted. It is quite clear that if we enhance the capabilities of the Colombian forces to deal in their counterdrug operations, then necessarily you are enhancing their capabilities overall, which ultimately redounds to the benefit of the Government in dealing with the insurgency.

So it is not a subject that lends itself to neat compartmentalization, but I think that the focus of the DOD efforts, as I understand the situation, is appropriate. I mean, it is within the bounds of the law, and the broader points that were made earlier by Peter Rodman and others about the general importance of stability in our hemisphere are an important element of our analysis of that issue.

Senator BEN NELSON. Mr. Rodman, not to leave you out, would you respond to that, too, please?

Mr. RODMAN. I share the sentiment. We have decided as a country to emphasize the counternarcotics effort. That is what two administrations and Congress have decided, but I think inescapably we also have a stake in Colombia as a longstanding democracy and a friend, and I would not call it nation-building. I think that phrase brings to mind more ambitious things that we may not in other parts of the world want to attempt.

I think we do have a stake, and we should not shy away from saying it, a stake in helping Colombia, which is a friend, to survive. It happens to be under assault of extremists of both the right and the left, and we have chosen not to engage—we have not chosen

to get into the civil war, but I think inescapably, as Doug said, as we offer any help we give them we are hoping that they will be intact as a State.

Now, you mentioned world policeman. I do not think that applies. I think that the Western Hemisphere, if we do not have a vital interest in the Western Hemisphere, then you know, we do not have a vital interest anywhere. This is a friendly country, a pivotal country that we have a stake in, and I think obviously as a country we are being very careful and cautious, and I do not have any answers about what we should do, but I think there are good reasons why we are involved there.

Senator BEN NELSON. Would that apply to the Balkans, or Haiti, or Somalia?

Mr. RODMAN. Every case is different, and I have different opinions about different issues, and on the Balkans, I support what the President has said. We are engaged there, and we and our allies need to make collective decisions one way or another.

Haiti is something in the past. I had some doubts about it when it happened, but it is not on the current agenda.

I think we have to be selective. I think this is the President's philosophy, and it is shared by many others. We cannot get engaged everywhere. We need to look at where our national interests are at stake, and it is something that the President and Congress, one hopes, will share in deciding as a country what we do.

Senator BEN NELSON. Thank you, Mr. Chairman.

Senator INHOFE. Thank you, Senator Nelson.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman.

Mr. Feith, thank you for your time, and for visiting and sharing some of your thoughts with me. I was interested in your asymmetric threat statements. In answers to advance questions you submitted to the committee regarding asymmetric threats to the United States and appropriate responses, you mentioned a range of asymmetric threats, including terrorism and threats against our space and information systems. You state that in light of these threats, including biological weapons and conventional attacks, the administration's response is, and I quote, the development and deployment of missile defenses, unquote. How does this policy protect us against attacks on our information systems or against a biological weapon delivered by terrorists?

Mr. FEITH. Senator, this issue of asymmetric threats, or emerging threats, is one that I know that members of this committee, Senator Levin in particular, have been assiduous in highlighting, and it is an enormously important question, and it is of great value that this committee is focused on it as it is.

The topic covers a range of threats, as you mentioned. An element of it is the threat of the use on American territory of weapons of mass destruction, and there are, of course, various means by which those weapons could be delivered. One of them, which is the vulnerability that the missile defense program will attempt to defeat, is the danger of missile attack, but it is clear that that is not the only means by which that threat can be posed against U.S. territory.

Senator AKAKA. You have mentioned also that missile defense is not a threat to China, rather, it is intended to defend against a newly emerging ballistic missile threat resulting from proliferation, and also against unauthorized launches. Could you please clarify the statement, and what you mean by that, and what is the administration's point of view of any threat posed by China. Are you concerned about Chinese military modernization, and if so, what type of threat do you see it posing to us, and what should our response be?

Mr. FEITH. Senator, I am not sure that I heard the whole beginning of your question. As far as the issue of Chinese military modernization, this is a serious issue, a serious challenge for the United States. The Chinese have had a military modernization program underway for years, an important element of which is modernization of their offensive nuclear forces. This is something that is of concern.

I think President Bush captured well the complexity of our national security view of China when he said, we have different values, yet common interests in the world. We agree on the importance of trade. We want the citizens of both countries to enjoy the benefits of peace, so we need to work together on global security problems such as preventing the spread of weapons of mass destruction. He said, I will always stand squarely for American interests and American values, and those will no doubt sometimes cause disagreements with China, yet I will approach our differences in a spirit of respect.

I support the President's views on our relationship with China, and I think that the Defense Department has an important responsibility in protecting U.S. interests in Asia, helping to deter and defend against threats, including the threats that derive from the Chinese military modernization program that you have referred to.

Our challenge is to help shape a security environment in which stability in Asia can be maintained as China continues to emerge as a power in the region. That emergence is fairly inevitable, and we have to accommodate, we have to modify and continually review our response to it—there is no way to prevent China from getting bigger and stronger—but we have to do so in such a way that we can preserve our interests and those of our friends and allies in the area.

Senator AKAKA. Part of my question was whether our missile defense, whether it is a threat to China, and ask that you clarify the statement. With all that has been said about our missile defense, I was concerned about whether it really makes a difference, and why our missile defense is not a threat to China.

Mr. FEITH. Senator, the President has stated that the purpose of our creating missile defenses against a limited threat, and he emphasized the word limited, is to address the problem of the proliferation of missile capabilities to rogue countries, and to deal with the problem of unauthorized or accidental launches. The missile defense concept that the President has been propounding is not directed, he has said, against Russia or China.

Senator AKAKA. Let me ask you this, could you tell me which arms control treaties you support which cannot be completely verified?

Mr. FEITH. Senator, I personally do not use the term completely verified. It is just not the way I have analyzed arms control agreements. I think that there are issues of verification that fit into the broader assessment, net assessment of arms control agreements that one does in evaluating whether they are a net plus from the point of view of U.S. national security policy. There are agreements where the verification regime—or there are proposals, sometimes, for agreements where the verification regime would not allow the United States, for example, to detect even militarily significant violations of the agreement. If that were the case, I would say that is highly problematic, and I would tend to oppose an agreement of that kind.

If you ask, what arms control agreements I support, there are various arms control agreements. I mentioned that the INF Treaty, the Intermediate Nuclear Forces Treaty, is an agreement that I support, START I, START II. I think that the approach to chemical weapons arms control embodied in the Geneva protocol, which bans the use of chemical weapons, is a sensible, useful, good approach.

If you ask, are all of those agreements absolutely verifiable, the answer is, there may be violations to a greater or lesser degree of some of them or of aspects of them where we would not know for sure that they have occurred, but that does not mean that they are not of net benefit to the United States.

I think we need to evaluate the issue of verification when we look at arms control agreements, and I know that this is something that the Senate does, and does with great seriousness, and it is an important function of the Senate in the treaty-making process.

Those issues of verification have to be evaluated as an element of the overall assessment of what the treaty sets out to accomplish.

Senator AKAKA. Thank you very much, Mr. Chairman.

Chairman WARNER. Thank you, Senator, very much. Gentlemen, I am sorry I had to leave, but I am delighted to come back and conclude these matters here with you this morning.

I would like to go back to the ABM Treaty. I was not present during all of the colloquy, but I would like to give you my own views. I have had some familiarity with this treaty for many years. I was in the Department of Defense as Secretary of the Navy at the time the work-up documents were made, preparatory to the meeting in May in Moscow when President Nixon and President Brezhnev executed that treaty. I happened to have had the privilege of being in Moscow at that time.

I was there for the Incidents at Sea Agreement, an integral part of the group that worked on it, and I have been supportive of the ABM concept, but I think our President, President Bush, has very correctly, very properly enunciated his goals with regard to the limited threat that faces this Nation from the rogue missile or the accidental or unintentional firing.

Now, people tend to say, oh, well, it could never happen, but regrettably the world has watched two tragic events where the most highly skilled officers were in charge of two submarines. One, the first, the loss of the Russian submarine with all hands, apparently because of some accidental situation occurring aboard that vessel, full details of which we do not have, but we know enough that it

was clearly an accident. We have reason to believe that that vessel did have nuclear weapons aboard, but we saw an accident happen.

We saw a second accident happen with a submarine of our own, commanded by what we had every reason to believe was a highly skilled naval officer, but an accident happened.

So anyone who says that accidents cannot happen, I point to these two incidents to show that they can happen, and therefore I think our President is absolutely right in taking the initiative to prepare this country to do whatever we can to destroy an incoming missile, whether it be from a rogue nation or an accident.

Now, in that context, I draw your attention to the National Missile Defense Act of 1999, adopted here in the Senate and the House, now the law of the land signed by the President. My first question to you is, as I look at the actions taken by President Bush, I see of intention, in any way, other than to follow that law. Do you agree with that, Mr. Feith?

Mr. FEITH. Yes, I do, Mr. Chairman.

Chairman WARNER. Thank you. Anyone else at the table, Mr. Rodman?

Mr. RODMAN. I certainly agree.

Chairman WARNER. I would like to go back to the treaty itself. It is clear to this Senator that the President has every right to, within the current framework of the treaty, to initiate research and development programs on systems that previous presidents for whatever reason decided not to initiate. Do we agree on that?

Mr. FEITH. Yes, sir.

Chairman WARNER. That if the research and development is permitted, it would give this Nation some better understanding on the feasibility or nonfeasibility of different types of approaches to the defense against ballistic missiles, do you agree with that?

Mr. FEITH. Yes. That is my understanding, too, Senator.

Chairman WARNER. It is my hope that the President, under his leadership, with the current President of Russia, can work out some framework, as President Bush said, either by way of amendments, or a new framework by which to take further steps beyond the research and development phase on new systems. Am I not correct in that?

Mr. FEITH. Yes. I know, Mr. Chairman, that there is a great interest in exploring cooperative arrangements with the Russians.

Chairman WARNER. I think he has made progress in sending the teams forth throughout the world on this issue, and that you see a better understanding of other nations, not just of to the threat to the United States, but indeed the threat to Russia. Russia is within a perimeter of firings from other nations that gives them almost a greater vulnerability than the United States to some systems.

So I am hopeful that eventually this can be worked out, that a new framework can be established so that the research and development on certain new concepts can be carried into the testing and, if necessary, into the deployment phase, so I think we have a clear understanding on that.

Now, Mr. Rodman, on the question of NATO, I think NATO has been the most extraordinary military pact in the history of mankind, and we have to do everything we can to keep that pact and

to make it work as it has these many years to deter aggression and, if necessary, then to combat aggression. It deterred for some half-century. Then, of course, when the aggression occurred in the Balkans, it was employed, 19 nations, to successfully bring about the fighting in that conflict.

But I tell you, whether you know it or not, I opposed the enlargement of NATO in years past, and I intend to, not arbitrarily, look very carefully at any future proposals to enlarge NATO. I feel that we have to make what is in place work, and to work, and work better, before we proceed to further enlarge it.

I think all the Nations have to be given an opportunity to properly fund their participatory obligations to NATO, and then to train what they have in place, to integrate their forces so that, indeed, they can be viewed as a strong initiative to strengthen NATO.

I would be interested in your views on the subject of further enlargement. That subject will be brought up next year.

Mr. RODMAN. As you say, that is one of the important issues on our agenda the next few years, and I was an advocate of enlargement in the first go-around, and the President—I think the executive branch and the Senate are only at the beginning, I think, of the process, and I do not think the President has made any decisions that I am aware of about exactly who we will advocate.

Chairman WARNER. I agree.

Mr. RODMAN. I assume there will be consultation with Congress, but I do want to say that I also want to defer to my colleague, J. D. Crouch, because I think if my understanding is that Secretary Rumsfeld may be rearranging some of the responsibilities in the policy office, so that area, while I have a strong interest in it, the NATO issues may move to the Office of International Security Policy. I am happy to answer questions that you have.

Chairman WARNER. I just make really more of an observation, and a personal one, that I think we have to make what is in place work, and work very well, before we begin to add other nations. That is my view.

Mr. RODMAN. I hope the executive, and the President, and the Senate, this committee, work closely as this policy evolves.

Chairman WARNER. All right. Mr. Feith, I hope that you commit to the extent you can on behalf of the Secretary of Defense to involve Congress, particularly those committees that have an integral responsibility in the question of security affairs, as we proceed with this NATO enlargement issue.

Dr. Crouch, your views.

Dr. CROUCH. Thank you, Mr. Chairman. I think it is essential that we work with this committee. I have to say that I had left public life when the first NATO expansion occurred, and I began a skeptic, but I have come to believe that this was a wise choice.

Chairman WARNER. You mean the past round of enlargement?

Dr. CROUCH. Yes, the past round of enlargement, but I mention that because I want you to know that I do not come to this with a preset set of ideas about what we should or should not do. I think that I would underscore one point, and that is that NATO has been a very effective alliance, so that a principal question for me beyond the general question of, is this in the National security interests of the United States, is will NATO retain its capacity for collective ac-

tion? If bringing states in weakens that capacity, I, myself, I think, would not be supportive of that move, and I do not think the Secretary or the President would as well.

Chairman WARNER. Those are the correct criteria by which to view this subject and, indeed, I approach it with an open mind.

Dr. CROUCH. I hope to work closely with the committee on that, if confirmed, Mr. Chairman.

Chairman WARNER. I also believe that Russia has strong feelings on this issue, and if I were to prioritize the issues before this Nation at the present time, I would put the reconciliation of the differing viewpoints on ABM as the top priority. Perhaps the ABM Treaty, if it is worked properly, which I am optimistic that the President can achieve, then we can move on to other issues.

Would you care to comment, Mr. Feith, on the reallocation of responsibilities?

Mr. FEITH. Mr. Chairman, I think what Peter Rodman was referring to is that I believe the Secretary's current thinking is that the International Security Policy Office will have responsibility as a geographical matter for Europe and Eurasia more generally.

Chairman WARNER. Would you undertake, and/or the Secretary, to advise the Senate as quickly as you can if there is a reallocation of responsibility?

Mr. FEITH. Absolutely, as soon as the thinking crystallizes.

Chairman WARNER. Now, to the question of the Balkans, and the policies of this administration with regard to the current level of deployments and the future level of deployments. There has been some publicity to the effect that maybe the views of Secretary Rumsfeld could be at variance with the views of Secretary Powell.

I think Secretary Powell has to look at it from the standpoint, again, of NATO, first and foremost, and the question of the relationships with the NATO countries. Let there be no perception that we are less than a full partner in NATO and its missions, and the fulfillment, and the conclusion of those missions.

On the other hand, Secretary Rumsfeld is concerned that much of the costs of that operation prior to the last fiscal year were borne by the military services, which negatively impacted on procurement and readiness and modernization.

Would you care to comment on what you perceive is the current policy with regard to that withdrawal?

Mr. FEITH. My understanding is that some of the remarks that Secretary Rumsfeld has made about the issue of United States deployment in the Balkans, in particular in the Bosnian deployment and the Kosovo deployment, have given rise to some misunderstandings. As I understand it, the Secretary values the missions.

Chairman WARNER. I would suggest you add a name to "Secretary." We are talking about two now.

Mr. FEITH. Secretary Rumsfeld. I think he and Secretary Powell share an evaluation of the missions as important. Secretary Rumsfeld has been, as I understand it, emphasizing that the United States should configure its participation in those missions in the best, most efficient fashion, and that the missions have evolved over time.

For example, in Bosnia the initial mission was more military. The current mission includes an important element of civil imple-

mentation, and the Secretary has raised the question of whether we are appropriately configured to do the mission as it exists right now. This has been, I think, interpreted, misinterpreted, as somehow devaluing the mission or wanting to pull U.S. forces out unilaterally.

Secretary Rumsfeld has been, I think, emphatic on the point that the United States went into the Bosnian mission as part of the alliance, and is going to remain part of the alliance, and as I think he put it, we went in together, and if we come out, we are going to go out together, and has no desire to disrupt the harmony of alliance work on that subject.

Chairman WARNER. Thank you very much.

Senator Bill Nelson.

Senator BILL NELSON. Thank you, Mr. Chairman. It is my understanding, Mr. Feith, earlier in the testimony this morning that you had stated that you agreed with the goal of the Chemical Weapons Convention (CWC), but you disagreed with language in it. Could you share with us what is the language to which you object?

Mr. FEITH. Senator, I certainly do agree with the goal of the Chemical Weapons Convention, and think that the world would be much better off if chemical weapons were entirely abolished, and nobody had them.

My concern about the convention itself was more than a matter of language. It was the question of whether the approach to chemical weapons arms control in that convention was a sensible approach. My view was, there is a very good chemical weapons treaty already in existence. It is the Geneva Protocol, one of the most venerable of the arms control agreements, and it bans the use of chemical weapons in war.

The principal problem of chemical weapons, the principal problem of the chemical weapons threat, in my view, was that that treaty had been on a number of occasions violated most horrifically and recently by the Iraqis in their war with Iran. The Iraqi Government of Saddam Hussein also used chemical weapons against the Iraqi Kurdish citizens, and when that occurred, the international community did nothing to enforce the existing treaty.

Then that same international community that dropped the ball, as it were, that failed to enforce the sensible, verifiable ban on the use of chemical weapons produced a ban on possession of chemical weapons, and by undertaking to ban possession, it was taking on itself a detection and monitoring, a verification job that just cannot be performed, and it was quite clear that our intelligence lacks the capability to detect even militarily significant violations of that agreement, and that was one of my principal concerns.

So my view was, it would be much more constructive for the goal that I think everybody in the debate supported, if we had focused on putting teeth into the enforcement mechanisms for the ban on the use of chemical weapons, rather than to pursue the ban on possession. Having said that, I just want to add that the Chemical Weapons Convention is now the law, and it is the administration's job to enforce that and make it as effective as possible, and if confirmed, that would be my focus.

Senator BILL NELSON. Do I interpret correctly that what you are saying is that the CWC, in your opinion, is superfluous, given the fact of the Geneva Convention?

Mr. FEITH. I think that rigorous enforcement of the Geneva Convention would contribute much more to addressing dealing with the threat of chemical weapons than the nonpossession ban of the Chemical Weapons Convention.

Senator BILL NELSON. So in essence you are saying yes, that it is superfluous. Do you think it is harmful?

Mr. FEITH. The concern I had about some harm that I saw in the Chemical Weapons Convention had to do in particular with certain provisions that required the sharing of technologies regarding defensive gear and defensive measures, and the concern that I had is, there is an obligation in the treaty to share chemical weapons defense technology, and there is a danger there that a party that would enter into the convention not in good faith could obtain by its party status access to defense technology that could enhance the ability of that party to use chemical weapons offensively, and that is a serious problem.

I think a number of the problems with the Chemical Weapons Convention that a number of us highlighted in the course of the debate were addressed very seriously by the Senate and were, to some extent, remedied in the ratification action, in the ratification approval that the Senate took, and so I think that was a constructive exercise.

Senator BILL NELSON. If confirmed, and you consider that part of the CWC a danger, how would you then implement the CWC as law?

Mr. FEITH. We would have to implement it as carefully as we can, fulfilling our treaty obligations but doing so in as prudent a fashion as possible to minimize the dangers.

Senator BILL NELSON. Could you help me understand what you mean by prudent?

Mr. FEITH. All I can say at this point, Senator, is we would have to keep the dangers in mind. One of the things that comes to mind, for example, is, the Nuclear Nonproliferation Treaty, a treaty that I think was also a net plus, and contributed to the slowing down of the proliferation of nuclear weapons capabilities, nevertheless had elements to it that have been a problem.

For example, in the International Atomic Energy Agency inspection regime that is part of the Nuclear Nonproliferation Treaty, Iraq is a party to the Nonproliferation Treaty. After the Gulf War, when the U.N. weapons inspectors talked to Iraqi nuclear engineers, they learned that Iraqi nuclear engineers participated in the International Atomic Energy Agency inspection regime, and through that participation, learned how better to conceal the Iraqi nuclear program and Senator, our intelligence community was stunned at the effectiveness of the Iraqi concealment program for their nuclear weapons program. They were much farther along, we discovered after the war, than our intelligence community thought at the time, and one of the reasons they were so far along is, they had signed on to the Nuclear Nonproliferation Treaty, participated in the IAEA inspection regime and knew how to do it, how to conceal what they were doing.

Now, that is an example of how a perfectly well-intentioned apparatus can sometimes be put to bad use, and we need to protect against problems of that kind.

Senator BILL NELSON. Indeed we do. Now, with regard to the CWC, would you share with us what other efforts you think that our country might take to protect ourselves from chemical weapons developed and deployed? I would be interested in hearing your ideas.

Mr. FEITH. Senator, one that comes to mind right away is ensuring that we have appropriate defense capabilities in the chemical weapons area. Defense capabilities means things like protective gear, detection and analysis capabilities, so that if chemical weapons are used against our forces we can know that they have been used and what the agent is, and also the appropriate medical treatment for the different agents, chemical weapons agents that we are likely to confront.

Chemical weapons are most effective against unprepared forces, and to the extent that our forces are properly prepared with defensive gear, and defensive technologies, it will contribute to our deterrence.

Senator BILL NELSON. Thank you, Mr. Chairman.

Chairman WARNER. Thank you very much.

We are going to go into a second round now, and I am going to remain.

Mr. Roberts.

Senator ROBERTS. Doug, in your response to the committee's questions, you stated, another major challenge is dealing with so-called emerging threats, the ability of hostile forces, State and terrorist organizations to cause serious damage on U.S. territory even though they cannot defeat our armed forces. You said this field of emerging threats deserves the most serious attention of defense policymakers. I could not agree more.

Basically, I think, in assessing our vital national security interests, we have had reports from the CSIS folks, the Hart-Rudman Commission, the Gilmore Commission, the Bremmer Commission, and the Rand Corporation, all of them indicating that if not number 1, it is close to it. In regards to the threat to the individual American citizen, homeland security has now forged to the top.

I am Chairman of the Emerging Threats and Capabilities Subcommittee, a newly formed subcommittee by the distinguished chairman. We had a hearing here about 3 weeks ago with the Appropriations Committee, the Armed Services Committee, and the Intelligence Committee. We invited 46 Federal agencies to come up here, and basically asked them, what is your mission, who is in charge, what do you do? The FBI said we are in charge, FEMA said they were in charge, and finally the sheriff of Arapaho County said he was in charge, that he was a first responder.

Now, I understand you are going to have an Assistant Secretary in charge of Special Operations, Low Intensity Conflict, or an outfit called SOLIC. That is the acronym for that DOD agency. Now, about a year ago we asked four people to come up from the Department of Defense, and I asked them to testify in order of who is in charge on terrorism, and none of them knew which to go first. Now, we legislated, however, that there should be an Assistant Secretary

for Terrorism, if that is the proper word, or homeland security, and you are going to be in charge of that person, is that right?

Mr. FEITH. The Assistant Secretary for SOLIC reports to the Under Secretary of Defense for Policy, so if confirmed, the Assistant Secretary would report to me.

Senator ROBERTS. If confirmed, if we get past all of the articles and the editorials, et cetera, et cetera, but at any rate, that person would report to you, is that correct?

Mr. FEITH. Yes, sir.

Senator ROBERTS. OK. Now, some people feel that the DOD made a mistake in not being in charge of homeland security. That went to the Justice Department. Now we have FEMA being the facilitator for the review by the Vice President on this. Do you have any thoughts on DOD's role, and I am specifically interested in the National Guard, the RAID teams that we have.

You are going to have people on the scene. You are going to have—my gosh, you are going to have the RAID teams, special units, Red Cross, FBI, FEMA, first responders. It is going to be a real challenge. Any thoughts on DOD's role?

Mr. FEITH. Senator, it is bureaucratically very complex. It is conceptually very complex. To handle this problem within the United States requires great sensitivity to the issues of civil liberties and the appropriate role of the Defense Department in supporting civil authorities within the country. It is a hard problem, and the messiness, as it were, of the bureaucratic structure I think reflects that.

Senator ROBERTS. Yes, but if an incident like this happens, you know DOD will be called on.

Mr. FEITH. Absolutely. When it comes to what is now called in the bureaucracy "consequence management," the Defense Department has real expertise, and it knows about analyzing, for example, chemical agents, or biological agents, it knows about protective measures, it knows about decontamination. Those are special talents that have been developed within DOD, and therefore the Defense Department has an extremely important role to play if there were a terrorist incident, a use of weapons of mass destruction in the United States on U.S. territory, but that role has to be fitted into a general Government program. DOD is not the lead agency. DOD would be supporting the civil authorities in that area, and working to make sure—I have not mastered this very complex field, but I am at least aware of one of the key challenges, which is working to make sure that we have the bureaucratic structure in place so that if a terrible event like this occurs, DOD can most effectively bring its own capabilities to bear in support of the civil authorities.

Senator ROBERTS. I appreciate that answer. I would just like to say that I want to thank the chairman for his question on NATO, and thank Dr. Crouch for indicating the number 1 concern is collective action. As we all know, we had the situation with our allies now talking about something called ESDP, or ESDI. I do not know about the third way, but the French and Germans seem to have their own way. Very little monetary investment in that.

Wes Clark just wrote a book about the 19 nations and our Kosovo effort. It was like herding cats. Those are my words, not his.

I want to just mention to you the strategic concept adopted by NATO two summers ago, as opposed to collective defense, the mission of NATO now and the United States I assume also involved missions in Europe as to crime, drugs, environment, ethnic violence and repression, peacekeeping.

I am worried about this. I am worried about our collective action and our role in regards to NATO, and in regards to NATO expansion more especially with the Balkan States. If we are worried about the ABM Treaty and we expand NATO into the Baltic States, you talk about a sharp stick in the Russian eye. That is it, so I have a lot of hesitation. I understand all three of you indicated school is still out in regards to NATO expansion. Is that a proper definition?

Dr. CROUCH. I do not know that we would put it exactly that way, Senator, but I think yes, and I think the administration at this point, from my understanding, has made no commitment one way or another on this, but I think it is going to be an issue that we are going to have to face in the next year, and as I said, my personal views were that I have a very open mind on the subject.

Senator ROBERTS. Peter, here is another chance.

Mr. RODMAN. I think you are right, obviously no decision has been made about who or which. Obviously, there have been general expressions by the President that he is leaning forward, and there will be a NATO enlargement. I think that may be a fair characterization of some of his statements, but certainly the alliance as a whole has to be consulted and the Senate has to be consulted, so I would express it that as a country we are at the beginning of considering exactly what is going to happen.

Mr. FEITH. I agree with what both of my colleagues have said, Senator. The President has said that we support the open door principle within NATO, but there are criteria for admitting new members, and those criteria have to be met. There has to be a scrupulous review of the circumstances to make sure that the interests of the United States and the interest of the alliance as a whole are satisfied in the decision about moving forward. I share my colleagues' view that this is a very serious, important, and difficult subject, and I also will approach it with an open mind.

Senator ROBERTS. I thank the chair, and I thank my distinguished colleague from Oklahoma.

Chairman WARNER. Thank you very much, Senator.

Senator Levin, we are now on a second round.

Senator LEVIN. Thank you, Mr. Chairman.

Mr. Feith, my difference, and I think the difference a number of us have with you relative to ABM does not relate to the question of whether or not it would be wise to deploy a missile defense system unilaterally and withdraw from the ABM Treaty. That is a separate issue, an important issue. The problem is, you do not think there is an ABM Treaty. You do not think there is an INF Treaty. Our treaties, according to your view, are lapsed. INF, you say, you support. There is no INF Treaty under your view. You are in sharp difference with the Bush administration's own view, which is that there is a treaty in effect. They are seeking to modify that treaty. They have offered amendments to Russia to modify a treaty

that you say no longer exists. INF you say you support. On the other hand, under your theory, there is no INF Treaty.

The Incidents at Sea Treaty, which our good chairman, by the way, Senator Warner, perhaps I could interrupt just for 1 second, who negotiated this treaty and signed this treaty, there is no Incidents at Sea Treaty any more, I assume, under your theory. It has lapsed.

All right, that one still is with us.

Mr. FEITH. I believe so.

Senator LEVIN. OK. I know the chairman will be happy to hear. We will ask you for the record what the difference is, then, between the ABM Treaty, which you say no longer exists, and Incidents at Sea Treaty, which you say does exist, but that is for the record.

[The information referred to follows:]

Before answering this specific question, I would like to make a general comment. I recognize that the position for which I have been nominated—Under Secretary of Defense for Policy—is responsible for policy, not legal judgments. The Administration will take positions on legal questions based on the advice of officials functioning as lawyers. The Under Secretary of Defense for Policy is not such an official. Even though I am a lawyer, I know that, if confirmed as Under Secretary, I would not be making legal judgments for the administration.

Regarding in particular the legal memorandum I co-authored on whether the ABM Treaty of 1972 became, upon the U.S.S.R.'s demise, a treaty between the United States and the Russian Federation, I wish to note that that work was an attempt to describe the law, not to advocate what the law should be. As a practical matter, I think the controversy over the treaty's legal status has been overtaken by events, for this Administration has made clear that it is respecting the terms of the ABM Treaty. President Bush has also stated that "we must move beyond the constraints of the 30 year old ABM Treaty," but he has made it clear that he seeks to do so cooperatively with Russia.

As Senator Warner noted in the hearing, "The Incidents at Sea was an unusual concept, and it is an executive agreement. It does not have a treaty status, but it has served both nations very, very well, and it is continually adhered to, and periodically reviews by both nations are undertaken." Based on legal research I did a few years ago, I concluded that, as a matter of international law, all bilateral, non-dispositive treaties and all other bilateral, non-dispositive agreements between the United States and the U.S.S.R. automatically lapsed upon the U.S.S.R.'s dissolution in December 1991. In my view, nothing prevented or prevents the U.S. executive branch from deeming Russia the substitute for the U.S.S.R. with regard to U.S.-U.S.S.R. agreements that had come into force without Senate approval of ratification. It is my understanding that the U.S. Government deems such executive agreements as continuing with Russia as the substitute party.

If confirmed, I will support U.S. Government policy regarding these treaties and agreements, deferring on legal questions to the administration's legal counsel.

Chairman WARNER. Could I make one clarification? The ABM is a treaty in the full context. The Incidents at Sea was an unusual concept, and it is an executive agreement. It does not have a treaty status, but it has served both nations very well, and it is continuously adhered to, and periodical reviews by both nations are undertaken.

Mr. FEITH. Mr. Chairman, I appreciate that comment.

Senator LEVIN. I am glad to hear that.

Chairman WARNER. I think his fundamental question is still in place, because I think the question applies to whether it is a treaty or an executive agreement. It was an executive agreement at that time with the Soviet Union.

Senator LEVIN. The INF Treaty clearly, then, is covered by your policy. We can discuss the Incidents at Sea at a later time, but you say you support INF. INF no longer exists under your theory. It

seems to me you are raising such great uncertainty when you take that position, and it is in such sharp contrast to what the Bush administration is trying to do, which is to modify an ABM Treaty, to offer amendments to the ABM Treaty, that there is just a very clear difference there.

But I want to go on. You indicate that you support the INF Treaty. You wrote an article at the time that the INF Treaty was before us, and this was President Reagan's Treaty. In fact, President Reagan noted when he was looking back on his presidency that perhaps the most dramatic achievement was when he and Mr. Gorbachev signed INF, and yet your article in the *Christian Science Monitor* sure does not sound to me like you supported INF. I want to just read you just a couple of lines from it.

"Despite the general ban on INF systems, various treaty provisions could actually facilitate the creation or maintenance of a covert Soviet force of SS-20s, the most threatening of the Soviet missiles covered. While each such provision may seem a minor problem in its own right, taken together, they mean that the Soviets, even without violating the specific terms of the treaty, could retain a militarily significant INF capability."

You said that the treaty had corrosive imprecision in that article. You said the treaty's defects could only be corrected with the Soviets' agreement, which they did not agree to. You said that Senators Nunn and Byrd had extracted promises from the Secretary of State. You said that the Senators—this is all from this one article—you said the Senators evinced little concern about the issue which you raised as to whether or not the Soviets would agree to the interpretation.

There is nothing in that article that looks like you supported the INF Treaty. The whole article just is full of criticism of INF, again President Reagan's, one of his prime achievements. How do you say that that article reflected support from the INF? Would any reasonable reader get out of that article that you were supportive of INF?

Mr. FEITH. Senator, what I was focused on in that article were a number of very complex provisions that were discussed at some length in this article by article review that I referred to before that was published by the American Enterprise Institute. What I was focused on there were some provisions that I thought were weaknesses in the agreement that could be remedied, and I was highlighting them and suggesting that they be remedied, and that the treaty would be a lot better if they were remedied.

Senator LEVIN. Were they?

Mr. FEITH. No.

Senator LEVIN. But you still supported the treaty.

Mr. FEITH. I still supported the treaty, but the treaty I do believe would have been better had they been remedied.

Senator LEVIN. But you still supported the treaty, you say. In that article, is there any indication of that support?

Mr. FEITH. No. That article did not deal with that. That article dealt with a problem, the remedy of which I was advocating.

Senator LEVIN. Well, but the rhetoric of this article—let us just be fair, OK. Senator Nunn extracted—extracted—promises from the Secretary of State. He and Senator Byrd and Senator Pell evinced little concern as to whether or not the Soviets agree to the

interpretations which were offered to it. The INF Treaty you said is corrosively imprecise. This is in the article. This is what you published, to the public, OK.

Then you say that despite the ban, that they can retain a militarily significant INF capability. That is what you tell the public. Are you saying that does not clearly evince opposition to the treaty? There is no indication there that you support the treaty, even if these could be corrected. There is surely nothing in here about supporting the treaty if they cannot be corrected.

Now, just look at a fair reader and tell me if anybody reading that article would think you supported the INF Treaty. I would just like to ask you that question. Would any fair reading of that article lead to the conclusion that you support the INF Treaty? That is my question.

Mr. FEITH. I believe a fair reader would recognize I did not do a net assessment of the treaty in that short article. I was addressing myself to a specific problem, and suggesting a remedy.

On the point about corrosively imprecise, I would like to say that it has been a theme of much of what I have written on the subject of arms control that we should be as respectful of the law-making process through arms control treaties as we generally are of the law-making process in a country like ours that takes law seriously, and frequently for diplomatic reasons we allow imprecision to remain in a treaty and it is corrosive.

Imprecision in these treaties, time after time, gives rise to bitter recriminations about compliance disputes, and there is nothing more corrosive of the whole process and the whole concept of international law than entering into agreements where we know in advance we are purchasing for ourselves compliance and enforcement disputes.

Senator LEVIN. That is the Reagan INF Treaty we are talking about, is that right? Just as long as we are talking about the same treaty.

Mr. FEITH. I am making a point that applies across the board to treaties in general.

Senator LEVIN. Your article was referring to the Reagan INF Treaty, right?

Mr. FEITH. I said—

Senator LEVIN. Is that correct?

Mr. FEITH. Yes.

Senator LEVIN. Thank you. My time is up. I want to just conclude with one thing, unless we want to just take more time on this round.

Chairman WARNER. Go ahead, Senator, if you wish to take another question.

Senator LEVIN. Where did you evince your support of the INF at the time?

Mr. FEITH. I did not. I was not invited to testify. It was not an area of my responsibility when I was in the Pentagon. I was not a major voice on the subject.

Senator LEVIN. But you say that you did support it at the time.

Mr. FEITH. Yes, but I was not a major participant.

Senator LEVIN. I understand that, but I just want to be real clear. It is not just that you support it now, but at that time you supported it.

Mr. FEITH. Yes, sir.

Senator LEVIN. Would you just furnish to the committee, if you will, a copy of—because we have not been able to get it—the analysis which you made for the American Enterprise Institute?

Mr. FEITH. Oh, sure.

Senator LEVIN. Thank you.

Thank you very much.

[The information referred to follows:]

DOUGLAS J. FEITH,  
June 7, 2001.

Hon. CARL LEVIN, *Chairman,*  
*Senate Armed Services Committee,*  
*Senate Russell Office Building,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Thank you for the serious consideration and courtesy you have extended to me in the confirmation process despite our different points of view on certain matters. It was an honor for me on Tuesday to discuss such significant issues with you at such length in so important a forum.

Enclosed, as you requested, is a copy of (1) the February 3, 1988 “Article-by-Article Review of the INF Treaty” and (2) the May 18, 1988 “Further Review of the INF Treaty: Seven Key Issues” by the American Enterprise Institute (“AEI”) Working Group on the INF Treaty, of which I was a member. In his introduction to the former paper, AEI’s president, Christopher DeMuth, states:

“The purpose of the working group’s analysis is not to support or oppose ratification of the INF Treaty; indeed the group includes individuals on both sides of the ultimate issue before the Senate.”

As you may know, Richard Perle, also a member of the AEI Working Group, testified before Congress in favor of the INF Treaty.

Reflecting on my confirmation hearing exchanges with you regarding the INF Treaty, I would like to clarify a point regarding my having supported the INF Treaty when it was under Senate consideration. I supported the treaty in that, on balance, I favored approval of ratification. My role in the ratification debate was limited, however. I do not recall testifying before Congress, appearing on any television or radio shows or publishing work about the INF Treaty other than the AEI Working Group reviews and the single April 6, 1988 *Christian Science Monitor* op-ed piece, co-authored by me, that you cited.

The *Monitor* op-ed urged the Senate to clarify with the administration certain INF Treaty language issues and to ensure a meeting of the minds on those issues between the U.S. and Soviet governments. As I mentioned in the confirmation hearings, treaty ambiguities gave rise during the Cold War to many bitter U.S.-Soviet exchanges that strained relations and eroded respect for arms control and international law. Believing that efforts to craft precise language should be as serious in the field of international law as they are in the field of ordinary U.S. domestic law, we wrote in our op-ed: “Fortunately, the Senate can yet ensure that the INF Treaty is free of corrosive imprecision.” The op-ed concludes:

“[Correction of the specified defects]—by and large—would entail nothing more than conforming the *details* of the treaty to the already accepted *general obligations*. This should make it a worthy and eminently doable task.”  
(Emphasis in original)

I am sending a similar letter also to Senator Warner.

With best wishes, I remain

Yours truly,

DOUGLAS J. FEITH.

## THE INF TREATY: ANALYSIS AND COMMENT

## Introduction

This analysis of the Intermediate Nuclear Force Treaty, entered into December 8, 1987 between the United States and the Soviet Union and currently being reviewed by the U.S. Senate, was prepared by a working group convened at the American Enterprise Institute for Public Policy Research and chaired by AEI visiting fellow Frank Gaffney. The members of the working group are listed on the following page. -

The purpose of the working group's analysis is not to support or oppose ratification of the INF Treaty; indeed the group includes individuals on both sides of the ultimate issue before the Senate. The aim here is rather to examine rigorously and in detail the effectiveness of the Treaty's provisions and protocols in achieving the Treaty's own goal: to eliminate all intermediate-range and all shorter-range nuclear missiles. Regardless of the wisdom of this goal it is clearly in the interest of the United States that the Treaty's requirements should be as transparent as possible and that its verification provisions should protect against undetected violations. Mindful of the Soviet Union's exploitation of ambiguities and loopholes in past treaties, and concerned that differing interpretations could lead to an unequal exchange of rights and obligations in the future, the authors have sought clarity, precision, and the timely assessment of ambiguities in the Treaty's text.

The members of the working group believe that a number of the INF Treaty's deficiencies discussed in this analysis could be exacerbated if an agreement limiting strategic arms were concluded and if certain of this Treaty's provisions were regarded as a precedent for the later agreement. They have thus identified problems which may strike some readers as minor details -- but which could become critically important in the context of the more ambitious agreements currently being negotiated.

This analysis is offered in a constructive spirit on the premise that the Senate will wish to understand the Treaty in detail before deciding whether to ratify it unreservedly or to amend or adopt reservations to it. Where there are ambiguities the Senate may wish to clarify them by eliciting an indication from the Soviets of how they interpret those provisions. In all events the sort of close scrutiny offered here should assist in placing the final disposition of the Treaty on a firmer basis than if the issues identified were not squarely addressed.

**ARTICLE-BY-ARTICLE  
REVIEW OF THE INF TREATY**

**INTRODUCTION**

This paper reviews provisions of the INF Treaty, its two Protocols and Memorandum of Understanding. Comments are offered regarding a number of key issues. Where it is not yet possible to ascertain satisfactorily the meaning or implications of a given provision, we have highlighted the need for clarification by setting forth the relevant questions.

**ARTICLE I - PRINCIPAL OBLIGATION**

In accordance with the provisions of this Treaty which includes the Memorandum of Understanding and Protocols which form an integral part thereof, each Party shall eliminate its intermediate-range and shorter-range missiles, not have such systems thereafter, and carry out the other obligations set forth in this Treaty.

**Comment:**

The primary obligation of the Treaty parties is, according to this article, the complete elimination of all intermediate-range and shorter-range missiles and other specified items. This is the standard against which the Treaty's provisions must be judged. If, for example, as a result of the cumulative effect of allowed production, inadequate inspection and permitted R&D, the Soviets can retain or produce prohibited missiles and other systems, the Treaty would fail to achieve its purpose.

**ARTICLE II - DEFINITIONS**

Analysis of the Article II definitions should take into account not only their suitability in the context of this INF Treaty, but also the implications of their use as precedents for a START Treaty. It should be noted that the provisions of Articles VI and VII significantly add to and in some cases alter the definitions of terms dealt with in Article II.

The Treaty does not define "elimination" as such, though it does specify procedures for eliminating specific items. The problem is that the specified procedures will not in every case result in the actual elimination of these items. In fact, in some cases items "eliminated" according to the specified procedures may even be able to continue to perform their prohibited functions. See comments on Article IV.1.

even be able to continue to perform their prohibited functions. See comments on Article IV.1.

Article II, Paragraphs 1 and 2

For the purposes of this Treaty:

1. The term "ballistic missile" means a missile that has a ballistic trajectory over most of its flight path. The term "ground-launched ballistic missile (GLBM)" means a ground-launched ballistic missile that is a weapon-delivery vehicle.
2. The term "cruise missile" means an unmanned, self-propelled vehicle that sustains flight through the use of aerodynamic lift over most of its flight path. The term "ground-launched cruise missile (GLCM)" means a ground-launched cruise missile that is a weapon-delivery vehicle.

Comment:

Taken together, the definitions of ballistic and cruise missiles in Paragraphs 1 and 2 do not capture every possible type of missile. For example, a hyper-velocity glide vehicle appears not to be within the definitions. This should be confirmed, as some work is being done in the United States on that technology. What other missile technologies are similarly excluded by these definitions? Were all such exclusions intended by us? What uses can the Soviets make of such exclusions?

This provision permanently prohibits conventionally-armed ground-launched missile options that could contribute substantially to the non-nuclear defense of Western Europe. (See Report of Commission on Long-Term Integrated Strategy.) The INF Treaty makes such contributions more important than before. The breadth of the definitions -- that is, the fact that they cover conventionally-armed as well as nuclear-armed ground-launched missiles -- is said to be justified by the verification difficulties that would be created if conventionally-armed missiles were not prohibited. This verification benefit, however, has largely been negated by the fact that the definitions do not cover drones (remotely piloted vehicles) or any other ground-launched missiles that do not carry weapons.

The operative assumption evidently is that the Article VII counting rule, which specifies that such systems may not be flight-tested for weapon-delivery, will prevent prohibited missiles from being developed in the guise of drones. Is this assumption valid? In other words, is it possible to flight-test a weapon-delivery system in a manner that would not be distinguishable from the flight-test of a drone? For further

Given that major verification problems still inhere in these definitions, the wisdom of permanently banning conventionally-armed missiles should be reassessed.

Article II, Paragraph 3

3. The term "GLBM launcher" means a fixed launcher or a mobile land-based transporter-erector-launcher mechanism for launching a GLBM.

Comment:

A key issue of the Treaty is its application to Soviet GLBM launchers. See comments on Article IV, Paragraph 1.

Article II, Paragraphs 5 & 6

5. The term "intermediate-range missile" means a GLBM or a GLCM having a range capability in excess of 1000 kilometers but not in excess of 5500 kilometers.

6. The term "shorter-range missile" means a GLBM or a GLCM having a range capability equal to or in excess of 500 kilometers but not in excess of 1000 kilometers.

Comment:

These definitions refer to "range capability," but that phrase is misleading. In the case of ballistic missiles, as Article VII, Paragraph 4 makes clear, the range is considered to be not the maximum range of which the missile is capable, but only the maximum range to which it has been tested. As for the case of cruise missiles, see comments on Article VII.4.

Article II, Paragraph 8

8. The term "missile operating base" means:

(a) in the case of intermediate-range missiles, a complex of facilities, located within a deployment area, at which intermediate-range missiles and launchers of such missiles normally operate, in which support structures associated with such missiles and launchers are also located and in which support equipment associated with such missiles and launchers is normally located; and

(b) in the case of shorter-range missiles, a complex of facilities, located any place, at which

shorter-range missiles and launchers of such missiles normally operate and in which support equipment associated with such missiles and launchers is normally located.

Comment:

"Normally operate" is not defined in the Treaty. Its use here implies that missiles and launchers may legally operate outside the missile operating bases. This may mean that missiles that qualify under the Treaty as "non-deployed" may nevertheless be operational, though it is clearly the intention of the Treaty that all operational missiles be deemed "deployed." Is there an agreed meaning for this term? What if anything do we know about the meaning the Soviets attribute to "normally" here?

Ambiguous or unclear terms of this kind may or may not have great significance in the context of the INF Treaty. But we can expect many such terms to be transplanted into the START Treaty, where their significance might increase greatly. It is elementary but bears emphasis that it is very bad practice to allow terms of an arms control Treaty to remain ambiguous or undefined.

ARTICLE III - Treaty-LIMITED SYSTEMS

1. For the purposes of this Treaty, existing types of intermediate-range missiles are:

(a) for the United States of America, missiles of the types designated by the United States of America as the Pershing II and the BCM-109G, which are known to the Union of Soviet Socialist Republics by the same designations; and

(b) for the Union of Soviet Socialist Republics, missiles of the types designated by the Union of Soviet Socialist Republics as the RSD-10, the R-12 and the R-14, which are known to the United States of America as the SS-20, the SS-4 and the SS-5, respectively.

2. For the purposes of this Treaty, existing types of shorter-range missiles are:

(a) for the United States of America, missiles of the type designated by the United States of America as the Pershing IA, which is known to the Union of Soviet Socialist Republics by the same designation; and

(b) for the Union of Soviet Socialist Republics, missiles of the types designated by the Union of

Soviet Socialist Republics as the OTR-22 and the OTR-23, which are known to the United States of America as the SS-12 and the SS-23, respectively.

Comment:

On the assumption that the SSC-X-4 was at more or less the same early stage of development as the U.S. Pershing IB, the U.S. consented to have the Treaty treat these two missiles in the same fashion, different from the treatment of the "existing" items. The information about the SSC-X-4 in the Memorandum of Understanding -- that 84 SSC-X-4 missiles and six launchers have been produced and are located at a storage facility -- suggests that that assumption was erroneous.

This evident intelligence error raises questions about our ability to monitor the subject matter of the Treaty. How do we know that the 84 SSC-X-4 missiles that the Soviets have acknowledged are all the SSC-X-4 missiles that they possess? For that matter, what confidence do we have about the accuracy and completeness of the other data supplied by the Soviets? See comments on the Memorandum of Understanding.

Is there any significance to the difference between those inspection provisions applicable to the systems "never deployed" (i.e., Pershing IB and SSC-X-4) and those applicable to "existing" (i.e., deployed) items? See Article X.6.

ARTICLE IV - ELIMINATION SCHEDULE (Intermediate-Range Systems)  
Article IV, Paragraph 1

Each Party shall eliminate all its intermediate-range missiles and launchers of such missiles, and all support structures and support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, so that no later than three years after entry into force of this Treaty and thereafter no such missiles, launchers, support structures or support equipment shall be possessed by either Party.

Comment:

The Treaty says that all Treaty-limited systems are to be "eliminated," and no such systems are to be "possessed" by either Party after three years. The actual obligation of the Parties, however, is to follow certain "elimination" procedures, custom designed for each banned item, and such procedures amount only to alteration rather than elimination of several Soviet launchers.

Whereas the "elimination" procedures for all Treaty-limited U.S. systems will ensure that such systems are reduced to scrap,

the procedures for several Treaty-limited Soviet launchers have been designed to allow the "eliminated" launchers to be used for other purposes. Given that these "eliminated" Soviet launchers will be permitted to operate throughout the Soviet Union, the question is whether, even if we observe them through overhead reconnaissance, we have the capability of ascertaining whether the alterations have been reversed so as to allow the item to perform a prohibited function.

It may be that the Soviets would find it easier to produce a new launcher from "scratch" than to undo the elimination procedures on an old launcher. This raises the question: Do we have any confidence that we would detect clandestine production of Treaty-limited launchers? See comments on Article VI, Paragraph 1.

Some of the Treaty's language implies a greater comprehensiveness of its scope than is, in fact, the case. In drafting the Memorandum of Understanding, the Parties excluded from the list of items to be eliminated certain elements of an INF capability -- certain facilities and equipment -- that can be used for other purposes, too. With respect to the U.S. facilities and equipment being spared, this seems a sensible, financially responsible measure. The United States can be expected to fulfill its obligations under the Treaty not to retain an INF capability, and will not put such items to prohibited uses. The exclusion, however, may on the Soviets' side facilitate the concealment of Treaty violations or may enhance their ability to effect a rapid "break-out." For example, the Treaty allows the Soviets to retain without alteration SS-20-related multiple-bay garages and support structures for shorter-range missiles.

Each exclusion from the elimination schedule, gerrymandered definition, and exception to the non-production rule may seem minor in itself, but taken together such provisions mean that the Soviets, even without violating the Treaty, can remain rather close to a militarily significant INF capability. And the violations that would be required to maintain an INF capability are less extensive (and thus easier to conceal) than the Treaty's comprehensive language leads one to believe.

#### ARTICLE V - ELIMINATION SCHEDULE (SRMs)

##### Article V, Paragraph 1

- Each Party shall eliminate all its shorter-range missiles and launchers of such missiles, and all support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, so that no later than 18 months after entry into force of this Treaty and thereafter no such missiles, launchers or support

equipment shall be possessed by either Party.

Comment:

Regarding the possible significance of this Article's failure to mention the elimination of support structures for shorter-range missiles, see comments on Article IV, Paragraph 1.

ARTICLE VI - COLLATERAL CONSTRAINTS

Article VI, Paragraph 1

Upon entry into force of this Treaty and thereafter, neither Party shall:

(a) produce or flight-test any intermediate-range missiles or produce any stages of such missiles or any launchers of such missiles; or

(b) produce, flight-test or launch any shorter-range missiles or produce any stages of such missiles or any launchers of such missiles.

Comment:

The ability of the Intelligence Community (IC) to monitor Soviet performance under the terms of this provision and the Treaty in general is a major issue. In this connection, the following questions, among others, must be addressed:

Can the IC accurately represent that it knows the location of all the facilities that have been used to produce the Soviets' Treaty-limited systems? Would it know if the Soviets actually began production of banned items at other facilities? Would it know if the Soviets created the capability at other facilities to begin production of banned items?

To what extent could permitted SS-25 production and testing mask or substitute for SS-20 production/testing?

It has been argued that this Article's prohibition of flight-testing serves to guarantee against covert deployment of the SS-20. The contention is that without flight-testing the Soviets would have no confidence in the reliability of their missiles and therefore would not deploy them. But our experience with the SS-16 missile, deployment and flight-testing of which were banned under SALT II, argues to the contrary. According to the Administration, the SS-16 was probably deployed over a long period of time even though we detected no flight tests.

It is also presumably the case that the Soviets will be able to obtain useful reliability information from the permitted launches to destruction and static fire burns prescribed by the

Treaty's elimination provisions.

Furthermore, flight tests of the SS-25 will provide the Soviets some data relevant to the SS-20 because the first stages of those two missiles are essentially identical. Indeed, the Soviet Union's ability to use their unregulated SS-25 program as a vehicle for getting around the prohibitions of the INF Treaty or concealing violations of the Treaty is an intractable problem which arises repeatedly throughout this agreement. Some have sought to minimize the gravity of this issue by contending that the Soviets have little incentive to maintain a prohibited, concealed SS-20 capability because the SS-25s themselves, which are not prohibited, can perform the same military function as the SS-20 does.

This argument ignores, however, the possibility that the Soviets may value highly the specialized characteristics of the SS-20 -- in particular, its multiple warheads, high accuracy, and short time of flight. Such considerations may constitute ample incentive for the Soviets to exploit opportunities to maintain an SS-20 capability despite the Treaty. Also, if a START agreement is concluded, limiting or banning SS-25s and other strategic systems, the Soviets' incentives to violate the INF Treaty would increase substantially.

Article VI, Paragraph 2

Notwithstanding paragraph 1 of this Article, each Party shall have the right to produce a type of GLBM not limited by this Treaty which uses a stage which is outwardly similar to, but not interchangeable with, a stage of an existing type of intermediate-range GLBM having more than one stage, providing that that Party does not produce any other stage which is outwardly similar to, but not interchangeable with, any other stage of an existing type of intermediate-range GLBM.

Comment:

This provision attempts to address the problem caused by the fact that the Treaty-limited SS-20 and the unlimited SS-25 ICBMs have first stages that are so similar that no practical inspection regime would be able to distinguish them. As a result of this provision, the Soviet Union will be allowed to produce first stages that are "outwardly similar to" the SS-20 first stage, thereby vitiating somewhat the general prohibition on production of any intermediate-range missile stage in paragraph 1. Although the Soviets say such stages are "not interchangeable with" SS-20 first stages, the absence of any definition of that phrase makes it meaningless.

Furthermore, it is unclear how -- if at all -- this Article would affect a future intermediate-range missile that might be developed using the first two stages of the SS-25 (just as the first two stages of the SS-16 gave rise to the SS-20). Could the development, testing and production of such a system be concealed using the SS-25 program as "cover"? In any event, it will be difficult for the U.S. to determine whether anomalous activities within the SS-25 program indicated a surreptitious intermediate-range missile development program.

This paragraph contains a noteworthy drafting error. Read literally, it permits the production of an "SS-25" second stage that is "outwardly similar to, and interchangeable with" the second stage of an SS-20. This problem arises because the paragraph begins with a "notwithstanding" clause that overrides the general prohibition on intermediate-range missile stage production of paragraph 1. This point should be clarified with the Soviets. What the last clause of the Paragraph meant to say (and should be revised to reflect) is: "... provided that that Party does not produce any other stage which is either outwardly similar to, or interchangeable with, any other stage of an existing type of intermediate-range GLBM."

#### ARTICLE VII - COUNTING RULES

As was pointed out in the comments on Article II, the Article VII counting rules have an important bearing on the definitions of key Treaty terms, and analysis of these rules should take into account both their suitability in the context of this INF Treaty and also the implications of their use as precedents for a START Treaty.

#### Article VII, Paragraphs 1 & 2

For the purposes of this Treaty:

1. If a ballistic missile or a cruise missile has been flight-tested or deployed for weapon delivery, all missiles of that type shall be considered to be weapon-delivery vehicles.
2. If a GLBM or GLCM is an intermediate-range missile, all GLBMs or GLCMs of that type shall be considered to be intermediate-range missiles. If a GLBM or GLCM is a shorter-range missile, all GLBMs or GLCMs of that type shall be considered to be shorter-range missiles.

#### Comment:

The Treaty does not define the word "type." This suggests that the Parties were unable to arrive at a common understanding

of the term. In light of the controversy relating to whether the SS-25 is a new type of ICBM, and thus a violation of SALT II, it is important that the sides not hold to inconsistent definitions of so critical a term.

In the absence of such a definition it is impossible to know how different a new missile must be from a Treaty-limited missile in order for that new missile to be excluded from the Treaty's prohibitions (i.e., in order for the new missile to be considered either (1) not a weapon-delivery vehicle, or (2) not a vehicle of intermediate- or shorter-range).

Article VII, Paragraph 3

If a GLBM is of a type developed and tested solely to intercept and counter objects not located on the surface of the earth, it shall not be considered to be a missile to which the limitations of this Treaty apply.

Comment:

The following questions arise from this provision:

With what effectiveness could a missile now designed for ABM, ATBM, or anti-air purposes be used in a ground-to-ground, weapon-delivery mode?

Could the Soviets develop a new intermediate-range or shorter-range missile in the guise of an ABM, ATBM, or anti-air missile?

Article VII, Paragraph 4

The range capability of a GLBM not listed in Article III of this Treaty shall be considered to be the maximum range to which it has been tested. The range capability of a GLCM not listed in Article III of this Treaty shall be considered to be the maximum distance which can be covered by the missile in its standard design mode flying until fuel exhaustion, determined by projecting its flight path onto the earth's sphere from the point of launch to the point of impact. GLBMs or GLCMs that have a range capability equal to or in excess of 500 kilometers but not in excess of 1000 kilometers shall be considered to be shorter-range missiles. GLBMs or GLCMs that have a range capability in excess of 1000 kilometers but not in excess of 5500 kilometers shall be considered to be intermediate-range missiles.

Comment:

The counting rule for GLBM range capability provides a significant loophole: a new GLBM could be tested to 490 km in a non-minimum-energy trajectory and thus would have much greater actual range. The U.S. would have no grounds to object to such a system, even though it would unquestionably have the ability to strike targets over 500 km away.

The counting rule for GLCM range is taken from the SALT II Treaty (Article, II.8, 2nd Agreed Statement). As Secretary Vance's published analysis of SALT II (Document 12B, p.19) makes clear, the U.S. interpretation of this definition was not confirmed by the Soviets. Was there, in the course of the INF negotiations, any agreement on the meaning of "flying to fuel exhaustion"?

In any event, this provision is not verifiable. If we observed a new Soviet GLCM flying 490 km in a test, how would we be able to know how much fuel it had on board when the flight was terminated? Replacing a large conventional warhead on such a GLCM with a small nuclear warhead would allow it to fly INF ranges -- even if the fuel would have been exhausted carrying the first payload to only 490 km.

Article VII, Paragraphs 7 & 8

7. If a launcher has been tested for launching a GLBM or a GLCM, all launchers of that type shall be considered to have been tested for launching GLBMs or GLCMs.

8. If a launcher has contained or launched a particular type of GLBM or GLCM, all launchers of that type shall be considered to be launchers of that type of GLBM or GLCM.

Comment:

Is there any engineering or mechanical reason why the launcher for the SS-25 could not be used to launch an SS-20? Do we know whether any such launcher has ever been used for this purpose -- including during development of the SS-25?

If an SS-25 launcher during development testing carried an SS-20 canister, it would be captured by the counting rule in Paragraph 8. Can we be certain no such launcher ever did?

Article VII, Paragraph 10

Except in the case of elimination in accordance with the procedures set forth in the Protocol on Elimination, the following shall apply:

(a) for GLBMs which are stored or moved in separate stages, the longest stage of an intermediate-range or shorter-range GLBM shall be counted as a complete missile;

(b) for GLBMs which are not stored or moved in separate stages, a canister of the type used in the launch of an intermediate-range GLBM, unless a Party proves to the satisfaction of the other Party that it does not contain such a missile, or an assembled intermediate-range or shorter-range GLBM, shall be counted as a complete missile; and

(c) for GLCMs, the airframe of an intermediate-range or shorter-range GLCM shall be counted as a complete missile.

Comment:

Because the first stage of an SS-25 is externally indistinguishable from that of an SS-20, the counting rules for U.S. missiles differ from those for Soviet missiles. They impose a more rigorous standard on the U.S. side (the largest stage of the Pershing II missile alone counts as a full-up missile) than on the Soviet side (only a full-up Soviet missile -- or its canister -- counts as a missile).

The difference between the counting rules for U.S. missiles and those for Soviet missiles affects the relative values of U.S. and Soviet inspection rights under the Treaty. Because of these counting rules, the U.S. side's rights to conduct continuous monitoring of a Soviet production facility apply only to a Soviet final assembly plant. The corresponding rights of the Soviets, however, apply to a U.S. plant that actually manufactures missile stages. (For further discussion of this point, see Article XI, Paragraph 6.) This means that the Soviet facilities that now manufacture SS-20 second stages (or first stages for that matter) are not subject to monitoring by the United States under the Treaty.

Given that the Treaty effectively permits the Soviets to continue manufacturing first stages of the two-stage SS-20 (see Article VI, Paragraph 2), it is not a minor matter that we have no inspection rights at all at whatever facilities manufacture SS-20 stages.

ARTICLE VIII - SITING LIMITATIONS

Article VIII, Paragraphs 1, 2 and 3

1. All intermediate-range missiles and launchers of such missiles shall be located in deployment

areas, at missile support facilities or shall be in transit. Intermediate-range missiles or launchers of such missiles shall not be located elsewhere.

2. Stages of intermediate-range missiles shall be located in deployment areas, at missile support facilities or moving between deployment areas, between missile support facilities or between missile support facilities and deployment areas.

3. Until their removal to elimination facilities as required by paragraph 2 of Article V of this Treaty, all shorter-range missiles and launchers of such missiles shall be located at missile operating bases, at missile support facilities or shall be in transit. Shorter-range missiles or launchers of such missiles shall not be located elsewhere.

Comment:

This Article describes where intermediate-range and shorter-range missiles and launchers shall be located during the period between entry into force and the end of the elimination period. These requirements raise the following questions:

Will we be able to tell that Treaty-limited items are not located elsewhere? For example, could they be stored without risk of detection in warehouses or other installations? Do we know that all areas in the Soviet Union where operational missiles exist have been identified by the Soviets as "deployment areas?"

How many intermediate-range missiles have the Soviets produced? How confident are we in our estimate?

Article VIII, Paragraph 5

All deployment areas, missile operating bases and missile support facilities are specified in the Memorandum of Understanding or in subsequent updates of data pursuant to paragraphs 3, 5(a) or 5(b) of Article IX of this Treaty. Neither Party shall increase the number of, or change the location or boundaries of, deployment areas, missile operating bases or missile support facilities, except for elimination facilities, from those set forth in the Memorandum of Understanding. A missile support facility shall not be considered to be part of a deployment area even though it may be located within the geographic boundaries of a deployment area.

Comment:

If the Soviets have continued after November 1, 1987 to maintain SS-20s or support equipment at any missile support facility previously associated with these missiles but not listed in the MOU, they would be in violation of this provision. Is there evidence that any such items continued to be present at any such facility after November 1, 1987?

Article VIII, Paragraph 6

Beginning 30 days after entry into force of this Treaty, neither Party shall locate intermediate-range or shorter-range missiles, including stages of such missiles, or launchers of such missiles at missile production facilities, launcher production facilities or test ranges listed in the Memorandum of Understanding.

Comment:

The word "locate" in this provision seems to mean "to allow something to be at a location." On the other hand, it could be read to mean "to move something to a location." This point should be clarified by the Parties especially if consideration is being given to creating a parallel provision in START.

Article VIII, Paragraph 8

A non-deployed intermediate-range or shorter-range missile shall not be carried on or contained within a launcher of such a type of missile, except as required for maintenance conducted at repair facilities or for elimination by means of launching conducted at elimination facilities.

Comment:

This provision seems altogether unmonitorable. And, in any event, even if we were to detect an apparent violation, the loophole (viz., "except as required for maintenance conducted at repair facilities ...") would make it impossible to establish the point. Is it clear that, for purposes of this provision, a missile can be placed on its launcher only at a repair facility?

Article VIII, Paragraph 9

Training missiles and training launchers for intermediate-range or shorter-range missiles shall be subject to the same locational restrictions as are set forth for intermediate-range and shorter-range missiles and launchers of such missiles in paragraphs 1 and 3 of this Article.

Comment:

This provision contains the Treaty's first reference to "training" missiles and launchers. No definition or clarification of such terms is provided in Article II, Article VII, or elsewhere. Have the Parties agreed that training missiles must be inert -- i.e., without propellant? If all missiles must be either deployed or non-deployed, where do training assets fit in? How will we be able to tell the difference between such missiles and "real" ones. This point is particularly important in light of last-minute Soviet reallocation of a number of deployed SS-20s into the training category.

ARTICLE IX - DATA AND RELATED NOTIFICATIONSArticle IX, Paragraph 1

The Memorandum of Understanding contains categories of data relevant to obligations undertaken with regard to this Treaty and lists all intermediate-range and shorter-range missiles, launchers of such missiles, and support structures and support equipment associated with such missiles and launchers, possessed by the Parties as of November 1, 1987. Updates of that data and notifications required by this Article shall be provided according to the categories of data contained in the Memorandum of Understanding.

Comment:

The quality of the data contained in the MOU is fundamental to the viability of this Treaty. If such data represent only a portion of the actual Soviet force then the remainder of that force will not be subject to any of the inspection provisions. Issues that need to be explored include: the quality of our intelligence; the likelihood that actual Soviet capabilities are higher; the significance of apparently wide discrepancies in the number of refire missiles associated with each of the several Soviet systems limited by the Treaty; and the extent to which our estimates are being altered on the basis of Soviet-supplied information (despite the fact that the factors which gave rise to these estimates in the first place do not appear to have changed).

Article IX, Paragraph 3

No later than 30 days after entry into force of this Treaty, each Party shall provide the other Party with updated data, as of the date of entry into force of this Treaty, for all categories of data contained in the Memorandum of Understanding.

Comment:

The United States insisted on reviewing before Treaty signature -- and retaining the right to reject -- the data provided for in the MOU. The data in the MOU, however, are not the data that form the basis of the Parties' obligations under the Treaty. The data that really count are those to be exchanged by the Parties 30 days after the Treaty's entry into force; the Treaty does not afford us the right to reject Soviet data supplied at that time. In fact, if the United States is unsatisfied with the information provided in the data update -- e.g., if we judge the Soviets to be understating their INF force -- and the Soviets fail to convince us of the accuracy of their new data, then the United States would have no effective recourse. As a practical matter, we would feel compelled to continue to fulfill our obligations under the Treaty.

Under Article X.8, the Soviets will be allowed to remove missile support facilities and operating bases from this data base if they claim to have accomplished certain elimination procedures by the date of entry into force of the Treaty. Since there is no prohibition against eliminating Treaty-limited items during this period, the Soviets may choose to remove missiles and launchers from the updated data base contending that they have been eliminated. However, we will not have any inspection rights with regard to such missiles and hence will not be certain that they have, in fact, been eliminated. It is, moreover, unclear whether the Soviets would be obligated to follow the procedures in the Protocol on Elimination with respect to systems eliminated during this period.

Two of the advertised verification strengths of the Treaty are the agreement on data before Treaty signature (as reflected in the MOU) and the inspection rights applicable to the elimination of Treaty-prohibited items. In light of the foregoing paragraph, one cannot reach a judgment on the contribution these "strengths" make to the Treaty's verification regime until we have received the updated data from the Soviets 30 days after the Treaty's entry into force. In order to minimize the problem, the United States could insist upon a commitment from the Soviets either that, should they eliminate Treaty-limited systems prior to entry into force, they will follow the provisions of the Protocols on Elimination and Inspection or that they will refrain from such eliminations until the Treaty enters into force.

Article IX, Paragraph 5

Upon entry into force of this Treaty and thereafter, each Party shall provide the following notifications to the other Party:

\*\*\*

(f) notification of transit of intermediate-range or shorter-range missiles or launchers of such missiles, or the movement of training missiles or training launchers for such intermediate-range and shorter-range missiles, no later than 48 hours after it has been completed, including:

- (i) the number of missiles or launchers;
- (ii) the points, dates and times of departure and arrival;
- (iii) the mode of transport; and
- (iv) the location and time at that location at least once every four days during the period of transit.

Comment:

It should be noted that the provision on notification of transit is not as valuable as it might have been, since it does not require that notification be given until 48 hours after the transit is completed.

ARTICLE X - ELIMINATION PROVISIONS

Article X, Paragraph 1

Each Party shall eliminate its intermediate-range and shorter-range missiles and launchers of such missiles and support structures and support equipment associated with such missiles and launchers in accordance with the procedures set forth in the Protocol on Elimination.

Comment:

Unlike Article VI (production) and Article VIII (location of Treaty-limited items), this paragraph does not specifically apply its terms to the stages of Treaty-limited missiles. Section I.3 of the Protocol on Elimination does state that "all stages of intermediate-range and shorter-range GLBMs shall be subject to elimination." It might be argued, however, that this Protocol language applies only to the stages of full-up missiles that are listed in the updated data base and whose elimination is observable pursuant to the Treaty's inspection provisions. That reading would allow the Soviets to separate, before the Treaty's entry into force, the two stages of the SS-20 and retain the separated stages indefinitely. This would greatly facilitate the

reconstitution of a Soviet INF capability.

To fix this problem, the Parties could agree to add to Paragraph 1 the words "and stages of such missiles" after the phrase "intermediate-range and shorter-range missiles."

Article X, Paragraph 5

Each Party shall have the right, during the first six months after entry into force of this Treaty, to eliminate by means of launching no more than 100 of its intermediate-range missiles.

Comment:

This provision was included because the Soviets insisted that they would otherwise be unable to eliminate all their intermediate-range missiles within the allowed period. The Intelligence Community should assess whether any benefit might accrue to the Soviets in terms of establishing a useful data base on SS-20 reliability. (See comments on Article VI, Paragraph 1). Does the U.S. expect to destroy any of its intermediate-range missiles by launching them?

Article X, Paragraph 6

Intermediate-range and shorter-range missiles which have been tested prior to entry into force of this Treaty, but never deployed, and which are not existing types of intermediate-range or shorter-range missiles listed in Article III of this Treaty, and launchers of such missiles, shall be eliminated within six months after entry into force of this Treaty in accordance with the procedures set forth in the Protocol on Elimination. Such missiles are:

(a) for the United States of America, missiles of the type designated by the United States of America as the Pershing 1B, which is known to the Union of Soviet Socialist Republics by the same designation; and

(b) for the Union of Soviet Socialist Republics, missiles of the type designated by the Union of Soviet Socialist Republics as the RK-55, which is known to the United States of America as the SSC-X-4.

Comment:

The significance of this paragraph is discussed in the

comments on Article III.

Article X, Paragraph 7

Intermediate-range and shorter-range missiles and launchers of such missiles and support structures and support equipment associated with such missiles and launchers shall be considered to be eliminated after completion of the procedures set forth in the Protocol on Elimination and upon the notification provided for in paragraph 5(e) of Article IX of this Treaty.

Comment:

This paragraph makes it clear that the term "elimination" in the Treaty does not mean elimination in the common sense of the term but rather fulfillment of the elimination procedures set forth in the Protocol on Elimination. The adequacy of such procedures was called into question in the comments on Articles II and IV.1.

Article X, Paragraph 8

Each Party shall eliminate its deployment areas, missile operating bases and missile support facilities. A Party shall notify the other Party pursuant to paragraph 5(a) of Article IX of this Treaty once the conditions set forth below are fulfilled:

- (a) all intermediate-range and shorter-range missiles, launchers of such missiles and support equipment associated with such missiles and launchers located there have been removed;
- (b) all support structures associated with such missiles and launchers located there have been eliminated; and
- (c) all activity related to production, flight-testing, training, repair, storage or deployment of such missiles and launchers has ceased there.

Such deployment areas, missile operating bases and missile support facilities shall be considered to be eliminated either when they have been inspected pursuant to paragraph 4 of Article XI of this Treaty or when 60 days have elapsed since the date of the scheduled elimination which was notified pursuant to paragraph 5(a) of Article IX of this

Treaty. A deployment area, missile operating base or missile support facility listed in the Memorandum of Understanding that met the above conditions prior to entry into force of this Treaty, and is not included in the initial data exchange pursuant to paragraph 3 of Article IX of this Treaty, shall be considered to be eliminated.

Comment:

This provision must be read in conjunction with Article XI.5(b), which deals with the inspection of former missile operating bases and support facilities. It opens the door to the possibility that facilities which currently have a role in Treaty-limited activities can be exempted from inspection if the Party claims to have fulfilled the three conditions listed and hence omits them from the data exchange which must be made 30 days after entry into force.

Are all the conditions listed in subparagraphs (a)-(c) discernible by national technical means of verification? If not, how will we have confidence that facilities known to be associated with Treaty-limited activities meet these conditions before entry into force? If so, what is the perceived need for close-out inspections at facilities eliminated after entry into force?

Article X, Paragraph 9

If a Party intends to convert a missile operating base listed in the Memorandum of Understanding for use as a base associated with GLBM or GLCM systems not subject to this Treaty, then that Party shall notify the other Party, no less than 30 days in advance of the scheduled date of the initiation of the conversion, of the scheduled date and the purpose for which the base will be converted.

Comment:

It seems intended, but is not made explicit, that a missile operating base must be "eliminated" before it can be converted for the use of a non-limited GLBM or GLCM. This possible ambiguity takes on special importance given that the Treaty allows the Soviets to retain such structures as multi-bay garages and other SS-20-related items at "eliminated" operating bases.

ARTICLE XI - VERIFICATION: INSPECTION PROVISIONS

The utility of this inspection regime is limited by the fact that it does not provide any right to conduct short-notice, on-site inspections at suspect sites, i.e., sites other than

declared (or formerly declared) facilities. Thus, all of the effort described in this article is directed only at those places that the Soviets have in fact listed and thus chosen to make subject to inspection.

Article XI, Paragraph 3

Beginning 30 days after entry into force of this Treaty, each Party shall have the right to conduct inspections at all missile operating bases and missile support facilities specified in the Memorandum of Understanding other than missile production facilities, and at all elimination facilities included in the initial data update required by paragraph 3 of Article IX of this Treaty. These inspections shall be completed no later than 90 days after entry into force of this Treaty. The purpose of these inspections shall be to verify the number of missiles, launchers, support structures and support equipment and other data, as of the date of entry into force of this Treaty, provided pursuant to paragraph 3 of Article IX of this Treaty.

Comment:

If a facility is not included in the updated data base to be provided 30 days after the Treaty's entry into force (which Article X.8 says it need not be if it is "eliminated" prior to entry into force), do we still have the right to inspect it? On the one hand, this provision is said to apply to all facilities listed in the Memorandum of Understanding, but, on the other, the purpose of the inspections it authorizes is said to be the verification of the data in the updated data base. A related ambiguity is discussed under paragraph 5(b) of this Article.

Article XI, Paragraph 5

Each Party shall have the right to conduct inspections pursuant to this paragraph for 13 years after entry into force of this Treaty. Each Party shall have the right to conduct 20 such inspections per calendar year during the first three years after entry into force of this Treaty, 15 such inspections per calendar year during the subsequent five years, and ten such inspections per calendar year during the last five years. Neither Party shall use more than half of its total number of these inspections per calendar year within the territory of any one basing country. Each Party shall have the right to conduct:

(a) inspections, beginning 90 days after entry into force of this Treaty, of missile operating bases and missile support facilities other than elimination facilities and missile production facilities, to ascertain, according to the categories of data specified in the Memorandum of Understanding, the numbers of missiles, launchers, support structures and support equipment located at each missile operating base or missile support facility at the time of the inspection; and

(b) inspections of former missile operating bases and former missile support facilities eliminated pursuant to paragraph 8 of Article X of this Treaty other than former missile production facilities.

Comment:

Subparagraph (b) provides the right to inspect former missile operating bases and support facilities "eliminated pursuant to paragraph 8 of Article X." This right constitutes a major element of the entire inspection regime. Its value, however, could be severely limited depending on how one interprets the ambiguous term "pursuant to." In particular, the question is: Is a site that has been "considered to be eliminated" under the last sentence of Article X.8 *ipso facto* deemed eliminated "pursuant to" that paragraph? If not, then the Soviets can severely limit the value of this inspection right by "eliminating" as many sites as possible prior to entry into force of the Treaty. This problem would be solved if the Parties agreed to add the following sentence to the end of subparagraph (b): "Any site considered to be eliminated under Article X, Paragraph 8 shall be deemed eliminated pursuant to Article X, Paragraph 8."

This section's negotiating history needs to be carefully reviewed. In particular, what is the rationale for the diminishing quota of inspections?

Article XI, Paragraph 6

Beginning 30 days after entry into force of this Treaty, each Party shall have the right, for 13 years after entry into force of this Treaty, to inspect by means of continuous monitoring:

(a) the portals of any facility of the other Party at which the final assembly of a GLEM using stages, any of which is outwardly similar to a stage of a solid-propellant GLEM listed in Article III of this Treaty, is accomplished; or

(b) if a Party has no such facility, the portals

of an agreed former missile production facility at which existing types of intermediate-range or shorter-range GLBMs were produced.

The Party whose facility is to be inspected pursuant to this paragraph shall ensure that the other Party is able to establish a permanent continuous monitoring system at that facility within six months after entry into force of this Treaty or within six months of initiation of the process of final assembly described in subparagraph (a). If, after the end of the second year after entry into force of this Treaty, neither Party conducts the process of final assembly described in subparagraph (a) for a period of 12 consecutive months, then neither Party shall have the right to inspect by means of continuous monitoring any missile production facility of the other Party unless the process of final assembly as described in subparagraph (a) is initiated again. Upon entry into force of this Treaty, the facilities to be inspected by continuous monitoring shall be: in accordance with subparagraph (b), for the United States of America, Hercules Plant Number 1, at Magna, Utah; in accordance with subparagraph (a), for the Union of Soviet Socialist Republics, the Votkinsk Machine Building Plant, Udmurt Autonomous Soviet Socialist Republic, Russian Soviet Federative Socialist Republic.

Comment:

This provision establishes the asymmetrical monitoring rights discussed in connection with Article VI.2 and VII.10.

ARTICLE XII - VERIFICATION: NATIONAL TECHNICAL MEANS

Article XII, Paragraph 2

Neither Party shall:

- (a) interfere with national technical means of verification of the other Party ...; or
- (b) use concealment measures which impede verification of compliance with the provisions of this Treaty by national technical means of verification carried out in accordance with paragraph 1 of this Article. This obligation does not apply to cover or concealment practices, within a deployment area, associated with normal training, maintenance and operations, including the use of

environmental shelters to protect missiles and launchers.

Comment:

Given the fact that the Soviets have in the past not complied with the corresponding non-interference provisions of other treaties, there is reason to doubt the value of this provision.

Article XII, Paragraph 3

To enhance observation by national technical means of verification, each Party shall have the right until a Treaty between the Parties reducing and limiting strategic offensive arms enters into force, but in any event for no more than three years after entry into force of this Treaty, to request the implementation of cooperative measures at deployment bases for road-mobile GLBMs with a range capability in excess of 5500 kilometers, which are not former missile operating bases eliminated pursuant to paragraph 8 of Article X of this Treaty. The Party making such a request shall inform the other Party of the deployment base at which cooperative measures shall be implemented. The Party whose base is to be observed shall carry out the following cooperative measures:

(a) no later than six hours after such a request, the Party shall have opened the roofs of all fixed structures for launchers located at the base, removed completely all missiles on launchers from such fixed structures for launchers and displayed such missiles on launchers in the open without using concealment measures; and

(b) the Party shall leave the roofs open and the missiles on launchers in place until twelve hours have elapsed from the time of the receipt of a request for such an observation.

Each Party shall have the right to make six such requests per calendar year. Only one deployment base shall be subject to these cooperative measures at any one time.

Comment:

We can expect that this provision will be hailed as a major accomplishment in the field of cooperative verification measures. While it does represent a new approach -- one designed to obviate on-site inspection of certain suspect facilities -- it does not

under the circumstances accomplish its purpose, namely to allow us to monitor SS-25 bases to check whether SS-20s have been deployed there in violation of the Treaty. But Subparagraph 3(a) in effect affords the Soviets six hours in which to remove from a challenged site any illegally deployed SS-20s. Given that the SS-20 is a mobile missile designed to be movable upon short notice, it is unreasonable to suppose that, if the Soviets decided to cheat in this manner, they would not be able to effect a timely removal of the SS-20s after a challenge.

Other issues that merit attention in this regard include:

What is the value of this provision relative to the value of the short-notice, on-site inspection regime the United States was proposing up till the final days of the Treaty negotiations? It is noteworthy that, although the United States in the INF negotiations dropped its insistence on on-site inspection of suspect facilities, the Gorbachev-Reagan Summit Statement commits the Soviets to agree to procedures for such inspections in the START agreement. With this commitment in hand, perhaps the United States can now find a way to use it to strengthen the verification regime in the INF Treaty.

Does the negotiating record reflect some understanding about what a fixed structure for a launcher is, and indicate what would happen in the event new fixed structures for launchers appeared which did not have openable roofs? Is it physically possible for the Soviets to open the roofs of all fixed structures at SS-25 bases which are capable of containing SS-20 launchers? What about maintenance facilities, other garages, etc. in which a launcher could be located?

Does the Soviet obligation to show us the "missiles" on SS-25 launchers mean simply that we will be allowed to observe the SS-25 canister which will be judged (applying the standard INF Treaty counting rules) to contain an SS-25 and not an SS-20, or does it constitute an obligation to display the missiles removed from their canisters? If not, what value would this provision have as an aid to verification?

#### ARTICLE XIII - RESOLUTION OF COMPLIANCE ISSUES

##### Article XIII, Paragraph 1

To promote the objectives and implementation of the provisions of this Treaty, the Parties hereby establish the Special Verification Commission. The Parties agree that, if either Party so requests, they shall meet within the framework of the Special Verification Commission to:

- (a) resolve questions relating to compliance with

the obligations assumed; and

(b) agree upon such measures as may be necessary to improve the viability and effectiveness of this Treaty.

Comment:

Given the poor record of the Standing Consultative Commission established under SALT I in resolving serious concerns about Soviet violations of past treaties, it is unclear on what basis one should expect the Special Verification Commission established by this paragraph to do better.

It is also unclear what types of "measures ... to improve the viability and effectiveness of the Treaty" are envisioned that the parties will agree upon pursuant to subparagraph 1(b). It should be ascertained whether this provision can be used to circumvent the amendment process (described in Article XVI), which properly requires that any proposed amendments to the Treaty be submitted to the Senate for its advice and consent.

ARTICLE XIV - NON-CIRCUMVENTION

The Parties shall comply with this Treaty and shall not assume any international obligations or undertakings which would conflict with its provisions.

Comment:

The fundamental question about this provision is: Does it create any obligations over and above those contained in other parts of the Treaty? If not, then it merely emphasizes the Parties' commitment to comply with the Treaty, and, from a legal point of view, is surplusage. We assume that the Administration takes the latter position. However, under international law, if there is a question regarding the interpretation of a Treaty provision, then a reading which entails the creation of an additional obligation of the Parties is presumed correct as opposed to one that regards it as redundant (or "surplusage"). Consequently, if the Administration regards this provision as surplusage, then it must be clearly established now that the parties deem it as such in order to defeat the legal presumption that would otherwise apply. If this is not accomplished, then the provision could be cited as barring various Western defense efforts that, while not prohibited by the Treaty's terms, are said to be somehow "in conflict with" them.

ARTICLE XV - DURATION

Article XV, Paragraph 1

This Treaty shall be of unlimited duration.

Comment:

Although the Treaty is of unlimited duration, the inspection rights it grants last for only 13 years (3 years in the case of the verification enhancement provisions relative to SS-25 bases, possibly less for portal monitoring at Votkinsk under certain circumstances). The working assumption seems to have been that a START Treaty would be signed within 3 years. Should a START Treaty not be signed in that period, should thought be given to ensuring that the verification regime for this Treaty will be extended?

ARTICLE XVI - Amendments

Each Party may propose amendments to this Treaty. Agreed amendments shall enter into force in accordance with the procedures set forth in Article XVII governing the entry into force of this Treaty.

Comment:

See the comment on Article XIII.1(b) concerning the potential uses of the Special Verification Commission to circumvent the requirement that all amendments be submitted to the Senate for its advice and consent.

SIGNATURE SECTION

\*\*\*

DONE at Washington on December 8, 1987, in two copies, each in the English and Russian languages, both texts being equally authentic.

Comment:

Given the haste with which the final texts were prepared, and in view of the significant difficulties we have had in the past with divergent translations being cited as a pretext for Soviet behavior we judged to be inconsistent with their commitments, a careful review of the consistency of the two texts is in order.

Postscript on THE PREAMBLE

The United States of America and the Union of Soviet Socialist Republics, hereinafter referred to as the Parties,

Conscious that nuclear war would have devastating consequences for all mankind,

Guided by the objective of strengthening strategic stability,

Convinced that the measures set forth in this Treaty will help to reduce the risk of outbreak of war and strengthen international peace and security, and

\*\*\*

Have agreed as follows:

Though preambular language is often dismissed as having little significance, it can have a bearing on public attitudes about the subject matter of the Treaty and on questions of Treaty interpretation. It is troubling that the preamble here focuses on the threat of nuclear war rather than the threat of war in general. Any major European war would have devastating consequences. The focus on the special threat from nuclear weapons lends itself to use as a criticism of NATO's flexible response policy, which entails reliance on nuclear weapons as a deterrent against aggression.

The preamble implies that the elimination of nuclear weapons as such enhances strategic stability. This could have dangerous effects on attitudes toward the remaining nuclear weapons in Europe and toward strategic arms, all of which are critical to Alliance security -- indeed, more critical in the aftermath of the INF Treaty than before.

## ELIMINATION PROTOCOL

INTRODUCTION

This protocol specifies the categories of items associated with Treaty-limited systems that the Parties agree to eliminate and the procedures that will be deemed to constitute "elimination." Two points merit particular attention: First, the Parties have agreed that not all the equipment or facilities associated with Treaty-limited missiles are to be eliminated. Second, they agreed that some of the items to be "eliminated" are not actually to be destroyed but simply modified or altered in designated ways so as to allow them to be used for other purposes.

SECTION ISection I, Paragraph 4

For both Parties, all stages of intermediate-range and shorter-range GLBMs shall be subject to elimination.

Comment:

Notwithstanding this provision, the Soviets are permitted by the Treaty (see Article VI.2) not only to retain but even to produce the first-stage of the intercontinental SS-25, which is virtually identical to that of the first stage of the SS-20. Article VI.2 of the Treaty vitiates this section of the Elimination Protocol as far as a key element of the most important Soviet INF system is concerned.

SECTION IISection II, Paragraph 3

Prior to a missile's arrival at the elimination facility, its nuclear warhead device and guidance elements may be removed.

Comment:

This provision spares from elimination the nuclear warheads of the Treaty-limited INF missile systems. Given the serious concerns on the U.S. side about whether there could be effective verification of nuclear warhead destruction and whether important net intelligence benefits would flow to the Soviets from measures to verify such destruction and, given the Parties' apparently mutual interest in recovering and recycling warhead materials,

this provision seems on balance to be desirable.

Section II, Paragraph 4

Each Party shall select the particular technological means necessary to implement the procedures required in paragraphs 10 and 11 of this Section and to allow for on-site inspection of the conduct of the elimination procedures required in paragraph 10 of this Section in accordance with Article XI of the Treaty, this Protocol and the Protocol on Inspection.

Comment:

What is involved in allowing the inspected party to "select the technological means necessary ... to allow for on-site inspection of the conduct of the elimination procedures"? Is it clear that this right cannot be used to hinder the ability of the inspecting party to conduct a useful inspection?

Section II, Paragraph 7

A missile stage being eliminated by burning in accordance with the procedures set forth in paragraph 10 of this Section shall not be instrumented for data collection. Prior to the initiation of the elimination procedures set forth in paragraph 10 of this Section, an inspector from the inspecting Party shall confirm that such missile stages are not instrumented for data collection. Those missile stages shall be subject to continuous observation by such an inspector from the time of that inspection until the burning is completed.

Comment:

It is unclear whether we can have confidence that the Soviets are complying with this provision.

Section II, Paragraph 10

The specific procedures for the elimination of the items of missile systems listed in paragraph 1 of this Section shall be as follows, unless the Parties agree upon different procedures to achieve the same result as the procedures identified in this paragraph:

For the Pershing II:

\* \* \*

Launcher:

- (a) erector-launcher mechanism shall be removed from launcher chassis;
- (b) all components of erector-launcher mechanism shall be cut at locations that are not assembly joints into two pieces of approximately equal size;
- (c) missile launch support equipment, including external instrumentation compartments, shall be removed from launcher chassis; and
- (d) launcher chassis shall be cut at a location that is not an assembly joint into two pieces of approximately equal size.

\* \* \*

For the SS-20:

Launcher:

- (a) erector-launcher mechanism shall be removed from launcher chassis;
- (b) all components of erector-launcher mechanism shall be cut at locations that are not assembly joints into two pieces of approximately equal size;
- (c) missile launch support equipment, including external instrumentation compartments, shall be removed from launcher chassis;
- (d) mountings of erector-launcher mechanism and launcher leveling supports shall be cut off launcher chassis;
- (e) launcher leveling supports shall be cut at locations that are not assembly joints into two pieces of approximately equal size; and
- (f) a portion of the launcher chassis, at least 0.78 meters in length, shall be cut off aft of the rear axle.

Comment:

The procedures "eliminating" SS-20 and other Soviet launchers

have been designed to leave them useful to a certain extent. They contrast with the elimination regime applicable to comparable U.S. systems (i.e., the Pershing I's and II's) which requires a cutting up of the systems into halves. The significance of this discriminatory arrangement is discussed in the comments on Article IV.1 of the Treaty.

## PROTOCOL ON INSPECTION

INTRODUCTION

This protocol details the rights and responsibilities of the Parties with respect to the inspections called for in the INF Treaty and its associated documents.

SECTION IIISection III, Paragraph 7

Without prejudice to their privileges and immunities, inspectors and aircrew members shall be obliged to respect the laws and regulations of the State on whose territory an inspection is carried out and shall be obliged not to interfere in the internal affairs of that State. In the event the inspected Party determines that an inspector or aircrew member of the other Party has violated the conditions governing inspection activities set forth in this Protocol, or has ever committed a criminal offense on the territory of the inspected Party or a basing country, or has ever been sentenced for committing a criminal offense or expelled by the inspected Party or a basing country, the inspected Party making such a determination shall so notify the inspecting Party, which shall immediately strike the individual from the lists of inspectors or the list of aircrew members. If, at that time, the individual is on the territory of the inspected Party or a basing country, the inspecting Party shall immediately remove that individual from the country.

Comment:

There are two types of problems relating to this provision. First, the obligation of inspectors "to respect the laws and regulations of the [inspected] State" appears to offer the Soviets the opportunity to circumscribe narrowly the on-site activities of U.S. inspectors. Carrying out the legitimate functions of an inspection (e.g., demanding access to areas off-limits to individuals without necessary clearances) could be characterized as a failure to respect the laws and regulations of the inspected Party. Moreover, this paragraph permits the parties great latitude in deciding whether to expel an inspector.

Second, there is the larger question of ensuring that the inspectors will be able to operate in the Soviet Union in the intended manner and without personal risk. There have been

problems in other contexts with Soviet treatment of U.S. (and other Western) inspectors (e.g., when Soviet troops in 1985 insisted on restricting the activity of -- and ultimately killing -- Major Nicholson, who was serving in East Germany as an inspector under the Four-Power Military Liaison Mission agreement which was concluded in the late 1940s). Have the Parties arrived at any understanding on how to resolve disputes about the proper bounds of the inspectors' activities so that incidents like the shooting of Major Nicholson will not occur?

#### SECTION IV

Section IV, Paragraph 5

Either Party may change the point or points of entry to the territories of the countries within which its deployment areas, missile operating bases or missile support facilities are located, by giving notice of such change to the other Party. A change in a point of entry shall become effective five months after receipt of such notification by the other Party.

#### Comment:

This paragraph appears to give the Soviets the right to make a unilateral change in the point of entry into the German Democratic Republic. This issue -- a highly sensitive matter dating back to the earliest days of the Four Power occupation of Germany -- gave rise to particularly difficult negotiating during the last days of the INF Treaty negotiations. The result was Soviet agreement to name an airport other than Berlin-Schoenefeld (which the United States regards as a part of Berlin and hence subject to Four Power control) as the point of entry into the GDR. If the Soviets have given private assurances that they will not use this paragraph to change the point of entry to Berlin-Schoenefeld, it would be desirable to make them part of the record, lest this subject cause needless friction in the future between the FRG and its friends in the West.

#### SECTION V

Several paragraphs under Sections V and VI of this Protocol give the inspected Party wide powers to influence the inspection process, e.g., the right to appoint in-country escorts with wide powers; to control in-country transportation; to provide telephonic communications for the inspectors' use; to specify "safety regulations" that the inspectors must observe, etc.

Can the U.S. prevent the Soviets from exploiting these provisions to frustrate effective inspection? What lessons were learned about likely Soviet behavior in the course of such

inspections from the visit to Gomel?

Section V, Paragraph 4

Equipment and supplies which the inspecting Party brings into the country in which an inspection site is located shall be subject to examination at the point of entry each time they are brought into that country. This examination shall be completed prior to the departure of the inspection team from the point of entry to conduct an inspection. Such equipment and supplies shall be examined by the in-country escort in the presence of the inspection team members to ascertain to the satisfaction of each Party that the equipment and supplies cannot perform functions unconnected with the inspection requirements of the Treaty. If it is established upon examination that the equipment or supplies are unconnected with these inspection requirements, then they shall not be cleared for use and shall be impounded at the point of entry until the departure of the inspection team from the country where the inspection is conducted. Storage of the inspecting Party's equipment and supplies at each point of entry shall be within tamper-proof containers within a secure facility. Access to each secure facility shall be controlled by a "dual key" system requiring the presence of both Parties to gain access to the equipment and supplies.

Comment:

Equipment and supplies brought in by inspection team may be examined by the "in-country escort" in order "to ascertain to the satisfaction of each Party that [they] cannot perform functions unconnected with the inspection requirements of the Treaty. If it is established [query: by whom?] upon examination that the equipment or supplies are unconnected with these inspection requirements, then they shall not be cleared for use and shall be impounded...."

The Parties cannot intend that this language be taken literally. Any kind of inspection equipment can perform functions "unconnected" with the Treaty; e.g., a camera can take pictures of things other than limited missiles and launchers. Presumably what is meant is that equipment will not be cleared for use if it cannot perform any functions connected with the Treaty. This would be worth clarifying with the Soviets.

Section V, Paragraph 5

Throughout the in-country period, the inspected

Party shall provide, or arrange for the provision of, meals, lodging, work space, transportation and, as necessary, medical care for the inspection team and aircrew of the inspecting Party. All the costs in connection with the stay of inspectors carrying out inspection activities pursuant to paragraph 6 of Article XI of the Treaty, on the territory of the inspected Party, including meals, services, lodging, work space, transportation and medical care shall be borne by the inspecting Party.

Comment:

This provision, as well as other provisions which envisage that the Soviets will supply services for U.S. inspectors and bill the United States for them, should be evaluated in the light of our experience with similar arrangements in connection with the construction of the new U.S. Embassy in Moscow.

Use in-country of host aircraft for transport to inspection sites conflicts with policy statements made following agreement at the Conference on Disarmament in Europe that the precedent established in that accord for host-aircraft use would not be applied to further, "serious" arms control agreements. This has possibly still more unsatisfactory implications for the START negotiations.

SECTION VI

Section VI, Paragraph 3

In discharging their functions, inspectors shall not interfere directly with on-going activities at the inspection site and shall avoid unnecessarily hampering or delaying the operation of a facility or taking actions affecting its safe operation.

What is the implication of this "non-interference" provision for the "stand-downs" (pursuant to Section VII.1) needed to give the on-site inspectors an opportunity to assess what is at the site? Will inspectors be able to enforce the rules requiring that missiles, launchers, etc., not be moved during the pre-inspection period?

Section VI, Paragraph 6

Inspectors carrying out inspection activities pursuant to paragraph 6 of Article XI of the Treaty shall be allowed to travel within 50 kilometers from the inspection site with the permission of the in-country escort, and as considered necessary by the inspected Party, shall be accompanied by the

in-country escort. Such travel shall be taken solely as a leisure activity.

Comment:

The intelligence by-products of this provision will not be the same for the two Parties. While it appears that nothing of importance lies within 50 kilometers of Votkinsk, Salt Lake City, an increasingly important commercial and defense center, lies well within the range of "off-duty" Soviet inspectors.

Section VI, Paragraph 7

Inspectors shall have the right throughout the period of inspection to be in communication with the embassy of the inspecting Party located within the territory of the country where the inspection is taking place using the telephone communications provided by the inspected Party.

Comment:

This provision, requiring the use of host-country communications systems, may allow the Soviets to hinder effective inspection by U.S. personnel. It gives the Soviets the opportunity to deny U.S. personnel secure communications (or any at all) with their government while in the USSR.

Section VI, Paragraph 9

The inspection team may bring onto the inspection site such documents as needed to conduct the inspection, as well as linear measurement devices; cameras; portable weighing devices; radiation detection devices; and other equipment, as agreed by the Parties. The characteristics and method of use of the equipment listed above, shall also be agreed upon within 30 days after entry into force of the Treaty. During inspections conducted pursuant to paragraphs 3, 4, 5(a), 7 or 8 of Article XI of the Treaty, the inspection team may use any of the equipment listed above, except for cameras, which shall be for use only by the inspected Party at the request of the inspecting Party. During inspections conducted pursuant to paragraph 5(b) of Article XI of the Treaty, all measurements shall be made by the inspected Party at the request of the inspecting Party. At the request of inspectors, the in-country escort shall take photographs of the inspected facilities using the inspecting Party's camera systems which are capable of producing duplicate, instant development

photographic prints. Each Party shall receive one copy of every photograph.

Comment:

This provision requires agreement within 30 days of entry into force of the Treaty on the "characteristics and method of use of" equipment brought by inspection teams. Given that the "initial" inspections (pursuant to Article XI.3 of the Treaty) are to start 30 days after entry into force (and to be finished 60 days thereafter), it is necessary that such agreement be reached promptly; will the fact that these discussions will be going on under such great time pressure create a problem for us? Why were these matters not agreed to before Treaty signature?

Section VI, Paragraph 14

For inspections pursuant to paragraphs 3, 4, 5, 7 or 8 of Article XI of the Treaty, pre-inspection procedures, including briefings and safety-related activities, shall begin upon arrival of the inspection team at the inspection site and shall be completed within one hour. The inspection team shall begin the inspection immediately upon completion of the pre-inspection procedures. The period of inspection shall not exceed 24 hours, except for inspections pursuant to paragraphs 6, 7 or 8 of Article XI of the Treaty. The period of inspection may be extended, by agreement with the in-country escort, by no more than eight hours. Post-inspection procedures, which include completing the inspection report in accordance with the provisions of Section XI of this Protocol, shall begin immediately upon completion of the inspection and shall be completed at the inspection site within four hours.

Comment:

The inspections under Treaty Article XI, Paragraphs 3-5 (i.e., the bulk of the inspections provided for in this Treaty, except for the permanent portal monitoring) are limited in duration to 24 hours. This creates an incentive for the Soviets to delay and quibble. What recourse will the United States have if its inspectors are subjected to dilatory maneuvers?

SECTION VII

Section VII, Paragraph 1

Within one hour after the time for the

specification of the inspection site notified pursuant to paragraph 1(a) of Section IV of this Protocol, the inspected Party shall implement pre-inspection movement restrictions at the inspection site, which shall remain in effect until the inspection team arrives at the inspection site. During the period that pre-inspection movement restrictions are in effect, missiles, stages of such missiles, launchers or support equipment subject to the Treaty shall not be removed from the inspection site.

Comment:

Pre-inspection movement limitations are to be imposed within one hour of notification of the specific site to be inspected; will it be possible to verify that such a "stand-down" order has been issued on behalf of the inspecting Party by the inspected Party and that that order has been obeyed? See comments on Section VI.3 of this Protocol.

Section VII, Paragraph 8

A missile, a stage of such a missile or a launcher subject to the Treaty shall be subject to inspection only by external visual observation, including measuring, as necessary, the dimensions of such a missile, stage of such a missile or launcher. A container that the inspected Party declares to contain a missile or stage of a missile subject to the Treaty, and which is not sufficiently large to be capable of containing more than one missile or stage of such a missile of the inspected Party subject to the Treaty, shall be subject to inspection only by external visual observation, including measuring, as necessary, the dimensions of such a container to confirm that it cannot contain more than one missile or stage of such a missile of the inspected Party subject to the Treaty. Except as provided for in paragraph 14 of this Section, a container that is sufficiently large to contain a missile or stage of such a missile of the inspected Party subject to the Treaty that the inspected Party declares not to contain a missile or stage of such a missile subject to the Treaty shall be subject to inspection only by means of weighing or visual observation of the interior of the container, as necessary, to confirm that it does not, in fact, contain a missile or stage of such a missile of the inspected Party subject to the Treaty. If such a container is a launch canister associated with a

type of missile not subject to the Treaty, and declared by the inspected Party to contain such a missile, it shall be subject to external inspection only, including use of radiation detection devices, visual observation and linear measurement, as necessary, of the dimensions of such a canister.

Comment:

The last sentence will allow the Soviets (except at Votkinsk) to declare any suspicious canister to be a canister for an SS-25 (or for some other non-limited missile) and, it appears, we will be unable to look inside it, weigh it or x-ray it. As a result of this provision, the Soviets could keep any number of undeclared SS-20s in SS-25 canisters.

Section VII, Paragraph 9

A structure or container that is not sufficiently large to contain a missile, stage of such a missile or launcher of the inspected Party subject to the Treaty shall be subject to inspection only by external visual observation including measuring, as necessary, the dimensions of such a structure or container to confirm that it is not sufficiently large to be capable of containing a missile, stage of such a missile or launcher of the inspected Party subject to the Treaty.

Comment:

It is unclear how small a structure or container must be in order for this provision to exempt it from inspection other than by external visual observation. For instance, it is not clear whether the counting rules of Treaty Article VII.10 apply to this provision and, if so, how.

Section VII, Paragraph 10

Within a structure, a space which is sufficiently large to contain a missile, stage of such a missile or launcher of the inspected Party subject to the Treaty, but which is demonstrated to the satisfaction of the inspection team not to be accessible by the smallest missile, stage of a missile or launcher of the inspected Party subject to the Treaty shall not be subject to further inspection. If the inspected Party demonstrates to the satisfaction of the inspection team by means of a visual inspection of the interior of an enclosed space from its entrance that the enclosed space does not contain any missile, stage of such a

missile or launcher of the inspected Party subject to the Treaty, such an enclosed space shall not be subject to further inspection.

Comment:

The language of this provision is not clear. Does the prohibition on further inspections apply only to the inspection then underway, or would it apply to subsequent inspections of the same facility, as well? In the latter case, would it be overridden by any evidence that a party had increased the dimensions of the space so that it could now contain a Treaty-limited item?

Section VII, Paragraph 14

During an inspection conducted pursuant to paragraph 5(b) of Article XI of the Treaty, it shall be the responsibility of the inspected Party to demonstrate that a shrouded or environmentally protected object which is equal to or larger than the smallest missile, stage of a missile or launcher of the inspected Party subject to the Treaty is not, in fact, a missile, stage of such a missile or launcher of the inspected Party subject to the Treaty. This may be accomplished by partial removal of the shroud or environmental protection cover, measuring, or weighing the covered object or by other methods. If the inspected Party satisfies the inspection team by its demonstration that the object is not a missile, stage of such a missile or launcher of the inspected Party subject to the Treaty, then there shall be no further inspection of that object. If the container is a launch canister associated with a type of missile not subject to the Treaty, and declared by the inspected Party to contain such a missile, then it shall be subject to external inspection only, including use of radiation detection devices, visual observation and linear measurement, as necessary, of the dimensions of such a canister.

Comment:

Rules about inspecting containers, shrouded objects, etc. have the following anomaly: as noted in connection with paragraph 8 above, if the inspected Party declares that a given container is a launch container for an unlimited missile, then said container is subject to a less stringent inspection regime.

SECTION VIII

Section VIII, Paragraph 1

Inspections of the process of elimination of items of missile systems specified in the Protocol on Elimination carried out pursuant to paragraph 7 of Article XI of the Treaty shall be conducted in accordance with the procedures set forth in this paragraph and the Protocol on Elimination.

\*\*\*

(c) Subject to paragraphs 3 and 11 of Section VI of this Protocol, inspectors shall observe the execution of the specific procedures for the elimination of the items of missile systems as provided for in the Protocol on Elimination. If any deviations from the agreed elimination procedures are found, the inspectors shall have the right to call the attention of the in-country escort to the need for strict compliance with the above-mentioned procedures. The completion of such procedures shall be confirmed in accordance with the procedures specified in the Protocol on Elimination.

Comment:

Exactly what does the "right to call the attention of the in-country escort to the need for strict compliance" with the inspection protocols procedures mean?

Section VIII, Paragraph 2

Inspections of the elimination of items of missile systems specified in the Protocol on Elimination carried out pursuant to paragraph 8 of Article XI of the Treaty shall be conducted in accordance with the procedures set forth in Sections II, IV or V of the Protocol on Elimination or as otherwise agreed by the Parties.

Comment:

The Protocol contains no inspection rules for inspections of elimination of training missiles and launchers.

SECTION IX

The precedents established in this Treaty for continuous monitoring will be important for START. They should be rigorously assessed in that light.

Section IX, Paragraph 1

The inspected Party shall maintain an agreed perimeter around the periphery of the inspection site and shall designate a portal with not more than one rail line and one road which shall be within 50 meters of each other. All vehicles which can contain an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party shall exit only through this portal.

Comment:

The last sentence of this paragraph, as well as other paragraphs of this Section, apparently incorporates the fundamental inequality caused by the counting rule (Article VII.10 of the Treaty) according to which a Pershing II first stage counts as a whole missile, while only a full-up missile or its canister counts as an SS-20 on the Soviet side. In other words, all U.S. vehicles and containers large enough to contain a Pershing II first stage (length 3.7 meters) will be subject to inspection at the Magna facility's portal while only those as large as (or larger than) an entire SS-20 (length 16.5 meters) will be subject to inspection at the Votkinsk gate.

Furthermore, it is not clear whether there is agreement as to what constitutes an "agreed perimeter." Is there an accord reflecting certain minimum Soviet security standards, or are we making assumptions about the character and quality of such standards based on past practice?

Section IX, Paragraph 13

Vehicles exiting through the portal specified in paragraph 1 of this Section that are large enough and heavy enough to contain an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party but that are declared not to contain a missile or missile stage as large or larger than and as heavy or heavier than an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party shall be subject to the following procedures.

\*\*\*

(c) If inside a vehicle there are one or more containers or shrouded objects large enough to be or to contain an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party, it shall be the responsibility of the inspected Party

to demonstrate that such containers or shrouded objects are not and do not contain intermediate-range GLBMs or the longest stages of such GLBMs of the inspected Party.

Comment:

What does "responsibility...to demonstrate" mean? To inspectors' satisfaction? What is the significance of this choice of words when elsewhere the requirement is spelled out with specificity?

Section IX, Paragraph 14

Vehicles exiting through the portal specified in paragraph 1 of this Section that are declared to contain a missile or missile stage as large or larger than and as heavy or heavier than an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party shall be subject to the following procedures.

\*\*\*

(c) The inspecting Party shall have the right to weigh and measure the dimensions of any launch canister or of any shipping container declared to contain such a missile or missile stage and to image the contents of any launch canister or of any shipping container declared to contain such a missile or missile stage; it shall have the right to view such missiles or missile stages contained in launch canisters or shipping containers eight times per calendar year. The in-country escort shall be present during all phases of such viewing. During such interior viewing:

(i) the front end of the launch canister or the cover of the shipping container shall be opened;  
(ii) the missile or missile stage shall not be removed from its launch canister or shipping container; and

(iii) the length and diameter of the stages of the missile shall be measured in accordance with the methods agreed by the Parties so as to ascertain that the missile or missile stage is not an intermediate-range GLBM of the inspected Party, or the longest stage of such a GLBM, and that the missile has no more than one stage which is outwardly similar to a stage of an existing type of intermediate-range GLBM.

Comment:

The last sentence suggests that the Parties now know of some non-intrusive and non-damaging way to discriminate between the largest stage of the SS-20 and that of the SS-25. Is this the case? What is this technology? Is it currently available? What is its assessed reliability?

By what mechanisms are the Parties to agree to the methods for measuring SS-20/25 stages at Votkinsk? Do they include the non-damaging image producing equipment mentioned in Section IX.6? If so, why not say so? If the Soviets have not yet agreed that the methods to be used include such equipment, this lack of agreement should be noted.

SECTION X

An inspection shall be cancelled if, due to circumstances brought about by force majeure, it cannot be carried out. In the case of a delay that prevents an inspection team performing an inspection pursuant to paragraphs 3, 4 or 5 of Article XI of the Treaty, from arriving at the inspection site during the time specified in paragraph 2 of Section VII of this Protocol, the inspecting Party may either cancel or carry out the inspection. If an inspection is cancelled due to circumstances brought about by force majeure or delay, then the number of inspections to which the inspecting Party is entitled shall not be reduced.

Comment:

This section foresees the possibility of a delay that prevents the inspecting Party from arriving at the inspection site within the 9 hour period specified in Section VII.2. The inspecting Party may cancel (and not have an aborted inspection count against its quota) or continue anyway (and presumably have it count against its quota). In either case, this section appears to be an all-purpose loophole; the inspecting Party has an incentive to cancel since the presumably less worthwhile, delayed inspection still counts against the quota; even if it does not, the inspected Party will have been able to hide anything it wishes before the delayed inspection occurs. (Note that "delay" is distinguished from a force majeure circumstance in which the inspection presumably cannot be carried out at all.)

SECTION XISection XI, Paragraph 1

For inspections conducted pursuant to paragraphs 3, 4, 5, 7 or 8 of Article XI of the Treaty, during post-inspection procedures, and no later than two hours after the inspection has been completed, the inspection team leader shall provide the in-country escort with a written inspection report in both the English and Russian languages. The report shall be factual. It shall include the type of inspection carried out, the inspection site, the number of missiles, stages of missiles, launchers and items of support equipment subject to the Treaty observed during the period of inspection and any measurements recorded pursuant to paragraph 10 of Section VI of this Protocol. Photographs taken during the inspection in accordance with agreed procedures, as well as the inspection site diagram provided for by paragraph 6 of Section VII of this Protocol, shall be attached to this report.

Comment:

The written inspection report is to be provided to the in-country escort within 2 hours of the completion of the inspection. This hardly allows for any serious analysis of observations. It seems to assume that the inspection report will simply verify the inspected Parties' information.

In any case, it should be made clear that failure to list an anomaly in the inspection report will not prevent the inspecting Party from raising the issue subsequently, either in the Special Verification Commission or elsewhere.

Section XI, Paragraph 2

For inspection activities conducted pursuant to paragraph 6 of Article XI of the Treaty, within 3 days after the end of each month, the inspection team leader shall provide the in-country escort with a written inspection report both in the English and Russian languages. The report shall be factual. It shall include the number of vehicles declared to contain a missile or stage of a missile as large or larger than and as heavy or heavier than an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party that left the inspection site through the portal specified in paragraph 1 of Section IX of this Protocol during that month. The report shall also include any measurements of launch canisters or shipping containers contained in these vehicles recorded pursuant to paragraph 11 of Section VI of this Protocol. In the event the inspecting Party,

under the provisions of paragraph 14(c) of Section IX of this Protocol, has viewed the interior of a launch canister or shipping container declared to contain a missile or stage of a missile as large or larger than and as heavy or heavier than an intermediate-range GLBM or longest stage of such a GLBM of the inspected Party, the report shall also include the measurements of the length and diameter of missile stages obtained during the inspection and recorded pursuant to paragraph 11 of Section VI of this Protocol. Photographs taken during the inspection in accordance with agreed procedures shall be attached to this report.

Comment:

In addition to the aforementioned shortcomings of this Section, a further mechanical one merits mention. The problem of having competent translation and conforming of report texts performed under the time pressures stipulated here is not a trivial one. If these reports take on the importance one might expect, then having them done properly and consistently may prove to be as daunting a task as ensuring that they are technically sound.

## MEMORANDUM OF UNDERSTANDING REGARDING INF DATA

Serious questions can be -- and have been -- raised about the accuracy of the data provided by the Soviets in this MCU. This is a matter that can be explored usefully and properly only through an examination of classified estimates and analyses.

However, it should be noted that the State Department stated in the Spring of 1987 that:

In addition to the approximately 400 SS-20 missiles now deployed, there may be as many as 200-400 (or more) such missiles in the USSR's inventory.

Thus, it would seem that our intelligence estimates on these matters fall within a wide range of uncertainty. It is also the case that our estimates have, for some time, been a matter of public record. Consequently, we should not take particular comfort from the contention that the Soviet-provided data fall within that range.

February 3, 1968

THE INF TREATY: ARTICLE-BY-ARTICLE REVIEW  
HIGHLIGHTS

This paper analyzes the rights and obligations of the Parties to the INF Treaty, not as advertised in statements or declarations about the treaty, but as set forth in the Treaty language itself. This review of the Treaty text does not aim to evaluate whether the Treaty's purposes are well-advised from the points of view of strategy or diplomacy. Rather, it examines whether the Treaty's terms actually accomplish the Treaty's stated (or clearly implied) purposes, chief among which is the complete, verifiable elimination of the intermediate- and shorter-range (500 to 6500 km.) ground-based nuclear missiles of the U. S. and USSR. It focuses on ways the Treaty might be improved to enhance the chances that it will achieve its aims and to minimize unintended side-effects detrimental to U.S. interests.

The key points are listed below, accompanied by references to the relevant Treaty provisions and the pages of the Article-by-Article Review on which they are discussed.

1. VERIFICATION PROBLEMS.

a. The Data Gap.

Article IX.3 (pp. 15-16)  
Article XI.3 (p. 21)  
Article XI.5 (pp. 21-22)

b. Loopholes that could facilitate either SS-20 violations or breakout preparations.

Article IV.1 (pp. 5-6)  
Article VI.1 (pp. 7-8)  
Article X.1 (pp. 17-18)  
Article X.5 (p. 18)  
Article XII.3 (pp. 24-25)

c. Inadequate basis for judging accuracy of Soviet-supplied data

Memorandum of Understanding (p. 48)

2. NON-CIRCUMVENTION CLAUSE

Article XIV (p. 26)

3. PROHIBITION ON CONVENTIONALLY ARMED CRUISE MISSILES

Article II.1 and II.2 (pp. 2-3)  
Article VII.4 (pp. 10-11)

## A FURTHER REVIEW OF THE INF TREATY:

SEVEN CRITICAL ISSUES

## Introduction

This analysis of critical issues presented by the Intermediate Nuclear Forces Treaty supplements an earlier AEI paper, Article-by-Article Review of the INF Treaty, published in February 1988. Like the earlier analysis, this one was prepared by a working group of arms control specialists convened at the American Enterprise Institute for Public Policy Research under the chairmanship of Frank J. Gaffney, Jr. The members of the working group are listed on the following page.

The purpose of this further analysis is to review the central issues that have emerged over the past three months in the course of the Senate's deliberations on the INF Treaty. While the initial AEI paper focused almost exclusively on the provisions of the Treaty itself, this paper also considers statements of Administration officials and others in Senate hearings and, in particular, four official documents -- an assessment of the AEI Article-by-Article Review submitted to the Senate on behalf of the Administration by Secretary of Defense Frank Carlucci, the (unclassified) unanimous report on the Treaty of the Senate Select Committee on Intelligence, the majority report of the Senate Armed Services Committee, and the majority report of the Senate Foreign Relations Committee.

As before, the working group concentrated on (a) the effectiveness of the INF Treaty's provisions and protocols in achieving the Treaty's own goal of eliminating all intermediate- and shorter-range nuclear missiles, and (b) the implications of these provisions for broader strategic arms reduction agreements now being discussed between the United States and the Soviet Union. Larger questions concerning the military and strategic value of eliminating the nuclear missiles covered by the INF accord are not considered here. We hope, however, that this assessment will help clarify some of the critical issues presented by the Treaty and the Senate deliberations.

## CONVENTIONALLY-ARMED GROUND-LAUNCHED MISSILES

Introduction

The INF Treaty bans all conventionally-armed, ground-based cruise missiles of intermediate- and shorter-ranges. The rationale for the treaty's banning such non-nuclear systems was that it would enhance our ability to verify the ban on nuclear-armed missiles of the same type and range. As we cannot reliably distinguish through national intelligence means between nuclear-armed and conventionally-armed GLCMs, banning both types was considered helpful in allowing us to verify the ban on the former type. The central issues are: What are the actual verification benefits we can derive from banning conventionally-armed GLCMs? And do those benefits outweigh: (1) the military costs to the United States of eschewing such systems and (2) the risks that this "collateral" ban on a conventional system -- in what is supposed to be a nuclear weapons treaty -- will be used as a precedent in the Strategic Arms Reductions Talks (START) to impose unacceptable constraints upon non-nuclear air- and sea-launched cruise missiles?

Relevant Treaty ProvisionsArticle II, Paragraphs 1 and 2

For the purposes of this Treaty:

1. The term "ballistic missile" means a missile that has a ballistic trajectory over most of its flight path. The term "ground-launched ballistic missile (GLBM)" means a ground-launched ballistic missile that is a weapon-delivery vehicle.
2. The term "cruise missile" means an unmanned, self-propelled vehicle that sustains flight through the use of aerodynamic lift over most of its flight path. The term "ground-launched cruise missile (GLCM)" means a ground-launched cruise missile that is a weapon-delivery vehicle.

Article VII, Paragraphs 1 and 2

For the purposes of this Treaty:

1. If a ballistic missile or a cruise missile has

been flight-tested or deployed for weapon delivery, all missiles of that type shall be considered to be weapon-delivery vehicles.

2. If a GLEM or GLCM is an intermediate-range missile, all GLEMs or GLCMs of that type shall be considered to be intermediate-range missiles. If a GLEM or GLCM is a shorter-range missile, all GLEMs or GLCMs of that type shall be considered to be shorter-range missiles.

Article VII, Paragraph 4

The range capability of a GLEM not listed in Article III of this Treaty shall be considered to be the maximum range to which it has been tested. The range capability of a GLCM not listed in Article III of this Treaty shall be considered to be the maximum distance which can be covered by the missile in its standard design mode flying until fuel exhaustion, determined by projecting its flight path onto the earth's sphere from the point of launch to the point of impact. GLEMs or GLCMs that have a range capability equal to or in excess of 500 kilometers but not in excess of 1000 kilometers shall be considered to be shorter-range missiles. GLEMs or GLCMs that have a range capability in excess of 1000 kilometers but not in excess of 5500 kilometers shall be considered to be intermediate-range missiles.

Article VII, Paragraph 11

A ballistic missile which is not a missile to be used in a ground-based mode shall not be considered to be a GLEM if it is test-launched at a test site from a fixed land-based launcher which is used solely for test purposes and which is distinguishable from GLEM launchers. A cruise missile which is not a missile to be used in a ground-based mode shall not be considered to be a GLCM if it is test-launched at a test site from a fixed land-based launcher which is used solely for test purposes and which is distinguishable from GLCM launchers.

Identification of the Problem

The AEI Article-by-Article Review of the INF Treaty noted the anomaly that an accord universally known as the INF (shorthand for Intermediate-range Nuclear Forces) Treaty actually has

profound implications for conventional forces. Indeed, the INF Treaty bans in perpetuity conventionally-armed, ground-launched intermediate- and shorter-range missiles, as well.

The first AEI Review posed two questions: Is it prudent -- in the context of a treaty which will make the United States and NATO still more dependent upon conventional defenses -- to foreclose a potentially important option for deploying advanced non-nuclear missiles? And, can the United States verify Soviet compliance with a ban on such missiles, regardless of how they are armed?

#### Subsequent Development of the Issue

Testimony before the Senate Armed Services Committee offered an interesting insight into the evolution of the INF Treaty's ban on nuclear-armed GLCM's into one prohibiting conventionally-armed variants as well. Former Assistant Secretary of Defense for International Security Policy-Designate Frank J. Gaffney, Jr. testified that novel grounds were cited in the Summer of 1987 to encourage President Reagan to reconsider his long-standing opposition to this Soviet-proposed formula: The Soviets had informally expressed to the American INF negotiator, Amb. Maynard Glitman some interest in acceding to the U.S. position permitting conventional GLCM's. It was argued that, unless the United States moved smartly to accept the Soviet position, our own would likely become the agreed Treaty language.

Without making explicit reference to this background, Defense Secretary Frank Carlucci, in formally responding at the request of Senator Claiborne Pell and on behalf of the Administration to issues raised in the first AEI Review suggested why, in the end, the U.S. Government decided such an outcome would have been undesirable:

1) The issue was one of "whether or not to protect the option for deploying conventionally-armed ground-launched cruise missiles (GLCM's). At the time of the decision the U.S. and NATO did not -- and do not today -- have any specific plans or military requirements for conventionally-armed GLCM's."

2) The option to acquire comparable capabilities through air- and sea-launched cruise missiles is "fully protected" as the INF Treaty does not cover such systems and "our position is firm that there shall be no limits on [such] conventionally-armed cruise missiles." Moreover, GLCM's with ranges below 500 km are not prohibited.

3) The Soviets would likely be able to exacerbate the existing conventional (and chemical) imbalance by deploying more

of such systems than could NATO, particularly in the aftermath of a Treaty banning INF-range nuclear missiles.

4) Acute verification difficulties are "inherent in distinguishing between nuclear- and conventionally-armed GLCM's. The United States Government has been unable to develop -- and the Soviet Union has not put forth -- a regime to verify effectively the differences between the two types." Banning all such systems would make covert Soviet deployment more "difficult and costly" and eliminate a "ready means" for the Soviets to breakout of the Treaty.

5) Citing the need of weapon systems for realistic testing (the character of which is specifically determined by the intended use of the system) and a dedicated infrastructure, Secretary Carlucci took issue with The AEI Review's contention that drones and other permitted non-weapon delivery vehicles could be used to circumvent this ban and undermine its verification benefit.

For its part, the Senate Select Committee on Intelligence (SSCI) observed in the unclassified version of its report that "so long as SLCMs are not banned, their testing will allow a Soviet military planner to fulfill all of the technical requirements for testing a covert GLCM." The Committee also expressed "concern that the Soviets could covertly extend the range capability of a cruise missile, or covertly develop a new ground-launched cruise missile with a prohibited long-range capability, [even] if the cruise missile were tested only to shorter ranges."

The SSCI judged, however, that with respect to the former, the lack of a permitted "ground forces infrastructure for [INF-range] weapons would be extremely difficult for the Soviets to overcome covertly, and this greatly lessens the value and probability of such a cheating effort." With respect to the latter concern, the Committee "believes that the risk of a Soviet attempt to cheat with such an extended range capability is offset by Soviet operational requirements" and that "Soviet military planners would have serious problems with the reliability of systems not tested to their maximum range."

The majority of the Senate Armed Services Committee (SASC), while recognizing the "validity of concerns expressed...over the prohibition of a potentially promising option for implementing NATO's follow-on forces (FOFA) and deep strike doctrines," gave greater weight to the fact that the Soviets could readily exploit such an option to increase "its conventional and chemical threat" and the verification problem "that would be created were the Soviets to deploy conventional GLCMs of INF range." The SASC's majority report concludes "that the verification question was a principle [sic] factor in the

Administration's willingness to ban conventional GLCM's."

The majority of the Armed Services Committee also concluded that the Soviets would firmly resist any renegotiation of this provision; for these several reasons, it did not recommend deleting the ban on conventional GLCMs. Instead, it settled for a cautionary note: "...Banning the deployment of [conventionally-armed GLCMs] makes it essential that START not foreclose U.S. options for conventional ALCMs and SLCMs, including systems of these types for INF ranges."

Finally, the Senate Foreign Relations Committee (SFRC) considered three related issues:

1) The possibility that the Soviets might exploit the Treaty's Article VII, paragraph 11 -- which permits fixed, ground-launched testing of SLCMs -- to circumvent the ban on flight-testing GLCMs. The Committee's majority, "while concerned about the technical possibility that the Soviet Union could exploit this provision to develop a covert force of ground-based cruise missiles," was "satisfied that the Administration is aware of the problem and will be monitoring it closely."

2) The possibility that the Soviets might exploit the Treaty's exclusion under Article II, paragraph 2 of GLCMs that are not "weapon-delivery vehicles" to produce, test and deploy drones which could be quickly converted to carry nuclear warheads. Emphasizing testimony to the effect that reconnaissance drones require a "different type of infrastructure than would go with a nuclear, or for that matter, a conventional delivery basis," the majority of the SFRC dismissed this possibility as a "minor problem." It judged that, in addition to the discernible operational differences, any Soviet incentive to cheat through this exception would be "greatly inhibit[ed]" by the fact that "the Soviet Union would have very low confidence in a nuclear GLCM only tested as a drone." Consequently, "the prospect of Soviet efforts to develop a covert GLCM force from drones [was assessed to be] highly unlikely and impractical" and "the Committee believes that claims about a GLCM drone 'loophole' are pure sophistry."

3) The "lack-of-a-military-requirement" and the "inherent-difficulties-of-verification" arguments noted above were found by a majority of the Foreign Relations Committee to be persuasive; accordingly an amendment offered by Senator Jesse Helms to permit conventionally-armed cruise missiles was defeated by a vote of 15-3. The Committee majority opined that "developing a covert GLCM force from systems tested below 500 kilometers would be complex and unreliable. For example, the Soviets could hardly be confident that even if a cruise missile were accurate at a range of 490 km, it would also be accurate at

980 km. This 'loophole' is thus more theoretical than real." The SFRC majority concluded that "any amendment purporting to allow conventional GLCM's could undermine U.S. national security."

On the margins of the ministerial meeting conducted between Secretary of State Shultz and Foreign Minister Shevardnadze (11-13 May 1988), representatives of the United States and Soviet Union agreed to language clarifying certain aspects of the INF Treaty's applicability to non-nuclear-armed, intermediate-range missiles. While the thrust of this agreement is most relevant to the matter of futuristics (see the treatment of this issue in the following chapter), the agreed text affirms that "the Treaty does not cover non-weapon-delivery vehicles" without clarifying how the sides will discriminate between those missiles that are weapon-delivery and those that are not.

### Analysis

#### Foreclosing an Area of U.S. Competitive Advantage

There is no disputing the fact that, by prohibiting conventionally-armed -- as well as nuclear -- GLCMs, the United States is foreclosing for all time potentially significant conventional defense options. As the majority of the Armed Services Committee put it: "Advanced technology is the Alliance's trump card, and highly-accurate, unmanned, long-range, stand-off weapons represent a particularly attractive means for redressing the conventional imbalance in Europe."

The willingness, nonetheless, to foreclose such options appears to turn critically upon the view of the Joint Chiefs of Staff that there is not now, nor will there ever be, a military requirement for the ground-based versions of these options. Such a view could have been expressed prior to World War I with equal confidence -- and equal short-sightedness -- about the absence of a requirement for airplanes to be used for other than observation purposes.

In fact, the present lack of a JCS requirement for ground-launched conventionally-armed missiles seems to be principally a function of the absence of an identified service-sponsor for a weapon system with these characteristics. The Army generally regards "deep strike" as an Air Force mission; the Air Force wants to perform such strikes with manned aircraft; the Navy is not interested in ground-based platforms; and the Marines do not regard missiles of this type as applicable to most of their roles. To the extent the Air Force and Navy see any need for intermediate-range conventional missiles, parochial considerations appear to give rise to requirements only for air- and sea-launched variants. (See the following discussion of the

implications of the INF Treaty's ban on conventional GLCM's for such options in the START context.)

Moreover, while it is certainly true that -- if such ground-based, conventionally-armed missiles were permitted, the Soviets might eventually obtain more of them -- it is much less clear that even greater numbers of these weapons would contribute as much to Soviet capabilities as smaller numbers would to NATO's defenses. This is, after all, the same logic that produced a numerically inferior, but militarily significant, deployment of Pershing II's and GLCM's to Europe in the first place. Such logic will certainly be even more compelling in the aftermath of an INF Treaty which increases NATO's need for improved conventional defenses.

Indeed, it is difficult to believe that, given time and the latitude to do so, the U.S. military will not come to appreciate the importance of having the in-theater ability to attack high priority targets: 1) deep in the enemy's rear echelons, 2) early in any conflict, 3) without relying upon a limited number of extraordinarily vulnerable NATO airfields or tying up valuable maritime assets, and 4) without having to resort to nuclear weapons. It may be that only highly accurate, conventionally-armed intermediate-range missiles that are widely dispersed in the theater will offer such a capability. Such weapons will also offer commanders the flexibility to provide lateral supporting fire to allied forces at ranges over 500 km; this capability could prove to be enormously important during any future conflict in Europe if hostile forces cease to be situated exclusively to the East of NATO's troops.

#### An Unavoidable Precedent for START

Much is made of the fact that the ban on both nuclear- and conventionally-armed GLCMs is acceptable because the United States will not agree to constraints on its ability to deploy conventional ALCMs and SLCMs in START. Unfortunately, such a position is probably as untenable as it is illogical. There is no technical basis for rejecting in connection with air- and sea-launched cruise missiles the verification argument used in INF, namely that limits must apply to both because no means can be found of distinguishing between nuclear and non-nuclear variants.

Indeed, the United States has offered ways of constraining conventionally-armed ALCMs in START through missile range and aircraft platform limitations. The United States has, moreover, agreed that it will find a means of limiting nuclear-armed SLCMs. Given the manner in which essentially identical, conventionally-armed GLCM's are treated in the INF accord -- and clear Soviet interest in capturing non-nuclear U.S. SLCM's -- it may simply be a matter of time before similar constraints are

negotiated on conventional sea-launched cruise missiles.

"It Ain't Necessarily So"

It is said that the United States can have confidence the USSR will not obtain capabilities denied the U.S. by virtue of two main devices: the Soviets' inability covertly 1) to test prohibited GLCMs and 2) to deploy them without a detectable infrastructure.

1) With regard to the test ban, the several documents produced since the first AEI Review was published, in fact, seem to suggest multiple ways in which the Soviet Union could conduct an effective flight test program for systems with prohibited capabilities. For example, as the SFRC and SSCI have noted, a GLCM can be tested from a fixed site -- so long as it is designated a SLCM. Recent disclosures that the Soviet Union has undertaken to test apparent sea-launched cruise missiles from mobile ground launchers and the Administration's response -- to the effect that it cannot determine the range, character or purpose of the cruise missiles in question -- bears witness to the ease with which such circumvention options can be pursued by the USSR and the monumental monitoring problems involved for the United States.

Moreover, as testimony before the SSCI and the SASC has made clear, it is not a difficult task to make ground-launched cruise missiles tested to less than 500 km or over 5500 km fly to prohibited distances between the two. To some extent, such can even be the case with ballistic missiles, although these missiles tend to have specific performance characteristics more directly tied to their ranges. A particularly graphic example of the latter can be found in the fact that Iraq is using a Soviet-supplied missile, the SCUD-B -- which is not prohibited by the INF Treaty, as it is said to have a range of less than 500 kilometers -- to attack targets in Iran at distances well beyond that. Not only does this development show that such improved performance is possible; it also raises the question as to whether Soviet SCUD-B's should be banned under the INF accord.

Interestingly, in regard to the assertion that flight testing to full-range is necessary in order to have confidence in a given system, the United States does not test all of its missiles to full-range. They are, nonetheless, designed and deployed to hit targets at specified distances beyond those to which these missiles are tested. Obviously, it is possible to have confidence in the ability of such weapons to fly farther than demonstrated -- even in the absence of maximum range testing.

Furthermore, the assertion of the majority of the SFRC

notwithstanding, developing a covert GLCM capability from such missiles is neither complex nor unreliable; what is involved are essentially low-risk engineering extrapolations from demonstrated flight-test performance and other modeling, including wind-tunnel testing. When the uncertainties noted in the SSCI report about U.S. ability to monitor effectively Soviet GLCM testing are factored in, statements extolling the efficacy of the INF Treaty's missile flight-test ban appear all the more unfounded.

In this connection, claims to the effect that there are inherent and monitorable differences between the ways in which reconnaissance drones and weapon-delivery vehicles are tested and deployed should be viewed with considerable skepticism. At least one U.S. contractor has developed a ground-launched missile of INF-ranges for overseas sales which could be fitted at will with a reconnaissance package or conventional ordnance. As this example illustrates, there need be no perceptible difference between the flight profile, test program or external configuration of attack and surveillance variants of a GLCM; if a party wishes to obtain an illegal weapons-delivery capability by modifying covertly a drone or RPV, it is quite possible to do so with little or no risk of detection. Far from being, in the words of the Senate Foreign Relations Committee "pure sophistry," such an approach is a plausible cheating scenario for the Soviet Union.

What is more, as noted above, there is no agreed definition for what constitutes a weapon-delivery test profile that would cause a drone to be deemed a weapon-delivery vehicle. The Soviets could thus perform tests we judged to be suitable for a weapon-delivery missile and we would have no grounds for effectively challenging their behavior; to the contrary, the USSR can be expected to cite the now-express understanding that non-weapon-delivery vehicles are not banned and the lack of an agreed definition permitting distinctions between non-weapon and weapon systems to pursue whatever technical approaches it deems appropriate. Unfortunately, past experience suggests that the United States will, in an effort to comply scrupulously with both the letter and the spirit of its arms control commitments, constrain -- if not outright kill -- its own programs for drones and RPV's that could, arguably, be reconfigured.

2) With respect to the purported need for a dedicated infrastructure, here again, myriad ways of Soviet circumvention are apparent. Large deployments of short- and long-range cruise missiles would provide excellent operational cover, training and infrastructural support to INF-range GLCMs. As the Treaty does not define what has to be different about a new missile to distinguish it from a prohibited existing type it is unclear on what basis Secretary Carlucci made the following assertion in response to a criticism in the first AEI Review : "If the

Soviets were to test or deploy a missile which they claimed was slightly modified but was indistinguishable from an existing INF Missile, we would consider it a violation of the Treaty, even if it were only tested below 500 kms." For that matter, the absence of an agreed definition as to what would constitute an allowed infrastructure for drones or remotely-piloted vehicles makes problematic any contention that the USSR could not use what it contends is such an infrastructure to support systems for weapons-delivery.

It is worth remembering that the Soviet Union surprised U.S. intelligence by declaring as part of the INF Treaty that 84 SSC-X-4 missiles and 6 launchers were in their inventory. It does not require great imagination to recognize that the Soviets' demonstrated ability to store such missiles without detection suggests they might be able similarly to maintain a formidable covert GLCM capability unbeknownst to the United States. Moreover, as is the case with flight testing, the absence of an agreed definition of what constitutes an infrastructure for drones with illegal weapons-delivery capability could allow the Soviets to deploy widely and with impunity a system we considered to be banned.

#### What is the Real Soviet View of this Prohibition?

Finally, the exact nature of the Soviet response to a U.S. effort to revise the INF Treaty so as to eliminate its prohibition of other than nuclear-armed missiles cannot be determined with certainty before the fact. That said, the Administration's contentions that an amendment toward this end would kill the Treaty and murmurs from the Soviets along similar lines notwithstanding, there are two considerations which suggest the USSR would ultimately accept such a change. First, as noted above, a driving factor in the decision in the Summer of 1987, to reconsider the U.S. position protecting conventionally-armed missiles was the assertion by Ambassador Glitman that the Soviets seemed inclined to accept our proposal. Second, it is difficult to see how those who argued that the Soviets would benefit -- were the Treaty to allow conventionally-armed GLCM's -- can also claim that an effort to restore this right would "kill" the Treaty.

#### Conclusions

The foregoing analysis suggests that, while allowing both sides to retain infrastructures for conventionally-armed INF-range GLCMs will not improve the verifiability of this Treaty, neither will the prohibition of these systems ensure that the USSR is denied such capabilities. In fact, whatever arguable verification benefit might accrue from such a prohibition is more than offset by other verification shortcomings of the

agreement. Only by deleting this prohibition can the very great potential of these missiles for non-nuclear defense of U.S. and allied interest world-wide be protected and the danger reduced that conventionally-armed air- and sea-launched cruise missiles will fall prey to undesirable constraints in START.

## FUTURISTIC GROUND-LAUNCHED MISSILES

Introduction

As noted above, in its consideration of the advisability of banning conventionally-armed ground-launched missiles, the Senate Armed Services Committee discovered that the breadth of the INF Treaty's ban was unclear. Specifically, the Committee wanted to know: Does the Treaty ban all INF-range ground-launched missiles -- whether armed with conventional munitions or not -- as long as they have the capacity to damage or destroy targets? This line of inquiry led to one of the most portentous controversies involving this Treaty to date.

Relevant Treaty ProvisionsArticle II, Paragraphs 1 and 2

For the purposes of this Treaty:

1. The term "ballistic missile" means a missile that has a ballistic trajectory over most of its flight path. The term "ground-launched ballistic missile (GLEM)" means a ground-launched ballistic missile that is a weapon-delivery vehicle.
2. The term "cruise missile" means an unmanned, self-propelled vehicle that sustains flight through the use of aerodynamic lift over most of its flight path. The term "ground-launched cruise missile (GLCM)" means a ground-launched cruise missile that is a weapon-delivery vehicle.

Article VII, Paragraphs 1 & 2

For the purposes of this Treaty:

1. If a ballistic missile or a cruise missile has been flight-tested or deployed for weapon delivery, all missiles of that type shall be considered to be weapon-delivery vehicles.
2. If a GLEM or GLCM is an intermediate-range missile, all GLEMs or GLCMs of that type shall be

considered to be intermediate-range missiles. If a GLBM or GLCM is a shorter-range missile, all GLBMs or GLCMs of that type shall be considered to be shorter-range missiles.

#### Identification of the Problem

Senator Dan Quayle (R-IND) led the SASC's investigation of the application of the INF Treaty to so-called "futuristic" ground-launched missiles. While a point of departure for this line of inquiry was The AEI Article-by-Article Review of the INF Treaty's observation that it was unclear whether or not future missile technologies such as hypervelocity boost-glide vehicles would be covered (a point the Administration chose simply to say would be decided subsequently on a case-by-case basis), the Committee quickly discovered that a more fundamental question arose as a result of uncertainty about the meaning of the term "weapon-delivery vehicle."

The SASC majority, in its report on the Treaty, noted that the Administration's own Article-by-Article Analysis defines this term as "those types of ground-launched cruise missiles that have been...flight-tested or deployed with any type of warhead device or simulation thereof." The Committee commented that:

This suggests that GLBMs or GLCMs which destroyed their targets through other, perhaps more futuristic or exotic, means would not be covered. If this reading is correct, then, the Treaty would appear to allow GLBMs or GLCMs that destroyed targets through such means as lasers, particle-beam generators, microwave pulse generators or perhaps even direct impact (kinetic kill). During the hearings, however, there were indications that the Administration may be interpreting this language more broadly...to include future weapons types such as those listed above (i.e., anything that can destroy a target).

At the time the SASC report went to press, the Committee had not received satisfactory clarifications of the Administration's views and urged that such be forthcoming -- together with an authoritative statement as to whether the U.S. definition of "weapon-delivery" had been "clearly agreed to by the Soviet Union" -- before final Senate action on the Treaty.

#### Subsequent Development of the Issue

When this issue first arose, Administration witnesses suggested that this matter had been agreed between the parties in the course of the negotiations. On April 13, 1988, however,

former Secretary of Defense Caspar Weinberger and former ACDA Director Kenneth Adelman wrote Sen. Quayle to the effect that no such agreement had been reached. Subsequently, the Administration acknowledged, as Amb. Glitman put it, that "During the negotiations, the United States and the Soviet Union did not specifically discuss INF missile systems using techniques, such as lasers, to destroy targets, nor did the parties specifically address the meaning of the term 'weapon-delivery.'" "

The Senate Foreign Relations Committee majority reported, however, that Amb. Glitman "was unconcerned that the issue had not been directly discussed in the negotiations" insofar as the Administration regarded the meaning of this term to be "commonly understood." He defined that understanding as follows:

The United States believes that the common sense meaning of the term "weapon-delivery vehicle" in the context of this treaty is any INF missile which carries a weapon, that is, any mechanism or device which, when directed against a target, is designed to damage or destroy it (emphasis added).

Initially, the Administration took the position that "...it is not necessary to confirm this understanding with the Soviet Union as a condition to the Senate's giving its advice and consent to ratification of the INF Treaty."

The majority of the SFRC accepted the thrust of the Administration's position. It cited three reasons for doing so:

1) The negotiating record supports the view that the Soviets sought "to ensure that the Treaty covered all missiles in the INF range-band." As the Committee put it, "Indeed, given the fact that this type of advanced technology is an area of relative U.S. advantage, it would be surprising if the Soviet Union would not seek to capture such weapons if at all possible (emphasis added)."

2) Based upon the "ordinary meaning of the term 'weapon,' missiles using weapons other than conventional or nuclear warheads would be covered" insofar as "the INF Treaty does not provide for any exceptions to the term weapon-delivery vehicle."

3) The negotiating record reportedly reveals that "neither party sought exceptions" which is said to "provide...strong evidence that the intent of both parties was indeed to cover all intermediate-range and shorter-range missiles -- those using conventional and nuclear weapons to damage or destroy targets and those using futuristic weapons to damage or destroy targets."

Based upon these considerations, the majority of the Foreign

Relations Committee saw "no firm basis to dispute the Administration's testimony that futuristic weapons would be banned by the Treaty." Interestingly, however, emphasizing the fact that the Soviets have long attempted "to capture advanced technologies -- an area of relative U.S. advantage -- [through] arms control agreements," the Committee urged the Administration to "consider seeking, through diplomatic channel [sic], explicit clarification from the Soviet Union that future weapons are covered by the INF Treaty."

On April 14, 1988, the Administration did so in the course of a meeting between Secretary of State Shultz and Foreign Minister Shevardnadze. On the following day, the Soviet Union responded to Secretary Shultz's request for clarification by transmitting a letter from the Soviet Foreign Minister which contained the following language:

In our conversation in Geneva on April 14 you raised the question of the INF Treaty interpretation in connection with the fact that a question has arisen during the U.S. Senate debate on this Treaty as to whether the ban covers the intermediate- and shorter-range missiles that could be equipped with warheads developed with some future technologies. As you noted, in responding to senators the Administration is saying that the Treaty ban covers intermediate- and shorter-range missiles, however equipped. (Emphasis added.)

\* \* \*

I would like to confirm to you once again that the Soviet side's understanding of this question is the same as that of the U.S. side. The Soviet side unequivocally assumes that the Treaty on the Elimination of Intermediate-Range and Shorter-Range Missiles bans these two classes of missiles, however equipped, nuclear or any non-nuclear.

Subsequently, on April 20, Secretary Shultz wrote Senate Minority Leader Bob Dole forwarding another translation of the Shevardnadze letter. This translation substituted the English word "armed" for the word "equipped" as the correct counterpart to the Russian word "osnashcheny, osnashcheniye," ostensibly pursuant to the practice used in the Geneva negotiations. Questions have been raised, however, about the validity of this translation; in fact, some Russian linguists have contended that the proper translation -- and the one used in previous Geneva talks -- is "equipped."

On the 22nd of April, Senate Armed Services Committee Chairman Sam Nunn described in a lengthy statement on the Senate floor his concerns about developments associated with this issue. Specifically, he said the Shevardnadze letter "raised a

question as to whether the Soviet Union believes that the types of unarmed missiles [used for surveillance purposes] are covered by the Treaty." Sen. Nunn judged that it is possible to "read the phrase 'however equipped'...as including surveillance drones or remotely-piloted vehicles (RPVs) and other types of non-weapons-equipped missiles."

A second Nunn concern was that "the letter refers only to missiles which are equipped with 'warheads.' Chairman Nunn found this "troubling since, as previously mentioned, this issue arose in the first place because the [Administration's] article-by-article analysis appeared to indicate that only those INF missiles equipped with 'warheads' were covered. Finally, Sen. Nunn noted the failure of the Shevardnadze letter to "provide an explicit assurance that the Soviet Union agrees with the administration's position" on the meaning of the term "weapon-delivery vehicle."

In light of these concerns, Chairman Nunn said he believed "that a Category III understanding may be required making approval of the Treaty contingent on the President's obtaining an explicit confirmation from the Soviets that they agree with the Administration's definition of "weapons-delivery vehicle." This requirement flowed, at least in part from his view that "we can[not] trust that the Soviets might not at some future point present a different definition of 'weapons-delivery vehicle' in an attempt either to block certain types of U.S. drones or RPVs which we would not consider to be 'weapons-delivery vehicles' or to allow the Soviets to deploy INF missiles which we would consider to be banned."

In response to such concerns, U.S. and Soviet representatives met on the margins of the Shultz-Shevardnadze ministerial in Geneva and, on May 12, 1988, the United States and the Soviet Union agreed to language stipulating that:

...The term "weapon-delivery vehicle" in the Treaty means any ground-launched ballistic or cruise missile in the 500 kilometer or 5500 kilometer range that has been flight-tested or deployed to carry or be used as a weapon -- that is, any warhead, mechanism or device, which, when directed against any target, is designed to damage or destroy it. Therefore, the Treaty requires elimination and bans production and flight-testing of all such missiles tested or deployed to carry or be used as weapons based on either current or future technologies, with the exception of missiles mentioned in paragraph 3 of Article VII of the Treaty. [Art VII.3: If a ground-launched ballistic missile is of a type developed and tested solely to intercept and counter objects not located on the surface of the earth, it shall not be considered to be a missile to which the limitations of this Treaty apply].

...The parties share a common understanding that the Treaty does not cover non-weapon-delivery vehicles.

#### Analysis

Any analysis of this topic must begin with consideration of a threshold question: Is it in the interest of U.S. and alliance security to ban "any ground-launched ballistic or cruise missile in the 500 kilometer to 5500 kilometer range that has been flight-tested or deployed to carry or be used as a weapon -- that is, any warhead, mechanism or device [based on current or future technologies], which when directed against any target, is designed to damage or destroy it"?

As the Foreign Relations Committee majority report notes, advanced technology is a field in which we have an advantage -- an advantage the Soviets are anxious to curb through arms control. Of particular concern to the Soviet Union has been the array of emerging technologies which will offer the United States the capability to use sophisticated, unmanned missiles to perform a variety of non-nuclear missions deep behind enemy lines and without relying upon either limited numbers of vulnerable airfields or naval platforms with other, high priority missions. It is no accident, therefore, that the USSR has been interested in curbing conventionally-armed GLCMs in INF and air-and sea-launched counterpart systems in START. It is hardly surprising either that the Soviets are now willing to broaden that prohibition further to capture unconventional or futuristic U.S. weapons, as well.

The Soviet Union appreciates that such weapons have the potential to enhance enormously NATO's ability credibly to defend its territory without resort to nuclear weapons. The following are but a few of the applications of advanced non-nuclear technology actively being considered by U.S. and/or alliance military planners:

- interrupting the marshalling, or progress, of Warsaw Pact follow-on forces deep behind the front-line;
- destroying air-defense and other radar networks;
- designating targets for other weapon systems;
- attacking antennas utilized by enemy command, control, communications and intelligence systems;
- jamming or otherwise interrupting or disabling an adversary's avionics suites, computers, fire control units or optical devices.

Indeed, the Pentagon's congressionally-mandated "Balanced Technology Initiative" is giving high priority to research and development of technologies utilizing lasers and microwave impulses.

These are all capabilities which threaten to reduce -- and possibly to neutralize -- the Warsaw Pact's conventional force superiority. A prohibition on such weapons would be in the Soviet Union's interest as it would perpetuate the present conventional force imbalance. Conversely, it would not be in the interest of the United States and its allies -- even if there were not serious problems with its verification.

What is more, such a prohibition cannot be verified with confidence. Nearly every word in the newly agreed definition is troublesome from a verification standpoint. Consider the following illustrative issues:

- o Can we be sure we know what the operative "mechanism or device" is; could it be nothing more than the kinetic energy of an unarmed missile? It is simply not possible in every case to determine from the external appearance of the missile, from the test profile or from the deployment infrastructure what mechanism or device might be associated with it.
- o Will we be able to determine from observing a given missile what target it is to be "directed against"? Particularly given the exclusion offered by Article VII.3, a cruise missile system which might, for example, be flight-tested and deployed apparently to jam or damage aircraft avionics may actually be optimized for interfering with ground-based electronic equipment.
- o Does this definition apply only to ground-based "targets" as might be inferred from the reference made to the exemption of surface-to-air, ABM and ASAT systems from the Treaty's limits? If so, why does the agreement simply refer to "targets?" Will not ambiguity about this point likely exacerbate the problem noted immediately above?
- o How can we be sure of the "design" or intended use of a given missile? This agreed definition would appear to be a radical departure from established U.S. Government policy, i.e., that capability -- not intentions -- must be the measure of merit in judging a system's consistency with arms control limitations. Does the new understanding effectively compel the United States to apply one standard for judging a system's performance for threat assessment purposes and an altogether

different one for verification purposes?

Is the implementation of this understanding predicated upon the idea that we would share design information on the characteristics of military systems with the Soviets? Would we have confidence in any such data that they might share with us?

- o What is the definition of "damage?" If, for example, a missile-borne jammer is not "designed" to damage an adversary's radar or other systems -- but inadvertently does so (for example, due to imperfect knowledge of the other sides' equipment and its capabilities) -- would such a system be banned?

Alternatively, if a futuristic mechanism is intended to jam proximity fuzes of enemy ordinance and the result is the explosion of such ordinance would that constitute "damage" for the purposes of the Treaty?

What if the effect of the mechanism is to interrupt the functioning of a given target for a period of time -- minutes, hours or days; if, at the end of the period of interruption, the target system performs just as before, would it be considered "damaged"?

How would such a regime be monitored? Would the Parties be obliged to exchange technical data about possible targets so as to establish what it would take to damage them?

This is hardly an exhaustive list of the questions and uncertainties aroused by the newly-adopted agreement broadening the INF Treaty's prohibitions. It does, however, illustrate the point that the real import of this new definition is neither self-evident nor fully thought-through. To the extent that answers do exist with respect to these and similar questions, this definition will be a compliance morass and a verification nightmare. More likely, there are no answers -- at least not agreed ones, creating the prospect of U.S. adherence to unilaterally defined criteria; even if we were to make the mistake of negotiating exacting implementing guidelines with the Soviet Union, we would be unable to ensure they were complying, given the intractable verification problems associated with such a regime.

Nearly as troubling is the manner in which this regime became U.S. Government policy. As noted above, the unhappy truth of the matter is that, in adopting its decision to prohibit conventionally-armed as well as nuclear-armed GLCMs, the Administration did not even consider -- let alone have a formal position on -- the implication of this prohibition for future

variants of ground-based missile systems not carrying conventional high-explosive warheads.

It is, consequently, neither surprising or particularly significant that the United States did not seek in the course of the negotiations to establish an express understanding with the Soviet Union about how, if at all, such systems would be affected. Similarly, one cannot read any substantive significance -- as the SFRC majority has attempted to do -- into the fact the U.S. did not seek to develop exceptions to the language of the Treaty.

In fact, it was only after the Treaty was signed, when members of the Senate asked about the extent to which futuristic systems were banned that the Administration started formally to address the issue. As mentioned earlier, the Administration was caught so unprepared for this line of inquiry that at first its representatives actually maintained that the Soviets had expressly agreed during the Treaty's negotiation to ban futuristic systems along with conventionally- and nuclear-armed missiles.

This episode has tremendously important ramifications for the proposed Biden Condition. While the implications of this condition are discussed at length in the section on treaty interpretation, the controversy over the INF agreement's impact on futuristic systems reveals in a graphic way the folly of such a stipulation. In part, the Biden Condition states:

The United States shall interpret this Treaty in accordance with the understanding of the Treaty shared by the Executive and the Senate at the time of Senate consent to ratification...such common understanding [being] based on the text of the Treaty and reflected in the authoritative representations provided by the Executive branch to the Senate and its committees in seeking Senate consent to ratification....

Had the Biden Condition been operative at the time, the controversy over futuristics may not have arisen until long after the INF Treaty was ratified. The Administration having spoken "authoritatively" on the subject, what was at the time an altogether unilateral characterization of the INF Treaty's terms would have become -- for the United States -- a binding interpretation. Whereas, in the event, a review of the negotiating record revealed that no such agreement in fact had been obtained, what the negotiating record showed about actual Soviet obligations would have been inadmissible evidence if the Biden Condition were in effect.

Even in the absence of the Biden amendment, the story of the United States' hasty and entirely ex post facto broadening of

the intended scope of the INF Treaty is not one of the shining moments in U.S. diplomatic history. The substantive problems identified above bear witness to the ill-considered and precipitous manner in which the Administration sought to dispense with the issue of futuristic systems. Unless checked, there will be a powerful incentive for dealing in a similar fashion with future INF problems should they arise. There is, moreover, every likelihood that this procedural precedent will be cited as the proper way to deal with the inevitable problems to be expected in the more complex and militarily significant START Treaty.

#### Conclusions

There are ample grounds for the Senate to conclude that this limitation is unacceptable.

From a military standpoint, the arguments made on behalf of interpreting the INF Treaty permanently to prohibit futuristic technologies do not stand up to scrutiny. It seems apparent that the long-term implications of such a prohibition on U.S. and allied security have not been properly thought-through. An objective analysis of all relevant technologies and all credible prospective applications of such technologies to be done would surely affirm the obvious: the INF Treaty's newly fashioned, sweeping prohibition on future technologies is not in the interest of the United States.

From a verification standpoint, this definition is, at best, a formula for endless controversy and charges of Soviet non-compliance. At worst, it will permit the Soviet Union to acquire and maintain capabilities denied the United States.

Finally, the controversy over futuristic systems -- and the manner in which the Reagan Administration has handled it -- reflect a dangerous lack of meticulousness in its management of the arms control negotiating process. This augurs ill for the much more significant START Treaty.

As with the closely related issue of the Treaty's constraints on conventional weapons technologies, the only sure way of preventing untoward limits on possibly vital futuristic systems is to delete the underlying ban on non-nuclear weapons delivery vehicles. Such a change in the INF Treaty would not signal U.S. indifference to the importance of seeking verifiable provisions in arms control agreements. Rather, it would reflect a recognition that it does not make sense to subordinate potentially crucial military options to an ultimately vain effort to enhance verification. In few areas is this proposition more compelling than in that of advanced cruise missile technologies.

Yet, if the interpretation of the INF Treaty as banning futuristic weapons holds, the United States will find itself in a situation like that of a homeowner who decides to mortgage his future salary to install dead-bolt locks, a cross-bar and an alarm system on his front door when two or three others are left permanently ajar. Such an approach is neither good security policy for the individual nor for the Nation.

## ARTICLE XIV -- NEW OBLIGATIONS OR SURPLUSAGE?

Introduction

In previous arms control agreements, the Soviet Union has sought and -- to varying degrees -- obtained, commitments from the United States in effect constraining collaboration between the United States and its allies on the grounds that such collaboration would circumvent the constraints imposed by such agreements. During much of the negotiation of the INF Treaty, the Soviets argued that a provision comparable to that found in the SALT II agreement should be incorporated into the new accord. The United States strenuously resisted this proposal; in the end, the Parties agreed to the language of Article XIV. The issue now is: Given the USSR's interest in impeding U.S.-allied defense cooperation, what, if any, are the implications of this article for such cooperation?

Relevant Treaty ProvisionsArticle XIV

The Parties shall comply with this Treaty and shall not assume any international obligations or undertakings which would conflict with its provisions.

Identification of the Issue

The AEI Article-by-Article Review pointed out that this article either imposed additional obligations -- such as a prohibition on various cooperative defense efforts with U.S. allies -- or it was surplusage from a legal point of view. The first AEI Review observed that:

...Under international law, if there is a question regarding the interpretation of a Treaty provision, then a reading which entails the creation of an additional obligation of the Parties is presumed correct as opposed to one that regards it as redundant (or "surplusage"). Consequently, if the Administration regards this provision as surplusage, then it must be clearly established now that the parties deem it as such in order to defeat the legal presumption that would

otherwise apply. If this is not accomplished, then the provision could be cited as barring various Western defense efforts that, while not prohibited by the Treaty's terms, are said to be somehow "in conflict with" them.

This is hardly a groundless concern. Administration testimony, aimed at emphasizing the United States' negotiating success, dramatized the extent to which the Soviets were, as Ambassador Glitman put it to the Senate Armed Services Committee on February 23, 1988, intent on:

...insert[ing] into the treaty language which they hoped could serve as either a brake on United States-NATO cooperation or at least as a basis for public accusations that we were not in compliance with the treaty.

The majority report of the Senate Foreign Relations Committee recounts that:

The Soviets had sought language which would have provided that each Party undertake not to circumvent the provisions of the Treaty in any manner, and they specified that this would include a prohibition on the transfer of intermediate-range missiles, launchers, components of such missiles, and technical documentation....When the Soviets dropped their request for noncircumvention language, they continued to seek language to the effect that the Parties would not take any action through any state or states or otherwise which would conflict with the Treaty. The U.S. argued that the language was too general and designed to provide a basis for the Soviets to seek to interfere with NATO cooperation, including modernization of forces....[The Soviets then] pressed for language stating that the Parties would not undertake obligations contrary to [the Treaty's] provisions....The U.S. argued that "actions and activities" was too vague, and suggested "undertakings" in the sense of a formal agreement.

In short, there can be no mistaking Soviet intentions in this area. What is less clear is the question of whether, in settling for less stringent language than they originally sought, the Soviets, nonetheless, obtained a basis for challenging future U.S.-allied collaboration over and above the express prohibitions contained elsewhere in the INF Treaty. The initial Administration characterization of this provision conveyed in its Article-by-Article Analysis of the Treaty seemed to hedge somewhat on this point:

Article XIV records the Parties' undertaking to comply with the Treaty and not to assume any international obligations or undertakings that would conflict with the provisions of the Treaty. This provision thus reflects the duty of each Party under customary international law to

comply with the Treaty (i.e., pacta sunt servanda). This provision does not impose any additional obligation on the Parties, nor does it broaden the interpretation of other obligations in the Treaty. This provision refers only to the assumption of obligations in the future, and existing agreements are therefore unaffected. Article XIV will not affect existing patterns of defense collaboration or cooperation with our Allies. Nor will this provision preclude cooperation with our Allies in modernization. (Emphasis added.)

In other words, in precisely the area of greatest concern -- namely that of future cooperation with our allies -- it seemed the United States might run into problems with its commitments under Article XIV.

#### Subsequent Development of the Issue

In light of a widespread view that a clear understanding of the correct interpretation of Article XIV's import was crucial to future U.S. latitude in collaborative efforts with our allies, both the Senate Armed Services and Foreign Relations Committees took pains to clarify the Administration's position on this issue. Amb. Glitman told the SFRC:

The language of Article XIV and the negotiating record support the conclusion that this article, as finally agreed, does not in any way constitute a noncircumvention provision nor impose any additional obligations on the Parties, nor interfere with any existing program of cooperation with our Allies, nor interfere with any provision by the United States to its Allies of any items not limited by the Treaty.

The Armed Services Committee majority stated that:

Amb. Glitman's testimony demonstrated that the Soviets sought to insert language into the Treaty which they hoped would restrict U.S.-NATO cooperation, but the U.S. successfully resisted this effort, and the U.S. view was agreed to by the Parties (emphasis added).

Both committees went to great lengths to establish their views of the crucial importance of such representations. In fact, the SASC majority actually predicated its position that it was not "necessary to adopt a condition in the Resolution of Ratification on the meaning and effect of Article XIV" because of the explicit assurances received from the Administration "which were consistent with the negotiating materials provided to the Senate." The Armed Services Committee, nonetheless, stated its "unequivocal" understanding of this provision:

...Article XIV does not in any way constitute a noncircumvention provision, nor does it impose any obligations on the Parties that are not expressed elsewhere in the Treaty. Questions as to the types of assistance prohibited under the Treaty must be addressed under the specific prohibitions in the Treaty, not by reference to Article XIV. The Treaty prohibits the Parties from producing or transferring a missile, missile stage, or launcher for a treaty-limited cruise missile or ballistic missile. It does not prohibit the production or transfer of lesser components or other items, such as guidance elements, technology, or blueprints. However, it would prohibit providing another country with every component piece by piece, thereby effectively amounting to the transfer of a whole missile, missile stage, or launcher.

The Foreign Relations Committee echoed this sentiment by stating that:

The Committee wishes to make it absolutely clear that, in its view, the transfer or production of these lesser components...are fully consistent with both the letter and the spirit of the INF Treaty. If the Soviet Union were in the future to make contrary claims, the Committee would regard them as unpersuasive and without any justification deriving from the Treaty.

The SFRC completed its consideration of Article XIV by asserting that "confirmation that the Soviets did not succeed in restricting cooperation and modernization was provided on February 9 by Foreign Minister Eduard Shevardnadze in an address" before the Supreme Soviet. He is quoted as having said:

...There is indeed a lot being said just now about compensation, about creating modernization, and so on, and this undoubtedly does give serious cause for concern, and it also gives our allies cause for concern. I said in my speech that it is now very important to maintain dynamism, not to permit significant pauses in problems of disarmament. If serious intervals were allowed, quite unexpected developments of events would be possible. Therefore, the Treaty itself does not give such a guarantee, but it creates good conditions to achieve progress and achieve the reductions of weapons in other fields, too. (Emphasis added.)

#### Analysis

While it is now reasonably clear that the Administration and the Armed Services and Foreign Relations Committees intend to treat Article XIV as surplusage, there are two important

problems with the approach adopted for doing so.

Have the Soviets Agreed?

Notwithstanding the foregoing, somewhat torturous and ultimately ambiguous statement by Foreign Minister Shevardnadze, no clear-cut evidence exists to support the view that the Soviet Union shares the U.S. interpretation of Article XIV. Indeed, the USSR has nowhere indicated that it regards this provision as redundant, meaningless or surplusage. To the contrary, it is the direct result of a consistent, unflagging Soviet campaign to obtain language that would, as Amb. Glitman said, "put a brake on United States-NATO cooperation." While it is true that the Soviets sought more explicit restrictions than ultimately emerged from the negotiations, it could be dangerous to conclude that -- absent formal agreement to the contrary -- the USSR will not construe the record to be one of ultimate U.S. accommodation to their overall objective, even if the words are not as tightly drawn as the Soviet Union would have liked.

Internal Inconsistencies Weaken the Administration's Case

The Administration's effort to minimize the potential for mischief associated with this provision is weakened by internal inconsistencies in its arguments. For example, its assertion that Article XIV merely restates the already existing obligation to comply with the Treaty seems confuted by the fact that such an obligation expressly appears elsewhere in the accord. Specifically, Article I commits the Parties to "carry out the...obligations set forth in this Treaty." Except for making clear that the Memorandum of Understanding and the Protocols are integral parts of the Treaty, Article I contains no substantive provision that is not also expressed in the requirements of Articles IV and V (namely, to eliminate intermediate- and shorter-range systems).

Therefore, the evident purpose of the highlighted language of Article I is to restate the parties' obligation under customary international law to comply with the Treaty. In that case, Article XIV would be nothing more than a redundancy of Article I, which in turn is a redundancy of existing international law. It is difficult to believe that such is the Soviet view of Article XIV.

Similarly, the Administration's argument that Article XIV "does not in any way constitute a noncircumvention provision" of the sort contained in Article XIII of the SALT II Treaty could prove troublesome. First, it doubtless will be argued by some that Article XIV's ban on assuming "any international obligations or undertakings which would conflict with" the INF Treaty's provisions is not necessarily less restrictive than SALT II's requirement "not to circumvent the provisions of this

Treaty, through any state or states, or in any other manner." Indeed, the United States must expect the assertion to be made that some forms of defense cooperation with allies might fall considerably short of "circumvention," yet still "conflict with" some provisions of the INF Treaty.

Concerns over the possible unhelpful association of the SALT II "non-circumvention" formula with U.S. commitments under the INF Treaty are heightened by the Administration's own Article-by-Article Analysis which uses essentially identical language to describe the INF accord's Article XIV as that employed in the State Department's official 1979 analysis of SALT II to explain the earlier agreement's Article XIII. In fact, the former seems to have been composed simply by combining the texts from the latter's treatment of SALT II's Articles XIII and XIII, with the addition of the Latin phrase, pacta sunt servanda.

#### Conclusions

While the Administration has fairly consistently maintained that Article XIV is surplusage and Senate committees have endorsed that position, it is, nonetheless, to be expected that critics of NATO modernization will assert that Article XIV creates a legal basis for blocking necessary collaborative programs. If the United States is to minimize the political significance of such criticism throughout the NATO alliance, it will need explicit Soviet assent to the effect that Article XIV does not impose any additional obligation on the Parties, nor does it broaden the interpretation of other obligations in the Treaty. If Mr. Shevardnadze's recent statement means what is ascribed to it, there should be no difficulty obtaining such an agreement.

THE SOVIETS' RIGHT TO RETAIN "ELIMINATED" LAUNCHERSIntroduction

In the closing days of the negotiation of the INF Treaty, the United States accepted a number of Soviet demands in an effort to facilitate completion of the accord. One of the most remarkable of these came about when the U.S. agreed to grant the Soviets an asymmetric right to retain all of its mobile missile launchers by performing specified modifications, whereas the United States was obliged to cut all of its launchers in half.

Relevant Treaty ProvisionsArticle IV, Paragraph 1

Each Party shall eliminate all its intermediate-range missiles and launchers of such missiles, and all support structures and support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, so that no later than three years after entry into force of this Treaty and thereafter no such missiles, launchers, support structures or support equipment shall be possessed by either Party.

Article X, Paragraph 1

Each Party shall eliminate its intermediate-range and shorter-range missiles and launchers of such missiles and support structures and support equipment associated with such missiles and launchers in accordance with the procedures set forth in the Protocol on Elimination.

Section II of the Protocol on Elimination, Paragraph 10

The specific procedures for the elimination of the items of missile systems listed in paragraph 1 of this Section shall be as follows, unless the Parties agree upon different procedures to achieve the same result as the procedures identified in this paragraph:

For the Pershing II:

\* \* \*

## Launcher:

(a) erector-launcher mechanism shall be removed from launcher chassis;

(b) all components of erector-launcher mechanism shall be cut at locations that are not assembly joints into two pieces of approximately equal size;

(c) missile launch support equipment, including external instrumentation compartments, shall be removed from launcher chassis; and

(d) launcher chassis shall be cut at a location that is not an assembly joint into two pieces of approximately equal size.

\* \* \*

## For the SS-20:

\* \* \*

## Launcher:

(a) erector-launcher mechanism shall be removed from launcher chassis;

(b) all components of erector-launcher mechanism shall be cut at locations that are not assembly joints into two pieces of approximately equal size;

(c) missile launch support equipment, including external instrumentation compartments, shall be removed from launcher chassis;

(d) mountings of erector-launcher mechanism and launcher leveling supports shall be cut off launcher chassis;

(e) launcher leveling supports shall be cut at locations that are not assembly joints into two pieces of approximately equal size; and

(f) a portion of the launcher chassis, at least 0.78 meters in length, shall be cut off aft of the rear axle.

Identification of the Problem

The AEI Article-by-Article Review of the INF Treaty observed that, in contrast to the general obligation to "eliminate" (among other items) all INF missile launchers the Parties possess, the detailed provisions of the Treaty and its Elimination Protocol will only require alteration of the USSR's transporter-erector-launchers (TELS) for its mobile INF missiles. The first AEI Review noted that:

Whereas the "elimination" procedures for all Treaty-limited U.S. systems will ensure that such systems are reduced to scrap, the procedures for several Treaty-limited Soviet launchers have been designed to allow the "eliminated" launchers to be used for other purposes. Given that these "eliminated" Soviet launchers will be permitted to operate throughout the Soviet Union, the question is whether, even if we observe them through overhead reconnaissance, we have the capability of ascertaining whether the alterations have been reversed so as to allow the item to perform a prohibited function.

The first AEI Review concluded that:

Each exclusion from the elimination schedule, gerrymandered definition, and exception to the non-production rule may seem minor in itself, but taken together such provisions mean that the Soviets, even without violating the Treaty, can remain rather close to a militarily significant INF capability. And the violations that would be required to maintain an INF capability are less extensive (and thus easier to conceal) than the Treaty's comprehensive language leads one to believe.

Subsequent Development of the Issue

In his unclassified analysis of the first AEI Review, Defense Secretary Frank Carlucci, did not directly rebut its critique. Instead, he averred that "the [Treaty-stipulated elimination] procedures are designed to render the launchers unusable" and that it would probably take longer to reconstitute them than to build them from scratch (emphasis added)." He also notes that, as contrasted with the launchers themselves, "the erector mechanisms for the declared launchers will be destroyed" under on-site monitoring.

Interestingly, Secretary Carlucci does acknowledge the following point:

...It is important to remember that only the declared

final assembly facility for the launcher is subject to on-site inspection. Facilities capable of producing the launcher chassis and other components and assembling them have no uniquely identifiable features. Thus, detection of production of new launchers will be difficult. Of course, over a period of time, our confidence in detecting clandestine production will increase if the Soviets attempt to field a militarily significant force that would require a large number of launchers.

The Secretary of Defense did not address the central issue regarding this unequal treatment of Soviet mobile missile launchers -- Will the United States, upon observing SS-20 launchers throughout the Soviet Union, be able to determine with confidence whether they are: modified (i.e., "eliminated") TELs, "eliminated" launchers which have had their Treaty-mandated alterations reversed, new production, mission-capable SS-20 transporter-erector-launchers or non-declared launchers, illegally retained in an unaltered state?

The majority report of the Senate Armed Services Committee addresses the concerns expressed in the first AEI Review somewhat more squarely. Indeed, it acknowledges that an amendment to the Treaty requiring the Soviets to eliminate their mobile launchers in the same manner that the United States must (namely, by cutting them in half), would "make it virtually impossible for the Soviets to convert 'eliminated' SS-20 launchers back into operational SS-20 launchers and it would preclude the possibility of SS-20 launchers roaming in the field in the guise of pipelaying vehicles."

The SASC majority, while recognizing that "the SS-20 launcher elimination procedure specified in the Treaty complicates the monitoring tasks confronting the United States," declined to recommend such an amendment, however. They did so on the grounds that such a revised elimination procedure would not "prevent [the Soviets] from covertly stockpiling intact SS-20 launchers which had either been falsely declared to have been eliminated during the period between the signing of the Treaty and its entry into force or never declared in the first place." These Senators also sought comfort in the argument that:

...With or without such an amendment, the effectiveness of the Treaty's verification regime will still depend in the final analysis upon a Soviet calculation that prohibited systems would not be militarily viable due to the ban on flight testing, and/or that the political risks of detected cheating outweigh the military benefits of covertly conducting prohibited activities.

Neither the Select Committee on Intelligence in its unclassified report nor the Foreign Relations Committee in its

majority report addressed this subject.

#### Analysis

The foregoing arguments against correcting the inequity posed by the launcher "elimination" procedures of the INF Treaty are unpersuasive. The fact is that this arrangement is a defect in the accord, one that could substantially facilitate Soviet planning for break-out even as it makes more difficult the U.S. job of monitoring and verifying Soviet compliance.

Particularly unpersuasive is the argument found in the SASC majority report that the United States can be indifferent to the cumulative, adverse effect on the Treaty's verifiability of provisions like that governing the elimination of launchers in view of the flight-test ban and the political risks to the Soviets of detected cheating. With respect to the former, as the first AEI Review noted, the Soviet Union evidently elected for years to maintain in its inventory a significant force of SS-16 ICBM's (the three-stage version of the two-stage INF-range SS-20) in violation of the SALT II Treaty -- despite the fact that nary a flight-test took place after that Treaty was signed.

With respect to the latter, it is difficult to identify what political costs the Soviet Union has borne for its past cheating on arms control agreements. Unfortunately, this is not simply a question of the dismal verifiability of past agreements; even where such cheating has been easily detectable, as in the case of the Krasnoyarsk radar, there has been essentially no risk to the USSR attending calculated, purposeful and militarily portentous non-compliance. Given the United States' failure to respond meaningfully to previous Soviet violations, it would be naive in the extreme to expect that the Soviets will be deterred from cheating on the INF Treaty by perceived risks of our detecting them at it -- especially where we have accepted Treaty provisions which will make such detection vastly more problematic.

In fact, the real -- but unstated -- basis for the SASC's reluctance to endorse an amendment which would, admittedly, reduce appreciably some of the verification difficulties associated with this accord, is the fact that doing so would necessitate renegotiation of the Treaty. Some fear that such a step would "kill" this agreement. In our view, it is inconceivable that such a stipulation, one both entirely consistent with the general obligation of the INF Treaty and designed to eliminate predictable difficulties in the future over Soviet compliance, would result in the Treaty's rejection by the USSR.

Conclusions

Soviet agreement to eliminate its launchers in the same way as the United States is required to do appears to be the only way to avoid the consequences of the present INF Treaty language described above. Happily, such a step would not only restore equity to this provision; it would also be justifiable on the grounds of conforming the details of the INF Treaty with its general obligations and of maximizing the verifiability of this agreement.

## DO UNCERTAINTIES ABOUT SOVIET MISSILE DATA MATTER?

Introduction

On the face of it, it would seem hard to disagree with the proposition that, unless the United States knows how many INF missiles are in the Soviet inventory, the U.S. will have little confidence in an agreement banning all such missiles. If, for example, the USSR were to have more SS-20's in its arsenal than it admitted to in the Memorandum of Understanding (MoU) which accompanies the INF Treaty, the Soviets could conceivably retain an illegal force of such missiles -- even if the United States were sure that every last declared SS-20 had been destroyed.

Yet, as has become apparent in recent weeks, the United States Government is not certain that it knows how many Soviet INF missiles there are. This chapter attempts, within the limitations of an unclassified discussion of intelligence-related matters, to describe the magnitude of that uncertainty and its significance for verification of the INF accord.

Relevant Treaty Provisions

Numerous provisions of the Treaty and its accompanying documents bear upon this issue in one way or another. The most directly applicable material, however, can be found in the Memorandum of Understanding Regarding the Establishment of a Data Base for the INF Treaty.

Identification of the Issue

Mobile missiles are inherently difficult to monitor. This is particularly true of those Soviet mobile INF missiles that are not "deployed," that is, those located at facilities other than operational bases which can be identified with relative ease. As made clear in the INF Treaty's Memorandum of Understanding, the USSR does possess such missiles; their exact number, status and whereabouts, however, are unknown outside the Soviet Union. These "non-deployed" assets might be used as refires, operational spares, test missiles or as wartime reserves; they need not be stored in a manner which can be identified by U.S. intelligence.

Indeed, there has long been considerable uncertainty within the United States Government about estimates of the total Soviet stockpile of mobile INF missiles, especially the number of SS-20's. For years, this uncertainty has been reflected in terms of a range of estimated force levels. As The AEI Article-by-Article Review pointed out:

...It should be noted that the State Department stated [publicly] in the Spring of 1987 that:

In addition to the approximately 400 SS-20 missiles now deployed, there may be as many as 200-400 (or more) such missiles in the USSR's inventory.

The first AEI Review concluded:

Thus it would seem that our intelligence estimates on these matters fall within a wide range of uncertainty. It is also the case that our estimates have, for some time, been a matter of public record. Consequently, we should not take particular comfort from the contention that the Soviet-provided data fall within that range.

#### Subsequent Development of the Issue

Two related questions have emerged to date in the Senate's consideration of the data issue in the INF Treaty: 1) Is the Soviet-supplied information about the quantity of its deployed and non-deployed SS-20's accurate? And 2) Even if the United States cannot be certain that it is accurate, do the Treaty's provisions ensure that -- should the Soviets have failed to account for all of their holdings of such missiles and, therefore, attempt to retain an illegal, covertly-deployed SS-20 force -- the U.S. can have confidence that these systems will be without military or political value?

#### Is the Soviet Data Accurate?

In the course of the Senate's hearings on the INF Treaty, it became clear that the U.S. intelligence community's uncertainty about the number of SS-20's in the Soviet inventory had not been eliminated by the data concerning these missiles supplied by the USSR. As the Senate Select Committee on Intelligence noted in its unclassified report:

With respect to assessing the accuracy of the numbers and locations of forces and systems declared by the Soviets in the Treaty's Memorandum of Understanding, the Intelligence Community has not resolved significant differences of view over the possibility that the Soviets may not have disclosed

their entire inventory of non-deployed SS-20 missiles. These differences represent valid analytical judgments based on the limited and inconclusive information that has been available to the Intelligence Community.

In a March 21, 1988 memorandum (whose claim to be unclassified was sharply contested by several Senators), Sen. Jesse Helms, Ranking Minority Member on the Senate Foreign Relations Committee, contrasted the following estimates with the declared Soviet SS-20 force level of 650 deployed and non-deployed missiles:

<u>Estimated Force Level</u>	<u>Source</u>
550	CIA/State (July 1987)
700	CIA/State (January 1987)
840	State public number (May 1987)
950	Majority intelligence community assessment (NIE July, 1987)
1200	Defense Intelligence Agency number (July 1987/Jan. 1988)
2250	Private assessments of intelligence experts

We cannot comment upon the accuracy or sources of this memorandum. That said, the magnitude of the discrepancy between U.S. intelligence agencies' estimates described in Senator Helms' memo -- like that revealed in the earlier Shultz letter noted above -- suggest a serious verification problem, i.e., nearly a 100% uncertainty factor if the DIA numbers are accurately portrayed.

In his analysis of the first AEI Review, Defense Secretary Carlucci stated:

We have made it clear that there are some differences within the U.S. Intelligence Community over estimated numbers of Soviet systems. It is not surprising that there are differences of opinion. They reflect independent analyses which add to the strength of our monitoring process. The Soviet numbers for deployed and non-deployed forces are, for the most part, near the estimates of our Intelligence Community, allowing for the range of our uncertainties. However, there are some differences in agency views of the number of non-deployed SS-20's. Estimates for non-deployed systems are, of course, inherently less certain. They vary by agency, reflecting the independent analyses noted above. There are 3 agency views. Two are close to the Soviet declared number. One is not.

The Foreign Relations Committee majority reported that "Accordingly, most Members concluded that while the Soviet

figures could well be accurate, it is also possible that there are additional missiles in storage."

Does the INF Treaty Make Such Uncertainty Irrelevant?

The ease with which Soviet mobile INF missiles can be moved, concealed or otherwise deceptively operated was an important consideration behind President Reagan's decision to seek a global ban on such systems -- the so-called "zero-option." The idea was to create a set of exceedingly stringent limitations on all facets of SS-20-associated activities (e.g., complete prohibitions on production, testing, deployment, training, maintenance) such that any indication of any activity having anything to do with SS-20's would constitute a violation of the INF Treaty. Under such circumstances -- even if the United States could not be certain how many SS-20's had been produced prior to the accord -- U.S. confidence in its ability to detect illegal activity would be reasonably high. Moreover, such restrictions would, it was hoped, make maintaining an undetectable covert force so difficult that the Soviets would be deterred from trying to do so.

Indeed, the Administration, the Senate Select Committee on Intelligence and the Senate Foreign Relations Committee all averred that, with the realization in the INF Treaty of the "zero-option" and the accompanying limitations, the present U.S. uncertainty over actual SS-20 force levels was, if anything, of fleeting consequence.

Secretary Carlucci put it this way in submitted testimony to the SFRC:

The capability of detecting covertly stored Treaty-limited weapon systems will depend on the scenario, including size of force, state of readiness, mode of operations, training requirements and a number of other factors. But the Treaty is designed to deal with possibilities such as the Soviets having more non-deployed SS-20's than we assess. Our National Technical Means can verify Soviet compliance with the Treaty's ban on INF flight testing, as well as with the Treaty's ban on INF infrastructure and activity. Testing, training and infrastructure are essential to a militarily effective force. Thus, unless the Soviets were willing to risk detection, the military effectiveness of concealed SS-20's would degrade over time.

The SSCI concluded in its unclassified report:

Whether or not [the differences between U.S. intelligence agencies] can be resolved in the future, on the basis of new information or analysis, their potential military significance would be short-lived. This is because

the operational reliability and military utility of any covertly maintained missiles would begin to deteriorate immediately; would seriously degrade during the first three years, when all declared missiles are being eliminated; and would vanish entirely within a decade, unless the Soviets can resume flight testing them. This would be both illegal and readily detectable.

The SFRC majority embellished this view with the following assertions:

...The Committee knows of no responsible official who believes that [additional Soviet] missiles in covert storage could possibly constitute a usable force.

\* \* \*

While it may be possible to evade one of the verification measures in the treaty, the combination of all measures, including particularly the ban of flight training and flight testing, will ensure that any covert force would rapidly lose its military utility.

\* \* \*

...It is clear that the Soviets have little incentive to deceive with regard to SS-20's. If they value this Treaty and the prospect of further arms control agreements, they understand that any cheating is a high-risk activity. Moreover, since a covert, untested, and unexercised force could have no deterrent or political intimidation value and, given other forces still available, quite limited military value, the obvious and wise choice would be compliance with the requirement of the Treaty for complete elimination of INF systems.

### Analysis

#### Is the Soviet Data Accurate?

It is clearly the case that the United States Government is neither able to accept as valid -- nor entirely reject as false -- the formal representations of the Soviet Union as to the number of Soviet systems that will be limited by this Treaty. This must be regarded as a rather inauspicious point of departure for such an arms control venture.

The disagreements within the U.S. intelligence community appear to be serious. According to press accounts, the Director of the Defense Intelligence Agency, LTC Leonard Perroots, has repeatedly been asked to explain why his agency's estimate of

Soviet non-deployed SS-20's is so much higher than that of CIA and the State Department's Bureau of Intelligence and Research. Reportedly, one such audience included the Secretary of Defense and Chairman of the Joint Chiefs of Staff. Gen. Percots is said to believe that there is no basis in the information available to date that would warrant a change in DIA's estimative methodology and that, consequently, that there are no grounds for lowering that organization's assessment of the size of the SS-20 force.

Moreover, according to Sen. Helms, it appears that DIA is not -- as Secretary Carlucci's statement quoted above suggests -- alone in calculating a substantially higher quantity of SS-20's than the Soviets have declared; other intelligence agencies who participate in the construction of the National Intelligence Estimate -- the National Security Agency, the Army, Navy and Air Force Intelligence Directorates, among others -- are said to believe the Soviet figure is too low.

While it is not possible to reach a judgment about the relative accuracy of one intelligence component's assessment over another's, it is possible -- and important -- to sound cautionary notes about several aspects of this issue:

- o First, a practice of entering into agreements where we have reason to disbelieve formal Soviet declarations about the forces to be limited can be a highly risky business. The INF Treaty will doubtless be cited as a precedent in urging U.S. acceptance of equally -- or even more -- suspect Soviet declarations with respect to strategic arms, chemical weapons and conventional forces. Given that agreements limiting such systems are certain to be still more difficult to verify than the INF Treaty, profound uncertainties about the USSR's actual capabilities will make the effectiveness and advisability of such accords all the more problematic.
- o Second, this controversy illustrates how the very act of negotiating arms control agreements and advocating them to the public and the Congress can assist the Soviet Union in determining means of circumventing such accords. By providing insights into how the U.S. intelligence community arrives at its calculations of Soviet force capabilities, this process can inform any planning for cheating the Soviets might do.
- o Third, the fact that Soviet numbers fall within our estimates should not be encouraging -- since the Soviets already were aware of the range of our estimates. Thus, their supplying a number that is within that range may only illustrate that we are susceptible to having our own assessment of their forces fed back to us.

- o Finally, there is the related point of the extent to which U.S. intelligence can be suborned by the perceived political imperative of supporting the arms control process. There is often subtle -- but real -- pressure exerted on the United States intelligence community to ensure that its estimates of Soviet capabilities track with expected performance under arms limitations. Such pressures pose a serious risk to the objectivity and accuracy of vital U.S. intelligence analysis.

Does the INF Treaty Make Such Uncertainty Irrelevant?

As was noted in The AEI Article-by-Article Review, in a number of important respects, the details of the INF Treaty are such that the pristine verification scheme envisioned by the "zero-outcome" will not be realized. To the extent that these bear critically on the assertions made by the Administration and the Senate Intelligence and Foreign Relations Committees about the irrelevance of U.S. uncertainty about Soviet forces, they warrant careful examination:

1) The SS-25 Problem: Whereas the "zero-outcome" anticipated a regime in which there would be no production, no training, no deployment, no maintenance and no testing of treaty-limited items, the INF Treaty will be implemented in a very different context. By virtue of the fact that the Soviet Union derived a three-stage intercontinental-range ballistic missile, designated the SS-25 by the U.S., from the two-stage SS-20, the widespread deployment of the former will afford the USSR an infrastructure very similar to that associated with the latter. It is entirely possible that the requisite training needed to ensure basic readiness proficiency for SS-20 crews -- including that associated with maintenance and deployment -- could be obtained via the device of cycling troops from a covert storage facility through legal SS-25 installations.

Moreover, the INF Treaty permits continued production of at least parts of the SS-20. This fact flows from U.S. acceptance of the Soviets' claim made late in the negotiations that the first-stage of the SS-25 is "outwardly similar to but not interchangeable with" that of the SS-20. (The second-stages of the two missiles are supposed to be both different and non-interchangeable.) In the end, the United States decided to agree that the Soviet Union can continue to manufacture a stage which, as a practical matter, cannot be distinguished from one whose production is banned. In any event, the Treaty affords the United States no rights to inspect Soviet ballistic missile production facilities, rendering moot whatever differences do exist and complicating further U.S. monitoring tasks.

2) The "Elimination" Flim-flam: As is discussed at length

elsewhere in this study, the Soviets have the right under its detailed terms to retain their entire mobile missile launcher inventory, provided that certain modifications are effected -- notwithstanding the Treaty's requirement that all limited INF systems be "eliminated." The continued, legal presence of SS-20 launchers which may be extremely difficult to distinguish from unmodified, illegal launchers not only makes verification more difficult; it also further diminishes the effectiveness of the Treaty's prohibition on maintaining an infrastructure for limited missile systems.

3) The Flight-Test Ban: Great weight is placed by the Administration and Congressional proponents of the INF Treaty on its prohibition of flight-testing as the ultimate and highly verifiable guarantor of this agreement's limitations. As the SSCI put it:

...There is little apparent advantage to Soviet military commanders, and there are certainly significant risks, in developing any covert forces that cannot be exercised realistically or tested fully....

Moreover, the INF Treaty's ban on the testing of any ballistic missiles for weapons delivery with ranges between 500 and 5500 kilometers can be monitored with high confidence. This makes it exceedingly difficult, costly and risky for the Soviets to develop or maintain a militarily useful, covert force of ballistic missiles, especially longer-range missiles, which violates the INF treaty.

While it is certainly the case that the Soviet missile force should experience some degradation in reliability if it is not tested regularly, several considerations may affect how decisive that degradation proves to be for Soviet planners contemplating the retention of covert INF missile stockpiles:

- o The INF Treaty actually does permit the Soviets to construct what amounts to a short, concentrated flight-test program, should they wish to do so. At their insistence, the Treaty allows up to 100 missiles to be launched-to-destruction within the first six-months after entry-into-force. While it is true that certain standard practices for monitoring such missile flights -- like test-related telemetry -- are not permitted, it is inconceivable that the USSR will be unable to glean considerable performance and reliability data from 100 such flights, should they choose to do so.
- o The Senate Armed Services Committee, in declining to act upon a recommendation that this allowed-launch provision be struck from the Treaty, cited the following Administration testimony:

It is our judgment, given that launch to destroy (LTD) is limited to 100 missiles in the first six-months and the fact that the Soviets have had over 10 years to train and can continue to do so right up to elimination, that these six months of LTD would not contribute significantly to the reliability of a covert force.

In other words, the Administration and the SASC believe that the Soviet Union could not obtain increased confidence in the reliability of any SS-20's it chose covertly to retain by conducting 100 launches of such missiles. It is hard to believe the United States would be unable to obtain useful information from such a launch series and harder still to believe that the Soviets who insisted upon this arrangement will not be able to do so.

- o The Administration has stated that the Soviet Union probably retained some number of the three-stage SS-16 ICBM's (from which the two-stage SS-20 was derived) in its operational force for many years after this missile was banned by the SALT II Treaty. Not once after that Treaty was signed did the Soviets flight-test this missile, suggesting that the USSR may be willing to accept a different standard of reliability for covert missile forces than the United States does for its deployed systems -- or, for that matter, than does the Soviet Union for other military assets.
- o If the Soviet Union were to choose, at some point after all U.S. INF missiles had been destroyed, to resume testing of SS-20's it had covertly retained, it could quickly restore whatever diminished confidence it might have in the reliability of its remaining stockpile. Indeed, the Soviets may be able to utilize SS-25 flight-testing to validate the performance of some SS-20 components so as to reduce the requirement for such a "breakout" even further.

#### Conclusions

The United States will be faced with substantial uncertainty about future Soviet compliance with the INF Treaty partly as a function of the difficulty in assessing how many SS-20's actually exist and partly because of the cumulative effect of several Treaty provisions which will make the task of monitoring the USSR's behavior considerably more difficult.

Regrettably, past behavior alone suggests that the Soviet

Union will retain SS-20's if it believes it expedient to do so, notwithstanding risks which some assert that behavior would entail. In fact, there have been few real risks associated with previous Soviet violations. The U.S. approach to arms control has failed to provide significant disincentives to the Soviet Union's cheating; as noted elsewhere in this paper, the INF Treaty itself bears witness to the fact that -- even when there is indisputable proof of Soviet cheating on arms control agreements (witness the Krasnoyarsk radar's breach of the ABM Treaty) -- the United States will enter into still further accords with the Soviet Union.

Moreover, it would be naive to accept the contention that such missiles, even if untested for a period of years, would -- if wheeled out in the midst of some future crisis -- have no "political intimidation value" in Europe and elsewhere. To the contrary, such a development could be decisive in influencing Western public and governmental opinion at a time when the Soviets will be particularly interested in doing so. This fact is not likely to be lost on the USSR and could, in and of itself, provide the Soviets with powerful incentives to cheat -- to say nothing of the war-fighting value of these mobile, survivable systems.

The risks of future Soviet exploitation of U.S. uncertainties about the USSR's INF missile force structure could be substantially alleviated were the INF Treaty to be restored to the zero-option as originally conceived. Measures that would be helpful toward this end include: prohibiting the SS-25 ICBM in START so as to eliminate its infrastructure as a vehicle for Soviet cheating; reestablishing that both sides' INF missile launchers are eliminated in the same fashion -- by being cut in half; precluding potentially useful flight-testing by excising the Treaty's provision for launching to destruction.

Furthermore, the United States should be extremely chary of getting into new agreements where the magnitude of its uncertainty about actual Soviet capabilities will be, in all likelihood, even greater than it is with respect to the USSR's INF data.

THE ASYMMETRIC "COUNTING RULE"  
AND ITS EFFECTS ON U.S. INSPECTION RIGHTS

Introduction

In the latter stages of the INF Treaty negotiation, the United States accepted the Soviet Union's contention that there were differences in the way the main Soviet ballistic missile covered by the Treaty (the SS-20) and the main U.S. ballistic system (the Pershing II) were assembled, stored and moved, and that those differences must be reflected in asymmetric treatment of those missiles in the agreement. Subsequent to the signature of the Treaty and in the course of negotiations aimed at establishing the precise modalities for inspections, disagreements surfaced in the respective views of the United States and the USSR about the precise application of this asymmetric treatment to the Parties' inspection rights -- especially the evident Soviet interest in making the inspection regime even more disadvantageous to the United States. These differences were among those that prompted the U.S. Senate to suspend its consideration of the Treaty until Secretary Shultz could address them with his Soviet counterpart during their meeting in Geneva in May, 1988.

The Parties have, as a result of the negotiations conducted on the margins of that meeting, effectively reaffirmed the INF Treaty's asymmetric method of counting the two sides' most important weapon systems. The Treaty, as a result, provides for inequitable arrangements which may affect the verifiability of this agreement. The present chapter suggests, however, that the principle of asymmetric verification arrangements might, if employed somewhat differently in the future, create the basis for an acceptable START agreement.

Relevant Treaty Provisions

Article VII, Paragraph 10

Except in the case of elimination in accordance with the procedures set forth in the Protocol on Elimination, the following shall apply:

- (a) for GLEMs which are stored or moved in separate stages, the longest stage of an intermediate-range or shorter-range GLEM shall

be counted as a complete missile;

(b) for GLEMs which are not stored or moved in separate stages, a canister of the type used in the launch of an intermediate-range GLEM, unless a Party proves to the satisfaction of the other Party that it does not contain such a missile, or an assembled intermediate-range or shorter-range GLEM, shall be counted as a complete missile....

\* \* \*

Section IX of the Protocol on Inspection

1. The inspected Party shall maintain an agreed perimeter around the periphery of the inspection site and shall designate a portal with not more than one rail line and one road which shall be within 50 meters of each other. All vehicles which can contain an intermediate-range GLEM or longest stage of such a GLEM of the inspected Party shall exit only through this portal. (Emphasis added.)

2. For the purposes of this Section, the provisions of paragraph 10 of Article VII of the Treaty shall be applied to intermediate-range GLEMs of the inspected Party and the longest stage of such GLEMs. (Emphasis added.)

\* \* \*

Identification of the Issue

The AEI Article-by-Article Review noted that:

...The counting rules for U.S. missiles differ from those for Soviet missiles. They impose a more rigorous standard on the U.S. side (the largest stage of the Pershing II missile alone counts as a full-up missile) than on the Soviet side (only a fully assembled Soviet missile -- or its canister -- counts as a missile).

This asymmetric treatment, codified in Article VII, paragraph 10, turns on the premise that the Pershing II missile is stored and transported in separate stages (and assembled in the field), while the Soviet SS-20 is assembled at a "final assembly facility" (at Votkinsk) and is thereafter stored and transported as an entire missile in its launch canister.

In its Article-by-Article Analysis, the Administration

maintained that "The purpose of [this counting rule] is to facilitate verification of compliance with the Treaty by identifying those features of the missile systems most easily observable by national technical means of verification." Yet, the first AEI Review observed that:

The difference between the counting rules for U.S. missiles and those for Soviet missiles affects the relative values of U.S. and Soviet inspection rights under the Treaty. Because of these counting rules, the U.S. side's rights to conduct continuous monitoring of a Soviet production facility apply only to a Soviet final assembly plant [at Votkinsk]. The corresponding rights of the Soviets, however, apply to a U.S. plant that actually manufactures missile stages [at Magna, Utah]. This means that the Soviet facilities that now manufacture SS-20 second stages (or first stages for that matter) are not subject to monitoring by the United States under the Treaty.

#### Subsequent Development of the Issue

Secretary Carlucci's analysis of the first AEI Review is the only one of the subsequently developed documents we reviewed which addressed this point. The Defense Department paper, moreover, did so only to amplify upon the procedural differences in the U.S. and Soviet production and logistical approaches which ostensibly warranted this asymmetric treatment. It concluded by asserting that:

Additional provisions and cooperative measures (including non-destructive imaging and random opening of canisters exiting Votkinsk) will help determine that INF-limited items are not leaving the facility under the guise of other, allowed missiles....The inspection procedures at Votkinsk will help us deter Soviet cheating.

Dismissed as an issue by the Administration and unaddressed by the formal reports of the relevant Senate committees, the matter seemed to be one that would not receive serious consideration in the course of the Senate's ratification debate.

Near the end of April, however, in the course of on-going "technical" discussions intended to resolve the verification details not finished by the time the Treaty was signed, it became clear that a potentially significant disagreement existed between the Parties over the exact character of certain inspection rights under the agreement. The Soviets insisted that the United States did not enjoy the right to examine objects smaller than an assembled SS-20 or its canister at facilities associated with that missile but that they were entitled to examine any object in their inspections the size of

or larger than a Pershing II first-stage. In other words, the USSR maintained that the Treaty's asymmetric counting rule conditioned the applicability of the two Parties' respective inspection rights at facilities other than Votkinsk and Magna. They also reopened the question of the size of objects exiting Votkinsk subject to U.S. monitoring.

The United States rejected these efforts in the technical talks and insisted through diplomatic channels that the Soviets permit U.S. inspectors to examine objects smaller than assembled SS-20's or their canisters. With the support of the Senate -- which took the extraordinary step of announcing that its consideration of the INF Treaty would be deferred pending the completion of further negotiations on this and other outstanding verification points -- the Administration demanded that the Soviet Union back down.

On the margins of the May, 1988 ministerial between Secretary Shultz and Foreign Minister Shevardnadze, a new agreement was fashioned by Amb. Glitman and Col. Gen. Chervov which the Administration believes resolves these (and several other) matters in a "completely satisfactory" way. Relevant highlights from this agreement are:

...During baseline, close-out and short-notice inspections, the Parties will be inspecting the entire inspection site, including the interior of structures, containers or vehicles, or including covered objects, capable of containing: for the United States - the second stage of the Pershing II, and the BGM-109G cruise missile; for the USSR - the first stage of the SS-12 missile, the stage of the SS-23 missile, and the SSC-X-4 cruise missile and the SS-4 launch stand.

\* \* \*

The Soviet side assured the United States side that, during the period of continuous monitoring of facilities under the Treaty, no shipment shall exit a continuous monitoring facility on the territory of the USSR whose dimensions are equal to or greater than the dimensions of the SS-20 missile without its (sic) front-end section, but less than the dimensions of an SS-2- (sic) [presumably "SS-20" is meant here] launch canister....For the purposes of this assurance, the length of the SS-20 missile without its front section will be considered to be 14.00 meters. In the context of this assurance, the United States will not be inspecting any shipments whose dimensions are less than those of an SS-20 launch canister as listed in the Memorandum of Understanding (emphasis added).

With respect to the first point, the Parties evidently

clarified their respective rights for the purposes of baseline, close-out and short-notice inspections. The rule seems to be that Soviet objects and spaces that can contain the largest dimensions (diameter or length) of an SS-12 first stage (4.38 meters/14.36 feet in length, for example), the SS-23 missile, the SSC-X-4 cruise missile or the SS-4 launch stand. For the United States, the equivalent determinant is the size of the Pershing II second stage which is 2.47 meters long.

Regarding the matter of inspection rights at the continuously monitored facilities, for reasons that are not entirely clear, the Soviets insisted that there be a "dead zone" with respect to objects brought out of the Votkinsk facility. The United States accepted the Soviet assurance that no object would exit that facility that was in size larger than the assembled first two stages of the SS-20 (minus its front-end), i.e., 14.0 meters long, but smaller than the SS-20 launch canister, 19.2 meters long. As curious as it may seem, in exchange for this assurance, the United States agreed not to monitor what is not being brought out of the Votkinsk complex.

#### Analysis

Clearly, with respect to the continuous portal monitoring scheme, the United States enjoys significantly inferior inspection rights than those granted to the USSR. As things now stand, any vehicle leaving the Magna facility that can carry objects 3.7 meters (12.1 feet) or more in length must exit through the designated portal, and is subject to inspection. By contrast, only objects equal to or longer than the much bigger SS-20 canister (19.32 meters/63.4 feet) can be inspected by the U.S. officials stationed at Votkinsk. The convoluted nature of the Glitman-Chervov agreement leaves unclear what rights -- if any -- the United States would have to examine a container between 14.0 and 19.2 meters in length should one attempt, contrary to Soviet assurances, to exit Votkinsk.

This asymmetric verification regime and the recent activity involved in clarifying its implementation prompt several observations:

- 1) The application of Article VII, paragraph 10's asymmetric counting rule has given rise to unequal inspection rights at the Votkinsk and Magna facilities. Yet, it is not entirely clear why the Soviet SS-20 qualifies for preferential treatment; since the Soviets maintain they do not produce SS-20 stages at Votkinsk but only assemble them after producing them elsewhere, it would seem apparent that at least some storage and movement of this system occurs in stages. Consequently, this would seem to cause the SS-20 to be treated in accordance with subparagraph (a) of Article VII.10, that missile -- like its closest American

counterpart, the Pershing II. Such an arrangement would permit U.S. inspectors at the continuously monitored site in the Soviet Union to examine objects the size of the SS-20's first stage (8.5 meters/27.9 feet) instead of only those longer than its 63 foot-long canister.

2) What is more, treating the SS-20 as a missile accountable by stages could also correct another, possibly more egregious, asymmetry. Because the INF Treaty essentially limits this system only as a fully-assembled missile, the facility at which continuous portal monitoring takes place in the Soviet Union (i.e., Votkinsk) is a final assembly site, not one where SS-20's are produced. By contrast, because the Pershing II does not undergo final assembly at a facility -- such assembling of this missile's stages occurs in the field -- the Treaty establishes the counterpart permanent Soviet presence at a U.S. production site. Even more striking is the fact that the latter site, at Magna, Utah, has not been involved in Pershing II production for some time; instead it is associated with the production of other U.S. ballistic missiles not covered by the Treaty.

The asymmetry involved here may have substantial intelligence implications. When combined with the fact that the Soviet Union is permitted at Magna to observe the exiting of substantially smaller items than will U.S. representatives at Votkinsk, the inequity involved in this arrangement and the adverse implications for verification are all the more stark.

3) It is demonstrably the case that the United States can go back to the Soviets to address problems with the Treaty text without the act of doing so necessarily resulting in the "killing" of the Treaty. That said, the manner in which these recent negotiations were conducted -- like the manner in which the underlying provisions themselves were prepared in the Fall of 1987 -- is an undesirable model for drawing up arms control agreements. Indeed, had there not been an artificial deadline for the completion of the INF negotiation, the sort of problematic language that gives rise to the present controversy probably would not have found its way into the agreement. At a minimum, the technical discussions now underway which revealed this problem -- and which were, due to the summit-imposed deadline, of necessity remanded to the post-Treaty signature period -- should have been held before the accord was "finished."

4) Prudence argues not only for having this "technical" verification detail hammered out with the Soviet Union but also that the negotiations on the rest of the implementing arrangements be completed before the Senate gives its consent to the INF Treaty. Otherwise, there is little protection against the risk that other, significant differences -- at least some of

which may be of considerable importance to the future effectiveness of agreed Treaty provisions -- will emerge only after the United States has lost whatever leverage it presently enjoys with the Soviets.

#### Conclusion

One final observation seems in order. As it appears that the Treaty will continue to reflect this unequal monitoring regime with respect to Votkinsk and Magna, a potentially important precedent is being set for future agreements. Careful consideration should be given to a requirement that, henceforth, the United States will insist that arms control accords it signs provide for equal verification results. Indeed, it may be that the only acceptable basis for verifiably reducing strategic arms is an asymmetrical one -- but of a different kind than in the INF Treaty. The verification regimes of future arms control agreements may need to reflect the fundamental differences in monitoring an open, democratic society's compliance with its commitments on the one hand and, on the other, verifying the behavior of a closed, totalitarian state.

## THE TREATY INTERPRETATION ISSUE

Introduction

In October, 1985, the question of how and by whom treaties are interpreted after they are ratified moved from the back pages of legal textbooks to the forefront of a heated national debate. At specific issue was the interpretation of the 1972 Anti-Ballistic Missile (ABM) Treaty's limitation on the development and testing of "futuristic" defensive technologies. After a review of the ABM Treaty text and negotiating record, the Reagan Administration concluded that the Soviets had not, in fact, agreed to limit such development and testing even though many in the United States had believed otherwise in 1972 and thereafter.

In short order, the question of interpreting what the United States and Soviet Union had agreed in 1972 was overshadowed by an impassioned debate over constitutional precedent and procedure. The Administration argued that the executive branch could unilaterally determine that an interpretation previously presented in connection with the Senate's consideration of a treaty, had not, in fact, been agreed to by the Soviet Union and should not be binding upon the United States. According to many Senators, the Administration's position was a fundamental challenge to the Senate's constitutional responsibility to advise and consent to treaties.

As a practical matter, President Reagan acceded to the Senatorial view when, in 1987, he signed legislation precluding -- absent Congressional approval -- any implementation in the Strategic Defense Initiative (SDI) of his interpretation of the ABM Treaty with respect to "futuristic" technologies. In developing this legislation, Senate leaders contended that the prospects for expeditious consideration of the then-emerging INF Treaty could be adversely affected by this controversy. Thus, it was perhaps inevitable that the constitutional and political issues involved in the dispute over the correct interpretation of the ABM Treaty would be revisited in the context of the INF accord.

This chapter describes how the controversy over treaty interpretation has developed in the Senate's deliberations to date on the INF Treaty. It also analyzes the implications of a condition recommended by the Foreign Relations Committee to the resolution of ratification governing Presidential authority to

interpret the INF Treaty.

Relevant Treaty Provisions

In principle, the entire INF Treaty and its associated Protocols and Memorandum of Understanding are at issue.

While not itself a Treaty provision, the condition adopted by the Senate Foreign Relations Committee (on a 12-7 vote) is as follows:

That this Treaty shall be subject to the following principles, which derive, as a necessary implication, from the provisions of the Constitution (Article II, section 2, clause 2) for the making of treaties:

(a) the United States shall interpret this Treaty in accordance with the understanding of the Treaty shared by the Executive and the Senate at the time of Senate consent to ratification;

(b) such common understanding is:

(i) based on the text of the Treaty; and

(ii) reflected in the authoritative representations provided by the Executive branch to the Senate and its committees in seeking Senate consent to ratification, insofar as such representations are directed to the meaning and legal effect of the text of the Treaty;

(c) the United States shall not agree to or adopt an interpretation different from that common understanding except pursuant to a subsequent treaty or protocol, or the enactment of a statute.

This understanding shall not be incorporated into the instruments of ratification of this Treaty or otherwise officially conveyed to the other contracting Party.

Identification of the Issue

As noted above, the roots of the present controversy -- and, therefore, the identification of this issue -- actually are to be found outside the INF Treaty. The Senate debate on the INF agreement was, nonetheless, perceived by the majority of the Senate Foreign Relations Committee in its consideration of the agreement, to express "Senate unwillingness to acquiesce in

Administration assertions which, if not refuted, could imply acceptance of a radical aggrandizement of presidential power." Consequently, the matter of treaty interpretation became a key focus of the SFRC's deliberations.

According to the SFRC, the embodiment of this "radical aggrandizement" was to be found in the legal theory advanced by Judge Abraham Sofaer in support of the Administration's adoption of a "broad interpretation" of the AEM Treaty. This theory, labelled "the Sofaer doctrine" by the Foreign Relations Committee, was described by the Committee's majority as asserting that:

...the Executive is not bound, in implementing a treaty, by what it has told the Senate in seeking consent to ratification. The Executive is only bound, according to the doctrine, by a particular interpretation of a treaty's meaning if that interpretation meets three criteria: the particular interpretation must have been (1) "generally understood" by the Senate, (2) "clearly intended" by the Senate and (3) "relied upon" by the Senate.

In other words, it is not enough for the Senate to have been told by the Executive branch how the United States would interpret a treaty pending before the Senate. In order for the Senate to hold the Executive to a particular interpretation, the Senate must record in some clear, concrete way that it intends that interpretation when giving its consent to a treaty.

According to a "Chronology of Executive/Senate Action on Treaty Interpretation" included in the SFRC report on the INF Treaty, the first effort to respond to the so-called Sofaer Doctrine in the INF context was made by Senator Sam Nunn. In September, 1987, in the words of the Committee, Sen. Nunn "demand[ed] that the Administration provide the Senate with the INF Treaty 'negotiating record' as a result of the Sofaer Doctrine." His argument was essentially as follows: As long as the Administration subscribes to the Sofaer Doctrine, the Senate will be unable to rely exclusively upon its testimony in considering the forthcoming agreement. Instead, Senators would be obliged to perform their own exhaustive review of the record of diplomatic exchanges between the two sides in the course of its preparations.

While the Administration was, in principle, prepared to supply the Senate with a number of documents comprising much of the "negotiating record," it was anxious to avoid the lengthy Senate deliberation on the Treaty that Senator Nunn's position implied. Consequently, it embarked upon numerous exchanges with Senators Nunn, Robert Byrd (D-WV), Claiborne Pell (D-RI) and others in an effort to find a means of expediting the Senate's action on the INF accord. Specifically, the Senators sought a

letter from the Secretary of State containing three specific assurances:

- o The testimony of all Executive Branch witnesses and any submissions for the hearing record by the Executive Branch on the INF Treaty will be authoritative and the Senate can rely on them unless indicated otherwise prior to final Senate vote on the Treaty.
- o The meaning of the Treaty as presented to the Senate will be regarded by the Administration as authoritative without the necessity of the Senate incorporating that testimony and material in its Resolution of Ratification through understandings, reservations, amendments or other conditions.
- o A meaning for the Treaty different from that presented by the Administration to the Senate will not be adopted without the approval of the Senate.

Senator Nunn maintained that, without such express assurances, the Senate would have to obtain from the Administration nineteen different categories of documents from the 1980-87 period when the INF Treaty was being negotiated, as well as those portions of the START and Defense and Space Talks (from 1985-1987) during which INF was discussed. These categories included, in addition to the U.S. and Soviet plenary statements and notes on conversations and negotiations during plenary sessions, the following:

- o Presidentially-approved National Security Decision Documents relating to the negotiations;
- o Minutes of U.S. interagency group meetings related to INF;
- o Internal agency memos prepared in advance of such meetings or otherwise addressing a specific issue in the negotiations;
- o Draft versions of all documents falling into these nineteen categories.

#### Subsequent Development of the Issue

The Administration regarded such a demand as an unacceptable breach of Executive privilege. Following protracted negotiations between Secretary Shultz and his representatives on the one hand and interested Senators and staff on the other, on February 5, 1988, the Secretary of State sent a letter to Sen. Byrd. Interested Senators considered this letter to be

inadequate; as the majority of the SFRC subsequently recounted in its report on the INF Treaty, it "merely affirms the transfer of the 'negotiating record' but does not address the question of whether Executive Branch testimony will be both 'authoritative' and 'binding.'" The majority report went on to describe how, on the same day, Sens. Nunn and Byrd responded by :

...threatening to hold up the ratification proceedings on the INF Treaty unless the Administration assures the Senate that the testimony of Administration officials is "authoritative" and "binding." Nunn and Byrd say that, without such assurance, the Senate will have to fully examine the "negotiating record" and attach reservations and understandings to the Resolution of Ratification on each provision of the Treaty to ensure that a future President cannot change the meaning of the Treaty as presented by the Executive.

The key stumbling block proved to be the concept of "binding" insofar as the present Administration was reluctant to accept obligations which would extend beyond its time in office, i.e. be binding upon future Presidents. In a letter to the Senators dated February 9, 1988, Secretary Shultz accepted the proposition that "the testimony of all Executive branch witnesses and any submissions for the hearing record by the Executive branch on the Treaty can be regarded by the Senate as authoritative." He also agreed that "the meaning of the Treaty as presented to the Senate can be regarded by the Senate as authoritative without the necessity of the Senate's incorporating that testimony and material in its Resolution of Ratification through understandings, reservations, amendments, or other conditions."

The Secretary of State would not, however, go further than to assure the Senators that "the Reagan Administration will in no way depart from the INF Treaty as we are presenting it to the Senate (emphasis added)." The Foreign Relations Committee noted that "While the letter states that Administration testimony is 'authoritative,' it does not state that such 'authoritative' testimony is 'binding' upon the Executive." In subsequent testimony before the SFRC, Sec. Shultz made the Administration's position explicit. He said, "Of course, we cannot bind future Administrations."

On March 17, 1988, White House Counsel Arthur B. Culvahouse provided a definitive statement of the Administration's position on the then-current draft of a resolution prepared by Senator Joseph Biden (D-DE) at the time under active consideration by the SFRC. Mr. Culvahouse expressed the view that:

[The Biden Resolution] would change the legal rules of treaty interpretation. It would impose an unconstitutional mechanism for the alteration of a treaty interpretation.

Moreover, it would greatly increase the risk of inflexible distinctions between the meaning of a treaty for purposes of international law and its meaning for purposes of domestic law -- distinctions that could operate to the disadvantage of the United States....Therefore we believe the Resolution is not in the best interests of the United States.

Particularly noteworthy is Mr. Culvahouse's critique of the Resolution's practical implications:

In instances where the treaty text is not dispositive or is unclear, under international law one looks primarily to the negotiating record and the subsequent practice of the treaty parties. As a matter of domestic law, however, the President is bound by shared interpretations which were both authoritatively communicated to the Senate by the Executive and clearly intended, generally understood and relied upon by the Senate in its advice and consent to ratification. This is true even if the treaty negotiating record and subsequent practice indicate an interpretation contrary to that shared understanding. Exchanges in Senate proceedings in connection with the ratification of a treaty cannot under international law alter the meaning of a treaty where they are not officially communicated to the other treaty party prior to the exchange of instruments of ratification.

The result might be two INF Treaties, one binding domestically against the President and a second one binding internationally between the United States and the Soviet Union. In our view the Resolution would substantially increase this risk of a dichotomy between the interpretation of a treaty under international law and the interpretation to which the President constitutionally is bound under domestic law.

In order to ensure there was no suggestion that his letter of March 17th conflicted with statements made by Sec. Shultz in his letter of February 9th, Mr. Culvahouse wrote once more on March 22, 1988 to make clear that "no inconsistency was intended or in fact exists between" the two. The Foreign Relations Committee wrote in its report on the INF Treaty:

This assertion of consistency seems correct because the Shultz letter, while stating that all Administration testimony is "authoritative," did not state that all "authoritative" testimony is "binding." Indeed, the key premise of the first Culvahouse letter is that "authoritative" testimony is not binding unless the Senate has fulfilled the criteria of the Sofaer Doctrine.

In its favorable consideration of the Biden Condition (as the amended resolution has come to be called), the majority of the

SFRC described its purpose as being:

...to reaffirm the long-standing practice and long-standing principle that the "shared understanding" of the Executive and the Senate, as reflected in the Executive's formal representations, is indeed fully binding -- as opposed to binding only with regard to those provisions and interpretations which the Senate has gone to extraordinary lengths to brand as crucial to its consent, by formal condition or some other means.

\* \* \*

...[and] to lead the Senate to affirm a set of principles which reflect long-standing constitutional practice. By so doing, the Senate can:

-- avoid the need for other conditions pertaining to specific interpretations of the INF Treaty;

-- repudiate a pernicious doctrine that was asserted solely for a specific purpose [i.e., the Sofaer Doctrine];

-- establish a position with regard to future treaties such that the Senate can avoid repeating the inclusion of a formal condition. The Senate's [anticipated] 1988 action will have been sufficient to reaffirm fundamental constitutional principles of treaty-making.

#### Analysis

As the preceding discussion suggests, the factors which have led to the incorporation of the Biden Condition into the resolution of ratification are complex. They include: a constitutional struggle between the executive and legislative branches over the conduct of foreign policy (i.e., the responsibility to interpret and, therefore, in a sense to implement treaties); a partisan effort to score political points on arms control and against the Strategic Defense Initiative; and a desire to keep the Senate's role in advising on and consenting to treaties a manageable task.

Each of these factors raises issues that merit thorough consideration in the Senate's debate on the INF Treaty. Of these, the constitutional issues in our view are the most troublesome, because they call into question the fundamental constitutional mechanisms by which the United States makes and interprets treaties. The constitutional implications of the Biden Condition far transcend the INF Treaty, or arms control agreements generally.

The Constitutional Issues

We therefore concentrate our analysis on the constitutional issues. Without in any sense attempting an exhaustive constitutional discussion in this report, we outline below some considerations on the following key points:

1. The Biden Condition unconstitutionally infringes the President's authority to make treaties, by restricting his ability to assure that the United States and the Soviet Union share the same understanding of the INF Treaty.
2. The Biden Condition unconstitutionally infringes the President's prerogative to interpret and implement treaties.

1. The Biden Condition -- An Unconstitutional Infringement on the President's Treaty-Making Authority

The United States Constitution (Article II, section 2, clause 2) provides that the President "shall have Power, by and with the Advice and Consent of the Senate, to make treaties...." This provision has long been understood to mean that the President alone makes treaties, subject only to the Senate's advice and consent. The Senate does not make treaties. As stated in the Restatement of the Law (3d), Foreign Relations Law of the United States:

Under Article II, Section 2 of the Constitution..., it is the President who "makes" a treaty by ratifying or acceding to it..., but he may do so only after the Senate consents. Even if a treaty has received the advice and consent of the Senate, the President has discretion whether to make the treaty.<sup>1</sup>

A corollary of this principle is that the President or his representative has sole authority to conduct the negotiation of treaties without interference by the Senate:

The Constitution gives the President power to make treaties "by and with the Advice and Consent of the Senate," but Senate advice, as distinguished from consent, is not necessary. Presidents since the early years of the nation's history generally have refrained from formally consulting the

---

<sup>1</sup>Restatement of the Law (3d), Restatement of the Foreign Relations Law of the United States, Sec. 303, Comment d (1987) (hereinafter "Restatement (3d)" or "Rest. 3d").

Senate prior to negotiating a treaty.<sup>2</sup>

As part of his exclusive authority to negotiate and make treaties, the President has a duty to assure, to the extent possible, that the United States and the other treaty party share the same understanding of the treaty -- that the parties have reached a genuine "meeting of the minds" on the meaning and effect of the treaty. This duty exists not only during the negotiations leading up to the treaty text as presented to the Senate, but also with respect to any meaning the Senate intends the treaty to have as a condition to its consent to ratification. As stated in the Restatement (3d):

When the Senate gives its advice and consent to a treaty on the basis of a particular understanding of its meaning, the President, if he makes the treaty, must do so on the basis of the Senate's understanding.<sup>3</sup>

In order to assure that any understanding on which the Senate conditions its consent is given effect, the President normally must take steps to obtain and record the agreement of the other treaty party to that understanding:

Since the President can make a treaty only with the advice and consent of the Senate, he must give effect to conditions imposed by the Senate on its consent. The President generally includes a verbatim recitation of any proposed reservation, statement of understanding, or other declaration relevant to the application or interpretation of the treaty contained in the Senate resolution of consent, both in the instrument notifying the other state or the depositary of United States ratification or accession and in the proclamation of the treaty...The President may also communicate a Senate qualification separately.<sup>4</sup>

Including the Senate condition, understanding, etc. in the U.S. ratification instruments is a particularly significant step in the case of a bilateral treaty, because it puts the other treaty party on notice that the treaty has been revised and that such other treaty party, if it proceeds to accept the treaty, accepts it as so revised. In this manner the President may establish with substantial clarity that the Senate's condition is agreed by the other treaty party and thus "given effect" because it is part of the mutually binding rights, obligations and understandings created by the treaty relationship. Accord-

<sup>2</sup>Rest. 3d, Sec. 303, Reporters' Note 3.

<sup>3</sup>Rest. 3d, Sec. 314(2).

<sup>4</sup>Rest. 3d, Sec. 314, Comment b.

ing to The Restatement (3d):

If a reservation is attached [to a bilateral agreement] at ratification, it constitutes in effect a rejection of the original tentative agreement and a counter-offer of a new agreement. The other party must accept the agreement as revised by the reservation...<sup>5</sup>

Absent such an acceptance, of course, there will have been no meeting of minds between the treaty parties, and negotiations will either be broken off without a treaty being brought into force or negotiations will continue until the parties have agreed on its terms, including any understandings or the like on which the United States Senate may still condition its consent to ratification.

The precise term ("reservation," "understanding," "condition" or the like) used by the Senate in its resolution of advice and consent is not dispositive; if the Senate intends to affect the legal obligations of the United States under the treaty, its action will have the same effect as a reservation:

When signing or adhering to an international agreement, a state may make a unilateral declaration that does not purport to be a reservation. Whatever it is called, it constitutes a reservation in fact if it purports to exclude, limit, or modify the state's legal obligation. Sometimes, however, a declaration purports to be an "understanding," an interpretation of the agreement in a particular respect. Such an interpretive declaration is not a reservation if it reflects the accepted view of the agreement. But another contracting party may challenge the expressed understanding, treating it as a reservation which it is not prepared to accept.<sup>6</sup>

To ensure that Senate conditions of this sort are binding on both treaty parties,

in bilateral treaties, the United States has made it a practice to include in the Protocol of Exchange of the instruments of ratification a statement by each party expressly stipulating its acceptance of the reservations, declarations, understandings, etc. of the other.<sup>7</sup>

This sound practice reflects the customary appreciation of

<sup>5</sup>Rest. 3d, Sec. 313, Comment f.

<sup>6</sup>Rest. 3d, Sec. 313, Comment g (emphasis added).

<sup>7</sup>Rest. 3d, Sec. 314, Reporters' Note 1.

Presidents that, when the Senate conditions its consent to a treaty upon a particular understanding of its meaning, the President cannot make the treaty unless he is satisfied that as a matter of international law the treaty means what the Senate intends.<sup>8</sup>

In other words, this practice serves to assure that the treaty to which the Senate has consented is the same treaty that the other contracting party has accepted and hence -- in the oft-repeated phrase of the present Democratic Senate leadership -- the treaty made by the President is that treaty on which there has been "a meeting of the minds between the Senate and the President." Put another way, the President can only make that treaty to which the Senate has consented.

It is equally true, however, that the treaty made by the other contracting party must be the same treaty to which the United States Senate has consented, or else there is no treaty mutually binding on and having the same effect for both contracting parties. Thus,

the practice of the executive branch in notifying the other signatory or signatories of any statement of understanding required by the Senate reduces the risk of a situation arising in which such a statement of understanding would

---

<sup>8</sup>The Restatement of the Law (2d), Foreign Relations Law of the United States, which the Restatement (3d) does not purport to alter in this respect, is even more explicit on this point. It states:

When the resolution by which the Senate gives its advice and consent to the ratification of a treaty states that its approval is given on the basis of an understanding that is set forth or incorporated in the resolution, the President, if he ratifies the treaty, must include the Senate's statement of understanding in the instrument of ratification or otherwise make it clear that the assent of the United States is subject to the understanding, unless, as a matter of international law, the treaty cannot be interpreted otherwise than as stated in the understanding.

Restatement of the Law (2d), Foreign Relations Law of the United States, Sec. 133(2)(1965) (hereinafter "Rest. 2d"). (Emphasis added.) Nothing in international law mandates the understanding stated in the Biden Condition. Thus, it is precisely the sort of understanding that, if the Biden Condition is adopted by the Senate, should be incorporated into the ratification instruments in order to assure that both treaty parties share the "common understanding" of the Treaty announced in the Condition and, therefore, are agreeing to the same set of rights and obligations.

become domestic law where it might not become effective as international law.<sup>9</sup>

The Biden Condition would expressly prohibit the President from incorporating the understanding it expresses into the instruments of ratification of the INF Treaty or otherwise officially conveying that understanding to the Soviet Union. The Condition amounts to an instruction to the President not to follow the established practice that Presidents have adopted to assure that Senate conditions are part of the meeting of minds between the contracting parties and thus have equal legal effect for both. In this respect the Biden Condition would infringe the President's constitutional role as the sole organ of the United States in the negotiation of treaties.

The SFRC majority report contends that the Biden Condition should not be conveyed to the Soviet Union as part of the ratification instruments because it "is not directed to U.S. obligations under international law...." Rather, the Committee majority asserted, "the Condition is binding under domestic law...."

The claim that the Condition is not directed to U.S. obligations under international law, however, is directly refuted by the terms of the Biden Condition itself. Indeed, the Condition expressly states that the understanding embodied in it derives from "the text of the Treaty" and from authoritative Executive representations "directed to the meaning and legal effect of the text of the Treaty."

The text of the treaty is the primary source of U.S. obligations under international law. And the voluminous record of authoritative Executive representations "directed to the meaning and legal effect of the text of the Treaty" scarcely, if at all, concern the meaning and effect of the Treaty under domestic law. To the contrary, the Senate's overwhelming interest, and the Administration's principal effort, throughout the hearings has been to understand and explain the rights and obligations that the United States and Soviet Union would have vis-a-vis each other under the INF Treaty. The understanding expressed in the Condition on its face goes to the meaning and legal effect of the Treaty in all its aspects and hence in its very essence is a matter of bilateral U.S.-Soviet concern.

The Biden Condition is also objectionable in that it would substantially increase the risk of inconsistent interpretations of the INF Treaty by the United States and the Soviet Union. The Committee dismisses this concern as "highly theoretical." But even the history of the last several weeks proves that the

---

<sup>9</sup>Rest. 2d, Sec. 135, Comment a.

concern is far from theoretical. For example, the Administration during the latter stages of committee hearings assured the Senate that the INF Treaty banned "futuristic" weapons and not merely conventional munitions within the range categories governed by the Treaty. The Administration represented that this ban derived from a "common understanding" between the United States and the Soviet Union. Presumably, this "authoritative representation" as to the "meaning and legal effect" of the Treaty would have been sufficient in itself under the Biden Condition without any need to raise the matter with the Soviet Union. Instead, however, the Senate leadership wanted further assurances and, in due course, the Administration did raise the issue with the Soviet Union.

The initial Soviet response in no sense confirmed that the Soviet Union agreed with the Administration's representations to the Senate, and further discussions -- which yielded a formal written undertaking between the two contracting parties -- were required before a meeting of the minds emerged. Had the President been prohibited from raising the issue with the Soviet Union as the Biden Condition would do, it now seems evident that a common understanding between the two countries on the "futuristics" issue either would not have emerged or at best would have been a matter of uncertainty.<sup>10</sup>

B. The Biden Condition -- An Unconstitutional Infringement on the President's Prerogative to Interpret and Implement Treaties

The report of the SFRC majority concedes that "it is indisputable that the President alone bears the constitutional obligation to interpret and implement treaties...." It asserts that the Biden Condition is "perfectly consistent" with this constitutional principle. If there is any such consistency, it is far from perfect. To the contrary, the Condition would expressly prohibit the President from exercising his role as the sole interpreter of treaties and instead would arrogate to the Congress a role as co-interpreter insofar as the INF Treaty is concerned:

(c) the United States shall not agree to or adopt an

<sup>10</sup>The various last-minute disputes between the United States and the Soviet Union over the proper interpretation of the Treaty's verification provisions teaches the same lesson: On questions concerning "the meaning and legal effect of the text of the Treaty," the President must be free to take appropriate steps to assure that the understanding shared by the President and the Senate is also shared by the other contracting party. It is illogical and contrary to United States interests to assert that such matters are of domestic legal import only.

interpretation different from that common understanding [i.e., the one based on the text of the Treaty and on authoritative Executive representations directed to the meaning and legal effect of the Treaty text] except pursuant to Senate advice and consent to a subsequent treaty or protocol, or the enactment of a statute. (Emphasis added.)

Consider the situation that would arise were the Biden Condition in effect and the President found himself faced with the following circumstances: a question of interpretation under the Treaty arises that is not resolvable by reference to the text alone and that had not been addressed in any of the "authoritative" representations by the Executive branch to the Senate respecting the meaning and legal effect of the Treaty text. Since such an interpretative question would be outside the "common understanding" embodied in the Biden Condition, any resolution of that question would by definition be "different from" that "common understanding." Accordingly, the President would be barred by the Condition from resolving the question himself as envisaged by the Constitution. Instead, he would be required to pursue the cumbersome and uncertain procedures of negotiating a new treaty or protocol with the other contracting party and submitting it for Senate approval, or submitting proposed legislation for passage by both houses of Congress.

The mechanism imposed by the Biden Condition would contradict settled constitutional principles in the realm of treaty interpretation and implementation. The President is the "sole organ of the nation in its external relations," United States v. Curtiss-Wright Export Corp., 299 U.S. 304, 319 (1936), and as such he is in foreign affairs "clearly a separate source of law since he makes treaties..., which are the law of the land."<sup>11</sup> The President's authority as the sole interpreter of treaties in the realm of foreign relations derives from these principles.<sup>12</sup> And even in the realm of domestic law, courts of the United States give great weight to a President's interpretation of a treaty. As stated in The Restatement (3d):

- (1) The President has authority to determine the interpretation of an international agreement to be asserted by the United States in its relations with other states.
- (2) Courts in the United States have final authority to interpret an international agreement for purposes of applying it as law in the United States, but will give great weight to

<sup>11</sup>Rest. 3d, Sec. 1, Reporters' Note 2.

<sup>12</sup>Rest. 3d, Sec. 326, Comment a.

an interpretation made by the Executive Branch.<sup>13</sup>

Under the Constitution, the Senate has essentially no role in the subsequent interpretation of treaties that the President has made. As the United States Supreme Court said in Fourteen Diamond Rings v. United States, 183 U.S. 176, 180, "The meaning of the treaty cannot be controlled by subsequent explanations of some of those who may have voted to ratify it." This principle is recognized in the Restatement (3d), which observes that:

The Senate...has no special role in the implementation of the treaty after it is made....Interpretation by the Senate of a treaty after it has been concluded may have no special authority, but understandings expressed by the Senate in giving its advice and consent must be respected.<sup>14</sup>

The Biden Condition would fundamentally alter these settled principles of treaty interpretation and implementation, and it would arrogate to the Congress a cumbersome, intrusive role in the President's prerogatives not contemplated by the United States Constitution.

#### Conclusions

The cleanest and most straight-forward approach to addressing the constitutional and policy problems associated with the Biden Condition is not to adopt it. Alternatively, but far less preferable, would be the adoption of the Condition amended to reflect the requirement that the President make this Condition part of the ratification instruments and obtain express Soviet acceptance of it. In the latter event, the present Condition's clause (c) must be deleted.

---

## SUMMARY

As with the preceding AEI Article-by-Article Review of the INF Treaty, the present analysis is intended to contribute to the informed consideration of this agreement by the Senate and the public. Selection of these seven issues, of course, is not meant -- and should not be construed -- to suggest that other aspects of the INF Treaty do not also warrant close scrutiny. In the view of the working group, however, the topics addressed in this paper are among the most significant for the Treaty's claim of being equitable, effectively verifiable and in the interest of the United States. They are also of particular significance to the extent they will shape the terms of the strategic arms reduction agreement now under negotiation.

Chairman WARNER. Thank you.

Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman.

We have a lot of areas that we have not gotten into yet, and we have discussed quite a bit about contingency operations, about what shall we do now in Bosnia and Kosovo, but I would like to talk a little bit about a policy that we would formulate for something like this coming up in the future.

I can remember so well our resolution of disapproval back in 1995, of getting into Bosnia, and we lost it by 3 votes, and it was only because the President gave a guarantee. I remember hearing him say it, that we would be there only 12 months, and all the kids would be home for Christmas in December 1996. Of course, we are still there, and I think most of us knew they still would be there. It is easy to get in. It is hard to get out.

I think moving to Kosovo, it was purely a humanitarian motivation to send our people in there. I was over there during this time because I knew that that was going to happen, and I was trying to build a case to keep us from doing that.

I can remember a very prominent TV person was filming the burning of a mosque. It was the only mosque that was burned, it is my understanding, during that time, but from every possible angle. When he got back home you assumed every mosque was burning down, which we know what happened to 52 Serbian Orthodox Christian churches after this thing, after we got involved in it.

I guess my point is, as a policy—it sounds kind of hardened to say this. It is not that we are not all very sensitive to humanitarian problems, to genocide, to ethnic cleansing, but we are in a position where—at least I am, as Chairman of the Readiness and Management Support Subcommittee, in recognizing that we at that time are one-half the force strength that we were during the Persian Gulf War, and that means one-half the Army divisions, one-half the tactical air wings, one-half the ships floating around out there, and yet with the greater threat than immediately following the Persian Gulf War, and I think everyone agrees to that.

Things are volatile in the Middle East, volatile in Korea, and to use our limited military assets in areas like Kosovo and Bosnia and some of the other areas is wrong as policy, because now we see we can get in, we cannot get out.

I am involved in something that I guess some people refer to as mission work in West Africa. I am talking about Cote D'Ivoire, Benin, Nigeria, Togo, Gabon, both Congo, Kinshasa and Congo Brazzaville, and yet during the time that we were making that decision to go into Kosovo, for every one incident of ethnic cleansing in Kosovo, there are probably 100 on any given day in West Africa.

I would like to hear—you may want to answer this for the record, but any thoughts that you have on what our policy should be, particularly during this time that we have not rebuilt our defense system, and particularly at this time with the threat that we are faced with out there that has been characterized by people like George Tenet, Director of the CIA, as being the most threatened position we have been in as a Nation, what our policy should be regarding involvement in the future in using humanitarian jus-

tifications for that involvement. Just each one of you, any comments you want to make?

Mr. RODMAN. Let me start, Senator. You have asked a good question, really, because I think all of us, the President, many people in Congress, are uncomfortable with the way we seem to get drawn into things, but many people who have attempted to draw up a list of criteria, as if a checklist would tell us in any given case whether it is a place to go in or a place to stay out, and I am not sure—

Senator INHOFE. Well, I might interrupt you at this point and say that Senator Roberts did develop one, put it into the statutes, and they were not followed anyway, so maybe that is not too important.

Mr. RODMAN. Well, it is very relevant. I remember, I read over Secretary Rumsfeld's confirmation hearing, and he had a discussion with Senator Roberts about some of the criteria that Senator Roberts had listed. For example, I do not think there is any way you can guarantee public support for an enterprise, and what Secretary Rumsfeld said was, we saw in the Gulf War that a President can help to shape public support if he educates the public that in a particular case there is a vital interest involved, and I think President Lyndon Johnson found out that you can start with public support and squander it, so I do not think there is a checklist.

Another point that Secretary Rumsfeld mentioned was, of course, as a general principle, if we go into something we should go in overwhelmingly and decisively, and that is a good principle, but the Secretary mentioned, well, there is always a case of a pre-crisis situation when maybe an application of a smaller amount of force can head off a major crisis, so the variety of cases that we are going to be confronted with, there is no way to have a procedure that is going to answer all the questions.

I think we have to pray as Americans that if another case comes along, that the President and Congress and the public will have an intelligent debate and give voice to all of these considerations, and not be driven by media pressure, and to look at it and cold—well, I will not say cold-bloodedly, but analytically, and understand what the costs would be to our readiness, because I think when a case comes along it is going to have its own unique features, and we have to have the discipline as a country to look at the situation carefully, consult among the two branches of Government to make sure there is some national unity on this.

I think the mood I sense is that as a country we are uncomfortable with how far we have been drawn into things, and that this is a time when I think the country is ready for some restraint, and to show some restraint, and to hope that other countries can be brought in, that we can share responsibility.

You mentioned Africa. I think one interesting thing that both his administration and the previous administration did was with Nigeria, to help train Nigeria to take a greater responsibility for peace-keeping in West Africa, so we have to engage other countries. Maybe that is one principle that we can count on, that we should always look in the first instance to see if others can do it, and maybe we can help them, backstop them.

Those are my thoughts on this, but it is a question that will not go away.

Senator INHOFE. Any other thoughts on this?

I always keep in mind that if you are looking at the public to see how that barometer is going out there, they are assuming some things that are not true. For example, during that time that those decisions were made in both Bosnia and Kosovo, the general public probably, in fact definitely, according to polling data, did not know the crisis that we were in, in terms of what happened to our military.

They thought, well, our cup runneth over, we have everything we need, let us take care of these poor people out there, without any knowledge of other places in the world that this is going on.

So we are dealing with a policy, and I think it needs to be specific, and any comments you want to make now, and then maybe elaborate a little bit more for the record, because it is going to happen again.

Mr. RODMAN. No, I will provide some further thoughts, Senator, if you like, definitely.

[The information referred to follows:]

#### HUMANITARIAN INTERVENTION

What should our policy be with respect to humanitarian intervention?

The United States should be selective in its international military interventions, especially where there is a danger of combat. As President Bush said at The Citadel on September 23, 1999, "If America is committed everywhere, our commitments are everywhere suspect." My personal view is that U.S. combat troops should generally be reserved for the most significant strategic challenges to the international order.

At the same time, the United States will not be able to, nor should it, remain indifferent to significant humanitarian crises. But in these cases, we should seek as a first resort to help develop mechanisms whereby other nations can work together and take the leading responsibility. East Timor and West Africa are examples. The United States may be willing to provide assistance but others should take the lead wherever possible.

Senator INHOFE. I will wait till the next round. My time has expired.

Chairman WARNER. Thank you very much. The chair wishes to observe the hearing has been in progress now for 2½ hours. We have present a number of wonderful children who have joined us. It may be in the interest of all if we took about a 3- to 4-minute break so that maybe the children could say goodbye, daddy, you are on your own. [Laughter.]

Whatever the case may be with your families, and then we will resume, so let us just take 3 or 4 minutes.

Senator ROBERTS. We appreciate the break for additional reasons, Mr. Chairman. [Laughter.]

Chairman WARNER. Thank you very much. I hope the Senator from Georgia would understand. [Recess.]

Thank you. We will resume the hearing, and the chair recognizes the Senator from Georgia.

Senator CLELAND. Thank you very much, Mr. Chairman. I just want to echo the thoughts of the distinguished Senator from Oklahoma, Senator Inhofe, about the ease in which a major power can get drawn into conflicts abroad.

Mr. Chairman, you like quotes, and there are a couple of quotes I have on that point. Napoleon once said that wars are easy to get into and hard to get out of, and second, Wellington once said that

no great nation can have a little war, so there is no such thing as a little engagement for the United States.

I will say, Mr. Feith, you mentioned that the President's national missile defense program was not aimed at Russia and China. Who is it aimed at?

Mr. FEITH. Senator, the President has said that the purpose of the missile defense program will be to deal with the missile threat from rogue states, and the threat from accidental or unauthorized launches.

Senator CLELAND. Let me get into this now. I mean, it is pretty obvious that the rogue state might be a North Korea. I want to get into the whole North Korea issue, Dr. Crouch.

In 1995, you wrote in the *Journal of Comparative Strategy*, the Bush administration—this is President Bush, Sr.—the Bush administration's decision to withdraw tactical nuclear weapons from South Korea was a major geopolitical mistake. Do you believe that now?

Dr. CROUCH. I believe that at the time, Senator, that the United States had nuclear weapons on the South Korean peninsula for many decades. My sense was that at a time when the North Koreans were developing their own nuclear capability, that it was not prudent, it was not wise for the United States to withdraw in effect its tactical nuclear systems that were deployed there, because I believed those represented the best, most effective deterrent to the use, not only of a potential North Korean nuclear weapon, but also the use of at the time North Korea's overwhelming conventional capability.

Senator CLELAND. Let us just look at it. I mean, it is no secret that we ring the Korean peninsula with substantial sea forces, both submarine forces and other forces, and that we pose a powerful deterrent to any action that the North Koreans might pursue.

But let me ask you again, do you believe the Bush administration's decision to withdraw tactical nuclear weapons from South Korea was a major geopolitical mistake, and do you believe that now?

Dr. CROUCH. As I said earlier, at the time, I stand by my statement, I believed it was. Today, I believe the circumstances have changed dramatically. I mentioned a few of those changes. One, I would say, that I think is very important, in addition to the lessening of tensions between the North and the South, is the fact that the South Korean military is in a much better position to withstand an attack from North Korea. That is to say, the conventional disparity that existed 10 years ago is not the same as it is today, so today I do not believe it is critical to reintroduce tactical nuclear weapons in South Korea.

Senator CLELAND. Your article was written 6 years ago, not 10 years ago, and in that same article just 6 years ago you recommended the U.S. redeploy nuclear weapons to South Korea to demonstrate our nuclear commitment to a U.S. ally and maintain the means at hand to respond to the North Korean nuclear attack. Do you think we ought to introduce tactical nuclear weapons in South Korea now?

Dr. CROUCH. When I said 10 years ago, Senator, I was referring to the approximate time frame when they were withdrawn, not the time of the article.

As I said, I believe—if you go back to 1994, the situation then was very different than it is now. It was the end of the Kim Il Sung regime, tensions were high between the North and the South we had discovered, the Clinton administration had discovered a major nuclear program, and were very concerned about that program, and I believed that in light of those discoveries, at the time, yes, it was a geopolitical mistake.

I believe the circumstances have changed today, and consequently, today I would not be arguing for the reintroduction of tactical nuclear weapons into South Korea.

Senator CLELAND. In 1995 you also recommended the United States, quote, set a firm deadline for the destruction of North Korea's nuclear complex and its long-range missile production facilities, absent positive visible steps from the North Korean regime towards this end, authorize the destruction of as much of this complex as possible by U.S. and allied air power.

Do you think we ought to do that today?

Dr. CROUCH. Senator, I think again circumstances have changed, so the answer would be no.

Senator CLELAND. Were you ever in the American military?

Dr. CROUCH. No, sir.

Senator CLELAND. In 1993, you criticized Senators Hatfield, Mitchell, and Exon for their amendment to the Energy and Water Appropriations bill that led to a moratorium on nuclear testing in the United States, saying those who supported a ban on nuclear testing—this is 1993 now—were using, quote, Luddite logic, end of quote.

Now, President Bush has indicated during his campaign that he supported the current U.S. moratorium on nuclear testing. Is he a Luddite? Is he using Luddite logic?

Dr. CROUCH. No, sir. My concern about nuclear testing that was evinced in that article is simply that nuclear weapons are the most awesome explosive power that man has yet invented, and hopefully we will not invent one that is more awesome, or more explosive, but that we continue to rely on nuclear weapons, and I believe this position was reaffirmed by President Clinton. We continue to rely on nuclear weapons as a primary deterrent of aggression, deterrent to the use of nuclear weapons against the United States, as well as against our allies, as well as the use of conventional weapons against the United States and our Armed Forces.

My view was that we needed to know, and continue to know, as much as we can about those weapons, and what, in fact, a ban on nuclear testing was, was a ban on knowledge about this very awesome capability, so my argument really was that nuclear testing per se, as long as we are going to continue to rely on nuclear weapons, was an important part of understanding and enhancing the safety and reliability of that force.

Senator CLELAND. Do you support the Comprehensive Nuclear Test Ban Treaty?

Dr. CROUCH. No, sir.

Senator CLELAND. You also refer to economic sanctions as, quote, that great panacea of western inaction. We have economic sanctions on Cuba, Iraq, Iran, and Libya. Do you think we ought to lift those sanctions? Do you think that is the great panacea of western inaction?

Dr. CROUCH. When I use the term panacea in that context—the direct answer to your question is no, I do not believe we ought to. What I think I was pointing out is that sometimes democracies have a tendency to use sanctions, and to have a belief in sanctions as the only possible response to things.

I believe that sanctions have an important role. They can send many signals. They may, in fact, be sending a moral signal about a particular issue. They may in certain particular cases be able to be applied and be effective, and so I support that use of it, but I think sometimes, in some cases, sanctions are utilized when we simply cannot figure out what else we want to do.

Senator CLELAND. Well, Dr. Crouch and Mr. Feith, your answers have been very troubling to me, and I want you to know that, and it is going to be an agonizing thing to go over your testimony. There are numerous questions I have which I will not ask now, my time is up, but I would like the opportunity to submit some questions to you in writing.

Thank you, Mr. Chairman.

Chairman WARNER. I thank my good friend and colleague from Georgia. I do wish to say the following. You have referred to these nominees, which is your right, with regard to their previous military experience, or the absence of that. They have responded.

I wish to note that in the 23 years that I have been privileged to be in Congress I have seen a steady decline within the ranks of our Congress of those who have had military service, and I think the nominees coming before the Senate today, whatever their positions are, reflect, again, the generational changes.

You and I are of a different generation. Your service is extraordinary. Mine was very modest to the country, two opportunities, but I do not know the details of these gentlemen, but I just observe it seems to me their demographic backgrounds parallel in many respects the decline in Congress of the United States.

On the question of testing, I followed that very carefully, those important questions by my colleague from Georgia, but I have grave concerns about the future of the stockpile stewardship program into which we are plowing billions of dollars in the hopes that generations of computers can at some point in time give us the same reassurance that you mentioned.

Most importantly, Dr. Crouch, that it is the safety and reliability of our stockpile, 1) to the people who must deal with the weapons every day in one fashion or another, 2) to the environs in our country and elsewhere in the world where there are other persons in the proximity of the storing or otherwise deployment of these weapons, and 3) the credibility of the doctrine of deterrence on which these weapons are the very foundation, and that comes to the heart of stockpile stewardship and testing and credibility, so I must say, I think your responses are consistent with the views held by the chair.

Also, with reference to the ABM Treaty, I think it is a very important issue. We have covered it thoroughly. I mentioned some modest association I had back in 1972. I was not a principal, but I was in a position to observe how this thing evolved within the Department of Defense over the 2 years, roughly, 1969 to 1972, when I was there, the importance of this treaty to the overall stability between the Nations. I think our President is pursuing this issue in the right way, and I wish to read his comments into the record on this.

President Bush said, and I quote him, "we need a new framework that allows us to build our missile defenses to counter the different threats of today's world. To do so, we must move beyond the constraints of the 30-year-old ABM Treaty. This treaty does not recognize the present or point to the future. It enshrines the past. No treaty that prevents us from addressing today's threats and prohibits us from pursuing promising technology to defend ourselves, our friends, and our allies, is in our interests, or the interests of world peace."

I agree with every word of that, and I commend our President for his initiatives in this area, and I intend to strongly support him.

Let us return to this issue of the NATO expansion. I just wish to make one further observation. My concern, Dr. Crouch, is with the Baltics, and I really believe that before we give serious attention to their admission we had better have behind us a resolution of the ABM issues. I just make that observation for the record.

The general subject of civilian oversight of the military and most particularly the engagement of policy, this committee looked into and continues to look at aspects of the U.S.S. *Cole*, and we had as our first witness a man in whom I repose great confidence and respect for his judgment, General Zinni. He fully accepted his role of accountability for selecting that port, or accepting a recommendation within the administration for the use of that port for a refueling mission.

Now, hindsight tells us a lot of things we could have done and perhaps should have done, but the point is, I think, Mr. Feith, we want to make certain that the missions of our forward-deployed forces receive the constant scrutiny and oversight by the civilian side of the Department of Defense.

We do not want to micro-manage, of course, what the CINCs are doing. We chose them carefully, put them in those positions because of the capability we repose in them to handle those responsibilities, but I just think this record should reflect your own views on the necessity for constant civilian oversight and monitoring with respect to our forward-deployed missions and forces.

Dr. CROUCH. Mr. Chairman, the strength of civilian oversight of the military is, I think, an important part, attributable to the work that this committee has done, and the Goldwater-Nichols legislation has made the point in principle, and has created the means by which there could be more effective civilian control of the military. This is the point that I know I, and I believe my colleagues also have taken to heart, and we can assure you that this is a part of our responsibility that will be at the fore of our minds, if we are confirmed for these positions.

Chairman WARNER. I thank you on that. I think it is important that our record today take note of the very serious developments with regard to the security of the State of Israel. I think that I would like to ask each of you to give your views as to what this country should do, and are we doing that in your judgment at this time to hopefully bring about a cessation of the hostilities and to foster such formal agreements as really those two nations can evolve in the future?

Mr. Feith.

Mr. FEITH. Mr. Chairman, I agree that we have an important relationship with Israel that is based on our shared culture, a common commitment to democracy, and shared strategic interests. President Bush referred to the U.S. commitment to Israel as rock-solid, and Congress has been for decades an important and effective champion of close U.S.-Israeli strategic and political ties.

I share your concern about the current situation, which is really dreadful. I think that President Bush and Secretary of State Powell have played a delicate and intelligent role in stressing that any hope for fruitful diplomacy hinges on a cessation of the violence. I believe this morning's newspapers highlighted the very sharp message that this administration is sending to the Palestinian authority to bring the violence to an end.

I think that President Bush and the entire administration is handling this difficult matter as well as one can under the very unfavorable current circumstances.

Chairman WARNER. Mr. Rodman.

Mr. RODMAN. I want to second what Doug said about the American commitment to Israel. The Department of Defense, of course, has a significant role to play in giving content to that support.

As for the diplomacy, it is clearly the State Department, Secretary Powell, that takes the lead under the guidance of the President. They are putting the emphasis correctly on an end to the violence. If I should be confirmed, and if I have any role to play in ISA in support of administration policy, it would be definitely in support of what the State Department is pursuing. I hope I can contribute to some coherent American strategy for strengthening peace, promoting some diplomatic progress.

Chairman WARNER. Dr. Crouch.

Dr. CROUCH. Senator, this is not an area that will be in my area of responsibility, but I think it is so important that you should have my views on it. I think it is extremely important that the United States continue to support Israel.

I have held that view for a very long time, and I think that we really need to maintain that support for a whole host of reasons, but the ones that are based in our national interests, but at the same time I think it is important to recognize the importance of Israel as a democracy, a functioning, vital democracy in the Middle East, in a place where democracy is not flourishing in many respects.

So I commend the President. I think he has struck the right balance. I think calling for an end to the violence is exactly the beginning, but it of course is just the beginning of coming to some sort of genuine resolution to the conflict. Like I said, I am not going to

be involved in these issues very much directly, but I certainly would echo the views of both of my colleagues.

Chairman WARNER. Thank you very much.

Senator LEVIN.

Senator LEVIN. Mr. Chairman, thank you. On the chemical weapons issue, Mr. Feith, you wrote the following about the Chemical Weapons Convention.

You said it would cheapen the currency of international law, that it was junk arms control, that President Bush, obviously, you argued made a mistake in negotiating it. You also stated in another article that it was modeled after a concept in the Nuclear Non-proliferation Treaty which aims to reward States that renounce chemical weapons by providing them with chemical technology and material for, quote, peaceful purposes, close quote. Then you referred to those provisions as the poisons for peace provisions, and you said that the provisions would require the sale to Iran of an advanced chemical plant.

Given your strong rhetoric against that convention, which had been negotiated by President Bush, do you believe we ought to withdraw from it? You have indicated, well, it is law, it is done, but there is a withdrawal clause, and you obviously disagreed with President Bush when you attacked that treaty, called it junk arms control, called it cheapened the currency of international law. Should we withdraw from it under its withdrawal provision?

Mr. FEITH. Senator, I do not advocate withdrawing from the agreement. The point about cheapening the currency, though, I would like to say a word about, and that is, I really do value and take seriously international law, and that is the reason—the fact that I respect international law and think that we as a country have to respect it, and that I take diplomacy and treaties seriously, is what gives rise to the comment that we, if we make agreements that we cannot enforce, and that we have good reason to believe are going to be violated and are going to be open to countries that enter them cynically and in bad faith, the overall consequence of that over time is to cheapen the currency that we should really be preserving the value of.

It is out of respect for the idea of diplomacy and agreements that we enter into that I am unhappy when I see that we are entering into an agreement that I know is going to bring the whole field of international law into problems.

Senator LEVIN. But specifically you did say, did you not, that the Chemical Weapons Convention will cheapen the currency of international law? As applied to that treaty, which had been negotiated by President Bush, you said that convention will cheapen the currency of international law, and was junk arms control. I am just asking you, is that accurate?

Mr. FEITH. Yes, that is accurate.

Senator LEVIN. But you still think we ought to not pull out?

Mr. FEITH. As I said, Senator, the ratification process ameliorated some of the problems with the convention, and also the set of considerations that would go into pulling out of a treaty once one is in it are somewhat different from the set of considerations that govern the decision whether to enter into it in the first instance.

Senator LEVIN. Chairman Warner asked each of you about the position towards Israel. I want to ask you a slightly different question. I agree, by the way, with your answers, but this question is a little bit different.

Mr. Feith, you wrote that Israel should consider developing a credible strategy to repudiate Oslo. This was in an article that you wrote, *A Strategy for Israel*, and is it true that you then urged Israel to develop a credible strategy to repudiate Oslo in light of the Palestinian Authorities' irredeemable malfeasance? Is that what you were recommending, that they develop a strategy given the PA's activities?

Mr. FEITH. Senator, what I was recommending was that the Israelis work on devising a means to deal with what I considered to be one of the major problems that was undermining the Oslo process, and that was the problem of unremedied violations, systematic violations that the United States and Israel both were trying to remedy, but were trying unsuccessfully.

What I had in mind was, to use an analogy, if somebody goes into a car dealership to buy a car, and the car salesman knows that the customer cannot possibly leave the showroom without buying the car, that customer has no leverage. Only the threat that an unsatisfactory resolution of a problem or an unsatisfactory agreement will lead one party to walk away gives the party leverage. What I was saying is, after years of violations and compliance disputes and unsuccessful efforts to enforce the agreements, if the Israelis do not have a credible strategy for doing something outside the process, they will have no leverage to fix the process. It is crucial to the success of the process that the Israelis in my view have appropriate leverage to deal with the violations problems.

Senator LEVIN. Very specifically, what you were recommending, though, in order to achieve that leverage, was that Israel develop a credible strategy to repudiate Oslo, or in your own words, abrogating Oslo, is that correct?

Mr. FEITH. As I said, if they do not have any credible strategy for doing that, they have no leverage, and then the process dies of the violation problem.

Senator LEVIN. I am first trying to make sure that I understand. So it is clear that you were recommending that they have a strategy to repudiate or abrogate Oslo?

Mr. FEITH. Yes.

Senator LEVIN. Now, do you believe they should, under these circumstances that exist today, abrogate or repudiate Oslo?

Mr. FEITH. Senator, I would be very pleased, and I think that the United States would be benefitted, if the Oslo process produced a consensual resolution of the Arab-Israeli conflict, but the Oslo process is in bad shape right now.

Senator LEVIN. I could not agree with you more. My question, though, is, are you recommending that Israel repudiate or abrogate Oslo?

Mr. FEITH. No, Senator. What I am recommending is that serious attention is required to do what needs to be done to fix the situation, and there is a problem of leverage. There is a problem of how one goes about fixing the situation. If the status quo is simply maintained without serious thought about alternatives that are

better, different, the current situation will simply deteriorate, in my view.

Senator LEVIN. I do not disagree that the status quo is unacceptable, that the situation has deteriorated. I have no difficulty with that. I just want to get real clear, because I think once you write these kind of words, it is important, given the position to which you have been nominated, that you be clear on whatever your point of view is, you be clear on this question, so I am going to ask you again, under all of these circumstances, given all of the deterioration, given all the facts, that the status quo is horrific, do you at this time recommend that Israel abrogate or repudiate Oslo? That is my question.

Mr. FEITH. No, Senator, I do not, nor did I advocate that in that article. I said that they needed to have a credible strategy to do that in order to remedy the problem.

Senator LEVIN. Mr. Rodman, do you want to comment? Do you recommend that?

Mr. RODMAN. No, I do not. I was caught by surprise by Oslo when it was signed. I had been for many years hoping that we could find some other leadership of the Palestinians to deal with, other than the PLO, but I think once Oslo was a reality, particularly since Prime Minister Rabin was somebody I had enormous respect for, I thought that the task of our diplomacy was to somehow make it work.

Senator LEVIN. Dr. Crouch.

Dr. CROUCH. Senator, this is not an issue I have given a great deal of thought to. I am not an expert specifically on the Oslo Accords.

Senator LEVIN. Thank you. My time is up. Thank you.

Senator INHOFE. Thank you, Mr. Chairman. Several questions have been asked during the last 2 or 3 hours about the amendments proposed by President Bush to the ABM Treaty. Does either one of you know of any specific amendments that the President has proposed to the ABM Treaty?

Mr. FEITH. Senator, I do not believe he has proposed any specific amendments.

Senator INHOFE. Do the rest of you? OK.

Chairman WARNER. Excuse me, I think that is an important clarification. I certainly know of none, and I would have thought he would have some—

Senator INHOFE. Nor do I, Mr. Chairman.

Dr. Crouch, I think when Senator Cleland asked a question, it was a very good question, he said, national missile defense system against who, and I think you answered it, but it was not quite as elaborate as I would like to get into.

You place emphasis on the actions of China and North Korea and Russia regarding the sale of weaponry all the way around the globe recently, or in the first part of this year. The Chinese personnel were found in Iraq upgrading their IAD, their integrated air defense system network with fiber optics. We are talking about SAMs, we are talking about artillery, and we are also talking about the fact that nearly every day they are using this to fire on our pilots that are over there.

North Korean weapons are scattered around the Middle East, posing a threat to United States servicemen and women and our allies. Most notably, are Russia's close military ties with Iran, selling diesel submarines and technology for their Shehab III and IV missiles. Now, those are medium-range missiles which work very good with the guidance systems that they will get, that we assume they are getting from Russia. They are good. I mean, they are accurate, much more accurate than they were.

So I would hope, Dr. Crouch, that you would keep that in mind. I hear so many times, they say, well, China is not going to do anything, Russia is not going to do anything, North Korea is not going to do anything. Now, I am not ready to assume that, but even if we did assume that, it is very specific that these systems that these countries have, and this technology, is being readily traded with countries like Iraq and Iran and Syria and Libya and other countries. Do you have any comments about that, Dr. Crouch?

Dr. CROUCH. Yes, Senator. If confirmed, one of my responsibilities will be, in addition to overseeing policy having to do with missile defense, overseeing policy having to do with counterproliferation. I see these two issues as very integrally linked, and I think the President has also demonstrated that in looking forward at the potential emerging threats, that missile defense can help to play a role in our counterproliferation strategy.

As you pointed out, it may well be that Russia and China, or even North Korea, do not use their missiles, but it may well be that their missiles fall into the hands, or missile technology falls into the hands of others who will.

Senator INHOFE. Others who have said they would, such as Saddam Hussein said 10 years ago.

Dr. CROUCH. Right. I believe Mr. Quaddafi also made a similar statement, so it seems to me that to the extent that a missile defense system can help to devalue ballistic missiles, to the extent that the United States can demonstrate that its forward-deployed forces, its friends, its allies and, indeed, the United States itself, is defended against these missiles, it seems to me it places downward pressure on the interests of these countries in investing their scarce resources into these technologies. It is not a solution, but it is part of the solution.

Senator INHOFE. I would like to mention one other thing I do not think has been mentioned during the course of this hearing, and that is the quality of our intelligence.

I think as you make policy, you are going to have to make policy predicated on information that we have, and I do not think it has been—it has not been good. I can remember the National intelligence estimate of 1995, I guess it was, that talked about how long it would be before various countries, including North Korea, would have the capability of an ICBM, and they were off by about 15 years, and then they qualified that by saying, well, we were talking about an indigenous system.

I am not concerned about indigenous systems. I am concerned about a rocket that comes over here that is going to be just as devastating, whether it is indigenous or came as trading technology with some other country. There are no two people in the United States Senate who are more familiar with this than Don Nickles

and myself from what happened in Oklahoma City. I always comment that the damage that was done, which is the most devastating domestic terrorist attack in the history of this country, in Oklahoma City, was done with the explosive power comparable to 1 ton of TNT.

I think it is accurate to say that we do not know, at least I do not know of any nuclear warheads of less than a kiloton, so it would be a thousand times that power, so it is a great concern of mine, and it was a concern of mine back when we asked the question, back in 1998, of how long it would be before North Korea would be able to have the capability of a multiple stage rocket.

A letter that was signed by Henry Shelton—and I do not blame him for this, because he was depending on information that he got from our intelligence community, saying it would be a matter of years before they would have that capability—was dated August 24, 1998, and 7 days later they fired one. So do any of you want to comment on plans that you have to upgrade the level of information that we get from our intelligence community?

Dr. CROUCH. Senator, the subject that you have highlighted is absolutely crucial to the making of policy, and I know that it is a subject that is front and center in Secretary Rumsfeld's view, and Deputy Secretary Wolfowitz, as I have heard them publicly and privately both stress the importance of precisely the points that you are making about the need to improve our collection capabilities and our analysis in the intelligence field.

Senator INHOFE. That is good, and I am certainly hopeful that the three of you will be confirmed, and that we will be able to address that so that you will be able to perform your duties predicated on accurate information.

Since my time has expired, I do have one question that I would like to ask, and then you could answer it for the record. Some of us around here are old enough to remember the Cuban missile crisis, and there was recently a movie that was written about it called *Thirteen Days*, Mr. Chairman, which I have not seen, but was about waking up one morning finding that several of our American cities were targeted by Russian missiles located on Cuba. At that time hysteria hit the street and everyone was concerned, and this movie is about 13 days during that hysteria, and also about the fact that our President then, President Kennedy, did a very fine job of getting us out of that mess. Yet today we have in 1998, there was a release, an accidental release, I might add, of a CIA report that showed that around 13 American cities are currently targeted with Chinese missiles, and we have the same defense system today that we had back during the Cuban missile crisis. We do not have the capability of knocking down one that is incoming.

That, coupled with the statements that have been made by various Chinese officials, one back during the elections, when the Chinese were demonstrating off the Taiwan Straits, I think to try to intimidate that election, when the statement was made that we will not worry about the United States coming to our aid because they would rather defend Los Angeles than Taipei. Then even more recently, the defense minister of China said that war with America is inevitable. I would like to have you respond for the record your

opinion as to the relative risk that this Nation is facing now versus during the Cuban missile crisis.

[The information referred to follows:]

NATIONAL THREATS

How would you compare the relative risk that this Nation is facing compared to that faced during the Cuban missile crisis?

The CIA's National Intelligence Council has acknowledged, in its September 1999 response to the Rumsfeld Commission Report on the missile threat that, "the possibility that a WMD-armed missile will be used against U.S. forces or interests is higher today than during most of the Cold War." This refers mainly to U.S. forces abroad or allies and friends, and reflects the proliferation of ballistic missiles and WMD capabilities into unfriendly hands.

As for the risk to U.S. territory, this in my view is less today than in 1962, but is certain to increase over the next 5-10 years. The U.S.-Russian relationship is far more benign today. The number of weapons on both sides is greater but the ideological conflict has disappeared. It is hard to imagine a political issue or dispute that could lead to a U.S.-Russian military confrontation like that over Cuba in 1962.

Other countries, however, have or are developing ICBMs that can reach the United States. China, for example, has a small ICBM force that it is modernizing. Other states like Iran and North Korea also are intent on acquiring ICBMs.

Mr. Chairman, I know my time has expired, and I do have other things which I am going to submit for the record, because I will be presiding probably for the last time for a few months, and I do not want to miss that opportunity.

Chairman WARNER. I thank the Senator from Oklahoma.

Senator LEVIN.

Senator LEVIN. Thank you, Mr. Chairman.

I want to go back, Dr. Crouch, to the Korean issue. You have been asked about your statement that the Bush administration's decision to withdraw tactical nuclear weapons was a major geopolitical mistake, and in that same article you recommended U.S. redeployment of nuclear weapons to South Korea. The tensions were high when you made those recommendations. The South Korean Government did not support the redeployment of nuclear weapons to the peninsula, did it?

Dr. CROUCH. I do not know that the South Korean Government was ever asked about that question.

Senator LEVIN. Was it not their goal to denuclearize the peninsula?

Dr. CROUCH. I am certain that was the South Korean goal. I think that was also the U.S. goal.

Senator LEVIN. Are you saying that you recommended that we redeploy nuclear weapons to North Korea without knowing their position?

Dr. CROUCH. No, I was trying to answer, Senator, your question, which I thought was, what was the position on the reintroduction of South Korean nuclear weapons. I do not believe the question was—at least, I am unaware. I was out of Government at the time. I am unaware of the position that the South Korean Government had on that, if they were even asked. I suspect they were not, so they may not have had to formulate a position.

Senator LEVIN. Do you think it is relevant as to what their position was at the time as to whether we reintroduce nuclear weapons?

Dr. CROUCH. Absolutely. In fact, I think, obviously that either the introduction or reintroduction of nuclear weapons on an ally's

soil is something that would have to be determined based on mutual agreement between the parties.

Senator LEVIN. But when you made the recommendation that we reintroduce it, are you saying that you made that recommendation without even knowing what the position of South Korea was?

Dr. CROUCH. No. My recommendation, I believe, would have been, if, in fact, that recommendation had been taken up, that we would have sought that agreement from the South Korean Government.

Senator LEVIN. Is that what was in your article, that we seek agreement from South Korea?

Dr. CROUCH. I do not have a copy of the article in front of me, sir.

Senator LEVIN. Did you support the Framework Agreement?

Dr. CROUCH. My view on the Framework Agreement—

Senator LEVIN. No, not now. Did you support the Framework Agreement when it was entered into?

Dr. CROUCH. No.

Senator LEVIN. Your language was that the United States was—and this is an article you wrote in 1995, after the Framework Agreement—excuse me. This was after the Framework Agreement was signed in October 1994. You wrote that the United States was seeking to collude with the North Koreans. Did the U.S. Government collude with the North Koreans?

Dr. CROUCH. I believe that the U.S. position was not the right position to take. I mean, I think that the—

Senator LEVIN. I am not arguing that. I am just talking about the use of the word collude. You wrote that the U.S. Government was seeking to collude with the North Koreans.

Dr. CROUCH. Right. I think the point in the article was simply that—and my criticism of the administration was simply that the administration was not taking this particular threat as seriously as it should have. I guess my rhetorical way of stating that was that they were in fact colluding with the North Koreans.

Senator LEVIN. You also wrote that, again, this was in 1995, after the Agreed Framework was entered into in October 1994, that absent positive viable steps by the North Korean regime towards the destruction of their nuclear complex, that you would authorize the destruction, bombing of that complex.

Now, they are in the middle of a very tense situation on that Korean peninsula, and you are urging us to bomb North Korea if they do not comply with our demands. What was South Korea's view about that?

Dr. CROUCH. Again, I was not inside the Government. I do not know specifically what South Korea's view was. I know that the president at the time, the president of South Korea at the time considered it, and stated publicly so, that the development of weapons of mass destruction and the targeting of those weapons on South Korea was not something that the Government of South Korea would tolerate, but beyond that, it is very difficult for me to state what the internal views of the Government of South Korea—

Senator LEVIN. Or stated views, relative to bombing North Korea if they did not comply. This was after the Framework Agreement was entered into. You wrote in January 1995, 3 months after the

Framework Agreement is entered into, that we ought to bomb them if they do not comply with our demands, and in a tense situation. Not knowing what the Government of South Korea even favors, you recommend bombing. It is such a reckless comment.

Dr. CROUCH. Senator, I think that if I may say a few things on that, I do not believe that—number 1, if you will look at the record, the article was actually written in 1994. Unfortunately, I am in a position where yes, it was published in 1995. That is the way academic journals—there is usually a 3- to 6-month delay in these things.

Senator LEVIN. Did you ask them to hold off publication?

Dr. CROUCH. No, I did not. No, I did not, obviously, all right, but I want you to understand that the recommendations were made in that context, and so—but more to the point, I think that the concern that was evinced within that Government by, I believe, Members of the Senate at the time, and certainly even by Secretary Perry, who I believe testified before the Senate Foreign Relations Committee that he was considering options to do just this, is evidence of the serious nature of this.

I am not suggesting that it was an easy decision, and it may well have been that if different facts had come to light that I was not aware of because I was out of Government, I may have made a different decision, but given what I knew at the time, I stick by the recommendations.

Senator LEVIN. All right, but then you are saying that Secretary Perry made the same suggestion that you were making in this article?

Dr. CROUCH. No. What I said was that I believe that Secretary Perry testified in front of the Senate Foreign Relations Committee that he had considered and in fact had ordered that options for doing just that be drawn up.

Senator LEVIN. Just that.

Dr. CROUCH. But—well, not specifically that. The “just that” is attacking, the bombing, if you will, of North Korean nuclear weapons and missile complexes.

Senator LEVIN. Under what circumstances?

Dr. CROUCH. But he decided against that.

Senator LEVIN. All right. You are not suggesting that he and you had the same position?

Dr. CROUCH. No, but I am trying to suggest that the position of considering doing that was not a reckless position.

Senator LEVIN. You wanted to authorize it. That was your word, right?

Dr. CROUCH. Absent getting an agreement from the North Koreans—

Senator LEVIN. Which you opposed.

Dr. CROUCH. No. The kind of agreement that I would have sought—and I think one of the problems we have today with the Framework Agreement is that we are not getting the kind of transparency that is necessary to feel confident that the North Koreans are no longer developing weapons of mass destruction, in particular, nuclear weapons.

Senator LEVIN. Do you think we should continue to support the Framework Agreement now?

Dr. CROUCH. I know that the Framework Agreement is something that is, along with our entire relationship with North Korea, something that is currently under review by the administration. One of the things that—and principally this will—I will be involved in this, if confirmed, but I think it would be best if I were to know what the other considerations are, be involved in those deliberations, before making a determination on that. Ultimately the President, I believe, will make that decision, and I can certainly support whatever decision the President makes.

Senator LEVIN. Well, the decision has already been made. According to the letter that Deputy Secretary Armitage took to South Korea, we expect that among the things that our policy review would show would be that we would continue to support the Agreed Framework, so it has already been made, but you are still uncertain as to whether you support the extension of it.

Dr. CROUCH. Well, my reading—I have not seen that letter. I have not been privy to it.

Senator LEVIN. Perhaps you could for the record, then, take a look at the letter and give us your answer.

Dr. CROUCH. I would be happy to do that, Senator.

[The information referred to follows:]

I support the administration's position on abiding by the Agreed Framework. The administration has decided to undertake discussions with North Korea on a broad agenda that includes improved implementation of the Agreed Framework. I believe that the international situation has changed greatly since 1994 when I first wrote about the Agreed Framework. The June 2000 inter-Korean summit is one example of this change. In coordination with our Asian allies, the administration will hold discussions with North Korea aimed at reaching verifiable arrangements that enhance our national security and that of our allies.

Senator LEVIN. I think my time has probably long gone.

Chairman WARNER. Take another minute. Well, I will take a few points. I just want to follow on. I have had the privilege of working with Dr. Perry when he was in positions in the Department of Defense, particularly that of Secretary. I have a very high personal regard for him, and he, as you recall, Senator Levin, in the course of his trips to both Koreas would come and offer himself to consult with the Members of the Senate Armed Services Committee. I think he provided some very useful breakthroughs.

I am not going to get into specifics, but I am also an adherent of the doctrine, the more openness that we try to share with a nation that is so isolated as North Korea is to the overall advantage to the United States, so I am hopeful that the Bush administration will continue to pursue such opportunity as we may have to alleviate the stresses between the North and the South and, indeed, the isolation of that country. Their people are suffering tragically in North Korea now.

I want to shift to the subject of our relationship with Taiwan and that of the People's Republic of China. I will just make an observation of my own. I have followed this for many years here in the Senate. I strongly support and adhere to the law of the land whereby we have indicated that in certain circumstances we would first see that Taiwan is adequately armed to defend itself, and if necessary we would engage our forces if the President of the United States at that time felt that that obligation was in fulfillment of the law of the land.

On the other hand, I feel very strongly that implicit in the law of the land, our land, the United States, with regard to the relationship with Taiwan, implicit therein is the obligation of the Taiwanese elected persons and others who are in official positions to restrain their rhetoric and their actions so as to not incite additional stresses between Taiwan and the People's Republic of China. I think that is very important, and I always lay down that cautionary note, and I just wondered if you share a similar view with that of the chair.

Mr. Feith?

Mr. FEITH. Yes, Mr. Chairman. I think that working the relationship with Taiwan so that we provide the support that we should, and help keep the situation there secure, and at the same time work on cooperating with them to make sure that Taiwan's own position does not become a destabilizing element in the area is—I think both of those points are worth stressing.

Chairman WARNER. Thank you. Do either of you wish to comment on that?

Mr. RODMAN. I agree with that. I think the United States is not looking for a crisis with China over Taiwan, and the Taiwan Relations Act reflects the American commitment, but I think our objective is to deter a crisis, and the way you expressed it I think is the right approach.

Chairman WARNER. Thank you.

Dr. Crouch.

Dr. CROUCH. I agree. I think the President's position on this has been that he is going to speak clearly on the subject so that both parties, the PRC in particular, knows about our commitment, but on the other hand I think it would be wrong to try to artificially solve that problem or to create stresses between those two States.

Chairman WARNER. Turning to the subject of Iraq, the administration is actively trying to reengage our allies. Great Britain has loyally stood by our side. It has certain initiatives in the United Nations, and before the Security Council, which I commend Great Britain for taking.

At the same time, we have a daily responsibility to enforce the no-fly zones, and the risk to aviators, be they U.S. or British or, should others fly of our allies, is increasingly risky to them, and we must take cognizance of this. I am confident that Secretary Rumsfeld in his most recent visit through the region has enunciated our adherence to protecting the concept of the no-fly zone, and doing everything we can, the United States, to enforce the sanctions which prohibit the importation into Iraq of raw materials and/or technology, or to add to the weapons of mass destruction, which I am sure Saddam Hussein daily tries to create in his own country. This is a keen balance that we have to recognize today with the clear indication that Saddam Hussein is stepping up the activity against the aviators. I just wondered if, Mr. Feith, you agree with my views on this.

Mr. FEITH. Yes, I do, Mr. Chairman. I believe it was yesterday Secretary Rumsfeld visited the Incirlik Air Base in Turkey, and made points very much in line with those you just expressed.

Chairman WARNER. I see Turkey is continuing to give its support to the missions, and I think that is important.

India and Pakistan, countries which we have had a long and valued relationship with both nations, they are a tinder box, regrettably, because of their ability to have some capabilities with nuclear weapons. I think it is important that we maintain engagement with both nations, and do what we can on matters of counterterrorism, peacekeeping, regional security, and the like. Do you agree with my views on that, Mr. Feith?

Mr. FEITH. Mr. Chairman, South Asia is rapidly growing in strategic importance and U.S. relations with the States there are going to be an important part of shaping the strategic environment for the 21st century. It is going to influence our relations with Russia and China. Our relations with India and Pakistan help contain the danger of conflict between them, which is especially important, given the nuclear capabilities and missile capabilities of each of the States.

I would say simply that, if confirmed, I would enter into the review that I know is underway of our policies towards South Asia, and would be looking forward to working with the committee on how we could best weave together our security and economic and political interests in both of those important countries.

Chairman WARNER. Do either of you wish to add to that?

Dr. CROUCH. I agree with that.

Chairman WARNER. Thank you. The subject of persons who are missing in action, commonly referred to as the POW/MIA issue, is one that I feel very strongly about that our country should at no turn in its relationships, particularly with Vietnam and, indeed, Korea—I had a brief tour of service with the Marines there in 1951–1952, and I have friends who are unaccountable to this day. I think there are several thousand in the Korean conflict, and an equal number, if not greater, in Vietnam. Do I have the assurance of all of you, as you pursue your official duties, if confirmed, that you will in every way assist in terms of our official efforts, as well as the efforts of other recognized and responsible organizations, to solve the mysteries and the family stress associated with POW/MIA?

Mr. FEITH. Yes, sir.

Dr. CROUCH. Absolutely, sir.

Mr. RODMAN. Absolutely.

Chairman WARNER. Thank you.

Senator LEVIN.

Senator LEVIN. Thank you. The chairman asked about amendments—I think it was the chairman. It may have been Senator Inhofe—asked about the amendments to the ABM Treaty which had been offered, or were talked about as possibly being offered to Russia by President Bush, and I think you all indicated that you do not know of any amendments—maybe Mr. Feith, you said you do not know of any amendments that have been proposed, is that correct?

Mr. FEITH. That is correct.

Senator LEVIN. Is it your understanding that amendments to the ABM Treaty will be proposed by the Bush administration to Russia?

Mr. FEITH. What I understand, Senator, is that the President has said that he wants to create a new framework for the relationship

between the United States and Russia, and it is my understanding that the administration right now is in consultations with the allies and with the Russians and I am confident with Congress, is working on refining the idea of framework. The President said in his National Defense University speech that he is looking at a wide range of ideas for that framework, and whether amendments of the type that you are referring to are going to be part of it or not I am sure will be part of the consideration.

Senator LEVIN. At The Citadel in 1999 he said that we will offer Russia the necessary amendments to the ABM Treaty. Do you remember that?

Mr. FEITH. I had not remembered that.

Senator LEVIN. All right. He did say that. Now, whether he does that or not, you do acknowledge that either he is going to be offering a totally new framework to substitute for the ABM Treaty, or amendments to the ABM Treaty. Is that a fair statement of what your understanding is of the Bush administration?

Mr. FEITH. My understanding is that he is considering all sensible options for a framework.

Senator LEVIN. Which may include—

Mr. FEITH. Which may include that, which may include lots of other ideas.

Senator LEVIN. OK. Dr. Crouch, on the question of economic sanctions, in the article which has been referred to where you were critical of the Framework Agreement and made the other statements which have been quoted, you said the following, that the administration is predictably turning to that great panacea of western inaction, economic sanctions. When you were asked about it earlier this morning you sounded very different from that, I must tell you. You said, sanctions have an important role. I did not catch any of that in this article, the important role of economic sanctions. They were just labeled a great panacea. Have you changed your mind since you wrote that?

Dr. CROUCH. No, Senator.

Senator LEVIN. So they still are a great panacea, or “that great panacea?” Is that still a fair summary of where you stand in terms of economic sanctions?

Dr. CROUCH. I think they can be a panacea, yes.

Senator LEVIN. I would agree with that, but you labeled economic sanctions as a whole, as a group, generically, as “that great panacea of western inaction.” Is that a fair characterization of your view of sanctions generically now, at this point, that they represent a great panacea of western inaction?

Dr. CROUCH. The point I was trying to make in the article, Senator, is that they have been, or have operated as a panacea of western inaction in the past, and I suppose that this was my rhetorical way of describing it, and I stick by that statement.

What I wanted to be clear on, however, was that I am not suggesting that economic sanctions have no value, nor am I suggesting that in combination with other actions they may not be able to be part of a comprehensive policy in dealing with problems like the one I discussed in the article.

Senator LEVIN. Are there any current sanctions that you would repeal?

Dr. CROUCH. I cannot think of any, no.

Senator LEVIN. On the nuclear testing issue, you talked about those who supported a testing as using Luddite logic, and when asked whether or not President Bush's decision to continue the moratorium that exists now on testing represented Luddite logic, you did not give an answer. You sort of laughed. Does it represent Luddite logic?

Dr. CROUCH. I thought I said no.

Senator LEVIN. Why does it not, given your views back in this article?

Dr. CROUCH. As I stated in the article, I believe, my view on nuclear testing is that it formed an essential component to us being able to understand nuclear weapons technology, that as long as the United States continues to rely on that technology as a principal basis for its defense, that we need to understand as much as possible about it, and so I think that that is about as clear as I can get on it.

Senator LEVIN. Are you recommending we resume testing?

Dr. CROUCH. I am not recommending anything at this point, Senator.

Senator LEVIN. Why?

Dr. CROUCH. Pardon me?

Senator LEVIN. Why do you not recommend it? For the reasons you just gave, why should we not resume testing?

Dr. CROUCH. Well, I think that whether we resume testing, particularly given the fact that the CTBT is a negotiated treaty, given—this is an issue that has to be looked at in the context of our entire international commitments, has to be looked at in terms of what requirements we may have in the future for nuclear testing, and I think it is an issue that the administration is going to be looking at very hard in its strategic review.

Senator LEVIN. I do not understand how you label it Luddite logic to stop testing, but not now say that you recommend we resume it. I do not get it.

Dr. CROUCH. The reason I labeled it that is that I think that, why should we not have as much information as possible?

Senator LEVIN. Then why should we not resume testing?

Dr. CROUCH. I did not say that we should not resume testing.

Senator LEVIN. Should we resume testing? You do not say we should, and I am asking it the other way, why should we not resume testing, given your position?

Dr. CROUCH. Well, I think that considering the resumption of testing is something that the administration ought to consider.

Senator LEVIN. My time is up. Thank you.

Chairman WARNER. I would like to follow up on that. This stockpile program, which is the substitute for testing, was very carefully evaluated by this committee in the context of the review of the Comprehensive Test Ban Treaty and the Senate rejected that.

Now, until such time as there is greater clarity to the success of that program, and in the judgment of this Senator that clarity has not been brought forth by the technical people as yet, we should not foreclose any options, because we have a convergence of the aging of the nuclear stockpile. I am repeating myself, but the safety of those in our armed forces and civilians who must deal with these

weapons, the proximity of these weapons, which are aging, to communities in the United States and other places in the world, we have to keep open the option of some alternative program to get the safety issue and the credibility of our deterrence clearly established. Because as time goes on I think the Nations of the world could attach some lack of faith in our stockpile of weapons unless we have some clear documentation that these weapons, no matter how awesome they maybe, no matter how much I and others hope they will never be used, but nevertheless they have to be maintained safely, and they have to provide a credible deterrent.

So in my view, the question of testing is an open one, and it is dependent on the success or the failure of this stockpile program that is underway at the cost of an enormous amount of money, which is basically a computer program, and we have to be aware of what other nations may be doing with respect to their testing procedures.

I certainly am not in a position to say unequivocally that Russia—we accept their representations, but documentation as to whether or not they are or they are not doing any testing is an open question in my mind.

I just have one more question on Latin America. It is very important to this hemisphere. I think we must be ever cognizant of the importance of the relationships between this nation and those in Central and Latin America, and there is considerable instability in a number of the Nations. I just wish to have your commitment that that is a priority that you will address from time to time. Mr Rodman.

Mr. RODMAN. Yes. It is an area that the President is giving priority attention to, and if I am confirmed, it is an area that I will give the same attention to.

Chairman WARNER. Good. Any others wish to comment on that?

Mr. FEITH. Mr. Chairman, I agree with that.

Chairman WARNER. Senator Levin.

Senator LEVIN. Thank you, Mr. Chairman.

Dr. Crouch, on missile defense I just want to ask you a few questions. One of the chief U.S. objectives in START II is to eliminate Russia's S-18 missiles and all of its MIRV'd ICBMs. Do you believe it is in our interest for Russia to eliminate all of its MIRV'd ICBMs?

Dr. CROUCH. Yes, I do, sir.

Senator LEVIN. If we determined that unilaterally deploying a national missile defense, assuming we tried some new framework and it failed to be achieved, or we tried to modify by amendment the ABM Treaty, and we failed, if we determined that unilaterally then deploying a national missile defense would result in Russia keeping their MIRV'd ICBMs, would that fact be worthy of consideration by us relative to the question of whether we would be more or less secure with a unilateral deployment?

Dr. CROUCH. I certainly think it would be worthy of consideration.

Senator LEVIN. All right. Is it in our national interest for Russia to cooperate with us on nuclear nonproliferation?

Dr. CROUCH. Yes.

Senator LEVIN. The same question. If we assess that there would be proliferation dangers by a unilateral deployment of a national missile defense, would that make it worthy of consideration, the question of whether or not to deploy, if it led to that? Is it just worthy of consideration? I am not asking you to reverse your position on national missile defense. I just want to know whether or not you think it is worthy of consideration.

Dr. CROUCH. I absolutely think it is worthy of consideration.

Senator LEVIN. All right. Is it in our interests that Russia not provide advance missile defense countermeasures to other nations?

Dr. CROUCH. Certainly.

Senator LEVIN. If we determined that a unilateral deployment of a national missile defense would result in Russia transferring advanced countermeasures technology to other countries, would that be worthy of consideration on the question of whether to unilaterally deploy a national missile defense?

Dr. CROUCH. Yes.

Senator LEVIN. Is it in our interest that Russia and China not join together to oppose U.S. interests generally?

Dr. CROUCH. Generally, yes.

Senator LEVIN. If we assess that deploying a national missile defense unilaterally would result in Russia and China joining together to oppose U.S. interests, or make it more likely that they would join together to oppose our interests, would that be worthy of consideration on the issue of whether or not to deploy unilaterally a national missile defense?

Dr. CROUCH. I think all of those issues are worthy of consideration.

Senator LEVIN. I will just give you another, then. You can add any additional considerations for the record. Is it in our national interest that China not expand its nuclear forces beyond a reasonable deterrent level from their perspective?

Dr. CROUCH. Yes. I think it is in their interests, too.

Senator LEVIN. If we assess that deploying a national missile defense in the way that I just previously described would result in China expanding its nuclear forces further than they otherwise would, would that be a consideration, do you believe, that ought to be taken into account on the decision whether or not to deploy a national missile defense?

Dr. CROUCH. Yes.

Senator LEVIN. One last question now, and the other ones I will save for the record. Actually, there are two more questions, and the others will be saved for the record. This goes to Mr. Rodman.

In your article in the *Los Angeles Times* on May 7, 1999, you wrote that NATO's original demands for a reversal of ethnic cleansing, withdrawal of the Yugoslav army and police from Kosovo, and a NATO military protectorate to speed the return of refugees, is a key benchmark by which to judge any negotiated outcome, and then you wrote, the outcome is likely to be a diplomatic compromise superficially confusing enough to allow some in the West to claim success. What is your view now as to the success of the diplomatic and military outcome in Kosovo?

Mr. RODMAN. I was wrong, Senator. I predicted that it would not—that the bombing campaign would end inconclusively, and I was, I say, pleasantly surprised by the outcome.

Senator LEVIN. Then one question on the Sinai peacekeeping. If confirmed as Assistant Secretary, you are going to be responsible, I believe, for advising the Secretary of Defense on U.S. policy in the Middle East. Do you believe that the Middle East should withdraw its forces from participation in the Sinai peacekeeping force?

Mr. RODMAN. I know that Secretary Rumsfeld has expressed a general interest in reviewing the kind of commitments we have in many parts of the world, and I would not want to prejudge the outcome of a review because I do not think he is prejudging the outcome.

I regard the Sinai agreement, the peace treaty between Egypt and Israel, as one of the most important achievements of the peace diplomacy. I realize the great role that the MFO has fulfilled, but I have to say that I think the Secretary is right to look at these and just to see if they are still essential. I certainly agree that the peace agreement and maintaining stability in the Sinai are definitely essential.

Senator LEVIN. Do you have an opinion as to whether we should withdraw those forces?

Mr. RODMAN. I do not know enough about it. I do not know whether there are other options that might be available.

Senator LEVIN. Thank you.

Mr. Chairman, I and a number of my colleagues have some questions for the record. I would ask that it be kept open for 24 or 48 hours so that we can get those questions in. There have been a number of things requested of our nominees, including the paper that was written for the American Enterprise Institute, and so I would ask that the record be kept open for a reasonable length of time so that we can get the answers to those questions.

Chairman WARNER. Senator Levin, I assure you we will do that. I will do the appropriate thing to consult with you as to when both sides of the aisle here have had the full opportunity to submit and get the responses. Of course, we are anxious—you have been a tremendous team player in getting the nominations of the Secretary of Defense to the floor expeditiously, and I expect we will do the same in this case, but there are a number of questions, and we should get those answered for the record.

This has been an excellent hearing. It may well be my last for an indefinite time as the chairman, but I think we have very thoroughly and fairly and objectively looked into all issues that relate to the Senate's very important responsibility of advice and consent. I am optimistic that each of you will receive the advice and consent of the Senate, but that remains to be seen. Certainly your responses to this Senator confirm the wisdom of the Secretary of Defense and the President in selecting you.

In closing, I say to my good friend, Senator Levin, we came to the Senate some 23 years ago. We have worked together these many years. We will continue to work together, and throughout my period of 2 years plus as chairman, Senator Levin, you have accorded me every courtesy and plus some, and I intend to do the same whenever the time occurs for the passing of the mantle, this

one, which will be, I presume, in the next 48 hours or so. I wish you luck.

Senator LEVIN. Mr. Chairman, let me just say that you have always been, as long as I have known you, a fair person. We have always operated in a bipartisan manner. You as chairman have carried out a great tradition of bipartisanship on this committee. One never knows what the future holds. We have learned that many times in politics, so you cannot predict how long anybody will be here, much less how long anybody will be chairman.

Chairman WARNER. That is true.

Senator LEVIN. I just want to thank you for your continuing stretching out your hand to this side of the aisle. We will do the same when the gavel passes. I again just want to thank you and assure you that I will be just as bipartisan, and try even to somehow or other be more so, even though that may not be possible, than you have been. You have been a wonderful role model for anyone who aspires to be chairman of this committee.

Chairman WARNER. I thank you. I accept that with great humility, and I extend the hand. Good luck. Thank you very much.

The hearing is concluded, we are adjourned.

[Whereupon, at 1:40 p.m. the committee adjourned.]

[Prepared questions submitted to Douglas Jay Feith by Chairman Warner prior to the hearing with answers supplied follow:]

May 18, 2001

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours Truly,

DOUGLAS J. FEITH.

cc: Hon. Carl Levin,  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support the implementation of these reforms. The focus on "jointness" outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America's security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* From my point of view, the most important aspects are the clear responsibility and authority given the CINCs for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can

be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles that indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am unaware of any major changes that are needed to Goldwater-Nichols. Before any modifications are suggested, the Department should consult closely with Congress, especially this committee.

#### DUTIES

*Question.* Section 134 of Title 10, United States Code, provides that the Under Secretary of Defense for Policy shall assist the Secretary of Defense in preparing written policy guidance for the preparation and review of contingency plans and in reviewing such plans.

Additionally, subject to the authority, direction and control of the Secretary of Defense, the Under Secretary shall have responsibility for supervising and directing activities of the Department of Defense relating to export controls.

Department of Defense Directive 5111.1 reiterates these duties and specifically notes that the Under Secretary of Defense for Policy is the principal staff assistant and advisor to the Secretary of Defense and the Deputy Secretary of Defense for all matters on the formulation of national security and defense policy and the integration and oversight of DOD policy and plans to achieve national security objectives.

What is your understanding of the duties and functions of the Under Secretary of Defense for Policy under current regulations and practices?

Answer. If confirmed, I will perform the duties provided by statute and regulation, as set forth in the Directive. The Under Secretary of Defense for Policy serves as the principal assistant and advisor to the Secretary and Deputy Secretary of Defense for all matters concerning the formulation of national security and defense policy and the integration and oversight of DOD policy and plans to achieve national security objectives.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld would prescribe for you?

Answer. I would expect Secretary Rumsfeld to look to the Under Secretary of Defense for Policy to fulfill all the duties assigned to that office by statute and regulation—in particular, assistance and advice on the formulation of national security and defense policy. This would likely include: oversight of DOD policy and plans; DOD relations with foreign governments and international organizations; and DOD participation in the interagency process of the U.S. government.

*Question.* How do you see the civilian role, as opposed to the military role, in the formulation of strategy and contingency planning?

Answer. As I understand this activity from the briefings I have received, the Under Secretary of Defense for Policy office, on behalf of the Secretary, initiates the contingency planning process through its preparation of the Presidentially-approved Contingency Planning Guidance. The Under Secretary of Defense for Policy staff follows the development of actual plans which are developed by the military over the 18–24 month deliberate planning cycle and then conducts a formal review of the final products. Final plans as well as preliminary strategic concepts are briefed to the Under Secretary of Defense for Policy for approval, and a number of key plans and strategic concepts are brought to the Secretary for his approval.

#### CONTINGENCY PLANNING

*Question.* One of the purposes of Goldwater-Nichols was to increase attention on the formulation of strategy and contingency planning. The Under Secretary of Defense for Policy is specifically directed to assist the Secretary of Defense in prepar-

ing written policy guidance for the preparation and review of contingency plans and in reviewing such plans.

In your opinion, does the civilian leadership currently have an appropriate level of oversight of contingency planning?

Answer. I am not able to judge at this time, but I am told that civilian oversight of the contingency planning process is at its most mature state since enactment of Goldwater-Nichols. I have been told that the Office of the Under Secretary of Defense for Policy has good relations with the Joint Staff and CINCs' planning staffs that facilitate oversight.

*Question.* What steps do you believe are necessary to ensure effective civilian control and oversight of contingency planning?

Answer. If confirmed, I will be able to gain a more detailed understanding of OSD's oversight processes and how it might be improved.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges confronting the Under Secretary of Defense for Policy?

Answer. The Under Secretary of Defense for Policy must strive to ensure that the U.S. military maintains the ability to deter the range of threats we face and defend our national interests in a world of diverse and not necessarily predictable threats. We face major challenges in properly supporting our forces today while transforming the military to deal effectively with future uncertainties. Another major challenge is dealing with so-called emerging threats—the ability of hostile forces (states and terrorist organizations) to cause serious damage on U.S. territory even though they cannot defeat our armed forces. This field of emerging threats deserves the most serious attention of defense policy makers.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I will work to ensure that we have a defense strategy and appropriate policies and plans to address the threats we face and capitalize on U.S. strengths.

#### EUROPEAN SECURITY AND DEFENSE POLICY

*Question.* A major challenge facing the United States and NATO in the months and years ahead will be the European Union's (EU) implementation of its European Security and Defense Policy (ESDP), that is, an EU capability to conduct military operations in response to international crises in cases where "NATO as a whole is not engaged." Many in Congress have expressed concern that ESDP could emerge as a competitor, rather than a complement, to the NATO Alliance.

Do you share these concerns? What steps do you believe that the United States and NATO must take to ensure that ESDP is implemented in a way that strengthens the Alliance?

Answer. The United States and our NATO Allies must ensure that ESDP preserves NATO's integrity as the primary instrument of transatlantic security and does not diminish the Alliance's military operational effectiveness. ESDP could increase European military capabilities, complementing and reinforcing NATO to balance better the transatlantic relationship; however, with historically low levels in Europe of investment and public interest in security, ESDP could also pose a resource diversion risk and undermine NATO's ability to undertake effective collective defense.

#### IRAQ POLICY

*Question.* The administration is currently conducting a comprehensive review of U.S. policy toward Iraq. Secretary of State Powell recently raised the possibility of changing the sanctions regime against Iraq to ease economic sanctions in return for strengthening the implementation of sanctions on military-related items.

What elements do you think should be part of the administration's policy to ensure Iraqi compliance with the obligations Iraq accepted at the end of the Gulf war?

Answer. U.S. policy toward Iraq aims to ensure that the Baghdad regime does not threaten U.S. interests in the Gulf region or the Middle East as a whole. That objective is consistent with the aims of the Gulf War cease-fire resolution and the other UN Security Council resolutions dating back to the initial invasion of Kuwait—all of which are intended to ensure that Iraq can no longer be a threat to peace and security.

I am advised that the ongoing administration review of Iraq policy focuses on three main elements: (1) refocusing sanctions to target Iraqi military and WMD capabilities; (2) using the military more effectively to support our policy objectives, in-

cluding enforcing the no-fly zones; and (3) promoting conditions in which the Iraqi people might be able to free themselves of Saddam's tyrannical regime. These elements are linked to each other and our challenge is to bring all three together while addressing the complex task of rebuilding consensus in the region and in the international community.

#### ENGAGEMENT POLICY

*Question.* President Bush has directed the comprehensive review of all U.S. military deployments abroad. In his September 1999 speech at the Citadel when he announced his intention to have such a review, then-Governor Bush spoke of problems with "open-ended deployments and unclear military missions."

What do you believe are the proper criteria to apply when deciding whether or not to involve the U.S. Armed Forces in military operations overseas?

*Answer.* The decision to employ U.S. military forces in support of our national interests is one of the most important that a President has made. Each case is unique. The assessments on the use of force should consider what interests are at stake, whether the goals we seek are achievable, and at what cost and how we would characterize success. It is important that the mission be defined so that we know when it is over and when we can bring our forces home.

*Question.* If confirmed, would you support continued engagement activities of the U.S. military?

*Answer.* Engagement activities, if conducted wisely and at appropriate levels of effort, can serve useful purposes including: strengthening alliances; deterring threats; and enhancing U.S. military access in key regions. I support such U.S. military activities for these useful purposes. If confirmed, I will assist in reviewing engagement activities to ensure that they support our goals.

*Question.* Do you believe that these activities contribute to U.S. national security?

*Answer.* These activities can serve the national interest, demonstrating U.S. commitment, deterring aggression and adventurism, and helping ensure a rapid and decisive response in the event of crisis.

*Question.* Would you assure the committee that there would be adequate civilian oversight of these activities?

*Answer.* If confirmed, I assure the committee that there will be adequate civilian oversight of engagement activities.

#### INVOLVEMENT IN THE BALKANS

*Question.* Since the United States first deployed ground troops to Bosnia in December 1995, there have been dramatic changes in the Balkans. Although ethnic tensions remain high throughout the region and ethnic conflict has flared in the Former Yugoslav Republic of Macedonia (FYROM), the major source of instability in the Balkans, Slobodan Milosevic, is out of power and under arrest in Serbia, and a new, democratically elected government is now in charge in the Federal Republic of Yugoslavia.

Given recent changes, should the United States and the international community re-evaluate its policies in the Balkans, to include a re-evaluation of the need for a large U.S. and NATO-led presence in the region?

*Answer.* Military forces are being used to secure the environment in which civil implementation of the Dayton Accords and of other peacekeeping arrangements can take place. Decisions on the circumstances and timing of continued military presence will result from the regular alliance processes reviewing the missions. I understand that we have underway an assessment of the need for military forces in these missions, and we are committed to act as a member of the alliance in defining any reductions in our presence.

#### PEACEKEEPING OPERATIONS

*Question.* What is your view as to the value of U.S. forces' participation in peace operations?

*Answer.* U.S. forces' participation in peace operations can serve the national interest and strengthen military skills in several areas, such as operating in coalitions, providing logistics, communications, engineering and medical support, small unit leadership and civil affairs. Readiness benefits have to be balanced against the readiness detriment inherent in any use of military forces for operations other than war. Both of these factors are part of the broader national interest cost-benefit analysis required regarding peace operations.

## ASYMMETRIC THREATS

*Question.* What are the asymmetric threats you see to the United States and its interests, and what are the appropriate responses to these threats?

*Answer.* Asymmetric threats to the United States include nuclear, biological and chemical (NBC) weapons and their means of delivery, terrorism, threats against our space and information systems, and a range of conventional capabilities intended to deny U.S. access to key regions in times of crisis. In light of these threats, President Bush has made the development and deployment of missile defenses a priority for his administration. Also, the Department is preparing U.S. forces to deter such threats and, if deterrence fails, to fight and win despite the threat or actual use of NBC weapons against them.

As part of the administration's response to emerging threats to U.S. use of space, Secretary Rumsfeld announced several major organizational changes designed to improve the effectiveness of U.S. space capabilities.

Countering anti-access and area-denial capabilities, such as submarines, anti-ship cruise missiles, advanced surface-to-air missiles, and advanced sea mines, requires ongoing investments to transform the weapons and the doctrine, organization, training, logistics, and procedures of our armed forces.

*Question.* Do you think policies are required to address this emerging threat and growing biotech capability?

*Answer.* Yes. Please see answer to 10A.

*Question.* In your view, it is possible to develop and implement policies that will address this growing biotech capability?

*Answer.* Yes. Please see answer to 10A.

## COUNTER-NARCOTICS

*Question.* In your view, what is the appropriate role of the Department of Defense in U.S. counter-drug efforts?

*Answer.* As the President recently said, a successful counter-drug (CD) effort depends on a thoughtful and integrated approach. The Department's CD activities support a range of programs in the administration's overall National Drug Control Strategy. The Department is reviewing all its missions, including CD-related support to other Federal Agencies. I am ready, if confirmed, to oversee the support the President and the Secretary deem required to assist other agencies in their counter-drug efforts.

*Question.* Do the Department's efforts contribute to the defense of our vital national interests?

*Answer.* The Department's CD activities play a significant role in contributing to the administration's overall National Drug Control Strategy.

*Question.* What role do you believe the United States should play in the implementation of Plan Colombia?

*Answer.* The Department of Defense supports U.S. Government efforts to assist President Pastrana's Plan Colombia. The Department of State is the lead Federal Agency for coordinating these efforts. Both the President and the Secretary of State have made it clear that the new administration will support Plan Colombia by assisting the Colombians in their counternarcotics efforts. The Secretary of State and his team can best address in detail USG support to Plan Colombia.

## NORTH KOREA

*Question.* Please outline your views with regards to the situation on the Korean Peninsula. In particular, discuss your thoughts on the implementation of the 1994 Agreed Framework and on the missile proliferation talks between the United States and North Korea.

*Answer.* With regard to the Agreed Framework, I believe our goal must be a complete and verifiable end to the North Korean nuclear program. If there are ways to improve upon the Agreed Framework that enable us to have more confidence in achieving that goal, they should be considered. Regarding North Korean missiles, please see 12 B.

*Question.* Do you believe U.S. policy should continue to seek an end to North Korean's nuclear weapons and ballistic missile programs?

*Answer.* Yes. North Korea continues to pose a significant military threat to U.S. and South Korean forces. North Korea has been actively producing and exporting missiles and missile-related equipment and technology to other countries for more than a decade. These activities pose a threat to regional security and stability and to U.S. forces, allies, and friends.

*Question.* Should these efforts include talks and negotiations with North Korea?

Answer. North Korean activities and capabilities—regarding WMD and missiles, as well as conventional artillery—warrant intense attention. We must take the necessary steps to address these threats. I understand that the North Korea policy review, now underway, is considering various options. I look forward to becoming involved in this process if confirmed. If we engage in talks with the North Koreans, I believe we should do so with clearly defined objectives and a realistic assessment of our chances of achieving them.

## AFRICA POLICY

*Question.* The Defense Department is currently involved in a number of initiatives in Africa to help certain nations be better prepared to provide their own regional peacekeeping forces and humanitarian missions. The African Crisis Response Initiative and the ongoing training of several Nigerian army battalions for peacekeeping duty in Sierra Leone are two examples of this policy.

Do you support these initiatives?

Answer. Yes. The United States has an interest in the development of a peace operations and humanitarian response capacity in Sub-Saharan Africa. We can promote this interest by developing defense partnerships with important states and sub-regional organizations. The concept is to help regional actors deal with regional problems. One such actor is Nigeria, with whom the United States is currently conducting peace operations training to support UNAMSIL in Sierra Leone (Operation FOCUS RELIEF, or OFR), training that also includes Senegal and Ghana.

## MISSILE DEFENSE

*Question.* The President has made clear his commitment to the deployment of a limited missile defense system to protect the American people and our overseas interests and allies.

In your view, to what extent should the United States utilize the ground-based architecture developed under the previous administration as a starting point for implementing the President's missile defense plans?

Answer. The President has established missile defense as a top priority. Our policy is to deploy ballistic missile defenses based on the best available options, at the earliest possible date, that are capable of defending not only the United States but also friends and allies and U.S. forces overseas. Before it decides on deployment, I understand that the administration will examine all available options and basing modes that can contribute to defense.

*Question.* Do you believe that system can meet the operational requirement for defending all 50 States against ballistic missile attack?

Answer. The ground-based system advocated by the previous administration was being developed to meet the defined requirement of defending all 50 states. It would not have been capable, however, of defending allies and friends. Other system architectures could be more effective overall and capable of defending our allies, friends and forces abroad.

*Question.* If that system can meet this operational requirement, what would be the rationale for expanding beyond the land-based system?

Answer. That system was designed so its development (and even its deployment) could take place largely within the constraints of the ABM Treaty, which prohibited us from pursuing promising new technologies. It is not clear, therefore, that the system is based on the best available options. As noted above, that system would lack the robustness of a system that also included other types of defenses, and would not provide protection to allies and friends. I understand that the administration, before it decides on deployment, will examine all available options and basing modes that can contribute to defense including land-based options.

*Question.* Is it your view that the administration is committed to deploy a national missile defense system without regard to the ABM Treaty and without regard to the views of our allies, Russia or China?

Answer. The President has made clear that he is not interested in defenses that would separate us from our allies. The principle of shared risk is not in doubt or open to question. As demonstrated by the most recent round of consultations, the President and the Secretary of Defense are committed to substantive and meaningful dialogue with our allies.

We have diplomatic challenges to work through regarding Russia and the ABM Treaty. The President has said we will address Russian concerns about the impact of defenses on their deterrent. We have had serious discussions with Chinese officials and listened to their views. Missile defense is not a threat to China—rather, it is intended to defend against the newly emerging ballistic missile threat resulting from proliferation and also against accidental and unauthorized launches.

*Question.* What are the advantages of eliminating distinctions between “national” and “theater” missile defense systems?

*Answer.* The President has said we will deploy defenses capable of defending the United States and our allies and friends. Whether a particular system is a “national” system or a “theater” system depends on where you live and how close you are to the threat. Some systems—boost-phase systems, for instance—may be effective against short-, medium-, and long-range ballistic missiles, whether they are directed at the United States or at allies in theater. These systems should be used where they are effective.

*Question.* Does the administration intend to continue pursuing missile defense systems specifically for tactical or theater applications?

*Answer.* Yes. U.S. and Allied forces already face threats from shorter-range ballistic missiles. It is important to pursue existing programs to address these threats.

*Question.* To what extent do you believe that multi-layered missile defenses are necessary for dealing with the emerging ballistic missile threat?

*Answer.* The administration has made clear that more work is needed to determine the final form defenses might take. In this process, it might draw on established technologies to intercept in boost-phase, mid-course, or after reentry vehicles enter the atmosphere. In principle, I believe a multi-layered defense is the most robust approach.

*Question.* Will space-based defenses be needed in the future?

*Answer.* As the President indicated in his May 1 speech, we have more work to do to determine the final form a missile defenses might take. The administration says it will continue to explore all options. I think it is well-advised to do so.

*Question.* Does the administration intend to continue pursuing missile defenses specifically for applications against missiles with ranges from 300 to 3,500 kilometers?

*Answer.* Yes. The United States and its allies will likely face threats from the full spectrum of ballistic missiles—short-, medium-, intermediate- and long-range. Therefore, the administration believes that it is imperative to continue programs designed to combat short-, medium-, and intermediate-range threats, as well as long-range threats.

*Question.* Can the existing set of theater and national missile defense programs provide effective defenses against missile attack, as planned, or do you believe that space-based defenses will also be needed?

*Answer.* As the President indicated in his May 1 speech, there is more work to be done to determine the final form a missile defense architecture might take. I believe we should continue to explore all options.

*Question.* Critics of ballistic missile defense occasionally point out that such systems would not be able to defend against weapons of mass destruction delivered by non-missile systems such as ships or trucks. In your view does this fact detract from the case in favor of deploying defenses?

*Answer.* No. The United States currently has efforts underway to address non-missile threats (e.g., intelligence, border controls, etc.), but now has no defenses against long-range ballistic missiles. Leaving ourselves vulnerable to ballistic missiles, does not diminish other threats. Rather, it encourages countries to obtain long-range ballistic missiles for potential coercion or blackmail of the United States and its allies to deter us from intervening in regional conflicts.

*Question.* What programs will the administration implement to defend against non-ballistic missile attacks with nuclear, chemical or biological warheads?

*Answer.* I believe we should pursue improvements in threat reduction, export controls, border controls, detection, decontamination, protective clothing, shelters and equipment, vaccines, antidotes, antibiotics, and other emerging technological advances.

*Question.* Do you agree with President Bush that the goal of a missile defense protecting our nation is to defend against limited missile attacks, or do you believe that goal should be to defend against large scale attack, long-range, missile attacks?

*Answer.* I agree with the President. Defense of the United States should be designed to deter and defend against limited threats, in particular, attacks from states that are currently attempting to develop or acquire long-range ballistic missiles, and against accidental or unauthorized launches.

*Question.* Do you believe an appropriate justification for a national missile defense system is to protect against accidental or unauthorized ballistic missile launches?

*Answer.* Yes.

#### ABM TREATY

*Question.* Why do you believe the ABM Treaty no longer exists?

Answer. The Bush administration has not promulgated a judgment on the treaty's legal status, but it has declared that it is treating the Treaty as being in effect. I support the administration's approach.

*Question.* In your view, does the 1997 ABM multilateral Memorandum of Understanding have any force or effect, legal or moral?

Answer. The United States signed the 1997 Memorandum of Understanding (MOU), but the Clinton administration did not send it to the Senate for approval of ratification. The Bush administration has not announced a specific decision on what it will do with the MOU. The question will be considered in the context of the President's statement that we should replace the ABM Treaty with a new framework that reflects a break from Cold-War thinking and facilitates development of a new, cooperative relationship between the United States and Russia.

#### STRATEGIC NUCLEAR FORCES

*Question.* The National Defense Authorization Act for Fiscal Year 2001 requires the Secretary of Defense to conduct a new nuclear posture review.

When would you expect this review to be completed and to what extent will this review encompass the views expressed by the President in his May 1, 2001, speech?

Answer. I understand that the Defense Authorization Act states that the review must be completed in December 2001. I have been told the Department intends to submit the report by that date. I am unfamiliar with the details of the review. However, if confirmed, I would recommend that the study, as emphasized by President, recognize that although nuclear weapons still have a role to play in our security and that of our allies, the Cold War is over and the nature of the threat has changed. The administration has said it is aiming to achieve a credible deterrent with the lowest possible number of nuclear weapons consistent with our national security needs.

*Question.* As the President pointed out in his National Defense University speech, "nuclear weapons still have a vital role to play in our security and that of our allies." Would you describe your view of what that role is?

Answer. Nuclear weapons remain important as a deterrent to threats and, if necessary, a response to use of nuclear, biological, or chemical weapons against the United States, its deployed forces, or its Allies and friends. Nuclear weapons also serve as a means of upholding U.S. security commitments to our Allies, as a disincentive to those who would otherwise contemplate developing or acquiring their own nuclear weapons, and as a hedge against an uncertain future.

*Question.* What changes to our alert posture would you recommend, if any, to enhance security and stability?

Answer. It is my understanding that the Department of Defense will review all aspects of nuclear forces and their posture as a part an overall review of our nuclear deterrent. I am not aware of any results of this review to date.

*Question.* How do you define "hair trigger alert" and what U.S. weapons fit the description of being "on hair trigger alert?"

Answer. As President Bush said in his speech on May 1, at the height of the Cold War the Soviet Union and the United States had "thousands of nuclear weapons pointed at each other on hair-trigger alert." This meant first, that large numbers of ICBMs, SLBMs, and strategic bombers carrying thousands of warheads were maintained by both sides in an alert status that would have allowed their execution within minutes; and second, that the overall U.S.-Soviet strategic relationship was so characterized by distrust and potential for conflict that there was significant concern about the possibility of a first strike in a crisis. Clearly, the latter condition does not apply to the current U.S.-Russian relationship.

*Question.* Do you believe that United States strategic systems are on "hair trigger" alert status today?

Answer. As noted above, the overall U.S.-Russian relationship is not characterized by the same level of distrust that was present during the U.S.-Soviet standoff in the Cold War. In addition, changes have been made since the end of the Cold War that have altered the status of U.S. forces. For example, strategic bombers no longer stand alert on a day-to-day basis, and would require a few days (as opposed to minutes) before the force could be launched on a mission. The President has made clear his determination to change further the size, composition, and character of U.S. nuclear forces in a way that recognizes that the Cold War is over.

*Question.* Would you support prompt de-alerting of any Russian or U.S. weapons that are to be retired?

Answer. De-alerting of U.S. strategic systems scheduled for retirement is not without precedent. In 1991 former President Bush, as a part of the Presidential Nuclear Initiative, ordered the de-alerting of all Minuteman II ICBMs scheduled for

deactivation under START I. I understand that this is an issue that will be carefully examined in the nuclear posture review.

*Question.* What other weapons would you recommend come off “hair trigger” alert?

*Answer.* As I have not been confirmed, it would be premature for me to recommend specific changes to the composition and character of U.S. forces. This issue will be considered in the review of U.S. nuclear forces.

*Question.* Do you support repeal of section 1302(b) of the National Defense Authorization Act for Fiscal Year 1998?

*Answer.* If confirmed, I will work with the committee to review the provision.

*Question.* Do you support prompt retirement of the Peacekeeper ICBM?

*Answer.* This is an issue that should be examined in the context of the review of U.S. nuclear forces.

*Question.* Do you support unilateral reductions in strategic nuclear forces and if so, to what levels?

*Answer.* The Bush administration has stated its intention to reduce the U.S. nuclear arsenal to the lowest level consistent with our national security requirements, including our commitments to our allies.

The Presidential Nuclear Initiatives of 1991 and 1992 resulted in significant unilateral reductions to our tactical nuclear forces, and termination or curtailment of modernization programs for our strategic forces, without requiring years of detailed negotiations in the context of the Strategic Arms Reduction Treaties. This is an option for making reductions that warrants serious consideration.

*Question.* Would you support reductions below START II force levels?

*Answer.* I support reductions significantly below existing levels, which are a vestige of the Cold War. How far to reduce U.S. nuclear forces is being addressed in the review of nuclear forces.

*Question.* Do you support dismantling warheads removed from deployment?

*Answer.* I believe we need to address the dismantlement of warheads removed from deployment on a case-by-case basis.

*Question.* In your view what is the appropriate size of the nuclear arsenal?

*Answer.* As noted above, the Bush administration has stated its intention to reduce the U.S. nuclear arsenal to the lowest level consistent with our national security requirements, including our commitments to our allies.

*Question.* Do you support a hedge strategy and if so for what purpose?

*Answer.* We cannot reliably predict the future. Unforeseen circumstances will arise, despite our best efforts to anticipate them. The United States needs to take steps to reduce its nuclear forces, while at the same time ensuring that we have the needed flexibility and capacity to deploy an effective deterrent against any potential aggressor.

#### TECHNOLOGICAL CAPABILITIES OF TERRORISTS

*Question.* A key disadvantage of the proliferation of information technology is that potential and acknowledged adversaries can now gather data, imagery, and intelligence updates from many of the same sources and means that the U.S. military uses. The ability to counter these emerging capabilities is a great concern for this committee.

What would you propose the United States do to address this problem?

*Answer.* The power of the Internet to access and assimilate data rapidly is a double-edged sword for the U.S. military—it provides opportunities and challenges. A search for information that previously would take days or even weeks to assemble can now be retrieved in hours through sophisticated data mining. But in any event, open source collection is not on the level of U.S. intelligence capabilities.

While there are some circumstances where commercial availability of high quality satellite imagery may become a concern, we have commercial remote imagery policies in place to address these concerns. But I believe these policies should be reviewed. Regarding monitoring commercial open source intelligence analysis and commercial satellite imagery, it is useful for the Department to be aware of the information that is being disseminated and who the recipients are.

I understand that DOD has included operational security (OPSEC) as a core capability of its Information Operations policy and implementing doctrine.

*Question.* Open sources have reported recently that Usama Bin Laden’s communications network “is getting tougher to crack. He is using powerful encryption devices that can be bought on the open market. . . Usama Bin Laden has better communications technology than the U.S.” These reports demonstrate that this growing technological capability is being and will continue to be used against U.S. interests by known terrorists.

How would you address this growing terrorist technological capability?

Answer. It is my understanding the Department does not agree that Usama Bin Laden has better communications than we do. Nevertheless, the worldwide proliferation of encryption, particularly on the Internet, underscores the need to ensure that the intelligence community has the necessary resources.

Most of what is on the Internet is beyond the control of DOD or the U.S. Government, including the proliferation of encryption technology. In any event, we must take steps to keep pace with the changing environment.

#### EXPORT OF SENSITIVE TECHNOLOGIES

*Question.* In his October 1999 speech on high tech issues, then Governor Bush stated that, as President, he would safeguard sensitive high technology exports, while letting Americans sell what is already widely available elsewhere. He stated that wherever there is no security interest at stake, exports would be permitted. Wherever security is truly a stake, exports would be barred, with serious penalties for violations.

If confirmed as Under Secretary of Defense for Policy, what policies and procedures do you believe need to be changed in the export license control process to reflect the proper balance between national security and commercial interests?

Answer. Exports of sensitive technology affect U.S. national security interests in many ways. First, we must protect our military personnel and our security interests by ensuring that sensitive technologies are not exported to potential adversaries or to foreign entities that represent a significant diversion risk. Second, we must have sensible policies and procedures to ensure authorization of appropriate transfer of military and commercial systems and technologies that support our coalition warfighting objectives. Finally, we must be mindful that the United States is not the only country with advanced military and commercial technology. So, we need to work with our allies and friends to ensure that their policies and approaches toward the export of such technologies meet our common security interests. The Department of Defense has an essential role to play in designing and implementing export control policies. If confirmed, I will be working closely with Congress and my administration colleagues on these important matters.

*Question.* Do you believe the Department of Defense should play a greater role in the export licensing process than it currently does in determining whether sensitive technologies should be exported overseas?

Answer. The Defense Department must have a strong role in the export control policy process. Defense has talent and technical expertise in the export control area and should have the ability to apply these assets to the overall process. If confirmed, I will review the licensing process and determine whether to recommend specific changes in how DOD participates.

#### COOPERATIVE THREAT REDUCTION (CTR) PROGRAM

*Question.* Given the increase in Russia's GDP during the past year and the subsequent increases in its military spending and arms exports, what is your view regarding Russia's ability to assume more of the cost share associated with threat reduction efforts?

Answer. Russia should do more to fund the reduction of the weapons of mass destruction left by the Former Soviet Union. Part of the ongoing administration review of assistance programs to Russia is to identify whether Russia is doing as much as it can to fund these reductions. The recent upturn in Russia's economic situation and increase in military spending should be taken into account.

*Question.* What is your view regarding the fungibility of U.S. funds associated with threat reduction assistance in light of Russia's priority on military spending?

Answer. Investment in the CTR program and other U.S. nonproliferation programs should not become a means by which Russia frees resources to finance its military modernization programs. The current review of these programs should look at such questions.

*Question.* Do you support the CTR Program?

Answer. Yes. The elimination of former Soviet strategic nuclear weapons, other weapons of mass destruction, and their delivery vehicles funded by the CTR program has benefited U.S. national security. The United States also has an interest in ensuring that Russia eliminates its stockpile of chemical munitions and biological agents. At the same time we do not want the CTR program to become a means by which Russia frees resources to finance its military modernization programs.

*Question.* Do you support funding for the Russian chemical weapons destruction facility at Shchuch'ye?

Answer. I have been advised that U.S. funding for the construction of a chemical weapon destruction facility at Shchuch'ye is under review. Many complex issues are involved in this program, including Russian and international commitments to this program. Such a review will help inform a decision on how the administration wants to proceed with this and other assistance programs.

*Question.* Do you believe the CTR programs are making a long-term contribution to increasing the security of the United States?

Answer. Yes. Please see answer to 19 C.

*Question.* Do you believe the CTR programs are reducing the probability of an accidental or unauthorized launch of a Russian ballistic missile?

Answer. The CTR program does not address directly the issue of accidental or unauthorized launches. To the extent that the program funds the elimination of former Soviet strategic nuclear weapons and their delivery vehicles, it can be said to contribute to the reduction of that danger.

*Question.* Do you support increasing funding for the CTR programs as necessary to improve control over all aspects of Russia's nuclear arsenal including dismantlement of nuclear warheads, accounting storage and control of weapons-usable plutonium and uranium, and shutting down the last three Russian plutonium producing reactors?

Answer. I have been briefed that the administration is currently reviewing the efficiency and effectiveness of all Russian assistance programs, including the CTR program. Upon completion of this review, a decision will be made regarding the scope of the program and related funding issues.

#### COMPREHENSIVE TEST BAN TREATY (CTBT)/NUCLEAR TEST MONITORING

*Question.* In the CTBT Task Force report that was released in January 2001, General Shalikhshvili notes that the U.S. should take whatever steps are necessary to deter or detect any nuclear explosions that could decrease national security, regardless of what it decides about the CTBT.

What is your view of this statement?

Answer. In principle, I agree that the United States should have the capability to deter or detect, identify, locate, and attribute any nuclear explosion that could decrease national security. In practice I believe that the United States needs to decide how much detection capability is possible and how much it is willing to pay, taking into account all defense and intelligence budget priorities.

*Question.* Do you believe that our existing nuclear monitoring capabilities are sufficient to deter and detect any nuclear explosions?

Answer. I understand that the Department deems our existing monitoring capabilities sufficient to detect some, but not all, nuclear explosions. The risk of detection will not necessarily deter testing. Whether a country will be deterred depends on its own calculation of whether the benefits of the test exceed possible penalties resulting from possible detection.

*Question.* Are there steps that should be taken to enhance our nuclear monitoring capabilities?

Answer. An answer to this question would require an examination of U.S. nuclear monitoring requirements and the extent to which current capabilities can satisfy them. If confirmed, I would review the adequacy of our ability to detect foreign nuclear tests and the cost-effectiveness of potential improvements.

*Question.* What should be the policy within the Department of Defense regarding programs that support the CTBT, e.g., the Center for Monitoring Research funded by the Department?

Answer. Secretary Rumsfeld has said that he has concerns with CTBT: in particular, the risks to the reliability and safety of our nuclear weapon stockpile and the difficulty of verification. Secretary of State Powell has made clear the administration does not intend to pursue ratification. If confirmed, I would support a review of all planned DOD activities associated with the CTBT.

*Question.* Do you support continued and full funding for the International Monitoring System?

Answer. The U.S. contribution to the CTBT Organization, which includes support for the International Monitoring System, or IMS, is in the Department of State's budget. If confirmed, I would support a review of all DOD activities associated with the CTBT.

*Question.* Do you support the Department of Energy's Stockpile Stewardship program?

Answer. Yes, I support the Department of Energy's Stockpile Stewardship program for its contribution to maintaining a credible nuclear deterrent. Ensuring the safety, reliability, and effectiveness of U.S. nuclear weapons is important to the Na-

tional security interests of the United States. If confirmed, I would support an administration review of the Stockpile Stewardship Program.

REORGANIZATION OF THE OFFICE OF THE UNDER SECRETARY OF DEFENSE FOR POLICY  
(OUSD(P))

*Question.* At the beginning of the Clinton administration, Secretary of Defense Aspin undertook a major reorganization of the OUSD(P). There are reports that the Bush administration is currently planning another reorganization of this office.

If confirmed, what changes would you propose to the current organization of the OUSD(P)?

*Answer.* If confirmed, I may propose a modest restructuring of the current organization to address better the concerns and priorities of the President and the Secretary of Defense and would look forward to consultations with this committee on those changes.

ARMS CONTROL

*Question.* Are arms control treaties, either bilateral or unilateral, in the national interest of the United States, and, if so, under what circumstances?

*Answer.* Arms control agreements and actions can be in the national interest of the United States. Each proposed treaty or unilateral action needs to be evaluated to determine whether it is in the U.S. national interest. Relevant considerations regarding treaties include: Is a proposed treaty's purpose in our national interest? Will the proposed terms accomplish the purpose? Is the proposed treaty verifiable? How likely is it that other parties will comply? How effective are efforts likely to be to enforce compliance if the treaty is violated? Are there collateral benefits of the proposed treaty even if its terms are violated by other parties?

INTERMEDIATE NUCLEAR FORCES (INF) TREATY

*Question.* In April 1988 you co-authored an article in which you concluded that the INF Treaty does not accomplish its stated purpose: "the complete, verifiable elimination of U.S. and Soviet intermediate and shorter-range ground-based nuclear missiles." You also wrote that "various [INF] provisions would actually facilitate the creation of maintenance of a covert Soviet force of SS-20's, the most threatening of the Soviet missiles covered."

*Answer.* First, allow me to comment directly about the 1988 article on the INF Treaty, which I co-authored. This article highlighted a study of the INF Treaty performed by a six-person group of which I was a member. The study group did not oppose the treaty or take a position against ratification. One study member, Richard Perle, testified before Congress in favor of ratification. I did not oppose the treaty. In my view, the treaty has contributed positively to U.S. national security, and I think the Senate acted wisely in approving ratification.

Also related to my past writings, questions have been raised about a 1997 article I wrote on the Palestinian-Israeli "Oslo" accord. The main theme of my several articles on that subject has been that the accords have been violated systematically and efforts to remedy the violations have proven ineffective. This point should not be taken as opposition to Oslo or peace negotiations as such. What I oppose are the violations, which have done harm to the negotiating process, to the Israeli and Palestinian victims of violence, and to U.S. interests.

My criticisms over the years of the Oslo process specifically, and the arms control process in general, have all arisen from my conviction that such negotiations should take full account of the difficulties of enforcing compliance. This problem is closely tied to the character, stability, political organization and other traits of the parties. Each negotiation and each proposed agreement requires careful, pragmatic judgments by policymakers.

*Question.* Do you believe that the Senate's ratification of the INF Treaty was a mistake?

*Answer.* In that April 1988 article, my co-author and I examined drafting defects in the INF Treaty in the context of the Cold War, a period of hostility and suspicion on our part regarding the Soviet Union. The Cold War is over and our relationship with Russia is fundamentally different from and better than our relationship with the Soviet Union. As I stated above, I did not oppose the INF Treaty. In my view, the treaty has contributed positively to U.S. national security and I think the Senate acted wisely in approving ratification.

## CHEMICAL WEAPONS CONVENTION

*Question.* The United States is a party to the Chemical Weapons Convention. During the floor debate on this treaty, you wrote urging opposition to it.

What are your views of the Chemical Weapons Convention today?

*Answer.* The United States is a party to the Chemical Weapons Convention and has accepted legal obligations under the Convention. The Department of Defense will implement its obligations fully, including those spelled out in the Senate Conditions to the Resolution of Ratification. If confirmed, I will work to make the Convention as effective as possible in eliminating the danger of chemical weapons.

*Question.* Will you fully implement the terms and conditions of this treaty?

*Answer.* Please see answer to 24 A.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of Defense for Policy?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications or information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

## TREATIES/AGREEMENTS

1. Senator LEVIN. Is it your opinion that all bilateral non-dispositive treaties and agreements between the U.S. and the Soviet Union automatically lapsed in December 1991, or just the treaties?

Mr. FEITH. A number of the questions in this new set ask about my opinions on legal matters. Before I answer the specific questions, I wish to make some general comments. I recognize that the position for which I have been nominated—Under Secretary of Defense for Policy—is responsible for policy, not legal judgments. The administration will take positions on legal questions based on the advice of officials functioning as lawyers. The Under Secretary of Defense for Policy is not such an official. Even though I am a lawyer, I know that, if confirmed as Under Secretary, I would not be making legal judgments for the administration.

I want also to note that, as Under Secretary, I would (if confirmed) do my policy work within the bounds of legal judgments made by other administration officials (and, of course, the courts). That would be true with regard to the ABM Treaty and all other law-related matters. I foresee no difficulty operating in this fashion even if those legal judgments differ from mine, let alone from an opinion I formulated in the private sector.

Regarding in particular the legal memorandum I co-authored on whether the ABM Treaty of 1972 became, upon the U.S.S.R.'s demise, a treaty between the United States and the Russian Federation, I wish to note that that work was an attempt to describe the law, not to advocate what the law should be. As a practical matter, I think the controversy over the treaty's legal status has been overtaken by events, for this administration has made clear that it is respecting the terms of the ABM Treaty. President Bush has also stated that "we must move beyond the constraints of the 30 year old ABM Treaty," but he has made it clear that he seeks to do so cooperatively with Russia. The issue of the ABM Treaty is, I recognize, essentially political and diplomatic in nature.

On the issues of missile defense, arms control in general and, indeed, all defense policy matters, I believe that it is important to think questions through pragmatically, non-ideologically, with an appreciation that reasonable people differ on such important topics. If confirmed, I would see it as my responsibility to ensure that policy making at the Defense Department is an open-minded, comprehensive and honest process conducted in close consultation with Congress.

Now, specifically in answer to Question 1: Based on legal research I did a few years ago, I concluded that, as a matter of international law, all bilateral, non-dispositive treaties and all other bilateral, non-dispositive agreements between the United States and the U.S.S.R. automatically lapsed upon the U.S.S.R.'s dissolution in December 1991. (*See Attachment hereto, which reproduces from the legal memorandum I co-authored the section describing the relevant legal doctrine.*) I appreciate that reasonable people differ on this question. In any event, in my view, nothing prevented or prevents the U.S. Executive Branch from deeming Russia the substitute for the U.S.S.R. with regard to U.S.-U.S.S.R. agreements that had come into force without Senate approval of ratification. It is my understanding that the U.S. Government deems such executive agreements as continuing with Russia as the substitute party.

author concerning what the law ought to be, but for trustworthy evidence of what the law really is.<sup>103</sup>

Courts continue to look to distinguished commentators for aid in ascertaining customary international law.<sup>104</sup>

**D. *The Works of Scholars Support the Conclusion That a Bilateral Treaty Other than a Dispositive Treaty Does Not Survive the Extinction of One of the Treaty Partners***

In very general terms, a dispositive treaty is one that creates a disposition – as of a political boundary, for example – that is intended to be perpetually respected. That the ABM Treaty is not a dispositive treaty is shown at Part IV.K below. A treaty that is not dispositive is called a “personal” or a “real” or “political” treaty.

A widely-quoted author on the law of State succession is D.P. O’Connell. According to Professor O’Connell:

There has been, at least since the late nineteenth century, almost unanimous agreement that personal treaties of a totally extinguished State expire with it because they are contracted with a view to some immediate advantage, and their operation is conditional on the nice adjustment of the political and economic relations which they presuppose. When this adjustment is upset the rationale of the treaty is destroyed.<sup>105</sup>

The principle that bilateral treaties of a State lapse on the State’s extinction became a part of the scholarly tradition of international law even before the United States was founded, and European scholarly works on international law were well known in the United States in the early

<sup>103</sup> *The Paquete Habana*, 175 U.S. 677, 700 (1900) (citation omitted).

<sup>104</sup> *Banco Nacional de Cuba v. Sabbatino*, 376 U.S. 398, 423 (1964); *See also Hilton v. Guyot*, 159 U.S. 113, 163 (1895); *United States v. Nippon Paper Indus. Co.*, 109 F.3d 1, 10-11 (1<sup>st</sup> Cir. 1997).

<sup>105</sup> D. P. O’CONNELL, *THE LAW OF STATE SUCCESSION* 16 (1956) (footnotes omitted). The rationale for treaty lapse has also been characterized as a case of “impossibility of performance,” *i.e.*, it is impossible for an extinct State to do anything; *ergo*, it is impossible for an extinct State to perform its predecessor’s treaty obligations. The principles of impossibility-of-performance are elaborated in a Memorandum from the law firm of Hunton and Williams to the Heritage Foundation, *The Collapse of the Soviet Union and the End of the 1972 Anti-Ballistic Missile Treaty* 4-10 (June 15, 1998) (David B. Rivkin, Jr., Lee A. Casey, Darin R. Barram, authors).

Nineteenth Century. The most prominent work was by Emmerich de Vattel, a Swiss scholar who wrote in the second half of the Eighteenth Century. Vattel wrote:

In the same manner as a personal treaty expires at the death of the king who has contracted it, a real treaty is dissolved, if one of the allied nations is destroyed, – that is to say, not only if the men who compose it happen all to perish, but, also if, from any cause whatsoever, it loses its national quality, or that of a political and independent society.<sup>106</sup>

Another of the prominent early works was Frederic de Martens' *The Law of Nations*, published in 1788. Martens' career included professorships of law at the Imperial School in St. Petersburg and at the University of Gottingen; as representative of Russia at many official conferences; and as an arbiter in international disputes, for which he became known as "Chief Justice of Christendom."<sup>107</sup> An English translation of Martens' work was published in Philadelphia in 1795, dedicated to President George Washington. Martens wrote:

TREATIES, properly so called, cease to be obligatory when the foreign power with whom they were concluded ceases to exist, and when the state passes under the dominion of another power.<sup>108</sup>

Henry Wheaton made the same point in his *Elements of International Law* in 1836, perhaps the first treatise exclusively on international law written in the United States. Wheaton was Justice of the Marine Court of New York. Later, as the official reporter of the U.S. Supreme Court, he edited twelve volumes of the Supreme Court's reports. He then became, in succession, Charge d'affaires of the United States to Denmark, U.S. Minister to Prussia, and Lecturer on International Law at Harvard University.<sup>109</sup> Professor Wheaton wrote:

*Treaties*, properly so called, or *fodera*, are those of friendship and alliance, commerce and navigation, which even if perpetual in

<sup>109</sup> FINCH, *supra* note 107, at 35-36.

terms, expire of course . . . in . . . case either of the contracting parties loses its existence as an independent State.<sup>110</sup>

In 1889, the State Department stated as a "principle of public law" that a treaty expires when one of the parties "loses its existence."<sup>111</sup> In support, the State Department quoted from General Henry W. Halleck's *International Law*,<sup>112</sup> written in 1861:

The principle of public law which causes Treaties under such circumstance [*i.e.*, the cessation of a State's existence as an independent State] to be regarded as abrogated is thus stated: "The obligations of Treaties, even where some of their stipulations are in their terms perpetual, expire in case either of the contracting parties loses its existence as an independent State . . ." <sup>113</sup>

In 1897, U.S. Secretary of State John Sherman invoked scholarly works to explain to the Government of Japan why the treaties made by the Kingdom of Hawaii would not survive the U.S. treaty of annexation of the Kingdom's territory, *i.e.*, "[t]he treaty of annexation does not abrogate [the Kingdom's treaties], it is the fact of Hawaii's ceasing to exist as an independent contractant that extinguishes those contracts."<sup>114</sup>

<sup>110</sup> HENRY WHEATON, *ELEMENTS OF INTERNATIONAL LAW* 191 (1836) (unabridged republication by Da Capo Press 1972). "Fodera" are treaties. A "fodus" is a treaty, a league or a compact. BLACK'S LAW DICTIONARY 770 (rev. 4<sup>th</sup> ed. 1968).

<sup>111</sup> United States Department of State, *Treaties and Conventions Concluded Between the United States of America and Other Powers Since July 4, 1776*, 1236 n.2 (1899), quoting HALLECK'S *INTERNATIONAL LAW* 899, which is materially the same as HENRY W. HALLECK *INTERNATIONAL LAW* 316 (G.S. Baker ed., 4<sup>th</sup> ed. 1908).

<sup>112</sup> Halleck, the adopted son of Baron Frederic von Steuben, was a career soldier and lawyer. He was General-in-Chief of the United States Army in the Civil War until replaced by General Ulysses S. Grant. In 1861 he wrote his first book on international law. It was updated in 1866 and has appeared in many subsequent editions. Halleck's career as soldier and lawyer is sketched in Scott R. Morris, *The Laws of War: Rules by Warriors for Warriors*, 1997 *ARMY LAW*, 4, 10 (1997).

<sup>113</sup> United States Department of State, *Treaties and Conventions Concluded Between the United States of America and Other Powers Since July 4, 1776* 1236 (1899).

<sup>114</sup> United States Secretary of State John Sherman, *Note to the Minister of Japan* (June 25, 1897), quoted in JOHN BASSET MOORE, *V DIGEST OF INTERNATIONAL LAW* 349, 350 (1906). The treatises invoked in the Note were HALLECK'S *INTERNATIONAL LAW OR RULES REGULATING THE INTERCOURSE OF STATES IN PEACE AND WAR* 316 (4<sup>th</sup> ed. 1908) and WILLIAM EDWARD HALL, *A TREATISE ON INTERNATIONAL LAW* 96-97 (4<sup>th</sup> ed. 1895). Secretary Sherman was a lawyer who had been a Senator and a Representative. He is remembered as the author of the Sherman Antitrust Act, 15 U.S.C. § 1 *et seq.*, and the Sherman Silver Purchase Act, 26 Stat. 289 (1890). See also *Territory of Hawaii v. Osaki Mankichi*, 190 U.S. 197, 198-211 (1903) (describing the termination of the Kingdom of Hawaii's treaties with other States after it was annexed by the United States).

Likewise, in 1902 Charles E. Magoon, Law Officer in the Office of the Secretary of the War Department, submitted a Report to Secretary of War Elihu Root, which Secretary Root ordered to be published. On the subject of the treaty obligations of extinct States, the Report states:

But where there is a complete change, not only of sovereigns but of sovereignty, of necessity the agreement ends, for each sovereignty must exercise its grace in accordance with its own constitution, laws, and customs.<sup>115</sup>

In addition, in 1895 Captain Edwin F. Glenn, Acting Judge Advocate General of the United States Army, in his *Hand-Book of International Law*, wrote:

When some of the stipulations of a treaty imply perpetuity, even though the act mentioned to be performed has been accomplished according to the letter of the agreement—as, for instance, in the recognition of a new state,—the act of recognition is complete when accorded; but the state of things contemplated implies permanency, and a state is not authorized to disregard the obligation imposed. If, however, one of the contracting parties loses its existence, or its interior constitution undergoes a change of such a nature as to render the treaty inapplicable to the new state of things, the contract expires.<sup>116</sup>

Also, William Edward Hall (1895) and Max Huber (1899) published treatises expressing the view that upon a State's extinction, its personal treaties lapse.<sup>117</sup>

British scholar Arthur Berriedale Keith assessed the evidence of State practice in 1907. Soon after the dissolution of the Dual Monarchy of Norway and Sweden, he stated: "The evidence, from the practice of nations, is all in favour of the lack of continuity in treaty obligations."<sup>118</sup>

2. Senator LEVIN. Why would treaties lapse and not agreements?  
Mr. FEITH. Please see answer to Question 1.

#### INF TREATY

3. Senator LEVIN. Is the treaty between the United States and the Union of Soviet Socialist Republics on the elimination of their intermediate-range and shorter-range missiles together with the Memorandum of Understanding and the two protocols thereto collectively referred to as the INF Treaty (Entered into force December 11, 1988) still in force?

Mr. FEITH. My understanding is that the United States is committed to complying with the terms of the INF treaty. I understand further that the Clinton administration stated that the 12 newly independent states that arose on the territory of the former U.S.S.R. “remain subject to the [INF] Treaty’s indefinite ban on the posses-

sion, production, and flight testing of intermediate-range and shorter-range missiles." No succession agreement has ever been signed, though my understanding is that the Clinton administration sought unsuccessfully to negotiate a succession agreement with the Russian Federation, Kazakhstan, Belarus, and Ukraine.

The heads of state of ten of the twelve members of the Commonwealth of Independent States adopted the October 1992 Bishkek Resolution, to which the United States was not a Party. That Resolution declared that its signatories "will implement the provisions of the INF Treaty with respect to their territory and taking into account their national interests."

If confirmed, I would support U.S. Government policy regarding the treaty, deferring on legal questions to the administration's legal counsel.

#### ABM TREATY

4. Senator LEVIN. Both President Bush and President Clinton operated on the general principle that the treaty rights and obligations of the former Soviet Union had passed to the successor States, unless the terms or the purpose of the treaty required a different result. Edwin D. Williamson, the Legal Advisor to the State Department during the former Bush administration, confirming the idea that the Russian federation and the other Republics were successors to the treaty obligations of the former Soviet Union, wrote:

"Perhaps most importantly, however, continuity has been supported by the republics themselves, who affirmed this approach in the Alma Ata Declaration when they guaranteed the "fulfillment of international obligations stemming from the treaties and agreements of the former U.S.S.R."

Would you then agree that the views of the Executive Branch, as dispositive of this issue, are that the U.S. and Russia are bound by the ABM Treaty?

Mr. FEITH. The Bush administration has declared that it is treating the Treaty as being in effect. I support the administration's approach and would, if confirmed as Under Secretary of Defense for Policy, defer on legal questions to the administration's legal counsel.

#### ALMA ATA DECLARATION

5. Senator LEVIN. What, in your view, is the effect of the Alma Ata Declaration of December 21, 1991 made by the States of the Former Soviet Union that ". . . the States participating in the Commonwealth (of Independent States) guarantee in accordance with their constitutional procedures the discharge of the international obligations deriving from treaties and agreements concluded by the former Union of Soviet Socialist Republics. . ." and the January 13, 1992 note in which the Russian Federation informed the U.S. that it . . . "continues to perform the right and fulfill the obligations following from the international agreements signed by the Union of Soviet Socialist Republics . . .?"

Mr. FEITH. The December 21, 1991 and January 13, 1992 declarations of the newly independent states did not, I believe, impose any obligations on the United States. I believe this has been the consistent view of the U.S. Government since the declarations were made.

#### CHEMICAL WEAPONS CONVENTION

6. Senator LEVIN. Under what circumstances would you advocate withdrawing from the Chemical Weapons Convention?

Mr. FEITH. I do not advocate U.S. withdrawal from the Chemical Weapons Convention and cannot foresee the circumstance under which I would do so.

#### NUCLEAR NONPROLIFERATION TREATY

7. Senator LEVIN. In an article you wrote for *The Washington Quarterly*, Spring 1986, you state that you are a strong supporter of the Nuclear Nonproliferation Treaty. Nevertheless in your article discussing and opposing the Chemical Weapons Convention on April 21, 1997 in *The Washington Times* you write "CWC Articles X and XI have become the main focus of the critics' case that the CWC will do more harm than good. These provisions, modeled on the 'atoms for peace' concept of the NNPT (Nuclear Nonproliferation Treaty), aim to reward states that renounce chemical weapons by providing them with chemical technology and material 'for peaceful

purposes.' You then refer to these provisions as the "poisons for peace" provisions and state that these provisions would "require the sale" to Iran of "an advanced chemical plant."

In making this statement, do you believe that the Nuclear Nonproliferation Treaty "atoms for peace" provisions have encourage or required proliferation? Do you have evidence that this has occurred?

Mr. FEITH. The NPT has been an important "net plus" for U.S. national security interests. The treaty embodies a number of bargains: For example, first, a bargain among the nuclear-weapons states. Second, a bargain between the nuclear-weapons states, on the one hand, and the non-nuclear-weapons states on the other.

It has impeded (albeit not prevented altogether) the proliferation of nuclear weapons capabilities. The treaty's requirement (based on "atoms for peace") to share nuclear technology "for peaceful purposes" and the related inspection regime have created problems, however. For example, before the Gulf War, Iraq was accepted as a participant in good standing in the International Atomic Energy Agency (IAEA) inspection program. After the Gulf War, our intelligence community ("IC") was surprised when U.N. weapons inspectors discovered just how effective Iraq had been at concealing the Iraqi nuclear weapons program, which was much further along than the IC had thought. Iraqis told the U.N. inspectors that they had learned concealment techniques by participating in the IAEA inspection program under the NPT.

Regarding my April 21, 1997 *Washington Times* article on the CWC, I did not state that Article XI would require the sale to Iran of an advanced chemical plant, but that Article XI might be cited as a pretext. I wrote:

Article XI prohibits—or at least expresses disapproval of—export restrictions in the chemical field among treaty parties. . . . If a German or a Chinese company arranges to sell an advanced chemical plant to Iran and the U.S. government protests that this would enhance Iran's chemical weapons program, *we can expect the German or Chinese government to cite Article XI, arguing* that the CWC not only permits but requires the sale, for Iran will be a treaty party in good standing (or, in any event a party against whom no violation has been proved). [Emphasis added.]

#### INF TREATY

8. Senator LEVIN. In April 1988 you coauthored an article with Frank Gaffney in *The Christian Science Monitor* in which you criticized the Intermediate Nuclear Forces Treaty negotiated by President Reagan's administration which was pending before the Senate. You wrote: "Despite the general ban on INF systems, various treaty provisions could actually facilitate the creation or maintenance of a covert Soviet force of SS-20s, the most threatening of the Soviet missiles covered. While each such provision may seem a minor problem in its own right, taken together they mean that the Soviets, even without violating the specific terms of the treaty, could retain a militarily significant INF capability." In your view did the INF Treaty facilitate a covert force of SS-20s?

Mr. FEITH. No.

#### MISSILE DEFENSE

9. Senator LEVIN. The current and former Commanders in Chief of the Strategic Command have both said that the Russian command and control system over its nuclear weapons launch capability is intact and the possibility of an accidental or unauthorized launch is virtually non-existent. Do you agree that Russia should not be a justification for an NMD system?

Mr. FEITH. I am not familiar with any such statements from the current or former Commanders in Chief of the Strategic Command. In any event, the primary purpose of U.S. missile defense, according to President Bush, would be to defend against the emerging ballistic missile threat from rogue states. Such defenses, however, would also help protect against accidental or unauthorized launches. Though the probability of an accidental or unauthorized launch may be very low, the consequences would be extremely grave, so serious that the United States should, in my view, assess the risk as warranting defensive measures, which could be cooperative in nature.

## CHINESE ICBM LAUNCH

10. Senator LEVIN. The Chinese ICBMs are not maintained on a high alert status. Would you agree that the possibility of an accidental or unauthorized launch of a Chinese ICBM is remote?

Mr. FEITH. I have not been briefed on the PRC command and control system for nuclear weapons. My understanding is, however, that the primary purpose of U.S. missile defense, according to President Bush, would be to defend against the emerging ballistic missile threat from rogue states. Such defenses, however, would also help protect against accidental or unauthorized launches. Though the probability of an accidental or unauthorized launch may be very low, the consequences would be extremely grave, so serious that the United States should, in my view, assess the risk as warranting defensive measures, which could be cooperative in nature.

## START I/START II

11. Senator LEVIN. Do you support repeal of section 1302(b) of the National Defense Authorization Act for Fiscal Year 1998 that requires the U.S. to maintain a START I stockpile until START II enters into force?

Mr. FEITH. I understand that the administration (1) is now reviewing nuclear forces and arms control policies as a part of the strategic review and (2) supports repealing this section of the Authorization Act. I have not been briefed on the underlying considerations and, therefore, cannot offer a personal view.

The President has said he wants to reduce the number of U.S. nuclear weapons to the lowest level consistent with our national security, a policy that I support.

If confirmed, I would work with the committee to review legislation that requires the United States to maintain defined levels of nuclear forces, and to reach a position that is consistent with the results of the strategic review recommendations.

## PEACEKEEPER ICBM

12. Senator LEVIN. Do you support prompt retirement of the Peacekeeper ICBM?

Mr. FEITH. This is an issue that will be examined in the Nuclear Posture Review. I am aware that the President has said that he wants to reduce nuclear forces, a policy that I support. If confirmed, I would need to be briefed on the Peacekeeper issue before I could form a personal opinion on it.

## STRATEGIC NUCLEAR FORCES

13. Senator LEVIN. Do you support unilateral reductions in strategic nuclear forces? To what levels? Would you support reductions below the START II force levels? Would such reductions be unilateral, pursuant to treaty, or other government-to-government agreement?

Mr. FEITH. This administration has stated its intention to reduce the U.S. nuclear arsenal to the lowest level consistent with our national security requirements. I support this policy and, in particular, support reductions below existing levels. But whether it will be possible to reduce to below START II levels is a question on which I have not yet formed a personal opinion. I understand that the ongoing nuclear forces review is addressing that question.

Nor do I yet have a personal view on how best to pursue reduction goals. This is a complex question that hinges on many military and diplomatic considerations. If confirmed, I would get briefed on all the relevant facts and considerations and would look forward to working with this committee in thinking through the best course of action for arms reductions.

## NUCLEAR ARSENAL

14. Senator LEVIN. Do you support dismantling warheads moved from deployment? In your view what is the appropriate size of the nuclear arsenal? Do you support a hedge strategy and if so for what purpose?

Mr. FEITH. I cannot now offer a personal view on dismantling warheads, the appropriate size of the nuclear arsenal or the hedge strategy. These are complex issues on which, if confirmed, I would have to be briefed regarding all relevant facts and considerations.

## NUCLEAR FORCES

15. Senator LEVIN. How do you define "hair trigger alert" and what U.S. weapons fit the description of being "on hair trigger alert?"

Mr. FEITH. I do not have a personal view on this issue nor am I in a position to define the term "hair trigger alert." If confirmed, I would need to be briefed on the posture of our nuclear forces before taking a position. The President has made clear his determination to change further the size, composition and character of U.S. nuclear forces in a way that takes full account of current international circumstances.

## RUSSIAN/U.S. WEAPONS

16. Senator LEVIN. Would you support prompt de-alerting any Russian or U.S. weapons that are to be retired?

Mr. FEITH. This measure is not without precedent. I understand this issue will be examined as a part of the nuclear posture review. If confirmed, I would have to be briefed on all relevant facts and considerations, but my present inclination is to look favorably at the suggestion.

## NUCLEAR POSTURE

17. Senator LEVIN. What other weapons would you recommend come off "hair trigger" alert?

Mr. FEITH. I do not now have a personal view on this issue. I understand that this issue will be considered during the nuclear posture review and, if confirmed, I would study this issue carefully before making a recommendation to the Secretary of Defense. My present inclination is to look favorably at prudent de-alerting proposals.

## ABM TREATY

18. Senator LEVIN. In your view does the 1997 ABM multilateral MOU have any force or effect, legal or moral?

Mr. FEITH. The 1997 ABM multilateral MOU is an agreement that the United States signed but has not ratified. The Executive Branch has never submitted it to the Senate for approval of ratification, so the MOU is not in force. In any event, customary international law prohibits a signatory from defeating an agreement's object and purpose unless and until the signatory makes clear its intention not to become a party.

19. Senator LEVIN. Would you, if confirmed, recommend to the Secretary of Defense or others that if negotiations to modify the ABM Treaty are not successful, that the Treaty could or should be viewed as no longer in force? If confirmed, will you advocate this position?

Mr. FEITH. Regarding your first question: As I understand it, within the administration, this question, if it should arise, would be resolved by the President on the basis of legal advice from the administration's legal counsel. Please be assured that I appreciate that the Under Secretary of Defense for Policy should not render legal opinions.

As I noted in my answer to Question 1, as a practical matter, I think the controversy over the treaty's legal status has been overtaken by events, for this administration has made clear that it is respecting the terms of the ABM Treaty. President Bush has also stated that "we must move beyond the constraints of the 30-year-old ABM Treaty," but he has made it clear that he seeks to do so cooperatively with Russia. The issue of the ABM Treaty is, I recognize, essentially political and diplomatic in nature. Even though I am a lawyer, I know that, if confirmed as Under Secretary, I would not be making legal judgments for the administration. As Under Secretary, I would (if confirmed) do my policy work within the bounds of legal judgments made by other administration officials (and, of course, the courts). That would be true with regard to the ABM Treaty and all other law-related matters. I foresee no difficulty operating in this fashion even if those legal judgments differ from mine, let alone from an opinion I formulated in the private sector.

## MISSILE DEFENSE

20. Senator LEVIN. In your view, to what extent should the United States utilize the ground-based architecture developed under the previous administration as the

primary element for implementing the President's missile defense plans, if, as currently, that system can meet the operational requirement for defending all 50 States against ballistic missile attack? What would be the rationale for expanding beyond the land-based system?

Mr. FEITH. The question of alternative architectures for missile defense is complex and I have not been briefed to the extent that would permit me responsibly to form a judgment on the question.

#### NORTH KOREA

21. Senator LEVIN. Do you believe U.S. policy should continue to seek an end to North Korea's nuclear weapons and ballistic missile programs? Should these efforts include talks and negotiations with North Korea?

Mr. FEITH. My answer to both questions is yes.

#### COOPERATIVE THREAT REDUCTION

22. Senator LEVIN. Will you support the Cooperative Threat Reduction programs, increasing the funding as necessary to improve control over all aspects of Russia's arsenal including dismantlement of nuclear warheads, accounting storage and control of weapons usable plutonium and uranium, and shutting down the last three Russian plutonium producing reactors?

Mr. FEITH. I strongly support the CTR program. As to the particular elements of the program, I would, if confirmed, get briefed on all relevant facts and circumstances to allow me to formulate views on an appropriate funding level.

23. Senator LEVIN. Do you support CTR funding for the Russian chemical weapons destruction facility at Shchuch'ye?

Mr. FEITH. I do not have a personal opinion on Shchuch'ye. I would, if confirmed, get briefed on all relevant facts and circumstances to allow me to formulate a view.

#### QUESTIONS SUBMITTED BY SENATOR ROBERT C. BYRD

##### TREATIES

24. Senator BYRD. The article you co-authored in 1988 on the Intermediate-Range Nuclear Forces (INF) Treaty was critical of Senate action to clarify the terms and obligations of the treaty. What is your understanding of the role of the Senate in the making of treaties? To what degree do you believe the Senate is bound by international law, as opposed to the Constitution, in its consideration of treaties?

Mr. FEITH. My 1998 INF article, cited in the question, did not oppose Senate action to clarify the terms and obligations of the treaty. Rather, it urged the Senate to clarify those items with the administration and then also to ensure a meeting of minds on the clarifications between the U.S. and U.S.S.R. governments.

Treaty ambiguities gave rise during the Cold War to many bitter U.S.-Soviet exchanges that strained relations and eroded respect for arms control and international law. I believe that efforts to craft precise language should be as serious in the field of international law as they are in the field of ordinary U.S. domestic law.

I view the Senate as having a crucial role to play, through the exercise of its constitutional treaty-making authority, in clarifying the meaning of international agreements negotiated by the Executive Branch.

The Constitution of the United States, Article II, section 2, paragraph 2 vests in the President the power "by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur; . . ." Article VI, paragraph 2 provides that "This Constitution, and the Laws of the United States which shall be made in pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme law of the Land; . . ." Accordingly, as a matter of internal law, an agreement that would constitute a "treaty" for purposes of Article II, section 2, paragraph 2 cannot constitutionally bind the United States if it has not been concurred in by a two-thirds vote of the Senators present.

With respect to the second question, it is my understanding that international law does not bind the Senate in its consideration of treaties. The Senate has a crucial role under the Constitution in the making of treaties, so it is important that the Executive Branch give the Senate an accurate understanding of the terms of a treaty when the Senate deliberates on whether to provide advice and consent to ratification.

25. Senator BYRD. May authoritative representations made before the ratification of a treaty later be altered without the further advice and consent of the Senate?

Mr. FEITH. Please see my answer to Question 1 as to the fact that the Under Secretary of Defense for Policy has responsibility to give policy but not legal advice.

In his confirmation process, Mr. William Taft, IV, now State Department Legal Adviser, made the following statements:

"The Constitution's scheme of sharing the treaty-making power requires that mutual understandings on treaty interpretation reached with the Senate in the ratification process must be respected. . . . My view is that modifications or amendments to treaties should be submitted to the Senate for its advice and consent."

I concur with these statements.

26. Senator BYRD. Do you believe that the Senate gives its advice and consent to a treaty irrespective of representations made to it by the Executive Branch?

Mr. FEITH. Treaty-making is a power shared by the President and the Senate. During the process of advice and consent, I believe the Executive Branch is obliged to provide information necessary to allow the Senate to fulfill the Senate's constitutional role. Such information should be complete and accurate and the Senate should be able to rely upon it.

#### SOFAER DOCTRINE

27. Senator BYRD. Did you participate in the formulation of the "Sofaer doctrine?"

Mr. FEITH. I had no official or formal involvement in the formulation of the "Sofaer doctrine," nor do I recall any particular informal role.

28. Senator BYRD. At the time you wrote the article on the INF Treaty, what were your views on the "Sofaer doctrine?" Have your views on this doctrine changed?

Mr. FEITH. I did not perform independent legal research on the matter and do not recall ever having formulated a definite opinion.

#### TREATIES

29. Senator BYRD. If you were to be called to testify before a Senate committee, can you give an authoritative reading of any provision of any treaty that might affect the Department of Defense?

Mr. FEITH. I do not know under what circumstances the Under Secretary of Defense for Policy would be called upon to give an authoritative reading of a treaty provision. In any case, if I were called upon to do so, I would rely upon guidance provided by administration legal counsel.

#### QUESTIONS SUBMITTED BY SENATOR MAX CLELAND

##### ABM TREATY

30. Senator CLELAND. Your position regarding the ABM Treaty seems to be that it has no legal force as of the dissolution of the USSR, but that the U.S. and Russia have chosen to continue it in the absence of a legal requirement to do so. Would you recommend that the U.S. abrogate the treaty unilaterally without a successor agreement and over the strenuous objections of a significant number of our Allies?

Mr. FEITH. The Bush administration has declared that it is treating the ABM Treaty as being in effect, an approach I support. The President seeks to work with Russia to replace the ABM Treaty with a new framework that reflects a break from Cold War thinking and a new, cooperative relationship. The administration is in consultations with the Russians and with the allies on the framework. The President has said we will address Russian concerns. The President has also emphasized that we are not interested in defense that would separate the United States from our allies. It is clear that this administration values our allies and appreciates the importance of creating as broad a base of support as possible for U.S. policies. If confirmed, I would work toward achieving that new framework and the support of our allies.

##### MISSILE DEFENSE

31. Senator CLELAND. The term "international cooperation," like "bipartisan cooperation," implies that the parties in such a cooperative relationship cannot always

have it their way. Is it appropriate for a nation such as the United States to surrender some of its prerogatives because of the preferences of its avowed allies? Under what circumstances would you disregard the preferences of allies? In your mind, is the deployment of a National Missile Defense system important enough to pursue even over the objections of allies? Why?

Mr. FEITH. I believe that in the area of missile defense, the United States and our allies have fundamentally harmonious interests. In my view, the United States should proceed in this area in accordance with its national interests, taking into account the views of our allies. Good alliance relations are an important element of U.S. national interests. I think there are reasonable grounds for hoping that the United States and our allies will work closely and cooperatively in coming years to protect against the threats resulting from the proliferation of weapons of mass destruction and missile capabilities. The United States has begun a cooperative allied consultation process. As a result of the first round of consultations in May and Secretary Rumsfeld's recent June visit to Europe, I think the administration has a better understanding of allied views, both supportive and skeptical. I know that the administration welcomes the allies' input and intends to continue the consultations. The desirable outcome, I believe, is alliance consensus, which enlightened U.S. leadership has often over the years been able to produce.

#### IRAQ POLICY

32. Senator CLELAND. Will you actively oppose any efforts to employ U.S. ground forces in efforts to replace the current regime in Iraq with one more favorable to U.S. interests? Under what circumstances would you consider supporting the commitment of American ground forces to areas in and around the Persian Gulf in which hostilities are ongoing or imminent?

Mr. FEITH. I do not favor—indeed I oppose—sending U.S. ground forces into combat in Iraq to overthrow Saddam Hussein.

At the same time, I agree with Section 3 of the Iraq Liberation Act (Public Law 105-338), that it should be U.S. policy “to promote the emergence of a democratic government to replace [the Saddam Hussein] regime.”

I cannot now identify what circumstances in the future might justify a commitment of U.S. ground forces in hostilities in the Persian Gulf area. I did, however, support the use of U.S. forces to liberate Kuwait in the 1990-1991 crisis. I supported President Clinton's decision in 1994 to deploy U.S. ground forces in Kuwait to deter another Iraqi invasion. But I always consider any decision to commit U.S. forces of any kind a matter of the profoundest seriousness which must be considered rigorously and thoroughly on the basis of its own particular circumstances.

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### ISRAELI POLICY

33. Senator THURMOND. The fiscal year 2000 Omnibus Appropriations Act provided \$1.2 billion to assist the Government of Israel with implementation of the Wye River Accords, a peace agreement signed October 23, 1998. Specifically, the U.S. aid was to provide funding to move Israeli troops and military installations out of the occupied territories, as called for in the agreement. As part of this assistance, the U.S. Army Corps of Engineers is tasked to construct two infantry-training bases, and a Reserve division storage/logistics base in Israel. The program, estimated to cost \$233 million, is funded with Foreign Military Financing.

Considering the current turmoil in Israel, should the United States continue supporting the construction of these bases? Have the Israeli troops been withdrawn from the territories, as required by the Wye agreement?

Mr. FEITH. I have not yet been briefed on this legislation and the implementation issues. If confirmed, I would review this matter and consult with the committee about it.

##### NORTH KOREA

34. Senator THURMOND. Recently President Bush implied that continuing the peace talks with North Korea were not “worthwhile.”

What are your views on the role North Korea has in maintaining peace and stability in the Pacific region?

Mr. FEITH. The administration has stated it plans to resume negotiations with North Korea. As I understand it, the President has directed his national security

team to undertake discussions with North Korea on a broad agenda, including: improved implementation of the Agreed Framework relating to North Korea's nuclear activities; verifiable constraints on North Korea's missile programs and a ban on its missile exports; and a less threatening conventional military posture. As the President stated, the approach will offer North Korea the opportunity to demonstrate the seriousness of its desire for improved relations. I support the President's approach.

#### PERSIAN GULF POLICY

35. Senator THURMOND. The presence of U.S. military forces in the Persian Gulf region is seen as an important factor in maintaining stability in the region by our strategic planners. However, some of our allies in the region are under considerable internal pressure to reduce or eliminate the presence of our forces.

In your view, what are the long-term implications of maintaining large numbers of our forces in the Persian Gulf region?

Mr. FEITH. Since 1990, most U.S. forces in the Persian Gulf region have been there to carry out missions arising from Iraq's failure to abide by the terms of the 1991 Gulf War cease-fire. The requirement to maintain the U.S. presence depends in large measure on developments in Iraq.

In general, I believe the U.S. military presence in the Gulf should take account of the evolution of threats to U.S. interests and should be shaped through continuing consultations with our allies and partners in the Gulf. The U.S. presence in the region contributes to deterrence, regional stability and U.S. interests generally.

#### RUSSIA/CHINA

36. Senator THURMOND. Both Russia and China have expressed their concern regarding the United States sole super power status. There are some foreign policy experts who believe that these two nations may join others to check U.S. influence throughout the world.

In your judgment, is there a basis for such concerns and is there a potential that we could enter another Cold War era?

Mr. FEITH. In my view, as the United States contributes to shaping the international security environment, we should work to avoid creating incentives for other states to coalesce in opposition to our interests and those of our allies. The concern reflected in the question is an important one, and I know that the administration is intent on developing relations with Russia and China that are non-confrontational.

---

#### QUESTIONS SUBMITTED BY SENATOR BOB SMITH

##### CHINA MIL-TO-MIL

37. Senator SMITH. I'm directing this comment to you because I'm sure you're aware of controversy over the U.S./China military-to-military exchanges—I authored the fiscal year 2000 DOD restrictions on these exchanges.

I have requested a briefing on the department's perspective of the value of these contacts, the lack of reciprocity on the part of the Chinese, and to discuss how we might improve the program—if it is going to continue—so that it meets some clear objectives and is not divulging militarily useful information to the Chinese military.

Can you comment on the administration's change in the mil-to-mil program—how the new "case-by-case" review differ from the previous program under the Clinton administration?

Specifically, are we still trying to have the PRC observe at the COBRA GOLD exercises, as CINCPAC Admiral Blair stated?

Mr. FEITH and Dr. CROUCH. We have been advised that the Department of Defense began in January a series of broad policy reviews. One of the areas to be examined in detail was the program for military-to-military exchanges with the People's Republic of China. The first step in this process was to undertake a serious review of the schedule of military-to-military events with the PLA planned for 2001.

As we understand it, since the April 1 EP-3 incident over the South China Sea, business with China has not been as usual. Steps have been taken to limit the travel of DOD personnel to China and to limit contact with PRC officials, especially PLA personnel. The military-to-military program has been conducted on a case-by-case basis, with special emphasis on (1) benefit to U.S. interests and (2) reciprocity.

The PRC, along with other countries in the region, was invited to observe the command post portion of EXERCISE COBRA GOLD. The PRC, however, declined the invitation.

#### TAIWAN POLICY

38. Senator SMITH. I would also like to raise with you in the future the issue of closer ties between U.S. and Taiwan military forces—I believe we should lift the petty and counter-productive restrictions on U.S. military officer travel to Taiwan and allow more U.S. military personnel to train Taiwanese military personnel in Taiwan.

We should also be establishing direct and secure communications between Taiwan and the U.S. military, linking PACOM and Taiwan's defense ministry.

I urge you to undertake a review of U.S. military policy towards Taiwan. Not taking these steps could be disastrous in the event of another crisis in the straits.

Mr. FEITH and Dr. CROUCH. It is our understanding that the Department of Defense is reviewing a range of issues associated with our defense relationship with Taiwan, including enhancing our training programs. If confirmed, we would give serious consideration to the issue of U.S. military visitors to Taiwan.

#### COOPERATIVE THREAT REDUCTION

39. Senator SMITH. In your responses to the committee's questions, you were asked about the Cooperative Threat Reduction (CTR) program. There have been ongoing concerns, some lodged by the GAO, others by experts on Russia, that the program has failed to meet its objectives—that it has freed up Russian resources to remove obsolete weapons systems while the Russian continue with military modernization and proliferation of weapons of mass destruction to rogue nations.

I have also been told that there might be some confusion over CTR's accomplishments because of use of the terms "deactivation, dismantlement and destruction." Shouldn't we be focusing on destruction of warheads as opposed to simply their deactivation or dismantlement? Can you comment further on CTR and whether the program warrants an overhaul and how can we go about clarifying program objectives and evaluating success or failure?

Mr. FEITH. I do not have a personal view on this issue. If confirmed, I would expect to be briefed on these important issues and would look forward to consulting with you on the development of policy in this area.

#### ASIA PACIFIC CENTER

40. Senator SMITH. Are you familiar with the Asia Pacific Center for Security Studies? The center was mentioned in a recent *New York Times* article, "Rumsfeld Limiting Military Contacts with the Chinese."

Could you inform the committee as to any reason why the Asia Pacific Center for Security Studies does not list Taiwan on its website's "List of Countries in the Asia Pacific Region?"

Could you inform the committee as to why, after having been advised by the Secretary of Defense to invite a Taiwanese scholar to a May conference, the Asia Pacific Center then postponed the conference?

Are you aware of whether the Pentagon felt undercut on its missile defense agenda by the Director's (Asia Pacific Center) recent arguments in Australia against missile defenses?

Mr. FEITH. I do not have a personal view on this issue. If confirmed, I would expect to be briefed on these important issues and would look forward to consulting with you on the development of policy in this area.

---

#### QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

##### CONTINGENCY OPERATIONS

41. Senator COLLINS. As Secretary Rumsfeld recently told the press, contingency operations is one of several issues under examination in the ongoing Rumsfeld Strategic Review. Given that one of your oversight responsibilities is to assist the Secretary of Defense in preparing written policy guidance for the preparation and review of contingency plans or crisis management models, will you give us your

thoughts on the possibility of having a standing joint task force that would be established solely to deal with contingency operations?

Mr. FEITH. I do not have a personal view on this issue. This issue is now under review by the Secretary. If confirmed, I look forward to participating in the review and working with this committee on the issue.

#### DEPLOYMENT OF OUR ARMED FORCES

42. Senator COLLINS. I would like to briefly discuss your views on the Department's engagement policy. The decision to employ our troops in support of our national interests is one of the most important decisions that a President has to make. It is imperative that we not only carefully assess the use of force, set achievable goals, and determine the cost, prior to deploying our troops; but that we effectively characterize success criteria before placing them in harms way. If confirmed, how will you establish such criteria to ensure that when our U.S. military forces are employed, that the mission is clearly defined and a definite end is identified so we can bring our forces home at the appropriate time, limiting the number of continuous and indefinite military operations? Further, on the subject of continuous operations, would you identify for the committee, operations in the past decade involving overseas deployments, which you believe have contributed to engagement activities, strengthened alliances, deterred threats; and enhanced U.S. military access in key regions?

Mr. FEITH. As you state, deploying U.S. armed forces in support of our national interests is one of the President's weightiest decisions. It is important that we carefully assess the use of force, set realistic goals and determine the risks involved before sending our troops into harm's way. The considerations you have laid out in your question are, I believe, valid. While there may not be any objective criteria applicable to all circumstances, and each contingency must therefore be addressed on a case-by-case basis, it is necessary to have definite political and military objectives before forces are deployed. If confirmed, I will work with DOD officials, others in the administration, and this committee to help ensure that when we deploy our armed forces, the mission is justified and well-defined and the strategy is well-conceived.

Our deployments in the Persian Gulf area and in the Balkans are examples of overseas operations that have served the kind of U.S. interests specified in the question.

---

[The nomination reference of Douglas Jay Feith follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 30, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Douglas Jay Feith, of Maryland, to be Under Secretary of Defense for Policy, vice Walter Becker Slocombe.

---

[The biographical sketch of Douglas Jay Feith, which was transmitted to the committee at the time the nomination was referred, follows:]

#### BIOGRAPHICAL SKETCH OF DOUGLAS J. FEITH

Douglas J. Feith is currently the Managing Attorney of the law firm of Feith & Zell, P.C., of Washington, DC. He founded the firm in 1986.

Mr. Feith began his professional career as an Attorney with the Washington, DC, law firm of Fried, Frank, Harris, Shriver & Kampelman (1978 to 1981). In 1981-1982, he served on the staff of the National Security Council as a Middle East specialist, working primarily on Arab-Israeli, Persian Gulf and energy security issues. From 1982 to 1984, he was Special Counsel to Assistant Secretary of Defense Richard Perle.

In 1984, Mr. Feith was appointed Deputy Assistant Secretary of Defense for Negotiations Policy. In that position, he was responsible for policy for various arms con-

trol negotiations, including those on conventional force reductions, Confidence, and Security-Building Measures in Europe, chemical and biological weapons and nuclear testing, nuclear non-proliferation issues, and East-West political relations. For his work, he received the Defense Department's highest civilian award, the Distinguished Public Service Medal.

A native of Philadelphia, Pennsylvania, Mr. Feith received an A.B. degree *magna cum laude* from Harvard College in 1975 and a J.D. degree *magna cum laude* from the Georgetown University Law Center in 1978. Mr. Feith has published extensively on matters of international law and on foreign and defense policy. His writings have appeared in *The New York Times*, *The Washington Post*, *The Wall Street Journal*, *Commentary*, *The New Republic* and elsewhere. In addition, he has contributed chapters to a number of books, including James W. Muller, ed., *Churchill as Peacemaker*; Douglas J. Feith, et al., *Israel's Legitimacy in Law and History*; and Uri Ra'anan, et al., eds., *Hydra of Carnage: International Linkages of Terrorism*.

Mr. Feith now serves as the President of the Charles E. Smith Jewish Day School, a K-12 school with over 1,400 students. He is a member of the Council on Foreign Relations and the International Institute for Strategic Studies. He lives in Bethesda, Maryland with his wife, Yanna, and their four children, Daniel, David, Dafna, and Dore.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Douglas Jay Feith in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Douglas Jay Feith.

2. **Position to which nominated:**  
Under Secretary of Defense for Policy.

3. **Date of nomination:**  
April 30, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
July 16, 1953; Philadelphia, PA.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Yanna Feith (nee Tatyana Belenky).

**7. Names and ages of children:**

Daniel J. Feith, 17; David J. Feith, 13; Dafna M. Feith, 9; Dore L. Feith, 4.

**8. Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

Central High School (Philadelphia, PA), graduated in 1971; Harvard College, A.B. (*magna cum laude*) 1975; Georgetown Univ. Law Center, J.D. (*magna cum laude*) 1978.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

1986–now: Managing attorney, Feith & Zell, P.C., Washington, DC (law firm).

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Summer 1979, Intern, U.S. Arms Control and Disarmament Agency; 1981–82, Staff member, National Security Council; 1982–84, Special Counsel to Assistant Secretary of Defense (International Security Policy); 1984–86, Deputy Assistant Secretary of Defense for Negotiations Policy; 1986–?, Consultant to Office of Secretary of Defense (I do not recall if I ever charged for any consulting services and I did not recall when the consultancy lapsed.)

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

Feith & Zell, PC (law firm, President and managing attorney; Charles E. Smith Jewish Day School (non-profit K–12 school in Rockville, MD), President; Foundation for Jewish Studies (non-profit educational organization), Director/officer.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.

Council of Foreign Relations, Member; Center for Security Policy, Member, advisory board; District of Columbia Bar, Member; Harvard Club of Washington, DC, Member; Jewish Community Center of Washington, DC, Member.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Middle East policy advisor in Dole for President Campaign, 1996.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Year		Amount
1996	I do not have personal records showing any political contributions for 1996	\$ 500.00
1997	Wash Pol Action Committee	500.00
1998	Wash Pol Action Committee	500.00
1998	Kyl for Senate	2,000.00
1998	Wash Pol Action Committee	500.00
1999	Kyl for Senate	2,000.00
1999	Wash Pol Action Committee	500.00
1999	Friends of Doug Duncan	500.00
2000	Gilman for Congress	500.00
2000	Bush for President	1,000.00
2000	Odom, James for Congress	250.00
2000	Washington PAC	500.00
2000	Saxton for Congress	500.00
2000	Spence for Congress	500.00
2001	Washington PAC	500.00

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

1986, Department of Defense Distinguished Public Service Medal; 1997, Justice Louis D. Brandeis Award from Zionist Organization of America.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

See list below. I do not have a comprehensive list of my published writings, but the list below, I believe, is representative of the range of those writings.

**Representative Selection of Writings of Douglas J. Feith**

*New Technology and Biological Warfare*

DEFENSE ISSUES, Vol. 1 No. 60 (from testimony before the Subcommittee on Oversight and Evaluation of the House Permanent Select Committee on Intelligence, Aug. 8, 1986).

*International Responses*

A chapter in URI RA'ANAN, *ET AL.*, EDS., HYDRA OF CARNAGE: INTERNATIONAL LINKAGES OF TERRORISM (1986 Lexington Books).

*INF: Does anyone care what the Soviets think?*

CHRISTIAN SCIENCE MONITOR, Apr. 6, 1988 (coauthored with Frank Gaffney, Jr.).

*Glue in NATO's scabbard*

WASH. TIMES, Apr. 19, 1988, at F1 (re: conventional forces arms control).

*Bad Deal For Israel*

THE NEW REPUBLIC, Apr. 25, 1988.

*Protocol I Would give Shelter to Terrorist Organizations*

L.A. DAILY JOURNAL, Jul. 8, 1988 (re: Protocol I to 1949 Geneva Conventions on humanitarian law of armed conflict).

*Poison Gas, Poisoned Treaties*

N.Y. TIMES, Dec. 6, 1988, at A35 (coauthored with Amoretta M. Hoeber).

*Three Obstacles to Effective Implementation of Chemical-Weapons Control*

A chapter in UNITED STATES INSTITUTE OF PEACE, IS IT FEASIBLE TO NEGOTIATE CHEMICAL AND BIOLOGICAL WEAPONS CONTROL? (Kenneth M. Jensen and David Wurmser, eds.) 1990.

*Lions, lambs and peace talks*

WASH. JEWISH WEEK, Mar. 22, 1990, at 12 (re: Arab-Israeli conflict).

*Valiant Turkey Has Come Through for the West,*

INT'L HERALD TRIBUNE, Aug. 25-26, 1990, at 4.

*Discredited Conventional Wisdom*

NATIONAL INTEREST, No. 22, Winter 1990-91, at 33 (re: Gulf war).

*Shopping around for peace: Recycled Policy?*

WASH. TIMES, Mar. 13, 1991, at G1.

## Human Rights Caucus of the U.S. House of Representatives

April 24, 1991 (testimony re: Syria).

*Mideast Peace Under Arabs' Control*

WALL STREET JOURNAL, Nov. 29, 1991, at A6.

*Middle East policy muddle,*

WASH. TIMES, Mar. 4, 1992, at F2 (coauthored with Frank Gaffney, Jr.).

*Strategic ties worth enhancing*

JERUSALEM POST INT'L EDITION, Oct. 24, 1992, at 6.

*The League of Nations Mandate for Palestine*

A chapter in DOUGLAS J. FEITH, *ET AL.*, ISRAEL'S LEGITIMACY IN LAW AND HISTORY (1993 Center for Near East Policy Research)

*A Mandate for Israel*

NATIONAL INTEREST, Fall 1993, at 43.

*Assessing risk in the Israeli-PLO deal*

WASH. TIMES, Oct. 26, 1993, at A15.

*The Arab Underworld*

MOMENT, Dec. 1993, at 87 (book review of Kanan Makiya, *Cruelty and Silence*)

*The East Bank*

THE NEW REPUBLIC, May 16, 1994 (re: Arab-Israeli conflict).

*Land for No Peace*

COMMENTARY, No. 6, Jun. 1994, at 32.

MIDDLE EAST QUARTERLY, Dec. 1997, at 41 (debate among Feith and others on Arab-Israeli conflict).

*Before the next Iraqi crisis: Support Saddam's opposition*

JERUSALEM POST, Mar. 20, 1998.

*Live Missiles and Dead Letters*

NATIONAL REVIEW, Aug. 3, 1998, at 36 (re: ABM Treaty).

## Committee on Foreign Relations, U.S. Senate

106<sup>th</sup> Cong., 1<sup>st</sup> Sess., May 21, 1999 (testimony and publication of legal memorandum: *Did the ABM Treaty of 1972 Remain in Force After the USSR Ceased to Exist in December 1991 and Did it Become a Treaty Between the United States and the Russian Federation?* (coauthored with George Miron)).*Wye and the Road to War*

COMMENTARY, Jan. 1999, at 43.

*Go Ahead: Let Arafat declare his state*

THE NEW REPUBLIC, Sep. 11, 2000, at 20.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

See attached. I have given speeches at various forums, symposia and conferences. Only my formal speeches are attached. The substance of all the relevant speeches, I believe, is conveyed in the writings listed in my answer to question 15 of part A above.

**TRIBUTE TO THE US ARMED FORCES  
US HOLOCAUST MEMORIAL MUSEUM  
ON THE  
FIFTIETH ANNIVERSARY OF THE END OF WORLD WAR II**

**REMARKS  
BY  
DOUGLAS J. FEITH**

**November 8, 1995**

As the son of a Holocaust survivor, I deeply appreciate the opportunity -- which I deem an honor -- to pay tribute to the men and women of the U.S. military on this fiftieth anniversary of the end of World War II. My father, I would like to mention, after fleeing Europe, where his parents and seven brothers and sisters died at the hands of the Nazis, served in combat for several years during the war in the U.S. armed forces.

Defeating Nazi Germany was a just and moral act. But the United States and the Allies did not succeed simply because we had justice and morality on our side. We won the war because we had fighting forces and a general military capability that were superior to that of our enemies. We succeeded because we had courageous and capable men and women who were willing to do combat -- to die and (alas) kill -- for our cause.

We did not choose to fight the Nazis militarily because our leaders preferred war to peace. We fought because the option of peace was not available to us. This unhappy reality resulted not from any failing on our part, and not from any lack of desire for peace on our part. Peace was not available because the nature of the adversary precluded peace. Though it was evidently not obvious to many of the political leaders at the time, the Nazis were not trustworthy. They did not respect law as such. They did not respect the rights of their own people, let alone the rights of others. They were ideologically wedded to aggressive and immoral ambitions.

It is important to honor the men and women who defeated Nazism because such men and women made it possible for a just and moral cause to triumph. Good states cannot necessarily avoid war just because they intensely desire peace, any more than law-abiding citizens in our country have it within their power to

stop all violent crime. If international aggression or domestic crime is to cease, one must change the policies not of the good people, but of the bad. Unless and until this is accomplished, the cause of peace, morality and decency hinges on the bravery, skill, capability and morale of men and women like those we are thanking tonight -- the men and women of our armed forces who defeated the Nazis.

I was privileged to work in the Pentagon -- in the Office of the Secretary of Defense -- during the Reagan Administration. Many of my colleagues there were career military personnel. I admired them as professionals and fellow citizens. It was striking that they not only embodied civic virtues such as devotion to duty and love of country, but they were, as a group, impressively thoughtful and knowledgeable about what their duty was and why this country merited our love. We all gain greater appreciation of such ideas through studying history -- which this superb museum promotes -- and through participation in commemorative events, such as this one here this evening.

If I may presume to speak for my generation -- and in particular for those of us who are children of holocaust survivors -- I want to offer our thanks and respect to the U.S. armed forces on the fiftieth anniversary of the Allied victory over the Nazis and the Axis powers. And I want to thank the U.S. Holocaust Memorial Museum for keeping the rich and terrible history of this period vital and visible.

Thank you.

REMARKS ON "THE OSLO PROCESS"  
BY  
DOUGLAS J. FEITH  
BEFORE THE  
NATIONAL UNITY CONFERENCE FOR ISRAEL  
WASHINGTON, D.C.  
APRIL 7, 1997

It's an honor to be here to address you. Voices United is an admirable organization that gives important support to Israel. It serves the interests of both Israel and the United States. I've been friends for some years now with Esther Levens and I think she deserves high praise for her leadership.

I've been asked to talk about the Oslo Process negotiations between Israel and the PLO.

What is reasonable to expect from this Process? Some Israelis invest it with intense hope -- they see in it nothing less than the key to saving their children from having to fight a new war. Any humane person familiar with Israel's history should find it easy to understand such people. They want the decades of war to end. Having to defend themselves militarily is a burden, material and moral, that they are eager to relinquish. They're willing to compromise with the Arabs. They reason that the Palestinian Arabs must want for themselves and their children the same blessings of peace that are the average Israeli's object of desire.

The aspirations of the Israeli "peace camp" (so-called) sound so benign that it seems ill-natured to dispute their vision. But unpleasant facts obtrude. Consider a sampler just from the last month: An Arab terrorist detonated a bomb in Tel Aviv that killed three Israeli women. Next, referring to Palestinian "policemen" having used their weapons to kill Israelis during the tunnel controversy in September, Nabil Shaath and other Palestinian Authority officials threatened similar violence if Israel proceeds to build the planned Jewish homes in Har Homa in Jerusalem. Amin al-Hindi, a top Palestinian intelligence official, announced: "The Palestinian National Authority will not extradite any Palestinian regardless of what he is charged with." Fatah chief Marwan Barghouti, asked about Arab stoning of Israelis, responded "I don't think that stones are violence. It is peaceful to throw stones." Meanwhile Arafat declared, "It is the duty of all Moslems to rescue Jerusalem ... from the danger of Judaism."

But the breakthrough symbolized by the famous Rabin-Arafat handshake had promised an end to terrorism, or at least a diminution. It had promised conciliation, mutual sympathy and non-violent problem-solving between the Israelis and the Palestinians. Peace being in essence a matter of what is in people's hearts, not a matter of formal documents, it was clear that it wouldn't come about instantaneously when the ink dried on the Oslo Accords. But the Rabin-Arafat handshake promised that there'd at least be a peace *process* -- a move away from hatred, threats and violence.

How then to account for the persistent Arab hostility and recrimination directed against Israel since the famous handshake? How explain the blowing up of Israeli civilians? How explain Arafat's praise of the bombers as "martyrs and heroes?" How explain the persistence of anti-Israel and anti-Jewish rhetoric from Palestinian Authority leaders? How explain their refusal to fulfill obligations in the Oslo Accords on suppressing terrorism, amending the Palestine National Covenant, delivering terror suspects to Israel for trial and other examples of disregard of the Accords?

Israelis who call themselves the "peace camp" lament these discouraging realities, but they ascribe blame primarily to the Netanyahu government, whose policies on settlements, Jerusalem and other matters they condemn as provocative. Bombs may kill young mothers in Israeli cafes, but the Palestinian Authority, we are told, cannot be expected to block every would-be suicide bomber. Arafat may talk belligerently, but this is taken as an effort to appease hardliners in his own constituency. Arafat may fail to disarm Hamas and Islamic Jihad and may release terrorist operatives from prison, but he has domestic political pressures to manage.

The Israeli "peace camp" holds Netanyahu chiefly responsible for the unhappy state of the "peace process" even though the main elements of failure were all evident when Rabin and Peres headed the Israeli government. Even then, Arafat breached his obligations and preached  *jihad* . Anti-Israel terrorism between the signing of Oslo I and the election of Netanyahu killed more people than in any similar period in history (this is a large part of why Netanyahu won the election). But all this notwithstanding, the Israeli "peace camp" remains unshakeable in its faith that there is a peace process, that Arafat is committed to the goal of peace and that greater flexibility by Israel can bring the region to that goal.

As I said, I can readily sympathize with the Israelis' craving for peace. But I can't sympathize with the kind of passion for peace that precludes rational analysis -- the kind that renders one oblivious to facts and welded to one's preconceptions. The attitude toward Arafat of many Israelis on the left brings to mind battered wife syndrome. A man abuses his wife verbally. He beats her. He cheats on her. He diverts attention from his own sins by telling everyone who will listen that she is a whore. The poor, faithful battered wife makes excuses for her man. She blames herself. She insists that he loves her. She devotes herself to saving their romance. When friends warn her that her man is up to no good, she denounces her friends and impugns their motives. This battered wife simply cannot be persuaded that there is no romance and her man is just no darn good.

I have come to the conclusion that the Israeli "peace camp" -- like so many distraught battered wives -- simply cannot be persuaded that there is no romance -- there is no peace process. And despite Arafat's cynicism, contempt and hostility, they cannot be persuaded that their man Arafat -- their "peace partner" -- is a gangster and a liar who is just no darn good. The whole situation is both sad and dangerous. This kind of irrationality is bad enough in a relationship between two private people. It can be disastrous if it dominates the national security policy-making of a state.

\*\*\*\*\*

This brings me to the question of what the Netanyahu government is up to. Benjamin Netanyahu campaigned last year on criticism, indeed condemnation, of Oslo and the Labor Party policies that produced it.

Now he is carrying the process forward.

What has happened?

Two explanations: (1) Netanyahu changed his mind, abandoned his analysis and his principles (a cynic once said: "a politician is one who will find an excuse to get out of anything except office"); or (2) Netanyahu has not abandoned his analysis and principles.

If the latter is the case, what strategy might Netanyahu be pursuing?

## Background

Likud critique of Labor's peace policies toward Palestinians: Arafat cannot make peace. The PLO is not a credible interlocutor and not an authoritative representative of the Palestinian people. Peace cannot be made possible by a change of policy on *Israel's* side. The key to peace is change on the *Arab* side.

Two types of change are required: (1) Change of heart toward Zionism and Israel. And (2) Development of a proper political leadership and structure: A leadership that has legitimacy with own people, makes a practice of compromise and refrains from murdering its political opponents. The more democratic, the more reliable.

Neither of these changes had occurred when Oslo I was signed and neither has occurred since. The Rabin government made its radical departure in September 1993 out of impatience because these changes had not occurred and did not appear imminent.

The essence of Rabin's policy was to take a gamble on peace: Maybe a West Bank-Gaza ministate would satisfy enough Palestinians to get them to abandon the ambition to "liberate" all of Palestine. Rabin seems to have reasoned that the gamble is worthwhile because even if it does not produce peace, unilateral withdrawal by Israel is better than the status quo. He did not think the Israelis had the stomach to continue to defend their position in the territories.

Likud criticized Rabin for pursuing a policy that reflected the Lefi's demoralization and that tended to demoralize the whole country.

Likud argued that the embrace of Arafat was a strategic error, for he would not and could not make peace. That embrace would make peace less rather than more likely because:

- (1) it rewarded terrorism (Arafat achieved his status as statesman through leadership of a terrorist organization);

(2) the we-can't-go-on, there-is-no-alternative-to-peace chorus of so many Israelis, especially intellectuals and political leaders on the left, encouraged the belief on the Arab side that the anti-Zionist cause would ultimately triumph because the Arabs had stronger convictions about the justness of their cause than did the Jews; and

(3) a PLO-led ministate in the West Bank and Gaza would not satisfy Palestinian national aspirations and would endanger the security of Israel and Jordan.

Likud then argued that, even if one accepted Rabin's strategic concept, Labor was implementing its own peace policies badly. The main point was that the Labor government did not insist that Arafat comply with his formal promises.

With that critique as an important part of its campaign, Likud won last year's elections. As soon as they took office, Likud officials explained that *they* would not have entered into the Oslo Accords, but, paradoxically, the Likud has a better chance than Labor did to make the Accords a success.

Likud officials explained that their political fortunes were not tied to Oslo as Labor's were. As they did not believe that unilateral withdrawal is better than the status quo, they could credibly threaten to stop the process if Arafat didn't do the hard things he *must* do to comply with the Accords.

Prime Minister Netanyahu appeared to be reasoning along the following lines: His government must uphold the previous government's international commitments. He didn't believe that Oslo can produce peace, for all the reasons he had laid out over the years. But if Oslo fails, it should be clear that Likud did not kill the Accords on the basis of ideology or theory or speculation. It must be clear that the Likud government devoted itself in good faith to make the Accords succeed.

If the Oslo Process does succeed, Likud would of course be delighted to enjoy the resulting peace. If it fails, then they'll be able to set it aside while leaving as little room as possible for accusations that they acted hastily or in bad

faith, making the point that Oslo is being dropped as a *practical* failure and not because Likud leaders simply speculated that it could not succeed.

Now, if the Oslo process is being tested by the Netanyahu government with the intention of setting it aside if it does not, one must leave oneself an escape route. This requires establishing that there is an alternative to Oslo.

People talk of the "peace process" as if it were inevitable. Israelis commonly say "there's no alternative" -- "if you don't like Oslo, then what is *your* solution?"

But that begs the question, for it simply assumes that there *must* be a solution at hand and, furthermore, that the solution must be within Israel's control. If Netanyahu is to have a credible threat to stop the process if and when it proves a failure, he must refute this assumption. Otherwise, there is no escape from the Oslo box.

Prime Minister Netanyahu appeared to appreciate this point when he impressively launched discussion of a new set of themes about peace and security during his speech to the U.S. Congress in July last year. He said that peace must be built on three pillars: security, reciprocity and democracy.

He highlighted that the keys to peace are philosophical and political developments on the Arab side: change of heart regarding Israel's legitimacy, changes in rhetoric of Arab politicians and intellectuals and the development of liberal, democratic Arab political institutions. That speech to the Congress said, in effect, that the world in general was thinking about Arab-Israeli peace incorrectly, too simplistically, with too much attention to "process" and too little to ideas and institutions.

The philosophical source of the Arab-Israeli conflict has not changed for a century or so. It remains the Arab rejection of Jewish sovereignty in Palestine. If this attitude of rejection changes, there can be peace. If not, there may be temporary accommodations to the realities of power -- there may even be peace agreements -- but there will be no real peace.

Labor chose to ignore this point. Rabin said over and over again: I don't care what the Arabs say, I only care about what they do.

Likud should explain that "what they say" -- especially what the opinion leaders say -- is of the essence. True security for Israel -- and true peace -- will result not from the PLO agreeing to "do" certain things, like go on joint military patrols with Israeli soldiers, for as we have seen, the Palestinian Authority police who patrol jointly with Israelis one day can turn their guns on their Israeli colleagues the next day.

True security and peace will result from Palestinians coming to the conclusion that killing Israelis is not heroic and just, but immoral and damaging to the Arabs' own interests.

This is why changing the PLO Covenant would be significant. And why Arafat's continuing use of "jihad" and references to suicide bombers as "martyrs and heroes" is significant. Moral education should not be underrated.

Likud leaders have to explain why such items are so important. When Israeli leaders complain of PLO violations of Oslo, they should put the point in context. The issue is not just whether Israel is getting every drop of what it bargained for. The issue is what the systematic violations reveal about the Palestinians' attitudes and intentions -- their respect for law and for Israel's rights and the reliability and responsibility of their leadership.

Likud, alas, is not succeeding in changing the vocabulary and analyses that dominate world opinion about Arab-Israeli peace. The Netanyahu government has not succeeded in creating its own standards by which it can be measured. All too often, I am sorry to say, it uses Shimon Peres' vocabulary and models and is being measured by his standards, by which it is found wanting.

The Netanyahu government enunciated an analysis altogether at odds with that of Labor. It has convictions that run contrary to the conventional wisdom, but it is not easy to muster the courage of those convictions for the forces behind the standard view are formidable. If Likud does nothing more than try to implement

more effectively the peace policies of the Labor Party, it will be unlikely to achieve either peace or domestic political success.

Prime Minister Netanyahu is now declaring that the Israeli government, for the first time since September 1993, when Oslo I was signed, will insist that Arafat fulfill his promises before the Oslo process move forward another step. The Prime Minister has also said that, if the process is to move forward, Israel wants to skip the interim steps of the Oslo Accords and proceed straight to final status negotiations.

Benjamin Netanyahu's credibility is on the line. If he continues to let Arafat flout his formal obligations, he will find himself in the same position as the Labor government before him. He will be conducting what is in essence a unilateral withdrawal under the guise of a bilateral peace accord. Arafat will retain his pose as the aggrieved party in the process and will lack any incentive to take the action necessary to prevent terrorism. The Oslo Process has trained Arafat to expect something for nothing. It has permitted him time and again to sell the same horse for new consideration. Despite Likud's pre-election criticism of Labor on this score, Netanyahu has done nothing so far to compel Arafat to make hard choices. If the Israeli Prime Minister is to succeed in doing so, he must have leverage. He must have a credible threat to end the Oslo Process if it continues to disappoint every reasonable expectation of movement toward peace. He must persuade Israel that Likud was correct in its original critique of Oslo: that Oslo was not inevitable, and that Israel has an alternative to Arafat and the PLO once it decides that one is necessary.

Netanyahu's challenge is to work now within the Oslo framework without getting trapped in that framework. The key to a successful policy is intellectual. Netanyahu is famous for his intellectual and persuasive powers. He will need to use them and exert them to the full.

Thank you.

REMARKS  
BY  
DOUGLAS J. FEITH

SOLIDARITY RALLY FOR ISRAEL  
LAFAYETTE PARK, WASHINGTON, D.C.  
October 13, 2000

The community of Israel's friends and supporters in the United States spans the country. It comprises Jews and Christians, Democrats and Republicans, men and women with liberal politics and conservative politics. What puts the "co-" in our community are the convictions, affections and ideals that we hold in common. And what are these? First, recognition of the Jewish people's right to sovereign statehood in their ancient homeland and the right of Israelis to defend their state. Second, admiration of Israel as a liberal democracy, the only such in the vast Middle East, a country that upholds its people's freedoms under adverse circumstances. And third, appreciation of Israel as America's friend and ally – a country whose people love Americans, a country whose people revere rather than burn the American flag.

Israel's American friends are blessed and cursed with lively intramural differences of opinion on many issues. But, at this awful moment, the community as a whole proclaims a single message: solidarity with Israel. There is a time for intra-community debate, but now is a time for unity, harmony and the reaffirming

of the fundamentals – the thoughts that make a fellowship of all Americans who respect and support the State of Israel.

It is fundamental that democracies must defend themselves against their enemies. A humane, non-aggressive society that abhors violence and killing may have no good alternative to resorting to force if it is attacked. This is true for the United States as well as Israel. Both countries face terrorist enemies intent on physical and psychological warfare.

President Clinton says that the United States will and should react forcefully against those who attack U.S. soldiers or other U.S. citizens. In response to the terrorist bombing of the USS Cole yesterday, for example, U.S. officials, members of Congress and others have advocated terrible retaliation. Senator John McCain, for example, has said that the perpetrators should know that we shall hit them many times harder than they hit us. The issue is not simply one of vengeance, but of policy – the necessity to establish by word and deed that terrorism against the United States will yield the perpetrators more harm than good. This is a moral message for it will tend to deter, not encourage, violence.

Under the circumstances, it is easy to empathize with Israelis compelled to respond forcefully to terrorist attacks. Israel has the right to defend its legitimacy and security, the same right that we Americans properly claim for ourselves.

The current violence between the Israelis and Palestinians did not just occur or break out, like the eruption of a volcano or some other natural catastrophe. The current violence, with its heart-rending toll of limbs and lives lost, is the result of calculation, of purposeful actions taken by the Palestinian Authority to serve its political and diplomatic ends. Making this point is not an unconstructive exercise in blame-laying. Clear thinking and the willingness to make judgments are the prerequisites of moral action.

Yasser Arafat and other Palestinian Authority officials have not striven to restrain the violence against Israel. Rather, Arafat has proclaimed “days of rage,” closing his schools to facilitate the rallying of street mobs. Official Palestinian Authority television and radio, as reported in *The New York Times* and *Washington Post*, have been inciting hatred and violence and triumphalist outrages. Hence such acts as the destruction of Joseph’s tomb in Nablus and the mob murder yesterday of the Israeli prisoners in Ramallah. As the violence has intensified, the Palestinian Authority has released from prison numerous Hamas and Islamic Jihad members being held for terrorist crimes against Israelis. And the Palestinian Authority’s armed forces have been firing their weapons at Israelis, not even attempting to suppress the anti-Israel violence.

The blood-letting is large scale and profoundly sad. But it’s inaccurate to

call it spontaneous or uncontrollable on the Palestinian side. The violence is Palestinian Authority policy. It is unleashed deliberately, with calculation. Arafat uses violence, as he has throughout his career, because it has served his purposes to do so. When the Palestinian Authority receives diplomatic and other rewards through this crisis, that encourages more violence.

Some commentators like to position themselves as superior to both sides in the conflict, looking down on Israelis and Palestinians alike, condemning both sides as morally equivalent – that is, *immorally* equivalent. (Various countries around the world assume a similar position with respect to the United States when we confront terrorist attackers.) But justice, morality and common sense rebel at the notion that, in defending its soldiers, its people and its national rights, Israel is on the same moral plane as those who use guns, knives and stones to kill and maim Israelis – those who advocate *jihad* against the Jewish State, those who desecrate Jewish holy sites, those who deny that Jewish Temples stood on the Temple Mount and deny the Holocaust, those who use official schools, summer camps and childrens' TV shows to preach and teach hatred, assassination and war to youngsters of elementary-school age.

There is nothing in the world sadder than the death of children. The pictures of dead young Palestinians and Israelis that we see day after day on

television outrage the sense of decency of all good people. But, I repeat: It is precisely when confronted with such horrors that we should strive for intellectual and moral clarity.

The Palestinian Authority is using children cynically, systematically and unforgivably as pawns – expendable tokens – in an immoral war to demoralize and otherwise damage Israel. The Palestinian Authority has an army of around 40,000 men. These so-called security forces were established under the Oslo Process and armed by the grace of Israel. They were supposed to suppress Palestinian violence against Israel. Instead, they aggravate it and even perpetrate it themselves. For example, it is their practice to position themselves so that children throwing stones to provoke fire fights stand between lines of Israeli and Palestinian armed forces. This ensures that the young stone throwers will face injury and death within view of various video cameras.

The exploitation of youngsters in this manner is barbarity of the lowest order. It is a form of child sacrifice for which the Palestinian Authority deserves unequivocal denunciation. This terrible practice continues only because it is repaid so lavishly by journalists, diplomats and others in the form of denunciations of Israel. Its essential purpose is to cloud the moral issue: to make Israeli victims of aggression look like victimizers.

If condemnations were directed properly – at the Palestinian Authority rather than the Israeli Defense Forces – the practice would cease and the children would be spared such exploitation. If your heart goes out to these children, as it should, you should be ready to make a moral judgment and take a public stand, renouncing the rhetoric of moral equivalency and assigning responsibility where it belongs – to Yasser Arafat and his lieutenants. In such a situation, this is not unconstructive finger-pointing. On the contrary, it is the moral response of decent people who oppose the purposeful endangerment of children.

This brings to mind a remark of Winston Churchill. In response to misguided moral equivalency in *his* day, he commented that he could not maintain a fine indifference between the fire brigade and the fire.

When Israel is under attack, Israel's American friends and supporters stand with it. The violence hurts our hearts and we have compassion for every parent, Arab and Jewish, who loses a child. But we do not allow our compassion to cloud our moral judgment. Israel has a right to exist and to defend itself. The Palestinians have no right to direct violence against it. Israel deserves from its American allies not equivocation, not even-handedness, but moral clarity and wholehearted support.

Thank you. And may God bless America and Israel.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DOUGLAS JAY FEITH.

This 30th day of April, 2001.

[The nomination of Douglas Jay Feith was reported to the Senate by Chairman Levin on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

[Prepared questions submitted to Dr. J.D. Crouch by Chairman Warner prior to the hearing with answers supplied follow:]

May 21, 2001.

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

J.D. CROUCH, II.

cc: Hon. Carl Levin,  
Ranking Minority Member.

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes, I support the implementation of these reforms. The focus on "jointness" outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. These reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America's security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. From my point of view, the most important aspects are the clear responsibilities and authorities given the CINCs for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the National strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am unaware of any proposals to modify Goldwater-Nichols. The Department will should consult closely with Congress, especially this committee, on any changes that might be appropriate.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of Defense for International Security Policy?

Answer. I understand that, if confirmed, my duties as Assistant Secretary of Defense for International Security Policy will be to serve as the principal assistant and advisor to the Under Secretary of Defense for Policy in formulating and implementing national security and defense policy in a wide range of areas, including: nuclear forces; technology security; missile defense; Europe and NATO; Russia, Ukraine, and Eurasia; arms control, non-proliferation, and counter-proliferation.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld would prescribe for you?

Answer. I would expect Secretary Rumsfeld to look to the Assistant Secretary of Defense for International Security Policy to fulfill all the duties assigned to that office by statute and regulation—in particular, assistance and advice on the formulation of national security and defense policy in the areas noted in 2A .

*Question.* How do you see the civilian role, as opposed to the military role, in the formulation of strategy and contingency planning?

Answer. As I understand this activity, the Policy Office, on behalf of the Secretary, initiates the contingency planning process through its preparation of the Presidentially-approved Contingency Planning Guidance, and subsequently reviews actual plans developed by the military. Formulation of strategy and the contingency planning guidance that flows from it is an inherently civilian role. The military as an institution or through individual leaders, has an important part in this process. However, leadership and final decisions relating to formulation of strategy and contingency guidance is appropriately within the purview of the Nation's civilian leaders.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of Defense for International Security Policy?

Answer. The Department as a whole must strive to ensure that the U.S. military maintains the ability to deter the range of threats we face and defend our national interests in a world of diverse and not necessarily predictable threats. The United States government faces major challenges in properly supporting our forces today while transforming the military to deal effectively with future uncertainties. Another major challenge is dealing with so-called emerging threats—the ability of hostile forces (states and terrorist organizations) to cause serious damage on U.S. territory even though they cannot defeat our armed forces.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I will strive to ensure that we have a defense strategy and appropriate policies and plans to address the range of threats we face. In particular, the Assistant Secretary of Defense for International Security Policy plays a key role in addressing the challenges of emerging threats; this deserves the most serious attention.

#### NATO EXPANSION

*Question.* The further expansion of the NATO Alliance will be an issue addressed at the NATO Summit in 2002. Currently, nine nations in central and eastern Europe—including the three Baltic nations—are interested in joining the Alliance.

In your view, what criteria should the United States use in determining which nations should be invited to join this important military alliance?

Answer. The NATO Alliance has been the key instrument in keeping the peace in Europe for over 50 years. A main factor in considering future NATO expansion is whether or not expansion will enhance U.S. and NATO security. It is important that the broadening of NATO membership preserve the Alliance's capacity for effective collective action.

New members should share the democratic values of the Alliance and be prepared to make the necessary investments in the creation and maintenance of effective and interoperable military forces.

## NATO CHALLENGES

*Question.* What are the greatest challenges that you foresee for NATO over the next 5 years?

*Answer.* One of the key challenges will be to complete the Alliance transition from stationary forces to more mobile, deployable, and sustainable forces, and to assist new members and partners in developing forces that are better able to operate with NATO forces.

Another challenge is to develop a cooperative relationship with the European Union on the European Security and Defense Policy that preserves NATO's military operational effectiveness.

A final challenge will be to continue to evolve the relationship with Russia as we move away from the Cold War.

## EUROPEAN SECURITY AND DEFENSE POLICY

*Question.* The European Union (EU) is pursuing a European Security and Defense Policy (ESDP) under which the EU will be in a position to launch and conduct EU-led operations in response to international crises, where NATO as a whole is not engaged. The United States has endorsed the ESDP provided it is done right.

Do you agree with the United States position on ESDP?

*Answer.* Yes, I agree with the United States' position on ESDP. As President Bush stated in February, "The U.S. welcomes ESDP, intended to make Europe a stronger, more capable partner in deterring and managing crises affecting the security of the transatlantic community."

United States support for ESDP is based on the assumption that EU efforts will result in increased European capabilities and will not undermine NATO's military operational effectiveness, Allied cohesion, or the transatlantic link. ESDP could increase European military capabilities, complementing and reinforcing NATO to better balance the transatlantic relationship; however, ESDP could also pose a resource diversion risk and undermine NATO's ability to undertake collective defense.

*Question.* In your view, what does the EU have to do to ensure that ESDP is "done right"?

*Answer.* The EU must be willing to ensure that ESDP preserves NATO's integrity as the primary instrument of transatlantic security and does not diminish the Alliance's military operational effectiveness.

In addition, the EU should recognize that robust participation arrangements for non-EU European Allies, like Turkey, in EU crisis response planning and operations are essential to a successful NATO-EU relationship. While all 15 EU members (11 of which are also NATO Allies) have made a political commitments to ESDP, they must deliver on these commitments by providing resources to increase capabilities.

## CONFLICT IN MACEDONIA

*Question.* For the past several months, we have witnessed fighting between ethnic Albanians and government forces in the Former Yugoslav Republic of Macedonia. NATO has agreed to offer some assistance to the Macedonian Government in this conflict.

What do you believe is the proper role for the United States and NATO in this conflict? Should our involvement, if any, include the use of U.S. troops?

*Answer.* It is my understanding that the Bush administration plans to continue to assist the Macedonians to maintain territorial integrity, using their own means. The administration has consistently condemned the violence initiated by ethnic Albanian militants and supported the sovereignty of Macedonia. In cooperation with NATO, the United States has provided intelligence support and equipment appropriate for the level of the conflict. The administration supports the multi-ethnic Macedonian ruling coalition (Government of National Unity). I understand that, at present, the administration does not foresee a reason to expand the U.S. role beyond our current assistance and participation in KFOR, and nor does it foresee a reason for U.S. forces to be involved in the Macedonian conflict.

## MISSILE DEFENSE

*Question.* The United States has invested a significant amount of funding and time into the development of ground-based national missile defense system. The capability being developed under this program appears more mature than any alternative approach for countering strategic ballistic missiles.

Do you believe that it is the most mature missile defense program?

*Answer.* The President has established missile defense as a top priority. The administration's policy is to deploy ballistic missile defenses based on the best avail-

able options. It is my understanding that while the ground-based, mid-course system currently appears more mature, the administration intends to explore a broad range of missile defense technologies, pursuant to the President's guidance.

*Question.* To what extent would you recommend continuing this effort?

*Answer.* Secretary Rumsfeld has said that we have more work to do to determine the final form defenses might take. If confirmed, I will work with my colleagues in the Department to explore all of these options.

*Question.* Secretary Rumsfeld has indicated his intention to stop differentiating between "theater" and "national" missile defense systems.

Does this change in terminology in any way signify a reduction in the priority for programs designed primarily for tactical or battlefield use, such as the Theater High Altitude Area Defense, the Patriot PAC-3, the Airborne Laser, or the Navy Area Defense?

*Answer.* No. The President has said we will deploy a system capable of defending the United States, U.S. forces deployed overseas, and our allies and friends. Whether a particular system could be a "national" system or a "theater" system depends on where you live and how close you are to the threat.

#### ABM TREATY

*Question.* What, in your view, is the legal status of the ABM Treaty today?

*Answer.* The Bush administration has not announced a specific view on the ABM treaty's legal status. The administration has treated the ABM Treaty as being in effect. I agree with the administration's approach.

*Question.* Do you agree with the view that the treaty ceased to be legally binding when the Soviet Union dissolved?

*Answer.* The Bush administration has treated the ABM as being in effect. I agree with the administration's approach.

*Question.* The President has described a new strategic "framework" as the best alternative to the ABM Treaty in its current form. In your view, should such a framework be a new treaty, which would require Senate advice and consent, or should it be something other than a treaty? If not a treaty, what alternatives should the United States consider, and why?

*Answer.* I understand that the concept of a new strategic framework is currently being discussed, and no decisions have been made regarding its form. It is my view that any such framework should provide for the opportunity for openness, mutual confidence, and include a real chance for cooperation—including in the field of missile defense.

*Question.* If you do not believe that the ABM Treaty ceased to exist with the collapse of the Soviet Union, do you believe that the treaty should be modified? If yes, what types of defensive systems should any such modifications permit or disallow?

*Answer.* As the President has said, we need to move beyond the ABM Treaty, which prohibits us from pursuing promising new missile defense technologies. I have been told that all available technologies and basing modes are being examined, but no decisions have been made.

*Question.* If you do believe that the ABM Treaty ceased to exist as a matter of law when the Soviet Union collapsed, do you believe that Russia, nevertheless, should abide by all of the international treaties and obligations that were entered into by the former Soviet Union, including the ABM Treaty?

*Answer.* Russia has declared itself to be a successor state to the Soviet Union for the purposes of the ABM Treaty and various other agreements and should act accordingly.

#### STRATEGIC FORCES

*Question.* What role should strategic nuclear forces continue to play in United States policy and strategy?

*Answer.* As the President has said, "Nuclear weapons still have a vital role to play in our security and that of our allies." I believe that nuclear weapons remain a critical part of the overall deterrent capability of the United States. Nuclear weapons also serve as a means of upholding U.S. security commitments to our Allies, as a disincentive to those who would otherwise contemplate developing or acquiring their own weapons, and as a hedge against an uncertain future.

*Question.* What criteria should the United States use in determining an appropriate strategic nuclear force posture for the foreseeable future?

*Answer.* It is my understanding that these criteria will be developed as a part of the congressionally mandated Nuclear Posture Review (NPR). I am not aware of the status of the review, nor am I aware of what criteria will be applied in determining an appropriate strategic nuclear force posture for the foreseeable future.

*Question.* The National Defense Authorization Act for Fiscal Year 2001 requires the Secretary of Defense to prepare a new Nuclear Posture Review and a Plan for the Modernization and Sustainment of United States Strategic Nuclear Forces.

If confirmed, would you ensure that these requirements are fulfilled in a thorough and timely manner?

Answer. Yes.

*Question.* In your view, will the United States need to resume underground nuclear testing in the foreseeable future in order to ensure the reliability, safety, and security of the United States strategic nuclear forces?

Answer. If confirmed, I would support a review of how we can ensure the reliability and safety of our nuclear weapon stockpile.

*Question.* Do you believe that Russia should comply with the terms and conditions of the START II Treaty?

Answer. I regret that Russia did not unconditionally ratify START II as the United States did in 1996. As long as START II has not entered into force, Russia is not required to comply with its terms and conditions. However, I believe the administration would welcome Russian strategic force reductions to START II levels or below.

*Question.* Do you support ratification of the START II Treaty or would you advocate moving directly to a START III Treaty?

Answer. I understand that the Bush administration is currently reviewing nuclear forces and associated arms control policies as part of a strategic review. As the President noted in his speech on May 1, the objective is to reduce the number of nuclear weapons to the lowest level consistent with our national security requirements including our commitments to our allies. The President also has indicated that he wants to reduce nuclear forces quickly and is prepared to lead by example.

*Question.* As part of the ongoing review of strategic nuclear programs and the statutorily mandated nuclear posture review will you commit to look at the entire nuclear enterprise as part of that review, including the total number of nuclear weapons, the required number of delivery systems, ensuring a balance between the number of weapons and the delivery systems, and the requirements of the nuclear weapons complex?

Answer. If confirmed, I look forward to consultations with this committee on these matters as well as in other areas. As I noted earlier, I am not aware of the progress of the Nuclear Posture review. However, we would welcome Russian strategic force reductions to START II levels or below.

*Question.* Will you agree to work closely with the National Nuclear Security Administration?

Answer. Yes, I believe the Department of Defense and the National Nuclear Security Administration need to work closely together. The National Nuclear Security Administration has a critical role in supporting U.S. national security interests because of its responsibility to ensure the safety, security, reliability and effectiveness of U.S. nuclear weapons. If confirmed, I intend to work closely and cooperatively with Gen. John Gordon (Ret.), the Administrator of the National Nuclear Security Administration, and key members of his staff.

*Question.* Do you support the Stockpile Stewardship Program?

Answer. Ensuring the safety, reliability, and effectiveness of U.S. nuclear weapons is critically important to the National security interests of the United States. If confirmed, I would support an administration review of the Stockpile Stewardship Program to evaluate how well it has done its job to date, and how to improve it to meet future stockpile issues.

*Question.* If you believe that the U.S. will need to resume underground explosive nuclear testing, what is the test that would be necessary, why is it necessary, what is the specific problem to be addressed, why are the alternatives to testing not suitable, and when must such a test be conducted?

Answer. I have not been briefed on a DOD requirement for the United States to resume nuclear explosive testing at this time. As I said earlier, if confirmed, I would support a review of how we can ensure the reliability and safety of our nuclear weapon stockpile.

#### SPACE POLICY

*Question.* Do you support the 1996 National Space Policy?

Answer. The 1996 National Space Policy continues to provide policy and guidance for the conduct of the our nation's space activities. I agree with the Commission to Assess United States National Security Space Management and Organization that "the broad outline of U.S. national space policy is sound." I expect that the number, range, and complexity of domestic and international space issues, however, will con-

tinue to increase. If confirmed, I look forward to working with Congress and my administration colleagues to ensure that our national space provides a coherent approach and clear direction for advancing our interests in space.

*Question.* Do you favor the development and deployment of weapons in space?

*Answer.* The question of whether to develop and deploy weapons in space or not is one that deserves careful and thoughtful consideration. If confirmed, I look forward to participating in the process that will answer this question.

#### DOD'S COOPERATIVE THREAT REDUCTION (CTR) PROGRAM

*Question.* The CTR program has several key objectives that include (1) reducing strategic nuclear weapons; (2) improving the security and accounting of nuclear weapons and fissile material; (3) eliminating and preventing biological and chemical weapons and capabilities; and (4) encouraging military reductions and reforms to reduce proliferation threats. Currently, the Department of Defense is conducting a review of these programs to determine the program's future direction.

In light of the CTR objectives, do you believe the CTR program should continue with its current scope or do you believe adjustments are necessary?

*Answer.* The President supports the goals and objectives of the CTR program. I have been briefed that the CTR program is just one of a number of programs under review at this time by the administration. A review of all CTR program areas and their respective national security benefits will determine how the program can best meet its goals efficiently and effectively.

*Question.* In your view, what do you believe should be the top three objectives for the CTR program?

*Answer.*

1. Accelerate reductions in Russian strategic arms.
2. Prevent proliferation of nuclear weapons and fissile material from the former Soviet Union.
3. Elimination of SS-24 missiles in Ukraine and infrastructure in Ukraine and Kazakhstan.

*Question.* Secretary Rumsfeld stated in his answers to advance policy questions to this committee that "the elimination of former Soviet strategic nuclear weapons and their delivery vehicles that the CTR program has funded has benefited U.S. national security."

What is your view of the CTR program's chemical and biological weapons elimination efforts?

*Answer.* As the President has noted, many nations have or are seeking chemical and biological weapons and related weapons delivery technologies. The United States has an interest in ensuring that Russia eliminates its stockpile of chemical munitions and biological agents. As I noted earlier, the CTR program activities that address these threats are under review along with the nuclear threat reduction programs. The benefit to U.S. security should be the primary criterion being used to evaluate continued support of these programs.

*Question.* Do you believe these have benefited U.S. national security? How?

*Answer.* The elimination of former Soviet strategic nuclear weapons and their delivery vehicles funded by the CTR program has benefited U.S. national security. The United States also has an interest in ensuring that Russia eliminates its stockpile of chemical munitions and biological agents. At the same time we would not want the CTR program to become a means by which Russia frees resources to finance its military modernization programs.

*Question.* Given increases in Russia's gross domestic product during the past year and subsequent increases in its military spending and arms exports, what is your view regarding Russia's ability to assume more of the cost share associated with CTR efforts in Russia?

*Answer.* Russia should do what it can to fund the reduction of the weapons of mass destruction left by the Former Soviet Union. I understand that part of the ongoing administration review of assistance programs to Russia is to identify whether Russia is doing as much as it can to fund these reductions and to identify whether they can do more. The recent upturn in the economic situation in Russia will be taken into account in the review.

*Question.* In light of Russia's increasing priority on military spending, what is your view regarding the fungibility of U.S. funds associated with threat reduction assistance?

*Answer.* Investment in the CTR program and other U.S. nonproliferation programs to should not become a means by which Russia frees resources to finance its military modernization programs. I understand that the current review of these programs is looking at these questions.

*Question.* Do you think the CTR program is well coordinated among the U.S. government agencies that engage in threat reduction efforts in Russia, e.g., the State Department and the Department of Energy?

*Answer.* Effective coordination between among all U.S. government agencies is vital to the success of any multi-agency endeavor. I have been informed that the administration is reviewing CTR along with Russian assistance programs provided by other U.S. agencies to determine how we can best to ensure the most cost-effective means to achieve our objectives.

*Question.* Do you believe the CTR program should pay for the construction of fossil fuel plants to assist with replacing the power produced by the planned shut down of the three remaining plutonium production reactors in Russia?

*Answer.* Secretary Rumsfeld has previously noted that it has been the policy of our country to attempt to assist in seeing that nuclear materials in Russia are handled in a safe way so that they do not proliferate. The current review should assess how best to eliminate effectively and efficiently the Russian production of weapons-grade plutonium.

*Question.* Will you have responsibility for policy development, coordination, and oversight of the CTR program, if confirmed?

*Answer.* Yes, if confirmed.

*Question.* Do you fully support the CTR programs?

*Answer.* The elimination of former Soviet strategic nuclear weapons and their delivery vehicles funded by the CTR program has benefited U.S. national security. The United States also has an interest in ensuring that Russia eliminates its stockpile of chemical munitions and biological agents. At the same time we would not want the CTR program to become a means by which Russia frees resources to finance its military modernization programs. If confirmed, I will work to ensure that the CTR program meets its goals efficiently and effectively.

*Question.* Do you support the active participation of the United States in the effort to destroy Russian chemical munitions at Shchuch'ye?

*Answer.* I have been informed that U.S. funding for the construction of a chemical weapon destruction facility at Shchuch'ye is under review. Many complex issues are involved in this program, including Russian and international commitments to this program. The review will help inform a decision on how the administration wants to proceed with this and other assistance programs.

*Question.* If the CTR program does not support the shutdown of the last three plutonium producing reactors in Russia and replace their power generating capacity with fossil fueled plants, how would you propose to stop plutonium production in Russia by 2006 or earlier? Do you believe that the CTR program should support the destruction of Russian nuclear powered submarines capable of delivering nuclear weapons by other than SLBMs? Do you support expansion of the CTR program and if so in what specific areas?

*Answer.* I am not in a position to make a judgment on these issues at this time. If confirmed, I look forward to working with this committee on these and other important questions relating to the CTR program.

#### RUSSIA AND IRAN

*Question.* In December, 2000, Secretary Cohen met with then Russian Defense Minister Igor Sergeyev to discuss U.S. concern over Moscow's continuing arms sales and proliferation activities with Iran. While this meeting and subsequent State Department meetings were considered positive, the United States did not receive concrete assurances from Russia that these proliferation activities would cease. In fact, subsequent actions by Russia indicate that Russia intends to continue and increase its arms sales and nuclear technology efforts with Iran, despite U.S. concerns.

As Assistant Secretary of Defense for International Security Policy, what policy options would you propose to address the continued proliferation activities of Russia regarding Iran?

*Answer.* If confirmed, I would look at the full range of available options. I would underscore for Russian policymakers that this is a new administration and that positive, concrete steps on their part to address our security and stability concerns in this area can provide a basis for a constructive bilateral relationship.

*Question.* Would you propose limiting or prohibiting Cooperative Threat Reduction assistance to Russia until Russia ceases its proliferation activities with Iran?

*Answer.* I have been informed that the administration is currently reviewing its options for encouraging Russia to cease its proliferation activities with Iran, including possible steps in the event that Russia does not cease such cooperation. If confirmed, I would expect to participate actively in that review.

## COMPREHENSIVE TEST BAN TREATY/NUCLEAR TEST MONITORING

*Question.* What do you believe the policy should be within the Department of Defense regarding DOD Programs that support the Comprehensive Test Ban Treaty?

*Answer.* Secretary Rumsfeld has said that he has two concerns with the Comprehensive Test Ban Treaty (CTBT): the risks to the reliability and safety of our nuclear weapon stockpile and the difficulty of verification. Because the CTBT has not been ratified by the United States or entered into force, the United States is under no obligation to implement it. If confirmed, I would strongly support a review of all planned DOD activities associated with the CTBT, to determine whether they are useful on their own merits.

## ARMS CONTROL TECHNOLOGY PRIORITIES

*Question.* The Department of Defense plays the lead role in developing and implementing arms control technology in support of arms control agreements.

What do you believe should be the key capabilities that the Department should pursue and develop? What challenges do you believe exist in developing these key capabilities?

*Answer.* I am not in a position to make a judgment on these issues at this time. If confirmed, I look forward to working with this committee on these and other important questions relating to arms control technologies and capabilities.

## BIOLOGICAL WEAPONS CONVENTION (BWC)

*Question.* The Biological Weapons Convention (BWC) prohibits the stockpiling of biological materials in quantities that are not justifiable for solely peaceful purposes. Currently, the parties to the Convention are discussing details of a new protocol that consists of a legally binding regime for verification that goes beyond confidence building measures. Critics of these discussions believe that such verification measures are impossible due to limitations in the technology to enforce these measures.

What is your view of the Convention and do you believe it is possible to establish and verify measures beyond confidence building?

*Answer.* The Biological Weapons Convention establishes an important norm against the development, production, acquisition and stockpiling of biological weapons. However, given the nature of biological weapons and biotechnology, the Convention is inherently unverifiable.

## EXPORT ADMINISTRATION ACT

*Question.* The Export Administration Act of 2001 (S.149) was introduced by Senators Enzi and Gramm, and reported out of Banking Committee subsequently on a 19-1 vote on March 22, 2001. The administration has released a Statement of Administration Position indicating its support for the bill in its current form.

Do you support the Export Administration Act of 2001 in its current form? If not, what changes do you believe are needed to the measure?

*Answer.* I support the use of export controls to protect U.S. national security. The administration has indicated its support for the bill in its current form. I have not yet been briefed on the bill, but I note that it contains several provisions that will improve the process for controlling exports of dual-use goods and technologies. It also has other provisions that will help transition the current system-based cold war policies into a more modern system that focuses on WMD, end-user and end-use controls. As a result, the bill would allow the administration to meet national security and foreign policy objectives without impairing U.S. companies' ability to compete in the world marketplace.

*Question.* Do you believe that the State Department or the Commerce Department should be the lead agency for licensing satellite exports?

*Answer.* My own views on this question are not yet fully formed. I believe Congress and the administration must be deliberate in contemplating any change in export controls. Any review must be undertaken in a manner that seeks to preserve fundamental national security interests. I believe that the administration will be examining this issue carefully (including any statutory or regulatory changes that might be required), and will consult closely with Congress as this review proceeds.

*Question.* Do you believe that additional steps need to be taken to streamline the export control process?

*Answer.* I understand that the administration will be examining whether further streamlining is necessary.

*Question.* Do you support the Defense Capabilities Initiative (DCI)?

Answer. I support the goals and objectives of the DCI, but I have not yet been fully briefed on its implementation or the extent to which it has improved our Allies abilities to meet the needs of NATO in the 21st century.

THE OSLO ACCORDS

*Question.* What is your view of the Oslo Accords? Do you believe that Israel should abrogate any or all of the Oslo agreements, or do you believe that Israel and the Palestinian Authority should honor the agreements arrived at to date, and that the peace process should continue?

Answer. I have not fully formed a view on the Oslo Accords. I note that this issue will not be in the area of responsibility of the position for which I am seeking confirmation.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of the Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for International Security Policy?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

NORTH KOREA

1. Senator LEVIN. During your nomination hearing, I asked you for your view as to whether you believe the United States should continue to support the Agreed Framework. You responded to the effect that the issue was still being considered by the administration. I then advised you that, during his visit to South Korea on May 10th, Deputy Secretary of State Armitage delivered a letter from President Bush for President Kim Dae Jung in which President Bush stated that we expected, among the things our policy review would show that we would continue to support the Agreed Framework. Subsequently, on May 16th, State Department spokesman, Richard Boucher, stated that "Our position has always been that we intend to abide by the Agreed Framework and we expect them to abide by the Agreed Framework. . . ."

Do you believe that we should continue to abide by the Agreed Framework?

Dr. CROUCH. Yes, I support the administration's recent announcement on abiding by the Agreed Framework. The administration has decided to undertake discussions with North Korea on a broad agenda that includes improved implementation of the Agreed Framework. I believe that the international situation has changed greatly since 1994 when I first wrote about the Agreed Framework. The June 2000 inter-Korean summit is one example of this change. In coordination with our Asian allies, the administration will hold discussions with North Korea aimed at reaching verifiable arrangements that enhance our national security and that of our allies.

2. Senator LEVIN. At your hearing, I asked about your article published in 1995 about North Korea, in which you advocated presenting North Korea with an ultimatum and bombing North Korea if they did not acquiesce to our demands. At the hearing, you suggested that you had done nothing different than what then-Defense Secretary Perry had done to consider the option of offensive military action.

As I see it, there is a considerable difference between your position and that of Secretary Perry at the time. In Dr. Perry's case, as he told this committee on Janu-

ary 26, 1995, he considered—but rejected—the option of taking military action to destroy the one reactor before it could be refueled and its spent fuel reprocessed. That was a matter of prudent military planning. Secretary Perry never advocated a pre-emptive attack against any or all of North Korea's nuclear facilities, nor giving North Korea an ultimatum.

In your case, you advocated the position that we should issue North Korea an ultimatum to get rid of its nuclear complex and to “authorize the destruction of as much of this complex as possible,” if they did not take “positive, visible” steps to do so. According to what he told this committee, Secretary Perry did not advocate that position; he looked at the various scenarios and options and recommended to the President a course of action that he thought had the best chance of reducing the North Korean nuclear threat and preserving U.S. security, which was not to authorize a pre-emptive strike.

Do you agree that there is a difference between the Secretary of Defense considering—and rejecting—a number of options, including the possibility of military action against the Yongbyon reactor, and your advocating the destruction of the North Korean nuclear complex if North Korea did not accept an ultimatum to do so itself?

You mentioned at your hearing that you believed Secretary Perry testified to the Senate Foreign Relations Committee on North Korea and advocated a position similar to yours. If he did so, it would be very different from what he told the Armed Services Committee. Can you provide a record of Secretary Perry's testimony to the Foreign Relations Committee?

Dr. CROUCH. Mr. Chairman, I stated in my testimony that “even Secretary Perry, who, I believe testified before the Senate Foreign Relations Committee that he was considering options to do just this is evidence of the serious nature of this.” In testimony before the Senate Foreign Relations Committee on January 24, 1995, he stated:

*What were the alternatives then faced by the United States? Obviously, there was an alternative, a theoretical alternative, of going in and taking out the nuclear reactor. We considered that option. We looked very carefully at what would be required to do that. I can tell you flatly that we know how to do that, but on consideration, I did not recommend that course of action to the President—and careful consideration did not recommend that course of action.*

I agree with you that there is a difference between having considered options and having authorized them. My intervention in the hearing in which I paraphrased Secretary Perry's testimony was in response to questions about the reasonableness of my recommendations. I was pointing out that the sitting Secretary of Defense was concerned enough about the situation to have planned for, and considered, options to do what I recommended doing if the North Koreans did not respond to demands to open up their nuclear facilities to international inspection. He went on in his testimony to state, “there is no security problem we are facing more important than this one in which the alternatives are grimmer.” My intervention was not to portray Secretary Perry's views and mine as identical, but simply to demonstrate that in that time and in those circumstances, others were considering the same kinds of military actions that my article discussed.

In December 1993, Representative John Murtha suggested that if we know the location of the North Korean weapons facility, “we should consider military action.” He went on to state:

*You have to weigh what the North Koreans would do, because obviously it could precipitate an invasion. My feeling is I would be willing to take that chance, because to me it is just unthinkable to have a regime like North Korea with a nuclear weapon of any kind. It would be like Iraq having a nuclear weapon.*

In June 1994 Senator Robert Dole stated in response to questioning about the crisis: “I would not rule out the military option. I'd go ahead and start building up in that part of the world.” This echoes what Secretary Perry said at the time, “I said we will not have a preemptive military strike at this time and under these circumstances. I am not ruling that option out in the future.”

Finally, former National Security Advisor Brent Scowcroft and former Under Secretary of State Arnold Kanter stated in a June, 1994 *Washington Post* editorial: “We should tell North Korea that it either must permit continuous, unfettered IAEA monitoring to confirm that no further reprocessing is taking place, or we will remove its capacity to reprocess.” They acknowledged that this course of action is “not risk-free” and recommended a build-up of U.S. forces similar to what I recommended in my article. They concluded by stating: “Pyongyang must be made to understand that if war is unavoidable, we would rather fight it sooner than later,

when North Korea might have a sizable nuclear arsenal." This judgment, Mr. Chairman, was a central factor in my making the recommendations in my article.

Mr. Chairman, I certainly acknowledge a great difference between considering options and executing them. I also stated in my testimony that it was possible that "if different facts had come to light that I was not aware of because I was out of government," I may have made different recommendations. I agree with Secretary Perry that we were facing grim alternatives during this time. I quote the thoughts of others during this crisis not to convince you or the committee that my recommendations were right, or to imply that those quoted held identical views to mine, but simply to demonstrate that similar ideas were considered at the time by well respected authorities.

**Special Note:** Mr. Chairman, I would like to take this opportunity to respond to a concern you raised during my hearing about the use of the word "collude" in my 1995 article on North Korea. I have reread that article, and I can see that was a poor choice of words on my part. What I was trying to convey in that paragraph was that the Clinton administration, the IAEA, and the North Koreans had very different reasons for joining together in the Agreed Framework regime, though the fact of agreement was widely taken as a sign of true commonality of purpose. I was not trying to say that U.S. support for the Agreed Framework involved impropriety. I should not have used a word that can be taken as implying that. I believe that reasonable people can differ on the value of the Agreed Framework, and I also recognize that since the hearing, the President has announced the administration's support for moving forward with its implementation. If confirmed, I would wholeheartedly support the President in his efforts to implement that agreement in ways that enhance its prospects for success.

#### CHEMICAL WEAPONS CONVENTION

3. Senator LEVIN. In March 1996 you testified against ratification of the Chemical Weapons Convention before the Senate Foreign Relations Committee. You said in your testimony: "I cannot imagine an agreement less suited to our security needs in the post-Cold War security environment [than the CWC]."

You also said that with the CWC, the United States is abandoning "one of the most effective deterrents to chemical use against itself and its allies: the right to an extant and mature offensive chemical weapons program."

You said that the CWC would weaken deterrence "by eliminating the ability of the United States to respond in kind to chemical attack," and the result would be "that American and allied soldiers and citizens are more, not less, likely to be attacked with chemical weapons."

Are these still your views? Do you believe that the CWC has weakened deterrence and increased the likelihood of a chemical weapons attack on American soldiers?

Dr. CROUCH. While my earlier statements focused on my belief in the deterrent value of response in kind, I also believe there is deterrent value in robust defenses, including chemical defenses, that will deny an aggressor any advantages in first use of chemical weapons. The Senate substantially improved the CWC during the ratification process. For example, the Senate endorsed an enhanced and robust chemical and biological defense program in Ratification Resolution #11. The Department of Defense has similarly made a commitment to establishing robust chemical defenses that have sent the clear message to states that might contemplate use of CW that DOD is prepared for combat in a CW environment. I believe that this has diminished the likelihood of attack on American soldiers.

The CWC is now the law of the land. If confirmed, I see it as one of my most important responsibilities to ensure that it is implemented and enforced as effectively as possible. If confirmed, I would look forward to working with the committee to improve further our capabilities to deter and defend our forces against CW attack in the absence of a response in kind.

4. Senator LEVIN. If confirmed as Assistant Secretary of Defense for International Security Policy, will you advocate that the U.S. withdraw from the Chemical Weapons Convention?

Under what circumstances would you advocate withdrawing from the treaty?

Dr. CROUCH. I would not advocate a withdrawal from the Chemical Weapons Convention and cannot foresee the circumstances under which I would do so.

5. Senator LEVIN. Do you believe the U.S. should have an offensive chemical weapons capability? Would you advocate withdrawing from the CWC to develop such a capability?

Dr. CROUCH. I would not advocate a withdrawal “from the CWC to develop such a capability” and cannot foresee the circumstances under which I would do so.

#### NUCLEAR WEAPONS

6. Senator LEVIN. In an article in *Global Affairs* in 1993, you wrote that “in order to neutralize the effects of nuclear, chemical, or biological weapons that some future Saddam might put on a ballistic missile, our next generation, long-range Patriots might have to carry very low-yield nuclear weapons.”

Do you favor equipping missile defense interceptors with nuclear warheads?

Dr. CROUCH. No, I do not think the United States has such a requirement. Since 1993, the United States has demonstrated many hit-to-kill successes. For example, the Ballistic Missile Defense Organization has conducted eight successful intercepts for advanced PATRIOT (PAC-3), two for Theater High Altitude Area Defense (THAAD), and one for the Ground-Based Interceptor. I believe the most promising solution to weapons of mass destruction threats may be to develop hit-to-kill technologies in combination with boost-phase interception that could neutralize these threats.

#### ABM TREATY

7. Senator LEVIN. If confirmed as the Assistant Secretary of Defense for International Security Policy, you will be one of the main Defense Department policy makers involved in any negotiations to modify the ABM Treaty or to replace it with some new strategic framework.

In your view, how should these negotiations proceed? Do you believe that the ABM Treaty can be modified to allow the deployment of limited missile defenses?

Dr. CROUCH. The President has said the ABM Treaty should be replaced with a new framework that reflects a break from Cold War thinking and facilitates development of a new, cooperative relationship between the United States and Russia. Quite properly, in my view, the administration is consulting with the Russians, with Allies, and with Congress on the concept of such a framework, which should provide the opportunity for openness, mutual confidence, and a real chance for cooperation, including in the area of missile defense. The exact nature of the new framework and whether it includes agreements, parallel or unilateral actions, or a combination thereof, is something that is being developed. As Secretary Rumsfeld is quoted in the June 12 edition of the *New York Times*, “We may end up signing something that is not a treaty, but it’s an agreement or it’s an understanding or it’s a record of discussion.” The President is looking at a wide range of ideas for the framework, and whether amendments will be part of it remains under consideration. If confirmed, I look forward to participating in these efforts.

#### NATO EXPANSION

8. Senator LEVIN. In your answer to a pre-hearing policy question, you stated that “A main factor in considering future NATO expansion is whether or not expansion will enhance U.S. and NATO security. It is important that the broadening of NATO membership preserve the Alliance’s capacity for effective collective action.”

Do you believe that the enlargement of the Alliance to include Poland, Hungary and the Czech Republic enhanced U.S. and NATO security?

Do you believe that the United States’ and NATO’s relationship with Russia should be a consideration in the NATO enlargement decision?

Dr. CROUCH. Yes, the accession of Poland, Hungary, and the Czech Republic has enhanced U.S. and NATO security. As a concrete example, in October 2000 the Congressional Budget Office judged that all three of the new allies are making roughly proportional contributions to the ongoing missions in Bosnia and Kosovo compared with other long-standing NATO members with populations of similar size. This is quite an accomplishment for countries that are in the process of restructuring and modernizing their military forces from Warsaw Pact design to NATO requirements, which the United States has always expected to require many years.

As Dr. Rice, the Assistant to the President for National Security Affairs, said on June 6, “the United States believes strongly that enlargement needs to continue. It is only natural that enlargement will continue, that we believe strongly that there should be no red lines, geographic or historic, that eliminate any country as a fait accompli, and that we believe that there can be no veto by any country over NATO enlargement.”

While Russia will not be allowed to veto a NATO decision on which additional countries are admitted to NATO, I believe that the U.S. and NATO's relationship with Russia should and will be a consideration in the NATO enlargement decision.

#### NATO

9. Senator LEVIN. NATO's 50th anniversary Washington Summit, the Alliance launched the Defense Capabilities Initiative which is designed to improve NATO's core capabilities in five areas: mobility and deployability, sustainability and logistics, effective engagement, survivability, and consultation, command and control. Secretary General Lord Robertson, in reviewing the progress on the Defense Capabilities Initiative last year said that "governments will have to spend smarter, and where necessary, they will have to spend more."

In a speech in Barcelona on May 10th, U.S. Ambassador to NATO Sandy Vershbow, stated that "Unfortunately, 2 years after the Washington Summit, the reality is that rhetoric has far outpaced action when it comes to capabilities."

Last Wednesday, the London-based think tank, International Institute for Strategic Studies, issued its annual Strategic Survey, which found that "European military forces are still in many respects configured for the Cold War era. Rising personnel costs and a wave of systems acquisitions initiated long ago, as well as the costs of ongoing operations, have left little room for investment in R&D and procurement to satisfy newly identified requirements. . . . European defense spending in real terms continues to fall at a rate of nearly 5 percent every year."

If confirmed, how would you plan to encourage our European allies to spend more wisely and, if necessary, spend more so as to improve NATO's core competencies?

Dr. CROUCH. The United States, like all Allies, continues to support strongly the Defense Capabilities Initiative (DCI). The Alliance is aware of its shortfalls, and all nations are working to improve national, and Alliance capabilities. While I am sympathetic to the budgetary concerns of our Allies—all nations, including the United States, have budgetary constraints—I believe they must do more to ensure adequate spending and appropriate priorities for defense.

If confirmed, I intend to continue DCI work at NATO and in bilateral meetings to press Allies to move forward on their defense restructuring plans and improved spending levels. Many Allies have chosen to begin to work cooperatively to meet capability shortfalls. I understand the United States fully supports these efforts and has offered to assist these multinational groups. I also understand the United States is chairing a multinational group on combat identification to determine whether there is scope for cooperation. The United States is committed to working with our Allies to build defense capabilities and remains committed to improving transatlantic defense industrial cooperation, to include meaningful cooperation in co-development and technology sharing. If confirmed, I look forward to exploring with the committee ways we can advance these goals.

#### MACEDONIA

10. Senator LEVIN. For the past several months, we have witnessed fighting between ethnic Albanians and government forces in the Former Yugoslav Republic of Macedonia. NATO has agreed to offer some assistance to the Macedonian Government in this conflict.

What do you believe is the proper role for the United States and NATO in this conflict? Should our involvement, if any, include the use of U.S. troops?

Dr. CROUCH. I believe that the administration's current level of support to the forces of the Former Yugoslav Republic of Macedonia is the appropriate level of support at this time. I do believe it is important that the United States and NATO continue to monitor the situation closely. I do not think that there is a requirement for U.S. ground combat forces. I am not aware of any facts or any circumstances on the ground that would suggest a role different from the current role of U.S. peacekeeping forces in the region.

#### WEAPONS IN SPACE

11. Senator LEVIN. Do you favor the development and deployment of weapons in space?

Dr. CROUCH. The security and well-being of the United States, our allies, and friends depend on our ability to operate in space. Our increasing dependence and the vulnerability it creates, however, require us to have the means to deter and dissuade threats to our national interests in space. In this regard, I strongly support

the 1996 National Space Policy, which provides that “consistent with treaty obligations, the United States will develop, operate, and maintain space control capabilities to ensure freedom of action in space and, if directed, deny such freedom of action to adversaries. These capabilities may also be enhanced by diplomatic, legal or military measures to preclude an adversary’s hostile use of space systems and services.” A broad range of military capabilities may be required to implement this policy. I understand the administration has included in its on-going strategic review the range of capabilities necessary to implement this policy, and I support this effort.

---

QUESTION SUBMITTED BY SENATOR MAX CLELAND

NORTH KOREA

12. Senator CLELAND. In a 1995 article, you proposed using air strikes to destroy the North Korean nuclear facilities in the absence of evidence that the North Koreans dismantled these facilities in accordance with a specified deadline. In testimony at the 5 June hearing, you stated that you stood by that recommendation given the situation as it was then, but would not recommend the same approach now given the improvements that have occurred in relations on the Korean peninsula.

Explain how you could conceivably have thought air strikes against an unstable regime with a large chemical weapon inventory and the most offensively postured military in the world would have accomplished objectives consistent with U.S. interests in 1995. What was the likelihood, in your 1995 calculus, that the North Koreans would have responded in some military fashion, such as with a chemical Scud attack against a population center? What was the contingency plan, in your mind, to deal with this possibility?

Dr. CROUCH. When I wrote my article in 1995, the situation in Korea was as Secretary Perry described it: “There is no security problem we are facing more important than this one in which the alternatives are grimmer.” As I noted in my answer to Question 25, I was not alone in the midst of that situation in considering the airstrike option—many respected defense authorities, both inside and outside the government, were also considering it. From my vantage point—outside the government and without access to the full range of information available to those in authority—the airstrike option seemed necessary to achieve our objective and, along with the other steps I was recommending, to mitigate damage in the event deterrence failed.

I believe, and this belief was shared by responsible experts, that in any event there was a worrisome possibility of North Korean aggression against South Korea and U.S. forces stationed there in the mid-1990s. I recommended in my 1995 article that a series of steps be taken to bolster deterrence on the Korean peninsula. These included strengthening the U.S. force posture in various ways, including developing and deploying with South Korea and Japan a missile defense capable of countering the North Korean missile arsenal. All of these measures were designed to strengthen deterrence and, in the contingency that might follow the failure of deterrence, to minimize the impact of a North Korean use of weapons of mass destruction.

---

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

NATO

13. Senator THURMOND. Press accounts of Secretary Rumsfeld’s strategic review indicate that the Secretary will recommend a shift of focus and forces from Europe to the Pacific.

In your personal opinion, what impact will such a shift have on our role within NATO?

Dr. CROUCH. The United States has a vital interest, with our European and Canadian Allies, in NATO. It will remain the foundation of America’s security commitment to its Allies. In my view, increased U.S. attention to the security situation, for example in the Persian Gulf or Korea, in no way implies any American intention to de-emphasize Europe. I do not believe this is a zero-sum game.

## EUROPEAN SECURITY AND DEFENSE POLICY

14. Senator THURMOND. A significant concern with the European Security and Defense Policy is that it will divert resources from the modernization and support of the European forces committed to NATO.

In your judgement, is this a valid concern? If not, why not?

Dr. CROUCH. The President and his administration support the European Security and Defense Policy as long as it adds capabilities to NATO, embeds EU planning within NATO, and ensures transparency and a right of first refusal for NATO. There is no reason why NATO and the European Union (EU) cannot work cooperatively to build capabilities, maintain operational military effectiveness, and avoid squandering scarce defense resources. Much hard work lies ahead to ensure we make progress on these three fronts—and avoid an unnecessary and destructive competition from arising between the two pillars of our transatlantic community.

The EU's Headline Goal and NATO's Defense Capabilities Initiative have many points of intersection. Both call for increases in strategic mobility and sustainability. The EU's catalogue of forces and NATO's force goals both envision the need for increased capabilities in the areas of deployable and secure communications, suppression of enemy air defenses, aerial refueling, biological defense, and theater missile defense. Because eleven of the members of the EU are also members of NATO, there is a wonderful opportunity for European nations to increase these capabilities and take credit for the improvement in both NATO and the EU. Each of these European nations has only one pool of forces to draw from and only one budget to support their aspirations for and promises to NATO and the EU.

## BOSNIA

15. Senator THURMOND. I, like many of my colleagues, am concerned about the continuing commitment of our forces to Bosnia. I believe now is the time to start planning for the complete withdrawal of our forces from that specific region.

What in your judgment are the conditions that must be met before the United States can withdraw its forces from Bosnia?

Dr. CROUCH. The Bosnia commitment is an Alliance effort: U.S. policy is that since the allies went in together, they will leave together. When withdrawal may actually be appropriate will depend on judgments to be made about whether it would leave intact the essential achievements of the Dayton Accords, namely cessation of the war and preservation of regional stability. The mission has evolved from a primarily military mission into one that is more a matter of civil implementation. Overall force levels are reviewed every 6 months in the Alliance.

## QUESTIONS SUBMITTED BY SENATOR BOB SMITH

## CHINA MIL-TO-MIL

16. Senator SMITH. I'm directing this comment to you because I'm sure you're aware of controversy over the U.S./China military-to-military exchanges—I authored the fiscal year 2000 DOD restrictions on these exchanges.

I have requested a briefing on the department's perspective of the value of these contacts, the lack of reciprocity on the part of the Chinese, and to discuss how we might improve the program—if it is going to continue—so that it meets some clear objectives and is not divulging militarily useful information to the Chinese military.

Can you comment on the administration's change in the mil-to-mil program—how the new “case by case” review differ from the previous program under the Clinton administration?

Specifically, are we still trying to have the PRC observe at the COBRA GOLD exercises, as CINCPAC Admiral Blair stated?

Mr. FEITH and Dr. CROUCH. We have been advised that the Department of Defense began in January a series of broad policy reviews. One of the areas to be examined in detail was the program for military-to-military exchanges with the People's Republic of China. The first step in this process was to undertake a serious review of the schedule of military-to-military events with the PLA planned for 2001.

As we understand it, since the April 1 EP-3 incident over the South China Sea, business with China has not been as usual. Steps have been taken to limit the travel of DOD personnel to China and to limit contact with PRC officials, especially PLA personnel. The military-to-military program has been conducted on a case-by-case basis, with special emphasis on (1) benefit to U.S. interests and (2) reciprocity.

The PRC, along with other countries in the region, was invited to observe the command post portion of EXERCISE COBRA GOLD. The PRC, however, declined the invitation.

#### TAIWAN POLICY

17. Senator SMITH. I would also like to raise with you in the future the issue of closer ties between U.S. and Taiwan military forces. I believe we should lift the petty and counter-productive restrictions on U.S. military officer travel to Taiwan and allow more U.S. military personnel to train Taiwanese military personnel in Taiwan.

We should also be establishing direct and secure communications between Taiwan and the U.S. military, linking PACOM and Taiwan's defense ministry.

I urge you to undertake a review of U.S. military policy towards Taiwan. Not taking these steps could be disastrous in the event of another crisis in the straits.

Mr. FEITH and Dr. CROUCH. It is our understanding that the Department of Defense is reviewing a range of issues associated with our defense relationship with Taiwan, including enhancing our training programs. If confirmed, we would give serious consideration to the issue of U.S. military visitors to Taiwan.

---

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

##### NUCLEAR CITIES INITIATIVE

18. Senator SANTORUM. Created in 1998, the Nuclear Cities Initiative (NCI) is a nonproliferation program designed to create sustainable job opportunities for weapons scientists in Russia's closed nuclear cities and to help Russia accelerate the downsizing of its nuclear weapons complex. From fiscal year 1999 through December 2000, the expenditures for the NCI totaled about \$15.9 million. According to a recent report prepared by the General Accounting Office, of that amount, about \$11.2 million (or 70 percent) had been spent in the United States by the national laboratories, and about \$4.7 million (or 30 percent) had been spent for projects and activities in Russia.

About 50 percent of the NCI projects have been established to fund a variety of activities in the nuclear cities. According to DOE, while these projects may increase the potential for job creation in the closed cities, they are not designed to directly lead to new jobs for weapons scientists. DOE officials believe that community development projects are needed to improve the economic and social conditions in the cities in order to make them more attractive to commercial investors.

Do you believe that the level of funds being invested in Russia is adequate given the goal of the program to create sustainable jobs in Russia? What is your opinion of NCI investments in "community development" projects?

Dr. CROUCH. The Nuclear Cities Initiative is not a Department of Defense funded or administered program. I understand that the administration is conducting an interagency review of this program, and if I am confirmed, I will participate in the interagency process that is intended to provide general guidance on these programs. At this point, I have not been briefed on the NCI. If confirmed, I will look into this program early on, and I look forward to working with this committee in the area of aid to Russia.

##### INITIATIVES FOR PROLIFERATION PREVENTION

19. Senator SANTORUM. Another program, the Initiatives for Proliferation Prevention (IPP), is also administered by DOE. IPP seeks to employ weapons scientists in several countries of the former Soviet Union, including Russia and the nuclear cities. IPP is designed to commercialize technologies that utilize the expertise of the scientists who work at the various nuclear weapons institutes. IPP requires that all proposed projects have an industry partner to help ensure the commercial viability of each project.

The IPP program relies on a nonprofit association of U.S. companies and universities to help evaluate and develop commercial projects. The NCI program did not require that projects have industry partners or demonstrate commercial viability until January 2001. GAO speculates that since the NCI and IPP programs share a common goal, combining the two programs could alleviate many of the concerns the entity has with the implementation of the NCI program.

Do you concur with GAO's observation on commonalities existing between the NCI and IPP programs? Would you support a review that looked at consolidating these two programs?

Dr. CROUCH. The Initiatives for Proliferation Prevention program is not a Department of Defense funded or administered program. As with its Nuclear Cities Initiative, I understand that the administration is conducting an interagency review of this program. If confirmed, I will participate in the interagency process that is intended to provide general guidance on these programs and will look into the question of consolidating the programs. Like the NCI, I look forward to getting briefed on the IPP and working with this committee on ensuring that U.S. aid to Russia is efficiently administered.

---

QUESTION SUBMITTED BY SENATOR SUSAN COLLINS

NATO

20. Senator COLLINS. You mentioned in one of your responses to the advance questions, one of the major challenges that you will face will be developing a cooperative relationship with the European Union on the European Security Defense Policy that preserves NATO's military operational effectiveness. How do you propose that we preserve NATO's military operational effectiveness, and how do you propose the U.S. coordinate a united position with the other agencies involved in this effort, i.e. the Department of State?

Dr. CROUCH. For the United States, the maintenance of military operational effectiveness is the touchstone for assessing all proposals for European defense. As I stated in response to Question 60, the President and his administration support the European Security and Defense Policy as long as it adds capabilities to NATO, embeds EU planning within NATO, and ensures transparency and a right of first refusal for NATO. There is no reason why NATO and the EU cannot work cooperatively to build capabilities, maintain operational military effectiveness, and avoid squandering scarce defense resources. In implementing the President's policy with regard to ESDP, I believe it will be important to ensure that NATO's military operational effectiveness is preserved. If confirmed, I would get briefed on all the relevant facts and considerations and would look forward to working with others in the administration, including the Department of State, and with this committee in determining the best course of action with regard to ESDP and preserving NATO's capabilities.

---

[The nomination reference of Dr. Jack Dyer Crouch II, follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
May 7, 2001.

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Dr. Jack Dyer Crouch II, of Missouri, to be an Assistant Secretary of Defense, vice Franklin D. Kramer.

---

[The biographical sketch of Dr. Jack Dyer Crouch II, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. J.D. CROUCH II

J.D. Crouch is Associate Professor of Defense & Strategic Studies at Southwest Missouri State University in Springfield, MO. From 1990 to 1992 he was Principal Deputy Assistant Secretary of Defense for International Security Policy in the first Bush administration. From 1986 to 1990 he was the Military Legislative Assistant to Senator Malcolm Wallop (R-WY) and served as his staff designee on the Senate Armed Services Committee. From 1984 to 1986 he worked for the Assistant Director for Strategic Programs in the U.S. Arms Control & Disarmament Agency and was an Advisor to the U.S. Delegation on Nuclear & Space Arms Talks with the former Soviet Union.

He is also co-founder of PalmGear.com, a leading internet company. As part of his public service through the university, Dr. Crouch has served as a Reserve Deputy Sheriff in Christian County, MO and member of a Multi-County Special Response Team from 1993 to present. He is on the Board of Editors of *Comparative Strategy* and is a member of the Board of Advisors of the Center for Security Policy.

Dr. Crouch holds a Ph.D. in International Relations from the University of Southern California. He has written on a wide range of defense and foreign policy issues. He lives with his wife, Kristin Crouch, and his two children, Lara and Jake, in Nixa, MO.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. Jack Dyer Crouch II, in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Jack Dyer Crouch, II, aka J.D. Crouch.

2. **Position to which nominated:**  
Assistant Secretary of Defense for International Security Policy.

3. **Date of nomination:**  
May 7, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
July 1, 1958; Santa Monica, CA.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Kristin Crouch, Maiden Name: Karnbrock.

7. **Names and ages of children:**  
Lara, 12; Jake, 9.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

University of Southern California, 09/81-08/87, Ph.D. 08/87.

University of Southern California, 06/80-08/81, M.A. 08/81.

University of Southern California, 06/76-06/80, B.A. 06/80.

Palm Springs High School, 09/73-06/76, Diploma 06/76.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Associate Professor, Southwest Missouri State University, Springfield, MO, 08/92–present.

Principal Deputy Assistant Secretary of Defense (ISP), DOD, Washington, DC., 02/90–07/92.

Legislative Assistant, Senator Malcolm Wallop, Washington, DC., 03/86–02/90.

Foreign Affairs Officer, ACDA, Washington, DC., 08/85–03/86.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Deputy Sheriff; Christian County Sheriffs Department, Ozark, MO, 12/93–present.  
Consultant to OSD, 07/92–01/93.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

Consultant to MobilePCGear H.Q., 1997–present.

Board of Directors, MobilePCGear H.Q., 1999–present.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.

Life Member, National Rifle Association, 1992–present; Member, Academics for the Second Amendment, 1996–present; Member, National Policy Council on U.S. Leadership in a Changing World, 1995–96; Member, Board of Editors, *Comparative Strategy*, 1993–present; Member, Board of Advisors, Center for Security Policy, 1992–present; President, Christian County Deputy Sheriffs Association, 2001–present; Member, Missouri Deputy Sheriffs Association, 1994–present; Member, National Association of Scholars (approx. 1994–1996); Reserve Deputy Sheriff, Christian County, MO, 1993–present; Member, Board of Advisors, Missourians for Personal Safety, 1998–99; Member, National Tactical Officers Association, 1999–present; Alpha Tau Omega fraternity, 1978–present; Skull & Dagger Honor Society, University of Southern California, 1980–present; Member, Multi-County Jurisdictional Special Response Team, 1993–present; Adjunct Fellow, The Claremont Institute, 1993–present; Trainer, Association of Professional Trainers, 1997–present; Member, Military Committee, Springfield Chamber of Commerce, 1994–present.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Campaign Manager, Citizens for Matlock, Candidate for Christian County Sheriff, 1999–2000.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Citizens for Matlock 2000 Election, Maximum in both Primary & General; Talent for Governor 2000 Election, \$200; Tim Hayes, Election 2000, \$100.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

Hubert H. Humphrey Dissertation Fellowship 1983–1984.

Skull & Dagger All-University Honor Society 1980.

Blue Key Honor Society 1980.

Distinguished Public Service Award, Department of Defense, 1992.

Missouri Reserve Deputy Sheriff of the Year, 2000.

Rockwell Dennis Hunt Scholastic Award, top graduate student award, 1981–82.

Order of the Palm, highest undergraduate award for excellence in scholarship and service to the University, 1980.

Herman Fellowship, USC School of International Relations, 1980–81, 1981–82.

Earhart Foundation Fellowship in National Security Affairs, 1980–81.

Publius Fellowship, from Public Research, Syndicated, Claremont, California, 1981.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

- "Gun Law Enforcement, Not More Gun Laws," *Washington Times*, April 29, 1999.
- "Concealed-Gun Law Can Help Us Defend Innocent," *Springfield News-Leader*, September 10, 1998, p. 10A.

There are doubtless other informal speaking arrangements local to the Springfield area including the Breakfast Club of the Ozarks, Rotary Club, etc. that I have participated in but have not recorded the dates and topics.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JACK DYER CROUCH II.

This 10th day of May, 2001.

[The nomination of Dr. Jack Dyer Crouch II, was reported to the Senate by Chairman Levin on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 1, 2001.]

---

[Prepared questions submitted to Peter W. Rodman by Chairman Warner prior to the hearing with answers supplied follow:]

June 1, 2001.

Hon. JOHN WARNER,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

PETER W. RODMAN.

cc: Hon. Carl Levin,  
Ranking Minority Member.

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support the implementation of these reforms. The focus on “jointness” outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America’s security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* From my point of view, the most important aspects are the clear responsibility and authority given the CINCs for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles that indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the National strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I have no knowledge of any proposals to amend Goldwater-Nichols; however, if confirmed, before any modifications are suggested, I believe it is necessary to review the extent to which these reforms have been implemented and the stated goals achieved. If any changes are determined to be appropriate after such a review, I am confident the Department would consult closely with Congress and this committee.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of Defense for International Security Affairs?

*Answer.* I understand, that if confirmed, I will perform the duties of the Assistant Secretary of Defense for International Security Affairs as prescribed by Department of Defense Directive 5111.7. The directive notes that the Assistant Secretary of Defense for International Security Affairs is the principal staff assistant and advisor to the Under Secretary of Defense for Policy (USD(P)) and the Secretary of Defense for the formulation and coordination of international security strategy and policy; political-military policy on issues of DOD interest that relate to various foreign regions and nations, their governments and their defense establishments, for oversight of security cooperative programs and foreign military sales programs; and direction of DOD activities to promote civilian control of the military and standards of military professionalism respectful of human rights throughout the world.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld would prescribe for you?

*Answer.* While I have not formally consulted with Secretary Rumsfeld on this issue, I would expect him to look to the Assistant Secretary of Defense for International Security Affairs to fulfill all the duties assigned to that office by statute

and regulation—in particular, formulation and coordination of international security strategy and policy.

*Question.* How do you see the civilian role, as opposed to the military role, in the formulation of strategy and contingency planning?

*Answer.* As I understand this activity, the Policy Office, on behalf of the Secretary, initiates the contingency planning process through its preparation of the Presidential-approved Contingency Planning Guidance, and subsequently reviews actual plans developed by the military. Formulation of strategy and the contingency planning guidance that flows from it are an inherently civilian role. The military as an institution, or through individual leaders, has an important part in this process. However, leadership and final decisions relating to formulation of strategy and contingency guidance are appropriately within the purview of the Nation's civilian leaders.

*Question.* Will the responsibilities of the Assistant Secretary for International Security Affairs include responsibility for dealing with NATO nuclear matters?

*Answer.* The incoming Under Secretary of Defense for Policy, with the approval of the Secretary and the Deputy Secretary of Defense, may choose to restructure the current Policy organization to address better their concerns and priorities and the concerns and priorities of the President. Under the current organization, NATO and European Affairs fall under the responsibilities of the Assistant Secretary for International Security Affairs, while nuclear and counter- and non-proliferation issues fall under the responsibilities of the Assistant Secretary for Strategy and Threat Reduction.

*Question.* Will the responsibilities of the Assistant Secretary for International Security Affairs include any responsibility for formulating strategic nuclear policy?

*Answer.* Please see answer to 2D.

*Question.* Will the responsibilities of the Assistant Secretary for International Security Affairs include any responsibility for the Nunn-Lugar programs?

*Answer.* Please see answer to 2D.

*Question.* Will the responsibilities of the Assistant Secretary for International Security Affairs include any responsibility with respect to nonproliferation efforts of the DOD?

*Answer.* Please see answer to 2D.

*Question.* Will the responsibilities of the Assistant Secretary for International Security Affairs include any responsibility with respect to nuclear matters in Asia, including the Agreed Framework?

*Answer.* As I mentioned above, the incoming Under Secretary of Defense for Policy, with the approval of the Secretary and the Deputy Secretary of Defense, may choose to restructure the current Policy organization to address better their concerns and priorities and the concerns and priorities of the President. Under the current organization, Asian and Pacific affairs fall under the responsibilities of the Assistant Secretary for International Security Affairs, while nuclear and counter and non-proliferation issues fall under the responsibilities of the Assistant Secretary for Strategy and Threat Reduction.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of Defense for International Security Affairs?

*Answer.* As currently structured, the Assistant Secretary of Defense for International Security Affairs will oversee development and implementation of U.S. security policies in many regions of the world, as determined by the Secretary of Defense. This traditionally includes various regions of potential major crisis such as the Asia/Pacific and the Middle East and the Gulf, and could also include challenges of different kinds in Latin America and Africa. In areas of potential major crisis, the challenge is to ensure that this country is strong in deterring aggression and conflict and strong in supporting its friends and allies. In other dimensions of U.S. security relations, DOD has an opportunity through its policies of engagement to contribute to military professionalism, respect for civilian authority and human rights, and otherwise contribute to strengthened political relations and peace and freedom. If confirmed, I look forward to meeting these challenges.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will advise the Secretary of Defense, the Deputy Secretary of Defense, and the Under Secretary of Defense for Policy in formulating and executing policies that deter regional crises and build a more secure world. I will also seek to assure that DOD's relationships with other countries contribute to the advancement of American values, as well as American strategic interests. I look for-

ward to working with Congress and, in particular, with this committee in carrying out these responsibilities.

#### POLICY TOWARD IRAN

*Question.* In a December 1996 editorial, you expressed support for a policy of containment of Iran, to include tight economic sanctions.

Given the changes that have taken place in Iran since that time, do you believe that containment is still the best policy for the United States to pursue? If so, why?

*Answer.* While there have been some changes since this article was written, Iran continues to pursue policies that threaten U.S. security interests and are destabilizing to the region, including the pursuit of WMD and long-range missile technologies, support for terrorism, and support for violent opposition to Middle East peace. While internal changes in Iran continue to be a cause for interest and hope, it is unlikely that these changes, by themselves, will produce significant improvements in the areas of U.S. concern. It is my understanding that the new administration is conducting a thorough review of Iran policy. If confirmed, I look forward to participating in such a review.

#### IRAQ POLICY REVIEW

*Question.* The administration is currently engaged in a comprehensive review of U.S. policy toward Iraq, to include a review of military options. It has been reported that one option under consideration is a restructuring of the sanctions regime against Iraq.

What elements do you think are necessary for a U.S. policy designed to ensure Iraq's compliance with the commitments it made at the end of the Gulf War?

*Answer.* The fundamental objective of U.S. policy toward Iraq must be to ensure that the Baghdad regime does not threaten our interests in the Gulf region and in the Middle East more broadly. That objective is consistent with the aims of the Gulf War cease-fire resolution and a succession of other UN Security Council resolutions dating back to the initial invasion of Kuwait—all of which are intended to assure the international community that Iraq can no longer be a threat to peace and security.

I am advised that the ongoing administration review of Iraq policy focuses on three main elements: (1) refining sanctions to improve the precision with which sanctions target Iraqi military and WMD capabilities; (2) using military forces more efficiently to support our overarching policy objectives, including through enforcement of the no-fly zones; and (3) facilitating a change in the regime in Iraq. These elements are linked to each other and the challenge is to bring all three together while addressing the complex task of rebuilding consensus in the region and in the international community.

#### DEVELOPMENTS IN THE MIDDLE EAST

*Question.* The conflict in the Middle East continues to escalate, with both sides seemingly unwilling to take the first step to end the violence. On May 21, Senators Mitchell and Rudman issued a report recommending a possible path ahead to end the violence.

What are your views on the Mitchell-Rudman report recommendations?

*Answer.* While I would defer to the Department of State to provide the official U.S. view, I believe the Mitchell-Rudman report provides a good point of departure for renewed negotiations. The recent resumption of joint security talks following Ambassador Burns' visit is a step in that direction. The parties must work to end the violence and resolve their differences through negotiations.

*Question.* What role do you believe the U.S. should play, if any, in this on-going conflict?

*Answer.* I agree with the view that a solution to this conflict cannot be imposed on the parties. However, the U.S. must remain committed to helping the Israelis and the Palestinians find a way to end the violence and return to negotiations. As President Bush has stated, the United States remains committed to Israel's security and maintaining Israel's qualitative military edge regardless of circumstances. If confirmed, I will work with Congress and this committee to further these objectives.

#### ENGAGEMENT POLICY IN THE MIDDLE EAST

*Question.* The terrorist attack on U.S.S. *Cole* in October 2000, focused attention not only on the terrorist threat in the region, but also on the U.S. policy of military engagement with a wide range of nations worldwide. Many Americans were sur-

prised to learn that the United States military personnel and U.S. Navy ships made frequent stops in Yemen.

What criteria do you believe should be used to determine when the U.S. military should pursue a policy of engagement with a nation—particularly in a volatile area such as the Middle East?

Answer. Engagement, if conducted wisely and at appropriate levels of effort, can serve U.S. interests in the Middle East including: strengthening alliances; deterring threats; and enhancing U.S. military access in this key region. I support such activities for these useful purposes. If confirmed, I will work to ensure that engagement in the Middle East and elsewhere supports our goals and that associated risks are fully assessed and guarded against.

*Question.* If confirmed, would you ensure that there is appropriate civilian oversight of any such engagement decisions by our military commanders?

Answer. Yes.

#### REGIONAL SECURITY AND DOD COUNTER-NARCOTICS ACTIVITIES

*Question.* For the past several years there has been a debate regarding the counter-narcotics activities of the Department of Defense with particular emphasis placed on the question of the U.S. military's role in the Andean Ridge. While some believe that these activities should more appropriately be performed by law enforcement agencies, others believe that these activities contribute to stability in a region where we have important interests.

Would you please outline what important interests you believe the United States has in the Andean Ridge?

Answer. It is my view that it is in the United States' interests to promote and support democracy and democratic institutions, foster sustainable economic development and trade liberalization, and significantly reduce the supply of illegal drugs. A stable, prosperous and democratic Andean Ridge and an improved economic and political environment across the Western Hemisphere are in our interests.

Our interests, however, are threatened by the corrosive influence of a thriving illegal narcotics industry. Fueled by billions of dollars of drug money, the traffickers challenge not merely the laws of states, but the states themselves. It is clearly in our national interest to continue to work with other nations to combat narcotics trafficking.

Given the President's firm intention to work more closely with Latin governments to achieve economic and security objectives, it is my understanding the Department of Defense is reviewing existing policies and programs, including the counterdrug program, to make DOD's role in that process more effective. I am ready, if confirmed, to oversee the support the President and the Secretary of Defense deem required to assist other agencies, and work with Congress and this committee, in these efforts.

*Question.* Do you believe that the Department's activities in the theater, including counter-narcotics operations, contribute to the advancement of these interests?

Answer. Please see answer to Question 8A.

#### REGIONAL STABILITY—LATIN AMERICA

*Question.* Over the past few decades, democracy has taken root in Latin America. Unfortunately, we are witnessing a retreat from democracy in many of these countries. Peru has suffered a severe political scandal, Ecuador has experienced a coup, and Venezuela could be headed down a path of one-man rule. Furthermore, Colombia is faced with escalating violence between the Colombian Armed Forces, two communist rebel organizations, and a collection of paramilitary forces.

How do you view the current and future stability of the region?

Answer. I share your concern about stability in Latin America, particularly in the Andean Ridge, the sub-region to which all the countries the question mentioned. The good news is that Andean governments are interested in maintaining strong bilateral relationships with the United States. Thus, the United States is well-positioned to influence events there, if it is deemed necessary to do so.

*Question.* What actions, if any, should the United States take to strengthen regional stability in the Andean Ridge?

Answer. DOD plays a supporting role in defining U.S. foreign policy, so I hesitate to offer specific proposals. I understand the Department of Defense is still in the midst of a broad review of all its overseas activities, so it would be premature for me to suggest where DOD might be heading. In general, the United States should continue to encourage governments in the region to redouble their efforts to defend human rights and combat corruption; progress in areas such as these will help the inhabitants of the region to realize the benefits of democracy.

## CHINA/TAIWAN

*Question.* President Bush recently stated that the United States would do “whatever it took” to defend Taiwan from China.

What is your understanding of this statement and how will this impact the U.S. military posture in the Pacific region, particularly with regards to the U.S.-Taiwanese military relationship?

*Answer.* My understanding is that the President’s statement did not signal a change in U.S. policy toward Taiwan, or in the U.S. position on “One China.” We remain committed to help Taiwan defend itself. U.S. policy toward Taiwan is guided by the Taiwan Relations Act (TRA) of 1979. The premise of the TRA is that an adequate defensive capability on Taiwan is conducive to the maintenance of peace and security in the region, so long as differences remain between the PRC and Taiwan.

There is an ongoing review of the U.S. defense strategy and posture. I am not privy to the progress of that review; however, if confirmed, I look forward to participating in that review and working with this committee and Congress on this important matter.

*Question.* What is your understanding of how this statement will affect U.S.-China relations?

*Answer.* Our unofficial relationship with Taiwan is an issue that is frequently raised in discussions between the United States and China—a condition likely to persist so long as differences remain between us. The President has also made clear his interest in building a constructive relationship with China.

*Question.* The Department of Defense is currently reviewing the merits of the military to military contacts program between the United States and China.

What are your thoughts on the merits of establishing a military-to-military contacts program between the United States and Taiwan?

*Answer.* This is an important issue. However, I have not had an opportunity to study it in detail or formulate a view on this issue.

## EXPORT CONTROLS

*Question.* In 1998 Congress transferred jurisdiction over commercial communications satellite export licenses from the Commerce Department to the State Department. Now, the aerospace industry is complaining that the State Department approval process takes too long and undermines our ability to compete internationally.

Do you see any problems with the current licensing process for satellite technology, and if so, how would you change it?

*Answer.* I am not familiar with the details of the export licensing process; therefore, I am not in a position to recommend changes. However, in general, I believe Congress and the administration are deliberate in examining any change in export controls on these sensitive items. Any review should be undertaken in a manner that seeks to preserve fundamental national security interests.

*Question.* In 1995, a 6-year bilateral trade agreement was signed by China and the United States, restricting the number of Chinese commercial space launches, so that China would not unduly benefit from its nonmarket economy at the expense of U.S. companies. This agreement will expire on December 31, 2001.

Do you believe that it is in our interest to limit the number of Chinese launches?

*Answer.* It is premature for me to offer an opinion on this subject other than to say that this is a matter that could be reviewed by the administration. Should there be such a review, I would expect that it would involve the Department of Defense. If confirmed, I will work to ensure that U.S. space-related national security considerations are prominent. I am also advised that there is a substantial interest in this matter in Congress and that there therefore should be Congressional consultations associated with such a review.

*Question.* Do you favor renewing the agreement?

*Answer.* Please see answer to 11B.

## ENGAGEMENT POLICY

*Question.* Do you believe that engagement missions—exercises, small joint and multinational operations, training the trainers—contribute to troop readiness at the individual and small unit level?

*Answer.* Engagement missions, if conducted wisely and at appropriate levels of effort, can serve useful purposes including: strengthening alliances; deterring threats; and enhancing U.S. military access in key regions. I support such U.S. military activities for these useful purposes. If confirmed, I will assist in reviewing engagement activities to ensure that they support our goals.

*Question.* Do you believe that the U.S. should participate in humanitarian interventions, and if so, under what circumstances?

*Answer.* Decisions on whether or when to use military forces are one of the most important that a President can make. Each case is unique, and should be guided, first and foremost, by the U.S. national interests at stake and by a consideration of the costs and risks of a particular military involvement. If confirmed, I plan to work closely with the Secretary of Defense and his most senior advisors to help develop appropriate policies on how to guide the use of our military forces.

#### ENGAGEMENT POLICY IN AFRICA

*Question.* U.S. Special Forces personnel are beginning the second phase of Operation Focus Relief, a U.S. initiative to provide training and equipment to West African troops for peacekeeping operations.

Do you consider this a beneficial program and would you support expanding it to other African nations?

*Answer.* While I am not familiar with the details, it is my understanding that Operation Focus Relief is the sort of engagement intended to help regional actors deal with regional issues. Nigeria's peace operations capacity is key to resolution of the situation in Sierra Leone and the sub-region. In my opinion, supporting regional powers can reduce the need to engage U.S. forces.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for International Security Affairs.

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

##### IRAQ POLICY

1. Senator LEVIN. In an April 28, 2000 lecture at the University of Virginia Law School you criticized the Clinton administration as one "that uses only pinpricks against Saddam Hussein." Yet, the only military action President George W. Bush's administration has taken against Iraq has likewise been a limited airstrike on January 28th on Iraqi surface-to-air missile system sites in southern Iraq. How was the January attack different from the ones you have criticized?

Are you advocating stronger use of force against Saddam Hussein?

Mr. RODMAN. President Bush authorized a response against Iraqi air defense and command and control facilities on February 16, 2001. That Coalition strike, against targets north of the 33rd parallel that had not been attacked since Operation DESERT FOX in 1998, was intended to signal to Saddam Hussein that we will resolutely enforce the relevant U.N. Security Council resolutions. I understand that the administration is conducting an Iraq policy review that addresses the use of military force, including our operations in the no-fly zones. With respect to the appropriate level of force, before I could formulate an opinion I would need to have before me all the relevant facts and considerations that are part of that on-going review.

2. Senator LEVIN. You were one of 40 signatories of a February 19, 1998 open letter to the President advocating that the U.S. Government:

"Recognize a provisional government of Iraq based on the principles and leaders of the Iraqi National Congress (INC) that is representative of all the peoples of Iraq.

Restore and enhance the safe haven in northern Iraq to allow the provisional government to extend its authority there and establish a zone in southern Iraq from which Saddam's ground forces would also be excluded."

You urged the President to “position U.S. ground force equipment in the region so that, as a last resort, we have the capacity to protect and assist the anti-Saddam forces in the northern and southern parts of Iraq.”

Do you still support this policy and, in particular, do you still advocate the use of U.S. ground troops in Iraq in order to support an insurrection against Saddam Hussein?

Mr. RODMAN. In my view, there is no question that the whole region would be a safer place, Iraq would be a better country, and American national interests would benefit if Iraq were freed from the grip of the Saddam Hussein regime. The specific details of how best to support the Iraqi opposition, in the framework of the Iraq Liberation Act, are being reviewed in the context of overall policy toward Iraq. I do not favor the deployment of American ground forces in Iraq to replace the Saddam Hussein regime.

3. Senator LEVIN. The administration’s current efforts are to revise the sanctions regime by the adoption of a new Resolution by the UN Security Council that would apply throughout Iraq.

Do you agree with this approach and, if so, would you explain how it would be consistent with the policy espoused in the February 19, 1998 letter?

Mr. RODMAN. The ongoing administration review of Iraq policy, of which sanctions are a part, is, I believe, consistent with the 1998 letter. That review focuses on three main elements: (1) refining sanctions to improve the precision with which sanctions target Iraqi military and WMD capabilities; (2) improving how we use our military forces, including those patrolling the no-fly zones, to support our overarching policy objectives; and (3) facilitating a change in the regime in Iraq. These elements are linked to each other. Our challenge is to bring all three together while addressing the complex task of rebuilding consensus in the region and in the international community.

#### MISSILE DEFENSE/STRATEGIC WEAPONS

4. Senator LEVIN. In a November 22, 1999 *National Review* article you criticized the Clinton administration on their negotiations with Russia regarding missile defense and strategic weapons. You wrote: “To entice Moscow, they are offering 1) dangerously low ceilings on strategic offensive weapons, 2) a very restrictive definition of the defenses we might employ and 3) other sweeteners, such as financing for new ABM radars in Siberia. The Russians haven’t yet bitten. But one thing is certain: Such an agreement, if reached, would be defeated in the Senate even more overwhelmingly than the test-ban treaty.”

President Bush has proposed substantial and unilateral reductions in the current levels of U.S. strategic weapons, and is also reportedly preparing to offer Russia a package of weapons purchases, joint anti-missile exercises, money to rebuild its out-moded early warning radar system, and a proposal to include Russian S-300 surface-to-air missiles in a new defensive shield over Russia and Europe as enticements to obtain Russian agreement to scrap the ABM Treaty.

What is your opinion of these proposals?

If the Russians accepted such proposals, would you recommend that the Senate reject it?

Mr. RODMAN. There are a number of assumptions in the question with respect to the Bush administration’s approach. In any event, the President has not announced specific proposals in these three areas though he has indicated a general direction. It would be a mistake for me to prejudge the decisions he may make. The key weakness I was criticizing in my article was #2—the Clinton administration’s restrictions on defenses. I believe a strategic environment characterized by offensive reductions and expanded defenses is the most stable strategic environment of all.

#### NATO ENLARGEMENT

5. Senator LEVIN. In your 1999 article “The Future of NATO Enlargement” you wrote that “The ‘sensitivity’ of Russians to the Baltic States’ association with the West is not something that the West can, as a matter of principle, defer to.” Subsequently, you expressed the view that NATO must answer the question of ensuring Baltic security and listed three options, namely early NATO membership for Lithuania, Latvia and Estonia; membership for one of the Baltic states (Lithuania) and one in the southeast (Slovenia); or, as an interim step, a security umbrella over the three Baltic states that would be short of NATO membership.

Do you believe, then, that NATO has a responsibility to ensure Baltic security?

If our NATO allies were unwilling to ensure Baltic security, what action would you recommend the United States take?

Mr. RODMAN. I believe the United States and NATO have an interest in the security, independence, and freedom of the Baltic states. As I wrote in that article, there are various options for protecting this interest, and NATO membership is one. In the absence of NATO guarantees formalized by NATO membership, I believe the United States may want to strengthen U.S. bilateral ties and use NATO's Partnership for Peace as a vehicle for strengthening NATO's security links with the Baltic states.

#### BOSNIA

6. Senator LEVIN. On December 11, 2000 in a speech to the German Foreign Policy Association you said: "The more recent debate over reducing U.S. troops in Bosnia, originating in some statements by Gov. George W. Bush, is really more an issue of timing. Americans share European hopes that European forces can take on a greater role in peacekeeping in such cases. But all agree that any further transfer of responsibility ought to be a matter of consultation and agreement."

Yet—much to the consternation of our European allies—2 weeks ago Secretary Rumsfeld said in a *Washington Post* interview that he was "pushing" to have U.S. troops withdrawn from Bosnia.

Do you favor Secretary Rumsfeld's unilateral approach, or would you support Secretary Powell's consultative assertion that the U.S. went in with our allies and "we'll come out together?"

Mr. RODMAN. My understanding of Secretary Rumsfeld's policy is that he does not oppose the Bosnia mission or advocate unilateral withdrawal. Rather, he wants to ensure that the mission is fulfilled in the most efficient manner. It is my understanding that there is complete harmony in the administration on the principle that, as we went into Bosnia together with our allies, we will come out together.

#### BALKANS POLICY

7. Senator LEVIN. Does maintaining stability in the Balkans contribute to stability in Europe—and therefore bolster U.S. national security interests?

How do we decide when to disengage from our current obligations in Europe, the Sinai and elsewhere?

Mr. RODMAN. In my view, it is in the national interest to bolster regional stability on NATO's southern flank, and to ensure the long-term viability of NATO as the guarantor of security in the region. Decisions to alter U.S. deployments, whether in Europe or Sinai or elsewhere, should, I believe, depend on such factors as whether the mission has been reliably accomplished, whether there is a more efficient way to fulfill the mission, whether other partners can do the job, whether we can reach consensus with partners, and other factors.

#### NORTH KOREA

8. Senator LEVIN. If confirmed as the Assistant Secretary of Defense for International Security Affairs, you will be responsible for advising the Secretary of Defense on U.S. policy towards North Korea.

Do you believe that the United States should continue to abide by the Agreed Framework as long as North Korea lives up to its side of the agreement?

Mr. RODMAN. Yes. I support the administration's recent announcement on abiding by the Agreed Framework. The administration has decided to undertake discussions with North Korea on a broad agenda that includes improved implementation of the Agreed Framework.

#### IRAN POLICY

9. Senator LEVIN. In a December 1996 editorial, you expressed support for a policy of containment of Iran, to include tight economic sanctions.

Given the changes that have taken place in Iran since that time, do you believe that containment is still the best policy for the United States to pursue? If so, why?

Mr. RODMAN. My general views of policy toward Iran have not changed since that article. I think that domestic developments in Iran over the past 4 years give reason to hope for an eventual improvement in U.S.-Iranian relations. However, Iran continues to pursue policies that threaten U.S. security interests and are destabilizing

to the region, including the pursuit of WMD and long-range missile technology, support for terrorism, and support for violent opposition to the Middle East peace negotiations. I believe it is therefore prudent for us to continue a strategy to deter and defend against Iranian threats to U.S. interests. Such a policy, I believe, has the best chance of moderating Iran's foreign policy.

#### IRAQ POLICY

10. Senator LEVIN. The administration is currently engaged in a comprehensive review of U.S. policy toward Iraq, to include a review of military options. It has been reported that one option under consideration is a restructuring of the sanctions regime against Iraq.

What elements do you think are necessary for a U.S. policy designed to ensure Iraq's compliance with the commitments it made at the end of the Gulf War?

Mr. RODMAN. Ensuring Iraqi compliance with U.N. Security Council resolutions since the Gulf War will, I believe, require a comprehensive approach. Strengthening the sanctions regime is one part of such an approach. Enforcing the no-fly zones and other aspects of the U.N. Security Council resolutions, as coalition forces are now doing, is also important, and the United States should, I believe, look for ways to accomplish this more effectively. Finally, as expressed on a bipartisan basis in the Iraq Liberation Act, regime change should be an element of U.S. policy.

#### TAIWAN POLICY

11. Senator LEVIN. What are your thoughts on the merits of establishing a military-to-military contacts program between the United States and Taiwan?

Mr. RODMAN. First, I believe our military contacts should be guided by the provisions of the Taiwan Relations Act of 1979. Second, I would have to study the merits of any particular proposed contact program. But in principle, I would support contacts that contribute to deterrence and regional stability and that would enhance communication between the United States and Taiwan, especially in a crisis.

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### AFRICA POLICY

12. Senator THURMOND. In response to the committee's advance policy question on the major challenge you might face if confirmed as the Assistant Secretary you indicated "challenges of different kinds in Latin America and Africa."

What do you believe are the challenges facing the United States in regard to Africa and how should we respond to those challenges?

Mr. RODMAN. In Africa, the challenges include tasks of building security ties in a way that promotes not only military skills but also military professionalism and respect for civil authority and human rights. Africa also faces the more acute challenges of instability and violent ethnic conflict. Sudan is an especially troubling case. DOD is providing training for Nigeria (along with Ghana and Senegal) to enable them to play a peacekeeping role in West Africa, including as part of the U.N. mission in Sierra Leone. This DOD effort is meant to enable regional countries to cooperate more effectively and take a greater share of responsibility for regional security.

##### IRAQ POLICY/ECONOMIC SANCTIONS

13. Senator THURMOND. Although the sanctions against Iraq have precluded Saddam Hussein from rebuilding his military force, from a public relations standpoint they have been a disaster. We have been accused of causing malnutrition and the premature deaths of children and as a result are under pressure to lift sanctions.

What are your views on economic sanctions and how do we reverse the public relations failure in regard to Iraq?

Mr. RODMAN. Sanctions were imposed to secure Iraqi compliance with its international obligations. In my view, they also serve a specific purpose—to impede the rebuilding of the Iraqi military machine. I therefore believe sanctions in some form should remain in place until Iraq complies with its obligations. There is no justification short of that for removing the sanctions, especially since the oil-for-food program is generating more than enough revenue to meet the Iraqi people's humani-

tarian needs. Moreover, Security Council Resolution 1284 has established a road-map for suspending and lifting sanctions based on Iraqi progress toward compliance.

At the same time, I think it makes sense to review the process by which contracts under the oil-for-food program are now done and to ensure that the sanctions are applied in a focused way against Iraqi military capabilities. These changes in the application of sanctions should make it harder for Saddam Hussein to use the suffering of his people as an argument against the sanctions.

#### INDIA/PAKISTAN

14. Senator THURMOND. What role should the United States play in resolving the Kashmiri dispute between India and Pakistan?

Mr. RODMAN. The United States should not, in my opinion, attempt to mediate the India/Pakistan dispute over Kashmir in the absence of clear indications that it would make a decisive difference. However, maintaining good relations with India and Pakistan contributes to U.S. influence that can have a moderating effect.

#### EUROPEAN SECURITY AND DEFENSE POLICY

15. Senator THURMOND. Many policy experts believe that the European Security and Defense Policy coupled with the Rapid Reaction Force will lead to the demise of NATO.

What are your views on the impact of these European initiatives on NATO?

Mr. RODMAN. NATO will continue to be the indispensable foundation for American engagement in European security and for ensuring the collective defense of Alliance members. In my view, it is important that ESDP proceed in a manner that does not damage the transatlantic link or the ability of the Alliance to take collective action. I note that Prime Minister Blair told the Canadian Parliament in February that "NATO is our organization of choice" and that ESDP "applies only where NATO has chosen not to act collectively." I believe that that approach serves the common interests of the United States, the UK, and all the Atlantic allies.

#### QUESTION SUBMITTED BY SENATOR RICK SANTORUM

##### AFRICA/AIDS THREAT

16. Senator SANTORUM. As you are aware, President George W. Bush has raised the profile of the AIDS plight impacting the continent of Africa. The United States recently contributed \$200 million to a United Nations trust fund to help treat individuals suffering from this disease and help combat the spread of the AIDS virus. More than 70 percent of all people living with the disease, an estimated 25.3 million HIV-positive individuals, live in Africa.

President Bush has designated Health and Human Services Secretary Tommy Thompson and Secretary of State Colin Powell to chair a new high-level task force to better coordinate the administration's activities and responses to the AIDS crisis. The Secretary of State has indicated that he considers the spread of the AIDS virus as a national security threat to the United States.

What can you do as ASD/ISA to help the administration to make a difference in the fight against the AIDS virus? What is the appropriate role of the Department of Defense in response to this national security threat?

Mr. RODMAN. I recognize this is an enormously important subject, though I am not at present conversant with DOD's role in this area. If confirmed, I will make it a priority to obtain briefings on this subject and will contribute as appropriate in the interagency process to advance U.S. policies.

[The nomination reference of Peter W. Rodman follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
May 14, 2001.

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Peter W. Rodman of the District of Columbia, to be an Assistant Secretary of Defense, vice Edward L. Warner III.

[The biographical sketch of Peter W. Rodman, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF PETER W. RODMAN

Peter W. Rodman is Director of National Security Programs at the Nixon Center. He is the author of *More Precious than Peace* (Scribner, 1994)—a history of the Cold War in the Third World—and of a series of annual strategic assessments published by the Nixon Center, the most recent of which is *Uneasy Giant: The Challenges to American Predominance*.

Mr. Rodman served as a Deputy Assistant to President Reagan for National Security Affairs (Foreign Policy) from March 1986 to January 1987 and then, until September 1990, under Presidents Reagan and Bush, as Special Assistant for National Security Affairs and NSC Counselor. From April 1984 to March 1986, he was Director of the Department of State Policy Planning Staff, advising Secretary of State George P. Shultz on major issues including U.S.-Soviet relations and the Middle East.

In the Nixon and Ford administrations, from August 1969 to January 1977, Mr. Rodman was a member of the National Security Council staff and a special assistant to Dr. Henry A. Kissinger. From 1972 to 1977 he took part in nearly all of Dr. Kissinger's negotiations and missions. Following this, he was principal research and editorial assistant to Dr. Kissinger in the preparation of his memoirs and was Director of Research for Kissinger Associates, Inc.

Mr. Rodman has been a Senior Editor of *National Review* (1991–1999) and a Senior Advisor on foreign policy to the 1992 Republican National Convention Committee on Resolutions (Platform Committee). He has been a scholar at both the Center for Strategic and International Studies and the Johns Hopkins Foreign Policy Institute.

Mr. Rodman was born on November 24, 1943, in Boston. He was educated at Harvard College (A.B. 1964, *summa cum laude*), Oxford University (B.A., M.A.), and Harvard Law School (J.D. 1969). He is a member of the boards of Freedom House, the World Affairs Council of Washington, DC, and the U.S. Committee on NATO. He and his wife Veronique live in Washington with their two children.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Peter W. Rodman in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Peter Warren Rodman.
2. **Position to which nominated:**  
Assistant Secretary of Defense for International Security Affairs.
3. **Date of nomination:**  
May 14, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
November 24, 1943; Boston, MA.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to former F. Veronique Boulad.
7. **Names and ages of children:**  
Theodora Tatiana Boulad Rodman, age: 15; Nicholas George Rodman, age: 14.
8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.  
Roxbury Latin School, 1955–1961: High School diploma 1961.  
Harvard College, 1961–1964: AB degree 1964.  
Oxford University, 1964–1966: AB degree 1966; MA 1971.  
Harvard Law School, 1966–1969: JD degree 1969.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
Director of National Security Programs, The Nixon Center, 1615 L St., NW, (#1250) Washington, DC 20036, Feb. 1995–present.  
Director of Middle East and Eurasian Studies, Center for Strategic and International Studies, 1800 K St., NW (#400), Washington DC 20006: January 1994–February 1995.  
Fellow, The Johns Hopkins Foreign Policy Institute, 1619 Mass. Ave., NW., Washington, DC 20036: September 1990–January 1994.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
Member, NSC Staff (August 1969–Jan. 1977).  
Member, Policy Planning Council, Dept. of State (March 1983–March 1984).  
Director, Policy Planning Staff, Dept. of State (March 1984–March 1986).  
Deputy Assistant to the President for National Security Affairs (Foreign Policy) (March 1986–February 1987).  
Special Assistant to the President for National Security Affairs and NSC Counselor (February 1987–September 1990).  
U.S. Commission on National Security/21st Century, National Security Study Group, Member (1999–present).  
Study Group on Enhancing Multilateral Export Controls for U.S. National Security, Member (1999–present).  
CIA Strategic Assessment Group, China Futures Panel, Member (August 2000–present).  
Library of Congress, Henry Alfred Kissinger Chair in Foreign Policy and International Affairs, Executive Director and Member of Steering Committee (December 2000–present).
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.  
AMK Advisers, LLC (Member, August 1997–present).  
ipx, inc. (Consultant, June 1999–present).
12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.  
World Affairs Council of Washington, DC (Board member, 1991–present; Vice President, 1996–present).  
Freedom House (Board member, 1996–present).  
U.S. Committee on NATO (Board member, 1996–present).  
Cosmos Club (member, 1984–present).  
Council on Foreign Relations (member).  
International Institute for Strategic Studies (member).

George Bush Presidential Library (member).  
 Ronald Reagan Presidential Library (member).  
 Gerald Ford Foundation (member).  
 Richard Nixon Library and Birthplace Foundation (member).  
 The Federalist Society (member).  
 American Automobile Association member (1970–present).  
 United States Holocaust Memorial Museum (charter member).  
 Friends of the National Zoo (member).  
 Smithsonian Associates (member).  
 National Geographic Society (member).  
 National Aquarium in Baltimore (member).  
 National Air & Space Society (member).  
 National Trust for Historic Preservation (member).  
 United Ostomy Association (member).  
 WETA (member).

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Jim Miller for Senate (VA), June 5, 1996 (\$100)  
 John Pappageorge for Congress (MI), June 10, 1996 (\$100)  
 David Catania for City Council (DC), Oct. 17, 1997 (\$100)  
 Governor Bush Committee (TX), June 29, 1998 (\$200)  
 Heather Wilson for Congress (NM), June 29, 1998 (\$200)  
 David Catania for City Council (DC), July 25, 1998 (\$100)  
 Heather Wilson for Congress (NM), Oct. 4, 1998 (\$150)  
 DC Republican Committee, Oct. 11, 1998 (\$250)  
 McCain for President, Feb. 28, 1999 (\$200)  
 George W. Bush Exploratory Committee, July 11, 1998 (\$150)  
 DC Republican Committee, July 11, 1998 (\$250)  
 McCain for President, Jan. 19, 2000 (\$200)  
 DC Republican Committee, May 29, 2000 (\$100)  
 Bush for President, May 29, 2000 (\$200)  
 Carol Schwartz for City Council (DC), July 3, 2000 (\$150)  
 Heather Wilson for Congress (NM), Sept. 17, 2000 (\$100)  
 RNC Victory 2000, Sept. 17, 2000 (\$100)  
 RNC Victory 2000, Nov. 2, 2000 (\$150)  
 Heather Wilson for Congress (NM), Nov. 2, 2000 (\$150)  
 DC Republican Committee, Feb. 15, 2001 (\$100)

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

Medal of Merit of the Czech Republic, awarded by President Vaclav Havel on September 17, 1988, in Washington, in connection with my support of the Czech Republic's admission into NATO.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

**Books and Monographs**

- Book, More Precious than Peace: The Cold War and the Struggle for the Third World (New York: Charles Scribner's Sons, 1994)
- Monograph, America Adrift: A Strategic Assessment (Washington: Nixon Center for Peace and Freedom, 1996).
- Monograph, Broken Triangle: China, Russia, and America After 25 Years (Washington: Nixon Center for Peace and Freedom, 1997).
- Monograph, Between Friendship and Rivalry China and America in the 21<sup>st</sup> Century (Washington: The Nixon Center, June 1998).
- Monograph, Drifting Apart? Trends in U.S.-European Relations (Washington: The Nixon Center, June 1999).
- Monograph, Uneasy Giant: The Challenges to American Predominance (Washington: The Nixon Center, June 2000).
- Monograph, Shield Embattled: Missile Defense as a Foreign Policy Problem (Washington: The Nixon Center, forthcoming).

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

PETER W. RODMAN.

This 15th day of May, 2001.

[The nomination of Peter W. Rodman was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

**NOMINATIONS OF SUSAN MORRISEY LIVINGSTONE TO BE UNDER SECRETARY OF THE NAVY; JESSIE HILL ROBERSON TO BE ASSISTANT SECRETARY OF ENERGY FOR ENVIRONMENTAL MANAGEMENT; AND THOMAS P. CHRISTIE TO BE DIRECTOR OF OPERATIONAL TEST AND EVALUATION, DEPARTMENT OF DEFENSE**

---

**THURSDAY, JUNE 7, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:30 a.m. in room SH-216, Hart Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Reed, Bill Nelson, Carnahan, and Warner.

Committee staff members present: David S. Lyles, staff director; and Christine E. Cowart, chief clerk.

Majority staff members present: Daniel J. Cox, Jr., professional staff member; Madelyn R. Creedon, counsel; Creighton Greene, professional staff member; and Peter K. Levine, general counsel.

Minority staff members present: Romie L. Brownlee, Republican staff director; Charles W. Alsup, professional staff member; L. David Cherington, minority counsel; Brian R. Green, professional staff member; William C. Greenwalt, professional staff member; George W. Lauffer, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, minority counsel; Joseph T. Sixeas, professional staff member; Cord A. Sterling, professional staff member; and Scott W. Stucky, minority counsel.

Staff assistants present: Kristi M. Freddo, Thomas C. Moore, and Michele A. Traficante.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi and Ross Kawakami, assistants to Senator Akaka; Peter A. Contostavlos, assistant to Senator Bill Nelson; Susan Harris, assistant to Senator Carnahan; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard;

Kristine Fauser, assistant to Senator Collins; and Derek Maurer, assistant to Senator Bunning.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Good morning everybody. The committee meets today to consider the nominations of Susan Livingstone to be Under Secretary of the Navy; Jesse Roberson to be Assistant Secretary of Energy for Environmental Management; and Thomas Christie to be Director of Operational Testing and Evaluation of the Department of Defense.

Just one note on the changed circumstances that we all find ourselves in. This committee has a time-honored tradition of being a bipartisan committee. The chairmen over the years have truly honored that tradition and have made it work. John Warner has added luster to that tradition. He has always reached out to me personally on this side of the aisle and it has been an honor to be a ranking member under his chairmanship. He is always gracious. He is always involving us in decisions. Obviously the chairman makes those decisions, but he has gone the extra mile to involve members on this side of the aisle. He has truly been a role model and I intend to do the best I can as long as I am chairman to follow that tradition.

One never knows around here whether it is the next day or the next election, which can bounce the ball in a different direction. We get used to it. We have been here together a long time. We have been steadfast and good friends. Again, one of the highlights I know of whatever length of time I happen to be serving as chairman will be having Senator John Warner as my ranking member. So, I just want to extend my hand to him as chairman, and I know he will reciprocate. Indeed he will do more than that as he always does.

Senator WARNER. Would the Senator yield?

Chairman LEVIN. I'd be happy to.

Senator WARNER. Thank you for those kind remarks. It is interesting in the life of the Senate, we come here from different parts of the United States, but we have common goals and certainly the security of our Nation is the first obligation of every citizen, from the President right on down. Yesterday I accompanied our President to Bedford, Virginia where he gave very stirring and solemn remarks in honor of the 57th anniversary of the landings of U.S. forces and our allies on D-Day, June 6, 1944.

But Senator, you and I came here exactly—and these folks might not know it—23 years ago. We were elected in the fall of 1978 and took our office together, in January 1979. We were both very lucky to get on this committee at that time, and we have served together these many years. Do we have differences? Yes, but our fundamental guidance is always on the welfare of the men and women of the armed forces and to make this Nation strong so it can defend itself. Somehow I think there is a note of irony here today that you assume rightfully your chairmanship with dignity and grace, and we have before us a nominee for Under Secretary of the Navy, which is the best job I ever had in my life.

Chairman LEVIN. The ranking member well, he will just surpass that. [Laughter.]

Senator WARNER. We welcome our nominees and I thank you for these few minutes. You will have my cooperation, as you have had it these many years.

Chairman LEVIN. Thank you. One other note before we get to our nominees. Congress needs time to consider the administration's proposed defense budget. We have not yet received that budget and unless we do receive that budget soon we may run out of time to complete action on the Defense Authorization and Defense Appropriation bills before the next fiscal year begins on October 1. We are going to do everything we can to complete that action regardless of when we receive the budget. But, by the way, it is going to be more and more difficult the later we receive that budget.

I know we will be joining together and letting the administration know that it is important that they get that budget amendment as they call it up here promptly. I'm speaking for all of us here when I say that. We usually take months to review a budget, to hold hearings, to bring the bill to the floor, to then have a conference. If we are going to get this done in 1 month essentially, it is going to be a miracle. But if we can get it in the middle of June, we at least would have at least a few extra weeks over getting it the last part of June.

Senator WARNER. If the Senator would yield on that. You and I have met with the Secretary of Defense in the past few weeks and he has indicated he will work through the Office of Management and Budget. It is his hope to get the budget up here late this month. Just for the record, it is the 2002 budget that you were discussing because the President has forwarded to Congress the supplemental as it relates to the 2001.

Further, Senator, we are working on the budgets submitted by the last President, President Clinton, which is traditional. This will be a budget amendment. So we have before us now a budget on which our staffs have been working. I think you and I should also take this opportunity to reflect on the superb staff support that we have received all through these 23 years. We have today the former staff director, Les Brownlee, and the new staff director, David Lyles—two of the finest, together with their subordinates, that have ever served this committee.

Chairman LEVIN. It is very true. We are blessed in many ways and it is one of the blessings that we have great staff and that they work together too.

Our witnesses this morning have been nominated for some very important national security positions and they are faced with some difficult challenges. If confirmed, Ms. Livingstone will be the number two official in the Department of the Navy. Ms. Roberson will be in charge of the entire environmental program of the Department of Energy. Mr. Christie will be charged with ensuring that the testing of our weapons systems is independent, fair, and reliable. Each of our nominees this morning has impressive credentials and appears to be well-qualified to take on these challenges.

First, Ms. Livingstone served for 4 years as Assistant Secretary of the Army for Installations, Logistics, and Environment. Since then, she's been an executive with the Red Cross and the Association of the United States Army.

Ms. Roberson has served for a dozen years in the Department of Energy, most recently as the site manager for Rocky Flats and as a member of the Defense Nuclear Facilities Safety Board.

Mr. Christie has served in the Department of Defense for more than 30 years, including 10 years as the Deputy Assistant Secretary of Defense and Director of the Office of Program Integration. Since that time he's been the Director of the Operational Evaluation Division at the Institute for Defense Analysis.

So, all of our nominees are highly qualified, and I not only want to welcome you but welcome any family members you have with you today. We have a tradition in our committee of asking our nominees to introduce family members who might be present. We know that a number of family members were going to be present but we've rescheduled this hearing so many times kids had to go to school finally, and a few things like that. So, I think Mr. Christie, you may be the only one that has a family member with you. Would you introduce your wife?

Mr. CHRISTIE. I'm lucky enough for this to be my first hearing and I haven't had any postponement. This is my wife Kathleen who has put up with me for many years.

Chairman LEVIN. Maybe we should call her as a witness. [Laughter.]

Each of the families whether they are here to hear this in person or whether they will hear about it later and know about it later are indeed part of this effort and make sacrifices along the way. We are grateful to you for the support you have given Mr. Christie and to your families all whether they are here or not here today for what sacrifices they will be making.

Senator Warner.

#### STATEMENT OF SENATOR JOHN WARNER

Senator WARNER. Thank you, Mr. Chairman. I would like to place in the record my opening statement, followed by the opening statement of Senator Thurmond. Also, Senator Allard had hoped to be here today, Ms. Roberson. But I believe he is at the White House in connection with the signing of the tax legislation this morning. A number of our members have the opportunity to join the President on this historic moment. So, I would ask unanimous consent that his statement also be placed into the record.

Chairman LEVIN. It will be.

[The prepared statements of Senators Warner, Thurmond, and Allard follow:]

#### PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in welcoming the nominees and their families.

Ms. Livingstone, I regret your husband, Neil, could not be here today.

Ms. Roberson, I understand that your daughter, Jessica, is here with you today. Welcome to you both.

Mr. Christie, I understand your wife, Kathleen, is here with you today. Welcome.

Family support is critical to the success of individuals in senior positions in our government and we appreciate the support and sacrifices of the families of these distinguished nominees.

Ms. Susan Morrissey Livingstone is returning to the Pentagon for a second tour of duty. She served as Assistant Secretary of the Army for Installations, Logistics, and Environment from 1989 to 1993. The Department of the Navy will welcome you, nonetheless, I am sure. Some 32 years ago, I myself had the privilege of serving

in the billet to which you have been nominated, and I congratulate you. Ms. Livingstone has also rendered distinguished service in the Veterans' Administration in various senior positions, with the American Red Cross, and, currently, she is the CEO of the Association of the United States Army. We are grateful for her commitment to the welfare of our men and women in uniform.

Ms. Jessie Hill Roberson is a distinguished member of the Defense Nuclear Facilities Safety Board, having been confirmed by this committee in 1999. Prior to that she worked for the Department of Energy for 11 years, serving in a variety of positions managing projects associated with nuclear reactor operations and environmental restoration. Her last assignment was Site Manager at the Rocky Flats, Colorado, Environmental Technology Site, where she performed her duties in an outstanding fashion. On behalf of our colleague, Senator Allard, I would ask that an introductory statement summarizing Ms. Roberson's achievements be entered into the record.

Mr. Thomas P. Christie, who, I note, is a Virginian, is also returning to the Department of Defense for another tour, having previously served with OSD's Program Analysis and Evaluation Office and, from 1986 to 1989, as Deputy Assistant Secretary of Defense for Programs and Resources and Director of Program Integration. Most recently, Mr. Christie has worked for the Institute for Defense Analysis (IDA) as director of its Operational Evaluation Division.

Your willingness to serve again in this most important post as the Department of Defense's Director of Operational Test and Evaluation is appreciated.

Our nominees have a wealth of experience and accomplishments. I believe they will excel in the position to which they have been nominated. We welcome them and their family members and look forward to their comments and responses today.

Mr. Chairman.

---

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman: Chairman Levin, I want to join my colleagues in congratulating you on your accession as Chairman of the Armed Services Committee. This committee has a great tradition of placing the security of the Nation and the welfare of its men and women in uniform above partisanship. I know under your leadership we will continue in that tradition and I look forward to working with you and your staff as you assume this great challenge.

Mr. Chairman, I join you in welcoming this distinguished group of nominees. I find that this group is especially noteworthy since they have all had prior service in appointed positions within the executive branch. They have an appreciation of the challenges and personal sacrifices that they can expect once they are confirmed for the positions to which the President has nominated them.

I want to extend my congratulations and appreciation to each nominee. Once you are confirmed, you will each have a vital role in assuring the security of our Nation. More importantly, every action you take will have a direct impact on the 1.4 million men and women who wear the uniforms of our military services and the thousands of civil servants who support them. You can be assured that you will have my support and that of this committee in carrying out these responsibilities. I only ask that you keep us informed and do not hesitate to contact us when you need our support.

Thank you, Mr. Chairman.

---

PREPARED STATEMENT BY SENATOR WAYNE ALLARD

Mr. Chairman, Senator Warner, and members of the committee—I am honored to be able to introduce and recommend a person who I believe is an exceptional and deserving nominee to be the next Assistant Secretary for Environmental Management at the Department of Energy, Ms. Jessie Roberson.

Currently, Ms. Roberson is a Board Member of the Defense Nuclear Facilities Safety Board or DNFSB. The DNFSB is the oversight body which ensures the nuclear health and safety activities at all of DOE's nuclear weapons complex. She has been a Board Member since January 2000.

Prior to being a Board Member, Ms. Roberson was with the Department of Energy. In her 10 years with the Department she was at the Rocky Flats Environmental Technology Site, Golden, Colorado and the Savannah River Site, Aiken, South Carolina. It was during her time at Rocky Flats that I met and befriended Ms. Roberson.

In 1996, she became the Manager of the Department of Energy's Rocky Flats Field Office. She was ultimately responsible for the integration and performance of all environmental cleanup activities at Rocky Flats.

Before becoming the Site Manager, Rocky Flats was scheduled for a 2015 cleanup and closure date, but once she stepped in as manager, she put into place a more robust and vigorous plan to close the site at the end of 2006. I can say unequivocally that without her leadership this ambitious plan would never have been a reality.

While I believe Ms. Roberson's credentials and experience alone speak for her qualifications to become the next Assistant Secretary for Environmental Management at the Department of Energy, she has also received numerous awards and honors. In 1998 she was recognized as one of the top 25 newsmakers in the construction industry with a 1997 Newsmaker Award by *Engineering News Record*.

In 1997, Fort Valley State University awarded her the Platinum Achievement Award for Outstanding Leadership in the Field of Energy. Plus, the Girl Scouts Mile Hi Council awarded Jessie the Women of Distinction Award. In 1996 Ms. Roberson was honored with the Black Engineer of the Year Award for Professional Achievement in Government and the NAACP Scientific Achievement Award by the Conecuh County Branch.

I have worked with her for many years and have seen her make many tough, and sometimes not always popular, decisions. However, she stood her ground, took care of business and got the job done. Jessie also worked very close with the state and local communities. She kept everyone involved and informed during every phase of the project.

As a matter of fact, the Governor of Colorado, Bill Owens, strongly supports Jessie's nomination. Plus, the *Denver Post* wrote an April 3, 2001 *Denver Post* editorial, titled "Roberson a top flight pick" which I would like to insert into the record. Due to her efforts of cooperation at Rocky Flats, today state and local communities are the biggest supporters of the closure activities at Rocky Flats and not all closure sites can claim this.

Mr. Chairman, Jessie will bring 17 years of private and public sector experience in the nuclear field with an emphasis in environmental cleanup and restoration, low level waste management, nuclear reactor operations and project management, and safeguards and security to the Environmental Management job.

Given Jessie's extensive experience and qualifications, I strongly recommend her swift approval for the position of Assistant Secretary of Energy for Environmental Management at the Department of Energy. I am very proud to call Jessie a friend and hope to soon call her Madame Assistant Secretary.

Again, thank you for allowing me to speak on behalf of Jessie.

## Roberson a top-flight pick

**U**.S. Energy Secretary Spencer Abraham is getting some top-flight help in cleaning up the nation's Cold War legacy: Jessie Roberson, who headed the Department of Energy's Rocky Flats closure project in Colorado, is being nominated to manage DOE's entire environmental cleanup program nationwide.

Roberson will be the second Rocky Flats veteran to move into a key DOE post. Earlier, the White House announced it will nominate Robert Card for undersecretary of energy. Card previously headed Kaiser-Hill, the contractor doing the cleanup at Rocky Flats, the mothballed nuclear bomb trigger factory north of Golden.

The Rocky Flats crew led by Roberson and Card accomplished, in just three years of teamwork, more progress toward cleanup and closure than the facility had logged in the previous decade.

It's understandable that Abraham would look toward the people who brought DOE past success to move the entire department toward its future goals.

Roberson is an excellent choice. She is a nuclear engineer who in 1996 was named the national Black Engineer of the Year for Professional Achievement in Government. That

same year, she took the reins at Rocky Flats, where her personable but no-nonsense style got the flagging project on track.

In 1999, the Democratic Clinton administration tapped Roberson for the Defense Nuclear Facilities Board, which provides independent oversight at DOE nuclear sites on all issues affecting health and safety.

Now the Republican Bush administration also has recognized the value of her 17 years of nuclear safety experience.

As assistant energy secretary for environmental management, Roberson will oversee the cleanup of all the country's Cold War atomic sites. Among them: Hanford, the toxic and radioactive nightmare in eastern Washington. Savannah River, the South Carolina reactor and processing plant that must be modernized. And Rocky Flats, the one place DOE has scored real progress toward cleanup.

With Abraham at the top and Card in the No. 2 slot, Roberson will round out DOE's civilian management team.

The department's environmental management job, in fact, is one of the toughest positions in the federal government today. There likely isn't a better person around to tackle the task, however, than Jessie Roberson.

Senator WARNER. I compliment each of you and have had the privilege to meet with you and talk with you. I commend the President and the Secretary of Defense. This team he is putting together is just incredible in terms of experience and qualifications to take on the very heavy responsibilities with regard to our Nation's defense, and certainly your responsibilities in the Energy Department are tied very closely to those in the Department of Defense.

The problems before you Ms. Roberson are mountainous. In the statement by Senator Allard, he cites an article from the *Denver Post*, which says "Roberson: A Top Flight Pick". I think that says it all. You do not have to go beyond that headline.

Ms. Livingstone, you have a great opportunity before you and you are going to enjoy every day of it. I will have a chance in the months and years to come to work with you, and perhaps give you a little advice along the way. But I certainly think from your distinguished background, you are well-qualified to proceed on this. You have my strong support, all three of you.

Mr. Christie, thank you and your wife for returning to serve in another important position, but this time at a little higher pay grade, however, with the same problems. The Nation needs to re-equip its military with cutting edge technology and you will be responsible for that. I remember so well the stories—I experienced some of them myself in the modest career I had in the military—about the weapons, clothing, and other things that were getting into the field that were not adequately tested. The M-16 rifle went through a tortuous scenario and indeed maybe life and limb were lost because of the failure of that testing. But you know those things far better than I. So, I wish you luck. Thank you, Mr. Chairman.

Chairman LEVIN. Talking about testing reminds me of a former colleague of ours who, when the testing wasn't adequate, went down to test the DIVAD system for himself. That was the end of that system. Senator Nelson, do you have an opening statement you would like to make?

Senator BILL NELSON. No, thank you, Mr. Chairman.

Chairman LEVIN. Let me ask the following questions of each of our witnesses. In response to the advance policy questions you agreed to appear as a witness before congressional committees when called to ensure that briefings, testimonies, and other communications are provided to Congress. So, we already have those commitments. Now I will ask the following questions.

Have each of you adhered to applicable laws and regulations governing conflict of interest? Ms. Roberson first.

Ms. ROBERSON. Yes, I have.

Chairman LEVIN. Ms. Livingstone?

Ms. LIVINGSTONE. Yes, Mr. Chairman.

Chairman LEVIN. Mr. Christie?

Mr. CHRISTIE. Yes, I have.

Chairman LEVIN. Have you assumed any duties or undertaken any actions that would appear to presume the outcome of the confirmation process? Ms. Roberson?

Ms. ROBERSON. No, Mr. Chairman.

Chairman LEVIN. Ms. Livingstone?

Ms. LIVINGSTONE. No, sir.

Chairman LEVIN. Mr. Christie?

Mr. CHRISTIE. No, sir.

Chairman LEVIN. Would you assure that the Department complies with deadlines established for requested communication including prepared testimony and questions for the record and hearings? Ms. Roberson?

Ms. ROBERSON. Yes, Mr. Chairman.

Chairman LEVIN. Ms. Livingstone?

LIVINGSTONE. Yes, Mr. Chairman.

Chairman LEVIN. Mr. Christie?

Mr. CHRISTIE. Yes, Mr. Chairman.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests? Ms. Roberson?

Ms. ROBERSON. Yes, sir.

Chairman LEVIN. Ms. Livingstone?

Ms. LIVINGSTONE. Yes, sir.

Chairman LEVIN. Mr. Christie?

Mr. CHRISTIE. Yes, Mr. Chairman.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony? Ms. Roberson?

Ms. ROBERSON. Yes, Mr. Chairman.

Chairman LEVIN. Ms. Livingstone?

Ms. LIVINGSTONE. Absolutely.

Chairman LEVIN. Mr. Christie?

Mr. CHRISTIE. Yes, Mr. Chairman.

Chairman LEVIN. The responses that I've referred to the committee's pre-hearing policy questions and our standard questionnaire will be made a part of the record. We have received the required paperwork on each of the nominees and we will be reviewing that paperwork to ensure that it is in accordance with the committee's requirements. After the opening statements, if they choose to give any, by our nominees we will proceed with the first round of questions limited to 6 minutes for each Senator on the basis of the early-bird rule. Before we begin we have already covered that so we will now call upon our witnesses. I think the order we have them listed in our notice is the order we will call upon them. Is that right protocol? All right.

Ms. Livingstone, you are first.

**STATEMENT OF SUSAN MORRISEY LIVINGSTONE, NOMINEE  
TO BE UNDER SECRETARY OF THE NAVY**

Ms. LIVINGSTONE. Thank you, Mr. Chairman. First, Mr. Chairman, I would like to thank Senator Conrad Burns for his leadership on behalf of our Nation and our home state, the great State of Montana. Senator Burns was going to introduce me today but had a schedule conflict, which as you probably noticed, is I believe the signing of the tax bill.

Mr. Chairman, Senator Warner, and distinguished members of this committee, it is a sincere honor and privilege to appear before you as the nominee for Under Secretary of our incomparable Navy and Marine Corps team. In the interest of time, Mr. Chairman, I would ask that my formal statement be submitted for the record, and that I might just make a few brief comments at this time.

Chairman LEVIN. It will be made a part of the record.

Ms. LIVINGSTONE. Thank you. If I merit your confirmation, I am more than humbled by the opportunity to again serve our men and women in uniform, both active and reserve, their families, as well as the civilian workforce and those who served before—our military retirees. I thank President Bush for his nomination, and Defense Secretary Rumsfeld and Navy Secretary Gordon England for the opportunity to be a part of their team. I sincerely thank this committee for all that you do on behalf of our Nation and those who serve in its defense. If confirmed, I look forward to closely working with this committee and all members of Congress in support and advocacy of those who today volunteer to so selflessly serve in de-

fense of our Nation, and in particular, the U.S. Navy and Marine Corps.

To close, Mr. Chairman, with the committee's indulgence, I want to thank my family for their abiding love and support, and particularly my husband of nearly 33 years, Neil. Their foundation has been a mainstay of my life. If I might, I would like to wish my parents, Catherine and Dick Morrisey, who retired after a career in the Air Force to Russellville, Arkansas, not only a very happy birthday, but also happy anniversary. Both of them just recently turned 83 and on June 4, celebrated their 62nd wedding anniversary.

Thank you, Mr. Chairman. That concludes my opening remarks. [The prepared statement of Ms. Livingstone follows:]

PREPARED STATEMENT BY SUSAN MORRISEY LIVINGSTONE

Mr. Chairman, members of the committee, it is my distinct honor to appear before you today in seeking confirmation as the Under Secretary of the Navy and the privilege to work with our incomparable Naval forces. I would also like to express my deepest thanks and appreciation to the President, Secretary Rumsfeld, and Secretary-Designate England, for this opportunity to serve our Nation and our incomparable Navy and Marine Corps. I am in full support of the President, the Secretary of Defense, and the Secretary-Designate of the Navy in their effort to build a Navy Department which addresses the needs, threats and opportunities of the 21st century. Should I be confirmed, I look forward to the opportunity to work closely with this committee and Congress to effect this transformation within the Department.

Previously, Secretary-Designate England stated he intended to initiate four thrusts in support of the President's vision. These initiatives centered on combat capability, people, technology, and business practices. I am in complete agreement with the focus and proposed effort in these areas, and if I am confirmed, I welcome the opportunity to support these initiatives and look forward to moving them forward in the Department of the Navy.

Beginning with combat capabilities, this committee is well aware the mission of the Navy and Marine Corps is to deter, train for, and when necessary, fight and win the battles of our Nation. As such, it is only logical that combat readiness, to include platforms, weapons systems, and training, be the primary focus of the Department's collective efforts. Given limited and limited resources, the question, "does this system, base, facility, or program substantively contribute to improved unit combat capability and readiness?" needs to be asked, and often. It is also critical that the Department invest in doctrinal experimentation to find innovative and leading edge ways of accomplishing our mission.

People are by far our most important and valuable resource and we need to do a first-class job of taking care of them. Our uniformed and civilian work force is not an unlimited resource, rather it is very finite, and if confirmed, I will take great pains to ensure this valuable resource is treated responsibly and with the respect they deserve. Therefore, I fully support Secretary-Designate England's emphasis on "Quality of Service" for all our sailors and marines, both active duty and reserve, civilians and their families. Competitive compensation and quality housing, workplace resources, professional development, health care and training, combined with an operational tempo which considers not only the community and the family, but also the needs of the individual, are but a few of the areas which I consider important to improving their quality of service.

The advancement of technology is occurring at a blinding pace and is central to the strength of our military. I am in complete agreement with Secretary-Designate England in the need to focus on the leveraging capability of technology. To maximize our investment however, the Navy Department needs to draw from the broad spectrum of academia and industry, streamline outdated bureaucratic processes and come into closer alignment with proven business practices.

But improving business practices goes beyond technology to all of the considerable non-operational activities of the department. We must focus our resources on acquiring combat capabilities, and not on processing paper.

In essence, we need to increase the "tooth" part of the "tooth to tail" ratio. If confirmed, it is my intention to work closely with Secretary-Designate England to put in place such management techniques as will help managers know the actual cost of a process or system; some empirical method to measure worth or success; and

ways to evaluate what is needed to improve or modify that system. In short, we must fix the process to improve the product.

In summation, if confirmed, I look forward to closely working with Secretary-Designate England and with this committee to improve Navy and Marine Corps combat capabilities, the quality of service for our people, incorporate new and innovative technologies in a prudent but quicker manner, and bring the Department of the Navy's business practices into the 21st century. As each one of these efforts is inherently related and given that the Department is a large and complex entity, the challenge is large. But we owe the men and women of the Navy and Marine Corps nothing less. The continued support of this committee is essential to this undertaking and if confirmed, I am committed to close communications, cooperation, and coordination with you.

Thank you for your consideration.

Chairman LEVIN. Thank you.

Ms. Roberson.

**STATEMENT OF JESSIE HILL ROBERSON, NOMINEE TO BE ASSISTANT SECRETARY OF ENERGY FOR ENVIRONMENTAL MANAGEMENT**

Ms. ROBERSON. Thank you, Mr. Chairman, Senator Warner, and other members of the committee. It is a privilege to appear before you today as the President's nominee to be Assistant Secretary of Energy for Environmental Management. I thank the President and Secretary Abraham for their support. I look forward to serving under Secretary Abraham in this critical position.

I also thank you, Mr. Chairman, and your staff for moving rapidly on my nomination. I pledge to work closely with this committee and all of Congress in meeting the many challenges ahead. Mr. Chairman, I would also ask that the completion of my statement be included in the record.

Chairman LEVIN. It will.

Ms. ROBERSON. I come before you today with an appreciation of the magnitude of the task I am undertaking. As a former environmental program manager at the Savannah River Site in South Carolina and a former site manager at Rocky Flats in Colorado, I have experienced firsthand the many difficulties that we face in achieving safe and effective clean-up of the Cold War legacy. My work as a member of the Defense Nuclear Facilities Safety Board has further broadened my outlook to encompass the issues confronting the entire DOE complex.

However, I am not daunted by the task. I am ready to get on with it. I share Secretary Abraham's view that we can and will do a better job than we have. That we can and will make achievable clean-up commitments and that we will meet our commitments to the states and to our citizens and that we can and will use taxpayer's money responsibly.

I commit to working with Congress, the States, and individual citizens and informing them of our goals, plans, methods, and performance in an open and transparent manner. Perhaps I can condense my thoughts today by saying that I intend to learn, to encourage, to communicate, and to act and that I will devote my fullest energies to this task every day that I serve in this position.

Thank you, Mr. Chairman.

[The prepared statement of Ms. Roberson follows:]

## PREPARED STATEMENT BY JESSIE HILL ROBERSON

Good morning, Mr. Chairman, Senator Warner, and other members of the committee.

It is a privilege to appear before you today as the President's nominee to be Assistant Secretary for Environmental Management. I thank the President and Secretary Abraham for their support and look forward to serving under Secretary Abraham in this critical position. I also thank you, Mr. Chairman, and your staff for moving rapidly on my nomination. I pledge to work closely with this committee and all of Congress in meeting the many challenges ahead.

I come before you today with an appreciation of the magnitude of the task I am undertaking. As a former Environmental Program Manager at Savannah River and a former Site Manager at Rocky Flats, I have experienced first-hand the many difficulties we face in achieving safe and effective cleanup of the Cold War legacy. My work as a member of the Defense Nuclear Facilities Safety Board has further broadened my outlook to encompass the issues confronting the entire DOE complex.

I am not daunted by the task, however, rather, I am eager and anxious to get about it. I share Secretary Abraham's view that we can and will do a better job than we have been doing, that we can and will make achievable cleanup commitments and we will meet our commitments to the States and our citizens, and that we can and will use taxpayer's money responsibly.

Mr. Chairman, I plan to acquire a deep understanding of the technical strengths and weaknesses of the existing environmental program I am being asked to manage. I need to know successes, failures, where it has inspired public confidence, and where it has disappointed the public's expectations. I will participate in making a series of critical decisions on projects that are just not making the grade. I recognize fully that hard decisions like these will not please everyone, nonetheless, decisions must be made and carried out. I will challenge the employees in my charge, from top managers to the hands-on employees in the field to satisfy our commitments.

Finally, I commit to informing Congress, the States, and individual citizens of my plans, goals, methods, and performance. Why is this critical? I cannot say it nearly as well as President Franklin Roosevelt in his Second Inaugural: "Government is competent when all who compose it work as trustees for the whole people. It can make constant progress when it keeps abreast of all the facts. It can obtain justified support and legitimate criticism when the people receive true information of all that government does."

Perhaps I can condense my thoughts today by saying that I intend to learn, act, encourage, and communicate, and that I will devote my fullest energies to the task every day that I serve in this position.

Mr. Chairman and other members of the committee, I will be pleased to answer any questions you may have.

Chairman LEVIN. Thank you.

Mr. Christie.

**STATEMENT OF THOMAS P. CHRISTIE, NOMINEE TO BE DIRECTOR OF OPERATIONAL TEST AND EVALUATION, DEPARTMENT OF DEFENSE**

Mr. CHRISTIE. Thank you, Mr. Chairman and Senator Warner, for your gracious remarks. With your indulgence and approval and with the indulgence and approval of the other committee members, I will dispense with an opening statement and just make a few remarks here. I do want to express my feelings about what an honor it is to have been selected for this position and to be appearing before you today. Also, I'm deeply honored that President Bush has nominated me and Secretary Rumsfeld has supported me for the position of the Director of Operational Test and Evaluation.

They have proposed, with your advice and consent, to entrust me with the position and a mission vital to the Nation, to Congress, and to the Department of Defense. If confirmed, I will work with this committee and other members of Congress to ensure that the weapons and equipment that we deliver to the men and women of our armed forces are adequately tested and are operationally effec-

tive, suitable, and survivable for their use in whatever combat situations our troops end up using them. I look forward to your questions.

Chairman LEVIN. Mr. Christie, we thank you. Let me begin, Ms. Livingstone, with you. First on Vieques. Over the past couple of years our naval forces have been unable to conduct live fire training in the Navy's training range on Vieques. This has degraded the readiness of our forces to execute their wartime missions. Senator Inhofe and others on this committee have been particularly active in this area relative to this problem. An agreement was reached with the previous governor of Puerto Rico to try to resolve the issue. But the current governor of Puerto Rico does not appear to support the agreement. How do you believe that the issue should be resolved?

Ms. LIVINGSTONE. If confirmed, I perceive my role as being the strongest possible advocate on behalf of the Navy and the Marine Corps in terms of meeting their training needs. In terms of meeting those training needs I think there is no substitute for the ability to train as they fight, which would include live fire. Vieques is a very unique training range with capability in terms of providing not only integrated but also combined arms training. Really for the near term I do not see any possible alternative to meeting those kinds of training requirements other than hopefully being able to somehow continue to train in Vieques.

Chairman LEVIN. The President has said that the Navy needs to find another base to replace Vieques. Do you know of any plans underway to find another location or to renegotiate the agreement reached by President Clinton and the Navy with Puerto Rico?

Ms. LIVINGSTONE. No, sir, I do not. I do believe that the Navy is looking into possible alternatives for live fire capability, but Vieques is a very unique asset. If there were some longer term area, or longer term option, other than Vieques for combining integrated and live fire training, it would really need to look like and be like Vieques and also combine the instrumentation and evaluation capability that Vieques does. But I know of no specific options review of alternatives at this point, other than, I believe, one on live fire.

Chairman LEVIN. As part of the agreement, Puerto Rico was supposed to make sure that the exercises could continue there until an election was held or a referendum was held. They kept their end of the bargain.

Ms. LIVINGSTONE. Sir, I only know what I have read in the newspapers. It appears the exercises have been able to move forward. I know there have been some protests and some difficulties in that regard, but the training has proceeded, and I believe there has been an announcement that additional training will occur soon in Vieques.

Chairman LEVIN. With the support of the government?

Ms. LIVINGSTONE. That I cannot answer, sir. I simply do not know.

Chairman LEVIN. Secretary Rumsfeld has stated that new base closures, and this is a question related to BRAC, will be needed to address the Defense Department's excess infrastructure. Do you believe the Department of the Navy has excess infrastructure?

Ms. LIVINGSTONE. Yes, Mr. Chairman. I believe as the military service is currently sized there is excess infrastructure. Obviously, we have the Quadrennial Defense Review ahead and that study may point more specifically to areas and opportunities where base realignments and closures would be beneficial.

Chairman LEVIN. Do you believe there have been savings from previous rounds of base closures?

Ms. LIVINGSTONE. I have been away from the Pentagon since 1993. I am aware of GAO reports that have looked at and verified that there have been significant cost savings. I cannot speak specifically to that. I know that there are a lot of upfront costs that occur, environmental cleanup notwithstanding, and that must be expended. But I believe the GAO has underscored that there are real and very distinct savings from base closures.

Chairman LEVIN. Former Secretary Danzig made an effort to reduce the demands for manpower on Navy ships. The new DD-21 scheduled to be deployed in 2010 would have a crew size of as few as 95 people compared to a crew of more than 300 on a comparable ship today. In the nearer term, the Navy has started to outfit existing ships with more automation—a so-called Smart Ship Program—to reduce the need for people. That program has run into technical difficulties. Do you plan to pursue such initiatives such as the Smart Ship Program to help reduce demands on personnel and on their operating tempo?

Ms. LIVINGSTONE. Mr. Chairman, I would look forward to, if confirmed, working with Secretary Gordon England in that particular area. I have not been briefed on the specifics, but from what I know as a person from the outside that has been reading in those areas, the smart ship and crew sizing both appear to be very beneficial programs that are worthy of being pursued strongly.

Chairman LEVIN. In your answers to the pre-hearing questions, you stated that currently the application of advanced technology is significantly lagging in its availability. We must become far more agile in applying and leveraging the capability of technology. What specific recommendation do you have for reducing the time between the availability and the application of advanced technology for systems within the Defense Department?

Ms. LIVINGSTONE. Mr. Chairman, my reference in my written responses to those questions really was looking to the area of acquisition reform, the length of time it takes the Department of Defense and actually the Federal Government to move from requirements to actual production and capability. What I would be looking for would be areas where we could shorten that cycle in the acquisition arena in order to ensure that technology can be more readily available. I believe Secretary England has talked about some initiatives such as spiral development, things of that nature. I would look forward, if confirmed, to working with him as well as OSD and this body on acquisition reforms that would allow us to perhaps leverage the capabilities of technology much more quickly than we are currently.

Chairman LEVIN. Back to Vieques for a moment. The referendum is scheduled for November 6. Will you support the result of that referendum?

Ms. LIVINGSTONE. Mr. Chairman, my inclination is to again go back to what my perceived role would be, which is, if confirmed, to serve as the strongest possible advocate for the training requirements and needs of our Marine Corps and our Navy team. That said, I know there is an agreement and I also know there is congressional statutory language and obviously within the parameters of what is appropriate, I will support the law.

Chairman LEVIN. My time's expired.

Senator BILL NELSON. Will you yield?

Chairman LEVIN. I would yield to you on that—

Senator BILL NELSON. If you could give us some clarification on that—and perhaps Senator Warner could help clarify for this new member of the committee. The United States made an agreement, as I understand, with Puerto Rico specifically with the island of Vieques that there would a November 6 referendum.

Senator WARNER. That is right. That was sanctioned by Congress in statute.

Senator BILL NELSON. Then is there any question that we should not honor that agreement that we made? Because that was not the answer of the witness—

Senator WARNER. If I may say, Senator, I do not think there is any question on the part of the previous administration or this administration that that agreement should be honored. The practical effect is with the change in the political landscape there. The current administration in Puerto Rico has decided not to accept the agreement, which was entered into by the previous administration. That places before the military services—particularly the Navy and Marine Corps—a very serious dilemma. Adequate training with live fire ammunition is essential for those elements of our military who are being deployed now into the Gulf region where so often they find that within a matter of days or weeks after arriving on scene to relieve the previous contingents, they are in a combat situation.

So we have a very serious problem. I think there has been a natural sequence between the administrations, a joint view and a law. We have kept our word. Regrettably, the current administration in Puerto Rico desires not to do it and this places a tremendous burden on the chiefs of services of our Navy and Marine Corps together with their civilian bosses, the Secretary and the Under Secretary. I think our witness today has responded to these questions as best as she or any other witness placed in this position could respond.

Chairman LEVIN. Senator Nelson, my recollection is that there was an agreement and part of that agreement was that the government of Puerto Rico was to assure us access to that base during the interim until the election. We made certain commitments in that agreement as well, but I am one who believes that we ought to keep our commitments. I also believe that Puerto Rico ought to keep its commitments. When the governor started the lawsuit to prevent us—as I understand it, and I want to double check this—to prevent us from having the ability to do exactly what the agreement said we were supposed to have the ability to do in the interim. I was troubled by the lawsuit because it seemed to me that it was inconsistent with the agreement.

Now that gets into a legal situation which is not up to us, or at least I am not going to try to comment on or resolve it because I do not know the precise wording of it. I happen to believe that both parties to an agreement ought to keep their agreement and where that leads us, I do not know. Thank you for that follow-up question about the referendum. I think it is very important.

Senator WARNER. Senator, if I could just say, I think that the committee would welcome your active participation, and I would suggest that you talk with Senator Inhofe. He has really put in a lot of time on behalf of this committee and made many trips down there and to have someone from your side of the aisle to join in that volume of work would be very helpful. It is a challenge.

Ms. Livingstone, I just want to chat a moment or so. I remember experiences I had when I was in your office. One I will never forget—I went to the retirement ceremony overseas of a four-star admiral who was renown for his extraordinary career in the United States Navy. When I arrived I had a very modest role to represent the President at his retirement and so forth, put in I think some 40 years in the Navy, and when I arrived the ceremony was being put in place, and it was quite a grand ceremony which was befitting his distinguished career. He asked if he could sit down and talk with me. He said, “I am not going to go down there and retire until I get your assurance that you are going to protect the heart and soul of the United States Navy,” at which time he proceeded to lecture me at great length.

Although I had a very modest career in the Navy, I have studied it and I learned from him that there is a heart and soul to each of the military services. They are different in different ways. There is a difference between the Marine Corps and the Navy. But I would hope that you would spend time with those who have devoted much of their lives, whether they are on active or retired status, to understand the intangible qualities, which are the magnificence of our services. There is nothing like it, nothing comparable in the world as you said in your opening statement.

So I just hope that you will avail yourself of the opportunity to learn as I did and continue to learn about the services and what is so important because those intangible qualities are what attract the men and women today to accept the challenges, the risks—indeed the risk of life in some instances—to wear the uniform, and their families to have to pack and move so many times when their civilian counterparts remain safely in their villages and towns and cities across America and get to pursue a more controlled life.

Ms. LIVINGSTONE. Senator Warner, I appreciate your comments and I can assure you, if confirmed, I look forward to nothing more than communicating very closely with the men and women of both the Navy and the Marine Corps. As I said in my opening statement, I am—and I mean this very sincerely—honored and humbled by this opportunity, not the least of which, of course, is the large shoes to fill that you have set in the Under’s position in the Department of the Navy. But I agree that communications are critical. I came from a military background and I can assure you that I will perpetuate every opportunity for very close communication with our men and women in uniform.

Senator WARNER. I was running a rough calculation, if your father is 83—

Ms. LIVINGSTONE. Yes, sir.

Senator WARNER.—that means he joined the Army Air Corps in World War II. Would that be correct?

Ms. LIVINGSTONE. That's correct. Actually he called my mom up and enlisted without telling her before he left home in the morning. Then she followed him around for the next couple of months and from place to place as he went through different kinds of training. But he, of course, ultimately ended up in the Air Force after the Army Air Corps.

Senator WARNER. That is wonderful. That is a great heritage that you have. My father served as a doctor in World War I in the trenches and is an inspiration to me. But so much for that. Let's turn to the Osprey, the Marine Corps aircraft. This is a joint question to both of you. I will let Mr. Christie lead off.

The panel of witnesses which sat at that very table before this committee some several weeks ago was asked if it could make an impartial evaluation. They did a great service to the country and particularly to the Marine Corps in putting into perspective where we are in this complicated aircraft system and where we should go in the months and years to come. I am prepared to support the recommendations of that panel. I wanted to know, Mr. Christie, if you have had an opportunity to review it?

Mr. CHRISTIE. I have looked over the briefing that was presented here by the panel and do support their recommendations. In fact, I do believe that the Under Secretary of Defense for Acquisition, Technology, and Logistics is working with the Navy to develop a revised program that will do the necessary testing, that perhaps we skipped, in order to address the deficiencies that we found in the earlier testing before we proceed with any full production or deployment decision. If confirmed, I assure you that I will be part of those deliberations, assessing whether that testing will be adequate to fulfill the requirements that are laid down.

Senator WARNER. In that context, during the course of the hearing towards the end, the issue of the dissemination of operational test information was looked into by the committee. We did not bring to closure exactly what happened. But there were some allegations to the effect that the program manager did not receive full information. I do not think there was anything intentional done to circumvent the rules and regulations, but I do think there should be absolute clarity as to how this information is distributed and shared.

There are tendencies, I think, by the services to push a program because of the oftentimes desperate operational requirements to have this system in an operational status. But you have to resist that. You have to make sure that the result of test and evaluation is known to all that have a degree of responsibility. Could you give me that assurance?

Mr. CHRISTIE. Yes, sir.

Senator WARNER. You will clarify those rules? Because there was something in here—

Mr. CHRISTIE. I am aware of some ongoing negotiations or some interactions with this committee staff to look at whether a new policy should be promulgated in the Department.

Senator WARNER. We have isolated the problem, and Ms. Livingstone, I want you to work with Mr. Christie on it. It comes with the normal responsibilities of the Under Secretary.

Ms. LIVINGSTONE. Senator Warner, I would be pleased to do so if both of us are confirmed and agree that we have a major issue and challenge before us in terms of restoring the trust and confidence in the Osprey program. We will work with Congress, OSD, and the pilots and the maintainers to do that.

Chairman LEVIN. Senator Nelson has been kind enough to yield to Senator Carnahan even though Senator Nelson was here first, because of her commitment. Senator Carnahan.

#### STATEMENT OF SENATOR JEAN CARNAHAN

Senator CARNAHAN. Thank you very much, Mr. Chairman. I just want to thank you for inviting me to this hearing. I am eager to rejoin this committee as soon as possible and I am looking forward to working with you and Senator Warner on the challenging issues ahead. In the meantime, I want to—

Chairman LEVIN. Excuse me for interrupting. If I may, for a second, that may be a bit of an in-joke that our audience is not totally in on, so we might explain that until we have a new resolution of organization in place, members that joined the committee this year are technically not on the committee. But we have welcomed them to participate in these hearings and, of course, any vote that we have will hopefully take place after they have “rejoined” the committee. But we can assure you all that we consider you full members.

Senator WARNER. I assure you, I fervently desire to have you specifically stay on this committee.

Senator CARNAHAN. Thank you very much.

Senator WARNER. You have been a valuable member and we very much want you to remain.

Senator CARNAHAN. Thank you. I want to welcome our distinguished panel to the committee hearing today. I am delighted to hear your testimony and I am looking forward to working with you on issues affecting our Navy and U.S. Departments of Energy and Defense. At this time I would like to direct my comments specifically to the nominee for Assistant Secretary of Energy for Environmental Management.

I enjoyed meeting with Ms. Roberson yesterday about an issue that is of great concern to us in Missouri and that is the cross-country shipment of nuclear waste through Missouri. As some of you may know, the Department of Energy’s Environmental Management Program, which Ms. Roberson will oversee in her new role, is responsible for managing the disposal of spent nuclear fuel in this country. This includes both foreign and domestically produced nuclear waste. For the past several years the DOE has been making cross-country shipments of foreign nuclear waste. They plan to do another shipment in the near future. This shipment is scheduled to cross Missouri’s I-70 right through two major metropolitan areas of St. Louis and Kansas City.

What we have asked the DOE repeatedly is if it makes sense to ship this waste on this route versus shipping it on another route where perhaps the roads are better, or on one that avoids major metropolitan areas. We want proof that this is the safest determinable route. We have asked the DOE to prove to us that it is, in fact, the safest route, prior to the shipment coming through our state.

So, Ms. Roberson, as I said to you yesterday, I sent a letter to Secretary Abraham on May 25 asking if the Department of Energy had conducted a peer review of its route selection process. If so, I would like to know who conducted it and what the results were. If not, I would like to request that such a peer review be conducted. I would also like to have the general cooperation of the Energy Department and especially the Environmental Management Program that you will oversee in working with us on these kinds of route selections, analyses, and decisions.

We are not trying to be obstructionist here. We are only saying prove to us that your route determination for shipment of nuclear waste is, in fact, based on careful and rigorous analysis. Considering the seriousness of this issue to the people of Missouri, I firmly believe this is only fair to expect, and I hope you will work closely with us on this issue. I would welcome your comments on this subject today.

Ms. ROBERSON. Senator Carnahan, thank you for the question. I too enjoyed our meeting yesterday. My understanding is that there has been a peer review conducted and that the Department of Energy is working expeditiously to respond to your letter. I would like to commit to you—or demonstrate to you—my commitment to work with you and the Governor of Missouri to make sure that we address your safety concerns and those safety concerns across the country as we pursue this program. I will be open and transparent in those interactions and you certainly have my commitment to work with you.

Senator CARNAHAN. Thank you very much. I appreciate that. Thank you, Mr. Chairman.

Chairman LEVIN. Senator Reed, it is a pleasure to call upon you as always.

#### **STATEMENT OF SENATOR JACK REED**

Senator REED. Thank you, Mr. Chairman. Thank you ladies and gentlemen for your testimony. Mr. Christie, you answered a pre-hearing question on acquisition streamlining related to spiral development and its relationship to weapon system testing. Do you believe that the approach of testing this spiral development program could or should be applied to the fielding of commercial off-the-shelf technology in weapons systems or administrative support systems?

Mr. CHRISTIE. I think so, Senator. One thing about spiral development—if I may make a comment—perhaps it is becoming a little bit of a buzz word, but it is a way of getting new technology into the field faster. We have to be careful that what we introduce into the field at the end of one spiral and before we go one to another one is in fact useful and effective for the user. I do believe that test

techniques that are being used in the systems that are in that context are being used for commercial off-the-shelf equipment.

Senator REED. Thank you, Mr. Christie. Mr. Christie, let me turn my attention to another issue. Prior to his departure, your predecessor, Mr. Coyle, looked at the testing program for the National Missile Defense in the Ballistic Missile Defense Office and recommended a significant increase in the robustness in the testing, in the number tested, and the challenges inherent in the testing. Would you continue that effort, which I believe, is critical?

Mr. CHRISTIE. Yes, sir, Senator. I am not familiar at this point in time with what the administration is developing in the way of a new National Missile Defense Program. Mr. Coyle's assessment was, of course, based on the previous administration's primarily land-based interceptor program. As soon as the Department has come together with their strategy for National Missile Defense, and if confirmed, I'm sure that I will be involved in working to ensure that proper testing or robust testing is planned and executed before we make decisions to deploy such a system.

Senator REED. While I think that is absolutely critical and seems to be obvious, sometimes the obvious in Washington is not a reality. This is one of the more challenging technological endeavors that we have engaged in in many years and if we proceed forward with the land-based system, the current architecture, that requires increasingly more sophisticated and challenging testing. If we move to other architecture we are starting close to ground zero. So, I would assume that you would be intimately involved and I would urge you to be very demanding in the testing.

Mr. CHRISTIE. If confirmed, I will do so, sir.

Senator REED. So far you are doing pretty well. Let me turn my attention to Ms. Roberson. Ms. Roberson, there is consensus that the Department of Energy's budget request for fiscal year 2002 is about \$1 billion short of the amount required to keep the DOE current on all of its enforceable commitments to the states and to the EPA. Now if the supplemental or amended budget request does not address this funding shortfall and you are confirmed, how do you plan to deal with these issues? In effect, how do you plan to keep DOE in compliance with state judgments and Federal judgments?

Ms. ROBERSON. Senator Reed, if confirmed, one of the first tasks that I will undertake, which Secretary Abraham is committed to, is a complete review of the Environmental Management Program. That program recently celebrated its 10-year anniversary. So, we have 10 years of successes and disappointments to learn from to advance the program in the future. I believe that we will identify opportunities to aid and complete our clean-up activities in a more expeditious way. However, I am committed to working with this committee and Congress to make sure that we spend the budget that is allocated for this program, once that budget process is complete, in an efficient and effective manner.

Senator REED. Part of your job is certainly to spend the money that is appropriated but I would assume in other parts to advocate within the Department of Energy and within the OMB and within the administration and even within Congress for sufficient funds. This seems to me to be a case which is quite compelling. There are judgments and outstanding Federal requirements that we have to

meet and we are about \$1 billion short. I presume—it is obvious you recognize that—and I would hope that you could see that we follow through on our commitments to the states and the EPA.

Ms. ROBERSON. If confirmed, Senator, it is my goal and my commitment to work with the parties involved to make sure that we satisfy our environmental obligations as committed.

Senator REED. One of the challenges you face, Ms. Roberson, is to deal with other agencies, among them the National Nuclear Security Administration, in order to carry out your responsibilities. Could you just briefly indicate how you view your relationship and what you will do to provide for an integrated approach to the challenges at the DOE?

Ms. ROBERSON. Senator Reed, quite frankly, as a result of being a member of the Defense Nuclear Facilities Safety Board I have had the opportunity to see where those opportunities exist across the complex. I have met with General Gordon and I believe that we will have a very positive working relationship. I do not think that there will be any difference in the goals. Where our goals meet, they are very much aligned and I believe I will have a very good working relationship with General Gordon and his staff.

Senator REED. Thank you very much. Mr. Chairman, my time is up. I have one additional question, if I may.

Chairman LEVIN. Go ahead.

Senator REED. Thank you, Mr. Chairman. Thank you, Senator Warner. Ms. Livingstone, currently the Navy is considering a conversion of Trident submarines. How do you feel about that conversion process? Could you elaborate on it?

Ms. LIVINGSTONE. Senator Reed, I wish I could elaborate, but unfortunately, I have not been briefed. I am not yet confirmed and have not been really briefed on the program. It is something, however, I recognize as an important program area and I certainly will work with Secretary England and the Department of the Navy to get up to speed as quickly as possible, if I am confirmed.

Senator REED. Sorry, I should ask you questions about the Army then because you are fully conversant on the Army. [Laughter.]

Ms. LIVINGSTONE. I was an Air Force brat and I worked for the Department of the Army and now I am honored to work on behalf of the Navy and the Marine Corps, if I am confirmed. But you have to say the Navy and Marine Corps are air, sea, and land, so we have it all covered.

Senator REED. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Reed. Senator Reed raised a number of questions that I want to pursue and get a little more assurance on. I think these are really important areas that he has opened up. First on the question of the Department of Energy's budget request for 2002, as he pointed out, it is, we believe, about \$1 billion short of the amount that is necessary to keep the DOE current in its commitments. These are legally binding commitments to states and to the EPA. You have indicated that you will spend the budget allocated and will seek an adequate budget. Those are the assurances you gave to Senator Reed and those are very important. Do you agree that there is a shortfall?

Ms. ROBERSON. Mr. Chairman, I really have not had the opportunity to look at the details of the budget and work with the site

managers and the contractors responsible for implementing those. So, I am really at a disadvantage to answer that question.

Chairman LEVIN. Fair enough. I expect and hope you will be promptly confirmed. Will you get back to this committee after you are in office with your assessment of that issue, of that problem?

Ms. ROBERSON. Absolutely.

Chairman LEVIN. Let us know whether or not after you have had a chance to look at it if you believe there is a shortfall. We need your opinion. Whether or not you get the money from OMB, we need your commitment to give us your opinion on that.

Ms. ROBERSON. Yes, sir.

Chairman LEVIN. Mr. Christie, Senator Reed asked you about testing the National Missile Defense system to make sure that you will continue your predecessor's determination that the testing be robust and realistic. You made a commitment that you would do the same.

Mr. CHRISTIE. Absolutely.

Chairman LEVIN. I assume then that it would include a commitment that if the operational testing and evaluation of the National Missile Defense system does not demonstrate that the items and the components tested are effective and suitable for combat, that you would then recommend against acquisition or deployment.

Mr. CHRISTIE. Mr. Chairman, I view my mission or my responsibility to be one of reporting to the Secretary of Defense and to Congress the test results and whether or not the system was operationally effective, suitable, and survivable in the tests that were conducted, and that those tests were in fact robust enough or adequate enough to reach that conclusion. It is not my responsibility, in my view, to recommend that we deploy or not. That is, in fact, a decision that is to be made by the Under Secretary of Defense for Acquisition, Technology, and Logistics and in this case, no doubt, the Secretary of Defense and the President. I will just lay the facts on the table: here are the test results; here is my view of the tests that were conducted and how realistic they were, how robust they were. That decision on deployment or acquisition is in other hands.

Chairman LEVIN. Fair enough. Do you believe that the program that you have described from operational testing and evaluation for the National Missile Defense system includes the use of countermeasures?

Mr. CHRISTIE. Yes, sir, it will.

Chairman LEVIN. I guess the most important point is you have given us the assurance, which is so essential, which is you are just going to tell it like it is.

Mr. CHRISTIE. Yes, sir. I may not last long, but I will tell it like it is.

Chairman LEVIN. Mr. Christie, I have a question on Army transformation. The National Defense Authorization Act for Fiscal Year 2001 requires the Secretary of the Army to conduct a comparative evaluation of the interim armored vehicles selected for the fielding of the interim brigade combat teams with equipment that is already in the inventory. The law requires that the evaluation plan, including the sizes of the units involved in the evaluation, be approved by the DOT&E. Last month the acting DOT&E approved an

evaluation plan for side-by-side testing at the platoon level. Do you agree that an evaluation of platoon level missions is sufficient for such a new and unique unit that is designed primarily for operations at the brigade level?

Mr. CHRISTIE. My understanding of what has been looked at or has been approved, by the acting DOT&E, is that this will be a company-size unit as to the numbers of vehicles in the side-by-side comparison carrying out missions that are at the platoon level. I think the feeling is—and I have not looked into this in enough detail to form my own thoughts that it would be sufficient to enable a good assessment of the differences in the vehicle and to provide information to decision-makers as to whether they should proceed with one or the other. I believe that, if we go on with the IAV into IOT&E, it would of course be a much larger test. But right now I believe the side-by-side comparison is 13 or 14 vehicles, which is a company-level vehicle unit, but they will be carrying out platoon-level missions.

Chairman LEVIN. After you review the decision, after you are confirmed, would you take a personal interest in providing the oversight for the conduct of the operational comparison?

Mr. CHRISTIE. Absolutely. Certainly.

Chairman LEVIN. Senator Warner.

Senator WARNER. I want to follow-up. That is a very important inquiry that our Chairman has brought up. The Army certainly needs this transformation but the selection of the particular vehicle is subject to a great deal of controversy right now. It is an enormously expensive system. I really think that this is among the five major responsibilities—missile defense, this, the Osprey—that you have to bear down on. I would hope that you could expedite this situation. We will have to address it in the 2002 budget and any preliminary information you could supply to this committee would be a great help to us. We want to do the right thing by the Army. It has to be right. It has to be fixed, and has to be fixed right. So, I wish you luck on that.

Mr. CHRISTIE. Thank you, sir. If confirmed, I commit to getting into this personally.

Senator WARNER. It is a top priority. Give us interim reports on it.

Ms. Livingstone, of course, the number of ships in the Navy is always a matter of great concern. You will be directly responsible for a lot of the shipbuilding and contracting and you will work with the Secretary on the budgeting. All indications are that our Nation is falling short on laying the plans today, tomorrow, and in the future for an adequate number of hulls to carry out the missions, which our Navy must carry out. The sea lanes of the world are the arteries of this Nation not only in terms of our national security but indeed in our ever-expanding trade with nations abroad. The protection of sea lanes is absolutely imperative. So I presume you are going to go to work on that early on.

Ms. LIVINGSTONE. Senator Warner, absolutely. I share your concerns about the current rates of shipbuilding not only in terms of the implications it has for combat capability and readiness, but also in terms of the business aspects of it in the economies of scale and production efficiencies and also the impacts on the shipyard in-

dustrial base. I look forward to working on that issue with Secretary England and also within the context of the strategic reviews ongoing and in the Quadrennial Defense Review.

Senator WARNER. Good. Ms. Roberson, on behalf of Senator Alard, I am going to submit a very detailed question to you regarding the Rocky Flats situation and ask that you provide a response for the record.

Another question, you have stated that “sound science and innovative technology are critical to solving the complex technical problems that the Department faces including up to the DOE complex.” You have also acknowledged that the EM Technology Development Program has experienced problems in transferring cutting edge research to DOE clean-up and waste management sites. How do you view your role in ensuring that science and technology activities are responsible to on-the-ground needs identified in the field and then the users that participate in all aspects of technology decision-making from planning through deployment? You can amplify your response to that rather technical question in the record, but if you could give us a preliminary, I would appreciate it.

Ms. ROBERSON. Senator Warner, if confirmed, I will be responsible for ensuring that integration occurs and having been a field manager on the other end as a client and recipient of technologies, I think I understand quite clearly how that relationship has to work to be effective. I will work with the staff in the Department to ensure that those areas of improvement are implemented, and then I will provide a more detailed response to you.

Senator WARNER. I wish you luck. You have a real challenge. I serve on the Senate Environment and Public Works Committee and, therefore, have another oversight responsibility for the clean-up of America’s distressed sites. I really think we have to assign priority to those sites that have the potential to or are actually contributing to a degrading of the quality of life on a real-time basis. Many of the military sites are basically dormant so far as we know. Now scientific evidence may show leakage into the underground water system and things that are not apparent on the surface. I think you are going to have to prioritize your clean-up operations with your budget and how urgent it is with respect to the quality of life. I hope you exercise sound judgment and flexibility and petition your Secretary, whom I know very well and is a wonderful man, to give you some leeway in how you proceed on these issues.

Now, Ms. Livingstone, this is a question that is interesting. I greeted this day, as most of us do, listening to the news of the world and also the news here at home. Our air traffic situation is in need. I will let you answer this for the record so you can sit back and relax—the air traffic situation is becoming desperate. Commercial air traffic is expected to increase 6 percent annually and military airspace use will also increase for the next generation of high performance weapons. As a result of the pressures associated with commercial air traffic congestion, noise, and environmental concerns, the acquisition and use of special use air space has evolved into a challenging endeavor for all of the military departments. I want to put you on alert there because you are going to have to work to try and resolve that. It’s not unlike Vieques, where you have the essential need for that training site to maintain our readi-

ness and the same with our airspace here at home. Fortunately, we have not had a breakout of hostile viewpoints on this, but it is something you need to take a look at. With the commercial air system growing rapidly, it juxtaposes in many instances with our military requirements and airfields. Look at it and get ahead of the curve on this.

Ms. LIVINGSTONE. Senator Warner, I appreciate your question very much and also appreciate the opportunity to respond for the record later on. It is an important issue, thank you.

[The information follows:]

As airspace needs change with the evolution of new weapons systems and tactics, the drastic increase in civilian aviation traffic, compounded by urban sprawl, remains a continued threat to the retention of current airspace assets and the expansion of those assets. Scheduling/using agencies of Special Use Airspace delegated to Navy by the Federal Aviation Administration continually evaluate this resource to assure that it is properly sized, both vertically and laterally, to support the mission for which it was designed. Navy currently has three proposals at FAA headquarters for approval and a small number of proposals in the early stage of development. Preliminary discussions suggest that these proposals, if properly documented, have an excellent chance for approval. To facilitate continued interagency cooperation, we continue to expend a considerable amount of time in cultivating relationships with senior FAA officials in Washington Headquarters and the Regional Offices.

Senator WARNER. Mr. Chairman, thank you. I think you are off to an excellent start. That completes my questions.

Chairman LEVIN. Senator Warner, thank you. We thank our nominees and we congratulate you again. We look forward to a prompt confirmation and to your service.

Ms. LIVINGSTONE. Thank you.

Ms. ROBERSON. Thank you.

Mr. CHRISTIE. Thank you, Mr. Chairman.

[Whereupon, at 10:40 a.m., the committee adjourned.]

[Prepared questions submitted to Susan Morrissey Livingstone by Chairman Warner prior to the hearing with answers supplied follow:]

May 21, 2001.

CHAIRMAN,  
Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

SUSAN M. LIVINGSTONE.

cc: Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been accepted and implemented. They have clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman

of the Joint Chiefs. As a result of these reforms, the effectiveness of our joint warfighting forces has improved.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I consider the most significant value of these reforms to be an improvement in joint warfighting capabilities. Our military is now stronger and more lethal because our Services can work better together. If confirmed, I will maintain and extend the Navy's commitment to the principles of joint warfare including interoperability and joint doctrine.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

#### DUTIES

*Question.* Section 5015 of Title 10, United States Code, states the Under Secretary of the Navy shall perform such duties and exercise such powers as the Secretary of the Navy may prescribe.

Assuming you are confirmed, what duties and powers do you expect to be assigned to you?

*Answer.* The role of the Under Secretary of the Navy is to keep the Department on track and focused on the Secretary of the Navy's top priorities and keep him informed of any impediments to their successful completion. If confirmed, I will monitor and maintain those priorities and, in coordination with the SECNAV, if needed, take the lead on any item needing special attention, as well as perform any other duties assigned by the Secretary.

*Question.* In carrying out your duties, how will you work with the Assistant Secretary of Navy for Manpower and Reserve Affairs; the Assistant Secretary of the Navy for Installations and Environment; the Assistant Secretary of the Navy for Financial Management and Comptroller of the Navy; the Assistant Secretary of the Navy for Research, Development and Acquisition; and the General Counsel?

*Answer.* If confirmed, it is my intention to work closely and directly with the Assistant Secretaries of the Navy and the General Counsel to ensure the Department maintains a clear focus on the priorities outlined by Secretary-designate England consistent with the appropriate laws and Title X of the U.S. Code. I intend to encourage and foster teamwork within the Department of the Navy developing integrated product teams both within the civilian leadership and between the civilian leadership and their uniformed counterparts.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Secretary of the Navy and Under Secretary of the Navy?

*Answer.* I agree with Mr. England that there are four major areas of challenge facing the Department of the Navy:

- **Combat Capability**—The primary purpose of the Navy and Marine Corps is to deter, train for, and when necessary, fight and win our Nation's battles and wars. Combat capability, including readiness, must therefore be the primary focus with dedicated attention to the platforms, weapon systems, and training needed by the Navy and Marines in the context of the National Military Strategy.
- **People**—The men and women of the naval forces team are our most valued resource. Accordingly, if confirmed, I will work diligently in support of "quality of service" which includes both a quality workplace and quality of life for our sailors and marines (both active duty and reserve), civilians, and their families. An environment of excellence throughout the Department should be the standard. We must also maintain faith with those who came before: our retired community.
- **Technology and Interoperability**—The foundation of our military's strength lies in the application of advanced technology. Currently, the application of advanced technology is significantly lagging in its availability.

We must become far more agile in applying and leveraging the capability of technology. We must improve the interoperability within and between all of the military services and our allies.

- Modernization of Business Practices—More effective management processes must be applied and institutionalized to systematically improve the efficiency of the Department of the Navy.

*Question.* If confirmed, what plans do you have for addressing these challenges?

*Answer.* I will immediately work with the Secretary of the Navy to establish priority actions in each of these areas and then support him in initiating each as rapidly as possible.

#### SHIP ACQUISITION

*Question.* The Navy recently delayed two key ship acquisition decisions, T-AKE acquisition and DD-21 design selection. Regardless of the reasons for these delays, they raise questions about the Navy's ability to keep major ship programs on schedule.

As Under Secretary of the Navy, how would you intend to ensure that the acquisition decision process possesses the discipline to adhere to established schedules?

*Answer.* If confirmed as Under Secretary of the Navy, I will focus my attention in several areas to ensure that the acquisition process possesses the discipline to adhere to established schedules. I believe that the overall acquisition process must include:

- stability of operational requirements for acquisition programs which also recognize the rapid pace of technological change;
- stability of funding required to procure the ships needed for the 21st century naval forces;
- adequate staffing and training of acquisition organizations responsible for performing the contract source selections and life cycle management; and
- effective communications between the Department of the Navy, the Office of the Secretary of Defense, and Congress to ensure understanding of the shipbuilding procurement plan and prevent surprises on any shipbuilding program.

#### NAVY FORCE STRUCTURE

*Question.* Navy operational commanders have testified that there are not enough ships to complete the tasks required and that the burden of this inadequate force structure is being borne by the men and women of the Navy and the Marine Corps.

Do you concur with the operational commanders' assessments of the Navy's force structure versus operational commitment? If so, how would you address the mismatch? If not, what is your assessment?

*Answer.* I have not had an opportunity to review the issue of Navy and Marine Corps resources versus commitments, but this is an area that certainly falls within Secretary-designate England's focus on combat capability. If confirmed, I will work closely within the Department of the Navy and, through the Secretary of the Navy, with the Secretary of Defense's staff and Congress, to ensure the men and women of our Navy and Marine Corps have the resources they need to meet current and future requirements.

#### INDUSTRIAL BASE

*Question.* In recent years, several industrial suppliers of important weapons subsystems or components have decided to leave the market. This raises questions about the adequacy of the industrial base to provide key Navy and Marine Corps operational capabilities.

If confirmed, how would you determine whether or not the industrial base is sufficient to support required Navy and Marine Corps programs and to ensure that the Department of the Navy is adequately tracking this industrial base?

*Answer.* The Navy Department has a vital concern and interest in assessing and ensuring the industrial base's ability to develop and produce the weapons systems required for the 21st century. Therefore, if confirmed, one of my priorities will be to examine our Nation's industrial base to identify issues that may impact Navy acquisition programs and work with the OSD team and Congress to determine how best to resolve those issues. The health of the industrial base is a vital component of our future combat capability and readiness.

## AIRCRAFT MAINTENANCE

*Question.* The CNO has stated that in addition to quality of life issues, we must also be attentive to quality of service if we are to recruit and retain the sailors and marines we need. In the area of aircraft maintenance, the hours of maintenance dedicated to aircraft for each hour flown continues to rise as our aircraft continue to age. This aging aircraft problem is consuming more fiscal and human resources on an annual basis, and is often paid for by the RDT&E and modernization accounts that would replace the aging equipment.

What are your views on this one aspect of quality of service, increased working hours for maintenance as well as aircraft cannibalization, and what do you think should be done about it?

*Answer.* I am concerned about the increased hours that our sailors and marines are working to support the aging equipment that we have in our inventory. The key to reducing this impact is to establish a proper balance between the acquisition of new equipment, which helps reduce maintenance requirements, and properly funding the support elements for our in-service equipment.

## ORGANIZATIONAL CHANGES

*Question.* The CNO staff was recently reorganized to create a Warfare Requirements and Programs division.

Are there organization changes that you would recommend to the Secretary of the Navy regarding the staff that will support your decision-making?

*Answer.* I understand that the Deputy CNO for Warfare Requirements and Programs (N7) has fit well into the current Department of the Navy organization. I don't anticipate recommending any additional changes until I have had the opportunity to closely observe the Department. If confirmed, I will work closely with the SECNAV in evaluating the Department's organization to determine if any additional changes are required.

## READINESS

*Question.* Over the last few years we have seen increasing evidence that the readiness of the U.S. Armed Forces has begun to deteriorate as a result of the over-commitment of an under-resourced military.

What do you view as the major readiness challenges that will have to be addressed by the Navy and Marine Corps, and, if confirmed, how would you approach these issues?

*Answer.* I am concerned about the increasing stress placed on the people and equipment of our Navy and Marine Corps. In the near term, if confirmed, I will work with the Secretary of the Navy to identify actions that might help to balance the "TEMPO" stresses. In the longer term, we must ensure the naval forces are right-sized, trained, and equipped to meet the commitments that are placed on them. One major readiness challenge will be finding the resources to provide the proper balance between the modernization of our equipment and the support of the equipment that is already in place. Recruitment and retention also remain readiness challenges. Having the right measures and metrics is also critical to ensuring we identify thoroughly the resources needed to meet these readiness challenges.

## ENCROACHMENT

*Question.* Some of the most significant issues that will impact the readiness of the Armed Forces as we enter the 21st century involve the Armed Forces' ability to operate and train effectively. The Senior Readiness Oversight Committee is currently reviewing several readiness challenges it has characterized as "encroachment" issues. These issues include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, transfer of radio frequency spectrum from the Department of Defense to the wireless communications industry, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

In your opinion, how serious are these problems for the Navy?

*Answer.* Encroachment is a very serious problem. As encroachment grows, training and testing plans and procedures are impacted. These impacts include decreased days for testing and training, restrictions on the location and timing for testing and training, and limitations on the types of training available. The cumulative effect can diminish readiness. If confirmed, I will work with the Secretary of the Navy, as well as OSD and other federal agencies to seek resolve of specific encroachment concerns as well as assess the issue from a broader, overall policy perspective.

## ENVIRONMENTAL SECURITY

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Would you agree that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

*Answer.* It is important that the Navy and Marine Corps maintain a positive relationship with local authorities and communities. In this regard, compliance with environmental protection requirements is vital and must be budgeted for appropriately. If confirmed, this is an area that will have my close attention.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

*Answer.* In general, no. However, application of some environmental laws and regulations to militarily-unique training actions should be examined and may require some regulatory clarification to ensure national security.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

*Answer.* In general, yes. There may be circumstances where environmental regulations must be tailored to accommodate the unique military mission or special circumstances related to military training while balancing the need to ensure good environmental stewardship.

## VIEQUES

*Question.* Over the past 18 months, naval forces deploying from the East Coast of the United States have been prevented from conducting live-fire training on the Navy's training range on Vieques, Puerto Rico, which has had a significant impact on the readiness of these forces to execute their wartime missions. An agreement was reached in 2000 with the former Governor of Puerto Rico, and legislation passed to implement that agreement, which will provide economic incentives to the people of Vieques in return for their cooperation in the restoration of live-fire training. Unfortunately, the current Governor of Puerto Rico has stated that she will not abide by the terms of this agreement and that she will insist the Navy cease operations immediately.

Recent press reports have quoted the President as saying that the agreement "evidently is not satisfactory with the government of Puerto Rico" and "the Navy needs to find another base" for Atlantic fleet training. In the past, Navy officials have stated that no such alternative is available.

Do you agree with the Chief of Naval Operations and the Commandant of the Marine Corps that Vieques is essential to the readiness of East Coast naval forces?

*Answer.* Yes. The Navy and Marine Corps have briefed me on the importance of Vieques to ensuring the readiness of naval forces. Integrated combined arms training and evaluation are an essential step to prepare deploying forces to perform any task the President may direct. Vieques provides an unequalled environment for this training and evaluation. That said, this is an issue that involves not just the Department of the Navy, but also OSD, the current administration, and Congress. If confirmed, my role in this issue will be to advocate the training needs of our naval forces.

*Question.* If confirmed, would you ensure that the \$40.0 million Congress appropriated to fund economic development and outreach programs on the island of Vieques is released and put to effective use?

*Answer.* Yes, I will continue the Department's commitment to implement effective outreach and economic development in Vieques.

*Question.* Does the Navy now believe that an alternative training site to Vieques can be located?

*Answer.* Vieques provides a unique training environment to prepare deploying forces. President Clinton directed the Navy to examine long-term alternatives for live fire training on Vieques. From the briefings I have received, that review is underway using the following operational criteria:

- Availability of an air-to-ground live ordnance range with tactically realistic and challenging targets and airspace, which allow the use of high-altitude weapons delivery.
- Availability of naval surface fire support range that permits training of ships, forward spotters, and fire coordination teams.
- Ability to exercise combined arms amphibious operations.

- Availability of nearby naval and base support.

At this point, it is unclear whether any such alternative could completely replicate the training and evaluation capabilities available on Vieques.

*Question.* Does the administration intend to proceed with the November 2001 referendum?

*Answer.* I cannot speak for the administration on that issue and must therefore defer that question to others. I understand that the law says a referendum must be held unless the Chief of Naval Operations and Commandant of the Marine Corps certify that the Vieques Training Range is no longer needed for training.

#### INSTALLATION READINESS

*Question.* Based on your prior service as Assistant Secretary of the Army for Installations, Logistics, and Environment, your expertise will be important to the Secretary of the Navy especially as it relates to shore-based infrastructure. According to the General Accounting Office, by 1992 the military had accumulated an estimated \$8.9 billion in deferred maintenance. By 1998, that had grown to \$14.6 billion. It now exceeds \$16.0 billion. Last year in his testimony before Congress, the GAO's Neil Curtin said, "There really is a risk of losing the value of those (military) facilities. Real property maintenance is in disarray."

What priority would you place on installation readiness and eliminating this backlog in maintenance and repair?

*Answer.* My past experience as Assistant Secretary leaves me well-acquainted with the difficult challenges the military departments have faced to sufficiently invest in infrastructure. If confirmed, I will work with the Secretary on the Navy, the Assistant Secretary for Installations and Environment, the Chief of Naval Operations, and the Commandant of the Marine Corps to improve installation readiness so that it best supports the Department of the Navy's ability to accomplish its national defense mission.

*Question.* What are your views regarding the transfer of real property maintenance funds to meet operational needs?

*Answer.* I know from my previous experience that in preparing the Department's budget request, the Service Secretaries and the Secretary of Defense must make tough choices to balance competing demands. During budget execution, events can unfold that place severe financial pressure across the operating accounts.

*Question.* Would you support fencing real property maintenance funds to eliminate the backlog in maintenance and repair?

*Answer.* No. I believe we need to maintain financial flexibility during program execution to handle unexpected events.

#### BASE REALIGNMENT AND CLOSURE

*Question.* Over the past several years, various departmental officials have testified that there is excess defense infrastructure and have requested Congress to authorize another round of base closures.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* Once ongoing reviews are complete, a vision of how we must reshape the Department of Defense to best meet the threats of today and tomorrow to our Nation will be identified. Any discussion of where there may be excess capacity must await completion of these reviews, which will likely involve a shift in the focus and priorities of the military departments, including its supporting shore establishment.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of the Navy?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

1. Senator WARNER. In September 1999, as a result of environmental and worker safety issues, the Navy began conducting ship disposal through the Ship Disposal Project. Since that time, the Navy has budgeted for the disposal of 3 to 4 ships per year. At that funding level, it could take about 12 years to dispose of the backlog of about 47 obsolete Navy ships. These vessels are berthed in several locations around the United States, to include Portsmouth, VA. The communities in which these vessels are berthed recognize that the potential for environmental and navigational problems increases with length of time they are stored.

Wouldn't you agree that it is important to develop a budget and plan that allows the Navy to complete the disposal of its obsolete ships in the near-term? When is it anticipated that the Navy will complete disposal of its obsolete ships?

Ms. LIVINGSTONE. I would agree. In order to further reduce the size of the Navy's inventory of inactive ships in an orderly and cost-effective manner, the Navy utilizes multiple ship disposal methodologies, including transferring ships to eligible foreign governments under the Arms Export Control Act, donating ships as memorials or museums, utilizing vessels as targets or for other experimental purposes, transferring title of certain merchant-type ships to the Maritime Administration under the Department of Transportation (MARAD) for disposal, and domestic scrapping. As of June 7, 2001, the total number of stricken Navy ships available for disposal by all methodologies combined is 94 ships. The Navy expects to dispose of all but one of these ships by the end of fiscal year 2007, 19 by domestic scrapping and 74 utilizing the other methodologies. Additionally, 8 currently active ships are designated for scrapping upon their decommissioning through fiscal year 2007. Thus, the Navy expects to complete the scrapping of 24 conventionally powered destroyers and frigates by the end of fiscal year 2007.

RESOURCE PROTECTION

2. Senator WARNER. Maritime resource protection laws, Executive orders, and interpretations of Federal and state regulations have affected the conduct of maritime operations, test, and training activities.

As Under Secretary of the Navy, what measures would you take to preserve fleet operations and training exercises under the current regulatory and statutory framework?

Ms. LIVINGSTONE. I understand that the Navy has taken several positive steps in response to impacts from various laws, regulations, and Executive orders affecting maritime activities. This year, the Department of the Navy has been designated as the Department of Defense executive agent for maritime sustainability. This program, which will be implemented through the Office of the Chief of Naval Operations, has as its goal to achieve sustainable readiness in compliance with statutory and regulatory requirements. To that end, the Navy has adopted a strategy with four principal elements: sound legal position, knowledge advancement, consistent policy and procedures, and education and engagement. These pillars are being applied to solve some of the existing and future regulatory constraints facing service training within marine operational areas and ranges. I will support this program as needed to ensure continuation of fleet operations and training exercises.

---

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

3. Senator THURMOND. In recent testimony before the Subcommittee on Readiness and Management Support, Navy officials testified that the Navy's backlog of critical installation maintenance and repair was approximately \$2.5 billion. The officials further testified that over 33 percent of the Navy's base readiness reports reflect C-3 and C-4 readiness ratings due to facility conditions.

Based on your experience as the former Assistant Secretary of the Army for Installations, what are your concerns regarding this significant backlog in the critical repair and maintenance of Navy installations? What role will you assume in correcting this problem, if confirmed as the Under Secretary?

Ms. LIVINGSTONE. Our inability to maintain Navy infrastructure at acceptable levels and the resulting backlog growth make it more and more difficult and costly to turn the corner on the chronic deterioration of our bases. Lack of sufficient maintenance funds also translates directly to morale, retention, and readiness problems. I look forward to closely monitoring our progress in arresting backlog growth, reporting continuous improvement in our base readiness reports, and exploring ways to accomplish these objectives in a more timely manner.

#### BASE CLOSURE

4. Senator THURMOND. In response to the advance policy question on the need for additional base closures, you indicated that any discussion regarding base closure should be deferred until the completion of the strategic reviews.

Although I appreciate your response, I would like your views on the process used for base closures. Do you believe the process used for prior base closures is appropriate? If not, what changes would you advocate?

Ms. LIVINGSTONE. While the base closure process used in the past is not perfect, it has accomplished its primary intended goal—to close unneeded bases and remove excess and costly-to-maintain capacity from the Department of Defense. The criteria to evaluate the military need for installations and activities have been based on explicit standards established by Congress. Before the process begins, the data for analyses are obtained and verified by outside sources, the recommendations of the President are reviewed by an impartial commission, and communities are given the opportunity to participate. The all-or-nothing congressional approval keeps the focus on the overall picture; the process is based on a reasonable time schedule. In short, the process is fair and it has worked. That is a major accomplishment in comparison with the many previous failed efforts.

In terms of improvement, I think there are opportunities to accelerate property cleanup and disposal. In some cases, communities have been slow to accept the closure decision and begin reuse planning. By the same token, the cleanup and disposal process by the DOD has been hampered by uncertainty over cleanup standards to meet reuse needs, lack of timely funding, and expensive cleanup costs. The needs of both can often be best met when cleanup and disposal are integrated into the construction phase of redevelopment.

#### PRIVATIZATION

5. Senator THURMOND. It is generally assumed that privatization of functions performed by government employees achieves savings. Although I believe that in many cases there may be short-term savings, over the long-term these savings disappear as contracts are renegotiated.

What are your views on the long-term savings realized as a result of privatization?

Ms. LIVINGSTONE. The benefit of having a contract is the degree of control it provides the government in managing its business. Contracts can be re-competed to ensure the most economical price is provided for the requirement. Further, additional requirements cannot be assigned to a contract without defining the work scope and negotiating the price. This ensures the government is fully cognizant of the increase in requirements and additional cost to accomplish this requirement. Informed business decisions can be made with the factual understanding of the requirement and cost. Based on this information an acquisition decision can be made on the need for competition. Competition provides the baseline for determining the most cost efficient method to procure goods and services using the efficiency tools of privatization or competitive sourcing.

#### TRANSFORMATION

6. Senator THURMOND. Based on your affiliation with the Association of the United States Army, I know you are familiar with the need to transform the Army to meet the challenges of the new strategic environment.

Do you anticipate that the Navy will have to undergo some level of transformation to support the new threat environment? If so, what changes would you advocate?

Ms. LIVINGSTONE. Transformation is a process of meeting strategic mission and capability requirements through major changes in operational concepts, technology, and organization. The Navy's transformation started in 1992 with publication of . . . *From the Sea*, commencing a strategic shift from the Cold War's emphasis first upon sea control and then sequential power projection ashore once the Soviet fleet

was defeated, to today's simultaneous sea control and power projection directly ashore at the very initiation of conflict from the littoral.

The key operational challenge for the U.S. Navy today and in the near-term is sustaining assured access to deny the ability of any prospective adversary to be successful in employing an area denial strategy. The key to sustaining assured access lies in the Navy's evolution from a platform-centric to a network-centric force. Naval forces already forward, properly programmed, will deliver the sustained assured access from the first day of conflict that is needed for joint forces to flow into theater to carry out U.S. military strategy. While no one service can assure access on its own, by dint of already being forward and immediately employable, the Navy plays a key role in enabling the rapid deployment of decisive combat power to the theater of operations.

In the mid-term, geographically dispersed and interoperable naval forces will take advantage of network-centric operations to maintain a dominant military advantage, enhancing the Navy's ability to assure access when and where our Nation chooses to fight, and thereby deterring potential adversaries. The Navy will leverage its unmatched battlespace awareness with the capability to project offense ashore in effects-based attacks with vast volume from stealthy strike platforms and "artillery from the sea", holding even time critical targets at risk.

In the far-term, the Navy transformation will result in a universally netted force of dispersed manned and unmanned systems that leverages knowledge superiority with improved lethality. With assured access now established in all warfare dimensions, forward deployed naval forces will play a vital role in dissuading potential adversaries from pursuing policies inimical to U.S. interests. The Navy will maintain sea superiority with directed energy weapons and project offense ashore with supersonic strike missiles and unmanned combat aerial vehicles.

By maintaining sea superiority on, below, and above the sea, now and in the future, naval forces can continue to also project offense ashore—artillery from the sea, deep-land attack, and USMC operations ashore—and simultaneously project defense ashore with theater ballistic missile defense, all integrated through netted sensors that assures accuracy and lethality through knowledge superiority.

All this said, the DOD is currently undergoing a series of strategic reviews and the Quadrennial Defense Review. If confirmed, we will need to assess how the Navy's current transformation plans fit within the context of revised national security strategy and national military strategy. In addition, I need to become more knowledgeable about the overall planned architecture for USMC-Navy joint operations for the 21st century.

---

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

##### JOINT STRIKE FIGHTER

7. Senator SANTORUM. The Joint Strike Fighter is approaching a major decision point, with a source selection and entry into engineering and manufacturing development (EMD).

Do you feel the program can receive the stable funding required for it to meet its goals in light of other programs competing for limited resources, e.g. F-22 in the case of the Air Force and F/A-18E/F in the case of the Navy?

Ms. LIVINGSTONE. The Secretary of Defense is currently conducting a comprehensive strategic review of the Department's near- and long-term requirements. The results from that review will be incorporated into the Quadrennial Defense Review to provide the appropriate prioritization of our programs to meet those requirements. The allocation of Department resources will be based on that prioritization.

##### VIEQUES

8. Senator SANTORUM. Last year, the Navy and the Commonwealth of Puerto Rico negotiated an agreement concerning the Navy's use of the Atlantic Fleet Weapons Training Facility (AFWTF) at Vieques, Puerto Rico. A deal negotiated by President Clinton and Governor Rossello allowed for the Navy to resume training exercises with inert ordnance in exchange for an infusion of \$40 million in economic development funds to the island and a promise for a referendum on a resumption of live fire training. If the residents of the island support a resumption of live fire testing, an additional \$50 million will be provided by the U.S. government. If the residents of the island oppose a resumption of live fire testing, the Navy must leave by 2003.

Do you believe that the Navy needs to train at Vieques? Do you support the Clinton-Rossello agreement that was negotiated last year? What will be the impact on the Navy's readiness levels if it is denied access to the AFWTF at Vieques?

Ms. LIVINGSTONE. The central issue is effective training for our sailors and marines. The naval forces need and deserve the best training we can make available to them. I understand that although the Navy plans to discontinue training on Vieques in May 2003, they will, until then, continue to use the range facilities on Vieques in accordance with the mutually agreed upon restrictions on live fire and usage rates. I understand that the Navy is working to find alternatives to Vieques. While a 2-year timetable to find alternatives is certainly challenging, I believe it is reasonable and achievable. It is my understanding that this study on alternatives also will assess the impact on training readiness. The Clinton-Rossello agreement has been codified into law and is supported by the Department of the Navy.

#### SHIP DEPOT MAINTENANCE REQUIREMENTS

9. Senator SANTORUM. Last spring, during consideration of the Fiscal Year 2001 National Defense Authorization Act, Congress added \$142 million for the Navy to maintain its ships. Then, last October, Congress was informed that ship maintenance availabilities were being canceled due to lack of ship maintenance funds. In a briefing to staff on the Senate Armed Services Committee, the Navy indicated that it was \$283 million short in ship maintenance funding for fiscal year 2001. The October 12, 2000, terrorist attack on the U.S.S. *Cole* added another \$150 million to that requirement. Using the Navy's numbers, this brings the total ship maintenance requirement shortfall for fiscal year 2001 to \$433 million.

Please explain how the Navy estimates its yearly ship maintenance requirements. How is it possible for the Navy to have miscalculated by \$283 million for its ship maintenance needs? Will you work to see that a more accurate method of projecting ship maintenance requirements is developed?

Ms. LIVINGSTONE. The Navy estimates its yearly ship maintenance requirements using the best information available including historical execution data and estimated requirements of future needs. Engineered maintenance requirements, current ship material conditions, operational and maintenance schedules, and anticipated labor and material costs are components used to establish representative requirements for each planned CNO-scheduled ship availability.

Programming estimates are made up to 2 years in advance of actual execution of ship maintenance. Unanticipated requirements such as increased private sector man-day rates, material and support costs, unplanned repairs, and chronic underfunding to less than 100 percent of requirements in ship maintenance accounts led to the shortfall in ship maintenance funding in fiscal year 2001. Additionally, Navy must often reallocate available funding to unplanned emergent ship repair requirements, creating shortfalls in planned maintenance availabilities.

Navy has committed substantial resources to improving its estimates of ship maintenance requirements. I fully support these initiatives and full funding of all known requirements to prevent reallocation of funding in the year of execution. I will work closely with Navy leadership to provide the best information available about requirements to Congress.

---

#### QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

##### NAVAL FORCES

10. Senator COLLINS. I believe that strong leadership is needed to address the declining naval shipbuilding rate and our shrinking industrial base. The numbers are very troubling to me. The U.S. Navy has shrunk from a fleet of 594 ships in 1987 to approximately 315 today, while during the same period, deployments have increased more than 300 percent. Moreover, regional CINCs have repeatedly warned that the fleet is stretched perilously thin and needs to be increased to about a 360-ship Navy to meet the present mission requirements.

At the current low rate of production, the cost per ship will increase and the efficiency at our yards will go down. The fact is that this administration and Congress will be faced with the challenge of rebuilding and recapitalizing the Nation's naval fleet. The numbers are just as clear as can be: at present rate of investment, our Navy is heading toward a 200-ship fleet, which is alarmingly inadequate.

What are your thoughts on the need to increase the rate of production for our naval forces?

Ms. LIVINGSTONE. I believe the rate of production needs to be increased. In order to maintain the 1997 Quadrennial Defense Review (QDR) battle force of approximately 310 ships per year, Navy must procure approximately 9 ships per year.

## DDG 51

11. Senator COLLINS. In your advance questions, you address the issue of delays in the acquisition process and the impact of those delays on stability in acquisition programs. As you may know, this committee took the lead last year to authorize a follow-on DDG 51 shipbuilding multi-year procurement for the period fiscal year 2002 through fiscal year 2005 at the sustained rate of three ships per year.

Could you comment on the benefits of utilizing multi-year procurement in mature programs, such as DDG 51, and the importance once a multi-year process has been initiated to sustain it for further requirements in order to continue to gain maximum cost efficiencies and other industrial base benefits that result from program stability?

Ms. LIVINGSTONE. As I understand it, multi-year procurement (MYP) in mature programs ultimately strives to achieve affordability and workload stability. It does so by providing a stable business base and sufficient workload to various manufacturers, and second- and third-tier vendors needed to justify enhanced capital investment and a long-term commitment. MYP stabilizes the manufacturer and GFE industrial base resulting in:

- Greater manufacturer and vendor efficiency and improved overhead planning and capitalization, enhanced viability of the manufacturers as well as other providers;
- Continuous, stable construction of ships, aircraft, and combat system components;
- Stable employment levels and retention of skilled labor;
- Large lot or economic order quantity material procurement which reduces the cost through volume discounts; and
- More efficient pre-production planning for one build of multiple ships at each yard, rather than separate, annual efforts.

## DD 21 PROGRAM

12. Senator COLLINS. Recently, along with eight of my colleagues, I sent a letter to Secretary Rumsfeld highlighting the leap-ahead technologies and support that the DD 21 program will provide the Navy, if pursued. I don't know how familiar you are at this point with the DD 21 program, but could you share with the committee your understanding of some of the real breakthroughs anticipated from this program: technology wise, in terms of acquisition process, in terms of dramatically reduced total ownership costs, in terms of littoral warfare and joint interoperability, improved quality of service/quality of life for our sailors, greater survivability, employment of stealth features beyond any current applications on surface ships, introduction of integrated power systems with electric drive and the greater maneuverability and endurance capability with that technology and any other aspects you would care to discuss.

Ms. LIVINGSTONE. As I understand it, DD 21 will bring many unique capabilities to the fleet. These include a land attack warfare capability to meet USMC/JROC requirements for gunfire support for forces ashore; an Integrated Power System (IPS)/Electric Drive that provides electric power to the total ship (propulsion and ship service) with an integrated plant to reduce operating costs and improve warfighting capability and architectural flexibility; optimized manning through automation that will allow it to meet mission requirements with a significantly reduced crew size of 95–150 sailors while improving the sailor's quality of service; affordability resulting from DD 21's streamlined acquisition approach and significant cost savings through the use of advanced commercial technologies and non-developmental items; a new radar suite which provides DD 21 and other applicable surface combatants with affordable, high performance radar for ship self-defense; survivability improvements that will lead the Navy in the development of system and protection concepts that reduce vulnerability to conventional weapons and peacetime accidents under reduced manning conditions; and stealth design features which reduce acoustic, magnetic, infrared, and radar cross section signatures resulting in lower vulnerability to mine and cruise missile attack in the littoral environment in which it will be operating.

## P-3 AIRCRAFT

13. Senator COLLINS. Currently, the P-3 aircraft is an integral part of our current war plans, carrying out our patrol and reconnaissance missions. As you may be aware, however, the average age of the P-3 platform is roughly 25 years old. While aircraft avionics upgrades have kept the plane relevant and viable in today's threat environment, the airframe itself is reaching the end of its use service life. The CINCs have come to rely on the P-3 to perform their roles and missions on a daily basis, and a follow-on to the program should be pursued in the near-term.

I am aware that an ongoing service life assessment program is studying the airframe fatigue life of the plane. I am also aware that there is an ongoing analysis of alternatives underway to look at the multi-mission aircraft (MMA) as a potential follow-on to the P-3 program.

What are your thoughts on the MMA program as a follow-on contender for the Navy patrol and reconnaissance missions?

Ms. LIVINGSTONE. It is my understanding that the Navy and OSD continue to analyze a variety of options to fill CINC requirements currently filled by P-3 and EP-3 aircraft. The options include not only manned aircraft (i.e., MMA) but also innovative ways to provide part of the capability the CINCs need that do not require manned aircraft such as unmanned aerial vehicles. The analyses suggest that a manned aircraft is an essential element of filling the void created if P-3s and EP-3s are not replaced soon. I also understand that the Navy and OSD have examined both extending service life and remanufacturing the airframes as part of the analysis of alternatives. Preliminary results seem to indicate that new procurement may be a more economical solution than remanufacture of legacy airframes. Both the MMA and promising adjunct systems are to be further examined next year as a follow-on effort to the work already completed. If confirmed, I will work with the senior Department leadership to structure a program that meets warfighting requirements within fiscal constraints.

[The nomination reference of Susan Morrissey Livingstone follows:]

## NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
May 7, 2001.

*Ordered*, That the following nomination be referred to the Committee on Armed Services:

Susan Morrissey Livingstone of Montana, to be Under Secretary of the Navy, vice Robert B. Pirie, Jr., resigned.

[The biographical sketch of Susan Morrissey Livingstone, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF SUSAN M. LIVINGSTONE

For more than 30 years, Susan Livingstone has held demanding, high profile positions, both inside and outside of the Federal Government. She has headed five major management operations, served in three Federal departments (culminating in Presidential appointment/Senate confirmation as an Assistant Secretary of the Army), served as a vice president for the Nation's largest humanitarian organization, and held senior leadership, executive, strategic policy and planning, line management and operational roles.

Mrs. Livingstone currently is CEO of the Association of the United States Army (AUSA) and deputy chairman of its Council of Trustees. She also serves as a vice president and on the Board of the Procurement Round Table, as well as consults on policy and strategic management issues.

From December 1993 to October 1997, Mrs. Livingstone served as Vice President (Health and Safety Services) for the American Red Cross (ARC), responsible for leading and operating a major new strategic direction and restructuring of a \$100 million gross revenue and profit center that provides health and safety, education to over 15 million people a year. From November 1996 to May 1997, Mrs. Livingstone also served as ARC Acting Senior Vice President, Chapter Services, declining

to be considered for the permanent position. She served as a consultant to the ARC from October 1997 to March 1998. From April 1998 to August 1998, Mrs. Livingstone served as a committee chairman and consultant to the 1998 Defense Science Board (DSB) Summer Study on Logistics Transformation and consulted on phase 2 of this DSB study from October–December 2000.

Prior to joining the Red Cross, Mrs. Livingstone worked for over 20 years in the Legislative and Executive branches of the Federal Government, most recently, as Assistant Secretary of the Army for Installations, Logistics and Environment (November 1989 to January 1993).

As an Assistant Secretary of the Army, Mrs. Livingstone was responsible for oversight and policy direction for programs with \$20 billion in annual appropriations and employing over 125,000 people. Her responsibilities included the Army's military construction program, installation management program, logistics systems, chemical munitions stockpile demilitarization program, base realignment and closure program, energy and environmental programs, the Pentagon's support to domestic disaster relief, and the emergency reconstruction of Kuwait's public infrastructure following Operation Desert Storm.

From 1981 to 1989, Mrs. Livingstone served in the Veterans Administration (now Department of Veterans Affairs) in several Assistant Secretary level positions, including Associate Deputy Administrator for Logistics and Associate Deputy Administrator for Management. During her service at the VA, Mrs. Livingstone's responsibilities included direction and management of the Nation's largest medical facility construction program (\$1 billion annually) and the Federal Government's fourth largest procurement and supply program (\$4 billion annually). Prior to her executive branch service, Mrs. Livingstone worked for more than 9 years in the legislative branch on the personal staff of both a Senator and two Congressmen. From 1975 to 1981, she served as an Administrative Assistant to a House member.

Mrs. Livingstone is the recipient of the Army's highest civilian award (1993), the VA's highest civilian award (1989), two VA Unique Contribution Awards (1987 and 1988), and the ARC Special Achievement Award (May 1997). She received the highest performance ratings for all years of Federal service (1981–1993). She has spoken extensively throughout the United States and abroad, testified on numerous occasions before Congress, and appeared in a variety of print, radio, and television media.

Mrs. Livingstone has an A.B. from the College of William and Mary, an M.A. in Political Science from the University of Montana, and spent 2 years in postgraduate studies at Tufts University and the Fletcher School of Law and Diplomacy. She married Neil C. Livingstone in 1968.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Susan Morrissey Livingstone in connection with her nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Susan Morrisey Livingstone—nee Susan Morrisey—Susan M. Livingstone—Susan Livingstone—Mrs. Neil (N.C.) Livingstone.
2. **Position to which nominated:**  
Under Secretary of the Navy.
3. **Date of nomination:**  
May 7, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
January 13, 1946; Carthage, Missouri (Jasper County—USA).
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Neil C. Livingstone—1968.
7. **Names and ages of children:**  
None.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
High School—9/60—6/64—Summerville High School, Summerville, South Carolina. High School diploma received 6/64 (salutatorian). (My father was stationed at Charleston Air Force Base at the time.)  
Undergraduate—9/64—6/68—College of William & Mary, Williamsburg, VA 23185. AB received 6/68.  
Further undergraduate language study: 7/65—9/95—Georgetown University, Washington, DC.  
Masters—9/70—8/71—University of Montana, Missoula, Montana. Masters awarded either 12/72 or early 1973.  
Ph.D. Studies—9/71—5/72—Tufts University (NDEA Fellowship and Full Tuition Scholarship), Medford, Massachusetts 02155. No degree. Course credits transferred for further study at the Fletcher School (see next below).  
MA, MALD, Ph.D. Studies—9/72—6/93—The Fletcher School of Law and Diplomacy, Medford, Massachusetts 02155. No degree. Completed course requirements for MA, MALD and Ph.D. Wrote MALD (Masters of Arts of Law and Diplomacy) thesis. Passed Ph.D exams (4/18/78).
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
11/89—/93—Assistant Secretary of the Army (Installations, Logistics and Environment), Department of Army, The Pentagon, Washington, DC 20310.  
1/93—12/93—Took time off (unemployed).  
12/93—10/97—Vice President (Health and Safety Services), American Red Cross National Headquarters, 8111 Gatehouse Road, Falls Church, Virginia 22042. From 11/96—5/97, I also served as Acting Senior Vice President for Chapter Services, American Red Cross.  
10/97—3/98—Paid consultant for American Red Cross division of Armed Forces Emergency Services, 8111 Gatehouse Road, Falls Church, Virginia 22042.  
From 3/98 to present, I have been working pro bono (volunteer)—(see No. 11 below).
10. **Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.
  - a. 1966—68—(STATE)—Researcher for the Philosophy Department, College of William & Mary.
  - b. 2/69—8/70—(FEDERAL) Legislative Researcher—Senator Mark O. Hatfield.
  - c. (1970—73)—Interim years in graduate school.  
9/70—8/71 (STATE): Graduate Researcher, Graduate Assistantship and Full Tuition Scholarship, University of Montana.  
Summer 1972 (STATE): Wrote 2 film scripts for the State of Montana (a travelogue on Helena, MT and a state film on mental retardation).

1971–72 (academic years): NDEA Fellowship and full tuition scholarship, Tufts University.

d. 9/73–1/81—(FEDERAL) Legislative Assistant and Press Secretary (9/73–8/75) and Administrative Assistant/Chief of Staff (8/75–1/81) to Congressman Richard H. Ichord.

e. 1/81–7/81—(FEDERAL) Consultant to Congressman Wendell Bailey (part time pending Executive Branch appointment).

f. 7/81–9/81—(FEDERAL) Deputy Director (Legislative Liaison), Community Services Administration.

g. 11/3/81–11/81—(FEDERAL) Detailed to the Department of Health and Human Services to write the report on the closure of the Community Services Administration.

h. 10/4/81–10/31/81—(FEDERAL) Detailed to the Small Business Administration to conclude close out of the Community Services Administration and initiate the close out report.

i. 11/81–6/89—(FEDERAL)—Department of Veterans Affairs (then was Veterans Administration). From 11/81–2/85, I was Executive Assistant to the Associate Deputy Administrator for Logistics (VA). From 2/85–6/89, I was Associate Deputy Administrator for Logistics (VA). From 12/85–4/86, I was dual-hatted as Associate Deputy Administrator for Logistics and Associate Deputy Administrator for Management.

j. 6/89–11/89—Unemployed pending clearance for Assistant Secretary of the Army position.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

a. Consultant and Panel Chairman, Defense Science Board Summer Study on Logistics Transformation (Phase I: 4/98–8/98). Consultant to follow-on study (Phase II) 10/00–12/00.

b. CEO and Deputy Chairman, Association of the United States Army (AUSA), 2000–present.

c. Prior to above work with AUSA, I was on the AUSA Council of Trustees (1996–2000) and the AUSA Advisory Board (1994–96). I have been a member of the George Washington Chapter of AUSA since 1994.

d. Member (1993–present) and a vice president (1999 or 2000–present), Procurement Round Table, Washington, DC.

e. Member, Advisory Board to the Martin Institute, University of Idaho, Moscow, Idaho. I was invited to be a member of this Board and accepted, but our first meeting was to be 5/2001, which I will not attend.

f. I also have done pro bono work for American's Promise (wrote a marketing plan 5–11–98); wrote and consulted for "The National Moment of Remembrance" (2000); and served on as a volunteer representative of our apartment building to the rest of the apartment complex as well as served on our apartment "architectural and engineering" committee (1999–present).

13. **Political affiliations and activities:**

a. List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

b. List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

c. Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

6/6/00—ASHCROFT 2000—\$500.

10/20/00—RNC VICTORY—\$500.

6/21/01—George W. Bush Campaign—\$500.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Special Achievement Award, American Red Cross (May 1997).

Army Distinguished Civilian Service Award (1993).

VA Exceptional Service Award (1989).

VA Unique Contribution Awards (1987 and 1988).  
 NDEA Fellowship and Full Tuition Scholarship, Tufts University (1971–72).  
 Full Tuition Scholarship, University of Montana (1970–71).  
 Also in “Outstanding Young Women in America” (1979) and “Who’s Who in America” (since 1989).

Have received numerous other Federal awards, certificates, and recognitions (but never kept a list).

Counselor (1964) and participant (1963), American Legion’s Girls State (South Carolina).

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

I was an occasional “student” reporter for the College of William and Mary student newspaper, *The Flat Hat*, from approximately 1966–68. I may have gotten several “by-lines”, but this would need to be checked as it has been a long time. In the summer of 1972, my husband and I co-authored some film scripts for the State of Montana: one was on mental retardation and one was a travelogue on Helena, Montana. In 1983, I had the following 2 articles published: “Terrorism: The Original Cheap Shot—An Interview with Ambassador Diego Asencio,” *World Affairs*, Vol 146:1, Summer 1983, and “Terrorism Wrongs vs. Human Rights—An Interview with Assistant Secretary of State Elliott Abrams,” *World Affairs*, Vol 146:1, Summer 1983. Other than these, I have written numerous articles and/or given numerous speeches in association with my work in the Federal Government, at the American Red Cross, and my volunteer work with the Association of the United States Army. I also have appeared in the TV media in association with my Federal work. I have attribution on two Defense Science Board reports (both on “Logistics Transformation”), one was completed in 1998 and the other in December 2000. In addition, I wrote first drafts of two papers for the Procurement Round Table (1998 and 2000), one on outsourcing and the other on Federal acquisition reform in the 21st century.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have given speeches at events at the Annual Meeting of the Association of the United States Army (but not with a formal prepared text) and these were more “toastmaster” in nature (1996–2000).

I gave a number of speeches while I was at the American Red Cross (1993–1997) pertinent to my work area.

I gave a speech before “Women in International Security” on 10/24/96, on “Presidential Appointments: Preparing for the Next Administration”. (I spoke from notes.)

I gave a speech on “logistics transformation” in the Pentagon courtyard for Logistics Reform Focus Day (10/1/98), but do not have a final version.

I also spoke at the Pentagon during Women’s History Month on “Women at DOD” (4/97) and spoke from notes.

I was the guest speaker at the dedication of the Emilie Lawrence Reed Women’s Imaging Center at Walter Reed Army Medical Center (6/12/97).

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

SUSAN MORRISEY LIVINGSTONE.

This 8th day of May, 2001.

[The nomination of Susan Morrisey Livingstone was reported to the Senate by Senator Warner on July 11, 2001, with the rec-

ommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 19, 2001.]

[Prepared questions submitted to Jessie Hill Roberson by Chairman Warner prior to the hearing with answers supplied follow:]

CHAIRMAN,  
Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

JESSIE HILL ROBERSON.

cc: *Ranking Minority Member.*

#### QUESTIONS AND RESPONSES

##### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of Energy for Environmental Management under current regulations and practices?

Answer. In broad terms, these responsibilities include managing and overseeing the environmental restoration of contaminated soils and water, managing and disposing of waste created by past DOE missions, establishing the policy and procedures to promote safety and regulatory compliance, and supporting the development of new technologies to address unique cleanup and waste-management challenges.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Abraham would prescribe for you?

Answer. If confirmed, I would be responsible for the duties and functions assigned to the position by law and regulation. I also would be tasked by Secretary Abraham to lead a top-to-bottom assessment of the program, in order to promote efficiency and accelerate efforts to complete cleanup projects and site closures. The assessment offers tremendous opportunities to review all aspects of work—ranging from contracting strategies to program and management efficiencies that could be gained based on recommendations of independent reviewers and the Office of the Inspector General, actual cleanup strategies using innovative technologies, and future land-use options.

##### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the Assistant Secretary of Energy for Environmental Management and the Environmental Management Program?

Answer. I believe there are two major fundamental challenges facing the Energy Department's environmental program: the pace and cost of cleanup. I believe the program has made progress to date in managing a number of highly complex projects and completing work in the field. However, recent baseline estimates indicate that it may cost over \$200 billion and take up to 70 years to complete cleanup at the Department's major sites. The Secretary has indicated that his goal is to do better—and to make every effort to cut these costs and get the job done more quickly. I support these goals.

*Question.* Cleaning up the legacy of 50 years of nuclear weapons production and research is one of the toughest and most important jobs facing this country. These are some of the riskiest problems in the country, as well as the most technically complex and perhaps politically difficult. Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. This review will look for opportunities to improve the effectiveness of the EM program by identifying opportunities for greater integration within EM, as well as opportunities to apply new technologies and efficiencies in our operations, eliminating redundant or unnecessary DOE requirements, and working with regulators and communities to prioritize our activities.

## FUNDING SHORTFALLS

*Question.* The majority of the Department of Energy (DOE) complex-wide cleanup program is included in enforceable regulatory commitments made to Congress through the Defense Nuclear Facilities Safety Board. It now appears that the DOE did not obtain sufficient funding from OMB and therefore sites across the Nation may not be able to fulfill their binding commitments. How do you propose to meet the Department's legally enforceable commitments?

*Answer.* The DOE is committed to meeting its legal obligations, and I am committed to find a way to do so. I also commit to look at all sites in the complex to find better ways to achieve the goals we share with Congress and the States.

## PLANT CLOSURES AND COSTS

*Question.* The DOE's closure sites are dependent upon an integrated plan whose success depends on the interaction of multiple sites for storage and shipment of waste material. What are your views on the integrated plan and the technical, policy, and other barriers to accelerating closure?

*Answer.* The Department has formulated an extensive baseline for the Rocky Flats closure project, which has been an important element in evaluating the technical, policy, and logistical challenges facing the Department in its Rocky Flats closure effort. This baseline is currently undergoing an external validation. If confirmed, I hope to expand upon this approach by making visible the interdependencies and required integration of all sites to achieve cleanup. The complex was operated in an integrated fashion when these issues occurred and must be operated in an integrated way to achieve a stepwise, but progressive cleanup.

*Question.* An integrated and cooperative system across the EM complex must be maintained for the closure sites to remain on schedule. For example, to stay on their closure schedule, Rocky Flats needs to ship all of their plutonium metals and oxides to the K-Area at the Savannah River Site for storage. What would you do to ensure compliance and cooperation continue so there will not be a slow down in cleanup or delays in closure, at Rocky Flats, or any of the other closure sites?

*Answer.* First, the DOE needs to ensure a greater level of integration of its activities, both within the EM program and among different departmental elements. Second, we need to demand accountability from the DOE's field managers and contractors to proactively identify problem areas earlier so that actions can be taken. Finally, the DOE needs a robust process to ensure that problems and challenges are addressed at an early stage, with less financial and schedule impact.

*Question.* What can Congress do to make sure Rocky Flats and the Ohio sites are cleaned up and closed down according to their closure plans by 2006 or sooner?

*Answer.* Congress' strong support of the DOE's efforts to close Rocky Flats and the Ohio sites have been key to keeping them on track. Your support for the President's fiscal year 2002 budget request for these sites will be critical.

*Question.* Former Secretary Richardson implemented the notion of stable environmental funding applied to each site. Because this was done without regard to whether a site is an enduring site or a closure site it appears to lack an objective appreciation of complex-wide priorities. What is your long-term vision for the DOE complex regarding those sites with enduring missions as compared to closure sites?

*Answer.* Every activity within the EM program should, at its core, be considered a closure project. Closure consists of three phases: first, stabilization and material removal; second, remediation and restoration; and third, stewardship. As I stated earlier, cleanup of these sites must be integrated and progress in a stepwise manner. Integration must include consideration of cleanup activities and their relationship to enduring missions. Our role is to reduce or eliminate the environmental risks and ensure long-term stewardship of the sites by meeting Federal and State requirements.

*Question.* Does the decision to suspend plutonium immobilization activities at the Savannah River Site have any impact on the DOE's ability to ship plutonium from Rocky Flats to Savannah River, and thus the closure schedule for Rocky Flats?

*Answer.* There is no issue delaying or impacting the shipment of waste to Savannah River. Nevertheless, I recognize and appreciate the concerns of the State of South Carolina regarding the status of this important activity. In this case, shipment of plutonium from Rocky Flats to Savannah River is an EM activity while plutonium immobilization is an NNSA activity. If confirmed, I would look forward to working with my counterparts in NNSA, as well as working closely with the State of South Carolina, to ensure that these activities are fully integrated.

## WORKFORCE ISSUES

*Question.* There has been some indication that the DOE, in its efforts to achieve savings, may be looking at reducing requirements for worker safety. If confirmed, would you work to ensure that the safety of the workforce is never compromised?

*Answer.* Yes.

*Question.* As the DOE gets closer to the point in time when it will actually close sites, how would you propose to keep the workforce needed to close on schedule?

*Answer.* The DOE needs to focus on policies aimed at retention and transition in order to keep the workforce we need. We need greater integration among the sites to ensure that we can optimize critical skills throughout the complex. It is my experience that retention and transition policies are not one size fits all. Different strategies are needed at different sites.

*Question.* Do you believe some type of incentive system is appropriate, and if so, do you have any proposals for such incentives?

*Answer.* Yes. It is my understanding that there are incentives in place at some sites for these purposes. If I am confirmed, I will review these programs carefully. I will also review the existing authority available to me to implement further incentives.

## ENVIRONMENTAL MANAGEMENT STRATEGIC REVIEW

*Question.* When the Secretary of Energy unveiled the budget for fiscal year 2002, he mentioned his plan to implement a top-to-bottom review of the Environmental Management (EM) program, also known as the EM Mission Assessment. If confirmed, what general outcomes and recommendations do you anticipate will come out of the Secretary's EM Mission Assessment?

*Answer.* It would be premature to speculate or attempt to prejudge the outcomes of the review. The review will look for opportunities to improve the effectiveness of the EM program by identifying opportunities for greater integration within EM, opportunities to apply new technologies, efficiencies in our operations, eliminating redundant or unnecessary DOE requirements, and working with regulators and communities to prioritize activities.

*Question.* If confirmed, would you commit to provide this committee with interim and final reports and recommendations from this review?

*Answer.* Yes. If confirmed, I commit to informing and consulting with Congress as the review progresses.

## FUNDING

*Question.* Over the course of the past year, the DOE has renegotiated or entered into new contracts at almost all EM sites. These contracts were designed to provide incentives to the contractors to do more work with less money, but were all predicated on a predetermined funding profile. Is the fiscal year 2002 budget request adequate to meet this funding profile, or will the DOE be forced to modify the terms and conditions of these contracts?

*Answer.* At this time, I do not know if the fiscal year 2002 budget request will require modifying any DOE contracts. If confirmed, I will review these contracts and take the necessary steps to ensure that the impacts are minimized. The budget process for fiscal year 2002 is still ongoing, so it would be premature for me to speculate on the final outcome. I will keep this committee informed of any actions I consider necessary as a result of the final 2002 budget.

*Question.* Must you renegotiate the various agreements and consent orders with the states and the EPA if the funding requested by the DOE for fiscal year is the amount authorized and appropriated for fiscal year 2002?

*Answer.* The DOE is committed to meeting its legal obligations, and it is my commitment to find a way to do so. I also am committed to looking at all sites in the complex to find better ways to achieve the goals we share with Congress and the States. It is my hope that we can find more effective and more cost-effective ways to satisfy our cleanup obligations and to make concrete progress towards cleanup at all sites.

*Question.* In the past, the Department of Justice (DOJ) took the position that all sums available to the Department were available to the Department's cleanup effort before the Department could claim that it had no funds to comply with enforceable orders and agreements. Do you believe that is still the view of the DOJ?

*Answer.* I will work closely with the Department's General Counsel to ensure a coordinated strategy for complying with regulatory agreements.

*Question.* Do you have any plans to stop taking surplus buildings and facilities from other components of the DOE?

Answer. The EM's mission makes it the logical program to manage surplus DOE facilities. However, to maintain focus on cleanup and closure work, a more structured and disciplined transition process may be necessary to provide for more timely characterization, cleanup, and funding plans. Any specific change in policy on this issue would have to come from Secretary Abraham.

*Question.* What requirements would you place on the other DOE programs before you take additional facilities and buildings?

Answer. Before contaminated excess facilities are transferred to the Environmental Management program, I would want to ensure that the current requirements for such transfers are met. If confirmed, I would like to examine this issue more fully to determine whether we are implementing the most effective program and that sufficient funding is available to ensure that we are not merely shifting a problem from one part of the Department to another.

#### MANAGEMENT ISSUES

*Question.* There are a variety of complex issues facing the Environmental Management program, but one of the issues which has received criticism over the years is management. What are your views on the roles and responsibilities of Environmental Management field managers relative to those of Environmental Management headquarters managers? Do you favor more delegation of authority to field managers or less? What is your view of EM's organizational structure? Is there a smooth and consistent chain of command and reporting structure from the field staff to headquarters staff, from the contractors to DOE officials, and from the Office of Environmental Management to the Secretary of Energy and other DOE officials? Do the field offices have enough autonomy and flexibility to work with the contractors at the sites to get the cleanup finished in a safe and efficient manner? Should the field offices have more autonomy than they currently have?

Answer. As a former field office manager, I am very familiar with the dynamics between the field offices and DOE headquarters. Both elements are important. However, it is important to balance autonomy with integration and authority with responsibility. The cleanup of the sites in the EM program will achieve mission success only if it is managed and carried out in an integrated fashion. The key to maintaining this healthy balance is in clearly defining the authorities and responsibilities of both elements, and avoiding overlapping work and a confusing command structure. I do believe strongly in a corporate approach to the EM program, and I intend to manage this program accordingly, if confirmed. The effectiveness of the current EM organization is something I can only determine and address after a period of daily observation.

*Question.* The Environmental Management program has used a variety of contracting methods, including Management and Operating (M&O) contracts, performance-based or fixed-priced contracts, and privatization contracts. What is your view of these, or other, contracting methods, and what principles should the DOE follow when entering into EM contracts in the future?

Answer. Different contracting models have different applications, and what works in one instance may fail in another. Success in EM is not dependent on a specific contract structure, but on competent DOE oversight and management of technically competent and capable contractors. Integral principles include a clearly defined and well-understood scope of work, a defined duration for the accomplishment of that scope, a clear understanding of the expected result, sufficient understanding of the nature and depth of the problem, and technical sophistication on the part of the DOE officials charged with contract oversight.

#### CLOSURE PROJECTS

*Question.* You were in charge of the Rocky Flats Field Office, when enormous progress was made towards its closure by 2006. What are your plans for implementing a closure strategy for the entire Environmental Management complex?

Answer. I believe that the strategies that were successful at Rocky Flats are instructive for other sites, but are not necessarily solutions that will apply everywhere. However, I also believe that there are a number of factors that should be considered as the Department develops its cleanup strategies. First, cleanup priorities should be risk-based, ensuring that the highest risks receive priority attention. Second, it is important to establish and reach agreement on the end goals. These goals will focus activities and help to prevent disagreements on a small number of issues from hampering progress on the majority of issues. Third, contracts and contractors that are dedicated and properly incentivized and focused on achieving results must be in place at every site. Fourth, the Department's regulators and stakeholders must be fully involved in the Department's cleanup decision-making process.

esses. Compliance is important but needs to be results-oriented, flexible, and recognize the constraints on the Federal budget. Short-term, enforceable milestones with long term policy goals for site cleanup are a way to achieve this. Fifth, building trust is critical to successful relationships. The Department needs, through its actions and by keeping its commitments, to earn the trust of its regulators, stakeholders, and Congress. At first, trust will have to be earned slowly. But over time, this will lead to productive and cooperative relationships with the regulators and stakeholders.

*Question.* At Rocky Flats, the contractor implemented a plan which incorporated environmental, safety, and health (ES&H) responsibilities and accountability directly to the line workers themselves. This removed a separate group of DOE staff who had previously provided ES&H oversight at Rocky Flats and who currently provide such oversight at other EM sites. Please describe the benefits or detriments of assigning ES&H responsibilities directly to the cleanup workers.

*Answer.* A strong safety culture must be infused through every layer of DOE and contractor employees, and direct ES&H responsibilities help create this culture. The workers themselves are the first line of defense for safety, balanced by independent oversight and enforcement. A key challenge for managing each site and the overall program is striking the appropriate balance between empowering the frontline and maintaining sufficient independent oversight.

#### REGULATORY FRAMEWORK

*Question.* Numerous laws, DOE rules, DOE orders, and DOE policy guidance have created an enormous body of law and policy with which the EM sites must comply. Many of these laws and policies have become outdated, obsolete, or inconsistent due to technical errors. Do you believe these existing laws and policies are harmful to the goals of the closure projects and the broader EM program? What plan could be put in place by the DOE to catalogue outdated or inconsistent laws and policies? Is this issue being addressed in the top-to-bottom review of the EM program?

*Answer.* Technology developments, research advancements, work control improvements, and changing site missions are a few of the factors constantly modifying the activities at DOE sites. It is essential for the Department and its contractors to review the applicability and relevance of both formal and informal requirements to keep pace with these changes. This important matter will be addressed in the top-to-bottom review.

#### ENVIRONMENTAL MANAGEMENT TECHNOLOGY DEVELOPMENT

*Question.* Please give us your views on the importance of a vigorous, national technology development effort within EM?

*Answer.* Sound science and innovative technology are critical to solving the complex technical problems the Department faces in cleaning up the DOE complex. The Department needs to bring the best scientific and technological information and expertise to bear to solve these problems. This science and technology must be focused on the specific obstacles to achieving progress. The Department will need technological breakthroughs in order to get the job done, to improve system productivity, and to reduce the costs of many of the projects. The Department must use the considerable technological talent and resources available to better link research with "on-the-ground" cleanup needs.

*Question.* Do you believe that EM can effectively meet its proposed cleanup and closure goals without a viable EM technology development program?

*Answer.* No. Some of the challenges facing EM do not currently have solutions. New technologies must be developed to address these challenges in a responsible manner.

*Question.* Please give us your views on the effectiveness of the EM Technology Development program and its current management? Specifically, do you believe that this program has been effective in transferring cutting-edge research to DOE cleanup and waste management sites?

*Answer.* I believe that the EM Technology Development Program has experienced legitimate criticism. My impression is that the program is now beginning to realize the benefits of the investment. It is premature for me to offer an overall assessment of this program at this time. If confirmed, I will carefully review this program and identify ways to make it more effective in helping EM achieve its mission more effectively.

#### LOW-LEVEL WASTE DISPOSAL

*Question.* What are your views on the use of commercial disposal options for DOE-origin low-level radioactive waste?

Answer. There is great potential in using commercial facilities for low-level waste disposal, when it is cost-effective for the Department and is protective of public health and the environment. At Rocky Flats, the DOE made extensive use of such facilities during my tenure as Field Office Manager.

*Question.* Do you support increased competition for low-level waste disposal contracts?

Answer. I support any policies that will lead to the lowest cost for the taxpayer and that will provide for the DOE greater stability and diversity of disposal options. In this context, I believe that increased competition can play an important role.

*Question.* Do you believe the current policy encourages the DOE facility contractors to seek the lowest cost option, even if that option is utilization of a commercial disposal facility?

Answer. It is my understanding that current policies do enable the DOE to choose the lowest cost option. If confirmed, I will review these policies and review how they are implemented to ensure that the DOE's overall waste management program is using the best mix of government and commercial facilities.

#### WASTE DISPOSAL

*Question.* Are there any remaining issues with maintaining shipments of transuranic (TRU) waste or mixed-TRU waste to the Waste Isolation Pilot Plant (WIPP) which will delay or prevent completion of the closure sites by 2006?

Answer. Based on my understanding of the WIPP program, I believe that the Energy Department can promote its efforts to accelerate waste disposal and close sites by streamlining the work that is being conducted under WIPP permits and regulatory requirements. I understand that the Energy Department and the WIPP program managers are also working with both the State of New Mexico and the Environmental Protection Agency to review the proposed permit as well as requirement modifications that could be made without compromising safety in order to promote efficiency—and reflect the experience and knowledge gained from WIPP operations conducted to date. If confirmed, I will examine whether there are any additional steps the Department can take to support accelerated closure at the Department's sites.

#### COMPLIANCE

*Question.* Are there compliance issues at any of the EM or closure sites which will prevent the DOE from maintaining a focus on cleanup and closure?

Answer. At this time, I am unaware of any particular compliance issue at any specific site that may be hindering a focus on cleanup. If confirmed, I will work closely with regulators, communities, and Congress to ensure that there is no conflict between compliance and progress towards closure.

*Question.* The DOE's poor record on compliance has resulted in some states going or planning to go to court to enforce cleanup agreements. Subsequent orders have compelled the DOE to proceed with cleanup, but this process has resulted in the cleanup occurring in a costly and inefficient manner. The 3100 TRU waste issue at the Idaho National Engineering and Environmental Laboratory (INEEL) is an example where the State of Idaho felt compelled to assert its right to compel the DOE to proceed with shipments of TRU waste out of Idaho. While this legal process was effective in getting the DOE to act, it did so with a much larger cost than it should have. What would you do to make sure the DOE remains on time and within compliance, to avoid these costly and potentially inefficient court-ordered schedules?

Answer. I share your concern that litigation and court-ordered schedules are not productive ways to do business. My experience as a field office manager has taught me the importance of working closely with the regulators and citizens at the site. Consulting with them and keeping them informed about policies, issues, and decisions will not only help the Department make better decisions that are more likely to hold up over time, it increases the chances that they will afford the Department needed flexibility when the time comes to make the tough decisions. A second key element is to do a better job of planning up front—to clearly define from the outset what is to be accomplished, when, how, and at what cost. This is a critical element for building credibility to support needed flexibility.

#### PRICE-ANDERSON ACT

*Question.* The Department of Energy's Price-Anderson Act authority to provide indemnity protection for nuclear hazards expires on August 1, 2002, unless again renewed by Congress. In 1999, the Department submitted a report to Congress indicating the Act should be extended again in substantially its present form. Does the Department continue to support reauthorization of this important Act?

Answer. Yes. I understand that the Act is important to the Department's operations.

*Question.* Is Price-Anderson Act reauthorization a priority of the Department's legislative agenda for 2001?

Answer. Yes. I believe it is important for the Department's nuclear operations.

*Question.* The current indemnification authority under Price-Anderson expires in 2002. Should this authority be extended this year or can it wait until next year? What are the consequences of waiting until next year?

Answer. I believe that reauthorizing this legislation needs to be assigned a high priority by Congress to prevent it from expiring and potentially disrupting DOE nuclear program activities.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information. Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Energy for Environmental Management?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR JEAN CARNAHAN

1. Senator CARNAHAN. Could you explain what you believe is an appropriate method for the Department to evaluate alternative routes for cross-country nuclear waste shipments?

Ms. ROBERSON. I believe it is critical that the Department complies with regulations and guidance provided by the Department of Transportation and Nuclear Regulatory Commission for routing of shipments of spent nuclear fuel. Those regulations establish interstate highways as "preferred routes" for spent fuel shipments, and provide criteria for evaluating and selecting potential routes, including limiting the time in transit.

It is my understanding that the Department not only adheres to such regulations, but, in addition, participates in a working group of State and Tribal Nation representatives to identify and evaluate potential shipping routes.

2. Senator CARNAHAN. Would you commit to conducting a thorough, scientific analysis that compares the safety of 1-70 with other alternative routes?

Ms. ROBERSON. It is my understanding that the Department of Transportation is the Federal agency responsible for conducting safety analyses of interstate highways. If confirmed, I am committed to working with you to address the process used by the Department of Energy to evaluate potential shipping routes consistent with Federal regulations, and I also will ensure the involvement of other appropriate agencies to address interstate highway safety issues.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

3. Senator THURMOND. The Nation is spending over \$6 billion per year on DOE environmental cleanups. I am concerned that DOE spending plans are determined by the most vocal outside groups, or by compliance agreements made years ago, and not by the urgency of the work.

Under the current criteria, is the Department focused on cleaning up the worst problems and are we getting the best return for our investment?

Ms. ROBERSON. I share your concern that the Department's cleanup activities need to be properly aligned to focus on cleaning up the worst problems and getting the best return for our investment. As you are aware, Secretary Abraham has called for a complete top-to-bottom review of the Environmental Management (EM) program. If confirmed, one of the first tasks I will undertake is this evaluation of the EM program with the aim of ensuring the EM programs are aligned to safely clean-up our worst problems in the most efficient manner. As a part of this review, we will examine our compliance agreements to ensure that they are properly aligned to address our worst problems and work with the necessary parties to ensure that they reflect current cleanup priorities.

4. Senator THURMOND. The President's budget reduces environmental remediation activities by approximately 60 percent. A reduction of this magnitude could result in SRS violating cleanup program commitments to the State of South Carolina and the Environmental Protection Agency. Many of the reductions are associated with cleanup of the SRS groundwater.

What steps do you plan to take in regard to the environmental remediation account at SRS in light of the decreased funding for Environmental Management?

Ms. ROBERSON. The budget process for fiscal year 2002 is still in progress. The President has proposed a budget; Congress is now considering that budget. It is inappropriate for me at this time to comment on the budget status or prognosis of individual projects at specific sites. If I am confirmed, I will work closely with Congress to align the budget with cleanup priorities and obligations. In the long run, it is incumbent on the EM program to develop ways to achieve progress faster at all of our sites. This will be one of my principle commitments, if confirmed.

5. Senator THURMOND. In response to the recent tank 6 leaks in the SRS high level waste tank farm, the Defense Nuclear Facilities Safety Board issued a highly critical report. Although I agreed with many of the recommendations in the report, I am concerned with the recommendation to empty tank 6 by pumping the waste into other tanks. I believe the right course of action is to get the waste out of the ground and make glass through the vitrification process as fast as possible.

Are you committed to vitrification? What is the best solution to resolve the high level waste tank farm problems?

Ms. ROBERSON. I am committed to vitrification of high level wastes at the Defense Waste Processing Facility. The high-level waste tank farm is but one part of the system through which wastes are processed. The current problems affecting the high-level wastes tank farm must be addressed in the full context of the waste processing system without compromising safety margin in the short term. If confirmed, I will work to ensure that we resolve the tank farm problems in the most efficient manner.

6. Senator THURMOND. I recognize that the cleanup of Rocky Flats is extremely important for the Department and the Environmental Management program. The removal of plutonium from Rocky Flats to permit further cleanup is largely dependent on the support of the Savannah River Site, which is expected to receive that plutonium for interim storage pending ultimate disposition. Without that support, Rocky Flats closure cannot be successful. I have stated on a number of occasions that SRS agreed to accept waste and materials from other sites based on assurances that a "path out" of South Carolina will exist. The EM budget and many of the new missions scheduled for SRS represent that "path out." If the "path out" becomes cloudy, the "path in" may become a "road closed."

Will you serve as an advocate for proper funding for EM at SRS?

Ms. ROBERSON. I am keenly aware of the interdependency between the cleanup of Rocky Flats and the missions at SRS. In fact, there are interdependencies like this throughout the complex. None of the EM sites can be successful without the cooperation and active support of many sites. One of my chief priorities, if confirmed, will be to manage the EM complex as a unified complex with a corporate philosophy. Success will not occur anywhere if they are operated as islands unto themselves. I can commit that I will be a visible advocate for the overall EM mission and cleanup priorities. At the same time, I recognize that EM has many crucial activities at SRS that will require significant management support. If confirmed, I will work closely with the State of South Carolina and Congress to ensure that EM activities are adequately supported and that the DOE meets its obligations at SRS.

7. Senator THURMOND. It has come to my attention that the position of assistant manager for high level waste at the Savannah River Site has been vacant for the past 8 years. Please review this situation and provide me the following information:

what are the plans for filling this position and is this an appointed or civil service position?

Ms. ROBERSON. In general, it is not appropriate for me to comment on specific departmental personnel matters. It is my understanding that this position is a civil service position. It is my understanding that at this time there is a permanent assistant manager for high-level waste. I can assure you that I am committed to filling vacancies and retaining the technical and managerial expertise needed to manage this program.

---

QUESTION SUBMITTED BY SENATOR RICK SANTORUM

8. Senator SANTORUM. The steel and metals industry, along with others, have been very concerned about the release of scrap steel and metal from radioactive areas of DOE facilities. A policy allowing release of scrap metal from radioactive areas into the general stream of recycled scrap metal in this country essentially shifts the costs—both financial and health costs—of removing and dealing with radioactive contamination from the DOE to the steel mills and metal recyclers which have to make certain that no contaminated metal gets into new products. In addition, a policy allowing release by the government raises fears of the consuming public about the safety of steel and metal products, even if those industries are taking precautions to make sure the products in fact are safe. I think we all know of the condition of the U.S. steel industry. It certainly does not need the Federal Government working against it by allowing the release of scrap metal and steel.

In light of concerns about the effect of releasing scrap steel and metal from DOE facilities, last year the Department of Energy instituted a moratorium on release of scrap steel and other metals from radioactive areas in DOE facilities.

First of all, have you had an opportunity to review this issue and will you support a continuation of the moratorium on release of scrap steel and metal from radioactive areas?

Second, can you assure us that a waiver will not be used to undermine the moratorium?

Third, I would like your assurance that prior to making any changes in policy regarding release of scrap steel and metal from DOE facilities, that the Department will inform members of Congress who are concerned about this issue, to make sure that our concerns are addressed before any changes are made to the current moratorium on release?

Ms. ROBERSON. I have not yet been briefed on this issue, but share your interest in ensuring the safe disposition of metal products. However, I am not able at this time to comment on this issue in depth nor to comment on the current moratorium, or on the possibility of granting individual waivers. If confirmed, I will work closely with interested members of Congress and the public prior to making any policy changes on release or recycling of scrap metal. Further, I can commit that the DOE will not take any steps that will endanger public health and the environment.

---

QUESTION SUBMITTED BY SENATOR SUSAN COLLINS

9. Senator COLLINS. In your advance questions, you stated that “there are two major fundamental challenges facing the Energy Department’s environmental programs; the pace and cost of cleanup.” While I understand that the Department will be undergoing a top-to-bottom review, known as the Environmental Management Strategies Review, or EM Mission Assessment, how do you plan in the immediate future to confront these challenges?

Ms. ROBERSON. I do not believe there are any quick fixes to these challenges. It is my goal, if confirmed, to make changes that have lasting and permanent impact on this program. Changes like that are not made lightly or casually. If confirmed, I commit to consult with Congress on any steps and initiatives necessary in the short-, medium-, and long-range to help us improve the pace, cost, and performance of the EM program.

---

[The nomination reference of Jessie Hill Roberson follows:]

## NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*April 30, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Jessie Hill Roberson of Alabama, to be Assistant Secretary of Energy (Environmental Management), vice Carolyn L. Huntoon, resigned.

---

[The biographical sketch of Jessie Hill Roberson, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF JESSIE HILL ROBERSON

In September 1999, President Bill Clinton nominated Ms. Jessie Hill Roberson, of Evergreen, Alabama, to the Defense Nuclear Facilities Safety Board. After confirmation by the United States Senate, Ms. Roberson began her duties as a Board Member on January 18, 2000.

She has more than 17 years of experience in the nuclear field, with in-depth experience in low level waste management, environmental restoration, reactor operations, and project management.

Prior to her appointment to the Board, Ms. Roberson served with the Department of Energy (DOE) in a variety of responsible and challenging positions. In 1996, she became the Manager of the DOE's Rocky Flats Field Office at the Rocky Flats Environmental Technology Site in Colorado, with the responsibility for integration and performance of all environmental cleanup activities on the Site. She served with distinction in this position until December 1999. In her 10 years with the Department of Energy, she has held numerous technical and managerial positions at the DOE's Rocky Flats Environmental Technology Site and the Savannah River Site in Aiken, South Carolina, including environmental cleanup, waste management, safeguards and security, as well as nuclear reactors and weapons.

Before joining the Department of Energy, she worked with Georgia Power Company as a system engineering specialist from 1987 to 1989. At Georgia Power, Ms. Roberson focused on maintenance, testing, upgrades, and performance reliability of electrical and mechanical plant systems and equipment. She has extensive experience in nuclear reactor operations and successfully completed the testing requirements for reactor operations with E.I. DuPont in 1982. Later with DuPont she trained nuclear reactor operators and supervisors in both nuclear and field operations. Before leaving DuPont in 1987, Ms. Roberson worked as a nuclear reactor operations manager at several sites.

From 1977 to 1980, Ms. Roberson completed work assignments as a student engineer for Westinghouse at the Clinch River Breeder Reactor in Oak Ridge, Tennessee and the Nuclear Center in Monroeville, Pennsylvania. Ms. Roberson received a B.S. in Nuclear Engineering from the University of Tennessee in Knoxville, Tennessee.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Jessie Hill Roberson in connection with her nomination follows:]

UNITED STATES SENATE  
 COMMITTEE ON ARMED SERVICES  
 Room SR-228  
 Washington, DC 20510-6050  
 (202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
 BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
 NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
 Jessie Hill Roberson.  
 Jessie Mae Roberson.  
 Jessie Mae Hill.
2. **Position to which nominated:**  
 Assistant Secretary for Environmental Management, Department of Energy.
3. **Date of nomination:**  
 April 30, 2001.
4. **Address:** (List current place of residence and office addresses.)  
 [Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
 October 8, 1958; Escambia County, Alabama.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
 Divorced.
7. **Names and ages of children:**  
 Jessica Whitney Roberson—Age 12.
8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

Institution	Dates attended	Degrees received	Dates of degrees
University of Tennessee, Knoxville .....	8/77-6/81	Bachelor of Science .....	6/81

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Title/job description	Employer	Work location	Dates of employment
Sr. Reactor Manager .....	E.I. DuPont de Nemours .....	Aiken, SC .....	1981-1987
Lead Systems Engineer .....	Georgia Power Company .....	Baxley, GA .....	1987-1989
Dep. Asst. Manager for Environmental Restoration and Waste Mgt.	U.S. Department of Energy .....	Aiken, SC .....	1989-1994
Site Manager .....	U.S. Department of Energy .....	Golden, CO .....	1994-1/2000
Member .....	Defense Nuclear Facilities Safety Board	Washington, DC .....	1/2000-Present

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

None.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

I have made approximately four contributions of \$100 or less to the Colorado Democratic Party and the National Democratic Party in the last 5 years.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

University of Tennessee Minority Engineering Scholarship.

Honorary member of Rocky Flats African American Alliance.

Small Business Administration (8A) Business Development Support Award—1999.

Engineering New Record Newsmaker Award—1997.

National Baptist Convention CHRISTAR Award—1997.

American Association of University Women Trailblazer Award—1997.

Girl Scouts Women of Distinction Award—1997.

Denver Business Journal's Up and Comers Award—1997.

Urban Spectrum Certificate of Honor—1997.

U.S. Black/Hispanic Engineers Merit Award—1996.

Blacks in Government Excellence in Leadership Award—1996.

Environmental Protection Agency Certificate of Appreciation—1996.

NAACP Scientific Achievement Award—1996.

Award for Achievement in Equal Employment Opportunity—1996.

Notable Women in Energy—1996.

Black Engineer of the Year-Professional/Government—1995.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

"Environmental Restoration Strategy for DOE"—Rocky Flats Environmental Technology Site, Published in 1995, co-authored with Robert Card.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

In the past 10 years, I have given a wide variety of speeches related to nuclear cleanup of facilities and cleanup plans and progress. I have also frequently given speeches or participated in panel discussion for women, minorities, high school students, and college students related to continuing education, academic subject matters, engineering careers, managing changing culture and missions in the government, and leadership and professional development. I do not keep copies of my speeches and in most cases I do not have a prepared statement.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JESSIE ROBERSON.

This 21st day of May, 2001.

[The nomination of Jessie Hill Roberson was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

[Prepared questions submitted to Thomas P. Christie by Chairman Warner prior to the hearing with answers supplied follow:]

June 6, 2001.

CHAIRMAN,  
Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours truly,

THOMAS P. CHRISTIE.

cc: *Ranking Minority Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes, I support the implementation of these reforms. The focus on "jointness" outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. These reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of the DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America's security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. From my point of view, the most important aspects are the clear responsibilities and authorities given the CINCs for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am unaware of any proposals to modify Goldwater-Nichols. The Department should consult closely with Congress, especially this committee, on any changes that might be appropriate.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Director of Operational Test and Evaluation?

Answer. I understand that, if confirmed, my duties as Director, Operational Test and Evaluation will be to serve as the principal advisor to the Secretary of Defense and Under Secretary of Defense for Acquisition, Technology, and Logistics as to the conduct of test and evaluation within the Department and in formulating and implementing test and evaluation policy. Equally so, I am required to provide to Congress an annual report to Congress summarizing operational test and evaluation activities, to include comments and recommendations on test and evaluation resources and facilities, levels of funding required for operational test and evaluation activities, beyond low rate initial production reports, and specific requests from Congress for information relating to operational test and evaluation in the Department of Defense. If confirmed, my duties will include responsibility for prescribing policies and procedures for the conduct of operational test and evaluation, providing guidance to and consultation with the Secretary of Defense and the Under Secretary of Defense for Acquisition, Technology, and Logistics, and for monitoring and reviewing all operational and live fire test and evaluation within the Department. I will also be responsible for coordinating joint operational testing, review of and recommendations to the Secretary of Defense on all budgetary and financial matters relating to operational and live fire test and evaluation, including test facilities.

I believe my role is to provide information on a continuous basis to the decision maker, assist in the learning needed in the development of new systems, and to provide an objective evaluation for the user of the system's capabilities and limitations early, or as it evolves or is upgraded. I also believe operational testers should assist in the development of tactics, techniques, and procedures for the system's employment and should provide evaluations on whether the systems are effective and suitable before full rate production or deployment.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld would prescribe for you?

Answer. I would expect Secretary Rumsfeld to look to the Director, Operational Test and Evaluation to fulfill all the duties assigned to that office by statute and regulation—in particular, advice and proposed policies on all test and evaluation activities, and funding/management of operational test facilities, test ranges, and other related issues.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Director of Operational Test and Evaluation?

Answer. I believe that testing needs to be conducted more adequately, and requires better funding, both in phasing and magnitude. Funding for operational and live fire testing, test ranges, test facilities, and the test infrastructure—as a whole needs to be improved. I also feel that the state of the testing infrastructure, to include the physical plant, range real estate, instrumentation, data reduction and analysis, targets, and personnel, is in need of near-term investment and high-level emphasis. I am also concerned with the use of waivers to defer testing of key performance parameters and the lack of resources available to the service operational test agencies for testing smaller acquisition programs.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. To meet the above challenges, if confirmed, I plan to reinforce the initiatives of early involvement of operational testers during system development. I would also establish a system to track the problems identified by that early involvement to highlight them until they are resolved. If confirmed, I will engage the budget process and will institute effective long-range planning to link approval of TEMPs to the commitment of infrastructure investment. I will also give serious consideration to recent Defense Science Board recommendations on infrastructure management. On the issue of waivers, I would continue the DOT&E practice of ignoring waivers or deferrals in my assessment unless they reflect requirements changes approved by the JROC.

## ADEQUATE OPERATIONAL TESTING

*Question.* Section 2399 of Title 10 requires a report from the Director of Operational Test and Evaluation on whether the operational test and evaluation of each major defense acquisition program has been adequate and whether the results of such testing “confirm that the items or components actually tested are effective and suitable for combat.”

Can you assure the committee that, if confirmed, you will meet this statutory requirement and that you will require adequate operational test and evaluation of all major defense acquisition programs?

*Answer.* If confirmed, I promise to fulfill to the best of my ability my responsibilities with regards to Section 2399 of Title 10. I will ensure that adequate testing is conducted by the Department and will vigorously assess the effectiveness and suitability of defense acquisition programs under DOT&E oversight.

## INDEPENDENCE AND OBJECTIVITY

*Question.* Congress relies on the Director of Operational Test and Evaluation to be an independent and objective evaluator of the performance of major systems.

Can you assure the committee that, if confirmed, you will be independent and objective in your evaluations, and that you will provide your candid assessment of major defense acquisition programs to Congress, regardless of the consequences?

*Answer.* Yes. I strongly believe independence to be crucial to objective testing and reporting. If confirmed, I intend to be independent and to provide candid assessments of all oversight programs to Congress.

*Question.* Section 2399 of Title 10 establishes certain requirements regarding the impartiality of contractor testing personnel and contracted advisory and assistance services utilized with regard to the test and evaluation of a system.

What is your view of these requirements?

*Answer.* It is my view that Section 2399 of Title 10 prohibits persons employed by the contractor for the system being tested from being involved in the conduct of the operational test and evaluation and restricts the DOT&E from contracting any person for advisory and assistance services with regard to the operational test and evaluation of a system if that person participated in the development, production, or testing of such system. These sections appear to me to strike a good balance in maintaining objectivity and independence without impacting the ability to conduct OT&E.

*Question.* Will you comply with them?

*Answer.* Yes.

## MODELING AND SIMULATION

*Question.* Advances in modeling and simulation have provided an opportunity to streamline the testing process, saving time and expense.

What do you believe to be the proper balance between modeling and simulation and actual testing of the developed product?

*Answer.* I believe modeling and simulation can be effective in supporting test and evaluation in the test design and planning process. Another potentially high payoff area is in the logistics support area. I believe it is extremely difficult to measure the cost and time benefit associated with the use of modeling and simulation in the test and evaluation process and that most attempts so far have lacked the up-front funding needed for success. Modeling and simulation is not a substitute for testing, but there are situations where field-testing alone cannot represent the realistic situation. This is the case in some missile defense and chemical-biological defense scenarios. In those cases, modeling and simulation can help in the evaluation of what has been learned from field-testing.

*Question.* How is the amount of this actual testing determined to ensure reliability and maintainability thresholds are met with sufficient statistical confidence?

*Answer.* I am not aware of any standard or DOD guidance in this area. When the National Academy of Sciences looked at OT&E in 1998, they found that “Our assessment is that the current level of test planning and experimental design for operational testing in the Department of Defense is neither representative of best industrial practices, nor takes full advantage of the relevant experimental design literature.” If confirmed, I plan to review this situation.

## DEVELOPMENTAL TESTING

*Question.* During the past several years, a number of changes have been made to the historical divisions between developmental and operational testing activities. Largely, these have involved providing for earlier involvement of the operational

testing community in developmental testing in order to increase the confidence that weapons systems will be ready for operational testing and reduce the need to repeat testing during the operational evaluation phase that has already been demonstrated satisfactorily during developmental testing.

Do you believe that the current relationship between developmental and operational testing activities is appropriate?

Answer. I believe the relationship between developmental test activities and operational test activities within the Department is appropriate. Developmental testing is intended to verify the status of engineering development, verify that design risks have been minimized, verify technical performance, and certify readiness for operational test. Operational test and evaluation is to determine if a system is operationally effective and operationally suitable for use by intended users before production or deployment.

There is growing evidence that there is a need to conduct more thorough developmental testing to preclude weapon systems from entering operational testing before the systems are ready.

*Question.* Do you believe that the Department should make additional changes in this arena?

Answer. If confirmed, I will work with the Under Secretary of Defense for Acquisition, Technology, and Logistics to promote the value of developmental testing and, if appropriate, to strengthen the readiness for operational test and evaluation certification process. I also intend to review the current practices of the services to “waive” or “defer” requirements.

*Question.* Are you concerned that the increased involvement of the operational testing community in developmental testing could undermine the confidence we need in the independence and objectivity of our operational testers?

Answer. I believe that experience has shown that increased operational testing involvement has not compromised the independence and objectivity of operational testing and evaluation. DOT&E and Operational Test Agency independence is absolutely vital. I believe that operational testers must always retain a clear view of their primary responsibilities—to ensure that the weapon systems are operationally effective and operationally suitable before those systems are acquired for our operational forces. If confirmed, I will reinforce that responsibility.

*Question.* There has been concern that some programs are not being adequately tested during the developmental testing phase.

What do you propose to do, if confirmed, to ensure adequate developmental testing is taking place?

Answer. I share the concern that some programs are not being adequately tested during developmental testing. I believe that the readiness for operational test certification process needs to be reviewed and strengthened.

I also recognize the Director’s responsibility to offer advice to those who are responsible for developmental testing. I place high importance on thorough developmental testing before initiation of operational testing. I fully support the need for operational testers to be involved early in the program, with emphasis on understanding the developmental testing that has occurred and the results of that testing. If confirmed, I would vigorously make known my advice if I perceive that developmental testing was insufficient.

*Question.* Do you feel that operational testers should have earlier insight into the developmental testing process?

Answer. Yes.

*Question.* When is it appropriate for developmental and operational testing to be combined?

Answer. Combining developmental, operational test, and live fire test and evaluation is appropriate when test objectives are similar or overlapping and makes sense when a test event can meet multiple test objectives, including being conducted in an environment or scenario that is relevant to all. Depending on the test, either the developmental, live fire, or operational testers may conduct the test, with the data from the test available fully to all. I believe that the evaluation of the results of such combined testing is then best done independently in accordance with the differing objectives and perspectives of the evaluators.

#### STREAMLINING THE ACQUISITION PROCESS

*Question.* Both Secretary Rumsfeld and Under Secretary Aldridge have indicated that they believe that there is a compelling need to streamline the acquisition process to reduce the fielding times for new weapons systems and capabilities.

If you are confirmed as the Director of Operational Test and Evaluation, how would you propose to achieve an appropriate balance between the desire to reduce acquisition cycle times and the need to perform adequate operational testing?

Answer. The time to conduct operational testing is only a small percentage of the overall acquisition cycle time. Delays in entering operational testing usually are much longer than the time frame of the operational test itself. Because the operational tests supporting full production occur near the end of the acquisition cycle, there is greater pressure to rush such tests. I feel that the operational testers can contribute to reducing cycle time by identifying problems early in the development cycle when the problems can be solved with less impact on the program.

*Question.* There has been an initiative toward evolutionary acquisition, or spiral development, to field weapons systems sooner and then to evolve them once fielded.

What is the impact of this initiative on the testing process?

Answer. The operational testers will need to remain intimately involved with a weapons system program well beyond the full-rate production decision.

*Question.* What requirements and criteria would you propose to ensure an effective test program is established for an evolutionary acquisition program?

Answer. Spiral development requires a time-phased requirements process with a distinct set of requirements for each development spiral. Each spiral can then be operationally tested and evaluated against appropriate requirements.

*Question.* Do you foresee that follow-on operational testing will be required for each program “spiral”?

Answer. Yes. The first spiral that represents a fieldable configuration will undergo initial operational test and evaluation supporting the beyond low-rate initial production decision. Subsequent spirals will undergo follow-on operational test and evaluation.

#### “SYSTEM OF SYSTEMS” TESTING

*Question.* Many programs are now developing what is called a “system of systems” approach.

What challenges to operational testing are inherent for DOD programs that are a part of an overall “system of systems”?

Answer. I believe the most significant challenge to operational testing of systems deployed in an integrated “system of systems” is to adequately assess interoperability in terms of the system’s contribution to the integrated “system of systems” effectiveness and efficiency. This challenge is becoming more complex due to the modernization and automation of the integrated battlefield where most all systems must function to some degree in a “system of systems” architecture. Multiple factors contribute to the challenge of operationally testing interoperability.

Since acquisition programs are typically managed in a “stovepipe” manner, the system program managers are neither chartered nor funded to ensure the individual system’s contribution to the “system of systems.” The challenge is made more difficult by the expense and logistics in pulling all the members of a “system of systems” together for adequate interoperability testing of a new acquisition program.

*Question.* How should a “system of systems” be tested to assess the effectiveness of the whole?

Answer. I believe that prior to the production decision for a new acquisition program, the new system should be operationally tested in the “system of systems” architecture. “System of systems” testing should be integrated and conducted with the Initial Operational Test and Evaluation (IOT&E) prior to the production decision. All “system of systems” testing should be planned and detailed in the Test and Evaluation Master Plan. Final evaluation of the system’s performance and contribution to the “system of systems” should be in the IOT&E where systems are deployed with trained operators and operated in accordance with approved tactics and doctrine. This substantially increases the scope of OT as systems become more interoperable.

#### ADVANCED CONCEPT TECHNOLOGY DEMONSTRATIONS (ACTD)

*Question.* ACTDs have been viewed as a method to get promising technology into the hands of the operational forces in an expeditious manner.

How do you view DOT&E’s role in the execution of ACTDs, especially for those demonstrations where the system is to be fielded operationally upon completion of the ACTD?

Answer. Although most of the ACTDs do not reach the dollar value of a major defense acquisition program, several—because of their significant impact on combat operations—have been placed under DOT&E oversight. In those cases, it is my understanding that DOT&E conducts independent early operational assessments of the ACTD and includes assessment reports in the DOT&E annual report to Congress.

These assessments also provide the operational user with an understanding of the capability and weaknesses of the systems if they are deployed before they go through test and evaluation of a normal acquisition program. If confirmed, I will encourage the service operational test agencies to do the same for ACTDs that are not under DOT&E oversight, but this requires additional resources.

#### FUNDING FOR TESTING AND EVALUATION

*Question.* Over the past 12 years, we have cut the operating and investment budget for our major range and test facility bases by more than a billion dollars. At the same time, a number of major programs have reduced their test and evaluation budgets.

Do you believe that the test and evaluation function is adequately funded in the Department of Defense today?

*Answer.* No. I agree with the DSB finding that “the T&E process is not funded properly—in phasing or magnitude. Funds are not available early enough, [and] corners are cut in the testing that is done.” As a consequence, there is an aging workforce, skills imbalances, and few military left in the T&E organizations. The age of the facilities and capabilities average over 35 years, with some over 50 years old.

*Question.* What, in your view, are the likely consequences of underfunding testing and evaluation?

*Answer.* The recent DSB found that “the T&E process is not funded properly in phasing or magnitude.” As a result, the report went on to conclude that “testing is not being conducted adequately—if systems are not adequately tested they enter the inventory with latent defects that can be very costly and can impact operational effectiveness.” I agree with that assessment.

#### LIVE FIRE TESTING

*Question.* The live fire testing program is a statutory requirement to assess the vulnerability and survivability of platforms, while also assessing the lethality of weapons against the required target sets.

Do you believe that the Department’s current live fire testing program is accomplishing its purpose?

*Answer.* Yes. I believe the Department’s live fire testing program is accomplishing its purpose, and I strongly support the intent of Congress when it passed the statutory requirement to assess the vulnerability, lethality, and survivability of platforms with realistic testing. In virtually every live fire program conducted to date, there have been unexpected lessons learned that have resulted in design corrections to improve the survivability (or lethality) of the systems under test.

#### COMBINATION OF TESTING WITH TRAINING EXERCISES

*Question.* Some hold the view that the most representative operational testing would be to allow operational forces to conduct training exercises with the system under evaluation.

Should testing be combined with scheduled training exercises? What are the barriers, if any, to doing so?

*Answer.* The Department has combined testing and training events since the 1960s, with combined testing and training as one of the themes for operational test and evaluation articulated by Secretary William Perry in 1995. I favor combined test and training events when they provide increased test realism, more realistic friendly and threat forces, and provide a broader operational context, but still allow for the necessary collection of data.

On the other hand, I recognize there may be differing testing/training philosophies—and objectives, data collection intrusiveness requirements, ability to control events, and flexibility of schedule are potential barriers that require close cooperation between the tester and trainer in order to be successful.

#### SCIENCE AND TECHNOLOGY FOR TEST AND EVALUATION

*Question.* In fiscal year 2002, the Office of Operational Test and Evaluation will initiate a Science and Technology for Test and Evaluation program in coordination with the Deputy Under Secretary of Defense for Science and Technology. The program is intended to accelerate the development of critical technologies for test and evaluation, provide the essential knowledge base, and build test and evaluation capabilities for the future.

If confirmed, what actions will you take to ensure that this initiative meets the stated objectives?

Answer. If confirmed, I will continue to work with all appropriate organizations to establish the initial framework for this program. For the first time, the Department has a structured program that fosters a robust T&E/S&T planning process. This program will allow test technologies to pace evolving weapons technology, and is absolutely critical to ensuring that the Department has the capability to fully and completely test the advanced systems that will be fielded in 2010–2020.

I will continue to work with all the stakeholders to develop a comprehensive test technology roadmap that is consistent with other departmental planning documents such as Joint Vision 2020. This entails working intimately with the test capability developers and leveraging heavily from technology that emerges from academia, the DOD S&T community, and industry. If confirmed, I will attempt to identify and invest in the critical, leap-ahead technologies that are required to test tomorrow's advanced weapons systems.

#### OPERATIONAL TEST AGENCIES (OTA)

*Question.* There is currently an OTA for each of the services and the Marine Corps. The OTA provides testing for new and evolving systems, however, each service has a unique funding process for this testing. For example, testing within Navy programs is funded through program managers, but testing within the Air Force is funded through the OTA.

What benefit, if any, would be realized through a single funding structure within the OTA and would you recommend funding testing through OTAs or program managers?

Answer. I believe that funding of OT&E through the OTAs has led to problems in the past, creating internal pressures within the OTAs to limit the amount of operational testing based on their budgets. There have also been difficulties due to substantial development delays that move OT&E from fiscal year to fiscal year. When the funding for OT&E is the responsibility of individual programs, as required by 10 U.S.C. 2399, the Test and Evaluation Master Plan (TEMP) becomes the basis for OT&E test resources and the program manager must plan for, budget, and provide those resources at the time of OT&E.

*Question.* Do you have any concerns about the independence of the OTAs?

Answer. Yes, I am concerned that there will always be pressures on the OTA commanders to support service acquisition strategies. I think that it is important that they continue to report to the top level of their respective services, independent of the service acquisition organizations.

*Question.* Should the policies and procedures of the OTAs be standardized?

Answer. Each of the service OTAs has unique processes for the conduct of OT&E. As long as these processes lead to a robust operational test and evaluation of weapon systems, I believe DOT&E does not need to standardize those processes. I also feel that the area of OT&E funding is an area where some standardization may be appropriate.

*Question.* Can you describe DOT&E's role and oversight of the use of waivers to operational testing requirements by the OTAs?

Answer. DOT&E does not recognize waivers that services may apply to the conduct of OT&E. I believe that operational tests conducted by the OTA must adequately address all required capabilities regardless of waivers.

*Question.* What are your thoughts on the establishment of a joint testing agency?

Answer. My major concern is that the OTAs receive adequate funding and manning to carry out their missions. Only if the OTAs were not adequately resourced would I consider a joint testing agency.

#### DATA SHARING DURING OPERATIONAL TESTING

*Question.* Recent experience during operational testing on the V-22 program indicated that there may be problems with sharing important data with responsible officials outside the testing chain of command generated during operational evaluation. It is clear that there need to be limits on the ability of the program office to influence the testing results. However, it is less clear why the program office should not have clear visibility of data generated during testing.

Are you aware of current limitations on program office visibility into the activity and results of operational testing?

Answer. Yes. I understand that one service does limit access to test data during the conduct of the operational test.

*Question.* If so, do you agree with those limitations?

Answer. No. I believe that the deficiency data during an operational test should be readily accessible to all organizations that have a legitimate need for such data. On the other hand, this is a two-way street as data from the program offices and

other organizations should be shared on a routine basis to provide greater insight to operational testers throughout the acquisition cycle.

*Question.* Should there be appropriate differences of access between contemporaneous access and subsequent access?

*Answer.* I believe that the deficiency data should be available as soon as practicable with expedited availability for potential safety deficiencies. Access to the deliberative information associated with the evaluation process, such as scoring, should be released with the final test report. I believe the specific timing of the release of data needs to be developed as a matter of policy over the near term.

## V-22

*Question.* Over the last year, substantial questions have been raised about the viability of the V-22 program as a result of two fatal crashes and allegations that key maintenance data on the program may have been falsified. As a result of these problems, a decision to proceed beyond low rate initial production has been delayed.

Can you assure the committee that you will ensure that adequate operational testing and evaluation is conducted on the V-22 program, and that you will make a determination whether the items or components actually tested are effective and suitable for combat?

*Answer.* It is my understanding DOT&E will continue involvement with the V-22 program test and evaluation planning activities for the next several years, as well as with longer-term investigations into the unique qualities of tilt-rotors in general and the V-22 in particular. The planned experimental, developmental, and operational test activity to support a resumption of operational flying and eventual full-rate production will be documented in a revision to the Test and Evaluation Master Plan, which I will review, if confirmed.

*Question.* If the operational testing and evaluation on the V-22 program does not demonstrate that the items and components tested are effective and suitable for combat, will you recommend against proceeding beyond low-rate initial production on the program?

*Answer.* The decision to proceed beyond low-rate initial production is properly the responsibility of the Defense Acquisition Executive. If confirmed, I will issue a DOT&E report to the Defense Acquisition Executive, Secretary, and congressional defense committees at the time the decision is proposed. In that report, I will provide my opinion regarding test adequacy, operational effectiveness, operational suitability, and survivability of the V-22.

## NATIONAL MISSILE DEFENSE

*Question.* The United States has been developing a land-based National Missile Defense (NMD) system that has an approved operational requirement for defeating all incoming ballistic missile reentry vehicles from a limited ballistic missile attack, with a very high degree of confidence.

Can you assure the committee that you will ensure that adequate operational testing and evaluation is conducted on any National Missile Defense system, and that you will make a determination whether the items or components actually tested are effective and suitable for combat?

*Answer.* If confirmed, my intention is to have an operational test and evaluation program developed that adequately addresses the approved system operational requirements. Upon completion of the initial operational test and evaluation, I will provide an assessment of the effectiveness and suitability of the tested system.

*Question.* If the operational testing and evaluation of a National Missile Defense system does not demonstrate that the items and components tested are effective and suitable for combat, will you recommend against the acquisition or deployment of the system?

*Answer.* The decision to proceed is that of the Secretary of Defense or his designated executive. I would not recommend the acquisition or deployment of an ineffective or unsuitable system.

*Question.* Do you believe that a program of operational testing and evaluation for a National Missile Defense system can be considered adequate if it does not include the use of countermeasures?

*Answer.* I feel that an adequate test and evaluation must include the use of countermeasures.

*Question.* The previous Director of Operational Test and Evaluation recommended additional and more realistic testing of the ground-based National Missile Defense system. The Bush administration may revise the architecture and requirements of the ground-based NMD proposed by the Clinton administration.

Can you assure the committee that, if confirmed, you would work with Secretary Rumsfeld and the Director of the Ballistic Missile Defense Organization (BMDO) to determine a reasonable test and evaluation program for any revised missile defense program proposed by the Department of Defense?

Answer. If confirmed, I intend to work with the Secretary of Defense, the Under Secretary of Defense for Acquisition, Technology, and Logistics, and the Director, Ballistic Missile Defense Organization to assure an adequate test and evaluation program is developed to determine that the selected architecture satisfies the approved operational requirements.

*Question.* The previous Director of Operational Test and Evaluation recommended an expansion of the NMD range and infrastructure to provide for more realistic testing.

Do you agree with this recommendation?

Answer. Yes. I would always agree to range and infrastructure improvements to provide more realistic testing. If confirmed, I will need time to review the program before I can offer any specific recommendations.

*Question.* The missile defense community, as well as many other development and acquisition communities, makes extensive use of modeling and simulation.

What role should modeling and simulation play in the test and evaluation process?

Answer. I believe that modeling and simulation is indispensable to modern test and evaluation and can help the process in many ways. Simulations can help identify critical operational issues and key performance parameters to help focus test objectives. They can help develop test scenarios and otherwise assist in detailed test planning. Simulations can examine performance under conditions that cannot be replicated on a test range. I expect that simulations will evaluate missile defense performance for larger scale scenarios than planned for flight test and for numerous countermeasure variations that might be conceived.

*Question.* Can modeling and simulation streamline or reduce BMD operational test requirements? If so, to what extent?

Answer. I cannot speak to specific reductions modeling and simulation could bring, and until I fully understand program specifics and the NMD acquisition strategy, I am not prepared to elaborate on any specific BMDO test requirements.

*Question.* Countermeasures deployed by rogue nations could pose a challenge to BMD systems, but if and when such countermeasures would be deployed remains open to question.

If confirmed, how do you intend to address the challenge of BMD testing against countermeasures?

Answer. If confirmed, I intend to work with all the interested organizations to develop a broad program of flight tests, hardware-in-the-loop ground tests, and simulations to confirm that the system has sufficient performance margins to handle likely countermeasures.

*Question.* The DOT&E Fiscal Year 2000 Annual Report recommended that the NMD program office "should consider a much more parallel approach whereby flight testing can continue at an aggressive pace in the wake of a possible failed intercept."

Do you agree with this recommendation?

Answer. Until I fully understand program specifics and the NMD acquisition strategy, I am not prepared to elaborate on any specific BMDO test requirements.

#### ARMY TRANSFORMATION

*Question.* The National Defense Authorization Act for Fiscal Year 2001 requires the Secretary of the Army to conduct a comparative evaluation of interim armored vehicles selected for the fielding of interim brigade combat teams with equipment already in the inventory. The intent of this law is to carry out a side-by-side comparative operational evaluation of units similarly organized, trained, and equipped, other than for the differences in medium armored vehicles.

The law further requires that the evaluation plan, including the size of the units involved in the evaluation, be approved by the DOD Director of Operational Test and Evaluation. Last month the acting Director of Operational Test and Evaluation approved an evaluation plan, which examines platoon level missions in accordance with the interim brigade combat team organizational and operational concept.

Do you agree that an evaluation of platoon level missions is sufficient for such a new and unique unit designed primarily for operations at brigade level?

Answer. I believe that platoon level missions carried out at the company level in terms of vehicles and manpower are appropriate with robust technical testing. I think the test strategy is sufficient for an adequate vehicle level comparison. In con-

trast to the vehicle comparison, the interim armored vehicle IOT&E, currently scheduled for fiscal year 2002, will be a much larger test and evaluation of the capability of an interim brigade combat team equipped with medium armored vehicles to accomplish its missions. The IOT&E is currently designed to be conducted with an interim brigade combat team battalion and a brigade headquarters.

*Question.* Do you intend to review that decision?

*Answer.* Yes. If confirmed, I will work closely with the committee and the Army to ensure the intent of the law is met. The Army will be submitting a detailed comparative evaluation test plan to DOT&E for approval this month. If confirmed, I will review the plan for the comparison evaluation.

*Question.* Will you assure the committee that you will take a personal interest in providing oversight for the conduct of that operational comparison to ensure that this evaluation is valid and fulfills the intent of the congressional language?

*Answer.* Yes.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Director of Operational Test and Evaluation?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. With the greater reliance on the use of computer simulations in virtually all aspects of military training and testing, is there a continuing need for the extensive and costly live fire test and evaluation program?

Mr. CHRISTIE. There is a continuing need for an adequate and thorough Live Fire Test and Evaluation (LFT&E) program. Congress established the LFT&E program as a mechanism for reducing the vulnerability of American military personnel using our combat equipment and increasing the lethality of their weapons.

The current (and foreseeable) state-of-the-art in modeling and simulation (M&S), does not support the exclusive use of M&S predictions for system vulnerability or weapon lethality evaluations in lieu of live testing. The final product of an LFT&E program is a comprehensive evaluation of a system's vulnerability or lethality under operationally realistic conditions. This evaluation, which supports the decision to proceed beyond low-rate initial production, is based on realistic testing complemented by the best analytical tools available, to include M&S.

These M&S tools have proven both useful and necessary in the design of military systems and their test programs. Significant advances have been made in certain kinds of vulnerability and lethality modeling, such as physics-based modeling in support of ballistic missile programs. Such models help us identify munition-target interactions with uncertain or mixed results, allowing us to focus testing on areas where we are unsure of the outcome.

DOD regulations require each live fire test to be preceded by a prediction of results, using M&S. In part, this is intended to help validate those aspects of the model that appear to have predictive capability. Frequently, however, we have found that the predictive capabilities are severely limited or are inadequate. Model-test comparisons have assisted us in determining the appropriate role of M&S in our evaluations, and have helped the model developers to identify priorities for M&S improvements.

Finally, I should note that LFT&E involves a relatively modest cost to the program. Typically, the cost of LFT&E has not exceeded three-tenths of 1 percent (0.3 percent) of program costs and, in most cases, the cost has been much less. This includes the cost of testing as well as the M&S applications in support of the LFT&E.

2. Senator THURMOND. One of the goals of the Live Fire Testing and Training Program is to bring together the testing and training communities in the fielding of a weapons system. I personally believe that this must be a priority and that it should be done at the earliest possible time in system development.

Based on your earlier tour in the Operational Test and Evaluation office, are the services and OT&E doing enough in this area and what changes would you advocate, if confirmed?

Mr. CHRISTIE. I agree that priority should be given to achieving greater cooperation between the testing and training communities to better serve the Department's goal of fielding weapon systems with demonstrated operational capability in a more timely manner. If confirmed, I will advocate and support initiatives to share technologies and data between the two communities and to foster early collaboration that is crucial to lower cost and speedier acquisition of new weapon systems.

For example, I believe up-front investment in the training package for new systems can speed the process of fielding new capabilities, not merely passing a contractual milestone such as full-rate production. Early development of the training package could also allow more meaningful consideration of how the system will be used by our combat forces and that, in turn, could facilitate the design of a more robust and productive operational test and evaluation. Another initiative would involve the early development of man-in-the-loop training simulators containing the same software as the actual system that could then serve early on as effective software test beds.

3. Senator THURMOND. Many so-called experts believe that the solution to all problems in the Department of Defense can be resolved by adopting commercial practices. After all, Boeing and other corporations have their test and evaluation programs for commercial projects and they seem to get their products in the hands of customers much faster than the Department of Defense.

How is the civilian testing program different from that within the Department of Defense and should we be looking at commercial practices in the testing area?

Mr. CHRISTIE. There are a number of differences between the business practices of the Department of Defense and those of the commercial sector. In the main, commercial product development practices place much greater emphasis on testing than does defense. Commercial products that do not perform up to expectations suffer severe consequences in the marketplace. Of the thousands of new commercial products introduced each year, most fail to be profitable and soon disappear from the marketplace. Thus, there is a very strong incentive to ensure product effectiveness and suitability through robust testing. On the other hand, while defense weapons systems are not subject to the discipline of the marketplace, it is imperative that they be operationally effective, suitable, and survivable when employed by our soldiers, sailors, and airmen across a spectrum of demanding combat scenarios.

In many commercial cases, testing can be the largest single effort in development and, for the most part, it is an integral part of the development process. Commercial testing capability is planned, resourced, and conducted early to ensure that product development is well-focused on meeting product objectives. Achieving that same early emphasis for weapons systems testing will be one of my major goals, if I am confirmed.

---

QUESTION SUBMITTED BY SENATOR BOB SMITH

4. Senator SMITH. Congress has funded the Live Fire Testing and Training Initiative for the last 7 years. This has been a successful program which has saved lives and taxpayer dollars.

Can you assure me that as the Director of Operational Test and Evaluation you will advocate this initiative and that you will ensure it is included in the President's defense budget submitted to Congress?

Mr. CHRISTIE. I agree that the Live Fire Testing and Training Initiative has been a successful program that has saved lives and taxpayer dollars over the years that it has been funded by Congress. If confirmed, I will use my position as the Director, Operational Test and Evaluation to advocate funding this program in the President's defense budget, but could not ensure that any particular program or its level of funding will be included in the budget. That decision will be made by the Sec-

retary of Defense who must balance a host of competing demands for scarce resources in his deliberations on the defense budget.

QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

5. Senator SANTORUM. In an answer to advance questions, you state that you intend to promote the value of developmental testing and, if appropriate, to strengthen the readiness for operational test and evaluation certification process. During the past 2 years as Chairman of the Airland Subcommittee, I have expressed concern over migration of developmental test content out of the F-22 Raptor program. It seemed as if every time cost or schedule difficulties loom, more "testing efficiencies" had been discovered.

As the Director of Operational Test and Evaluation, how will you, if confirmed, and how are we, in our oversight role, to gain confidence that an appropriate level of developmental test has occurred before a program enters its operational test and evaluation?

Mr. CHRISTIE. I am also concerned with the "migration" and reduction in content of early developmental testing across the Department. If confirmed as the Director of Operational Test and Evaluation, I will work with the Under Secretary of Defense (Acquisition, Technology, and Logistics) and the service secretaries to reverse this disturbing trend. Consistent with statutory limitations on my involvement in developmental test issues, if confirmed, I will strive to ensure that the services implement a process whereby new systems must demonstrate sufficient maturity through developmental testing prior to entering operational test and evaluation. Additionally, I would continue to closely monitor system performance in early testing, conduct early operational evaluations, and provide independent advice and assessments to senior decision-makers and work to eliminate "migrations," "waivers," and "deferrals".

You refer to the problem of cost and schedule difficulties leading to test "efficiencies" that reduce testing. The most efficient test capability is one that accomplishes all the required testing within a schedule that is reasonable for the program. Certainly, the funding cap has been a major problem leading to the changing F-22 Raptor test program, but the test and evaluation infrastructure has had some problems accommodating all the flight test sorties the Air Force needs to accomplish in the time remaining on the schedule. If confirmed, I will seek to enhance the capabilities and responsiveness of our T&E infrastructure so that adequate testing is not perceived as a threat to the program manager's schedule.

6. Senator SANTORUM. The National Defense Authorization Act for Fiscal Year 2001 directed the Director of Operational Test and Evaluation to approve the Secretary of the Army's plan to conduct a side-by-side comparison of the infantry carrier variant of the interim armored vehicles selected for the interim brigade combat teams and the troop-carrying medium armored vehicles currently in the Army inventory.

This committee directed this test because of its concern that the Department of the Army had selected a vehicle for its interim brigade combat team that was more costly than medium armored vehicles currently in the inventory but not operationally more effective.

Do you agree that a side-by-side test be conducted before the Department obligates funds for acquisition of medium armored combat vehicles for the third interim brigade?

Mr. CHRISTIE. I understand the requirement to conduct a side-by-side test prior to obligation of funds for the third interim brigade combat team by the Department of the Army. In addition, a cost and operational effectiveness comparison, using the results from that test, will also be conducted before release of that funding. In addition, I understand that the Secretary of Defense must certify his approval of the obligation of funds and that the resulting force structure will not diminish the combat power of the Army.

The Army concept for the Medium Armored Vehicle Comparison Evaluation, as briefed to DOT&E this past spring, appears adequate to address operational effectiveness, suitability, and survivability issues. However, I understand the DOT&E office is awaiting more details on this concept that will be available when the Army submits its formal plan for DOT&E approval later this July. Overall, the Army's evaluation concept relies on both developmental and operational testing, the use of existing data, and modeling and simulation. The operational test event consists of side-by-side military operations of an infantry company equipped with the interim armored vehicle equipped with Force XXI Battle Command Brigade and Below

(FBCB2) and an infantry company with M113A3 Armored Personnel Carriers (APCs) with FBCB2. Developmental testing includes performance envelope testing to measure payload, mobility, survivability, and suitability.

---

[The nomination reference of Thomas P. Christie follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*May 24, 2001.*

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Thomas P. Christie of Virginia, to be Director of Operational Test and Evaluation, Department of Defense, vice Philip Edward Coyle III, resigned.

---

[The biographical sketch of Thomas P. Christie, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF THOMAS P. CHRISTIE

Thomas P. Christie most recently served as the Director of the Operational Evaluation Division for the Institute for Defense Analyses, a position he held from 1992 to 2001. With IDA, he previously served as the Assistant Director of the Operation Evaluation Division from 1989 to 1992.

Mr. Christie has had a long and distinguished career in public service. From 1987 to 1989, he was the Director, Program Integration, in the Office of the Under Secretary of Defense (Acquisition). Prior to that, he was the Deputy Assistant Secretary of Defense (Programs and Resources) in the Office of the Assistant Secretary of Defense (Acquisition and Logistics) from 1986 to 1987, the Deputy Assistant Secretary of Defense/Deputy Director (General Purpose Programs) in the Office of the Assistant Secretary of Defense (Program Analysis and Evaluation) from 1979 to 1986, the Deputy Assistant Secretary of Defense (Operational Test and Evaluation) in the Office of the Assistant Secretary of Defense (Program Analysis and Evaluation) from 1977 to 1979, and the Director, Tactical Air Division, in the Office of the Deputy Assistant Secretary of Defense (General Purpose Programs), Office of the Assistant Secretary of Defense (Program Analysis and Evaluation) from 1973 to 1977.

Prior to his service at the Pentagon, Mr. Christie served at the Air Force Armament Laboratory, Eglin AFB, Florida, first as an Analyst in the Special Studies Branch from 1962 to 1965, then as the Chief of the Analysis Branch from 1965 to 1970, and finally as the Director of the Weapon System Analysis Division from 1970 to 1973. Prior to this, he began his professional career as an Analyst in the Ballistics Division at the Air Proving Ground Center, also at Eglin AFB, Florida.

Mr. Christie graduated from Spring Hill College in 1955 with a B.S. degree in Mathematics and from New York University in 1962 with an M.S. degree in Applied Mathematics. Over the years, Mr. Christie has received numerous awards and citations for his outstanding performance. These awards include the Presidential Rank, Distinguished Executive Award (1983), the Presidential Rank, Meritorious Executive Award (two awards—1980 and 1987), the Department of Defense Distinguished Civilian Service Award (four awards—1979, 1981, 1983, and 1989), and the Air Force Scientific Achievement Award (two awards—1965 and 1970).

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Thomas P. Christie in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Thomas Philip Christie.

2. **Position to which nominated:**

Director, Operational Test and Evaluation, Office of the Secretary of Defense, Department of Defense.

3. **Date of nomination:**

May 24, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

May 28, 1934; Pensacola, Florida.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Kathleen Ann Lawson.

7. **Names and ages of children:**

Son, Kevin Patrick Christie—29 years old.

Daughter, Stephanie Marie Christie—26 years old.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

Attended Pensacola Catholic high School 1947-1951; graduated May 27, 1951.

Attended Spring Hill College in Mobile, Alabama 1951-1955; received Bachelor of Science Degree on May 24, 1955.

Attended Courant Institute of Applied Mathematics, New York University 1961-1962; received Master of Science Degree in Applied Mathematics in September 1962.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

1989-1991: Research Analyst—responsible for evaluations of weapon system performance.

Operational Evaluation Division, Institute of Defense Analyses, 1801 N. Beauregard Street, Alexandria, VA 22311.

1992-2001: Director, Operational Evaluation Division—responsible for managing and directing staff of about 100 research analysts in the evaluation of weapon system performance.

Institute for Defense Analyses, 1801 N. Beauregard Street, Alexandria, VA 22311.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

- 1955–1973: Series of increasingly responsible positions as federal employee working for the U.S. Air Force Armament Laboratory at Eglin AFB, FL.
- 1973–1977: Director, Tactical Air Forces; Office of the Assistant Secretary of Defense for Program Analysis and Evaluation (ASD/PA&E); Office of the Secretary of Defense (OSD).
- 1977–1979: Deputy Assistant Secretary of Defense for Operational Test and Evaluation; ASD/PA&E; OSD.
- 1979–1985: Deputy Assistant Secretary of Defense for General Purpose Programs; ASD/PA&E; OSD.
- 1985–1987: Deputy Assistant Secretary of Defense for Programs and Resources; ASD (Production and Logistics); OSD.
- 1987–1989: Director, Program Integration; Office of the Under Secretary of Defense for Acquisition; OSD.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

As Director of Operational Evaluation Division, I was a member of IDA's Board of Directors. I resigned from this position when the President nominated me for the position of Director, Operational Test and Evaluation. I have no other business relationships.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

I am a member of the organizations listed below. I hold no office in any of these.  
National Defense Industrial Association.  
National Historic Preservation Trust.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

I have never held any office with a political party nor have I ever been a candidate for any public office.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

I have not been a member, held any office in or rendered any services to a political party or election committee during the last 5 years.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

During the past 5 years, I have not made a political contribution of \$100 or more to any individual, campaign organization, political party, PAC, or similar entity.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

Four-year scholarship to Spring Hill College, 1951–1955.

Air Force Scientific Achievement Award, 1965 and 1970.

DOD Distinguished Civilian Service Award, 1979.

Presidential Rank, Meritorious Executive Award, 1980 and 1987.

First Oak Leaf Cluster to DOD Distinguished Civilian Service Award, 1981.

Second Oak Leaf Cluster to DOD Distinguished Civilian Service Award, 1983.

Presidential Rank, Distinguished Executive Award, 1983.

Third Oak Leaf Cluster to DOD Distinguished Civilian Service Award, 1989.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Other than several technical reports authored during my time as a weapon analyst at Eglin AFB in the 1955 to 1973 time frame and a few technical reports I co-authored as an IDA research staff member in 1990, I have authored no other books, articles, or other published materials.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

THOMAS P. CHRISTIE.

This 29th day of May, 2001.

[The nomination of Thomas P. Christie was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

**NOMINATIONS OF ALBERTO J. MORA TO BE  
GENERAL COUNSEL OF THE NAVY; DIANE  
K. MORALES TO BE DEPUTY UNDER SEC-  
RETARY OF DEFENSE FOR LOGISTICS AND  
MATERIAL READINESS; STEVEN J. MO-  
RELLO, SR., TO BE GENERAL COUNSEL OF  
THE ARMY; WILLIAM A. NAVAS, JR., TO BE  
ASSISTANT SECRETARY OF THE NAVY FOR  
MANPOWER AND RESERVE AFFAIRS; AND  
MICHAEL W. WYNNE TO BE DEPUTY UNDER  
SECRETARY OF DEFENSE FOR ACQUISITION  
AND TECHNOLOGY**

---

**FRIDAY, JUNE 22, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES  
*Washington, DC.*

The committee met, pursuant to notice, at 9:37 a.m. in room SR-222, Russell Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Reed, Warner, and Inhofe.

Committee staff members present: David S. Lyles, staff director.

Majority staff members present: Daniel J. Cox, professional staff member; Creighton Greene, professional staff member; Gerald J. Leeling, counsel; Peter K. Levine, general counsel; and Michael J. McCord, professional staff member.

Minority staff members present: Romie L. Brownlee, Republican staff director; Judith A. Ansley, deputy staff director for the minority; Brian R. Green, professional staff member; William C. Greenwalt, professional staff member; Ambrose R. Hock, professional staff member; George W. Lauffer, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, minority counsel; Suzanne K.L. Ross, research assistant; Cord A. Sterling, professional staff member; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Kristi M. Freddo, Jennifer L. Naccari, and Michele A. Traficante.

Committee members' assistants present: Barry Gene (B.G.) Wright, assistant to Senator Byrd; Elizabeth King, assistant to Senator Reed; Eric Pierce, assistant to Senator Ben Nelson; John

A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; and Douglas Flanders, assistant to Senator Allard.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. The committee will come to order. The committee meets today to consider the nominations of Alberto Jose Mora to be General Counsel of the Department of the Navy; Diane K. Morales to be Deputy Under Secretary of Defense for Logistics and Material Readiness; Steven John Morello, Sr. to be General Counsel of the Department of the Army; William A. Navas, Jr. to be Assistant Secretary of the Navy for Manpower and Reserve Affairs; and Michael W. Wynne to be Deputy Under Secretary of Defense for Acquisition and Technology.

On behalf of the entire committee I would like to welcome you and your families and friends to the Armed Services Committee. We have a tradition on this committee of asking the nominees if they would like to introduce family members who might be present. Mr. Morello, I am going to start with you.

Mr. MORELLO. I would be very pleased and proud to introduce to you this morning my daughter, Rebecca, who traveled here from Michigan. Rebecca is a recent graduate of Ladywood High School in Livonia. She had a 4.0 and has been admitted to the University of Michigan this fall to study electrical engineering. Also with me this morning, Mr. Chairman, is a very distinguished citizen of Michigan and a friend and mentor of mine, Mr. Heinz Prechter.

Chairman LEVIN. We know Mr. Prechter well and I've been an admirer of his for a long time. We welcome him and your daughter.

Mr. Wynne.

Mr. WYNNE. Thank you, Mr. Chairman. It is my pleasure to acknowledge the support of my spouse of 35 years, Barbara. I appreciate that.

Chairman LEVIN. Ms. Morales.

Ms. MORALES. My family is in Texas, but I am surrounded by friends; Mr. Jim Guerin is with me, as is Mr. Maurice Henri, and Mr. and Mrs. Kenney.

Chairman LEVIN. Welcome everybody.

Mr. Navas.

Mr. NAVAS. Mr. Chairman, Senator Warner, I would like to introduce my spouse of 36 years, Wilda. She is here to give me the support she has given me throughout our careers.

Chairman LEVIN. Welcome.

Mr. Mora.

Mr. MORA. Thank you, Mr. Chairman. I would like to introduce my wife Susan Talalay; my son Alexander and his pet flamingo, whom you recognized earlier; my in-laws Dr. Paul Talalay and his wife Dr. Pamela Talalay.

Chairman LEVIN. We welcome them all, particularly the flamingo. I do not think we have ever had a flamingo here.

Chairman WARNER. Well, they had an alligator in New York City. [Laughter.]

We welcome you all and your family and friends and pets. The presence of families reminds us of the sacrifices that family will be asked to make on your behalf. Each of you has a previous record

of public service so your families I think have some idea of what they are in for. Certainly the members of this committee know the strain public service puts on normal family life. None of our nominees would be able to serve in these positions without the support of their families. We thank you in advance for the hardships that you will put up with during the service of your loved ones.

I would like to extend a particularly warm welcome to Mr. Morello who grew up in Michigan as he indicated. His dad worked for General Motors for 43 years. Mr. Morello went to the University of Detroit Law School. He currently works as vice president and general counsel and secretary of Prechter Holdings in South Gate. Heinz Prechter is here this morning and many of us know Mr. Prechter.

Mr. Morello also serves as a Roman Catholic Deacon in the Archdiocese of Detroit and he also, I believe, worked as a staff assistant many years ago for Senator Phil Hart, who was a great friend of all of his colleagues and a mentor of mine; and the person, of course, for whom the Hart Senate Office Building was named.

Mr. Wynne also has a strong Michigan connection, having served as vice president of General Dynamics Land Systems in Sterling Heights, Michigan for about 10 years.

Mr. Moore, if I can say so, although he doesn't have a Michigan connection, I believe, is a graduate of my alma mater, Swarthmore College. It's obvious that the Department decided that it is a good idea to butter up the new chairman of the committee. [Laughter.]

I just want to encourage them to continue that practice.

Mr. Mora, Ms. Morales, Mr. Navas may not have had the good fortune of these connections but all three have previously held important positions in the Federal Government and they are well-qualified for the positions to which they have been nominated. The General Counsels of the Army and Navy are among the top legal officials in the Department of Defense. The Assistant Secretary of the Navy for Manpower and Reserve Affairs is charged with the well-being of our men and women in uniform. The two nominees for Deputy Under Secretary positions will have important responsibilities for the management of the Pentagon's huge and complex acquisition and logistics systems.

The committee has a responsibility to get a clear understanding of our nominees' views on the national security issues which they are going to face and we look forward to their testimony.

Senator Warner, do you have an opening statement?

#### **STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Mr. Chairman, I commend you for the manner in which you have opened today's hearing. The Chairman and I are classmates. We came to the Senate at the same time. We consider ourselves very valued friends and yet there are times at which we have to differ. But this is not one of those times. This is family day before our committee and it is very heartening to have so many friends and families come long distances. We thank you for doing that.

This is an important day in your life. Some have been before the Senate on confirmation before. I have a piece of paper which is 32 years old when I sat in that seat seeking to get the advice and con-

sent of the Senate. It is one of my more valued possessions. More importantly, my children treasure copies of it. Fortunately I kept a few copies of the official record of that hearing. To see the young people here, they will in years forth take great pride in what you have done.

I interviewed all of you yesterday and in every case you are leaving more lucrative positions in the private sector to take on that responsibility known as public service. As a taxpayer I thank you.

I also wish to encourage you to avail yourself of this committee and I say that we have the most remarkable professional staff, I think, of any committee on Capitol Hill. It is not just because I have been privileged as has my good friend Senator Levin, to be chair and co-chair of this committee. But it really goes back decades. Our predecessors have always been able to attract eminently qualified young men and women to come here and serve on our staff.

You will find in your assignments more opportunity and need to work with our staff. You will find they are by and large bi-partisan. Their sole objective is to strengthen and keep strong America's defenses, and the well-being of the men and women who wear the uniform and the civilian force that work with them.

I congratulate our President and the Secretary of Defense and others who were able to persuade you to come into public service again. I wish you well and I think you will look back on this as I have as one of the high points of your distinguished career.

Thank you very much, Mr. Chairman.

Chairman LEVIN. Thank you.

Senator WARNER. I will put the balance of my statement in the record which is exactly parallel to everything you said in your opening statement. At this time, I also place in the record the opening statement of Senator Strom Thurmond.

[The prepared statements of Senator Warner and Senator Thurmond follow:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in welcoming the nominees and their families. We have a distinguished group of nominees before us this morning.

Mr. Michael W. Wynne is a graduate of the United States Military Academy at West Point and served for 7 years on Active Duty in the Air Force. He has an impressive record of achievement in industry, retiring as a Senior Vice President from General Dynamics with responsibility for International Development and Strategy. During the course of his career, he was instrumental in the development of various complex and vital programs, including the F-16, Main Battle Tank, and Space Launch Vehicles including the Atlas and Centaur.

Ms. Morales has an impressive record of government and private accomplishments. From 1990 to 1993, a period encompassing United States military operations in Desert Shield/Desert Storm, she served as Deputy Assistant Secretary of Defense for Logistics and played a substantial role in meeting the challenging airlift and sealift requirements associated with those operations. Ms. Morales has previously served as a board member on the Civil Aeronautics Board, with OMB, and in the Department of the Interior as Deputy Assistant Secretary for Policy. She has also been successful in business, and, if confirmed, will bring her extensive experience to bear in this important position.

William Navas—Major General Navas—is no stranger to this committee. He has had a distinguished career in the Army, with Active Duty service in Vietnam and Germany. More recently, from 1995 to 1998, General Navas was Director of the Army National Guard, and, prior to that, served as Deputy Assistant Secretary of Defense for Reserve Affairs, Vice Chief of the National Guard Bureau, and in var-

ious other highly responsible positions. If confirmed, he will undoubtedly adjust quickly to the Navy and its unique ways of doing business.

Steven J. Morello is also a product of Army training, having served on Active Duty in the Judge Advocate General's Corps from 1978 to 1982 with service in Germany and at Fort Sheridan. He has worked for the Northrop Corporation, and has assembled an impressive record of professional and personal achievements. Thank you for your willingness to serve in this important capacity.

Finally, Alberto J. Mora, the nominee for General Counsel of the Navy, has prior government experience as a Foreign Service Officer in the Department of State and, from 1989 to 1993, as General Counsel of the U.S. Information Agency. He too has had an impressive legal career and is also highly qualified for the position to which he has been nominated.

Our nominees have a wealth of experience and accomplishments. I believe they will excel in the position to which they have been nominated. We welcome them and their family members and look forward to their comments and responses today.

---

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman: Mr. Chairman, I join you and our Ranking Member, Senator Warner, in welcoming this distinguished group of nominees. I want to congratulate each of them on their nomination and thank them for their willingness to serve our Nation in the challenging positions for which they have been selected.

Mr. Chairman, I especially want to recognize General Navas. As the former Director of the Army National Guard and his distinguished service in various positions associated with the Reserve components, he will bring a unique perspective to the Office of the Assistant Secretary of the Navy for Manpower and Reserve Affairs. Our Nation is fortunate to have individuals of his caliber willing to serve.

I am confident that each of you will provide a valuable contribution to the security of our great Nation and especially to the men and women who wear the uniform of our military services. Good luck as you take on your new responsibilities.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you for your warm and perceptive words. Our nominees have all responded to the committee's pre-hearing policy questions and our standard questionnaire. Without objection these responses are going to be made a part of the record. The committee has also received the required paperwork on each of the nominees and we will be reviewing that paperwork to make sure it is in accordance with the committee's requirements.

The first round of questions will be limited to 6 minutes on the usual basis, which is the early-bird rule. I think we have a vote at 10:30 this morning, so we'll see if we cannot get a least one round in before that vote. There are certain standard questions which we ask every nominee who comes before the committee and you also have submitted responses to advance policy questions. You agreed to appear as witnesses before congressional committees when called and to ensure that briefings, testimony, and other communications are provided to Congress.

I will now ask you the following questions. Have you adhered to applicable laws and regulations governing the conflict of interest?

Mr. MORELLO. Yes, sir.

Mr. WYNNE. Yes sir, Mr. Chairman.

Ms. MORALES. Yes, Mr. Chairman.

Mr. NAVAS. Yes, Mr. Chairman.

Mr. MORA. Yes, sir.

Chairman LEVIN. Have you assumed any duties or undertaken any actions, which would appear to presume the outcome of the confirmation process?

Mr. MORELLO. No, sir, I have not.

Mr. WYNNE. No, Mr. Chairman.

Ms. MORALES. No, Mr. Chairman.

Mr. NAVAS. I have not, Mr. Chairman.

Mr. MORA. No, sir.

Chairman LEVIN. Will you ensure that the Department complies with deadlines established for requested communications including prepared testimony and questions for the record and hearings?

Mr. MORELLO. Yes, sir, I will.

Mr. WYNNE. Yes, Mr. Chairman.

Ms. MORALES. Yes, Mr. Chairman.

Mr. NAVAS. Yes, Mr. Chairman.

Mr. MORA. Yes, sir.

Chairman LEVIN. Will you cooperate and provide any witnesses and briefers in response to congressional requests?

Mr. MORELLO. Yes, Mr. Chairman.

Mr. WYNNE. Yes, sir.

Ms. MORALES. Yes, sir.

Mr. NAVAS. Yes, sir.

Mr. MORA. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. MORELLO. Yes, sir, to the fullest extent of the law.

Mr. WYNNE. Yes, sir.

Ms. MORALES. Yes, Mr. Chairman.

Mr. NAVAS. Yes, they will.

Mr. MORA. Absolutely.

Chairman LEVIN. Let me now call upon our nominees for any opening remarks they would like to make. Mr. Morello, let me start with you.

Senator WARNER. Mr. Chairman, might I indulge the chair and the members of the committee. I would like the record to reflect that I am now going to speak on behalf of the nominee, Ms. Morales. I am pleased to do so. She is a Virginian, having come from Texas 20 years ago. She came to serve in the Reagan administration as the Department of Interior's Deputy Assistant Secretary for Policy and later as a member of the Civil Aeronautics Board. After leaving government for several years to work in private industry, she returned to serve with distinction in the Bush I administration as the Deputy Assistant Secretary of Defense for Logistics. I will put the balance of the statement in the record, Mr. Chairman, given that our vote is upon us here momentarily.

I take great pride in introducing my constituent and indeed one that I have great admiration for. Thank you very much.

PREPARED STATEMENT BY SENATOR JOHN WARNER

Mr. Chairman, I am delighted to introduce Ms. Morales to the committee as the nominee for this important position.

Ms. Morales has an impressive record of government and private accomplishments. From 1990 to 1993, a period encompassing United States military operations in Desert Shield/Desert Storm, she served as Deputy Assistant Secretary of Defense for Logistics and played a substantial role in meeting the challenging airlift and sealift requirements associated with those operations. Ms. Morales has previously served as a board member on the Civil Aeronautics Board, with OMB, and in the Department of the Interior as Deputy Assistant Secretary for Policy. She has also been successful in business, and, if confirmed, will bring her extensive experience to bear in this important position. She has my strongest endorsement.

Chairman LEVIN. Thank you very much, Senator Warner. I wonder if either Senator Reed or Senator Inhofe might have an opening comment?

Senator INHOFE. No. I do have some questions.

Chairman LEVIN. Mr. Morello.

**STATEMENT OF STEVEN J. MORELLO, SR., NOMINEE TO BE  
GENERAL COUNSEL OF THE ARMY**

Mr. MORELLO. Good morning Mr. Chairman, distinguished members of the committee. It is indeed a high honor and great privilege for me to be here before you this morning. I thank you for giving me this honor of a hearing. I am also very grateful to the President of the United States, Secretary Rumsfeld, and Secretary White for giving me this opportunity and for reposing the trust in me that they have. I have prepared remarks, which I have brought. I would like to ask with your kind permission that they be inserted in the record.

Chairman LEVIN. They will be made part of the record as will be the other opening comments which our nominees might wish to place there.

[The prepared statement of Mr. Morello follows:]

PREPARED STATEMENT BY STEVEN J. MORELLO

Thank you, Mr. Chairman and distinguished members of the committee. It is a great honor and privilege to appear before this committee as the nominee to be the General Counsel of the Army. I am very grateful to the President, the Secretary of Defense, and the Secretary of the Army for the trust and confidence that they have placed in me. If confirmed, I pledge that I will work as hard as I possibly can to serve the soldiers, civilians, and families that make the United States Army the most powerful and professional army in the world.

When I joined the Army on active duty in 1978 as an officer in the Judge Advocate General's Corps, I could never have imagined that I would be joining it again, albeit in a different capacity, at this time in my life. I thoroughly enjoyed my assignments in Germany as a young captain in the late seventies and early eighties; I'll never forget the pride I felt while serving in the Berlin Brigade when it was the symbol of this country's commitment to freedom. After returning to the United States for a subsequent assignment with the United States Army Recruiting Command, I stayed in the Army Reserve until my civilian career made it impossible for me to continue my military service at that time.

When I was serving in the Berlin Brigade, I could hardly have imagined that so much change in the world could occur in such a relatively short period of time. Just as the international security environment has changed, I am keenly aware that the Army has changed to continue to meet the needs of the Nation. I understand that the Secretary of Defense and the Secretary of the Army are committed to developing a strategy and to setting forth a program that will meet those needs well into the future.

Should I be confirmed, I look forward to serving on their team as a way of once again joining the Army to continue serving the Nation during this landmark era of change and transformation. By serving on their team, I would also be serving with the Army team of Active, Reserve, and National Guard soldiers who distinguish themselves every day by their dedication and hard work. Finally, I would look forward to continuing my relationship with the members of The Judge Advocate General's Corps with whom I once proudly served. Alongside outstanding civilian lawyers, they provide legal services on a wide range of legal and policy issues that confront the Army around the nation and the world.

I believe that my prior military service, my experience in the legislative branch, and my extensive corporate background have prepared me for assuming the position of Army General Counsel. If confirmed, I pledge my best effort every day to be worthy of the trust placed in me and to uphold the proud tradition of selfless service that characterizes the dedicated soldiers, civilians, and families of the United States Army who protect and defend our Nation around the world.

Mr. Chairman, if confirmed, I look forward to a strong working relationship with you and this committee. I would be pleased to answer any questions at this time. Thank you.

Chairman LEVIN. Mr. Wynne.

**STATEMENT OF MICHAEL W. WYNNE, NOMINEE TO BE DEPUTY UNDER SECRETARY OF DEFENSE FOR ACQUISITION AND TECHNOLOGY**

Mr. WYNNE. Mr. Chairman, members of this committee, I am honored to appear before you today as a candidate for the position of Deputy Under Secretary of Defense for Acquisition and Technology. I would also like to thank President Bush, Secretary Rumsfeld, Under Secretary Aldridge for their confidence in me for this nomination that you are considering. I look forward to joining this very vibrant Department and working with Congress and this committee on the many challenges facing the Department. Mr. Chairman, I would also like to thank you for acknowledging my spouse and I would like to submit the rest of my remarks for the record.

[The prepared statement of Mr. Wynne follows:]

PREPARED STATEMENT BY MICHAEL WYNNE

Mr. Chairman and members of the committee, I am honored to appear before you today as a candidate for the position of Deputy Under Secretary of Defense for Acquisition and Technology.

I would like to thank President Bush, Secretary Rumsfeld and Under Secretary Aldridge for their confidence in me, and for this nomination that you are considering. I look forward to joining this very vibrant Department of Defense team and working with Congress and this committee on the many challenges facing the department. I look forward to applying the skills that I have learned in many differing assignments in and out of the military and Defense Industry to the noble cause of the defense of my country in support of the warfighters. I acknowledge the presence and support of my wife, Barbara, who has stood by me throughout all of those assignments in addition to raising our wonderful daughters.

There is much work to be done. Mr. Aldridge has laid down some challenging goals, and I look forward to working with him and the rest of the Acquisition, Technology, and Logistics team to achieve these goals. I look forward to my own portfolio as well, as it is important to make the most use of our time to more effectively confront the major issues and give each their proper attention. I'm certain that I will be creating some of my own subordinate goals as I meet my new team and become familiar with the problems they face on a daily basis.

Mr. Chairman, I thank you for the opportunity to appear here today to introduce myself and provide you insight into my approach to the challenging post that I have been nominated for. If I am confirmed, I look forward to working with Congress and especially with this committee. I know that this committee has been a leader and partner in many defense acquisition initiatives, and I appreciate your interest in continuing to improve defense management. I will be happy to answer any questions you might have.

Chairman LEVIN. Ms. Morales.

**STATEMENT OF DIANE K. MORALES, NOMINEE TO BE DEPUTY UNDER SECRETARY OF DEFENSE FOR LOGISTICS AND MATERIAL READINESS**

Ms. MORALES. Mr. Chairman, I have no opening statement other than to express my appreciation to you, Senator Levin, for your prompt consideration of our nominations. I am confident that President Bush and Secretary Rumsfeld appreciate these efforts. I would also like to thank Senator Warner for his kind introduction, and members of the Armed Services Committee.

It is an honor and a privilege to appear before this committee today. I am grateful to the President and the Secretary of Defense for their confidence and trust in nominating me for this important position; one entrusted with ensuring that the soldiers, sailors, airmen, and marines have the logistics and material support necessary to carry out their mission. If confirmed, I look forward to returning to the Department and to working with this committee. Mr. Chairman, thank you, and Senator Warner, thank you and I am prepared to answer your questions.

Chairman LEVIN. Thank you.

Mr. Navas.

**STATEMENT OF WILLIAM A. NAVAS, JR., NOMINEE TO BE ASSISTANT SECRETARY OF THE NAVY FOR MANPOWER AND RESERVE AFFAIRS**

Mr. NAVAS. Mr. Chairman, Senator Warner, members of the committee, it is my distinct honor to appear before you today seeking confirmation for the Assistant Secretary of the Navy for Manpower and Reserve Affairs. I also want to express my appreciation to President Bush, Secretary Rumsfeld and Secretary England for this opportunity to continue serving our Nation at this time in a civilian capacity in support of our sailors and marines, active and Reserve, civilians and their families. I fully support the Secretary of the Navy and his strategic thrusts to support the President's vision. These center on combat capability, people, technology, and business practices.

If confirmed, I plan to concentrate our efforts on building a team that would focus primarily on the people thrust that would make the Secretary's vision a reality. Our goal will be to create an environment where our men and women can excel at their chosen profession unimpeded by factors that divert their attention from work and sap their morale. Should I be confirmed, we will create definite objectives and establish a plan of action that will develop appropriate metrics to measure our progress.

I plan to work in close cooperation and coordination with the Under Secretary of the Navy, the Assistant Secretaries, the Service Chiefs and the commanding officers to achieve our primary purpose of combat readiness, understanding that people are our most important resource and accepting that premise as our core value. If confirmed, I will strive to provide our sailors and marines competitive compensation, quality housing, sufficient workplace resources, adequate health care and challenging training and a reasonable OPTEMPO.

To close, Mr. Chairman, with the committee's indulgence, I would like to thank my wife of 36 years—Wilda—who is here supporting me today as she has done throughout the years. She represents our children, their spouses, and our granddaughter. Thank you again for your kind attention and I look forward to your questions.

[The prepared statement of Mr. Navas follows:]

PREPARED STATEMENT BY WILLIAM A. NAVAS, JR.

Mr. Chairman, members of the committee, it's my distinct honor to appear before you today in seeking confirmation as the Assistant Secretary of the Navy for Manpower and Reserve Affairs. I also want to express my appreciation to President

Bush and to Secretary England for this opportunity to continue serving our Nation, this time in a civilian capacity. I fully support the Secretary of the Navy in his four strategic thrusts in support of the President's vision.

If confirmed, I plan to concentrate our efforts in building a team that will focus primarily on the "people" thrust to make the Secretary's vision a reality. Our goal will be to create an environment where our men and women can excel at their chosen profession unimpeded by factors that divert their attention from work and sap their morale.

Understanding that people are our most important resource, and accepting that premise as our core value, if confirmed, we will strive to provide our sailors and marines competitive compensation, quality housing, sufficient workplace resources, adequate health care, challenging training, and reasonable OPTEMPO.

Should I be confirmed, we will clearly define these objectives, establish a plan of action and develop the appropriate metrics to measure our progress. We will work closely with the Department of Defense, the Service Staffs and Congress to achieve our primary purpose of combat readiness.

Thank you for your kind attention. I look forward to your questions.

Chairman LEVIN. Thank you very much.

Mr. Mora.

**STATEMENT OF ALBERTO J. MORA, NOMINEE TO BE GENERAL COUNSEL OF THE NAVY**

Mr. MORA. Thank you, Mr. Chairman. It is a distinct honor to appear before you this morning to be considered by committee for possible confirmation as the 20th General Counsel of the Department of the Navy. I want to thank you personally, Mr. Chairman, for your gracious recognition of my wife and family. I want to thank you and the members of the committee, as well as the majority and minority staffs, for the many courtesies you have extended to me during the confirmation process.

In particular, I wish to express my appreciation for the committee's decision to schedule this hearing so rapidly following my nomination by the President. This gesture constitutes yet another example of the committee's long support of the military services.

I would not be here, Mr. Chairman, but for the decision made by President Bush and Secretary of the Navy England to entrust me with this responsibility. I am grateful to them both for the opportunity to add my name to the list of those men and women who serve or have served in the Navy and Marine Corps.

My debt to the President and the Secretary can only be repaid by dedication to duty and the diligent discharge of my responsibilities. If I am confirmed, I can pledge to you as I have to them that I will exercise my stewardship of the office of General Counsel to the fullest extent of my ability and energies. I ask that the remainder of my remarks be included in the record, Mr. Chairman.

[The prepared statement of Mr. Mora follows:]

PREPARED STATEMENT BY ALBERTO J. MORA

It is a distinct honor to appear before you this morning and to be considered by the committee for possible confirmation as the 20th General Counsel of the Department of the Navy. I want to thank you personally, Mr. Chairman, for your gracious recognition of my wife and family, and I want to thank you and the members of the committee, as well as the majority and minority staffs, for the many courtesies extended to me during the confirmation process. In particular, I wish to express my appreciation for the committee's decision to schedule this hearing so rapidly following my nomination by the President—this gesture constitutes yet another example of this committee's long history of support for the military services.

I would not be here, Mr. Chairman, but for the decision made by President Bush and Secretary of the Navy England to entrust me with this responsibility. I am

grateful to them both for the opportunity to add my name to the list of those men and women who serve or have served in the Navy and Marine Corps. My debt to the President and the Secretary can only be repaid by dedication to duty and the diligent discharge of my responsibilities. If I am confirmed, I can pledge to you—as I have to them—that I will exercise my stewardship of the Office of General Counsel to the fullest extent of my ability and energies.

From America's War of Independence to Desert Storm and with countless battles in between, our sailors and marines, along with their sister services, have fought and won America's wars and guarded the peace. They have helped our Nation achieve the security that has proven such a necessary element in the development of our freedoms and our prosperity. By helping also shield our allies and friends, they have been instrumental as well in creating the conditions that have made possible the dramatic growth and propagation of the democratic ideal that has flowered worldwide since 1989.

The attack on the U.S.S. *Cole* reminds us that service in the uniformed Navy and Marine Corps can and does entail risk and often sacrifice. Those of us whom you may decide to confirm to serve on Secretary England's team understand this sacrifice and accord it its proper value. We recognize that this sacrifice may include loss of life. We know, too, that sacrifice can take more subtle forms: for example, separation from family and friends; distance from home; long hours; financial sacrifice; the discipline to place duty and country before self; and other types of hardship that can appear in many other shapes and guises.

In my view, the willingness of the men and women of the Navy and Marines to place themselves in harm's way and incur these sacrifices imposes a moral obligation on the rest of us, particularly those who would assume responsibility for the civilian leadership for the Department of the Navy, to fully comply with our duty to ensure that the Navy and Marine Corps are supported, trained, and equipped at a level superior to any challenge that they may expect to encounter. That obligation takes the form of a covenant that runs from the Department in three directions: to the men and women who wear the uniform; to you in Congress who help provide the guidance and resources needed to properly deploy the Navy; and to the fathers and mothers who lend their sons and daughters to the Navy and Marines with the expectation that they will be sustained in the discharge of their duties.

Mr. Chairman, I look forward to assuming these responsibilities and honoring his covenant. If confirmed, I look forward to working closely with you and this committee to meet the needs of the Navy and Marine Corps and to meet the expectation of our Nation that we will do right by them.

Chairman LEVIN. Thank you very much. Ms. Morales and Mr. Wynne, let me ask you the following question. The President's February budget blueprint states that "with 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently". Do each of you agree or disagree that we have excess infrastructure in the Department of Defense today? Ms. Morales, let me start with you.

Ms. MORALES. It intuitively can be argued that the force structure has been drawn down further than the infrastructure, but I believe that both Secretaries Rumsfeld and Wolfowitz are deferring comment on this issue until the Defense Review has been completed.

Chairman LEVIN. OK. Mr. Wynne.

Mr. WYNNE. Thank you, Mr. Chairman. I am not as familiar with base closure as I will be when I am confirmed and learn more about this process. However, I believe that no opportunity for efficiencies should be off the table. Everything should be balanced against the future needs of the soldiers, sailors and airmen. We should carefully review every opportunity for cost efficiency and then judge it on its merits.

Chairman LEVIN. Mr. Navas, relative to Vieques, you are the Chairman of the American Veterans Committee for Puerto Rico Self Determination. I understand the committee has not taken a position on the Navy's continued use of Vieques. However, there

was a press release that has been brought to our attention, which was issued by the committee of which you are chair earlier this year. It has the following statement: "The Vieques issue should not overshadow a century of commitment to the United States by the American citizens of Puerto Rico. Instead it should remind us that despite all their contribution to the United States the people of Puerto Rico remain second-class citizens. Vieques is a symptom of a relationship which does not provide any mechanism for the people of Puerto Rico to address their just grievances."

Can you tell us what your own position is on the Navy's use of Vieques? Also, would you comment on that situation, the law which provides for a referendum of the people of Vieques, and the recent events on Vieques?

Mr. NAVAS. Yes, Mr. Chairman. The issue is a very complex one. On one side, as a combat veteran of 33 years in the Army, I strongly support realistic training as a principal underpinning of combat readiness. At the present time, Vieques provides the Navy and the Marine Corps team with an ideal place in which to conduct this training. That basically is the issue on one side.

On the other hand, the work that I did with the committee basically saw Vieques and the issue in Vieques as a symptom of a broader issue, which is the fact that the relationship between the United States and Puerto Rico for the last hundred years has not been resolved to the point where the people of Puerto Rico would have the right to self-determination and sovereignty. There are basically two options at the extreme of the spectrum; Puerto Rico becoming the 51st State of the Union or Puerto Rico becoming an independent republic in its own terms.

In those cases the relationship vis-à-vis the issues would have been dealt differently. I am torn between basically two issues. The issue at one hand of the requirement for combat readiness which I strongly believe and I have supported. Then on the other hand a more broader issue of resolving at some point the hundred year history of disenfranchisement of over 3.8 million Puerto Ricans citizens who do not have the opportunity to vote for the President or who do not have representation in our system.

Chairman LEVIN. What role would you expect to playing with regard to Vieques if confirmed?

Mr. NAVAS. Mr. Chairman, my portfolio obviously is personnel issues. I have not been involved in any of the issues. I would play whatever role the Secretary of the Navy sees fit for me. I would say intuitively that I might be able to provide him with some background, some insight on the broader issues of Puerto Rico because of the fact that I was born and educated and have been, except for the past 6 years, an official resident of Puerto Rico.

Chairman LEVIN. Mr. Mora, if confirmed, what are your objectives relative to Vieques and what role would you be playing?

Mr. MORA. Sir, as chief legal counsel of the Department of the Navy, my role would be as a legal advisor to the Department. The Vieques issue has, of course, significant legal dimensions, but it is fundamentally a policy issue centering on the readiness and the training of the military. I will, of course, advise the Secretary and other members of the Department of the Navy and the Marine Corps on the legal issues that may arise. Then beyond that I would

cooperate with the Secretary with whatever additional task or request for information or support he might care to give me.

Chairman LEVIN. Thank you, my time is up.

Senator WARNER.

Senator WARNER. Mr. Chairman I will follow on with your line of questions relative to Vieques. First an observation. In the response you made to the chairman's questions, you indicated that Puerto Rico has suffered and that well may be the case because of the difference in the way it is treated as a territory versus a state. But the record should reflect that the people of Puerto Rico have never voted to express their desire to become a state. Am I not correct on that?

Mr. NAVAS. Senator Warner, the issue is that we have never had a congressionally-sanctioned referendum which defines very clearly what are the options to the issue of Puerto Rico. Actually there is a letter by the four congressional committees, that have jurisdiction over Puerto Rico dated 1996, stating that the question of Puerto Rico's political status remains open and unresolved.

What we have had historically are referenda that have been done locally. They are not binding with the U.S. Congress and as such the Congress of the United States, who basically has the authority over Puerto Rico under the territorial clause of the Constitution, has never put some options there, binding options, for the people of Puerto Rico. That was attempted last year in the 106th Congress with the Young Bill that did not progress.

Senator WARNER. But in the meantime the laws of the United States have a force and effect in Puerto Rico. Is this committee to assume that you will respect and work to support the laws of the United States as relate to the Commonwealth of Puerto Rico?

Mr. NAVAS. Most definitely, sir.

Senator WARNER. I thank you very much. You have a distinguished career and it may well be that your knowledge in depth of the issues could be of help to the Department of the Navy and indeed the Secretary of Defense as these critical issues evolve.

Mr. NAVAS. Sir, I hope I can be a part of the solution.

Senator WARNER. I hope that you give your objective viewpoints to the Secretary of the Navy and Secretary of Defense.

Mr. NAVAS. Yes, sir.

Senator WARNER. Mr. Wynne, I want to ask you about contracting out. The DOD contracted for approximately \$54 billion worth of services last year, which is almost about as much as DOD paid for the procurement of weapons systems. The significance of this type of contracting has led this committee to ask the GAO to identify private sector "best practices" in services contracting, similar to what the GAO did for the committee in the area of systems acquisition. Do you believe that some changes are necessary to ensure that the DOD effectively acquires services from the private sector? If this is a bit technical, I would suggest you take that question for the record.

Mr. WYNNE. Thank you sir. I certainly will take that question for the record. I am concerned about the disciplining of services procurement.

[The information follows:]

## ACQUISITION OF SERVICES

Mr. WYNNE. As Senators Warner and Levin correctly noted, DOD has steadily increased its investment in services over the last few years. Given this increased investment, we believe it will be beneficial to establish a process to better inform the Defense acquisition Executive and the Service Secretaries of the approach being taken on these significant investments. Our objective is to ensure that our approach to the acquisition of services reflects sound acquisition practices and capitalizes on industry best practices. Such a process is currently under discussion and we expect to implement a new oversight process in the near future.

Senator WARNER. I think this is very important because it is an ever-growing issue and we want to keep it in balance. What we receive has got to measure up to what the private sector receives. I want to ask a question of Ms. Morales. One of the most challenging issues you will have to address is how to effectively deliver the required equipment and maintenance to our military forces. Maintenance is now performed by uniformed personnel on the flight lines and in the motor pools, by Federal and civilian employees at the depots, and by the private sector in a number of locations.

Assuring we retain the capability to perform the required maintenance in the most efficient and effective manner will be one of your most important responsibilities. If confirmed, what plans do you have to improve the entire equipment maintenance system and what role do you envision for each of the elements of that system?

Let me give you a case in point. The Navy at the moment has an escalating problem with regard to the maintenance of its aircraft because many are very old. Spare parts are lacking simply because the manufacturers of those parts have gone on to other business and some of these parts have to literally be hand crafted. The cost of the maintenance of naval aircraft each year is rising at an exponential rate. I hope that you can turn to the spare parts and maintenance issue early on in your responsibilities. To what extent have you given some thought to that?

Ms. MORALES. Senator, the number one concern and challenge to material readiness throughout the Department is the rising cost to maintain these older systems. In the newer weapons systems reliability and sustainability are being engineered into the systems. The first thing that I believe needs to be done, if confirmed, is to review an end-to-end study of the logistics systems and take apart each phase of it and see what we can do to improve the situation. But the high cost of spare parts for these older systems, the fact that suppliers are limited, and that, as you have said, many have gone out of business is going to be a continuing challenge.

Senator WARNER. I thank the witness. I thank you, Mr. Chairman. My time is up.

Chairman LEVIN. Senator Warner, thank you.

Senator Reed.

Senator REED. Thank you very much Mr. Chairman and thank you all for not only today but for your dedication to public service throughout your careers. Let me first address a question to Mr. Wynne and Ms. Morales. Both individually and collectively you will make critical decisions that affect the industrial base of the United States, the defense industrial base through acquisitions, through procurement policies, through logistic policies. Sometimes decisions appear in terms of just bottom line analysis in favor of doing one

thing, but when you consider the nature of the industrial base the decision could change.

My general question is to what extent do you think it is important to consider the survivability of the industrial base in terms of the whole range of issues, aircraft production, submarine production, and even suppliers of uniforms? Mr. Wynne first.

Mr. WYNNE. Thank you, Senator. My feeling is that each case has to be considered on its merits. There is right now a lull in purchasing, which creates an overcapacity situation. The questions are where do you want to be 15 years from now and what are you going to do 15 years from now for industrial support. So, yes, I agree with you that more things have to be considered than just price. I think it is a best value situation and that is the way I will do it if I am confirmed, sir.

Senator REED. Thank you, sir.

Ms. Morales.

Ms. MORALES. I agree with Mr. Wynne and we have had several conversations about this.

Senator REED. Thank you very much. Mr. Mora and Mr. Morello, you will be in the General Counsels of the Army and Navy. Besides making a bet on the Army-Navy football game, you will have a lot of other interesting things to do, one of which is the ongoing concern about environmental issues affecting both the Army and the Navy. This, I believe, will be amplified by the Vieques situation because whatever resolution comes about in Vieques, there will be additional pressure on training areas throughout the Army and Navy by local community groups.

My general question is what is your position at this point about the environmental laws? My specific question is what is your position about a broadened appreciation of the interaction between the local communities and military facilities? Mr. Morello.

Mr. MORELLO. Thank you, Senator. In my preparation for these hearings I was heartened to learn that the Army General Counsel's office does indeed have a number of attorneys who just specialize in environmental issues. I think that shows or demonstrates to me at least the seriousness with which the Secretary of the Army places upon environmental issues. Local concern is always an important part of the input that would be taken with regard to an appropriate environmental plan of action regarding any kind of training or other base activity.

If confirmed, I would continue with that sensitivity based upon some of my experiences in private practice. I know it is very important, especially to the people who live anywhere around areas that may be impacted, to make sure that we do the best we can and be good environmental citizens.

Senator REED. Thank you. Mr. Mora.

Mr. MORA. Thank you, Senator. In the week of briefings I have had at the General Counsel's office, Senator, I would say the preponderance of the issues have touched upon environmental matters in one way or the other. It is clear that preoccupation with environmental law and compliance is one of the principal preoccupations of the Navy. In fact, from what I have seen, I am not aware that there is almost any Navy operation or activity that does not have

some sort of environmental consideration which the Navy takes into account.

Obviously, the Navy will obey the environmental laws and wishes to be a good neighbor in all the communities in which it is a member. By the same token, it is clear that environmental restrictions which seem to be growing provide an ever-growing restriction to training and readiness in the Navy. These are difficult questions that have to be balanced, Senator. We can promise our full attention to these issues.

Senator REED. Thank you, Mr. Mora.

Mr. Navas, let me ask you a question with respect to personnel policy, which I believe you will be involved with. There have been some studies of the quality of life and retention and one of them was completed by Admiral Jeremiah for Secretary Rumsfeld. He suggested a complete overhaul of the human resources architecture of the total force. He talked about changes including doing away with the up-or-out promotion policy and early investing in portability military retirement benefits. I would add to that list probably consideration of the overall evaluation system for both officers and non-commissioned officers. What are your views about reforming the system of both benefits and of evaluations within the Navy?

Mr. NAVAS. Senator, I have not had an opportunity to review those proposals. Like I mentioned in my opening statement, one of the thrusts of the Secretary of the Navy is people with what that encompasses and we are looking at programs that would deal with a quality of life and a quality of service of our sailors, marines, and the civilians. So if confirmed, I see that as a primary issue of priority for the Department and I will work very diligently with the other elements of the Department of Defense and Congress to try to provide that quality of life and quality of service to our sailors and marines.

Senator REED. Thank you very much, Mr. Navas. Thank you all for your testimony and again for your service to the country.

Chairman LEVIN. Senator Reed, thank you.

Senator Inhofe.

Senator INHOFE. Mr. Chairman, are we going to have another round after this?

Chairman LEVIN. As many rounds as we need.

Senator INHOFE. OK, fine. Let's go back to the question that the answer that you gave, Mr. Navas, concerning your background and this group that you are the chairman of. It has the term self-determination in it, but specifically what is the name of the group?

Mr. NAVAS. Sir, the group is a committee called the American Veterans for Puerto Rico Self-Determination.

Senator INHOFE. You implied in the answer to Senator Warner's question that while there have been several elections, several referenda, there have not been any that had restricted options. I would assume that you would support a referendum that said statehood or independence. Is this accurate?

Mr. NAVAS. Sir, at the end of the day, the two pure options for sovereignty or self-determination for Puerto Rico would be either a State of the Union under the Constitution of the United States or an independent republic. There might be a third option. I have not studied that because every time you look at that option it always

remains as a transition option, it's an option that could go beyond the two options. So the ultimate two would be those two, yes, sir.

Senator INHOFE. Do you think that is what your governor would like to see?

Mr. NAVAS. Sir, I cannot speak for the governor. I have not been a resident, an official resident of Puerto Rico for the last 6 years.

Senator INHOFE. Since you support self-determination would you support self-determination for the citizens of Vieques as is called for in the referendum that will come in November?

Mr. NAVAS. Sir, there is a law on the books based on a referendum for a very specific issue. As long as that is the law, I think we would support it. Of course, I am aware that there is a thrust to try to get relief from that law, and I am not at this point in the capacity to comment one way or the other.

Senator INHOFE. Well, Mr. Mora. Do you have any comments on that from a legal perspective? Do you see any problem with the language in the law that we passed in the Defense Authorization Bill last year?

Mr. MORA. Senator Inhofe, I have not had the opportunity to analyze that legislation in any great detail.

Senator INHOFE. I don't think there is. I just wanted to make sure that you didn't already have a predetermined opinion on it.

Mr. MORA. I have no predetermined opinion on the law.

Senator INHOFE. OK, Ms. Morales, I am very interested. I would like to have a courtesy call at some time in this process so we can get into some of the issues. When you were working in the two administrations back we had the 60-40 rule that would address the core work in our depots. That is now 50-50. However, we have changed the status of COS and ICS so that it's really essentially the same as it was before.

Recently we have been operating, I think, for 2 consecutive years, on national security waivers. Do you have any suggestions for changing the law as it affects depot maintenance?

Ms. MORALES. Senator, I think it would be premature to have any suggestions at this point.

Senator INHOFE. If it does not change, would you do everything you could to get this out about operating on national security waivers. It was pretty obvious to all of us in advance that we are going to have some problems. A lot of it is legitimate and that is the Kosovo and Bosnia operations and the effects that they have had. But would you make a real effort to comply with the law so that we don't have to go into these waivers?

Ms. MORALES. Senator, it is my intent to comply with the law. If confirmed, I believe that we need to examine this issue further. I would be most pleased to sit down with you and speak about it.

Senator INHOFE. I look forward to that. Senator Warner brought out the spare parts problems. You are going to be shocked when you get around and see things like the spare parts problem. Every installation you go to you are going to see the same thing that we have seen. Across all the services. It is a very serious problem and it is one that is going to surprise you relative to the way it was some 10 years ago. I think that is something that has to be addressed. We have helicopters that are sitting out there for spare parts. It is a very serious readiness problem.

Ms. MORALES. A complete review of the depot maintenance operations throughout this country is one of my highest priorities.

Senator INHOFE. We have some pretty creative ideas on things that we can do. A lot of times people are talking about outsourcing. There are partnership programs and we have some successful ones in my state, but I think we will respond to some of these concerns that people will have about the costs. I look forward to working with you on that. We have one particular project I want to work with you on. So I look forward to visiting with you.

My time is expired but on the second round I want to expand a little bit on some of the concerns that were expressed by some of the other Senators here on the environment and the cost of complying with some of these environmental regulations. There are at least three of you that will be dealing with that. I look forward to the next round.

Chairman LEVIN. Thank you, Senator Inhofe. On that very issue let me ask Ms. Morales this question. In your response to our pre-hearing questions, you stated that you support the basic principle of the Federal Facilities Compliance Act that Federal facilities, including DOD facilities, should be subject to the same standards as comparably-situated civilian facilities. However, you also stated that there may be cases in which environmental regulations or regulators should "make allowances" for DOD facilities. I am just wondering how you reconcile those two statements. Should DOD facilities be subject to the same standards as comparably-situated civilian facilities, or should they be given preferential treatment?

Ms. MORALES. Environmental laws should apply to defense facilities and I believe that is how the law is stated. However, Congress did permit allowances for the President to make special considerations of the application of compliance for national security reasons. I don't believe that the Department would take lightly its advice to the President to do so, but that provision is there.

Chairman LEVIN. Mr. Mora, unlike other parties facing substantial costs for the abatement and removal of asbestos, the Navy has not sought to recover any of these costs from the asbestos manufacturers. In your response to the pre-hearing questions, you said that you had not yet been briefed on this subject. If you are confirmed, will you look into this issue, will you report back to the committee promptly on the desirability of pursuing such a remedy?

Mr. MORA. Yes, sir, I would be happy to do so.

Chairman LEVIN. Mr. Wynne, you have spent much of your career in weapons systems development and acquisition and the priorities that you have established in your response to the pre-hearing questions all deal with weapons systems. However, the Department of Defense now spends almost as much purchasing services as it does purchasing weapons systems. Do you agree that the Department's acquisition, training and guidance need to place a greater emphasis on best practices in the acquisition of services?

Mr. WYNNE. Sir, if confirmed, I will certainly look into the acquisition of services. It is my belief that we need to bring a little more discipline to that practice as it grows to a larger percentage of the defense budget.

Chairman LEVIN. Should the Department make a greater effort to advance and reward acquisition personnel who play a successful role in managing the acquisition of services?

Mr. WYNNE. Sir, I am not familiar with all of the attributes of the personnel contracting for services. We have a very professional workforce and I am looking forward to working with them. I do think we need to bring a little more attention to the procurement of services as the committee is concerned.

Chairman LEVIN. Will you work with us to make sure that the Department implements best practices in this area such as the use of performance-based service contracting and the competitive award of task orders.

Mr. WYNNE. Sir, I have long admired the committee for their work in partnership with the Department to achieve procurement excellence and this would be no exception.

Chairman LEVIN. This is one example of what Senator Warner was referring to in his opening statement of where the committee staff can be very helpful. We look forward to you working with that staff on these kind of issues.

Mr. WYNNE. Thank you, Mr. Chairman. I appreciate that offer.

Chairman LEVIN. Ms. Morales, over the years the military services have complained about the overhead fees the DLA charges for the purchases out of inventory, which I understand can exceed 20 percent. Do you believe it would cost more or less for the services to purchase and stock these items themselves?

Ms. MORALES. Senator, that is a very interesting question. I think I would like to take that under advisement.

Chairman LEVIN. Would you take a look at that after you are confirmed, if you would, and then let us know what your findings are?

Mr. Morello and Mr. Mora, although the Judge Advocate Generals are primarily responsible for providing legal advice and services regarding the UCMJ and the administration of military discipline, the General Counsels have historically played a role in civilian oversight of these programs. If confirmed, how will you assist the Secretaries in providing civilian oversight of these important functions. Either one of you. Mr. Morello? Mr. Mora?

Mr. MORELLO. Mr. Chairman, thank you very much for that question. I already had an opportunity to have a brief discussion with the Army's Judge Advocate General, Maj. Walt Huffman. The discussions were very cordial and very friendly and reminded me a lot of the days when I served on Active Duty as a captain. I really admired the Judge Advocate General.

The General Counsel of the Army has statutory responsibilities to provide professional guidance to all the lawyers in the Department of the Army. I look forward to working very closely with the Judge Advocate General, offering professional guidance wherever it could be helpful and providing advice to the Secretary of the Army with regard to the kinds of needs that the Department might have from time to time.

Chairman LEVIN. Thank you. Mr. Mora.

Mr. MORA. Mr. Chairman, in my briefings and in my investigations on the Department of the Navy, I have found an extremely close, cordial and cooperative relationship between the JAG Corps

and the Office of General Counsel. I too have met with Admiral Guter who is the JAG and I fully anticipate to continue to build on this relationship of collaboration and cooperation.

Chairman LEVIN. Thank you. Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. I would like to follow on that important question with two other observations to our General Counsels, Mr. Mora and Mr. Morello. There is, in my judgement, nothing more important to the integrity of the men and women of the Armed Forces than the integrity of the promotion system. Enlisted, yes, but perhaps more so because of the complexity of the officer system.

Each of you will have a role in working with your Secretaries and your Departments as a whole, as the case may be, on preserving that integrity. From time to time it is necessary to review it perhaps to change it. I just wish that each of you would give the assurance that that will be right at the top of your agendas.

In every system and every walk of life there is imperfection. This committee, in its responsibilities to preserve the integrity of the promotion system and in its oversight and its advise and consent role, is the trustee for the entire Senate in making our recommendations to the Senate to vote affirmatively on the slates of officers that come here from the President of the United States. It is necessary from time to time to ferret out, root out those who somehow have worked their way through the system, but have incidents or chapters in their careers which could be viewed as adverse and could well affect the judgment of this committee in its advise and consent role.

Each of you have that responsibility for your respective Secretaries or the Departments as a whole to make sure that this committee is kept informed and given all the facts necessary to discharge our constitutional function to advise and consent in that promotion system. Do I have your assurance Mr. Morello?

Mr. MORELLO. Yes, sir. Absolutely.

Senator WARNER. Mr. Mora?

Mr. MORA. Yes, sir, you do.

Senator WARNER. One further question for Mr. Wynne. The acquisition workforce needs a little morale building. It has sort of been downplayed through the years. Regrettably, for a decade or more we have had to put greater emphasis on expending funds for deployments rather than those necessary to get our new systems and weapons adequately maintained, a steady improvement in that infrastructure.

I just hope that you will, having visited with you at length yesterday, instill in this workforce a sense of real importance to modernize the Armed Forces of our United States. Instill in those in the civil service system, and indeed the uniform side, a sense of the importance of modernizing the Armed Forces of the United States under this administration. Will you do that?

Mr. WYNNE. Thank you for your concern, Senator. I think that is a marvelous attribute and I will certainly pursue that, if confirmed.

Senator WARNER. I thank the chair.

Chairman LEVIN. Thank you, Senator Warner.

Senator Inhofe, Senator Reed passes.

Senator INHOFE. Mr. Mora and Morello, and perhaps also Ms. Morales. You should form a law firm. [Laughter.]

Getting back to the question that was asked by the chairman on the BRAC process and the need for further rounds. It happens I don't fully agree with the chairman in this area, but there is one area where we might agree. I was elected to the House of Representatives the year that the BRAC process passed into law, and it was a very good one because its been very effective for four rounds.

There is one problem that I see with it, and that is anytime you start one, every city located near any type of an installation goes out and pays \$100,000 or more to consultants, and everybody comes here to try to influence their case. We refer to this as municipal purgatory.

It would seem to me that with the combined brilliance of the three of you working on this problem, there ought to be a way of taking categories, maybe something like primary training and flight training, and say there is not a problem in this area. There is not excess capacity in this area and at least let some installations go out. You could do the same thing with the our logistics centers where we went down from five working at 50 percent capacity to three now working at close to 100 percent capacity. Because that problem has been taken care of they would be excluded from the future system. Do any of you have any ideas on how this could be done? Would this be desirable?

Mr. MORELLO. Senator, I would be happy to address that. I have not had an opportunity to study the base closing and realignment statute in any kind of detail. I do understand that it is a statute that works well and I am sensitive to the concern which you have raised. I do believe that if I am confirmed I would look forward to working with my colleagues in coming up with a way to deal with the issue that you raised and get back and work with yourself and other members of the committee who might have similar concerns.

Senator INHOFE. Mr. Mora.

Mr. MORA. Sir, let me echo what Mr. Morello just indicated. I too would hope that we could work, and I am confident we can work cooperatively with the other services to ensure uniform procedures that are efficient in this process.

Senator INHOFE. Ms. Morales.

Ms. MORALES. I would agree that we could certainly look at opportunities.

Senator INHOFE. It is a huge problem and I am sure you are aware of it down in Texas. They have the same problem.

Ms. MORALES. I actually worked in the 1993 BRAC session for the NADEP at Pensacola. I am aware of all of the emotions that the communities and workers go through. It is very disruptive, yet I believe there are times when you have to focus on the overall goal, which is to align the infrastructure with the new force structure. It's definitely going to be a challenge to everyone.

Senator INHOFE. I would only ask, and I don't expect to have an answer, that you explore ways that this can be done. It would provide a great service for an awful lot of communities.

When you mention that there is some latitude in terms of the enforcement of the environmental laws in military installations, were

you referring to the fact that you can have Presidential waivers? Is this what you were referring to? I had not heard this before.

Ms. MORALES. It is my understanding, without having gone into great study of the environmental laws that Congress has provided, that the President can make certain waivers in compliance.

Senator INHOFE. I was a little embarrassed and had to check because I was not aware of that. I don't believe they have ever done that before. Let's discuss the Fort Bragg/Camp Lejeune red-cockaded woodpecker issue. Because of the efforts that were made by the military, they are creating more serious problems for themselves.

On two different visits down there they had these red areas that were excluded from training purposes because they are suspected habitats for the red-cockaded woodpecker. Now they have done such a good job, Mr. Chairman, that those are now expanding. They are taking more and more of the training area that was there. This needs to be addressed in some way because they are creating a greater problem for themselves.

At Camp Pendleton they came close to losing 70 percent of their training area. In training areas, whether they be live ranges, such as Vieques, or training areas such as those at Fort Bragg and Camp Lejeune, this is a very serious problem. I would like to ask that you look into these to see if there is something that can be put in place. If we don't do it, we are using up our training areas by the good job that we are doing.

Ms. MORALES. I agree with you, Senator, and if confirmed I look forward to finding common sense approaches to training and supporting training.

Senator INHOFE. That would be a very good thing to do and I look forward to that. I would like to be in on that with you. I happened to be exposed to this. The tortoise watchers between Yuma and Twentynine Palms. It really is a pretty good job. It is one I am sure is sought after.

Ms. MORALES. I think the services do their very best to comply with the law.

Senator INHOFE. That is an area that is very much a concern to all of us. Last, if I could, Mr. Chairman, just go back to the Vieques issue. The problem we are having there is that it is a unique place. While I make the statement that I have examined every possible alternative, I think that's an exaggeration because there might be some that we don't know about.

Of those that were in the Grace-Fallon Report and the Rush Report, I have had occasion to see the problems that are there. We are dealing with a very unique situation. We're dealing with a situation that when we deploy someone from the East Coast that ultimately goes to the Persian Gulf, the chances are better than 50-50 that they will find themselves in a combat environment and they must have integrated training. Of course, the battlegroup includes aircraft carriers and F-18s and F-14s doing their thing.

We had a very unfortunate thing that happened on March 12th on the range in Kuwait where five of our troops were killed. After reading the report, I believe that it was because they did not have live training. That was right at the time when they said you could do inert training instead of live training. I would hope all of you,

particularly you, Mr. Navas, with your background, would have a chance to really talk about the seriousness of this.

I want to make sure that you keep in mind that paramount is young Americans who are going into combat environments. We shouldn't be talking about this as a political issue. It is my understanding that there are even some, Mr. Navas, that feel so strongly about it that they have signed petitions to secede from Puerto Rico. Maybe Mr. Chairman, that is the answer. I don't know. If you would keep us involved in your decisions and your thinking as this thing progresses, I would appreciate it very much.

Mr. NAVAS. I will, sir.

Chairman LEVIN. Do we know of any Senators on their way? If not, what we will do then is adjourn now. We will not have to come back after this vote. We thank you all. We thank your families again. Alexander, your flamingo brought your daddy good luck. [Laughter.]

Or is that a pelican? I can't see what that is. It's a flamingo. Thank you all. Congratulations. We'll hope to bring these to the floor as soon as we have a committee to vote on them.

[Whereupon, at 10:42 a.m., the committee was adjourned.]

[Prepared questions submitted to Alberto J. Mora by Chairman Levin prior to the hearing with answers supplied follow:]

June 18, 2001.

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

ALBERT J. MORA.

cc: Hon. John Warner,  
*Ranking Member.*

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes. I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been fully implemented. It is my understanding that the legislation has clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs. These reforms also clearly defined the roles and responsibilities of the CINCs.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most significant aspects of these Department of Defense reforms have been the overall strengthening of the civilian leadership and enhanced clarity of the chain of command. The enhanced ability of staffs and the combatant commanders-in-chief to plan and execute their assigned missions has been demonstrated both in peace and conflict.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can

be summarized as strengthening civilian control, improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles, which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am aware that, last year, the Services and OSD supported changes to Goldwater-Nichols that would improve the efficiency and effectiveness of Joint Officer Management while upholding the spirit and intent of the original reforms. However, I understand that there is currently consideration to initiate changes to last year's proposal with which I am not completely familiar. If confirmed, I will be in position to better understand and assess whether such proposals are warranted. Implementation of Goldwater-Nichols has enhanced the ability of the Services to act quickly and jointly. However, like all innovative efforts, this may warrant review and assessment in light of experience. If anything, the "next level of jointness" ought to be ensuring that the Services and our allies are fully interoperable.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the General Counsel of the Department of the Navy?

Answer. The General Counsel is the chief legal officer of the Department, and legal opinions issued by the General Counsel are the controlling legal opinions within the Department. The General Counsel provides legal advice, counsel and guidance to the Secretary, the Under Secretary and the Assistant Secretaries, and their staffs. He is also responsible for providing legal services throughout the Department in a variety of fields, including business and commercial law, real and personal property law, fiscal law, civilian personnel and labor law, intellectual property law, environmental law, and litigation. In addition, the General Counsel serves as the Debarring Official and Designated Agency Ethics Official for the Department.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. If confirmed, I believe my work as General Counsel for the U.S. Information Agency (USIA), elsewhere in the Federal Government, and in the private sector will serve me well as the General Counsel. For 4 years from 1989 to 1993, as General Counsel for USIA, I advised senior government officials in the USIA and had extensive dealings with the White House, National Security Council, State Department and other foreign affairs agencies, Office of Management and Budget, Government Accounting Office, and Congress. I managed the legal staff serving the USIA and dealt with a wide range of legal issues.

My experience in private legal practice has provided extensive experience in problem solving, client counseling, dispute resolution, and management. This experience has provided me a broad experience in the law, with an emphasis on international litigation and transactions, much of it in the foreign affairs context.

Lastly, my tenure for the past 6 years as a Governor on the Broadcasting Board of Governors has provided significant, hands-on experience in agency management and, notably, in the policy formulation, budgetary, congressional, and inter-agency coordination aspects of work in a federal foreign policy. This expanded on and reinforced my prior experience, abroad and in the United States, gained as a State Department Foreign Service Officer.

Cumulatively, this experience, I believe, has well prepared me to take on the duties of General Counsel.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the General Counsel of the Department of the Navy?

Answer. I believe I possess the essential legal expertise and management skills to be the General Counsel. I continue to learn more about the Department and the work of the General Counsel. Additionally, I hope to benefit from the wisdom and knowledge of those who have devoted themselves to service in the Navy and Marine

Corps, as well as the career civil servants in the Department. If confirmed, I will seek out their advice.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary England would prescribe for you?

*Answer.* If confirmed, I anticipate that Secretary England will expect me to perform the duties noted above in response to the first question in this section. I anticipate he will want my candid and objective legal advice concerning issues, opportunities and problems as they arise. I further anticipate he will want me to work closely with the Judge Advocate General to ensure the faithful execution of the laws throughout the Department of the Navy, with the General Counsel of the Department of Defense and others on matters of mutual interest or concern.

*Question.* In carrying out your duties, how will you work with the Judge Advocate General of the Navy?

*Answer.* The General Counsel and the Judge Advocate General need to have a relationship that includes full consultation, close cooperation and careful coordination. This relationship is essential to ensure the faithful execution of the laws throughout the Department. If confirmed, I am confident that this close and collegial professional relationship will continue.

*Question.* In carrying out your duties, how will you work with the Staff Judge Advocate to the Commandant of the Marine Corps?

*Answer.* The position of Staff Judge Advocate for the Marine Corps is established in Title 10, Sec. 5046. While the Staff Judge Advocate's primary responsibility is advising the Commandant on military justice matters, if confirmed, I expect that our respective offices will consult and coordinate on any matters of mutual interest or concern that may arise.

*Question.* How are the legal responsibilities of the Department of the Navy allocated between the General Counsel and the Judge Advocate General?

*Answer.* I understand that the Judge Advocate General has primary responsibility for the administration of the military justice system. If confirmed, I expect that he and I will consult and cooperate on matters of mutual interest or concern relating to military justice, bearing in mind his statutory duties and special expertise in this area. With respect to civil law matters involving Navy and Marine Corps components, my understanding is that primary responsibility is divided, by major subject area, between the Office of the General Counsel and the Office of the Judge Advocate General. From time to time, I expect, there will arise matters in which responsibilities overlap. In such instances, and particularly with regard to litigation, I believe that cooperation and coordination between the two offices is imperative.

*Question.* Do you believe that this allocation—which differs from that in the Army and the Air Force—serves the interests of the Department of the Navy?

*Answer.* Yes. If confirmed, I will diligently monitor the division of responsibilities for legal services and work to ensure that the legal needs of the Naval Services are well served. If I detect any deficiencies, I will address them.

*Question.* In carrying out your duties, how will you work with the General Counsel of the Department of Defense?

*Answer.* While the General Counsel of the Department of the Navy reports to the Secretary of the Navy, the General Counsel of the Department of Defense is the chief legal officer of the Department of Defense. If confirmed, I will work closely with the DOD General Counsel, Jim Haynes, on matters of mutual interest or concern. I look forward to a most productive working relationship.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the General Counsel of the Department of the Navy?

*Answer.* Change is a fact of life for the Navy/Marine Corps team. The single greatest challenge for me in this period of change and transformation is to ensure sound legal advice and quality legal services are available on a timely basis. Additionally, the General Counsel must be prepared to meet the need for such advice and services in connection with policy developments and other events, foreseen and unforeseen, that may occur.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will review the resources, organization and operation of the Office of the General Counsel, and implement whatever changes may be necessary to enhance its ability to confront these challenges.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the General Counsel of the Department of the Navy?

*Answer.* I am not aware of any serious problems.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will address any serious problems I discover in as expeditious a manner as possible.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues, which must be addressed by the General Counsel of the Department of the Navy?

*Answer.* My foremost priority will be to ensure that the Department is provided the highest quality of legal advice and services and that uniformed and civilian attorneys work together to accomplish that goal. If confirmed, I will explore this issue and develop more defined priorities.

#### RECRUITING AND RETENTION ISSUES

*Question.* How do you assess your ability to hire and retain top quality civilian attorneys and provide sufficient opportunity for advancement?

*Answer.* It is my understanding that the Department has been able to hire top quality civilian attorneys but that the increasing financial disparity between Government attorneys and privately employed attorneys has made this more difficult in certain areas of expertise. At this time, I am not able to judge independently the long-term ability of the Department to hire, retain and advance civilian attorneys. If confirmed, I will work with the senior staff of the Office of the General Counsel to address these issues.

*Question.* Does the Department of the Navy, in your view, have a sufficient number of Navy and Marine Corps judge advocates on active duty to perform the missions assigned to the Judge Advocate General's Corps?

*Answer.* Based on an informal discussion with the Judge Advocate General, I understand the demand for judge advocates has grown significantly, both in commands desiring judge advocates and in emergent taskings on important issues. In this era of intense media scrutiny, complexity of domestic and international law in national security issues, environmental concerns and the penchant by many to litigate, there is an increasing demand for sophisticated, specialized legal services. If confirmed, I will work with the Judge Advocate General to address this issue.

*Question.* In your view, what incentives to successful recruiting and retention of judge advocates need to be implemented or established?

*Answer.* The Judge Advocate General Corps clearly must be able to attract and keep quality judge advocates. As a civilian practitioner, I know the competition for legal talent is intense. I understand recent initiatives by Congress and the Navy have helped alleviate some of the financial pressures facing our young judge advocates and have improved retention. I support these efforts and if confirmed will support others in the future.

#### MILITARY JUSTICE MATTERS

*Question.* Since Article 6 of the Uniform Code of Military Justice gives primary jurisdiction over military justice to the Judge Advocates General, how do you see your functions in this area with regard to the Judge Advocate General of the Navy?

*Answer.* In Article 6, Congress gave the Judge Advocates the responsibility to "make frequent inspections in the field in supervision of the administration of military justice." If confirmed, as the senior legal official within the Department of the Navy, I will have an interest in the administration of military justice within the Department of the Navy. I am certain that the Judge Advocate General will keep me informed on matters of interest in military justice.

*Question.* In your view, how should the General Counsel approach military justice matters—both in terms of specific cases and general policy issues to provide useful advice without generating problems of unlawful command influence?

*Answer.* If confirmed, I envision a close working relationship with the Judge Advocate General in which we share information and work collaboratively when necessary to resolve issues, whether they are policy issues or issues arising from a specific case. I believe that a close working relationship with the Judge Advocate General and reliance on his special expertise will avoid any potential issues of command influence.

*Question.* In recent years, there have been a number of cases in which military members have been accused of adultery. Concerns have been raised about the consistency with which these cases have been handled.

*Answer.* What do you see as the role of the General Counsel of the Department of the Navy in ensuring the Uniform Code of Military Justice is enforced in a fair and consistent manner?

Answer. If confirmed, as the senior legal official within the Department of the Navy, I will have an interest in the fair and consistent administration of military justice within the Department of the Navy. The Judge Advocate General and I will share information and work collaboratively when necessary to resolve issues.

*Question.* Do you see a need for any changes in either the law or its implementation in this area?

Answer. I have not had the opportunity to be fully briefed on this subject. If confirmed, I intend to work with the committee, the Judge Advocate General, and my staff to develop an informed opinion on this matter.

*Question.* In a recent Navy military justice case, charges alleging serious national security violations against a petty officer were dismissed with prejudice. Both the Article 32 Investigating Officer and the defense attorneys were critical of the government's handling of the investigation and case preparation. Congressional scrutiny of the case raised serious issues about the complexities of espionage and national security cases, and an investigation was initiated by the Department of Defense Inspector General to examine the processing of the case.

If confirmed will you assure the committee you will examine the processing of this case and ensure that the Department of the Navy is fully prepared to investigate and prosecute national security cases in an appropriate manner?

Answer. Yes. I look forward to the results of the investigation and reviews initiated by the Department of Defense Inspector General and the Judge Advocate General. If confirmed, I will support the implementation of necessary improvements to the process.

#### WHISTLEBLOWER PROTECTION

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes.

*Question.* If confirmed, what actions would you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If confirmed, I will act to ensure that military members whose actions are protected by the Act are not subject to illegal reprisals or retaliation. I also understand that the current Department of the Navy practice is to brief the requirements of the Act to all prospective commanding officers and executive officers, and address the requirements of the Act in the curriculum of eight separate courses of instruction for Navy and Marine Corps personnel. If confirmed, I will ensure that this emphasis on the Act in formal Navy training courses will continue.

#### JUDICIAL REVIEW

*Question.* What is your understanding of the appropriate role of the Article III courts in the review of military activities?

Answer. The courts have recognized that they are ill suited to standing in judgment on military matters and would argue that for most military matters there is little, if any, role for the Article III courts to play. The Constitution provides that Congress and the President have the power to control the military. The nature of this power, and the role of the Article III courts in defining or limiting it, have been addressed repeatedly by the Supreme Court. As a general proposition, the Court has explained, "it would be difficult to think of a clearer example of the type of governmental action that was intended to be left to the political branches directly responsible—as the judicial branch is not—to the electoral process." *Gilligan v. Morgan*, 413 U.S. 1,4(1973).

#### CLIENT

*Question.* In your opinion, who is the client of the General Counsel of the Department of the Navy?

Answer. In my opinion, the client of the General Counsel of the Department of the Navy is the Department of the Navy. The Department speaks through its senior officials, chiefly the Secretary of the Navy. While I do not anticipate any conflict be-

tween the Department's interests and those of a Department of the Navy official, my duty in such a case would be to the Department.

#### LEGAL ETHICS

*Question.* What is your understanding of the action a Department of Defense attorney should take if the attorney becomes aware of improper activities by a Department of Defense official who has sought the attorney's legal advice and the official is unwilling to follow the attorney's advice?

*Answer.* If an attorney is aware that a Department official intends to engage in improper activities despite the attorney's legal advice, the attorney should immediately report the situation to his or her professional supervisor and, if necessary, further up the professional chain of command until the matter is resolved.

*Question.* In your view, do the laws, regulations and guidelines that establish the rules of professional responsibility for attorneys in the Department of Defense provide adequate guidance?

*Answer.* Yes. Every lawyer must be an active member in good standing of the Bar of a State or the District of Columbia, and is subject to the professional responsibility rules of that jurisdiction. Lawyers conducting litigation are subject to the rules of the forum in which they appear. In addition, lawyers within the Department are also subject to the same rules of ethical conduct as all executive branch employees. Finally, Navy and Marine Corps judge advocates are bound by professional responsibility rules promulgated by the Judge Advocate General. I believe that adequate guidance is provided under this regime. Department attorneys, civilian and military, have a long history of ethical practice, and I aim to see that it continues. If confirmed, I will be alert to the need for adequate guidance and, if I detect any deficiencies, I will act to address them.

#### ROLE IN THE OFFICER PROMOTION AND CONFIRMATION PROCESS

*Question.* In your view, what is the role of the General Counsel of the Department of the Navy in ensuring the integrity of the officer promotion process?

*Answer.* My understanding is that the Judge Advocate General has primary responsibility for providing legal advice in the conduct of the officer promotion selection process. If confirmed, my role will be as directed by the Secretary. If so directed, I would review the process and governing procedures, and provide the Secretary with my candid and objective advice concerning compliance with the law, fairness and impartiality.

*Question.* What is the role of the General Counsel of the Department of the Navy in reviewing and providing potentially adverse information pertaining to a nomination to the Senate Armed Services Committee?

*Answer.* If confirmed, my role will be as directed by the Secretary. I expect that I will be called upon from time to time to review a nomination or a candidate's record, as in the case of past misconduct or alleged misconduct on the part of the candidate. In those instances, I would expect to consider the completeness and regularity of the package as a matter of both substance and form, to evaluate the significance of the adverse or alleged adverse information (if any), and to provide the Secretary with my candid and objective advice concerning the same.

#### LITIGATION INVOLVING THE DEPARTMENT OF DEFENSE

*Question.* In your opinion, what is the relationship between the Department of Defense and the Department of Justice with respect to litigation involving the Department of Defense?

*Answer.* Navy and Marine Corps attorneys work directly with the Department of Justice counsel in cases in which the Department is a party or has an interest. The Department of Justice has the primary responsibility to represent the United States in all litigation matters. (28 U.S.C. § 516.) Nonetheless, attorneys representing DOD review pleadings before they are filed with the courts, conduct and direct discovery, participate in making major litigation decisions, and in some cases become part of the trial team. It has been my experience that attorneys from the Department of Defense and Justice work closely to represent the agency and the United States in all substantive matters.

*Question.* Is the present arrangement satisfactory, or does the Department need more independence to conduct its own litigation?

*Answer.* To my knowledge, the present arrangement seems to be working well, and I see no need for more independence.

## COURT OF APPEALS DECISION

*Question.* On January 4, 2000, the United States Court of Appeals for the District of Columbia Circuit decided the case of *National Center for Manufacturing Sciences v. Department of Defense*, 199 F.3d 507 (D.C. Cir. 2000). The court concluded that “Because of the existence of 10 U.S.C. Section 114, it is clear that any monies appropriated for NDMS by Congress for research must be authorized before they can be appropriated and distributed”; and “Because 10 U.S.C. Section 114(a)(2) requires authorization of these funds before they become available, appropriation alone is insufficient.”

What is your view of the court’s decision in this case and its implications regarding the obligation of funds that are appropriated, but not authorized?

*Answer.* The case in question affirmed the district court’s decision to grant the government’s motion to dismiss for failure to state a claim. The basis for the decision was the fact that in the Department’s Fiscal Year 1995 Authorization Act, Congress effectively rescinded the unreleased portion of Fiscal Year 1994 funding earmark for the National Center for Manufacturing Sciences (NCMS). Accordingly, the court concluded that NCMS had no legal entitlement to the funds claimed.

Parties to this litigation, and the court, viewed the funds in issue to have been authorized by Congress. Thus, the question regarding the obligation of funds not authorized was not squarely presented for decision in this case, but was addressed only as a collateral matter. Situations where funds have been appropriated but not authorized are often complex and may involve unique statutory language. If confirmed, I will continue the practice of working closely with our oversight committees whenever these issues are presented.

## ROLE IN MILITARY PERSONNEL POLICY MATTERS

*Question.* What role, if any, should the General Counsel play in military personnel policy and individual cases, including cases before the service boards for the correction of military records?

*Answer.* I am advised that attorneys within the Office of the General Counsel do become involved with policy issues pertaining to military personnel, both with regard to individual cases and to the application of the Department’s personnel policies. I believe that the General Counsel should, in appropriate cases, make his or her views about individual cases and the development and application of personnel policies known to the Department’s senior leadership, so that individual cases are resolved fairly and that overall policies are developed uniformly, fairly and in conformance with law.

## SHIP SCRAPPING

*Question.* The Navy has a growing number of inactive ships that have been designated for scrapping. In September 1999, the Navy began conducting ship disposal through the Ship Disposal Project. Within that project there are four ship disposal contractors—two that compete for ships on the west coast and two that compete for ships on the east coast.

Given the potential for cost efficiencies, would it be appropriate to allow all four contractors to compete for disposal of ships on both coasts?

*Answer.* I have not had the opportunity to be fully briefed on this subject. If confirmed, I intend to work with this committee and my staff to develop an informed opinion on this matter.

*Question.* What is the basis for your position?

*Answer.* I have not had the opportunity to be fully briefed on this subject. If confirmed, I intend to work with this committee and my staff to develop an informed opinion on this matter.

*Question.* Asbestos remediation is one of the cost drivers for the Navy’s ship scrapping program. Other entities facing substantial costs for the abatement and removal of asbestos have been able to recover a portion of these costs from asbestos manufacturers, including companies that are currently in bankruptcy. The Navy, unlike other affected parties, has not generally pursued this course.

What is your view of the availability of this remedy and the desirability of the Navy pursuing it?

*Answer.* I have not had the opportunity to be fully briefed on this subject. If confirmed, I intend to work with this committee and my staff to develop an informed opinion on this matter.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the General Counsel of the Department of the Navy?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

THE MILITARY JUSTICE SYSTEM

1. Senator THURMOND. Mr. Mora, we all have read stories in the press criticizing the military justice system and the Uniform Code of Military Justice. Often these articles are sensationalized and written by people who have no understanding of the system.

How would you characterize the military justice system?

Mr. MORA. The military justice system is modeled after the Federal judicial system and is specifically tailored for the Armed Forces. It balances Constitutional guarantees of fairness with the need to maintain good order and discipline. Congress and the courts have long recognized that well-disciplined, combat-ready Armed Forces mandate a separate system of justice. To this end, the Uniform Code of Military Justice (UCMJ) was enacted by Congress to strike a balance between the military's mission, the desire to preserve the constitutional rights of a service member, and the need to maintain civilian oversight over the military justice process. Military defendants are afforded a number of procedural benefits not typically available to civilian criminal defendants. For example, military defendants are assigned qualified military defense counsel at no cost, regardless of financial ability, and may request assignment of a specific military defense counsel if reasonably available. Additionally, discovery by the defense is far more extensive for military defendants, and investigative and expert assistance is provided at government expense, again, without regard to a defendant's ability to pay for such resources. Military defendants who receive a punitive discharge or confinement for at least a year have an automatic, cost-free right of appeal to a court of criminal appeals, even if they pled guilty.

A trial by court-martial is substantially similar to a civilian criminal trial. Courts-martial are presided over by military judges and are subject to uniform rules of evidence patterned after the Federal Rules of Evidence. The court-martial is presented evidence and must be persuaded beyond a reasonable doubt to return a finding of guilty. The Manual for Courts-Martial, which contains the specific substantive and procedural rules that form the basis of the military justice system, is reviewed annually to ensure that it continues to fulfill its fundamental purpose to ensure justice in a unique military environment.

2. Senator THURMOND. Mr. Mora, the Navy empowers the captain of a naval vessel with a great deal of authority in regard to maintaining discipline aboard his ship. Many of these are based on old and traditional roles of the ship captain.

Considering that we now have almost instant communication and shorter deployments, is it time to review the role of the captain to impose judicial actions aboard his ship?

Mr. MORA. Nonjudicial punishment is authorized by Article 15, UCMJ and is administered by a unit's commander. Nonjudicial punishment provides commanders with a prompt and efficient means of maintaining good order and discipline. It also encourages positive behavior changes in sailors/marines without the stigma of a court-martial conviction. Nonjudicial punishment (NJP) is appropriate when simple

administrative corrective measures such as extra military instruction are inadequate due to the nature of the minor offense or the record of the sailor/marine, unless it is clear that only a trial by court-martial will satisfy the needs of justice and discipline. The imposition of nonjudicial punishment (NJP) pursuant to Article 15, UCMJ aboard naval vessels is a time-honored, well-conceived process for maintaining the Navy's fighting strength and preserving the national security of the United States. Afloat commanders must be able to resolve disciplinary problems while underway or in hostile waters. Extending service members assigned to afloat units the right to refuse NJP would place commanding officers in the unenviable position of transferring the accused and prospective witnesses ashore for trial by courts-martial; embarking a trial team composed of attorneys, a military judge, and court reporter; or delaying disciplinary action pending completion of the afloat mission. Unfortunately, improved technology does not mitigate the difficulties inherent in these options or relieve a commanding officer of the responsibility to maintain good order and discipline while underway. If a commanding officer cannot resolve minor misconduct quickly through the imposition of NJP, a delay in taking disciplinary action could adversely impact combat readiness, mission effectiveness, and crew morale.

Numerous safeguards ensure Article 15 is used by afloat commanding officers appropriately. Service members who receive NJP may appeal to the next superior commander. They may also petition to have the record and consequences of the NJP removed by the Board for Correction of Naval Records. Finally, oversight by the Federal judiciary of the Board for Correction of Naval Records ensures service members receive fair adjudication. The safeguards of Article 15 ensure basic procedural fairness and protect the rights of accused service members.

#### THE INSPECTOR GENERAL

3. Senator THURMOND. Mr. Mora, if confirmed, what will be your relationship with the Inspector General? What oversight will you have in regard to inspector general investigations?

Mr. MORA. If confirmed, I anticipate that I will have an excellent working relationship with VADM Haskins and his staff. Historically, the Office of the General Counsel has worked closely with the Office of the Naval Inspector General, and I anticipate that practice will continue unchanged under Secretary of the Navy England.

By law, the Naval Inspector General reports to, and receives direction from, the Secretary and the Chief of Naval Operations (CNO). There is no statutory or regulatory provision for any specific form of interaction between the General Counsel of the Navy and the Office of the Naval Inspector General. By regulation, the Navy has given the Naval Inspector General that degree of independence necessary to ensure the Navy, through the Office of the Naval Inspector General, is fully capable of critical internal introspection, self-evaluation and improvement. A formal provision for General Counsel oversight of inspector general investigations or inspections could be construed as an attempt to dilute the Naval Inspector General's independence and access to the Secretary or the CNO.

At the same time, the Navy has taken steps to ensure the Naval Inspector General has access to the best legal advice the Navy can provide. The Naval Inspector General legal staff includes two senior civilian attorneys (GS-15) and two officers of the Judge Advocate General (JAG) Corps (O-6 and O-4). Each of the civilian attorneys has been with the office for over 10 years. The civilian attorneys report directly to a senior lawyer on my immediate staff, and have unfettered direct access to me when they deem necessary. They participate in monthly OGC staff meetings and brief my staff or me on matters of legal interest. The four attorneys in the office are authorized to, and frequently do, obtain the legal opinions of senior JAG and OGC attorneys who may be regarded as subject matter experts in various legal fields. On occasion, they will recommend the Naval Inspector General obtain a formal legal opinion from the General Counsel in support of an investigation or other inquiry.

At least one of the attorneys in the office reviews every report of investigation before the Naval Inspector General signs it. At a minimum, the attorney informs the Naval Inspector General whether the report is legally sufficient. Often, the attorney provides additional advice. The attorneys discuss most cases with the investigators and provide advice as the investigation progresses. Before the Naval Inspector General issues his final reports of investigation, attorneys in his office may discuss the legal issues in them with the General Counsel or the Judge Advocate General as they deem appropriate. However, in order to protect the independence of the Naval Inspector General, they are not required to do so in any specific case.

I anticipate that my personal involvement in Naval Inspector General investigations will be similar to that of my predecessors. The Naval Inspector General, the General Counsel, and the Judge Advocate General attend weekly staff meetings with the Secretary. The Naval Inspector General meets with the Under Secretary of the Navy on a regular basis to discuss pending investigations; the General Counsel attends those meetings at the request of the Under Secretary or the Naval Inspector General. When the nature of an investigation warrants, the Naval Inspector General meets with the Under Secretary or the Secretary to brief the status of the investigation on a more frequent basis; the General Counsel and/or the Judge Advocate General frequently participate in those meetings.

#### WORK FORCE

4. Senator THURMOND. Mr. Mora, a significant issue throughout the Department of Defense is its aging workforce and the looming loss of expertise because of retirements.

What are your concerns regarding this issue as it related to the Office of the General Counsel?

Mr. MORA. The Navy's Office of the General Counsel is facing challenges that are very similar to those facing the Department of the Navy as a whole. Approximately 35 percent of OGC's attorneys, both general and patent, are age 50 or older. The number of attorneys under age 40 is about 25 percent. Among our career senior executives, over half will become retirement eligible within the next 5 years, and 72 percent of our 46 patent attorneys are now over age 50. These statistics are a clear signal that OGC is facing important force structure challenges similar to those faced by the Navy Department and the Federal Government as a whole.

What we do today to manage our workforce will determine the ability of OGC to provide first-rate legal services to the Department of the Navy in the 21st century. As the head of OGC, recruiting and retaining the best legal talent are top management priorities, but it is even more important that we shape our workforce to ensure both continuity of specialized expertise and the development of the next generation of senior leaders. I intend to give these matters my personal attention and to provide the corporate level guidance and direction necessary to achieve these goals.

---

#### QUESTION SUBMITTED BY SENATOR WAYNE ALLARD

##### CLEAN-UP AT THE COLORADO STATE FAIRGROUNDS

5. Senator ALLARD. Mr. Mora, I would like to call your attention to a matter between the Navy and the Colorado State Fair Authority. The Navy leased land at the Colorado State fairgrounds in Pueblo and in 1946 they had two Reserve Center buildings constructed. Now there is some dispute as to the environmental clean-up of the site, specifically regarding the asbestos contained in the building and who will be paying for clean up. I would certainly appreciate it if you could look into the matter, and ensure the Navy is giving all due accommodations to the matter. The Colorado State Fair is a great institution, but not a rich one, and I would hate for them to be put at a disadvantage.

Mr. MORA. I have inquired into the matter regarding the lease between the Colorado State Fair Authority and the Navy for Reserve Center property at the Colorado State fairgrounds in Pueblo. The Navy is very appreciative of the support and cooperation it received from the Colorado State Fair Authority during the approximate 50-year lease period. It is the Navy's goal to be both a good neighbor in the communities we are located as well as a good steward of the environment. In this regard, I am told that in 1998, prior to expiration of the lease at issue, the Navy spent approximately \$78,000 to remove underground storage tanks, clean up a small arms range, and remove friable asbestos on the leased property. As a result of these actions, the Navy believes the Colorado State Fair Authority received commercially viable and marketable buildings when the lease ended. Apparently, the present issue stems from the request of the Colorado State Fair Authority that the Navy entirely demolish the structures on the formerly leased property so that a parking lot can be built. It is this requested demolition of the buildings by the Colorado State Fair Authority that has raised a question as to whether further remediation is necessary with regard to asbestos containing roofing material that is otherwise in good condition. The roofing material in its present state poses no environmental hazard or risk. Since there is no contractual or legal obligation to demolish the buildings, there is no further remediation the Navy need undertake in this case. It

appears the Navy has fully complied with the terms and conditions of the lease and its obligations under applicable law and there is nothing further the Navy can do to assist the Colorado State Fair Authority in their desire to demolish the buildings.

[The nomination reference of Alberto J. Mora follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Alberto Jose Mora, of Virginia, to be General Counsel of the Department of the Navy, vice Stephen W. Preston.

[The biographical sketch of Alberto J. Mora, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF ALBERTO J. MORA

Alberto J. Mora is currently Of Counsel at the Greenberg Traurig law firm where he specializes in international law. Concurrently, he is the Governor of the Broadcasting Board of Governors and has been in that capacity since 1995.

Mr. Mora was a Partner at the firm of Holland & Knight from 1993 to 1997. Before that he was the General Counsel for the U.S. Information Agency from 1989 to 1993. From 1984 to 1989 he was a Partner at the law firm of Hornsby & Whisenand. Before that he was an Associate at the law firm of Frates, Bienstock, and Sheehe from 1981 to 1984. From 1975 to 1978 he was a Foreign Service Officer in the U.S. Department of State serving in Lisbon, Portugal.

Mr. Mora graduated from Swarthmore College with a B.A. degree in 1974. In 1981 he received his J.D. from the University of Miami School of Law.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Alberto J. Mora in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior

to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Alberto Jose Mora. I was also called "Albert" during my school years.

2. **Position to which nominated:**

General Counsel, Department of the Navy.

3. **Date of nomination:**

June 12, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

April 11, 1952, in Boston, MA.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

I am married to Susan J. Talalay (which is both her married and maiden name).

7. **Names and ages of children:**

Alexander L. T. Mora, age 5.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

(a) St. Joseph High School Jackson, MS, 9/66 to 6/70. I received my high school diploma in June 1970.

(b) Swarthmore College Swarthmore, PA, 9/70 to 6/74. I received my B.A. degree in June 1974.

(c) The University of Miami School of Law Coral Gables, FL, 9/78 to 6/81. I received my J.D. in June 1981.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

(a) Attorney (Of Counsel), Greenberg Traurig, Of Counsel, 800 Connecticut Ave., NW., Suite 500, Washington, DC 20006, 5/97 to present.

(b) Attorney (Partner), Holland & Knight, 2100 Pennsylvania Ave, NW., Suite 300, Washington, DC 20006, 4/93 to 4/97.

(c) Attorney (General Counsel), United States Information Agency, 301 4th Street, SW., Washington, DC 20547, 8/89 to 1/93.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

(a) Governor, U.S. Broadcasting Board of Governors, 330 Independence Avenue, SW., Cohen Building, Room 3360, Washington, DC 20547, 8/95 to present.

(Three times nominated by the President and confirmed by the Senate.)

(b) Foreign Service Officer (Economist), U.S. Department of State, Agriculture Directorate, International Organization Bureau, 2201 C Street, NW., Washington, DC 20520, 8/77 to 8/78.

(c) Foreign Service Officer (Political Officer), U.S. Department of State, U.S. Embassy, Lisbon, Portugal, 4/75 to 7/77.

(d) Foreign Service Officer Trainee, U.S. Department of State, Foreign Service Institute, Rosslyn, VA, 1/75 to 3/75.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

(a) Greenberg Traurig, LLP Of Counsel.

(b) U.S. Broadcasting Board of Governors, Governor.

(c) Radio Free Europe/Radio Liberty, Inc., Director.

(d) Radio Free Asia, Inc., Director.

(e) Farragut Media Group, Inc., Director.

(f) As an attorney, I serve as legal consultant to numerous clients.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.

(a) The Bar of the District of Columbia.

(b) The Bar of the State of Florida.

(c) The Bar for the U.S. District Court for the Southern District of Florida.

(d) The Bar for the Federal District Court of Federal Claims.

(e) The Council on Foreign Relations.

(f) The USIA Alumni Association.

- (g) The Appalachian Society.
- (h) The Air Force Association.
- (i) The Bush/Quayle Association.
- (j) U.S.—Croatia Friendship Association.
- (k) Phi Beta Delta, Honorary Society for International Scholars.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

Vice-Chair, Republican National Committee, Catholic Task Force (1997–present).

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Bob Dole for President, Foreign Policy Advisory Group (1996); The Bush/Quayle Association (1993–present); Republicans Abroad Ambassadors Forum, General Counsel (1995–97).

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Dole for President, 1996—\$1,000.

Ileana Ros-Lehtinen for Congress, 1996—\$100.

Bill McCollum for Congress, 1997—\$100.

Tom Davis for Congress, 1997—\$250.

Ileana Ros-Lehtinen for Congress, 1997—\$100.

George W. Bush Presidential Exploratory Committee, 1999—\$1,000.

Ileana Ros-Lehtinen for Congress, 1999—\$100.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

USIA's Distinguished Honor Award, 1993.

Election to Phi Beta Delta, the Honorary Society for International Scholars, 1992.

Election to the Bar and Gavel Honorary Society, University of Miami School of Law, 1981.

Selection as Editor-in-Chief, *The Lawyer of the Americas, the University of Miami Journal of International Law*, 1981 (a scholarship was also provided along with this selection).

Awarded an Organization of American States Fellowship for the OAS's Seventh Course on International Law, Rio do Janeiro, Brazil, 1980.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

"Statement of Alberto J. Mora on the Cuban Liberty and Democratic (Libertad) Act of 1996, before the Senate Foreign Relations Committee," 104th Cong., 2nd Sess. (July 30, 1996).

The Revpower Dispute: China's Breach of the New York Convention?, *Dispute Resolution in the PRC* (Asia Law & Practice Ltd, 1995).

*Cuba Transition Resource Guide*, International Republican Institute Cuba Transition Committee (Dec. 1995) (collaborative report).

The Case for Strengthening the New York Convention, *International Commercial Litigation* (Oct. 1995).

Saving Fidel, *Comint* (Mar. 1994).

International Exchange Visitor Program Regulatory Reform, *International Educator* (Spring 1993).

Arbitraje Comercial en America Latina, collaborative paper published by the OAS in the Proceedings of the VII Course on International Law (Rio do Janeiro, Brazil, 1981).

Judicial Review of Shipowners and Stevedore Liability Under the Longshoremen's and Harbor Workers' Compensation, Act, 12 Law Amer. 487 (1980).

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

The nominee responded and the information is contained in the committee's executive files.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

ALBERTO J. MORA.

This 18th day of June, 2001.

[The nomination of Alberto J. Mora was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 19, 2001.]

---

[Prepared questions submitted to Diane K. Morales by Chairman Levin prior to the hearing with answers supplied follow:]

*June 15, 2001.*

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed are my answers to the advanced questions that the Senate Armed Services Committee asked me to complete.

Sincerely,

DIANE K. MORALES.

cc: Hon. John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* If confirmed, I will fully support the intent of the reforms and advocate policies that will facilitate accomplishment of joint operations, streamline acquisition management and oversight, and enhance the department’s ability to respond to our 21st century national security.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* The enactment of Goldwater-Nichols significantly improved the organization of the Department of Defense, focused our joint warfighting capabilities, and enhanced the military advice received by the Secretary. However, given the passage of time, I support Secretary Aldridge’s view that it is worthwhile to review the department’s implementation and make appropriate adjustments if needed. In particular, I will emphasize a closer partnership between the acquisition, operations, and support communities and better integration of logistics support throughout the Department.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to

contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

Answer. Yes, I support full implementation of the Goldwater-Nichols reforms and agree with its goals.

#### DUTIES

*Question.* Section 133b of Title 10, United States Code, describes the duties of the Deputy Under Secretary of Defense for Logistics and Materiel Readiness.

Assuming you are confirmed, do you expect that Secretary Rumsfeld will prescribe additional duties for you?

Answer. I do not know of additional duties Secretary Rumsfeld might assign to me.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties and those outlined in the law and applicable DOD directives?

Answer. As President of DMS, Inc. since 1993, I have headed a management services firm focused primarily on defense and commercial logistics. Those management services include policy and program analysis, net assessments, strategic planning, and government relations/legislative analysis. Recent activities include Department of Defense strategic planning (Logistics 2010), information support systems, and best commercial logistics practices.

From 1990 to 1993, I served as the Deputy Assistant Secretary of Defense for Logistics. I managed DOD logistics operations, including the functions of supply/materiel management, maintenance, transportation, energy, international logistics, and all support information systems, commissaries and exchanges. My key accomplishments involved the following: (1) resized DOD inventories, reduced operating costs, and introduced commercial business practices; (2) standardized, streamlined, and integrated logistics policies and procedures for standard systems development; (3) consolidated DOD organizations and missions; and (4) began changing the business culture with total quality management.

In the area of supply/materiel management, we rewrote 80 separate policy documents regarding the supply system life cycle into a single, integrated policy and developed the Inventory Reduction Plan as the vehicle to implement the new policy and save \$18 billion. In maintenance, we developed a business plan to reduce business operations costs from \$13 billion annually in 1990 to \$6.4 billion in 1997 by streamlining processes, personnel, and infrastructure. In transportation, we consolidated wartime and peacetime, common-user and Service-unique transportation functions under a single command. I also revised requirements for lift assets, the appropriate mix of strategic lift, and the augmentation of military assets with commercial assets under the DOD Mobility Requirements Study. In international logistics, I worked with NATO in developing cooperative logistics programs to reduce U.S. costs and to increase "burden-sharing" among other members. I also prepared a Host Nation Support Model Agreement to accelerate logistics support agreements in countries where potential conflicts involving the U.S. might develop.

I believe my experience in both the public and private sectors qualifies me to perform the duties of this position.

*Question.* Do you believe there are any additional steps that you need to take to enhance your expertise to perform these duties?

Answer. Mr. Aldridge has realigned responsibilities within his office to create a Deputy Under Secretary of Defense (Installations and Environment) position that would report to the position for which I have been nominated. In my previous tour at the Pentagon, I had limited involvement in installations and environmental issues. If confirmed, I intend to work closely with Mr. DuBois to fully familiarize myself with these issues.

#### RELATIONSHIPS

*Question.* If confirmed, what would your relationship as Deputy Under Secretary of Defense for Logistics and Materiel Readiness be with each of the following:

The Under Secretary of Defense for Acquisition, Technology, and Logistics?

Answer. If confirmed, I would, as established in DOD Directive 5134.12, serve as the principal staff assistant and advisor to the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD(AT&L)) on logistics and materiel readiness in the Department of Defense.

*Question.* The Deputy Under Secretary of Defense (Installation and Environment)?

Answer. Under the May 29, 2001, realignment within Mr. Aldridge's office, this position would report to the position for which I am nominated. If confirmed, I would work with Mr. Aldridge to appropriately revise DOD Directive 5134.12 to formalize this reporting relationship.

*Question.* The Director of the Defense Logistics Agency?

Answer. If confirmed, I would, as established in DOD Directive 5134.12, exercise authority, direction, and control over the Director, Defense Logistics Agency.

*Question.* Elements of the Military Departments including the Army Materiel Command, the Naval Aviation Systems Command, and the Air Force Materiel Command?

Answer. If confirmed, my relationship with the Military Departments, including those elements specified, would be governed by the duties assigned to the position to which I have been nominated by DOD Directive 5134.12. I would, if confirmed: (1) prescribe policies and procedures for the conduct of logistics, maintenance, materiel readiness, and sustainment support in the Department of Defense, to include supply and transportation; (2) advise and assist the USD(AT&L) in providing guidance to the Secretaries of the Military Departments with respect to logistics, maintenance, materiel readiness, and sustainment support in the Department of Defense; (3) monitor and review all logistics, maintenance, materiel readiness, and sustainment support programs within the Department of Defense; (4) participate in the DOD Planning, Programming, and Budgeting System with respect to assigned areas of responsibilities; and perform such other duties as the USD(AT&L) may prescribe.

#### MAJOR CHALLENGES

*Question.* In your view, what are the major challenges confronting the next Deputy Under Secretary of Defense for Logistics and Materiel Readiness? If confirmed, what plans do you have for addressing these challenges?

Answer. As I understand it, the major challenge is to continue to increase the performance of the logistics system while reducing costs and improving the readiness of our forces. If confirmed, I will conduct a comprehensive analysis of the logistics system, from the "foxhole to the factory," to identify those capabilities and policies that are required to deliver and sustain the necessary combat capability required by the new military strategy. The capability analysis would include our mobility assets, depot maintenance assets, and the use of modern commercial technology. My policy review would include supply chain integration operations at the national level and include end to end distribution management responsibility for both the sustainment and deployment of our forces. The focus of the review would be to identify those investments and policy changes required to counter any threat to our Nation during the 21st century.

#### RESPONSIBILITY FOR INSTALLATIONS AND ENVIRONMENTAL ISSUES

*Question.* On May 29, 2001, the Under Secretary of Defense for Acquisition, Technology and Logistics realigned responsibilities in his office and created a Deputy Under Secretary of Defense (Installations and Environment) position that would report to the Deputy Under Secretary of Defense (Logistics and Materiel Readiness) position for which you have been nominated.

If confirmed, will you be responsible for oversight of installations and environmental issues?

Answer. Yes, if confirmed, oversight of installations and environmental issues would be part of my portfolio. The Under Secretary of Defense for Acquisition, Technology and Logistics, Mr. Aldridge, envisions his organization operating with two direct reporting Deputy Under Secretaries, one for Acquisition and Technology issues and one for Logistics, Installations, and Material Readiness issues. Mr. Wynne has been nominated for the Acquisition and Technology portfolio and I have been nominated for the Installations and Logistics portfolio.

*Question.* What role do you expect to play in issues such as family housing privatization, military construction, base closure policy, environmental policy, and policies for resolving conflicts over the use of land, water and airspace between military bases and the surrounding civilian populations?

Answer. I envision my role in overseeing installations and environmental issues as one of providing broad general guidelines to the Deputy Under Secretary of Defense for Installations and Environment, Mr. DuBois, and reviewing policy and work products from Installations and Environment which require higher level review. I anticipate that over the course of time that would involve the broad spectrum of installations and environmental issues, as all of the functions you listed have important national implications.

## ACHIEVING BEST BUSINESS PRACTICES

*Question.* What is your assessment of the progress the Department of Defense has made since you last served in the Department in 1993 in improving its business practices in the areas for which the Deputy Under Secretary of Defense (Logistics and Materiel Readiness) is responsible, such as supply management, logistics systems, and maintenance procedures, and in the application of information technology to these functions?

*Answer.* My assessment is that the Department of Defense has made considerable progress since 1993 in improving its business practices. For example, I am impressed by the degree to which "best practices" from the private sector have been applied to commercial items such as medical supplies, clothing and subsistence, and common hardware items. The adoption of commercial logistics vehicles such as prime vendor, combined with the application of modern information technology in the form of electronic ordering, has resulted in better customer support (faster with a greater variety of state-of-the-art commercial items) without reliance on unnecessary DOD infrastructure (warehouses, etc.).

*Question.* Where do you believe additional improvements are most needed and what steps would you plan to take to bring about change in those areas?

*Answer.* My view is that the Department is at a crucial point in improving its business practices. If confirmed, I would undertake, in consultation with the Military Departments and the Director of the Defense Logistics Agency, an intensive assessment of the "lessons learned" from the progress of the past decade in improving the Department's business practices, and developing a plan to build on that progress and expand the successes in commodities such as subsistence, medical items, and common hardware items to more complex areas such as fighter aircraft parts.

## DEFENSE ACQUISITION REGULATIONS

*Question.* Are you familiar with the recent revisions of DOD Directive 5000.1 and DOD Instruction 5000.2 that set forth DOD policy on acquisition and support of major weapons systems, and if so, what are your views on these policies as they relate to the areas for which the Deputy Under Secretary of Defense for Logistics and Materiel Readiness is responsible including logistics, weapons system support, and supply chains?

*Answer.* Yes, I am familiar with the recent revisions of DOD Directive 5000.1 and DOD Instruction 5000.2.

*Question.* Do you support these revisions?

*Answer.* I strongly support the recent revisions, particularly the increased emphasis on development of effective sustainment strategies for life cycle support. Section 2.8 of DOD 5000.2 Regulation contains guidance on planning for full life-cycle product support management that is built upon appropriate best practices and is focused on outcomes, such as mission availability and readiness.

*Question.* Are there any additional changes that you recommend in the current policies?

*Answer.* At this time, I would not offer any recommendations for changes to current policy. If confirmed, I will evaluate the effectiveness of current policy through program oversight on the Defense Acquisition Board and offer potential adjustments to Under Secretary Aldridge, if appropriate.

## PRICING ISSUES

*Question.* Over the last several years, the Department of Defense Inspector General has issued a number of reports that have been critical of the pricing of spare and repair parts purchased by the Defense Logistics Agency.

Are you aware of these reports and the concerns that they have raised about the pricing of spare and repair parts?

*Answer.* I am aware of the concerns raised by the Inspector General about the pricing of spare and repair parts under vehicles such as the Defense Logistics Agency's "corporate contracting" initiative. My understanding is that challenges were identified in terms of item pricing and the value of inventory management services.

*Question.* What are your views as to how these concerns should be addressed?

*Answer.* My view is that the Department of Defense should use the "lessons learned" from these test programs to improve future efforts before expanding commercial logistics practices into more challenging areas such as aircraft.

## LOGISTICS AND MATERIEL READINESS

*Question.* The Under Secretary of Defense for Acquisition, Technology, and Logistics will be responsible for developing plans for the complete life cycle of military

weapon systems from initial procurement to the maintenance of those systems decades later. There has been some concern expressed that this leads to decisions where long-term maintenance quality and efficiency are sacrificed to achieve reduced initial procurement costs. As a result of this concern, the position of Deputy Under Secretary of Defense for Logistics and Materiel Readiness was created to ensure that life cycle maintenance was given proper consideration during the acquisition process.

If confirmed what actions will you take to ensure that logistics and materiel readiness are adequately considered and protected when acquisition decisions are made on all of the Departments weapon systems?

Answer. The issue of trading off logistics life cycle considerations during weapon system design and development is still a challenge, although initiatives in recent years have enhanced attention to long-term logistics considerations. Much of this improvement is associated with the strengthened integration of acquisition and logistics functions within the Office of the Secretary of Defense, and particularly in the Military Departments. Today, emphasis on life cycle cost reduction is greater than ever. Logistics is now viewed as a performance element during the systems engineering process. Finally, the integrated process team (IPT) structure of managing the diverse elements of weapon system acquisition and sustainment has provided a very effective environment for improved attention to life cycle logistics requirements and issues.

It is in this last area of IPT involvement where, if confirmed, I will most vigorously take action to insure that logistics, sustainment, and readiness priorities are maintained. The most recent DOD 5000 series acquisition policy, just signed by Under Secretary Aldridge on June 10, 2001, for the first time makes the Deputy Under Secretary of Defense for Logistics and Materiel Readiness a mandatory member of the Defense Acquisition Board (DAB). The office of the DUSD(L&MR) is also represented by an executive on the Overarching IPT (OIPT), which prepares for the DAB decision. Recently, the Office of the Deputy Under Secretary of Defense for Logistics and Materiel Readiness has established an office that engages in all weapon system program IPT efforts to insure that life cycle logistics requirements are fully addressed.

#### IMPACT OF LOGISTICS DECISIONS ON READINESS

*Question.* If confirmed, what steps do you plan to take to coordinate logistics decisions with the Under Secretary of Defense for Personnel and Readiness and the military services to make sure that the potential impact on readiness is taken into account when decisions on logistics policies are made?

Answer. Readiness is the highest priority of the Department of Defense and is the product of a complex interaction of inputs, i.e., materiel readiness, personnel readiness and training readiness. Materiel Readiness must be viewed in the total context and is impacted by the availability of people to repair equipment, i.e., an element of Personnel Readiness. Training Readiness is impacted by the availability of equipment on which to train, i.e., an element of Materiel Readiness. Personnel Readiness, i.e., the availability of trained people, is the consequence of recruiting and retention.

Because of these interactions, a high state of Materiel Readiness can only be realized by strong partnerships and interactions with "stakeholders" in the Services, Joint Staff, and elsewhere in the Office of the Secretary of Defense. If confirmed, I will ensure there are strong partnerships with the Under Secretary of Defense for Personnel and Readiness and the Services so that logistics decisions intended to maximize Materiel Readiness are considered within the competing constraints of overall readiness.

#### ACQUISITION WORKFORCE

*Question.* During the post-Cold War drawdown there has been considerable pressure to reduce acquisition personnel. The Department's Acquisition Workforce 2005 Task Force has reported that DOD will be faced with a significant demographic challenge as 50 percent of the acquisition workforce will be eligible to retire in the next 5 years. In DOD maintenance depots, for example, the size of the workforce has declined by approximately 50 percent over the past decade, while the average age of the workforce that remains is now over 47 years.

Are you concerned that these reductions have created an unbalanced workforce?

Answer. Yes, I am very concerned about the effects of the reductions. During the decade of the 1990s the Acquisition, Technology and Logistics workforce underwent significant reductions conducted in accordance with Office of Personnel Management merit principles that adversely impacted those with less seniority, largely the younger workforce population. Additionally, there has been little recruitment or hir-

ing effort over the past 10 years due to downsizing efforts. One consequence is that the workforce has become older and is no longer evenly distributed across grades and year groups. As the Department continues to emphasize contracting out and competitive sourcing, the skills, training and experience of the acquisition workforce will be critical in effectively managing acquisition, technology and logistics efforts.

*Question.* What steps should the Department of Defense take to revitalize the civilian acquisition workforce?

*Answer.* As I understand it, there are already plans in place within the Department to revitalize the Acquisition, Technology and Logistics workforce. These high priority initiatives were published in October 2000 in the Acquisition Workforce 2005 Task Force Final Report. I look forward to studying this critical issue further if I am confirmed.

*Question.* Are there any additional steps that you would recommend taking to enhance the workforce in DOD's maintenance, supply, and distribution depots?

*Answer.* Prior to advocating any detailed proposals for individual logistics functional specialties, if confirmed, I would want to be thoroughly briefed on the specific issues and problems.

#### LOGISTICS TRANSFORMATION AND PRIME VENDOR SUPPORT

*Question.* Over the last 10 years, the Defense Logistics Agency has placed an increasing emphasis on approaches such as prime vendor agreements, virtual prime vendor agreements, and direct vendor delivery to streamline the Department's logistics systems for commercial items such as medical supplies, clothing and subsistence, and common hardware items.

Do you support commercial practices such as these that rely increasingly on the private sector to meet the Department's logistics need?

*Answer.* I strongly support the use of commercial practices in defense logistics, where it makes sense from a warfighter's perspective and I look forward in working this issue upon confirmation.

*Question.* Do you support the expansion of such commercial logistics practices to the delivery of non-commercial items, such as aircraft spare parts?

*Answer.* The challenge here is defense-unique items, such as fighter aircraft parts, which tend to be low volume, high cost items, often provided by sole-source manufacturers. DLA has recently tested commercial practices in support of weapons programs such as the Air Force C-130 as well as "Corporate Contracting" for classes of items with numerous industrial providers. The early results of these tests appear promising; however, some challenges were identified in terms of item pricing and the value of inventory management services. I believe that DOD should continue the adoption of innovative support methods, while using the "lessons learned" from the test programs to improve future efforts.

#### PRIME VENDOR SUPPORT

*Question.* There has been concern expressed regarding the proposals to adopt prime vendor support for weapon systems, particularly when that support would be provided by the original equipment manufacturer. There is concern that these relationships will lead to a non-competitive environment where our national security requirements might not be met at the lowest cost.

What actions must the Department of Defense take to ensure that its pursuit of prime vendor support arrangements does not lead to a non-competitive environment?

*Answer.* I fully agree with the committee's concerns over controlling cost in a non-competitive environment. Where contractor support is an option, prime vendor strategies must be examined in concert with other support options. Prime vendor support is but one type of weapon system support strategy being implemented today. Other strategies include third-party logistics concepts, partnerships, and contractor and organic support approaches with performance incentives. All of these support strategies include tenets of competition—marketplace competition, public-private competition, or a business case analysis to determine the best value support provider.

If confirmed, I will encourage the Department to place a greater emphasis on performance-based logistics (PBL) strategies. These can work as incentives to both public and private sector support providers. With private sector providers, these strategies can involve several contract options that are exercisable based on performance and cost. The contracts also include significant positive and negative incentives for cost and performance. These approaches stress the use of effective competition at the subcontract and supplier level (where most of the costs are) to maintain cost control. There are also examples of performance-based organic support providers

and integrators (e.g., Army HEMTT, USAF B-1) that can provide effective leverage on performance improvement and cost reduction.

#### COMPETITIVE SOURCING

*Question.* Over the past several years, DOD has increased its reliance on the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort while others have expressed concern that core activities are being jeopardized by reducing our reliance on military personnel and civilian employees of the Federal Government.

What approach would you recommend to balance the need to maintain necessary capabilities in the government workforce, including the knowledge necessary to be a "smart buyer," with the savings that may be available from outsourcing?

*Answer.* If confirmed, I recommend furthering efforts within DOD to refine the Federal Activities Inventory Reform (FAIR) inventory. In order to comply with the FAIR Act of 1998, an annual inventory of all Defense employee positions is performed in which they are categorized into three broad categories. A position is recognized as inherently government when it is part of a core activity so intimately related to the public interest as to require performance by Federal Government employees. Such positions are never candidates for competitive sourcing. A position may also be coded as commercial in nature and suitable for review for competitive sourcing. Finally a position may be coded as commercial in nature, but exempt from competition for one of several reasons, for example fire fighters are precluded from competitive sourcing due to 10 U.S.C. 2465. An accurate FAIR inventory identifies those positions that could be performed by the private sector without eroding necessary government workforce capabilities.

*Question.* Do you support the principle of public-private competition for the programs for which the Deputy Under Secretary of Defense for Logistics and Materiel Readiness is responsible, including depot-level maintenance of equipment?

*Answer.* Yes, to the extent possible under law. I believe the forces of competition drive identification of inefficiencies regardless of which offer is determined to be most beneficial.

*Question.* Do you believe that public-private competition results in significant savings to the Department of Defense regardless of which side wins the competition?

*Answer.* Yes. Every independent study performed on this issue that I am aware of has concluded that significant savings are achieved.

*Question.* OMB Circular A-76, which establishes the guidelines for outsourcing most government functions, is slated for scrutiny by a congressionally mandated panel of government and private experts in this area. The panel, chaired by the Comptroller General, is scheduled to report to Congress with specific policy and legislative reforms and recommendations for changing the way the government conducts out-sourcing decisions and implements them.

What is your view of the current A-76 process?

*Answer.* The process is lengthy, complex and frustrating for all involved. That very frustration is, in part, an outgrowth of a process which has evolved over time to address legitimate concerns to establish a level playing field and to protect the interests of all: the government employee, the private sector competitors and the taxpayer.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

*Answer.* The greatest part of the cost savings could perhaps be achieved by simply privatizing activities that we determine are suitable for performance by the private sector. This would take advantage of the forces of competition that already exist in the commercial marketplace, and which we enjoy in contracts that already exist and which are periodically re-competed.

Over the past several years the Department of Defense has increased its reliance on the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort, believing that outsourcing will yield significant savings that can be used to modernize the military. Unfortunately, previous administrations have over-estimated potential savings, which resulted in the need for supplemental appropriations to restore funds to accounts which were decremented. Furthermore, the Department has been faced with the possibility of restricting operations because of between labor and contractors.

*Question.* If confirmed, how would you structure contracts on work that is outsourced to ensure that the promised savings are achieved, and ensure that labor disputes do not disrupt essential operations?

*Answer.* The savings are established at the time the contract is awarded. The decision to contract for the work is only made when the contracted price reflects sav-

ings at least 10 percent greater than could have been achieved through government performance. Existing contract administration procedures enforce contract compliance on all contracts, to include those that are developed as part of an A-76 cost comparison process.

With regard to potential labor disputes, the Defense Department follows all regulatory requirements with regard to labor rights. Private sector contractors have provided services to DOD for many years. We minimize potential disruption to essential operations by retaining a government workforce to perform all inherently governmental activities.

#### JOINT LOGISTICS

*Question.* One of the most expensive and challenging military missions is the delivery of logistics support to the warfighter. While we have made great strides over the last 15 years, our current military structure continues the existence of a number of separate logistics systems for each of the military services.

Do you believe that more opportunities exist to consolidate our logistics systems in a way that will continue to serve the needs of each military service, while increasing the efficiency and effectiveness of the system as a whole?

*Answer.* First of all, I believe DOD's logistics systems primarily must be effective from a military requirement point of view, and they must be improved to meet the needs of an agile, highly lethal force. A significant part of that military effectiveness is the DOD's ability to rapidly source and distribute required material, without unnecessary hand-offs and delays. To reduce multiple hand-offs, some consolidation may be appropriate. If confirmed, I will assess end-to-end DOD logistics systems to enhance responsiveness to the military requirements inherent in the National Defense Strategy. If appropriate, I will identify areas for consolidation and share those areas with this committee.

*Question.* What elements of the logistics system do you believe should be available for privatization, and what elements do you believe need to be retained within the Department of Defense?

*Answer.* In terms of privatization, I believe the DOD should continue to draw upon the robust strength of our industrial sector where that sector can support our military mission and meet our military requirements. There is nothing inherently governmental about running a warehouse, a distribution center, or operating a business information system. On the other hand, DOD must retain sufficient technical and management expertise to fulfill our defense mission and to appropriately oversee private sector providers. If confirmed, I intend to assess logistics privatization efforts in context of desired outcomes and the national defense strategy. I would then share the results of that review with this committee.

#### PUBLIC-PRIVATE PARTNERSHIPS

*Question.* Congress has encouraged the Department of Defense to establish partnerships between its equipment maintenance depots and private industry.

What are your views on the extent to which the public and private sectors can and should work together?

*Answer.* I believe that public-private partnering for depot maintenance support is very beneficial to both the Department and the private sector. It allows each sector to take advantage of its strengths, it can potentially reduce costs, it can result in better capacity utilization, and it allows each sector to learn the best practices of the other. As long as it makes good sense and complies with the law, I would not want to limit the use of public-private partnering.

*Question.* Do you have any recommendations for facilitating such partnerships?

*Answer.* In recent years, the Department has undertaken several efforts to document the extent of public-private partnering for depot maintenance support. Indications are that the amount of partnering is quite extensive. So it appears that existing authorities are working. If confirmed, I would like to take a more detailed look at perceived issues before recommending any specific changes.

#### TECHNICAL DATA RIGHTS

*Question.* Do you believe the government should purchase the technical data rights for new weapons systems to the extent necessary to provide the government the option of competing the life cycle maintenance of that weapons system among private sector offerors or performing such maintenance in government facilities as the need might be?

*Answer.* I understand that the current policy states when an item is developed exclusively at the Government expense, we have "unlimited rights" to the data. When an item is developed with mixed (Government and Industry) funding the gov-

ernment has "government purpose rights" to the data for 5 years or other period as negotiated. It is only when an item is developed exclusively at private expense that it needs to negotiate for data rights. I believe the decision to purchase technical data rights needs to be decided on a case-by-case basis depending on a number of different factors. Also, I believe factors that should be considered include: the cost of the technical data rights; expected maintenance costs for the various alternatives; and whether maintenance of the weapon system is so critical that the government needs to maintain a capability to perform it.

#### MAINTENANCE OF NEW WEAPONS SYSTEMS

*Question.* When new weapons systems enter the inventory, should decisions on whether life cycle maintenance of those systems will be performed in the private sector, the public sector, or some combination of the two be made on the basis of lowest cost and best value to the government rather on a presumption that the source of repair should always be public or always be private?

*Answer.* Many factors enter into the decision on which sector should provide life cycle support for a weapon system. These include requirements for organic core maintenance capabilities and best value. I believe certain capabilities must be retained in the public sector, most certainly including organizational maintenance for deployed combat systems. Depending on applicable law and best value, private sector support may offer advantages to the government. In many cases it may be a combination of public and private sector support. I believe each case has unique considerations that must be considered.

*Question.* At what point in the life cycle of a new weapons system do you believe a decision on the long-term maintenance strategy for that system should be made?

*Answer.* I believe this is an evolutionary decision, but a detailed plan needs to be defined by Milestone C, which is the commitment decision for the production and deployment phase.

#### POLICY ON CORE MAINTENANCE ISSUES

*Question.* Is the Department currently reviewing existing policies on what policy skills and functions need to be maintained in government facilities? If so, when will the results of those reviews be provided to Congress?

*Answer.* I have not studied any ongoing review that the Department might be conducting on policy as to which core maintenance skills and functions must be retained in government facilities. If confirmed, I would need to be thoroughly briefed on any such effort to fully appreciate its findings before developing.

#### DEPOT MAINTENANCE POLICY

*Question.* Section 2466 of Title 10, United States Code, requires that 50 percent of the funds made available in any given fiscal year be used for depot maintenance performed by employees of the Department of Defense. Section 2464 of Title 10, United States Code, requires that the Department of Defense maintain a core logistics capability that is government-owned and government operated. These requirements are intended to maintain ready and reliable depot maintenance skills and the capacity to support the needs of the military services during periods of both peace and conflict.

Do you believe that we need to maintain an in-house capability to perform depot maintenance on those weapon systems necessary to enable the Armed Forces to fulfill the strategic and contingency plans prepared by the Chairman of the Joint Chiefs of Staff?

*Answer.* I believe that those depot maintenance capabilities that are essential to the national defense that cannot reliably be provided by the private sector must be maintained in the public sector. If confirmed, I have every intention of complying with the law, including these provisions of Title 10.

*Question.* Section 2469 also requires that the Department maintain the capability to perform depot maintenance on new weapon systems within the public depots not later than 4 years after initial operational capability. It appears that the Department of Defense has been contracting with private sector sources for the depot maintenance on all new weapon systems rather than ensuring that some enter the public depot system.

Do you believe that we can maintain modern and reliable public depots if we do not provide for them to perform work on the new weapon systems?

*Answer.* It is section 2464 that provides for having capability not later than 4 years after initial operational capability. The key concept here is capability. When the current language requiring the establishment of capabilities within 4 years of initial operating capability was enacted, the conference committee agreed that it

was not necessary that all work for systems required for the war plan be performed in public facilities. Rather, it is the capability to perform the work that must be retained and that the facilities be operated on a cost-effective basis. I believe that public depots require sufficient workload, including new weapon systems, in the respective core capabilities in order to sustain competency and operate efficiently. Workloads beyond this requirement can be considered for sourcing based on best value over the life cycle of the system.

*Question.* If confirmed, will you ensure that new weapon systems are inserted into the public depots within 4 year of their IOC as required by law?

*Answer.* As stated above, the law requires the establishment of capabilities. Weapon systems are not core. Core is skills, equipment, and facilities. If confirmed, I will endeavor to ensure that required skills, equipment, and facilities are established to support core capability requirements, as required by law.

*Question.* Section 2474 of Title 10, United States Code, requires the Secretary of Defense to designate the public depots as Centers of Industrial and Technical Excellence in their core competencies and provide authority for the establishment of public private partnerships for the performance of depot maintenance at these centers. There have been proposals to enhance this authority by ensuring the depot will be held accountable when performing work as a subcontractor, and by allowing depot maintenance work performed by private sector entities at these centers to be counted toward the public share of 50/50.

In light of the requirements to maintain a core depot capability, what actions do you believe should be taken to improve the efficiency of these facilities and foster cooperation between the public and private sector?

*Answer.* Section 2474 was completely revised by the National Defense Authorization Act for Fiscal Year 2001. It provided extensive new authorities for the Department to enter into public-private partnerships, lease out under-utilized capacity, and sell articles and services to the private sector. If confirmed, I would want to determine the impact of these new authorities before proposing additional measures to foster public-private cooperation. The Department has in place a number of programs to improve the efficiency of depot maintenance facilities, including the capital purchase program and the military construction program. Because of the extremely austere funding environment the Department has faced in recent years, many high priority requirements have not been funded. Before advocating any specific measures, if confirmed, I would want to conduct a detailed review of requirements.

Section 332 of the Senate version of the National Defense Authorization Act for Fiscal Year 2001 would allow the military services to lease out excess capacity in the military's industrial facilities to private business. It would allow the private sector to hire these facilities as subcontractors, if they chose to do so, and the work would not interfere with military requirements. The revenues generated through lease of excess capacity or through work for the private sector would be used to offset the overhead costs of these facilities thus reducing the burden on the Department of Defense and the American taxpayer.

*Question.* Do you believe that the services should be permitted to pursue these initiatives if they choose to do so?

*Answer.* Section 332 of the Senate version of the National Defense Authorization Act for Fiscal Year 2001 became section 341 of the enacted law. I fully support the law as enacted. I support use by the Services of these authorities when it is in the best interests of the Department and makes sound business sense.

*Question.* One of the challenges to the efficiency of the public depots is the fact that the facilities in which the maintenance is conducted is relatively old and poorly designed for the workloads of the modern military. This is particularly true of the Air Logistics Centers, where maintenance on large jet aircraft is being conducted in facilities that were built to produce World War II era bombers. Air Force Materiel Command has developed a plan to replace these facilities with modern maintenance hangers.

If confirmed, will you work to ensure that we modernize and maintain our public facilities so that they are able to efficiently perform their maintenance responsibilities?

*Answer.* It is my understanding that the Air Force is still in the process of developing a long-term strategy for its depots. Though a draft of the strategy is approaching completion, it has neither been reviewed or approved by the Secretary of the Air Force nor has it been shared with anyone in the Office of the Secretary of Defense. If confirmed, I will thoroughly review requirements for modernization of public sector depot maintenance facilities.

## MOVEMENT OF HOUSEHOLD GOODS

*Question.* The Department of Defense is currently pursuing three pilot programs to improve the process whereby the household goods of military service members are moved from one duty station to another.

What is the current status of these pilot programs?

*Answer.* I am aware of three pilot programs; The Military Traffic Management Command (MTMC) Pilot; the Sailor Arranged Move (SAM) program and the Full Service Moving Project (FSMP). I am also aware that DOD's objective is to evaluate the results of all three pilots to determine the best provisions of a reengineered program for implementation throughout the Department, and if confirmed, I will evaluate the status and results of these programs.

*Question.* Are they demonstrating improved moving service for our military families?

*Answer.* If confirmed I will be thoroughly briefed on the specific issues and problems and will provide you detailed information on the programs.

## BASE REALIGNMENT AND CLOSURE

*Question.* Over the past several years, members of the Joint Chiefs of Staff have testified that there is excess defense infrastructure and requested Congress to authorize another round of base closure. The previous administration insisted that another round of base closures is needed to streamline the defense budget and to shift resources into personnel and weapons procurement. This administration has also called for the authorization of another round of BRAC.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* I believe that an intuitive case, at least, can be made for further initiatives to reduce capacity, because I believe forces have been reduced more than bases. Only a comprehensive analysis could reveal where this excess capacity may exist. However, I also believe that simply eliminating excess capacity is only one part of the issue. It should be even more important for the DOD to review how its bases can be restructured to more efficiently support force structure and facilitate new ways of doing business.

*Question.* Would you provide a list of those facilities for congressional consideration absent the authorization of another round of base closures?

*Answer.* I have no such list. My experience tells me that only a comprehensive analysis could provide that detail.

*Question.* What is your view about another round of BRAC limited to where excess capacity exists?

*Answer.* Again, only a comprehensive analysis can reveal where excess capacity exists. I also believe that even if that analysis were completed, restricting future initiatives to those locations would preclude the DOD from looking at and rationalizing its entire base structure.

## ENVIRONMENTAL ISSUES

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment issues. These include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, and the assignment of radio frequency spectrum away from the Department of Defense.

In your opinion, how serious are these problems for the Department?

*Answer.* This is a critical training readiness issue. Historically, individual ranges address their own specific encroachment issues, most often on an ad hoc basis. I have observed that the Department has won some of these battles, and lost others. In the aggregate it appears the DOD is losing ground, sometimes literally. The complexity of issues involving Vieques, for example, illustrates just how serious these problems are and how challenging they are to address.

The myriad forms of encroachment that face the DOD and our ranges threaten to complicate, and in some cases severely restrict, the Department's ability to conduct critical testing and training. The overall trends are adverse, because the number of external pressures is increasing, and the readiness impacts are growing. This is why I believe the Department must begin to address these issues in a much more comprehensive and systematic fashion. It will also be important to work with regulators, special interests, other Federal agencies, and communities in order to clearly define the issues from all viewpoints and to reach mutually acceptable solutions, whenever possible.

*Question.* If confirmed, what role do you expect to play in addressing these challenges and what actions would you propose to take to address them?

*Answer.* I understand that the Department is addressing the wide-ranging issues of encroachment and range sustainability identified by the Senior Readiness Oversight Council (SROC). I believe the DOD strategy for range sustainment should include a comprehensive sustainability framework that addresses the test and training mission, regulatory requirements, community support, and the range capabilities used to support the mission. The strategy should aid in identifying problems needing attention, both short and long-term, and whether it should be a local, regional, national, or a combined response. If confirmed, I expect my role in developing that strategy would be significant.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action and those that will be out of compliance before the next budget cycle.

Would you agree that continuing funding for these types of environmental compliance areas is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

*Answer.* Yes. Operating in an environmentally sound manner is a major factor in maintaining good relationships with the regulatory authorities as well as the communities that surround our military bases. DOD personnel also reside in those very same communities. In addition, operating in an environmentally sound manner is more cost effective than having to correct the effects of unsound practices at a later date.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

*Answer.* No. I believe the Department of Defense should not be exempt from the application of the environmental laws. DOD should be held to the same standards. Environmental laws are constructed to protect human health and the environment, including the men, women, and children who work and live on Department of Defense installations. Congress has included clauses allowing the President to waive requirements of environmental laws when needed to protect national security. However, I do not believe the Department would ask the President to waive a requirement lightly.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that Federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

*Answer.* Yes. I support the basic principles of the Federal Facility Compliance Act, signed by President George H. W. Bush. Environmental laws are part of the cost of doing business for every civilian community and private industrial facility.

*Question.* The Department of Defense faces a bill for the cleanup of unexploded ordnance (UXO) that has been estimated to be at least in the tens of billions of dollars, and could be in the hundreds of billions of dollars. At current funding levels it has been estimated that it could take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

*Answer.* I cannot give you a recommended time frame for the cleanup of UXO today. That's something I'll have to look into, if confirmed.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department's long-term clean-up liability (and the time required to complete such clean-up)?

*Answer.* Yes. Improvements in technology for any endeavor usually effects greater efficiencies. I would expect that increased investments in UXO remediation technologies would lead to more cost-effective and timely cleanup of DOD sites.

*Question.* If confirmed, what actions will you propose to ensure that encroachment does not prevent the Armed Forces from effectively training and operating both at home and abroad?

*Answer.* Increasingly, public pressure to limit range use is fueled by concerns over safety, noise, and environmental impacts generated by the use of military munitions in testing and training. Therefore, I believe that sound management of UXO should figure prominently in the Department's efforts to address range sustainability and encroachment issues identified by the Senior Readiness Oversight Council (SROC), and if confirmed, I will work diligently to reduce the impact of encroachment on training.

*Question.* At what point will the Department have baseline data sufficient to provide a legitimate estimate of the bill for the cleanup of unexploded ordnance?

Answer. I would have to look into that in more detail, if confirmed. At this point, I do not have the information to give you an answer.

*Question.* Of particular concern is the cost and operational impact of environmental constraints. Some of the service chiefs have informed us that they spend more money each year complying with environmental regulations than they spend on training. We have seen in visits to military installations, the difficulty caused by compliance with environmental regulations on the ability of our military to train and operate today.

What are your views regarding the prospect of reducing the cost to the Department of environmental compliance?

Answer. I believe that the Department can continue to reduce the cost of environmental compliance by: (1) prudent investments in pollution prevention efforts and technology; and (2) working with regulators on a common sense approach to implementing existing laws and executive orders.

*Question.* Do you believe that there may be legitimate national security interests that require regulators to make environmental compliance allowances to preserve such interests for the Department of Defense?

Answer. Yes. I believe that in certain cases it might make sense for regulators to make allowances to preserve legitimate national security interests.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Under Secretary of Defense for Acquisition, Technology and Logistics?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### INSTALLATION READINESS

1. Senator THURMOND. Ms. Morales, installation readiness is one of the more challenging issues that you will face if confirmed as the Deputy Under Secretary for Logistics and Materiel Readiness. As you may know, due to the underfunding of the real property maintenance accounts, the majority of installations are rated C-3 or below. What in your personal view is a realistic approach toward resolving this significant issue?

Ms. MORALES. Installation readiness is one of the more challenging issues that I will address if confirmed. Three simultaneous steps are required to reduce the number of C-3 and C-4 facilities. First, DOD must fully sustain our facility assets, to prevent deterioration and maximize service life. Second, DOD must establish a stable and focused program to modernize and replace our facilities, using a combination of O&M and military construction funds, to keep up with evolving standards and new technologies. I agree with Secretary Rumsfeld and General Shelton, who have stated in their testimony that DOD must tie this recapitalization investment to the expected service life of our assets, which is conservatively estimated to average about 67 years. Finally, DOD must continue to dispose of obsolete assets, so they do not drain away resources we need for sustainment, restoration, and modernization of our remaining facilities.

##### HOUSING PRIVATIZATION

2. Senator THURMOND. Ms. Morales, as you may know the Department is counting on the housing privatization initiative as the solution to resolving the quality of the military housing problem. Unfortunately, the new leadership appears to be under

the impression that privatization is the final solution to the issue. In reality, it represents only a part of the total solution since there are installations at which the housing cannot be privatized and normal military family housing construction must be funded. Are you committed to the total family housing solution and not solely to the privatization effort?

Ms. MORALES. The Department is committed to a total family housing solution. The quality of housing for Service members and their families continues to be a critical element in supporting and retaining the high caliber personnel who make our armed forces the best in the world. But the majority of our military housing is old, below contemporary standards, and in need of extensive repair. Accordingly, the President and Secretary Rumsfeld have made improving housing one of their top priorities.

The military housing privatization initiative is designed to support the Department's ongoing policy to have our Service members live in private housing. Approximately 60–70 percent of our military in the United States (CONUS) reside off base in private housing. The military services own and maintain housing where the private sector does not provide adequate housing for Service members. This is usually where housing is substandard or not affordable to our Service members. In testimony before various congressional committees over the last few years the Department has laid out a strategy to address this area—which is to aggressively pursue a major 3-prong approach to benefit all Service members and improve their quality of life: (1) Increasing housing allowances to eliminate out-of-pocket costs paid by Service members for private sector housing in the United States. Higher basic allowances for housing (BAH) will help members who live off base to afford good quality housing. Both the quality and the availability of these off base housing options will immediately increase; (2) Strategically placing housing privatization projects where analyses have shown a greater housing requirement than the market can support. Higher allowances for housing will increase and enhance housing privatization, further improving Service member access to quality housing. Privatization is intended to enable the military services to revitalize their inventories of inadequate housing by leveraging appropriations with private capital. Under current privatization policy, the services must leverage appropriations to get at least three times the housing they would get under traditional military construction. In practice, the services have leveraged appropriations an average of six times; and (3) Maintaining Military Construction funding. The combination of increased allowances and continued use of privatization, where appropriate, will permit more efficient use of current military construction funding.

Given the demands placed on the Department's budget, and the Secretary's new initiatives, we believe that privatization will help the Department reach the goal of revitalizing all the military services' inadequate housing (approximately 180,000 units) by the year 2010. Under housing privatization, funding not required at one installation, is used to accelerate housing revitalization at another installation. This allows the Federal taxpayers dollars to be stretched farther and allows for a balanced approach between Military Construction funding and privatization. The leveraging through privatization is essential to achieve our goal of 2010, but where privatization is not viable; military construction funding will be requested.

3. Senator THURMOND. Ms. Morales, in this era of high utility costs, does it make sense to continue the Department's efforts to privatize the utility infrastructure on defense installations?

Ms. MORALES. Yes, because today's high utility costs relate primarily to the commodity costs (electricity or natural gas) while our policy to privatize utility infrastructure is for the ownership, operation, and maintenance of actual utility distribution systems (i.e., the pipes, poles, wires, and plants). Our policy is to privatize utility distribution systems only when it is economically feasible to do so and when the system has not otherwise been exempted due to unique mission or security reasons. Parties potentially interested in bidding on our systems may not necessarily be the same as those selling us the commodity. There are normally separate utility commodity contracts for electricity and natural gas. The ownership, operation, and maintenance of utility distribution systems will generally be separate from the installations' commodity contracts. The economics of privatization of the distribution systems may be affected by the commodity sale situation, but our policy indicates that these factors be considered in the economic feasibility analysis required by Title 10, section 2688.

## QUESTION SUBMITTED BY SENATOR BOB SMITH

## MICROELECTRONICS

4. Senator SMITH. Ms. Morales, I understand that the previous Secretary of Defense deemed the Defense Microelectronics Activity (DMEA) as vital to our national defense and moved the organization from the Air Force to report directly to the Deputy Under Secretary of Defense for Logistics and Materiel Readiness. Since microelectronics remains the heart of our most sophisticated weapons systems, will you continue to support this extremely important organization as a Defense-wide agency during your tenure?

Ms. MORALES. The DMEA is a unique and vital resource to our national defense. The activity was established to concentrate on the extraordinary issues surrounding microelectronics technologies that are common across all Services within the DOD. Microelectronics is the hidden, yet pervasive, key enabling technology which is the heart of "smart weapon systems," and a host of strategic and tactical assets for the warfighters. DMEA created original methodologies and innovative processes that produce solutions that are technically correct yet re-create profitability for the industry. Notable is DMEA's ability to rapidly respond to the well-known, commercially-driven dynamic microelectronics environment with innovative and pragmatic solutions. DMEA has been highly utilized and praised by all the Services within the DOD, other Agencies in the Government, and by industry for its exceptional record of accomplishments.

Much of DMEA's long list of inter-Service achievements is a direct result of DMEA's streamlined organizational structure. As such, I fully endorse and support DMEA as a defense-wide activity during my tenure.

## QUESTIONS SUBMITTED BY SENATOR WAYNE ALLARD

## UNEXPLODED ORDNANCES

5. Senator ALLARD. Ms. Morales, UXO's or unexploded ordnances are a major concern for many on this committee. For example, last year 5 sarin gas bomblets were found at the Rocky Mountain Arsenal and just last week, 4 more Sarin gas bomblets were located. I commend the job that the Army is doing at the Arsenal and for disposing of the bomblets, especially General Coburn of the Army Materiel Command. However, I am concerned that it will take 3 weeks before any of the only EDS destruction and disposal system is transported to Colorado. This lack of development of alternatives and lack of systems is of great concern. Can I get your assurances that the DOD will look and test other alternatives in order to ensure that we have the systems needed to deal with this important and dangerous problem?

Ms. MORALES. Senator Allard, it is our desire to have multiple tools to deal with the destruction of recovered chemical agent materials. I understand that the Army is taking action to ensure that appropriate disposal technologies are available to dispose of recovered chemical warfare materiel expeditiously.

## CLEAN-UP OF COLORADO STATE FAIRGROUNDS

6. Senator ALLARD. Ms. Morales, I would like to call your attention to a matter between the Navy and the Colorado State Fair Authority. The Navy leased land at the Colorado State fairgrounds in Pueblo and in 1946 they had two Reserve Center buildings constructed. Now there is some dispute as to the environmental clean-up of the site, specifically regarding the asbestos contained in the building and who will be paying for clean up. I would certainly appreciate it if you could look into the matter, and ensure the Navy is giving all due accommodations to the matter. The Colorado State Fair is a great institution, but not a rich one, and I would hate for them to be put at a disadvantage.

Ms. MORALES. If confirmed, I will certainly look into the matter, and communicate the results to you Senator.

## ROCKY MOUNTAIN LOW LEVEL WASTE COMPACT

7. Senator ALLARD. Ms. Morales, as you may know, the Rocky Mountain Low Level Waste Compact is congressionally mandated to take responsibility to dispose of federally-generated radioactive waste in the region. First, can you give me your thoughts about the compact system for disposing waste? Also, do you support the system and would you support a court challenge to invalidate the compact system?

Ms. MORALES. The Low Level Radioactive Waste Compacts serve a useful purpose by facilitating disposal for the Nation's LLRW. I know the DOD has supported the Compact system for the past 16 years and will continue to do so in the future.

I am not aware of any scenario in which it would support a court challenge to invalidate the compact system.

---

[The nomination reference of Diane K. Morales follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 5, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Diane K. Morales of Texas, to be Deputy Under Secretary of Defense for Logistics and Materiel Readiness, vice Roger W. Kallock.

---

[The biographical sketch of Diane K. Morales, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DIANE K. MORALES

In February 1993, Diane Morales became president of DMS, Inc. ("D. Morales Services, Inc." in Virginia), a management services firm focused primarily on public and commercial logistics operations and systems planning. Management services include policy and program analysis, net assessments, strategic planning, government relations, legislative analysis, and public outreach.

From 1990 to 1993, Ms. Morales served as Deputy Assistant Secretary of Defense for Logistics, and coordinated a comprehensive restructuring of defense logistics operations to improve performance and reduce business costs by \$70 billion over 7 years. Logistics reengineering included integrating logistics policy, regulations, and procedures; developing and managing programs to reduce DOD inventories from \$103 billion to \$55 billion by 1995; standardizing logistics systems and procedures, as well as improving business practices; consolidating and streamlining organizations; and achieving visibility of military assets to reduce supply costs and mobility requirements. Ms. Morales served in this capacity during Operation Desert Storm and played a substantial role in addressing airlift and sealift requirements.

Prior to her DOD service, Ms. Morales was president of the predecessor firm to DMS, Morales Consulting Services Company (MCSC), established in August 1988. MCSC performed net assessment analyses, strategic planning, and policy/program analyses for the program areas of ICBM Modernization, the then-Strategic Defense Initiative, and for the environmental cleanup and compliance issues regarding the Department of Energy Defense Nuclear Complex.

From 1986 to 1988, Ms. Morales served as Vice President of Government Affairs for the Earth Technology Corporation, a geotechnical and environmental services firm supporting primarily the siting and basing of the U.S. Air Force ICBM Modernization and SDI programs, as well as the Department of Energy hazardous/radioactive waste management programs.

Between 1981 and 1986, Ms. Morales served in executive positions in several government agencies: the Department of the Interior as Deputy Assistant Secretary for policy; the Civil Aeronautics Board as Board Member; and the Office of Management and Budget (OMB) and the Consumer Product Safety Commission as a consultant on deregulatory issues.

Ms. Morales was born in Houston, Texas. She received a B.A. from the University of Texas in Austin.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Diane K. Morales in connection with her nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Diane K. Morales.

2. **Position to which nominated:**

Deputy Under Secretary of Defense for Logistics.

3. **Date of nomination:**

June 5, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

July 11, 1946; Houston, Texas.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Single.

7. **Names and ages of children:**

None.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

Bellaire High School in Bellaire, Texas; graduated, 1964.

University of Texas in Austin, Texas; BA, 1968.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

DMS INC. 1993—PRESENT

President: Heads management services firm focused primarily on defense and commercial logistics. Management services include policy and program analysis, net assessments, strategic planning, acquisition, and government relations/legislative analysis. Currently engaged in activities regarding Department of Defense strategic planning (Logistics 2010), information support systems, and best commercial logistics practices.

DEPARTMENT OF DEFENSE 1990—1993

Deputy Assistant Secretary for Logistics: Managed DOD logistics operations; functions included supply/materiel management, maintenance, transportation, energy, international logistics, all support information systems, commissaries, and exchanges. Key accomplishments:

- Resized DOD inventories, reduced operating costs, and introduced commercial business practices;
- Standardized, streamlined, integrated logistics policies and procedures for standard systems development;

- Consolidated DOD organizations and missions; and
- Began changing the business culture with total quality management.

Supply/Materiel Management. Rewrote 80 separate policy documents regarding the supply system life cycle into single, integrated policy; developed the Inventory Reduction Plan as the vehicle to implement the new policy and save \$18 billion. In 1990, the value of the on-hand inventory was \$103 billion; by 1992, \$86 billion; in March 1993, \$80 billion; by 1997, \$55 billion (in constant 1990 dollars). In 1989, the Department spent nearly \$30 billion managing the supply system, including the cost of new supplies; by 1992, \$21 billion.

Tracking Assets. Post Gulf War, developed comprehensive plan (Defense Total Asset Visibility Plan) to provide operators with full visibility of assets and their condition throughout the logistics network. The benefits are reduced procurement, smaller inventories, improved availability of assets for mission requirements, and better use of transportation assets. Also, conducted study to improve in-theater distribution.

Maintenance. Developed annual business plan to reduce business operations costs from \$13 billion annually in 1990 to \$6.4 billion in 1997 by streamlining processes, personnel, and infrastructure; increasing inter Service support and competition among Services/between the Services and private industry; and improving utilization of capacity through realignment of workload and base closure.

Transportation. Post Gulf War, consolidated wartime and peacetime, common-user and Service-unique transportation functions under single command; revised requirements for lift assets, the appropriate mix of strategic lift, and the augmentation of military assets with commercial assets under the DOD Mobility Requirements Study; corrected operational deficiencies after first activation of the Civil Reserve Air Fleet (CRAF) in Operation Desert Shield; laid out a corrective plan for the Department of Transportation's problematic activation and maintenance of the Ready Reserve Force, a government-owned fleet; and after reviewing internal air carrier oversight systems, military programs for aviation, and FAA/foreign aviation regulatory activities, initiated a series of higher quality and safety standards for commercial carriers serving DOD.

Corporate Information Management (CIM). Directed the foundational logistics CIM initiative, the Department's program to standardize common functional information systems; determined requirements, identified candidate standard systems, and handed the product over to the Joint Logistics Systems Command (JLSC) for execution.

International Logistics. With the North Atlantic Treaty Organization (NATO), developed cooperative logistics programs to reduce U.S. costs and to increase "burdensharing" among other members; prepared a Host Nation Support Model Agreement to accelerate logistics support agreements in countries where the U.S. expects conflicts (the result of Operation Desert Storm); chaired the Logistics Cooperation Committee subgroup that completed the Korean Wartime Host Nation Support Umbrella Agreement signed by the Secretary of Defense and the Chairman of the Joint Chiefs of Staff.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

#### DEPARTMENT OF ENERGY 1989–1990

Consultant. Assessed the DOE, Office of Environment, Safety, and Health (ES&H) programs, policy, budget, congressional activity, environmental status (compliance) of all facilities, the changing environmental regulations, tracking of transportation of waste (nuclear and non-nuclear), and proposed Office initiatives.

#### OFFICE, MANAGEMENT AND BUDGET/CONSUMER PRODUCT SAFETY COMMISSION 1985–1986

Deregulation Consultant: Examined the deregulation of trucking, barge, maritime, rail, and mineral leasing (involving the Departments of the Interior and Transportation, and Interstate Commerce Commission) and made follow-on recommendations; developed program plan for the Consumer Product Safety Commission to encourage greater voluntary industry safety actions; the agency followed final recommendations.

## CIVIL AERONAUTICS BOARD 1983–1985

Board Member: Completed domestic aviation deregulation; decided several major anti-competitive cases; determined carrier fitness; licensed U.S. and foreign carriers; regulated international aviation and negotiated international agreements.

## DEPARTMENT OF THE INTERIOR 1981–1983

Deputy Assistant Secretary for Policy: Served as Acting Assistant Secretary of Territorial and International Affairs for half tenure; addressed issues regarding U.S. territories and the single Trust Territory; participant in negotiations to alter the relationship to the United States of the Trust Territory and the Northern Marianas.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

Currently limited to the following:

SAP Public Services, Inc., Consultant to DOD, 1300 Pennsylvania Ave., NW., Suite 500, Washington, DC 20004.

SAIC, support contractor on logistics contract, 7980 SAIC Court, Vienna, VA 22182.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

## POLITICAL ORGANIZATIONS

Reagan Alumni Association, Member, 1989–present.

Bush Alumni Association, Member, 1992–present.

## PROFESSIONAL ORGANIZATIONS

National Defense Industrial Association, Logistics Committee, 1995–present.

Women in Defense, Member, 1999–present.

## NON-PROFIT ORGANIZATIONS

S.A.F.E. Foundation (National Missile Defense), Board Member 2000–present.

## CIVIC ORGANIZATIONS

Texas State Society (social), Board Member, 1996–present.

Project Nehemiah (charity/orphanage), Board Member, 1996–present.

American Cancer Society/Virginia, Board Member, 2000–2002.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

George W. Bush Presidential Exploratory Committee—\$1,000.00.

George W. Bush for President Compliance Committee—\$1,000.00.

Fundraising: Solicitor Tracking No. 7494, Bush Presidential Campaign.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Department of Defense Outstanding Public Service Medal in 1993.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DIANE K. MORALES.

This 16th day of April, 2001.

[The nomination of Diane K. Morales was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

---

[Prepared questions submitted to Steven J. Morello, Sr. by Chairman Levin prior to the hearing with answers supplied follow:]

*June 15, 2001.*

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

STEVEN J. MORELLO.

Enclosure

cc: Hon. John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes. These reforms have improved the readiness of our Armed Forces, and the ability of the Department of Defense to perform its assigned responsibilities. If confirmed, I will work to ensure that the Department of the Army properly and fully implements the reforms, in complete compliance with congressional intent.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* In my opinion, the Department of Defense has implemented these reforms. I am unaware of any specific reforms that have not been implemented. If confirmed, I will assist in ensuring that the Department of the Army fully implements the reforms, as Congress has directed.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The Goldwater-Nichols legislation has strengthened civilian control over the Armed Forces by clarifying the authority, responsibilities and relationships among the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, the Serv-

ice Secretaries, and the Combatant Commanders. The legislation also streamlined the chain of military command from the President to the Combatant Commanders; vested the Chairman of the Joint Chiefs of Staff with responsibility to serve as the principal military adviser to the President, the Secretary of Defense and the National Security Council; and facilitated joint decision-making by designating the Chairman as the spokesman for the Combatant Commanders, defining the Combatant Commanders' roles, establishing joint officer management policies and streamlining the Joint Staff's operations. Our Armed Force's improved performance on the battlefield and in operations other than war is attributable to the enhancement of command and control, joint operations and training, and interoperability brought about by these reforms. Finally, the Goldwater-Nichols legislation has heightened the efficiency with which the Military Departments organize, train, equip and administer forces in support of the Combatant Commanders' operational requirements.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes. If confirmed, I will work to ensure that the Department of the Army continues its efforts in furtherance of these goals, and that Congress' intent is fully realized.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am currently unaware of any reason to amend Goldwater-Nichols. If confirmed, I will have an opportunity to assess whether the challenges of today's dynamic security environment require amendments to the legislation in order to achieve the objectives of the defense reforms.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the General Counsel of the Army?

*Answer.* Section 3019 of Title 10, United States Code, provides that the General Counsel of the Army shall perform such functions as the Secretary of the Army may prescribe. The General Counsel provides legal advice to the Secretary of the Army, the Under Secretary, the Assistant Secretaries, and other offices within the Army Secretariat. As the chief legal officer of the Department of the Army, the General Counsel determines the controlling legal positions of the Department of the Army. The General Counsel's responsibilities extend to any matter of law and to other matters as directed by the Secretary. Examples of specific responsibilities currently assigned to the General Counsel include providing professional guidance to the Army's legal community, overseeing matters in which the Army is involved in litigation, serving as the Designated Agency Ethics Official, exercising the Secretary's oversight of intelligence and other sensitive activities and investigations, and providing legal advice to the Army Acquisition Executive.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* The diversity and complexity of legal issues confronting the Department of the Army are such that no one lawyer can have in-depth experience in all of them. However, the General Counsel must possess absolute integrity, mature judgment, sound legal and analytical skills, and strong interpersonal and leadership abilities. I believe that my background and diverse legal experiences in both the military and corporate environments have prepared me to meet the challenges of this office.

I received my law degree from the University of Detroit Law School in 1977 and my Masters of Science Degree in Business Administration from Boston University's Metropolitan College in 1980, and served as a Judge Advocate officer in both the active Army and Army Reserve for over 8 years. I also served as a staff assistant to United States Senator Philip A. Hart. For the past 10 years, I have served as

Vice President, General Counsel and Secretary for Prechter Holdings, Inc., a privately held company based in Southgate, Michigan. I have provided extensive legal and business advice to corporate executives in the automobile, publishing, hotel, real estate, and cattle ranching industries. Prior to my affiliation with Prechter Holdings, I provided legal services to the information technology industry as managing attorney for Digital Equipment Corporation, and served as a contract attorney for Northrop Corporation.

I believe that my prior military service as a Judge Advocate officer, my experience in the legislative branch, and my extensive corporate background have prepared me for assuming the position of Army General Counsel and overseeing the delivery of legal services in the Army during this period of transformation. My knowledge of military legal practice and familiarity with corporate decision-making, and my experience with problem solving, client counseling and legal analysis have equipped me to address the challenges of this important position.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the General Counsel of the Army?

*Answer.* I believe I have the requisite legal training and abilities and leadership skills to serve as the Army General Counsel. I look forward to dealing with the full array of legal issues arising from the operation of the Army. If confirmed, I will work with the extraordinarily talented civilian and military lawyers in the Department of the Army to broaden my expertise and increase my knowledge to better serve the Army.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary White would prescribe for you?

*Answer.* I anticipate that Secretary White will rely on me to provide accurate and timely legal advice and help ensure that the Army complies with both the letter and intent of the law. Presumably, the current allocation of responsibilities set forth in the General Order prescribing the duties of each member of the Army Secretariat will remain in effect. Apart from these formally prescribed duties, I believe the Secretary of the Army would expect me to build a collegial and professional relationship with the General Counsels of the Department of Defense, the other Military Departments, and the Defense Agencies and, as required, the legal staffs of other Federal agencies. I anticipate that Secretary White will expect me to continue the extraordinarily effective and professional working relationship between the Office of the General Counsel and The Judge Advocate General and his staff. Finally, I anticipate that Secretary White will expect me to manage the General Counsel's office efficiently and effectively, and ensure that the Army legal community is adequately resourced to perform its important mission.

*Question.* In carrying out your duties, how will you work with The Judge Advocate General of the Army?

*Answer.* I believe that close, professional cooperation between the civilian and uniformed members of the Army's legal community is absolutely essential to the effective delivery of legal services to the Department of the Army. If confirmed, I will seek to ensure that the Office of the General Counsel, The Judge Advocate General and his staff continue to work together to deliver the best possible legal services to the Department of the Army.

*Question.* How are the legal responsibilities of the Department of the Army allocated between the General Counsel and The Judge Advocate General?

*Answer.* The Army General Counsel is the chief legal officer of the Department of the Army. The Office of the Army General Counsel is a component of the Army Secretariat, and provides legal advice to the Secretary of the Army and other Secretariat officials on all legal matters. Some of the Army General Counsel's specific duties under the current assignment of Secretariat functions include advising the Army Acquisition Executive, serving as the Designated Agency Ethics Official for the Army, overseeing compliance with the Freedom of Information Act and the Privacy Act within the Army, exercising the Secretary of the Army's oversight of intelligence activities and monitoring sensitive Army intelligence and criminal investigative activities for legality and propriety. The Judge Advocate General is the legal adviser of the Chief of Staff of the Army, members of the Army Staff, and members of the Army generally. In coordination with the Army General Counsel, The Judge Advocate General serves as military legal adviser to the Secretary of the Army. He also directs the members of the Judge Advocate General's Corps in the performance of their duties. By law, he is primarily responsible for providing legal advice and services regarding the Uniform Code of Military Justice and the administration of military discipline. The processing of military claims and the provision of legal assistance are other functions for which The Judge Advocate General is primarily responsible. The Office of the Army General Counsel and the Office of The Judge Ad-

vocate General have developed and maintain a close and effective working relationship in performing their respective responsibilities.

*Question.* In carrying out your duties, how will you work with the General Counsel of the Department of Defense?

*Answer.* The General Counsel of the Department of Defense is the Chief Legal Officer and final legal authority for the Department of Defense, including the Department of the Army. If confirmed, I anticipate establishing a close and professional relationship with Mr. Haynes, characterized by continuing consultation, communication and cooperation on matters of mutual interest, in furtherance of the best interests of the Department of Defense.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the General Counsel of the Army?

*Answer.* In my opinion, the major challenge will be to provide responsive, accurate legal advice regarding the broad array of complex issues likely to arise in connection with the Army's transformation in today's dynamic security environment. Although this environment makes it difficult to anticipate specific legal questions, I expect to confront issues relating to operational matters, acquisition reform, privatization initiatives, military and civilian personnel policies, compliance with environmental laws, and military support to civilian authorities in a variety of contexts.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will ensure that the Army's talented and dedicated lawyers continue to provide professional and responsive legal advice on every issue they address. I will endeavor to keep Army lawyers involved at all stages of the decision making process, because preventive law, practiced early in the formulation of departmental policies, can help the Department of the Army adapt to the changing operational environment. I would work diligently to adequately resource the Army legal community, in order to guarantee decision makers at all levels access to the best possible legal advice.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the General Counsel of the Army?

*Answer.* I am not aware of any serious problems in this area. However, if confirmed, I will work hard to ensure that the Army legal community is adequately staffed and resourced to provide the responsive, accurate and timely legal advice necessary to ensure the Department of the Army's successful transformation.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will ensure that any problems in performing the Army's legal functions are addressed promptly and through appropriate channels.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the General Counsel of the Army?

*Answer.* If confirmed, I will prioritize legal issues in the manner that best serves the Department of the Army. I anticipate that the legal issues of highest priority will arise from the Army's transformation to meet the challenges posed by today's dynamic security environment. I will also ensure that the Army legal community continues to provide timely legal advice of the highest possible quality in response to the Department of the Army's recurring legal responsibilities and the numerous issues that the Army confronts every day.

#### MILITARY JUSTICE MATTERS

*Question.* Since Article 6 of the Uniformed Code of Military Justice gives primary jurisdiction over military justice to The Judge Advocate General, how do you see your functions in this area with regard to The Judge Advocate General of the Army?

*Answer.* Article 6 of the Uniform Code of Military Justice requires The Judge Advocate General or senior members of his staff to make "frequent inspections in the field" in furtherance of his responsibility to supervise the administration of military justice. Although The Judge Advocate General bears primary responsibility for administering the military justice system within the Army, I will, if confirmed, consult and cooperate with him on matters of mutual interest or concern relating to military justice, recognizing his statutory duties and special expertise in this area. If confirmed, I will work with The Judge Advocate General in establishing policy for the Army and safeguarding the integrity of the military justice system.

*Question.* In your view, how should the General Counsel approach military justice matters—both in terms of specific cases and general policy issues to provide useful advice without generating problems of unlawful command influence?

*Answer.* It is my view that to avoid the appearance or actuality of improper command influence, decisions in individual military justice cases must be entrusted to the accused's commander, the convening authority, the military judge, and court members. The General Counsel, like the Secretary of the Army and other senior civilian and military officials of the Department of the Army, must avoid any action that may affect or appear to affect the outcome of any particular case. The Army General Counsel helps to ensure that the military justice system and its judicial officers are shielded from inappropriate external pressures that may threaten or appear to threaten the independence of the military's judicial system or the commander's discretion in exercising his or her responsibilities under the Uniform Code of Military Justice to maintain good order and discipline.

*Question.* In recent years, there have been a number of cases in which military members have been accused of adultery. Concerns have been raised about the consistency with which these cases have been handled.

What do you see as the role of the General Counsel of the Army in ensuring that the Uniform Code of Military Justice is enforced in a fair and consistent manner?

*Answer.* I understand that although The Judge Advocate General has the principal statutory role in military justice for the Army, he often coordinates with the Army General Counsel on particular matters associated with the fair and consistent enforcement of the Uniform Code of Military Justice. If confirmed, I will consult, as appropriate, with The Judge Advocate General on measures that may be necessary to ensure the proper administration of military justice.

*Question.* Do you see a need for any changes in either the law or its implementation in this area?

*Answer.* I am not aware of any such need at this time. I know that the Joint Services Committee on Military Justice conducts annual reviews of the military justice system and recommends appropriate changes to the law and the controlling Executive Order, The Manual for Courts-Martial. If confirmed, I would anticipate consulting with The Judge Advocate General on these matters and would be willing to provide you my views as to any particular legislative amendments or enactments that appear advisable.

#### WHISTLEBLOWER PROTECTION

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

*Answer.* Yes.

*Question.* If confirmed, what actions will you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

*Answer.* Department of Defense Directive 7050.6, Military Whistleblower Protection, implements Title 10, United States Code, section 1034, and affirms that members of the Armed Forces shall be free from reprisal for making or preparing a protected communication to a Member of Congress; an Inspector General; a member of a DOD audit, inspection, investigation, or law enforcement organization; or any other person or organization (within or outside the chain of command) designated under regulations or established procedures to receive such communications. If confirmed, I will work with The Judge Advocate General to ensure that military leaders are fully and accurately advised of the whistleblower protections accorded by law and regulation, and understand their legal responsibilities in this important area. In addition, I will ensure that any individual cases involving illegal reprisals that come to my attention are addressed in accordance with the law.

#### JUDICIAL REVIEW

*Question.* What is your understanding of the appropriate role of the Article III courts in the review of military activities?

*Answer.* The Constitution vests Congress and the President with the power to control the military. The Supreme Court has consistently observed that this power,

as well as the role of Article III courts in construing it, should be reserved to the executive and legislative branches. Thus, the courts have held that the great majority of internal military decisions are not subject to judicial review. In those relatively few categories of cases in which judicial review of military activities is appropriate, I believe that the courts should accord substantial deference to executive and legislative judgments on military matters.

## CLIENT

*Question.* In your opinion, who is the client of the General Counsel of the Army?

*Answer.* The Army General Counsel's client is the Department of the Army, acting through its authorized officials. If a conflict arises between the interests of the Department of the Army and any of its officials, the General Counsel must recognize that the Department of the Army is the client. In addition, in view of the necessarily close relationship between the Department of the Army and the Department of Defense, the General Counsel should regard both departments as clients.

## LEGAL ETHICS

*Question.* What is your understanding of the action a Department of Defense attorney should take if the attorney becomes aware of improper activities by a Department of Defense official who has sought the attorney's legal advice and the official is unwilling to follow the attorney's advice?

*Answer.* As I understand the system, the Department of the Army attorney should bring the matter to the attention of his or her supervisor and, if necessary, to higher-level supervisory lawyers or other authorities in the chain of supervision or command. I would expect Department of the Army attorneys to pursue such matters to the extent necessary to correct the problem.

*Question.* In your view, do the laws, regulations and guidelines that establish the rules of professional responsibility for attorneys in the Department of Defense provide adequate guidance?

*Answer.* Yes. As I understand the system in place, the Department of the Army has developed comprehensive rules in this area, applicable to military and civilian attorneys throughout the Department. These rules are based on both the American Bar Association's and the Federal Bar Association's Model Rules of Professional Conduct. They have been published as Army Regulation 27-26, "Rules of Professional Conduct for Lawyers," and provide excellent guidance specifically tailored for Department of the Army attorneys. I also understand that because all Department of the Army attorneys are members of the Bar of a State or the District of Columbia, they are also subject to the rules of their respective Bars.

## ROLE IN THE OFFICER PROMOTION AND CONFIRMATION PROCESS

*Question.* In your view, what is the role of the General Counsel of the Army in ensuring the integrity of the officer promotion process?

*Answer.* Under Title 10, United States Code, Chapter 36, the Secretary of the Army is responsible for the proper functioning of the Department of the Army's promotion selection process. All reports of promotion selection boards are processed through the Office of the Army General Counsel prior to final action on the report by the Secretary. Consequently, the Army General Counsel must satisfy himself or herself that the Army has met applicable statutory standards and that individual selection board reports conform with the law. The Army General Counsel must advise the Secretary of the Army of any case in which a selection board report fails to adhere to the statutory standards, either generally or with regard to a particular officer being considered for promotion. In advising the Secretary of the Army and the Office of the Assistant Secretary of the Army (Manpower and Reserve Affairs), the General Counsel helps to ensure that Army promotion policies properly implement applicable laws and regulations and are fairly applied. Moreover, the Office of the Army General Counsel coordinates closely on these matters with The Judge Advocate General.

*Question.* What is the role of the General Counsel of the Army in reviewing and providing potentially adverse information pertaining to a nomination to the Senate Armed Services Committee?

*Answer.* As I understand the role of the General Counsel of the Army, the General Counsel's office reviews each selection board report, as well as Departmental communications to the committee, the President, and the Secretary of Defense concerning nominations, to ensure that the reports and communications comply in form and substance with law and regulation. The General Counsel's office gives special attention to cases of nominees with potentially adverse information, in order to en-

sure that such information is reported to the Senate Armed Services Committee in a timely manner.

#### LITIGATION INVOLVING THE DEPARTMENT OF DEFENSE

*Question.* In your opinion, what is the relationship between the Department of Defense and the Department of Justice with respect to litigation involving the Department of Defense?

*Answer.* I understand that, pursuant to Title 28, United States Code, section 516, the Department of Justice is responsible for representing the United States, its agencies and officers in all litigation matters. Army attorneys assigned to the United States Army Legal Services Agency's Litigation Center work directly and very effectively with Department of Justice counsel in cases in which the Army is a party or has an interest. Consistent with the statutory responsibility of the Department of Justice, Army attorneys assist in drafting and reviewing pleadings, conduct discovery, participate in developing litigation strategy, and otherwise perform key roles in connection with trial proceedings.

*Question.* Is the present arrangement satisfactory, or does the Department need more independence to conduct its own litigation?

*Answer.* I am not aware of any problems in the present arrangement, or any need to accord the Department of the Army greater independence in conducting litigation but if confirmed, I will review the arrangement periodically to ensure that the Department has sufficient independence.

#### COURT OF APPEALS DECISION

*Question.* On January 4, 2000, the United States Court of Appeals for the District of Columbia Circuit decided the case of *National Center for Manufacturing Sciences v. Department of Defense*, 199 F.3d 507 (D.C. Cir. 2000). The court concluded that "Because of the existence of 10 U.S.C. Section 114, it is clear that any monies appropriated for NCMS by Congress for research must be authorized before they can be appropriated and distributed"; and "Because 10 U.S.C. Section 114(a)(2) requires authorization of these funds before they become available, appropriation alone is insufficient."

What is your view of the court's decision in this case and its implications regarding the obligation of funds that are appropriated but not authorized?

*Answer.* In this case, the D.C. Circuit Court of Appeals affirmed the lower court's granting of the government's motion to dismiss for failure to state a claim. The Circuit Court based its decision on a provision of the National Defense Authorization Act for Fiscal Year 1995 that effectively rescinded the unreleased portion of a fiscal year 1994 funding earmark for the National Center for Manufacturing Sciences (NCMS). The Circuit Court concluded that, in view of this provision, NCMS had no legal entitlement to the funds in question. In my opinion, the issue of whether Department of Defense appropriations must be authorized before they can be appropriated, obligated or expended was not squarely presented for resolution in this case. Instead, the court addressed this question only collaterally. Situations where funds have been appropriated but not authorized are often complex and may involve unique statutory language. Thus, I anticipate that the Department of the Army will continue its practice of working closely with the Office of the Secretary of Defense and our oversight committees in properly resolving issues involving funds that have been appropriated but not authorized.

#### ROLE IN MILITARY PERSONNEL POLICY MATTERS

*Question.* What role, if any, should the General Counsel play in military personnel policy and individual cases, including cases before the service boards for the correction of military records?

*Answer.* If confirmed, I will work closely with the Secretary of the Army, the Assistant Secretary of the Army (Manpower and Reserve Affairs) and other senior Department of the Army leaders to ensure that the Department of the Army's military personnel policies are formulated and applied uniformly, fairly, and in accordance with applicable laws and regulations. If I were to become aware of individual cases in which military personnel policies were not fairly and lawfully applied, I would take appropriate action to ensure that the case is properly resolved. If confirmed, I will coordinate with the Assistant Secretary of the Army (Manpower and Reserve Affairs), who exercises overall supervision of Department of the Army Military Review Boards, to ensure that the Army Board for Correction of Military Records receives the Army legal community's full support.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information subject to appropriate and necessary security protection, with respect to your responsibilities as the General Counsel of the Army?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

## PROCUREMENT

1. Senator THURMOND. Mr. Morello, as you are aware, the Army will be facing many critical procurement decisions as it fully carries out its transformation initiative. If you are confirmed as the next General Counsel of the Department of the Army what will be your participation in policy making and oversight of the procurement process within the Department of Army? What experience have you had with DOD procurement practices?

Mr. MORELLO. The Office of the Army General Counsel has long enjoyed an outstanding relationship with the Office of the Assistant Secretary of the Army for Acquisition, Logistics, and Technology (ASA(AL&T)). Now that I have been confirmed, I will continue that tradition by establishing a close and professional relationship with the ASA(AL&T) and by ensuring that the General Counsel's staff provides sound and proactive legal, policy, and business advice in support of the Army's procurement process. I have first hand experience with the Department of Defense's procurement practices, both as a former Army Judge Advocate officer and later as a contracts attorney for Northrop Corporation's Defense Systems Division, where I administered Northrop's B1B Defensive Avionics contracts with the Department of the Air Force. I have also served as managing attorney for Digital Equipment Corporation, where I provided legal services to the information technology industry. Since 1991, I have served as Vice President, General Counsel and Secretary for Prechter Holdings, Inc., where I provided legal and business advice to corporate executives in the automobile, publishing, hotel, real estate, and cattle ranching industries.

## INSPECTOR GENERAL

2. Senator THURMOND. Mr. Morello, if confirmed, what will be your relationship with the Inspector General? What oversight will you have in regard to inspector general investigations?

Ms. MORELLO. The Office of the Army General Counsel and the Office of the Inspector General have forged a longstanding, effective relationship that I am proud to continue. A member of the Office of the Secretary of the Army, the Inspector General inquires into and reports upon the discipline, efficiency and economy of the Army, as directed by the Secretary of the Army or the Chief of Staff. In addition, the Inspector General periodically proposes programs of inspection and recommends additional inspections and investigations as appropriate. As the chief legal officer of the Department of the Army and counsel to the Secretary and other Secretariat officials, I will maintain my office's close, professional relationship with the Inspector General, and will communicate with him directly and candidly as he performs his prescribed duties. I will provide independent and objective legal advice with regard to all matters that relate to the Inspector General's programs, duties, functions or responsibilities, and will oversee the provision of legal guidance to the Office of the Inspector General regarding the conduct of investigations. Further, as part of my responsibility to review legal and policy issues arising from the Army's intel-

ligence and counterintelligence activities, I will advise the Inspector General concerning proper reporting of the Army's intelligence oversight activities.

#### WORKFORCE

3. Senator THURMOND. Mr. Morello, a significant issue throughout the Department of Defense is its aging workforce and the looming loss of expertise because of retirements. What are your concerns regarding this issue as it related to the Office of the General Counsel?

Ms. MORELLO. Recruiting, training, and retaining Army's civilian work force is critical to mission accomplishment. Army is proactively addressing this challenge. Army projects that many of its civilians, particularly those in leadership positions, will retire within a relatively brief time span of about 5 years, from 2003 to 2008. In preparation for the anticipated losses as the "baby boomers" in its workforce reach retirement age, the Army is currently planning to increase entry and mid-level intake to professional, administrative, and technological occupations. It is also employing more aggressive and effective recruitment strategies. It is centrally funding a Student Career Experience Program for college juniors and seniors who may be non-competitively placed in intern positions. In order to compete with private industry, Army is offering recruitment bonuses for engineers, scientists, and computer specialists; accelerated promotions for engineers and nurses; permanent change of station moves for all interns; and, in some cases, advanced in-hire rates of pay and repayment of student loans.

In order to refine and accurately forecast future civilian work force needs, Army has developed and is using a sophisticated projection model that provides the capability to forecast future civilian needs under various alternative scenarios.

Army is also working with OSD to identify hiring flexibilities and pay reform that would facilitate recruiting in today's tight labor market. Two legislative proposals are pending. One would authorize Army to make expeditious job offers to applicants who might otherwise accept an immediate private sector offer rather than wait for the slow Federal selection process. The second would authorize a broad-banding pay system that combines 15 current General Schedule grades into a few broad bands comprised of one or more grades. Groupings would consider work similarities, qualifications, training requirements, and common patterns of advancement within occupations.

We are working with Army leadership to review the laws pertaining to civilian personnel to see where they might be modified to better enable Army to recruit, sustain, train, and retain a civilian work force capable of supporting the Army mission today and well into the 21st century.

#### RELIGIOUS PRACTICES

4. Senator THURMOND. Mr. Morello, the rise of various religious cults has challenged our military services because of the potential impact on morale and discipline. What are your views on the recognition of these religious cults by the military services?

Ms. MORELLO. The Army recognizes and places a high value on a soldier's Constitutional right to practice and observe the tenets of his or her personal religious beliefs. Army Regulation (AR) 600-20 provides guidance for accommodating religious practices within the United States Army and does not favor one form of religious expression over another. As a matter of policy, however, the Army does not support any activity, religious or secular, that is detrimental to good order and discipline. If the soldier's religious practice adversely impacts unit readiness, individual readiness, unit cohesion, morale, discipline, safety or health, the Army will not authorize the religious accommodation.

Army Regulation 600-20 requires the submission of special requests for religious accommodation from the soldier to his or her immediate commander. If the commander foresees no adverse impact on good order and discipline or on mission accomplishment, the commander may approve the request. If circumstances change and the accommodation is no longer in the best interest of the Army, then the commander can revoke the approval. If the commander disapproves the request or revokes a prior approval, the soldier can appeal this decision to the Deputy Chief of Staff for Personnel. During the appeal process, a chaplain will interview the soldier and examine both the religious basis and sincerity of the request. While the requests and appeals are pending, soldiers must adhere to the orders and standards established by their immediate commanders. Soldiers whose appeals are denied may request separation from the Army.

Under Army regulations, military chaplains have the responsibility of providing comprehensive religious support to soldiers and their families. As an exception to policy, however, civilian religious personnel may provide religious support when a military chaplain is otherwise unable to meet specific religious needs. Prior to using military chapels and unit facilities for religious services, civilian religious personnel must submit an application certifying that their religious organization has met certain regulatory requirements.

UNEXPLODED ORNANCES

5. Senator THURMOND. Mr. Morello, UXO's or unexploded ordnances are a major concern for many on this committee. For example, last year five sarin gas bomblets were found at the Rocky Mountain Arsenal and just last week, four more sarin gas bomblets were located. I commend the job that the Army is doing at the Arsenal and for disposing of the bomblets, especially General Coburn of the Army Material Command. However, I am concerned that it will take 3 weeks before any the only EDS destruction and disposal system is transported to Colorado. This lack of development of alternatives and lack of systems is of great concern. Can I get your assurances that DOD will look and test other alternatives in order to ensure that we have the systems needed to deal with this important and dangerous problem?

Mr. MORELLO. I share your desire to ensure we have adequate means to respond to the discovery of chemical munitions. The Army must be prepared to take immediate action to protect human health and the environment whenever non-stockpile chemical warfare materiel is found. I understand that the Army is reviewing its policies, procedures, and responsibilities for responding to the discovery of chemical warfare materiel and taking steps to ensure that appropriate disposal technologies are available to dispose of recovered chemical warfare materiel on short notice. Now that I have been confirmed, I will work with the program proponents to clear the way for the use of destruction and disposal systems that are safe and effective.

[The nomination reference of Steven J. Morello, Sr. follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 7, 2001.*

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Steven John Morello, Sr. of Michigan, to be General Counsel of the Department of the Army, vice Charles A. Blanchard, resigned.

[The biographical sketch of Steven J. Morello, Sr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF STEVEN J. MORELLO, SR.

Steve Morello was born the first of six children in Saginaw, Michigan, on September 17, 1952. He attended school in Carrollton, Michigan, and graduated from Carrollton High School in 1970. In 1974, Steve graduated from the Foreign Service School at Georgetown University in Washington, DC. While at Georgetown, he participated in Army ROTC and was awarded a 2 year scholarship to attend Georgetown by the Army. Steve attended University of Detroit Law School and graduated in May of 1977. In 1980 Steve was awarded a Masters of Art degree in Business Administration from Boston University. This year, Steve was awarded his second Masters in Art degree in Pastoral Studies from Sacred Heart Major Seminary in Detroit. In January of 1978, he joined the United States Army as a Captain and attended the Judge Advocate General's Basic Course in Charlottesville, Virginia.

In May of 1978 Steve was married to Francia Ormond. They have been married now for 23 years and have three children, Steven Jr., Rebecca, and Christine. Steve served on Active Duty with the United States Army as a member of the JAG Corps from 1978 until 1982. He was assigned to service in Karlsruhe and Berlin, Germany and completed his active service at Ft. Sheridan in Illinois. He was awarded an Army Commendation Medal while serving in Berlin.

After completing his military service, Steve joined Northrop Corporation and managed the Defense Systems Division's B1B defensive avionics contracts. Steve also worked for Digital Equipment Corporation in both Chicago and Detroit. Currently, Steve is the Vice President, General Counsel and Corporate Secretary for Prechter Holdings, Inc. PHI is a closely held corporation which manages almost one billion dollars worth of assets annually.

In 1991 Steve was ordained a Deacon in the Roman Catholic Church. He enjoys spending his free time with his family and in service to the Church preparing couples for marriage and celebrating other sacraments with members of the Church. He has also served as a Campus Minister at University of Detroit Mercy Law School and most recently as a Wayne County Sheriff's Chaplain.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Steven J. Morello, Sr. in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Steven J. Morello.

2. **Position to which nominated:**  
General Counsel of the Army.

3. **Date of nomination:**  
June 7, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
September 17, 1952 in Saginaw, MI.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Francia S. Morello (Ormond).

7. **Names and ages of children:**  
Steven J. Morello, Jr. (20).  
Rebecca S. Morello (17).  
Christine M. Morello (12).

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.  
a. Carrollton High School diploma 1970.

- b. Delta College: A.A. 1972.
- c. Georgetown University: B.S.F.S. 1974.
- d. University of Detroit Law School: J.D. 1977.
- e. Boston University: M.A B.A. 1980.
- f. Sacred Heart Major Seminary Certificate Diploma in Theology 1991.
- g. Sacred Heart Major Seminary M.A.P.S. 2001 (summa cum laude).

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Prechter Holdings, Inc, Southgate, MI: Vice President and General Counsel 1991 to present.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Staff Assistant to United States Senator Philip A. Hart, 1972–1974; U.S. Army JAG Corps, Active Duty, 1978–1982; Reserves from 1982–1987, Rank of Captain.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Vice President and General Counsel for these Heinz Prechter owned/controlled companies:

- i. Prechter Holdings, Inc.
- ii. ASC, Inc.
- iii. Heritage Network, Inc.
- iv. World Heritage Foundation
- v. ASCET, Inc.
- vi. Triad, Inc.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Michigan Bar Association.

Illinois Bar Association.

Computer Law Association.

American Corporate Counsel Association.

Works of charity include service as Roman Catholic Deacon in Archdiocese of Detroit.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Michigan Lawyers for Bush-Cheney.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

a. Army ROTC Full Tuition Scholarship.

b. UAW 699 Tuition Assistance Scholarship.

c. State of Michigan Tuition Grant.

d. Prechter Holdings Community Service Award.

e. Fellow—National Contract Management Association.

f. Army Commendation Medal.

g. Berlin Army of the Occupation Medal.

h. Sault Ste. Marie Tribe of Chippewa Indians Self Sufficiency Tuition Award.

i. Graduated in April 2001 from Sacred Heart Major Seminary Summa Cum Laude.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

STEVEN J. MORELLO.

This 8th day of May, 2001.

[The nomination of Steven J. Morello, Sr., was reported to the Senate by Chairman Levin on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

---

[Prepared questions submitted to William A. Navas, Jr., by Chairman Levin prior to the hearing with answers supplied follow:]

*June 15, 2001.*

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

WILLIAM A. NAVAS, JR.

cc: Hon. John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been fully implemented and that they have greatly clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs.

The effectiveness of our joint warfighting forces especially with respect to communication, interoperability, training, and joint operations, has improved as a result of these reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. In my view, the most significant value of these reforms has been to strengthen joint warfighting. Our military is stronger and more lethal because our Services can work better together.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control, improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am unaware of any proposals to amend Goldwater-Nichols. If confirmed, I will be in position to better understand and assess whether such proposals would be warranted. The implementation of the Goldwater-Nichols reforms has enhanced the ability of the Services to act quickly and jointly.

#### DUTIES

*Question.* What are your understanding of the duties and functions of the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

Answer. Assistant Secretary of the Navy for Manpower and Reserve Affairs provides oversight of the formulation and execution of Navy and Marine Corps manpower and personnel policies and programs for Active Duty, Reserve and Civilian Personnel. Manpower and Reserve Affairs also develops health care policy and provides oversight and review of health care delivery initiatives. Last but not least, Manpower and Reserve Affairs administers personnel actions as authorized or delegated by Secretary of the Navy.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. I served for over 33 years as a citizen-soldier, initially as a Regular Army Officer with combat duty in Vietnam, then as a traditional Guardsman while engaged in civil engineering and later as a full-time Active Guard and Reservist (AGR) with the Army National Guard. The last 11 years were spent as a General Officer in the Pentagon where I served in numerous high-level decision-making capacities including Director of the Army National Guard, Deputy Assistant Secretary of Defense for Reserve Affairs and Military Executive of the Reserve Forces Policy Board. I feel that those jobs have given me the experience and skills needed to successfully lead the Office of the Assistant Secretary of the Navy for Manpower and Reserve Affairs.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

Answer. I have begun to study and receive briefings on the vast array of issues that I would be responsible for if confirmed as the Assistant Secretary of the Navy for Manpower and Reserve Affairs.

*Question.* In carrying out your duties, how will you work with the Under Secretary of Defense for Personnel and Readiness, the Assistant Secretary of Defense for Force Management Policy, the Assistant Secretary of Defense for Reserve Affairs, the Assistant Secretary of Defense for Health Affairs, the Chief of Naval Personnel, the Deputy Chief of Staff of the Marine Corps for Manpower and Reserve Affairs, the Chief, Naval Reserve and the Commanding Officer, Marine Forces Reserve?

Answer. If confirmed, it is my intention to work closely and directly with the Under Secretary, Assistant Secretaries, Service Chiefs and Commanding Officers to ensure that Assistant Secretary of the Navy for Manpower and Reserve Affairs maintains a clear focus on the priorities outlined by the Secretary consistent with the appropriate laws and Title X of the U.S. Code. I intend to encourage and foster teamwork within the Department of the Navy developing integrated product teams

both within the civilian leadership and between the civilian leadership and their uniformed counterparts.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

*Answer.* I share Mr. England's vision, that at the end of the day, our sailors, marines, and civilians should know that their contribution is important and feel that their work is both stimulating and rewarding. If confirmed, I will emphasize "Quality of Service"—achieving a higher quality workplace as well as a higher quality of life for our sailors, marines, active duty and reserve, and civilians and all of their families.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

*Answer.* If confirmed, I will do whatever I can to support the Secretary of the Navy's four strategic thrusts—combat capability, people, technology and interoperability, and modernization of business practices. In particular—the people thrust. My goal, if confirmed as the Assistant Secretary for Manpower and Reserve Affairs, will be to create an environment where our men and women can excel at their chosen profession, unimpeded by factors that divert their attention from work. This includes providing:

- Competitive compensation
- Quality housing
- Hi-tech workplace resources
- Accessible and professional health care
- Cutting edge training
- Operational tempo that considers the individual, as well as family and community.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will immediately work with the Secretary of the Navy to establish priority actions in each of these areas and then support him in initiating each as rapidly as possible.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

*Answer.* None that I am aware of. If confirmed, I will immediately begin working towards improving the quality of service for our sailors and marines.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* None at this time.

#### OFFICER MANAGEMENT ISSUES

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest ethical and moral values.

Do you believe the officer corps has confidence in the integrity of the officer promotion system in the Navy and Marine Corps?

*Answer.* I believe the officer corps has confidence in the integrity of the officer promotion system in the Navy and Marine Corps. The services take considerable effort to ensure that promotion selection boards are impartial in terms of their management and the conduct of selection board deliberations.

*Question.* What role do you, as Assistant Secretary of the Navy for Manpower and Reserve Affairs, expect to play in the officer promotion system?

*Answer.* If confirmed, I will work with senior Service leaders to ensure that the promotion selection process is as fair. I would provide appropriate board guidance and monitoring.

*Question.* What role do you, as Assistant Secretary of the Navy for Manpower and Reserve Affairs, expect to play in the general officer management and nomination process?

*Answer.* If confirmed I intend to work closely with the Secretary of the Navy and support current regulations and policies regarding General and Flag officer management and nomination.

*Question.* What steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

*Answer.* If confirmed, I will work closely with senior Service leaders to ensure that the integrity of the promotion system remains inviolate.

#### PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

*Answer.* Yes.

*Question.* If confirmed, what actions would you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

*Answer.* If confirmed, I will be vigilant in ensuring that military members whose actions are protected by the Act are not subject to illegal reprisals or retaliation. I also understand that the current Department of the Navy practice is to brief the requirements of the Act to all prospective commanding officers and executive officers. If confirmed, I will ensure that emphasis on the Act in formal Navy training courses will continue.

#### OPERATING TEMPO

*Question.* The Services have been very concerned in recent years about the impact of the pace of operations, or "OPTEMPO," on the quality of life of our people in uniform and specifically on their willingness to reenlist.

What steps do you plan to take to address the Navy and Marine Corps OPTEMPO concerns?

*Answer.* I recognize the delicate balance between quality of life, retention and meeting the operational requirements of the National Command Authority. Though not completely familiar with all current issues of OPTEMPO in DON, I believe that the Service Chiefs should be given flexibility to manage personnel issues in regards to operational demands. If confirmed I will work with the Secretary of the Navy to address the issues associated with OPTEMPO.

#### RECRUITING AND RETENTION

*Question.* Recruiting and retention in the Navy have improved significantly over the last year. Yet the Navy continues to have shortages in critical specialties, and has an at-sea billet gap of 6,000. The Marine Corps also has shortages in a number of high tech specialties.

What steps will you take, if confirmed, to assist the Navy and Marine Corps in meeting their recruiting and retention goals?

*Answer.* In a strong economy the military is in direct competition with the private sector. If confirmed, my goal will be to make the military an attractive and fulfilling career choice. I believe that the Assistant Secretary of the Navy for Manpower and Reserve Affairs should be an extremely strong advocate for the Recruiting Commands, both active and reserve. Serving as sailors and marines must continue to be perceived as a proud and enduring vocation providing high quality training and appropriate compensation.

*Question.* Recent emphasis regarding recruiting and retention has been focused on the Active component. The Reserve components are facing even greater challenges in recruiting and retention.

What steps will you take, if confirmed, to assist the Reserve components in achieving their recruiting and retention goals?

*Answer.* As a former Reserve component chief, I consider myself a strong advocate for the Reserves. Just as with the Active component, the Reserve components are in competition for talented individuals with the private sector. If confirmed, I will ensure that the Reserves continue to be an integral component of the Navy and Marine Corps' Total Force recruiting effort.

## MANAGEMENT OF DEPLOYMENTS OF MEMBERS

*Question.* The increasing operational demands on military personnel resulted in enactment of section 991 of Title 10, United States Code, and section 435 of Title 37, United States Code. Those provisions require the Services to manage the deployments of members and, if operational necessity so dictates, to pay per diem compensation to members whose deployed periods exceed prescribed limits. Additionally, each Service Secretary is required to establish a system for tracking and recording the number of days that each member of the armed forces under the jurisdiction of the Secretary is deployed.

Do you support the statutory framework set forth in the sections cited above? If so, do you believe any modification to the law are necessary?

*Answer.* The Department of the Navy is tracking OPTEMPO for each individual service member (ITEMPO). I understand that a Navy working group is currently studying how best to manage situations arising from implementation of this program. If confirmed, I plan to closely study the recommendations of this group and this important issue.

*Question.* What is your understanding of the ability of the Navy and Marine Corps to comply with these statutes and implement the prescribed tracking and recording system?

*Answer.* I understand that both Services are working hard to ensure compliance with all aspects of the statutes. If confirmed I will examine the effort to date and become more familiar with the tracking and recording systems.

## ARMED FORCES RETIREMENT HOME

*Question.* The Naval Home in Gulfport, Mississippi, and the Soldiers' and Airmen's Home in Washington, DC, provide unique services to eligible military retirees, but have experienced problems in funding and management.

Do you support an increase in the amount of money automatically deducted from the pay of active duty personnel as a means of better funding the retirement homes?

*Answer.* If confirmed, I will study this issue in-depth and work towards a long-term and comprehensive solution that will ensure the solvency of the Armed Forces Retirement Home Trust Fund.

*Question.* If confirmed, what actions would you take to ensure the successful operation of the retirement homes?

*Answer.* If confirmed, I would support any and all efforts that would ensure that both facilities are operated in an efficient manner and that they provide excellent quality of life for our military retirees.

## HOMOSEXUAL CONDUCT POLICY

*Question.* Do you support the current Department of Defense (DOD) Homosexual Conduct Policy?

*Answer.* Yes.

*Question.* If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

*Answer.* No.

## ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax to be the greatest biological weapons threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA approved vaccine.

If confirmed, will you support and enforce the Anthrax Vaccine Immunization Program if DOD reinstates it?

*Answer.* Anthrax poses a clear and present danger to the Armed Forces of the United States; I would be remiss in my duties if I did not diligently pursue implementation of Secretarial directives pertaining to Anthrax Vaccine Immunization Program.

*Question.* How do you believe the Navy and Marine Corps should respond to service members who refuse to take the vaccine when ordered to do so?

*Answer.* It is imperative to maintain good order and discipline within the Navy and Marine Corps. I will support the enforcement of applicable statutes and regulations.

## MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlement. Many sailors and marines say they would like to stay in the Service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members might stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

If confirmed, will you give serious consideration to how the Navy and Marine Corps could use the transfer of unused GI Bill benefits to family members as a retention tool and provide your thoughts on how best to do this?

*Answer.* If confirmed, I will give serious consideration towards this concept. I will defer offering any concrete thoughts or opinions until I have had more time to study the issue.

*Question.* An alternative legislative proposal under consideration by the committee to address the cost of education for dependent spouses and children envisions the award of United States Savings Bonds to military members in connection with reenlistment.

If confirmed, will you give serious consideration to how the Navy and Marine Corps could use the award of U.S. Savings Bonds as a flexible means to enable sailors and marines to save money for the education of themselves and their dependents?

*Answer.* I understand that service members are concerned about their own education and that of their dependents. If confirmed I will seriously consider all efforts to improve Quality of Service, including this proposal.

## GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individual's life in the military, is structured and defined differently by each Service.

Do you believe the current DOD policy of allowing each of the Services to establish its own policy for gender integration in basic training is effective?

*Answer.* Yes. This policy allows the Services, each with their own unique military culture and professional ethos, the flexibility to conduct basic training in a manner that best instills the tenets of their culture.

## CONCURRENT RECEIPT

*Question.* Military retirees with disabilities incurred during their military service are eligible to receive military retired pay from the Department of Defense and veterans' disability compensation from the Department of Veterans' Affairs. However, current law requires that military retired pay be reduced by the amount of the veterans' benefits.

If confirmed, would you support a change in the law to permit disabled military retirees to receive their full retired pay as well as their disability compensation?

*Answer.* If confirmed, I will devote serious study to this important issue. I believe that disabled service member should be treated with the utmost care and fairness.

## MANAGEMENT OF THE CONGRESSIONAL FELLOWSHIP PROGRAM

*Question.* For the past several years, the committee has expressed concern about the management of legislative fellows by the military departments and the Department of Defense.

If confirmed, will you review the Department's policies pertaining to the management of legislative fellows and provide the committee your assessment of which management reforms have been implemented and which require additional action?

*Answer.* Yes.

*Question.* What are your personal views on the value and current management of the legislative fellowship program within the Navy and Marine Corps?

*Answer.* From my initial briefings, I believe that the program is worthwhile and should be continued. The Department benefits from the assignment of its personnel to the legislative branch of government, where they gain insight into the process by which legislation is drafted and passed. The Department places a high priority on ensuring that internal procedures and controls support DOD policy relating to legislative fellowships.

*Question.* After completing their fellowships, are legislative fellows assigned to positions in which the experience and knowledge they gained during their fellowship are used effectively?

Answer. From my briefings, I understand that after completing their fellowships, legislative fellows generally return to assignments within their warfare specialties. Subsequent tours of duty, as coordinated by the officer assignment managers, often allow officers to apply experience gained during their fellowships.

*Question.* In your opinion, is it appropriate to bring a Reserve component member on active duty solely to participate in a legislative fellowship program?

Answer. As an advocate for the Total Force, I believe in parity between the Active Duty and Reserves. Our Reserve sailors and marines bring a tremendous amount of experience and talent to each and every mission of our service, including legislative liaison. If confirmed I will spend time studying this issue and look for ways to integrate reservists into this important program.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Navy for Manpower and Reserve Affairs?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### MILITARY PAY

1. Senator THURMOND. Mr. Navas, for the past several years, Congress and the administration have provided significant increases in military pay and compensation. Despite these increases, recruiting of new soldiers and the retention of the highly trained personnel has been a problem in several of the services.

Based on your long and distinguished career in the Army National Guard and long association with military issues, how do you rate compensation over such issues as quality of life and personnel tempo as a motivator for a military career?

Mr. NAVAS. Military compensation has long been an extremely important element in the military services' efforts to achieve and sustain optimum personnel readiness. Having said that, there is clear and convincing evidence that quality health care, educational opportunity, family separation, adequate housing, promotion opportunity and availability of morale, welfare and recreation facilities are also significant contributing factors to the career decisions of service men and women.

In the current climate of unprecedented competition from the private sector for America's best and brightest, an appropriate balance of military compensation and assured "quality of Service" is clearly the best approach to influence military families to commit to military careers. Ultimately, all of these elements impact the ability of the armed services to achieve optimum personnel readiness in the near-term and sustain it over the long-term.

##### RESERVE COMPONENT

2. Senator THURMOND. Mr. Navas, as I indicated in my opening statement, once you are confirmed as the Assistant Secretary of the Navy, your long and distinguished career as a Citizen Soldier will be a great benefit to you and our sailors and marines. In view of this experience, what do you see as the greatest challenge facing our Reserve components?

Mr. NAVAS. The biggest challenge facing us is reconciling reservist availability to the Active components' increasing demand for their services. This is a particularly difficult issue within the Navy, whose main purpose is to provide combat-credible, forward deployed forces to respond to crises. That puts a lot of strain on the Active Force, and we try to relieve the strain by employing our reservists in peacetime.

Our nearly 90,000 citizen-sailors absolutely want to contribute but, if we try to do too much, we simply shift the “strain” from the Active to Reserve sailors. Balancing job, family and Navy is difficult. Our job is to find opportunities to do more—and more efficiently—with our reservists.

CROSS DECKING

3. Senator THURMOND. Mr. Navas, due to critical shortfalls in certain specialties, the Navy has been cross-decking personnel from a ship coming off deployment to a ship going on its deployment. The result has been an increased in personnel tempo and morale problems.

What is the current extent of cross decking and how do you plan to minimize the impact of this practice?

Mr. NAVAS. The need to crossdeck sailors is directly tied to shortages in our at sea manning. During the drawdown the Navy experienced difficulties in manning our deployed units. The shortfall peaked in late fiscal year 1998 due to numerous factors, an exceptionally strong national economy, not meeting our recruiting goals for several years and poor retention. Today through renewed efforts in recruiting and retention the at sea manning shortfall has fallen to less than one third of the 1998 levels and continues to trend downward. Correspondingly the need to crossdeck sailors has fallen. In Pacific Fleet, for example crossdeck needs have fallen from an peak average of 90 sailors a month at end of fiscal year 1998 and the first half of fiscal year 1999 to less than 35 sailors a month on average for the first half of fiscal year 2001. We are continuing to address the at sea manning shortfalls through better management of all sea duty eligible sailors, focused efforts on recruiting and retention and efforts to decrease attrition form afloat commands.

---

[The nomination reference of William A. Navas, Jr. follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 7, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

William A. Navas, Jr. of Virginia, to be Assistant Secretary of the Navy, vice Carolyn H. Becraft.

---

[The biographical sketch of William A. Navas, Jr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF WILLIAM A. NAVAS, JR.

William A. Navas, Jr. is currently a Defense and Management Consultant, specializing in the areas of program analysis, business development and strategic planning. He is a retired Major General in the United States Army.

Mr. Navas has had a long and distinguished career in public service and the military. From 1995 to 1998, he was the Director of the Army National Guard, responsible for the development and coordination of all programs, plans and policies affecting the Army National Guard. Prior to that, he was the Deputy Assistant Secretary of Defense/Chief of Staff for Reserve Affairs from 1994 to 1995. In that position, he was responsible for the integration of programs and policies for the Reserve components of all the Services, including the Coast Guard.

From 1992 to 1994, Mr. Navas was a Military Executive with the Reserve Forces Policy Board. Before that, he was the Vice Chief of the National Guard Bureau from 1990 to 1992, the Deputy Director of the Army National Guard from 1987 to 1990, and the Director of Plans, Operations, Training and Military Support for the Puerto Rico Army National Guard from 1981 to 1987. Mr. Navas was the principal in various design, land development, and general construction enterprises in western Puerto Rico from 1970 to 1981. Finally, from 1966 to 1970, he served in the United States Army as a Post Engineer in Germany, a Combat Engineer Company Commander in Vietnam, and as Engineer Advisor to the National Guard.

Mr. Navas graduated from the University of Puerto Rico in 1965 with a B.S. degree in Civil Engineering, and from the University of Bridgeport in 1979 with an M.S. degree in Management Engineering. In 1982, he studied at the Interamerican Defense College in Washington, DC, and in 1990, he participated in the Program for Senior Managers in Government at the Kennedy School of Government at Harvard University.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by William A. Navas, Jr. in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES  
Room SR-228  
Washington, DC 20510-6050  
(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
William A. Navas, Jr. (Bill/Billy).
2. **Position to which nominated:**  
Assistant Secretary of the Navy for Manpower and Reserve Affairs (ASN-M&RA).
3. **Date of nomination:**  
June 7, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
December 15, 1942, Mayaguez, Puerto Rico.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Wilda M. Cordova.
7. **Names and ages of children:**  
William A. Navas III—35.  
Gretchen M. Navas—32.
8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.  
Immaculate Conception Academy, 1956-1960, High School Diploma.  
University of Puerto Rico, 1960-1965, BS in Civil Engineering.  
University of Bridgeport, 1976-1979, MS in Management Engineering.  
Interamerican Defense College, 1981-1982, MEL1 Diploma.  
Harvard University, JFKSG, 1991, Senior Managers in Government Certif.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Independent Consultant, various organizations (see item 11), Washington, DC, 1998–present.

Director, Army National Guard, National Guard Bureau, Washington, DC, 1995–1998.

DASD (RA), OSD, The Pentagon, Washington, DC, 1994–1995.

Military Executive, Reserve Forces Policy Board, The Pentagon, Washington, DC, 1992–1994.

Vice Chief, National Guard Bureau, The Pentagon, Washington, DC 1990–1992.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

#### ORGANIZATION AND AFFILIATION

Burdeshaw Associates, Ltd.—Associate.

CALIBRE Systems, Inc.—Consultant.

Systems Management Engineering—Consultant.

James Martin Government Intel.—Consultant.

Booth, Allen & Hamilton—Consultant.

Wilbur Smith & Assoc.—Consultant.

American Systems International—Consultant.

Avue Technologies—Consultant.

Modern Technologies Corp.—Consultant.

IT Group Inc.—Consultant.

Price Waterhouse Coopers—Consultant.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Army Engineer Association Member, Board of Directors.

Minuteman Institute for National Defense Studies Member, Board of Directors.

Buffalo Soldiers Foundation Member, Board of Directors.

American Veterans' Committee for Puerto Rico Self-Determination, Chairman.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Republican National Committee, \$250.00, 1/29/00.

Election Committee, Cong. Carlos Romero Barceló, \$250.00, 9/9/00.

Republican National Committee, \$250.00, 9/9/00.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

#### CIVILIAN

Distinguished Military Student, University of Puerto Rico, 1964.

Distinguished Military Graduate, University of Puerto Rico, 1965.

Hispanic Magazine Avanzando Award.

National IMÁGE, Inc. Meritorious Service Award.

National Guard Association of the U.S. Meritorious Service Medal.

National Guard Bureau—Eagle Award.

National Guard Bureau—Distinguished Service Award.

Phi Sigma Alpha Fraternity—Distinguished Citizen Award.

Phi Sigma Alpha Fraternity—Distinguished Service Medal.

Army Engineer Association—Silver DeFleury Medal.

Artillery Association—Order of St. Barbara.  
 Illustrious Alumni Designation—University of Puerto Rico.  
 Biographee “Who’s Who in America”.  
 Knight, Equestrian Order of the Holy Sepulchre of Jerusalem.

## MILITARY

Defense Distinguished Service Medal.  
 Army Distinguished Service Medal.  
 Defense Superior Service Medal.  
 Legion of Merit with Oak Leaf Cluster.  
 Bronze Star Medal.  
 Defense Meritorious Service Medal.  
 Meritorious Service Medal with Oak Leaf Cluster.  
 The Air Medal.  
 Army Commendation Medal with two Oak Leaf Clusters.  
 Reserve Components Achievement Medal.  
 National Defense Service Medal with star.  
 Vietnam Service Medal with 4 campaign stars.  
 Humanitarian Service Medals.  
 Reserve Components Medal w/Hourglass Device.  
 Army Service Ribbon.  
 Overseas Service Ribbon.  
 Reserve Components Overseas Deployment Ribbon.  
 Republic of Vietnam Campaign Medal.  
 OSD Staff Badge.  
 Army Staff Badge.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

## PAPERS:

Threat of Civil Unrest and Insurrection, . . . to insure domestic tranquility, provide for the common defence . . . Strategic Studies Institute, October 2000.

The National Security Act of 2002, Organizing for National Security, Strategic Studies Institute, November 2000 Articles.

Posse Comitatus, the Army of the 21st century and the Law of Unintended Consequences, National Guard Magazine, January 1999.

The “Five Rs” of Army Integration and the Crucial Element, National Guard Magazine, July 1999.

The Army, Guard included, Needs to Tell its Story, National Guard Magazine, June 2000.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have not delivered any speeches relevant to the position for which nominated.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

WILLIAM A. NAVAS, JR.

This 9th day of June, 2001.

[The nomination of William A. Navas, Jr. was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

[Prepared questions submitted to Michael W. Wynne by Chairman Levin prior to the hearing with answers supplied follow:]

*June 15, 2001.*

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed are the answers to the advanced questions that the Senate Committee on Armed Services asked me to complete.

Sincerely,

MICHAEL W. WYNNE.

cc: Hon. John Warner,  
*Ranking Member.*

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. From your close association with defense issues, you have had an opportunity to observe the implementation and impact of those reforms.

Do you support full implementation of these defense reforms?

*Answer.* If confirmed, I will fully support the intent of the reforms and advocate policies that will facilitate accomplishment of joint operations, streamline acquisition management and oversight, and enhance the Department's ability to respond to our 21st century national security challenges.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* The enactment of Goldwater-Nichols significantly improved the organization of the Department of Defense, focused our joint warfighting capabilities, and enhanced the military advice received by the Secretary. However, given the passage of time, I support Secretary Aldridge's view that it is worthwhile to review the Department's implementation and make appropriate adjustments, if needed. In particular, if confirmed, I will emphasize a closer partnership between the acquisition and operational requirements communities and an efficiently organized management and support infrastructure that will reduce the time it takes to provide new warfighting capability while enhancing the effectiveness of our existing systems.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of the Goldwater-Nichols Department of Defense Reorganization Act, seem to me to be strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

*Answer.* Yes, I support full implementation of the Goldwater-Nichols reforms and agree with its goals.

##### DUTIES

*Question.* Section 133 of Title 10, United States Code, describes the duties of the Under Secretary of Defense for Acquisition and Technology and Logistics (USD(ATL)).

Assuming you are confirmed, do you expect that Secretary Rumsfeld will prescribe additional duties for you?

*Answer.* If confirmed, I will support the Secretary, Deputy Secretary, and the Under Secretary as best as I am able. To answer your question specifically, I would

expect that the USD (AT&L) would assign any additional duties, but I certainly will carry out all assigned tasks and unassigned tasks as prescribed by law and directive.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties and those outlined in the law and applicable DOD directives?

*Answer.* I have spent most of my career in weapons systems development and acquisition following 7 years as an Air Force officer. Over the past quarter of a century, I have gained experience and skills I think will enable me to carry out the duties required by the acquisition and technology position. Throughout my career, I have been blessed to have worked with outstanding individuals—leaders, colleagues, and subordinates—who have taught me a lot in how to manage, lead, and follow. I believe this perspective and the knowledge I have gained through different positions and working with many different people will aid me in carrying out the duties of this position.

*Question.* Do you believe that there are any additional steps that you need to take to enhance your expertise to perform these duties?

*Answer.* Life is a continuing learning experience. I think it is most important to listen and talk to the people who are subject matter experts, listen to people in the field, communicate with the Military Departments, Joint Staff, and Congress, and most importantly talk to the warfighter. If confirmed, I will get up to speed as soon as possible so I can perform my duties to the best of my abilities.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld and Mr. Aldridge would prescribe for you?

*Answer.* Title 10, United States Code, is of course, the starting point for all the duties to be considered. There are also Department of Defense Directives that cover broadly the duties of the USD(AT&L) and the DUSD(A&T). I look to these laws and directives as the guiding principles. Finally, if confirmed, I will perform any duties delegated to me by Secretary Rumsfeld and Mr. Aldridge.

*Question.* If you are confirmed as Deputy Under Secretary of Defense for Acquisition and Technology, what will your relationship be with each of the following:

The Under Secretary of Defense for Acquisition, Technology, and Logistics.

*Answer.* Mr. Aldridge would be my boss and I would support him to the best of my ability.

*Question.* The Deputy Under Secretary of Defense for Logistics and Material Readiness.

*Answer.* The DUSD(L&MR) would be a peer and colleague in supporting the USD(AT&L).

*Question.* The Director of Defense Research and Engineering.

*Answer.* The DDR&E would be a peer and colleague in supporting the USD(AT&L).

*Question.* The Deputy Under Secretary of Defense (Installations and Environment).

*Answer.* The DUSD(I&E) reports to the DUSD(L&MR).

*Question.* The Chief Information Officer of the Department of Defense.

*Answer.* The CIO is under the purview of ASD (C<sup>3</sup>I). The relationship would be one of coordination and communication on positions that relate to the USD (AT&L).

*Question.* The Defense Acquisition Regulatory Council.

*Answer.* The DARC is overseen by the Director, Defense Procurement, who reports to the DUSD(A&T). Issues and challenges would certainly be dealt with in a direct and positive way.

*Question.* The Secretaries of the military departments.

*Answer.* There are so many issues of mutual concern that coordination is demanded, and of course if confirmed, that is what I would do.

*Question.* The Assistant Secretaries of the military departments for research, development, engineering.

*Answer.* The Assistant Secretaries play a key role in acquisition, technology, and logistics as Component Acquisition Executives. Communication and coordination, as with the Secretaries of the Military Departments, are essential.

*Question.* The Director of the Defense Advanced Research Projects Agency (DARPA).

*Answer.* DARPA reports through DDR&E, a peer. If confirmed, I expect that I will be enlightened on the many different projects that DARPA is working and support DARPA activities.

*Question.* The Director of the Defense Logistics Agency.

*Answer.* DLA reports to the DUSD(L&MR) and the DUSD(L&MR) would be my peer.

*Question.* The Director of Operational Testing and Evaluation.

Answer. The DOT&E is a peer and plays a very key role in certifying tests before a program can move forward through the acquisition process. If confirmed, I expect to coordinate with the DOT&E on testing and evaluation issues.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Deputy Under Secretary of Defense for Acquisition and Technology?

Answer. If confirmed, the major challenges I will face include: (a) improving the cost and schedule performance of our major acquisition programs by focusing on actions to reduce acquisition cycle time and control cost growth; (b) implementing new DOD acquisition policies to emphasize evolutionary acquisition and time-phased requirements; and (c) maintaining effective communications with the Services and the defense industry.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. It is my understanding that the USD(AT&L) has established as a top priority a goal to improve the credibility and effectiveness of the acquisition and logistics process. To assist him in achieving this objective, I believe he is looking at some metrics to use to be able to measure key aspects of the acquisition cycle. I would think appropriate metrics would be to reduce acquisition cycle time or eliminate cost growth. If confirmed, he and I will oversee the execution of the Department's acquisition programs to identify areas needing improvement or better ways of doing business that will then accomplish the objectives and overcome the challenges I outlined above.

If confirmed, the USD(AT&L) and I also will meet regularly with the Service acquisition leadership and with leaders of the defense industry to maintain open and effective communications.

I believe that the USD(AT&L) already has announced his intention to open a new dialog with the Services and defense industry through regular, high-level meetings and annual, cooperative reviews of major contracts with the leading defense contractors.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Deputy Under Secretary of Defense for Acquisition and Technology?

Answer. I consider the most serious problems that I need to address, if confirmed, to be those associated with the USD(AT&L)'s five stated goals. These goals are:

- (1) *Achieve Credibility and Efficiency in the Acquisition and Logistics Support Process;*
- (2) *Revitalize the Quality and Morale of the Acquisition Workforce;*
- (3) *Improve the Health of the Defense Industrial Base;*
- (4) *Rationalize the Weapon Systems and Infrastructure With the New Defense Strategy; and*
- (5) *Initiate High Leverage Technologies to Create the Weapon Systems and Strategies of the Future.*

More specifically, the problems I need to address, if confirmed, will center around finding ways to measure how effectively we are meeting these goals.

*Question.* What management actions and timelines would you establish to address these problems?

Answer. If confirmed, I intend to develop more detailed objectives that will support the USD(AT&L)'s goals. Certainly, the bottom line is to identify those capabilities and policies that are required to deliver and sustain the necessary combat capability required by the military strategy. As for a timeline, I need to delve further into these issues, before I am prepared to present an actual timeline.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues that must be addressed by the Deputy Under Secretary of Defense for Acquisition and Technology?

Answer. If confirmed, I plan to explore more detailed subordinate goals to support Mr. Aldridge's five goals in order to bring them to the operational level. As you may recall, his five goals are to:

- (1) *Achieve Credibility and Efficiency in the Acquisition and Logistics Support Process;*
- (2) *Revitalize the Quality and Morale of the Acquisition Workforce;*
- (3) *Improve the Health of the Defense Industrial Base;*

- (4) *Rationalize the Weapon Systems and Infrastructure With the New Defense Strategy; and*  
 (5) *Initiate High Leverage Technologies to Create the Weapon Systems and Strategies of the Future.*

Beyond these, there are many challenges that confront me, if confirmed, and they run the full spectrum of my prospective responsibilities. A few that come to mind are:

Addressing the continued aging of the force structure and defining an executable long-term modernization program to support Secretary Rumsfeld's strategic vision. Arresting the forecasted growth of Operation & Support costs.

Improving the quality of the acquisition workforce and implementing programs to maintain a viable workforce in the face of significant predicted losses over the next decade.

Monitor and improve, where possible, the health of the Defense industrial base.

#### MAJOR WEAPON SYSTEM ACQUISITION

*Question.* Secretary Rumsfeld testified at his confirmation hearing that the cycle time for major acquisition programs conducted over the past several decades averages between 8 and 9 years. Others have stated that the cycle time may be as long as 15 to 20 years. The Secretary stated that this cycle time is not sufficiently responsive to urgent new challenges and rapidly emerging technological developments.

What specific steps could the Department of Defense take to reduce cycle time for major acquisition programs?

*Answer.* There is no doubt the Department must continually work to deliver advanced technology to the warfighter faster. It seems to me the acquisition cycle time can be reduced by: (1) rapid acquisition with demonstrated technology, (2) time-phased requirements and evolutionary development, and (3) integrated test and evaluation.

In addition, the Under Secretary of Defense for Acquisition, Technology, and Logistics has established specific goals for the organization and will look to metrics to help him assess progress toward achieving those goals. I think using metrics as tools to assist senior leadership and program managers in reducing cycle time is a good approach for the Department.

*Question.* Do you believe that incremental or phased acquisition approaches could help address this problem?

*Answer.* I believe evolutionary acquisition is a way to help address the problem. Early involvement of the test community in the requirements process and design of an integrated test strategy seems to me to be important also.

*Question.* One of the features of the Department's acquisition system that is frequently criticized is the extensive "concurrency", or overlap, between the development and production phases of major weapon system acquisition programs.

Where and under what conditions should concurrency be used in the development and production phases of DOD's major weapon system acquisition programs?

*Answer.* One has to balance the benefit of early acquisition against the risks of early failure. Some degree of concurrency may be necessary in weapons program execution. Overlapping development and production phases ensures that those engineering and management personnel involved in the development phase are also available to work the production technical issues and design changes. This ensures technical continuity, which I believe, results in a better product for the warfighter.

*Question.* Do you believe there has been too much concurrency?

*Answer.* It is important to maintain a balance on the degree of concurrency. With too much overlap, the results of testing (particularly operational testing) may not be incorporated in fixing and improving the weapon's design prior to a significant commitment to production. This results in costly rework for those units already in the production pipeline.

*Question.* If so, what steps should be taken to reduce such concurrency?

*Answer.* I feel that each weapons acquisition program needs to be evaluated and treated on a case-by-case basis. I believe DOD decision-makers are aware of the risks associated with too little or too much concurrency. Reducing acquisition cycle time or fielding an important capability for the warfighter as soon as possible must be balanced with the risks associated with too much concurrency.

*Question.* Department of Defense Instruction 5000.2, which governs the acquisition of major weapon systems, was recently rewritten to require that new technologies be demonstrated in a relevant environment (preferably an operational environment) before they may be incorporated into DOD acquisition programs.

Are you familiar with the revised version of DOD Instruction 5000.2, and if so, what are your views on this revision?

Answer. I am not yet as familiar with the new DOD Instruction as I hope to be, if I am confirmed. However, I do think a new, more flexible acquisition process has the possibility of giving the Department the right kind of policy tool to make the kind of acquisition decisions necessary to put advanced technologies into the hands of the warfighters faster.

*Question.* Do you believe that the process of testing and demonstrating new technologies is more efficiently conducted in the context of major acquisition programs, or in stand-alone technology programs?

Answer. It's really a matter of timing and context. If you are testing a technology for potential broad application across a number of existing or emerging systems, then testing within the context of a stand-alone technology program is appropriate. If, however, you are at the point of applying a technology within the context of a certain system, it should be tested in that context.

*Question.* Would DOD's major acquisition programs be more successful if the Department were to follow the commercial model and mature its technologies with research and development funds before they are incorporated into product development programs?

Answer. I believe there should be a clearer separation between technology work and systems work.

#### TEST AND EVALUATION

*Question.* The Department has frequently been criticized for failing to adequately test its major weapon systems before they go into production. In recent years, the Department has given the Director of Operational Test and Evaluation increased authority over developmental testing.

Would you agree that a strong, independent Director of Operational Test and Evaluation is critical to the success of the Department's acquisition programs?

Answer. First, let me say my understanding is the Department has not given the Director of Operational Test and Evaluation any increased authority over developmental test and evaluation. My understanding is that during a 1999 realignment of functions, the Director, Operational Test and Evaluation assumed responsibility for the Major Range and Test Facilities Base and budgets for the Central Test and Evaluation Investment Program. However, responsibility for developmental test and evaluation continues to be an Under Secretary of Defense for Acquisition, Technology, and Logistics function.

I feel that a strong, independent Director of Operational Test and Evaluation is critical to ensuring the Department's acquisition programs are realistically and adequately tested in their intended operational environment. As an independent voice, the Director of Operational Test and Evaluation provides operational test and evaluation results to the Secretary of Defense, other decision-makers in the Department, and Congress before they proceed beyond Low Rate Initial Production.

*Question.* Do you believe that supervisory authority over developmental testing is an appropriate role for the Director of Operational Test and Evaluation, or could this role compromise the Director's independence?

Answer. First, as stated in my previous response, my understanding is that the Director, Operational Test and Evaluation does not have a supervisory position over Developmental Test and Evaluation.

Developmental test and evaluation and operational test and evaluation are separate, yet complementary. Developmental test and evaluation is an integral part of system engineering designed to verify performance or to discover anomalies; and, through a test-fix-test process, assure the system design and mitigate technical risk. Operational Test and Evaluation is used to determine a system's military effectiveness and suitability for its intended operating environment.

*Question.* Do we need to take any steps to ensure that developmental testing is realistic, and is used for its intended purpose of identifying and addressing potential weaknesses in an acquisition program at an early stage?

Answer. I believe that there are several steps that can be taken to ensure developmental test and evaluation is realistic and used for its intended purpose. Developmental test and evaluation needs to be balanced against a schedule that will sufficiently mitigate program risk, while also ensuring a high probability of successfully completing operational test and evaluation the first time around and fielding systems to meet War-fighter requirements.

Testers should be involved early to ensure an adequate test and evaluation program is defined, addressed, and maintained in both program budget and schedule. We need to devote sufficient resources to conduct well-planned test programs and execute the program properly.

The Department needs to increase discipline in the developmental test and evaluation process by assuring systems have passed their exit criteria and demonstrated a fundamental core capability in developmental test and evaluation before entering Initial Operational Test and Evaluation.

## ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has essentially remained constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on effective program management, and if so, how do you plan to address this problem?

*Answer.* Yes, I am concerned about the effects of the reductions on the acquisition workforce. I believe there are some plans in place already within the Department to address issues related to reductions in the acquisition workforce.

*Question.* As the Department continues to emphasize contracting out and competitive sourcing, the skills, training, and experience of the acquisition workforce will be critical in effectively managing these contracts.

Does our current acquisition workforce have the quality and training to adapt to new acquisition reforms, as well as to the increased workload and responsibility for managing privatization efforts?

*Answer.* With changes related to acquisition reform, plus increased workload and a reduced workforce it is important that the current acquisition workforce have the necessary training and experience to implement the reforms as well as manage the Department's privatization efforts.

*Question.* What is your view of the recommendations of the Acquisition Workforce 2005 Task Force and what role do you expect to play in implementing these recommendations?

*Answer.* I am not familiar with the specific recommendations of the Acquisition Workforce 2005 Task Force but, if confirmed, it is certainly an area I will be interested in learning more about in order to determine what role I should play.

## SCIENCE AND TECHNOLOGY

*Question.* The Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 established the goal of increasing the budget for the defense science and technology program by at least 2 percent over inflation for each of the fiscal years 2000 to 2008. This goal was not met in the fiscal year 2000 and fiscal year 2001 budget requests. In his speech at the Citadel last year, then-Governor Bush spoke of his support for increased research and development spending and a strong and stable technology base.

Do you believe that a substantial increase in the Department's science and technology budget is needed?

*Answer.* Determining a sufficient level of science and technology (S&T) investment is not a precise science, rather I believe it is a strategic decision. But, yes, I believe the Department's S&T budget needs to be increased consistent with the President's Blueprint and balanced with other DOD needs to ensure the technological superiority of our armed forces. I feel that revolutionary concepts should be emphasized in the S&T budget to provide more dramatic advances in capabilities that the President seeks. Our military needs a technological edge now more than ever.

*Question.* Congress has authorized the Department to give laboratory directors direct hiring authority to enable them to compete more effectively with the private sector for top scientific and engineering talent. To date, the Department has been reluctant to use this authority.

Do you support giving the Department's laboratory directors the authority to make direct hires without having to go through a lengthy review process, which can take up to 18 months?

*Answer.* Yes. Our laboratories are vital for our Nation's development of future, essential warfighting capabilities. I am not familiar with this particular authority but the whole area of a talented and well-trained acquisition workforce, to include laboratory staff, where we need to have excellent scientific and engineering talent is an area I will be exploring further, if confirmed, in order to improve the Department's ability to compete for that talent.

## LOGISTICS TRANSFORMATION

*Question.* Over the last 10 years, the Defense Logistics Agency (DLA) has placed an increasing emphasis on approaches such as prime vendor agreements, virtual prime vendor agreements, and direct vendor delivery to streamline the Department's logistics systems for commercial items such as medical supplies, clothing and subsistence, and common hardware items.

Do you support commercial practices such as those that rely increasingly on the private sector to meet the Department's logistics need?

*Answer.* I strongly support the use of commercial practices in defense logistics, where it makes sense from a warfighter's perspective. I think DLA is moving in this direction and I support their efforts in this area.

*Question.* Do you believe that these types of logistics practices can appropriately be expanded to the delivery of non-commercial items, such as aircraft spare parts?

*Answer.* The challenge here is with defense-unique items, such as fighter aircraft parts, which tend to be low volume, high cost items, often provided by sole-source manufacturers. I believe DOD should continue adopting innovative support methods, while using "lessons learned" from the test programs to improve future efforts, always bearing in mind the very real need to protect the safety of our troops.

## COMPETITIVE SOURCING

*Question.* Over the past several years, DOD has increased its reliance on the private sector to perform certain activities including equipment maintenance and facility operations. Some have supported this effort while others have expressed concern that core activities are being jeopardized by reducing our reliance on military personnel and civilian employees of the Federal Government.

What approach would you recommend to balance maintaining necessary capabilities and outsourcing?

*Answer.* I believe each case should be evaluated on its merit. Intuitively, it would seem that all appropriate commercial activities could be competed.

*Question.* Do you believe that public-private competition results in significant savings to the Department and, if so, how?

*Answer.* I believe the forces of competition should drive identification of potential efficiencies regardless of which offer is determined to be most beneficial. However, if confirmed, I would like to review the analysis and the supporting data before making a final decision on this.

*Question.* Do you believe that public-private competition is an essential prerequisite to the outsourcing of functions currently performed by Federal employees?

*Answer.* I would think that competition would be the preferred option but there again I would like to see the supporting analytical data.

*Question.* What is your view of the current A-76 process?

*Answer.* I am only marginally knowledgeable of the A-76 process, but, if confirmed, I intend to become much better informed in this area.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

*Answer.* I cannot really respond at this time without reviewing more information on this.

## INFORMATION TECHNOLOGY

*Question.* There appears to be potential overlap between the responsibilities of the USD(ATL) and the Chief Information Officer (currently ASD(C<sup>3</sup>I)) with regards to information technology acquisition.

How do you anticipate sharing responsibilities with the CIO to ensure effective acquisition of information technology?

*Answer.* I think information technology acquisition is both a high priority and a continuing challenge for the Department. The ASD (C<sup>3</sup>I), USD (AT&L), and their respective organizations have major roles to play. If confirmed, I expect to have a close working relationship with the ASD (C<sup>3</sup>I) to ensure that both organizations contribute the strengths of the respective organizations to the process. From my perspective, I view the CIO as a technical expert in information technology and a colleague.

*Question.* The effective use of information technology such as advanced computing, telecommunications, networking technology and software is a vital component in achieving the goal of full spectrum dominance as outlined in the Joint Vision 2020. Recently, the commercial marketplace has been the source of major innovation in these sectors rather than DOD.

What is your assessment of the Department's ability to rapidly assimilate these commercial technologies?

Answer. The Department is aware of the increasing capability of commercial information technologies. I think the Department needs to emphasize evolutionary acquisition and time-phased requirements, in part, patterned after commercial practices, and to further improve its ability to rapidly assimilate commercial technologies to bring their benefits to the warfighter.

*Question.* Is a growing DOD dependence on commercial information technology a positive or negative development?

Answer. This is probably the province of the CIO, but with the growth in commercial technology I believe there are more positives than negatives. To be specific, to the extent that relying on commercial information technology enables DOD to deploy the latest technologies more quickly and at reduced costs, it is positive. When the commercial technologies are not sufficiently robust to operate in a military environment, and when a required and appropriate DOD in-house capability to support and maintain its military forces under unique military scenarios is compromised, it is negative. Striking the appropriate balance as we exploit commercial information technologies will be a continuing challenge.

#### THE DEFENSE INDUSTRIAL BASE

*Question.* Some have argued that in many categories the current industrial base may no longer be able to support the "winner-take-all" competitions of the past.

How can we obtain the benefits of competition given the current limited number of contractors?

Answer. The number of active competitors in several defense markets has declined and, consequently, it has become more challenging to ensure effective competition in these sectors. I believe the Department of Defense has in place a process to review proposed mergers and acquisitions. That process should help to address the concerns related to losing the benefits of competition in the marketplace.

*Question.* Do you support further consolidation of the defense industry?

Answer. Each proposed new merger or acquisition of the defense firms should be considered on a case-by-case basis. The competitiveness and financial health of each industrial sector are different and need to be considered.

*Question.* A November 2000 report by the Defense Science Board on the health of the defense industry identified some significant issues associated with under-investment and consolidation.

What is your view of the specific recommendations of the Defense Science Board study?

Answer. I am not familiar with the recommendations of this study but would certainly be very interested in learning more about them if confirmed. I believe it is imperative that the country retain a robust and competitive industrial base.

*Question.* What is your view of the current state of the U.S. defense industry?

Answer. My opinion is that the U.S. defense industry is strong and still provides the best products and services to our war-fighters. I believe it will continue to provide those products and services in the future. It will always need the correct incentives in order to remain a stable industrial base for the future.

*Question.* One factor in the escalation of support costs in relation to weapon system procurement and operations is the maintenance of over capacity in the defense industry that is carried as overhead. Some in industry contend that under current government accounting policies there is little incentive for contractors to reduce the number of facilities.

Should DOD assess providing incentives to further reduce the number of facilities or is this best left to market forces?

Answer. While I think it seems better to let the market forces provide the incentives for business decisions of our defense firms, I believe that with certain Defense-unique requirements there should be options available. I think when needed the Department should consider appropriate incentives for rationalizing inefficient operations.

#### FOREIGN ACQUISITION

*Question.* In recent years, foreign-owned companies have been purchasing a variety of U.S. defense manufacturers.

What is your position on foreign investment in the U.S. defense sector?

Answer. In general, I favor foreign investment in the U.S. whether it be for defense industries or non-defense industries, so long as this investment does not pose threats to national security.

*Question.* What are your views on the responsibility of the Department of Defense to monitor and oversee potential acquisitions of U.S. firms by foreign buyers?

*Answer.* Since foreign acquisitions of U.S. defense firms could directly affect both the reliability of suppliers to the DOD weapons acquisition process as well as the transfer of technology under development in DOD, I believe that the Department needs to oversee and continue to monitor developments in this area, in order to protect our national security interests. I realize, of course, that international armaments cooperation and, more specifically international investment in the industrial base increases the potential security risks inherent in the transfer of militarily significant technology. To eliminate such risks, all participating nations must ensure that mutually-acceptable, adequate control and enforcement mechanisms are in place to eliminate the transfer of technology outside the coalition partnership, or even into the commercial world.

*Question.* What standard should be applied to determine if a foreign acquisition threatens national security?

*Answer.* I believe the standard should basically be whether the company being acquired has a critical technology or process the Department of Defense relies on and if that technology or process would be lost if the investor decided to close it down.

*Question.* What do you plan to do to ensure that the U.S. does not lose critical manufacturing capabilities as a result of foreign acquisitions?

*Answer.* I understand there is a process currently in place by which the Department monitors vulnerabilities related to the possible loss of manufacturing and Research and Development capabilities and can take legal action, if necessary. Broadly, there are two things I think should be done regarding this issue. First, in each merger or acquisition transaction, one needs a good analysis on what vulnerabilities exist for national security in the event of a move offshore involving not just manufacturing facilities but R&D facilities as well. Second, I believe there is a need for continuing diligence in monitoring the defense industrial base in critical technology and manufacturing areas to anticipate where vulnerabilities may exist so that the Department can take actions to help ensure that future supply is reliable.

*Question.* What are your plans for strengthening the Defense Department's oversight role to ensure that U.S. national security is not compromised from future foreign acquisitions within U.S. industries?

*Answer.* Fundamentally my sense is the Department needs to enforce the guidelines that are already in place and make the current process work to the benefit of national defense.

*Question.* Do you believe that there should be greater cooperation and even integration between defense industries in Europe and the U.S.? If so how can such cooperation be facilitated?

*Answer.* I support greater transatlantic defense industrial cooperation. More cooperative endeavors such as transatlantic teaming, joint ventures and even mergers and acquisitions can produce beneficial synergies, efficient use of limited resources and healthy competition, so long as it occurs in a positive and constructive manner. One way to encourage more transatlantic industrial cooperation is to bring good, well-managed programs to the marketplace.

I think with respect to integration, it is necessary to evaluate each case on its merit.

#### INTELLECTUAL PROPERTY

*Question.* Many observers have said that one of the major disincentives for commercial companies interested in doing business with the Department of Defense is the difficulty of protecting their intellectual property under a government contract. On January 4, 2001, the Pentagon issued guidance to improve the Department's handling of intellectual property rights in order to attract commercial entities to defense contracts.

Are you familiar with this guidance and, if so, what are your views of this revised policy?

*Answer.* No, I am not familiar with this guidance, but I am aware of this criticism and the fact that it is perceived as a disincentive. If confirmed, my primary approach to this issue would be to ensure that any solution would be even-handed.

#### MULTIYEAR PROCUREMENTS

*Question.* Providing a stable funding profile for defense programs is absolutely essential to effective program management and performance, for both DOD and the defense industry. One already tested means of increasing program funding stability is the use of multiyear contracts.

Please provide your views on multiyear procurements.

Answer. My sense is that the Department has successfully used multiyear procurement in past years to reduce defense system production cost. Multiyear procurement is a very useful acquisition strategy when the requirement is clear and the program has achieved stability. Where these circumstances exist, I will, if confirmed, strongly encourage the use of multiyear contracts to reduce the production cost associated with weapon systems.

*Question.* How will you treat proposals to renegotiate a multiyear procurement?

Answer. If confirmed, with great caution. Multiyear procurement will remain an effective tool only if all parties to multiyear contracts live up to the long-term commitment they made. Neither industry nor Congress will be interested in entering into multiyear contracts unless each can rely on the other to follow through as planned. This is rarely a problem if the program met the stability criteria before the multiyear contract was awarded. That said, we all know dramatic changes can and do occur in this business. If circumstances change significantly enough to force renegotiation of a multiyear contract, I would expect any such recommendation to be fully supported by a description of what changed, why the changes necessitate renegotiation of the contract, how the benefits of the multiyear contract, including reduced cost, will be preserved to the extent possible in the renegotiation, and what will be done to preclude perturbing the contract in the future. It is definitely something that needs to be scrutinized on a case-by-case basis and depends on the particular circumstances.

#### SMALL BUSINESS ISSUES

*Question.* For the last two decades, the Department of Defense has been subject to statutory goals for contracting with small businesses and minority small businesses. More recently, additional goals have been added for contracting with women-owned business and businesses owned by disabled veterans. A number of programs have been put in place to help the Department achieve these goals.

Do you believe that these goals serve a valid purpose in the Department of Defense contracting system?

Answer. Yes, I believe statutory goals serve to highlight valid congressional concerns that the Department of Defense is obligated to carryout as efficiently and effectively as possible. However, the sheer magnitude of twenty separate statutory goals is undermining the Department's ability to credibly carryout those goals. If confirmed, I intend to play a proactive role in ensuring that small business firms have maximum practicable opportunity to participate in Defense procurements.

*Question.* Do you support the so-called "rule of two," which provides that if two or more small businesses are capable of performing a contract, competition will be limited to small business?

Answer. I support the "rule of two" providing their capabilities are sufficient to perform the service or provide the required product. I believe it is a valid and effective tool in support of the Department's efforts to provide increased opportunities for small business firms.

*Question.* Do you support the Section 8(a) program, under which the Department sets aside certain contracts for performance by small disadvantaged business?

Answer. I do. I think it has provided benefits and highlighted talents not otherwise recognized.

*Question.* Do you support the Department of Defense mentor-protégé program, under which major defense contracts provide advice and assistance to small disadvantaged businesses and women-owned businesses seeking to do business with the Department of Defense?

Answer. I am familiar with this program from my private experience and have seen that there is a benefit to expanding the Defense industrial base in this manner. By providing incentives to major prime contractors the Department is developing a cadre of capable small disadvantaged business firms that can support mission requirements. I was pleased to see that Congress has recently expanded the program to include women-owned small business firms and, if confirmed, will strongly support this program.

*Question.* Would you recommend the extension of the program?

Answer. Yes, this program has certainly demonstrated benefits. I believe that by developing the small business firms that have the requisite capabilities to participate in DOD acquisitions, the Department is expanding its domestic small business capabilities as well as ensuring a competitive and capable pool of contractors.

*Question.* Over the last several years, representatives of the small business community have been increasingly critical of the Department of Defense for "bundling" contracts together into larger contracts that, in their view, tend to preclude small businesses from competing. Several years ago, Congress enacted a law under which

the Department is required to conduct market research to determine whether consolidation of requirements is necessary and justified before proceeding with a bundled contract. The bundled contract is permitted to go forward only if the Department determines that the benefits substantially outweigh the costs.

What is your view of contract "bundling"?

Answer. I recognize the Department is dealing in an environment that requires taking a hard look at how we do business. Our acquisition workforce is much smaller than it was a decade ago. As the Department strives to create efficiencies, sometimes it is necessary to combine contracts or requirements that may have been previously performed by small business firms. I think this should be done carefully and with a full understanding of the actual benefits to be gained.

*Question.* Do you believe that there is a value to having small businesses contract directly with the Federal Government, rather than being relegated to the role of subcontractors?

Answer. I believe there is value in both roles. Certainly, my experience with the mentoring program confirms the value of having small business serve as subcontractors, but there are times when being the prime contractor is preferable for both the Department and the small business involved. I am convinced small businesses offer the Department value at both the prime contractor and subcontractor level.

*Question.* Do you believe that the standard adopted by Congress for approving bundling is the appropriate one, or would you recommend that this standard be modified?

Answer. I am not familiar with this standard, however, I would think that each case should be evaluated on its own merit. If confirmed, I certainly would want to look into using metrics to assess the impact of policy changes and would support such an approach in this area.

#### FEEDER SYSTEMS

*Question.* For years, the Department of Defense has been unable to ensure proper accountability and control over its physical assets, proper accounting for the costs of operations, and proper recording and reconciling of disbursements. In the view of many, the Department will not be able to get its financial house in order until it has identified and addressed problems with the so-called "feeder systems" that provide much of the information used by the Department's finance and accounting systems.

Do you agree that it must be a high priority for the Department of Defense to develop systems that can properly account for costs and disbursements?

Answer. I understand that Secretary Rumsfeld has made financial management reform and improvements to feeder systems a high DOD priority. I agree with the Secretary and, if confirmed, will aggressively work to ensure DOD systems properly account for costs and disbursements. The Secretary has already taken very positive steps to begin such improvement efforts by establishing a Defense Business Management Board to oversee business and financial improvements, and I will, if confirmed, ensure that my office is actively involved.

*Question.* Would you make it a high priority to work with the DOD Comptroller, the Chief Information Officer, and the military services to ensure that the Department's acquisition systems include appropriate management controls and provide reliable data that can be used for both acquisition management and financial management purposes?

Answer. Yes. If confirmed, I intend to work with the DOD Comptroller and other DOD organizations to ensure that the Department's acquisition systems are modernized and that controls are developed or strengthened to ensure reliable information is provided to both acquisition and financial management.

#### TRANSFORMATION

*Question.* Over the last year, the military departments have described or initiated plans to transform so that they will be better able to deal with a wide range of anticipated 21st century national security challenges.

What are your views of the transformation initiatives within the Department as they are currently understood?

Answer. I believe that the military departments have taken steps that are appropriate in view of the anticipated 21st century national security challenges. I would look to the upcoming Quadrennial Defense Review and the other Departmental reviews as a mechanism to further refine and integrate these individual transformation plans. The important point is to be forward looking and not to look to the past.

*Question.* Are you concerned that these initiatives appear to be “self defined” by the services without direct participation of the Secretary of Defense or the Chairman, Joint Chiefs of Staff?

*Answer.* I am not aware of any current problems in this regard. While the initial transformation steps by the military departments may have lacked broad DOD participation, it is clear Secretary Rumsfeld feels much can be done to prepare the Department for the 21st century. The Strategic Review and the upcoming Quadrennial Defense Review seem to have the full participation of the Office of the Secretary of Defense and the Joint Chiefs of Staff as well as the Services. It is my understanding that these two efforts will be the basis for the Department’s future transformation efforts.

*Question.* Recognizing that a fundamental change of the military services will be expensive and understanding that “legacy” modernization programs were significantly underfunded before these transformation initiatives began, what would you do to ensure that a proper balance of resources is maintained between the two efforts?

*Answer.* I feel that this will be the most difficult challenge for the Department. In my opinion, the Quadrennial Defense Review must carefully consider current capabilities and steps that must be taken in the near term to maintain a viable war-fighting capacity. In that vein, transformation initiatives must be examined on their own merit and paced in such a manner that sustainable programs are defined so as not to create budgetary imbalances in the future. I believe it is very important to recognize America continues to need protection during a transformation process and, therefore, judicious support of “legacy” programs is necessary.

#### COST ESTIMATING

*Question.* As programs move forward to critical decision points, there often seems to be a wide disparity between the cost estimates provided by Service analysts and those of the Cost Analysis Improvement Group (OSD CAIG).

How do you intend to handle the issue of projected costs when the estimates may widely differ?

*Answer.* Under Secretary Aldridge has testified about the 5 organizational goals he established that directly support the objectives of the Secretary of Defense. The first of these goals is to *Achieve Credibility and Efficiency in the Acquisition and Logistics Support Process*. A critical element of this goal is the need to establish realistic pricing for our acquisition programs.

Quite often, in the process of estimating program costs, different assumptions and methodologies will yield disparate results. If confirmed, I believe I would tend to rely on the independent estimate the CAIG provided for assessing the Service’s projected cost for the program. I would want to understand the reasons for differences between the Service estimate and the CAIG estimate prior to a decision at a Defense Acquisition Board meeting. To that end, I would seek to reconcile differences, on a case-by-case basis, if at all possible.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Under Secretary of Defense for Acquisition, Technology and Logistics?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### ACQUISITION WORKFORCE

1. Senator THURMOND. Mr. Wynne, I was pleased to see that you considered the Quality and Morale of the Acquisition Workforce as one of the most serious prob-

lems that must be addressed by the Department of Defense. What are your personal views on how the Department can best resolve this problem?

Mr. WYNNE. Senator, thank you for focusing your concern on this critical issue. The problem of deteriorating morale in the Acquisition, Technology and Logistics Workforce has developed over time and is the result of a decade of downsizing combined with the impact of increased operational deployments and associated costs during the 1990s reduced the funding available for modernization of systems and infrastructure.

There are already plans within the Department to address issues related to reductions in the workforce. I am looking at a range of initiatives encompassing career development, expanded recruiting and hiring, and the broad application of the kinds of authorities that are working so well in the Acquisition Workforce Personnel Demonstration Project. But one of the most important thing we must do is to provide leadership at every level. We have to provide vision and direction from the top and empower our line and middle managers to lead.

#### ACQUISITION PROCESS

2. Senator THURMOND. Mr. Wynne, based on your board and extensive experience in the private sector acquisition process, what commercial practices would you consider key toward improving the defense acquisition process?

Mr. WYNNE. We need to adopt best commercial practices and become more “commercial friendly.” By this, I mean we need to integrate better with commercial industry so that there are not two methods of doing business—one for government and one for commercial. For example, I plan to reform government property rules, look at how we manage intellectual property and develop creative solutions to implement commercial leasing alternatives.

#### LIVE FIRE TESTING

3. Senator THURMOND. Mr. Wynne, what are your views on the requirement for Live Fire Testing of our weapons systems?

Mr. WYNNE. Live Fire Testing is an important and integral part of the Department’s weapon system test and evaluation process, providing timely and accurate assessments of system survivability, vulnerability, and munitions lethality.

Live Fire Testing also provides insights into methods of reducing the vulnerability and improving the lethality of weapons and weapon platforms, assessing battle damage repair capabilities and issues, and improving the computer modeling of weapons system lethality and vulnerability.

I believe strongly that Live Fire Testing should be continued.

#### QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

##### ACQUISITION WORKFORCE

4. Senator COLLINS. Mr. Wynne, in your response to the advance policy questions, you state that you consider one of the most serious problems you would face as Deputy Under Secretary of Defense for Acquisition and Technology, to be that of revitalizing the quality and morale of the acquisition workforce. The Acquisition 2005 Task Force Report, *Shaping the Civilian Acquisition Workforce of the Future*, highlights that the Department is on the verge of a crisis of a retirement driven brain drain. This report states that more than 50 percent of DOD’s civilian acquisition workforce will be eligible to retire by 2003, requiring a surge in recruiting at all levels. Assuming you are confirmed, what are some specific actions you would take to overcome this problem?

Mr. WYNNE. Thank you, Senator. Actually the timeframe is 2005 versus 2003 that 50 percent of our acquisition, technology and logistics workforce is eligible to retire. I fully support the Task Force 2005 initiatives and I will aggressively pursue their implementation. Our civilian acquisition, technology and logistics workforce is critical to the continued success of the DOD. The Department has begun comprehensive human capital planning and is enhancing career development and training for the acquisition, technology and logistics workforce. We also need to pursue a range of workforce shaping and hiring initiatives. In particular, I support aggressive recruiting and hiring at all levels. We need to advertise the important and challenging work our people do every day in order to attract top talent as well as make it easier for people to transfer into government from the private sector. We also need to become more competitive with industry in recruiting because timing and ease of hiring

is critical particularly in our initial offers. We need a broader range of intern and exchange programs and authorities to speed the introduction of private sector best practices into our operations wherever appropriate.

#### SPIRAL ACQUISITION

5. Senator COLLINS. Mr. Wynne, in the responses to the advanced questions, you state that you will attempt to reduce cycle time for major acquisition programs by introducing the concept of “time-phased requirements and evolutionary development.” Is this concept synonymous with the concept that Mr. Pete Aldridge, Under Secretary for Defense for Acquisition and Technology, has commonly referred to as “spiral acquisition”? Would you elaborate on what the perceived pros and cons are to this acquisition approach?

Mr. WYNNE. Yes, “time-phased requirements and evolutionary development” are synonymous with “spiral acquisition.” “Time-phased requirements” refers to the establishment of “blocks” of military capabilities that are required to be fielded incrementally. “Evolutionary development” is the actual maturation of the needed technologies over time, with the focus on phasing in the required technologies on a more achievable basis. Together, these concepts are the foundation of “spiral acquisition” or “spiral development.”

Spiral development calls for using available and relatively more mature technologies to produce weapons systems that may meet many, but not necessarily all, of the system’s operational requirements when they first are deployed—and then for developing and incorporating upgrades to those systems later when the necessary technologies are available. The series of upgrades represent the “spirals” that provide for increasing capabilities over time.

The revised DOD 5000-series documents that govern the DOD acquisition system specifically embody this system as a way to reduce acquisition cycle times from Science and Technology activities through production of weapon systems. This new acquisition philosophy and process provides expanded opportunities to insert mature technologies more quickly into weapon systems at various phases in the acquisition cycle. The new process requires more involvement and collaboration between the S&T and acquisition communities by requiring an agreement on the technology maturity level before insertion into the weapon system. The new process also emphasizes earlier risk reduction and demonstration of key technologies before they are inserted into a weapon system and before the formal beginning of the acquisition program. By using the more mature and available technologies during the first phases of a program, we hope to avoid the cost growth and schedule delays that have been caused in the past by trying to satisfy every operational requirement at first fielding by using much riskier, much more immature technologies.

In addition to emphasizing earlier risk reduction, the new process also permits programs to proceed more quickly through the acquisition cycle by allowing them to enter later in the cycle if their technologies are more mature. For example, a program no longer must begin with a Concept Exploration phase and proceed serially through all the later acquisition phases. If a program embodies more mature technologies and concepts, it may be able to skip earlier program phases and enter the acquisition process in the late System Development and Demonstration phase or even in the Production and Deployment phase.

As part of this new acquisition model, we also have streamlined the Defense Acquisition Board decision process to eliminate unnecessary meetings, and we have established a comprehensive set of metrics to monitor the cycle time, cost growth, and other aspects of acquisition program performance so we can more easily monitor program status and, thus, more quickly address emerging problems before they seriously threaten program schedules.

A principal benefit of this approach is that its emphasis on earlier technology maturation and demonstration, more achievable development objectives, and flexibility in the acquisition cycle has the prospect for avoiding cost growth and schedule delays, thus potentially delivering more advanced capabilities into the hands of the warfighters sooner. A principal challenge of this approach is leading, educating, and training the acquisition community, both at the senior and working levels, so that it may best take advantage of the this new system to accomplish these objectives as soon as possible.

#### SCIENCE AND TECHNOLOGY

6. Senator COLLINS. Mr. Wynne, Mr. Pete Aldridge, Under Secretary for Defense for Acquisition and Technology, during recent testimony to the Emerging Threats

and Capabilities Subcommittee, stated that the Department needs to invest in its future through Defense Science and Technology initiatives. Further, he suggested that if you evaluate the science and technology investments as a percentage of the budget, that the right ratio of the budget which should be invested in science and technology would be approximately 3 percent. What are your thoughts on this issue?

Mr. WYNNE. Determining a sufficient level of Science and Technology (S&T) investment is not a precise science, rather I believe it is a strategic decision. It has always been the Department's goal to fund S&T at a level adequate to ensure the technological superiority of our armed forces. A strong S&T program is required to provide options for responding to a full range of military challenges both today, and into the uncertain future. The Department's investment in S&T develops the technology foundation necessary for our transformation and modernization effort, and fosters the development of "leap ahead" technologies that produce revolutionary capabilities. DOD must continue to invest broadly in defense-relevant technologies because it is not possible to predict in which areas the next breakthroughs will occur. It is the Department's objective to grow the S&T budget to be 3 percent of the total DOD top-line budget as soon as possible. This goal is consistent with the industrial model of investing 3 percent of a corporation's budget in research. However, we also need to ensure that the funding levels of the various components in the Department's total budget are balanced based on our assessment of the most urgent requirements at any given time.

#### CONTRACT BUNDLING

7. Senator COLLINS. Mr. Wynne, you refer briefly to your view of contract "bundling" in the response to your advanced questions. Recently, I attended an event for small to mid-size businesses at which the participants inquired as to what the Department's current defense policy is on bundling, and further highlighted their concern with this concept and its impact on growing small and mid-size companies trying to establish business relationships with the Department. First, can you comment on the Department's current policy on bundling? Second, what do you believe the Department can do to ensure that small and mid-size businesses have adequate opportunities to compete for DOD contracts?

Mr. WYNNE. The Department's policy is to comply with the applicable statutes and the Federal Acquisition Regulation concerning contract bundling. The FAR recognizes that bundling may be justified when there are measurably substantial benefits. The Department is preparing to issue a guidebook to assist acquisition planners in performing quality benefit analyses that are critical to the determination as to whether or not bundling is justified.

The Small Business Program Reinvestment was one of the first initiatives of Under Secretary of Defense for Acquisition, Technology, and Logistics, Mr. Pete Aldridge. This policy emphasizes the importance of senior management support for the Program and assigns accountability at the highest levels within DOD for small business program accomplishments. Providing for this level of program accountability is a strong measure toward ensuring that small businesses are provided the maximum practicable opportunities to compete for Defense requirements.

---

[The nomination reference of Michael W. Wynne follows:]

#### NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Michael W. Wynne, of Florida, to be Deputy Under Secretary of Defense for Acquisition and Technology, vice David R. Oliver.

---

[The biographical sketch of Michael W. Wynne, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF MICHAEL W. WYNNE

Michael W. Wynne is currently serving as Chairman and Chief Executive Officer for the IXATA group (IXTA), a position he took on in December of 2000. IXATA is an Internet Application Service Provider in the information space of the travel industry. He is also currently serving as Chairman of Extended Reach Logistics (www.e-RL.com), an Internet start-up aspiring to sell spares and repair kits to the military worldwide. He spent most of his career in the world of defense, both in the Air Force, and with Industry, following graduation from the United States Military Academy at West Point.

He retired as Senior Vice President from General Dynamics (GD), where his role was in International Development and Strategy. He spent 23 years with General Dynamics in various senior positions with the Aircraft (F-16's), Main Battle Tanks (M1A2), and Space Launch Vehicles (Atlas and Centaur). As the President of the Space Division, he facilitated the design of four Rockets in 4 years, introduced them commercially and set them on a course to launch over 50 straight satellites successfully. In Tanks, he initiated multi-year procurement in the Army and sold both vehicles and manufacturing facilities around the world. While in the F-16, he was the lead negotiator for the then "deal of the century" for the U.S./European co-production of the initial 998 airplanes.

In between working with GD, he spent 3 years with Lockheed Martin (LM, having sold the Space Systems division to then Martin Marietta. He successfully moved the division from San Diego to Denver and integrated it into the Astronautics Company. He became the General Manager of the Space Launch Systems segment, combining the Titan with the Atlas Launch vehicles. During this period, he orchestrated the first, and only, purchase, following design, of a Russian propulsion system (RD-180) for U.S. Rockets (Atlas). The resulting vehicle will be in the U.S. inventory for years to come.

Prior to joining industry, Mike served in the Air Force for 7 years, ending as a Captain and Assistant Professor of Astronautics at the U.S. Air Force Academy teaching Control Theory and Fire Control Techniques. While there he was awarded the Unit Citation Award for being one of the team of designers of the AC-130E Gunship.

In addition to his undergraduate degree, he also holds a Masters in Electrical Engineering from the Air Force Institute of Technology and a Masters in Business from the University of Colorado. He has attended short courses at Northwestern University (Business) and Harvard Business School (PMD2). He is a Fellow in the National Contracts Management Association, and has been a past President of the Association of the United States Army, Detroit Chapter and the Michigan Chapter of the American Defense Preparedness Association.

He was born in Florida, and currently resides in McLean, Virginia, with his wife Barbara. They have four daughters.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Michael W. Wynne in connection with his nomination follows:]

1028

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed, use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Michael Walter Wynne.

2. **Position to which nominated:**

Deputy Under Secretary of Defense (Acquisition and Technology).

3. **Date of nomination:**

June 12, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

September 4, 1944; Clearwater, FL.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Barbara H. Wynne (Maiden Name—Hill).

7. **Names and ages of children:**

Lisa W. Henkhaus, 34.

Collene W. Finn, 33.

Karen W. Murphy, 30.

Laura Wynne, 25.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.

University of Colorado, MBA—9/1973—6/1975.

Air Force Institute of Technology, Wright Patterson Air Force Base, MSEE—7/1968—6/1970.

United States Military Academy, BSGE—7/1962—6/1966.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

12/2000—Present, IXATA Group, 8989 Rio San Diego Dr., San Diego CA 92109. Chairman/CEO.

7/1997—10/1999, General Dynamics, 3190 Fairview Park Dr., Falls Church VA 22042, Senior Vice President.

5/1994—3/1997, Lockheed Martin Astronautics, Deer Creek Canyon Drive, Denver, CO 80145, General Manager—Space Launch System.

3/1991—5/1994, General Dynamics Space Systems, 5001 Kearney Villa Rd, San Diego, CA 92123 President.

4/1982—3/1991, General Dynamics Land Systems, 38500 Mound Rd, Sterling Heights MI 48310, Vice-President—Business Development.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Officer, United States Air Force, 6/1966–6/1973, Regular Reserve Officer, 6/1973–9/1975, Rank achieved Captain.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.

(1) WC Factors, LLC, Managing Member (I recently registered this to finance Extended Reach Logistics receivables. It has never operated.)

(2) Extended Reach Logistics, Inc. Chairman.

(3) IXATA Group, Chairman and CEO.

(4) NextGen Fund II, LLC, NextGen SBS Fund II, Limited Partner, Member of the Executive Committee.

(5) Rothstein Asset Management, LP, Limited Partner.

(6) Fiduciary Partners Fund, LP, Limited Partner.

(7) General Dynamics Corporation, Senior Vice President.

(8) Lockheed Martin Corporation, Astronautics; General Manager—Space Launch Systems.

(9) Association of the United States Army, Detroit Chapter, President—mid 1980s.

(10) Michigan Chapter, American Defense Preparedness Association, President—mid 1980s.

(11) National Contracts Management Association, Fellow—Since the early 1980s.

(12) National Contracts Management Association, Detroit Chapter, President—Early 1980s.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.

None.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Republican National Committee, Democratic National Committee, Clinton-Gore campaign, Senator Feinstein, Senator Allen, Senator Leahy, Congressman Hunter, Bush Campaign, Texas Republican Party, Virginia Republican Party, Congressman Cunningham, Senator Snowe, Lazio Campaign.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

National Contract Management Association, Fellow, Military Medals: Unit Excellence (AC130 Gunship Development).

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

(1) AIAA/IEEE proceedings, 1970—Multiple reentry vehicles.

(2) AIAA proceedings, 1972—Optimal control; sightline autopilot.

(3) Society for Parametric Estimating, 1978, 2d quarter—Impact of Labor Strike on Learning Curves for Manufacturing.

(4) Army Material Command, RD&A Magazine, May 1985—Benefits of the M1A1 multi-year for the Army.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth

in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

MICHAEL W. WYNNE.

This 13th day of June 2001.

[The nomination of Michael W. Wynne was reported to the Senate by Chairman Levin on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on June 12, 2001.]

**NOMINATIONS OF DIONEL M. AVILES TO BE ASSISTANT SECRETARY OF THE NAVY, FINANCIAL MANAGEMENT AND COMPTROLLER; REGINALD JUDE BROWN TO BE ASSISTANT SECRETARY OF THE ARMY, MANPOWER AND RESERVE AFFAIRS; DR. STEVEN A. CAMBONE TO BE DEPUTY UNDER SECRETARY OF DEFENSE FOR POLICY; MICHAEL MONTELONGO TO BE ASSISTANT SECRETARY FOR THE AIR FORCE, FINANCIAL MANAGEMENT AND COMPTROLLER; AND JOHN J. YOUNG, JR., TO BE ASSISTANT SECRETARY OF THE NAVY (RESEARCH, DEVELOPMENT, AND ACQUISITION)**

---

WEDNESDAY, JUNE 27, 2001

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 10:12 a.m., in room SD-106, Dirksen Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Reed, Warner, and Inhofe.

Other Senators present: Senators Stevens and Inouye.

Committee staff members present: David S. Lyles, staff director; Madelyn R. Creedon, counsel; Richard D. DeBobes, counsel; Gerald J. Leeling, counsel; and Peter K. Levine, general counsel.

Professional staff members present: Daniel J. Cox, Jr., Richard W. Fieldhouse, and Creighton Greene.

Minority staff members present: Romie L. Brownlee, Republican staff director; Judith A. Ansley, deputy staff director for the minority; L. David Cherington, minority counsel; Ann M. Mittermeyer, minority counsel; Suzanne K.L. Ross, research assistant; Richard F. Walsh, minority counsel; and Scott Stucky, minority counsel.

Professional staff members present: Charles W. Alsup, Edward H. Edens IV, Brian R. Green, William C. Greenwalt, Gary M. Hall, Carolyn M. Hanna, Mary Alice A. Hayward, Ambrose R. Hock, George W. Lauffer, Patricia L. Lewis, and Thomas L. Mackenzie.

Staff assistants present: Gabriella Eisen, Kristi M. Freddo, and Michele A. Traficante.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; Barry Gene (B.G.) Wright, assistant to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; Brady King, assistant to Senator Dayton; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; Kristine Fauser, assistant to Senator Collins.

#### **OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. The committee will come to order.

The committee meets today to consider the nominations of Dionel Aviles to be Assistant Secretary of the Navy, Financial Management and Comptroller; Reginald Jude Brown to be Assistant Secretary of the Army, Manpower and Reserve Affairs; Dr. Steven A. Cambone to be Deputy Under Secretary of Defense for Policy; Michael Montelongo to be Assistant Secretary of the Air Force, Financial Management and Comptroller; and John Young to be Assistant Secretary of the Navy, Research, Development, and Acquisition.

On behalf of the entire committee, I would like to welcome you, your families, and friends to the Armed Services Committee. We have a tradition in the committee of asking our nominees to introduce their family members who are present. Let me call on each of you to do that now. Then in a moment or two, we are going to go to the introductions.

So first, Mr. Montelongo, why do we not start with you?

Mr. MONTELONGO. Thank you, Mr. Chairman. It is my pleasure to introduce my bride, Debbie, and our daughter, Amanda.

Chairman LEVIN. Mr. Brown.

Mr. BROWN. Thank you, Mr. Chairman. It is my pleasure to introduce my wife, Emmy.

Chairman LEVIN. Dr. Cambone.

Dr. CAMBONE. Mr. Chairman, thank you very much. I would like to introduce my wife, Margaret, and my niece, Caitlin.

Chairman LEVIN. Mr. Aviles.

Mr. AVILES. Thank you, Mr. Chairman. I would like to introduce my wife, Kimberly; my son, Thomas; and my mother-in-law, Arlene Chandler, and my father-in-law, Bill Corbin.

Chairman LEVIN. Mr. Young.

Mr. YOUNG. Mr. Chairman, thank you. I would like to introduce my wife, Barbara; my son, Nathan; my son, William; and my daughter, Kathryn.

Chairman LEVIN. Kathryn is the name of your daughter? I have heard she has two great older brothers, who really, really love her. Someday, she will know how lucky she is. [Laughter.]

Now, that is the truth. Sometimes I joke about that, but I have heard in this family those two brothers really take great care of their sister.

Let me thank all the family members in advance for the sacrifices that they will be making so that you can serve. Each of you before us today have a record of public service, so your families at

least have some idea as to what they are in for. Again we thank them in advance for their willingness to have you serve again.

John Young and Dionel Aviles are well known to committee members for their dedicated service as congressional staffers over the last decade. Mr. Young has served since 1993 as a professional staff member for the Defense Subcommittee of the Senate Appropriations Committee.

Mr. Aviles has served since 1996 as a professional staff member for the House Armed Services Committee.

The experience, skills, thoughtfulness, and dedication that they have brought to their jobs will be missed on Capitol Hill, but will surely serve them well as they take on new challenges in the executive branch.

Mr. Brown, Dr. Cambone, and Mr. Montelongo have also had important experiences and bring great skills to their new jobs.

Mr. Brown has previously served as Assistant Administrator at the United States Agency for International Development.

Dr. Cambone has served as Staff Director for the Space Commission and the Ballistic Missile Threat Commission and currently serves as a Special Assistant to the Secretary of Defense.

Mr. Montelongo has served as a Special Assistant to the Army Chief of Staff and is a Congressional Fellow.

Each is well-qualified for the important position to which he has been nominated.

The committee, of course, has a responsibility to get a clear record of our nominees' views on national security issues that they and this Nation face, and we look forward to their testimony.

Senator WARNER.

Mr. Chairman, I thought out of deference to our two colleagues that I would give my few remarks following the introduction by our distinguished colleagues.

Chairman LEVIN. Terrific. Thank you very much.

Senator WARNER. I really want to hear what they got in return for releasing Young. They got a deal out of this somewhere. [Laughter.]

These two parents structured something to lose this valuable member.

Chairman LEVIN. In other words, I think Senator Warner is suggesting that you stay for questioning as well. [Laughter.]

Our nominees have all responded to the committee's pre-hearing policy questions and our standard questionnaire. Without objection, these responses will be made a part of the record.

The committee has also received the required paperwork on each of the nominees, and we will be reviewing that paperwork to make sure that it is in accordance with our requirements.

The first round of questions will be limited to 6 minutes for each Senator on the basis of the early bird rule. But before we begin our first round of questions and ask our introducers to make their comments, we would ask several standard questions of each of the nominees. In your response to the advanced policy questions you have agreed to appear as a witness before the congressional committees when called, and to ensure that briefings, testimony, and other communications are provided to Congress, so we will not repeat those questions.

Here are the questions that we will ask you to respond to: Have each of you adhered to applicable laws and regulations governing conflict of interest?

Mr. AVILES. Yes, sir.

Mr. BROWN. Yes, sir.

Dr. CAMBONE. Yes, sir.

Mr. MONTELONGO. Yes, sir.

Mr. YOUNG. Yes, sir.

Chairman LEVIN. Have any of you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Mr. AVILES. No, sir.

Mr. BROWN. No, sir.

Dr. CAMBONE. No, sir.

Mr. MONTELONGO. No, sir.

Mr. YOUNG. No, Mr. Chairman.

Chairman LEVIN. Have you done anything which presumes confirmation?

Mr. MONTELONGO. No, sir.

Mr. YOUNG. No, sir.

Dr. CAMBONE. No, sir.

Mr. BROWN. No, Mr. Chairman.

Mr. AVILES. No, sir.

Chairman LEVIN. Will you ensure that the Department complies with deadlines established for requested communications including prepared testimony and questions for the record and hearings?

Mr. AVILES. Yes, sir.

Mr. BROWN. Yes, sir.

Dr. CAMBONE. Yes, sir.

Mr. MONTELONGO. Yes, sir.

Mr. YOUNG. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Mr. AVILES. Yes, sir.

Mr. BROWN. Yes, sir.

Dr. CAMBONE. Yes, sir.

Mr. MONTELONGO. Yes, sir.

Mr. YOUNG. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. AVILES. Yes, sir.

Mr. BROWN. Yes, sir.

Dr. CAMBONE. Yes, sir.

Mr. MONTELONGO. Yes, sir.

Mr. YOUNG. Yes, sir.

Chairman LEVIN. I think what we will do at this point is ask our colleagues to make their introductions.

Senator Inouye, would you start please?

**STATEMENT OF HON. DANIEL INOUE, U.S. SENATOR FROM HAWAII**

Senator INOUE. Mr. Chairman and members of the committee, I am pleased to be here with my co-chairman of the Senate Appropriations Subcommittee on Defense to introduce Mr. John Young,

the President's nominee to be the Assistant Secretary of the Navy for Research, Development, and Acquisition.

Mr. Young came to the Appropriations Committee 10 years ago as a young 28-year-old American Institute of Aeronautics and Astronautics fellow from Sandia National Labs. At that point, 10 years ago, he already had an impressive resume.

He received an engineering degree from Georgia Tech, a masters degree from Stanford. He had worked for General Dynamics in the F-16 program; for Rockwell on tactical missiles. At Sandia, he had worked on the hypersonic reentry vehicle technology.

He claims that he came to us in Congress to learn about Congress and the defense budget process. He came for 12 months and we succeeded in keeping him for 10 years.

During his initial year, the members of the subcommittee and their staff recognized John's talent, his ability to analyze complex problems, and offer current solutions. As the record indicates, his recommendations to the subcommittee saved the taxpayers hundreds of millions of dollars. At the same time, his ideas helped the military further its agenda. That is why, Mr. Chairman, we kept him for 10 years.

Reluctantly, we recognize now that the administration has discovered our secret weapon and they have pressed him into their service. [Laughter.]

All kidding aside, John Young will be a great asset to the Department of the Navy and the administration. His long experience in acquisition matters for Congress and the private sector make him uniquely equipped to become the next Assistant Secretary for the Navy.

I am pleased to join Senator Stevens in introducing John Young to you formally, even though I know that many of you have gotten to know him over the past decade.

Mr. Chairman and members of the committee, I have never met anyone who has had anything but the greatest respect for his talent, his knowledge, and his pleasant demeanor. I recommend him to you without equivocation.

Chairman LEVIN. Senator Inouye, thank you very much.  
Senator Stevens.

#### **STATEMENT OF HON. TED STEVENS, U.S. SENATOR FROM ALASKA**

Senator STEVENS. Mr. Chairman and Senator Warner, it is a pleasure to join my chairman in introducing to you John Young.

Following Senator Inouye's comments you are well aware of his academic, engineering, and public service accomplishments. His resume is an extremely outstanding one. He is immensely qualified for the position that the President has asked him to fill.

I just want to take a moment to tell you how lucky the Navy is to have stolen John from our committee staff. He has demonstrated an extraordinary skill in balancing the priorities of the military and the interests of Congress, and the true capability of technology to be harnessed to serve our national defense.

It is not enough to be certain a system is right; it must be the right solution to a challenge that we face. The real talent lies in

determining whether that solution is, in fact, ready to be produced, how it is to be produced, and when it is to be produced.

Any candidate to serve as Assistant Secretary to the Navy for Research, Development, and Acquisition needs these skills, and John possesses all of them in abundance.

Quite simply, John has served as one of the most trusted members of our committee's staff for more than a decade. He worked for each of us and for both of us the whole time.

I am sorry to see John depart. He has been a grand fishing companion, if nothing else. [Laughter.]

I am not going to tell you, frankly, unless you put me in chains what we really got for him, a few bases here and there; a little re-opening of some that were closed inadvertently by a former Secretary of Navy. [Laughter.]

But this is the right assignment at the right time. I know that John appreciates as well that in being here it is a sign that the two of us will be looking over his shoulder as he wrestles with the challenges this administration will give him because we are going to continue to rely upon him to advise your committee and ours.

There is no one whose judgment I would trust more to serve in this position than John Young. It is a pleasure to be with you and a pleasure to work with him. We wish him the very best in his new assignment.

Senator WARNER. Mr. Chairman, if I might observe, the committee sees the presence of Steve Cortese, Sid Ashworth, Charlie Houy, and Tom Hawkins of the staff who have come to give backup support to the distinguished two "co-chairmen," as they refer to themselves.

Senator STEVENS. We have really come just to tell you we are ready to keep him if you do not do this very quickly. [Laughter.]

Chairman LEVIN. Well, I tell you, Senators Inouye and Stevens, we can accommodate your desire to keep him quite easily. There are ways for this committee to meet those needs, not very subtle ways, but there are ways that we can do it. [Laughter.]

Senator STEVENS. If this committee thinks that our needs are greater than the President's, we are at your service, sir. [Laughter.]

Chairman LEVIN. He has been trained at the feet of a couple of masters on the Appropriations Committee, so we know how well he will take that service to the executive branch.

Now, Congressman Reyes, you—

Senator WARNER. I would like to say a few remarks here. I had reserved my time—

Chairman LEVIN. Sure. Oh, no—we have a Congressman here.

Senator WARNER. Oh, yes, of course, OK.

Chairman LEVIN. Thank you.

**STATEMENT OF HON. SILVESTRE REYES, U.S.  
REPRESENTATIVE FROM TEXAS**

Mr. REYES. Yes, thank you, Mr. Chairman and members of the committee.

It is my privilege and pleasure to be here with you this morning to introduce a gentleman that we are very proud of, coming from El Paso in general and from Fort Bliss, the Army Air Defense Center, in particular.

I am also here on behalf of our colleague, Senator Kay Bailey Hutchison, who was unable to be here, but would have liked to be here as well. Also representing Mr. and Ms. Jerry Tennison are the nominee's in-laws, residents of my district.

This morning, it is my sincere pleasure to introduce to you the nominee for Under Secretary of the Air Force for Financial Management and Comptroller, Mr. Michael Montelongo. He is a graduate of the United States Military Academy and a career Army officer, having retired as a Lieutenant Colonel after serving in the Army Air Defense Artillery.

He is coming to us, to public service, from Cap Gemini Ernst and Young, where he served as a sales executive and consulting manager. He also served as a Congressional Fellow in the office of Senator Kay Bailey Hutchison in the 104th Congress, and in the past has also served as a fellow in the Pentagon.

It is my privilege and pleasure to also acknowledge his wife Debbie from El Paso and his daughter Amanda, who are with him here today.

Mr. Chairman and the members of the committee, I know that Michael Montelongo will do an outstanding job for our country in his new position.

Thank you very much for the opportunity.

Chairman LEVIN. Congressman Reyes, thank you very much for that introduction. I know how appreciative Mr. Montelongo is as well. Thank you.

Senator Warner.

#### **STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Thank you, Mr. Chairman.

Mr. Chairman, I commend you again in your skills for having these very important hearings, the Constitutional function of the United States Senate, which is to give advise and consent with regard to nominees of the President of the United States.

The President, again, is to be commended for recruiting such a fine, outstanding, and well-qualified group of individuals to come and, in several instances, to re-enter public service. They take on the very heavy responsibilities associated with protecting this Nation and making us secure, and not only here at home, and I emphasize at home because the President in his Citadel speech brought to the attention of the American people that threats here at home now unfortunately are mounting, but also preserving freedom abroad for ourselves and our allies.

I commend you and I thank you, Mr. Chairman, for your reference to the families. Indeed, they are a vital part of this team in the Department of Defense.

I was privileged to serve once and I remember so well my children were almost the sizes of those children right there at that time, and I have a wonderful picture of those toddlers gathered around me when I took on those responsibilities a quarter of a century ago.

I hasten to tell the families to get those husbands home at a reasonable hour in the evening. Any decision made after 7 o'clock in the Pentagon is reversed in the morning. [Laughter.]

So come on home and you will do better in your jobs after rejoining your wonderful families and getting the sustenance and the support that they can provide you.

Mr. Chairman and members of the committee, I would like to make some special comments with reference to Reginald Brown. He proudly claims Virginia as his State since 1986.

He is a West Point graduate who has served in the infantry from 1961 through 1971. He has an impressive history of government and business accomplishments including service as Assistant Administrator at the U.S. Agency for International Development from 1989 to 1993.

I believe at that time I introduced you before the Senate, but we will just dig up that old record and make it count for this one. I thank you and your family for once again responding to the public life.

Dr. Cambone, others have covered extensively your exceedingly impressive record of accomplishments for a relatively young man who has achieved so much in such a short period of time. You will be a point man for the President's policies and initiatives and particularly with missile defense and other strategic programs.

You are eminently qualified in my judgment, Doctor, to handle those debates before Congress and in the public forum. I think you want to anxiously accept that challenge.

Mr. Young, you have received so much praise, so I will remain quiet and just let it rest and I will put into the record my comments with respect to you.

To the others here, the Chairman also covered extensively your background, so I will place my statement in the record. But I, again, join the Chair and the members of this committee in thanking you for offering yourselves to public service.

Thank you, Mr. Chairman.

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in extending a warm welcome to our nominees and their families. I thank you all for your willingness to serve.

Dr. Stephen A. Cambone is currently serving as the Special Assistant to the Secretary and Deputy Secretary of Defense and has compiled a distinguished career in government and academia. He served as the Director of Research at the Institute for National Strategic Studies of the National Defense University from August 1998 to July 2000. Prior to that he served as the Staff Director for the Commission to Assess United States National Security Space Management and Organization from July 2000 to January 2001. From January 1998 to July 1998, Dr. Cambone was the Staff Director for the Commission to Assess the Ballistic Missile Threat to the United States. He previously served in the Office of the Secretary of Defense from 1990 to 1993 as Director for Strategic Defense Policy, and he worked in the Office of the Director, Los Alamos National Laboratory from 1982 to 1986. Dr. Cambone, I congratulate you on your many accomplishments.

Mr. Young is currently a Professional Staff Member on the Senate Appropriations Committee, Subcommittee on Defense, having served there since 1993. For 10 years prior to joining our colleagues on the Appropriations Committee, Mr. Young was a member of the Technical Staff at the Sandia National Labs. He has also worked as an engineer with Rockwell International, the BDM Corporation, and General Dynamics. Congratulations, Mr. Young, on your nomination.

Mr. Montelongo is an Army veteran having graduated from the U.S. Military Academy in 1977. His active-duty service included assignments as a Senior Analyst and Associate Professor at the U.S. Military Academy from 1988 to 1991 and as a Special Assistant to the Chief of Staff of the Army from 1994 to 1995. He currently works for the firm of Ernst & Young in Atlanta, Georgia.

Mr. Brown also served on active duty in the U.S. Army with the infantry after graduating from West Point in 1961. Following his military service, he served in various important government positions including Director in the Office of Price Monitoring at the Council of Wage and Price Stability and Principal Analyst for the Defense Manpower Commission. From 1989 to 1993, he was an Assistant Administrator at the U.S. Agency for International Development. Thank you for your willingness to return to government service.

Mr. Aviles is currently a Professional Staff Member on the House Armed Services Committee with responsibility for defense budget and financial management, Navy procurement, and Merchant Marine issues. He graduated from the U.S. Naval Academy in 1983, and served as a Surface Warfare Officer. Mr. Aviles was an engineer with the Naval Sea Systems Command from 1990 to 1991, and an Examiner at the Office of Management and Budget from 1991 to 1995. Thank you, Mr. Aviles, for your continued willingness to offer public service.

I am very impressed by the qualifications of these nominees. If confirmed, they will be key members of the Secretary's team of senior leaders. They have my support.

Senator Levin.

Chairman LEVIN. Thank you. Senator Reed, do you have an opening statement?

#### STATEMENT OF SENATOR JACK REED

Senator REED. Mr. Chairman, I do not have a formal opening statement. I just want to welcome the nominees.

I particularly want to welcome Mr. Brown, who was my instructor at West Point in the Social Science Department. If I am particularly acute today, take credit for it. Otherwise, you have no responsibility. [Laughter.]

To all the gentlemen and the families who have come here today to accept this responsibility to serve the Nation, I thank you for that.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you. Without meaning to pry in any way, how good a student was Senator Reed? That good? [Laughter.]

Mr. BROWN. A top one.

Chairman LEVIN. Well, he is top on this committee, too. [Laughter.]

Senator REED. I think that is one of those nominees conversions—[Laughter.]

—confirmation conversion, right?

Chairman LEVIN. Let the record show that Mr. Brown had his thumb up in the air. [Laughter.]

The record should reflect that Chairman Stump and Congressman Spence from the House Armed Services Committee had planned to be here to introduce Mr. Aviles, but we had to change the starting time of the hearing, and they were not then able to make it.

Senator WARNER. We have a hearing before the House this morning and they were with us this morning at the Department of Defense when we had breakfast with the Secretary and spoke very highly of you throughout the meeting. At this point, without objection, I submit for the record the opening statement of Senator Thurmond.

[The prepared statement of Senator Thurmond follows:]

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman:

Mr. Chairman, I want to welcome and congratulate each of our nominees as the Armed Services Committee convenes to consider their nominations to the critical positions within the Office of the Secretary of Defense and the military services. The fact that they are here this morning is a reflection of their accomplishments and the potential for them making significant contributions to our Nation, in particular to the men and women of our Armed Forces.

I specifically want to recognize Mr. Aviles and Mr. Young who toiled for many years as professional staff members on the House Armed Services Committee and the Senate Appropriations Committee. Each will provide critical insight of the legislative branch to Secretary Rumsfeld's leadership team and hopefully will facilitate the flow of information between the Department of Defense and the defense committees.

Mr. Chairman, the Nation is fortunate to have individuals, such as our nominees, who are willing to take on the challenges of the offices for which they have been nominated. I wish each of them success and a speedy confirmation.

Thank you, Mr. Chairman.

Chairman LEVIN. Now we will call out our witnesses for any opening remarks that they may wish to make. Let us just go right down the table, keep doing it the way we have been doing it.

Mr. Montelongo.

**STATEMENT OF MICHAEL MONTELONGO, NOMINEE TO BE ASSISTANT SECRETARY FOR THE AIR FORCE FINANCIAL MANAGEMENT AND COMPTROLLER**

Mr. MONTELONGO. Thank you, Mr. Chairman.

I am very honored and privileged to appear before this committee seeking confirmation as the Assistant Secretary of the Air Force for Financial Management. I want to thank the President and the Secretary for this very special opportunity and privilege to serve the men and women of the United States Air Force and the Nation.

I want to thank the committee members for taking time out of their busy schedules to conduct the hearing, and offer a very special thank you to Congressman Silvestre Reyes for his very kind introduction. I also want to thank everyone who helped shepherd me through the nomination and confirmation process.

Finally, I especially want to thank my bride Debbie and our daughter Amanda, for their love, prayers, and support, and for once again demonstrating that service to the Nation, as it is for so many of our servicewomen and men, is a family affair.

Mr. Chairman, if confirmed, I would seek to address what I believe are three issues key to the Air Force financial management community: One, restore confidence and reliability in financial management systems and the related critical feeder systems to achieve auditable financial statements and, more importantly, provide the warfighters and decisionmakers with informed information.

In other words, Mr. Chairman, as good stewards of taxpayer money, we should do everything possible to ensure that funds are executed in the same manner appropriated and that they are accurately tracked.

Two, review and understand the defense strategy and then shape the budget to meet Air Force priorities and strategy.

Three, to plan, program, and budget funds in a responsible manner to meet the demands of our changing global and military environments.

Mr. Chairman, if confirmed, I very much look forward to working with you and the committee to support and care for the men,

women, and families who selflessly serve in the United States Air Force.

I look forward to your questions.

Chairman LEVIN. Thank you very much.

Mr. Brown.

**STATEMENT OF REGINALD JUDE BROWN, NOMINEE TO BE ASSISTANT SECRETARY OF THE ARMY, MANPOWER AND RESERVE AFFAIRS**

Mr. BROWN. Thank you, Mr. Chairman, Senator Warner, Senator Reed, other members of the committee. I feel deeply honored and privileged to appear before this committee to seek confirmation as Assistant Secretary of the Army.

I wish to especially thank you, Senator Warner and Senator Reed, for your kind remarks.

I would also like to thank the President, Secretary Rumsfeld, and Secretary White for this opportunity.

I enthusiastically support Secretary White's three-part vision for the Army; as you may recall, an Army that will attract, develop, and retain America's best young people, while providing for their quality of life and well-being; an Army that will maintain its readiness; an Army that transforms itself to achieve dominance through the full spectrum of future military operations.

I look forward, if confirmed, to working with this committee and the Senate in achieving this vision for the Army. I look forward to the questions of the committee.

Thank you very much.

Chairman LEVIN. Thank you very much.

Dr. Cambone.

**STATEMENT OF DR. STEVEN A. CAMBONE, NOMINEE TO BE DEPUTY UNDER SECRETARY OF DEFENSE FOR POLICY**

Dr. CAMBONE. Good morning, Mr. Chairman, Mr. Warner, Mr. Reed. It is an honor to appear before this committee seeking confirmation as the Deputy Under Secretary of Defense for Policy.

I am grateful to Secretary Rumsfeld for his confidence in proposing my name to the President for this post. I am honored by the President for his nomination.

I am looking forward to taking part in this Constitutional process by which the Senate gives its advise and consent to the President on his nomination. It is a process that is characteristic of our democracy and one, as I say, I am looking forward to taking a part in.

If confirmed by the Senate, Mr. Chairman, I will work closely with you and other members of this committee to protect and defend the United States and its people, to promote the national security of the United States, and to assure that we and our future generations are peaceful and prosperous.

Thank you, sir.

Chairman LEVIN. Thank you, Dr. Cambone.

Mr. Aviles.

**STATEMENT OF DIONEL M. AVILES, NOMINEE TO BE ASSISTANT SECRETARY OF THE NAVY, FINANCIAL MANAGEMENT AND COMPTROLLER**

Mr. AVILES. Thank you, Mr. Chairman.

Mr. Chairman, Senator Warner, Senator Reed, it is my distinct honor and personal privilege to appear before you today as the nominee for the position of Assistant Secretary of the Navy Financial Management and Comptroller.

With your permission, I would like to dispense with a formal statement and just make a few brief remarks.

I thank President Bush for his nomination, Secretary Rumsfeld and Secretary England for their support for my nomination to serve the Nation and the Department of the Navy.

While serving as an examiner at the Office of Management and Budget and on the staff of the House Armed Services Committee, I have had the opportunity to work with the members and staff of this committee and know firsthand of your unwavering support for all of our Nation's armed forces. Having previously served the Navy both as a naval officer and a civilian engineer, I would like to express my personal thanks for that support.

Should I be confirmed, I look forward to working with Secretary England, the members and staff of this committee, and other Members of Congress to provide the Department of the Navy with the tools necessary to ensure the continued maritime dominance of our naval forces while improving the quality of service for our sailors and marines.

In closing, Mr. Chairman, if I may be permitted, I would like to thank former Chairman Floyd Spence, Chairman Bob Stump, and ranking member Ike Skelton of the Committee on Armed Services in the House of Representatives for their support. The opportunity that they have provided me to serve Congress has resulted in some of the most professionally rewarding experiences of my life, and I am grateful.

Lastly, I would like to thank my family, especially my wife Kimberly and my son Thomas, without whose loving support I am certain that I would not be appearing before you today.

Thank you, Mr. Chairman. That concludes my remarks.

Chairman LEVIN. Thank you very much, Mr. Aviles.

Mr. Young.

**STATEMENT OF JOHN J. YOUNG, JR., NOMINEE TO BE ASSISTANT SECRETARY OF THE NAVY (RESEARCH, DEVELOPMENT, AND ACQUISITION)**

Mr. YOUNG. Chairman Levin, Senator Warner, Senator Reed, it is a great honor to appear before you today as the President's nominee to be Assistant Secretary of the Navy for Research, Development, and Acquisition.

I have a statement for the record, and I would like to make a few brief remarks. I appreciate the time and effort devoted by members of the Senate Armed Services Committee to considering my nomination.

First, I wish to thank President Bush, Secretary Rumsfeld, and Navy Secretary England for the privilege of being nominated to

serve in this position. I strongly support their efforts to better prepare our Nation's forces for the future.

In the same breath, I want to thank my family for supporting me in this nomination.

I have served Chairman Inouye, Senator Stevens, and the other members of the Senate Appropriations Committee as a professional staff member for the past 10 years. Senator Stevens and Senator Inouye, as veterans, as lawmakers, and as citizens have provided a daily example of leadership and determined support for our Nation. They have faced dangers that I have never known and, hopefully, the Nation will never know again because of their unwavering support for preparing our defenses to overcome any and all challenges. I do not have adequate words to thank them for introducing me.

During my tenure in the Senate, I have had the opportunity to work with and learn from Senators, my dedicated staff colleagues on the Defense Appropriations Subcommittee, as well as the excellent professional staff supporting the Armed Services Committee.

It has been rewarding to serve the Senate because of the uniform and bipartisan support and desire of members and their staffs to provide for our soldiers, sailors, marines, and airmen.

Looking ahead now, I strongly support Secretary England's goals to improve combat capability, to meet the professional and personal needs of sailors and marines, to apply technology to the challenges posed by an advancing threat, and to change the business practices that hinder timely and affordable purchase of new systems and capabilities. If confirmed, I look forward to working through the details of Navy and Marine Corps research, development, and acquisition programs to accomplish these goals.

As a professional staff member, I have often thought of the sailors and marines who are deployed for months at a time, recognizing that our inconveniences are negligible relative to what the Nation asks of them.

Their commitment to this Nation is measured in their daily sacrifices as well as the patience and support provided by their families and friends. They ask nothing more than to have good equipment, adequate training, and the resources to prepare regularly and fight when necessary.

As a participant in the congressional defense process, I was able to directly observe the leadership role played by this committee in successfully and continually meeting and surpassing the objective of doing everything possible for our soldiers, sailors, marines, and airmen.

If confirmed, I hope to work with the strong Navy and Marine Corps team, the Defense Department, Congress, and this committee to continue this tradition of meeting and exceeding these goals.

I thank the members for their time and attention, and I look forward to your questions.

[The prepared statement of Mr. Young follows:]

PREPARED STATEMENT BY JOHN J. YOUNG, JR.

Chairman Levin, Senator Warner, and members of the committee, it is a great honor to appear before you today as the President's nominee to be Assistant Secretary of the Navy for Research, Development, and Acquisition. I appreciate the time and effort devoted by the members of the Senate Armed Services Committee

to considering my nomination. The opportunity that lies ahead is both daunting and exciting. However, before I can look ahead, I wanted to say a few things about the past.

First, I wish to thank President Bush, Secretary Rumsfeld, and Navy Secretary England for the privilege of being nominated to serve in this position. I strongly support their efforts to better prepare our Nation's forces for the future as well as their initiatives to spend our defense investment dollars more efficiently.

I have served Chairman Inouye, Senator Stevens, and the other members of the Senate Appropriations Committee as a professional staff member for the past 10 years. Senator Stevens and Senator Inouye, as veterans, as lawmakers, and as citizens, have provided a daily example of leadership and determined support for our Nation. They have faced dangers that I have never known and hopefully the Nation will never know again because of their determined, unwavering support for preparing our defenses to overcome any and all challenges. I do not have adequate words which can express my appreciation for the great honor of having these gentlemen introduce me to the Senate Armed Services Committee.

As a member of the Senate Defense Appropriations staff, I have been able to make recommendations on a range of defense issues to the members of the Appropriations Committee and Congress. Because of the excellent spirit of coordination and cooperation between the Senate Armed Services and Appropriations Committees, I have also had the chance to work with many members of the Armed Services Committee on key defense issues. Finally, I have had the pleasure of working with and learning from dedicated staff colleagues on the Defense Appropriations Committee as well as the excellent professional staff supporting the Armed Services Committee. These experiences have been some of the best of my professional career. It has been rewarding to serve the Senate because of the uniform and bi-partisan desire of members and their staffs to provide for our soldiers, sailors, marines, and airmen.

My industry experiences proved to be excellent preparation for my task of reviewing defense programs in support of the Senate. It was important for me to work on technology development, project management and testing in order to appreciate both the capabilities and limits of defense firms. Industry is an important ally in delivering the combat capability of the future, and I will work to enhance the Navy and Marine Corps' industry relationships, if confirmed.

Looking ahead now, I am pleased to have the opportunity to work with the Defense Department as well as Members of the Senate and the House of Representatives to make further improvements in the combat systems and equipment which our sailors and marines will rely on to provide for the Nation's security. Indeed, the support of the President and Congress will be essential to ensuring the Navy and Marine Corps can efficiently and affordably acquire modern weapons systems which will allow sailors and marines to overcome any threat that the future presents to this Nation's territory and ocean commerce.

Each of you is familiar with the key problems facing the Navy and Marine Corps. Secretary England very effectively outlined his strategic thrusts in support of the President's vision for our military. I strongly support his goals to improve combat capability, to meet the professional and personal needs of sailors and marines, to apply technology to the challenges posed by an advancing threat, and to change the business practices that hinder timely and affordable purchase of new systems and capabilities. Clearly, the Navy and Marine Corps must make progress in accurately pricing and then controlling the cost of new weapons systems. Further, more can be done to assure that the systems being purchased are fully tested and ready for combat.

While there are concerns and improvements to make, there is also progress. Many new systems appear to be on the verge of overcoming the challenges of development and delivering real and meaningful new capabilities to our warfighters. Further, as Secretary England highlighted, there are available commercial and defense technologies that, with changes in business practices, can be quickly harnessed to expand our buying power and combat capability.

If confirmed, I look forward to working through the details of current Navy and Marine Corps acquisition and development programs. I also will work to ensure that research programs are focused on the current and future needs of our naval forces. There are also research and development programs in the other services and defense agencies which can be applied to meeting the weapon and technology needs of the Navy and Marine Corps.

As a professional staff member, I often thought of the sailors and marines who are deployed for months at a time, recognizing that our inconveniences are negligible relative to what the Nation asks of them. Their commitment to this Nation is measured in their daily sacrifices as well as the patience and support provided

by their families and friends. They ask nothing more than to have good equipment, adequate training, and the resources to prepare regularly and fight when necessary. As a participant in the congressional defense process, I was able to directly observe the leadership role played by this committee in successfully and continually meeting and surpassing the objective of doing everything possible for our soldiers, sailors, marines, and airmen. If confirmed, I hope to work with the current, strong Navy and Marine Corps team, the Defense Department, and Congress to continue this tradition of meeting and exceeding these goals.

I thank the members of the committee for their time and attention. I look forward to your questions.

Chairman LEVIN. Mr. Young, thank you, and I am sure that Senators Inouye and Stevens would appreciate your tribute to them, well deserved.

Dr. Cambone, let me start asking you about Macedonia. The situation seems to be continuously unraveling. Civil war is a definite possibility there. If civil war erupts in Macedonia, then a renewed conflict could occur elsewhere in the Baltics as a result. That, in turn, could undermine the efforts of NATO including the U.S. in Kosovo, in the Presovo Valley in Serbia.

The United States, unlike other NATO allies, was apparently unwilling to make a commitment to participate in a NATO mission to oversee a voluntary disarmament of ethnic Albanian insurgents, even if the environment became benign.

What are the criteria that you would recommend be used in deciding whether or not U.S. forces participate with the forces of our NATO allies in a NATO mission in Macedonia in either a benign or a hostile environment?

Dr. CAMBONE. Let me say first of all, that the broad analysis that you have made about the importance of the situation as it is evolving in Macedonia is shared by many people. The Secretary and others have been engaged in discussions on this subject.

For my part, I think there are a handful of items we have to keep in mind. First, the objective ought to be to try to keep the legitimate government of Macedonia capable of functioning as such. That includes both its ability to exercise its powers of sovereignty, but also to respect the rights and circumstances of its ethnic populations. Any action that is undertaken with respect to Macedonia ought to have that in mind first and foremost.

Connected and intimately bound up with it is the fact that we already have—the United States does—deployed to Macedonia some 500 people, who have a variety of tasks, two of the most prominent being guarding the lines of communication to the forces at K4, and conducting reconnaissance operations and surveillance operations out of Macedonia.

Chairman LEVIN. Do you want to pull that mike up? Many people in the rear are not able to hear you.

Dr. CAMBONE. I am sorry, sir.

Chairman LEVIN. Just speak right into it.

Dr. CAMBONE. Second, therefore, we need to be careful in any steps we take to assure that our people are, in fact, protected and those supply lines are kept intact going into Kosovo.

Chairman LEVIN. Is it true that we have decided whether or not we would join with NATO in an operation in Macedonia? Have we set limits on it? If so, what?

Dr. CAMBONE. Senator, I cannot answer that question.

Chairman LEVIN. When you say you cannot answer it, that is because you are not——

Dr. CAMBONE. No. I do not know the answer to the question, sir.

Chairman LEVIN. Thank you. In your response to a pre-hearing question on the proper criteria for involvement of U.S. armed forces and military operations overseas, you stated that you would work to ensure, this is now your words, “that when we deploy our armed forces, the mission is justified, well-defined, and the strategy is well-conceived.”

You did not include an exit strategy in that description, and I am wondering if that was intentional or just oversight.

Dr. CAMBONE. Oh, no, sir. It was not an omission. As part of a well-conceived strategy, one ought to know what the objectives are and ought to be able to have the criteria in hand for knowing when they have been achieved.

Having done so, we then ought to be able to withdraw our military forces and, in a case like a Bosnia, be able to turn over those kinds of operations to civil authorities.

Chairman LEVIN. I want to move to missile defense. This is a subject which is going to take up a great deal of this committee’s time.

The first question relates to this: As a special assistant to the Secretary of Defense, you have been heavily involved in the Ballistic Missile Defense Program at the Department. In a briefing to this committee on June 13, General Kadish, the Director of the Ballistic Missile Defense Organization, presented the results of the Department’s missile defense strategy review and its recommendations.

He said that if the recommendations from the strategy review were implemented, there would be no violation of the ABM Treaty in fiscal year 2002. Is that your understanding of that review, number one?

Number two, is it your understanding that the fiscal year 2002 budget request reflects that strategy review?

Dr. CAMBONE. I will answer the second one first, if I may, sir. The budget request will find its way here either this evening, I hope, or in the morning. Within it will be a series of recommendations for spending.

I know that the Secretary is going to be prepared to address this specific question at tomorrow’s hearing, and I think all in all it would be better to defer to him on that question.

In terms of General Kadish’s comments, I cannot speak for General Kadish, sir. The objective of the program, as it is being proposed, is to be able to permit the United States to pursue the most effective and efficient form of missile defense that is possible, allowing us to make intercepts in each of the phases of the flight of a ballistic missile, and to do it in a way that allows us to take advantage of advances in technology as they occur.

Therefore, as the program unfolds, there will be adjustments and changes to it, particularly as General Kadish learns more about what he can and cannot do, both technically and in terms of the direction and guidance he has been given by the Secretary.

Chairman LEVIN. Do you know whether or not the budget that has been submitted to us reflects the review of the BMDO relative to missile defense budget?

Dr. CAMBONE. Yes. I am certain we have, sir. The Ballistic Missile Defense Office has proposed a program for 2002 that is reflected in its budget. There are a handful of undertakings within that budget which will be, during the course of the year, reviewed and considered.

I think one important thing that distinguishes this approach from past approaches is that what we do not have in this budget is a major acquisition program of the sort that we have had in the past, in which there are clear stages and milestones and activities that are laid out on a year-by-year basis.

It is designed to provide, as I said, the kind of technological experimentation that is necessary to move the program forward and develop as the year goes forward.

Chairman LEVIN. My time is up. I want to make sure I understand the first part of that last answer very clearly.

What you are saying to us is that the budget which is being submitted to us reflects the BMDO's review relative to missile defense, so that what General Kadish told us on June 13 is reflected in this budget submission?

Dr. CAMBONE. The proposed program from General Kadish is the one that he has submitted.

Chairman LEVIN. But—

Dr. CAMBONE. Whether General Kadish's statement to you about what the implications of all of the program activity that he has put forward or not is correct, that I cannot attest to, sir. I do not know what General Kadish has argued on that point.

Chairman LEVIN. All right. But putting aside his characterization, which was that there was no conflict between that proposal of his for 2002 and the ABM Treaty, what you are saying is that his proposal or his review is the review that is reflected in the budget request, his outline of a program.

Dr. CAMBONE. Yes, sir. I mean, he has proposed that—

Chairman LEVIN. His outline of the 2002 program is what is reflected in the 2002 budget request; it has not been changed.

Dr. CAMBONE. Well, insofar as I know, given the fact that there were adjustments made as the marks came down from OMB for the budget, and they went through a process of adjusting that program—and let me say, as well—

Chairman LEVIN. Insofar as you know then, the answer is yes?

Dr. CAMBONE. I believe so, Senator. But on the other hand, there is a great deal of advice that is given to people about what is and is not part of the program and how it is going to be conducted. I think we need to await the Secretary's statement tomorrow. He can give you a definitive answer to the question you are asking.

Chairman LEVIN. Have you not had any conversations in the last week with General Kadish?

Dr. CAMBONE. Yes, sir. We talked to him both yesterday and previously.

Chairman LEVIN. Did this subject not come up?

Dr. CAMBONE. Yes, sir, it did. Let me be as clear as I can. The program that General Kadish has submitted is within the reduc-

tions that they took and the changes that he made within that program, based on the marks that came from OMB, the program as it was proposed. There are adjustments, and there are changes to it that had taken place over the course of the last 10 days as they have adjusted for budgets.

In terms of explicit programmatic detail, I think what you are seeing in some of these statements is different understandings of how the program will unfold over the course of the next year based on where they expect to make progress and where it is that they could inject certain activities into the program.

Chairman LEVIN. I will pursue this in my next round.

Senator Warner.

Senator WARNER. We have a vote, Mr. Chairman. I would simply follow up while this subject is fresh in mind, that this morning in the discussions with the Secretary, my distinguished Chairman had a colloquy with the Secretary on this point, and I recommended today the record of General Kadish's testimony before this committee be brought to the Department, carefully reviewed, so that the Secretary can explicitly answer our Chairman's questions tomorrow, because I am very anxious.

This is an important year, 2002, to the United States military. I want to see our bill moved through Congress and become law. If we get tangled up on legitimate differences of views on this missile defense program, I happen to be among the strongest of supporters of the President's goals, that will stall this bill out quicker than anything I have seen in some time.

We were stalled out for some 50 days last year for other reasons, and I am just hopeful under the guidance of our Chairman that we could move this bill through and we can reconcile these differences, because it is my judgment, listening and studying what the President has said, that he wishes to start some new initiatives. But I do not detect any clear desire to go against the ABM Treaty and its provisions until such time as he has completed a program, which he has started already, of negotiating with our allies—or I should not say, maybe, “negotiating,” but in consulting with our allies. Indeed the initial consultations that he has had with President Putin, I think he has done commendably well, and we are moving forward.

But in my own opinion, without any facts to back it up, he's not going to reconcile in all probability a new framework as he has announced prior to the 2002 bill coming up for a vote in Congress.

We have to decide, given that I am correct in my prognosis, how we reconcile giving this President some new initiatives, such that he can lay the foundation for a new architecture and, at the same time, not jeopardizing passage of the bill because of controversy over the ABM Treaty. That is my view.

Chairman LEVIN. I very much welcome Senator Warner's comments, by the way. I think they are very much on target, but I would urge you to review this transcript because if there is a conflict between what the Secretary tells us tomorrow and what General Kadish told us just a week ago, there is an unnecessary firestorm that is going to be unleashed on that issue. So take a very careful look at that transcript.

Dr. CAMBONE. I will, sir.

Chairman LEVIN. You are in a position where you can do exactly that?

Dr. CAMBONE. You have my word that we shall.

Chairman LEVIN. We will stand adjourned for—

STAFF. Mr. Chairman.

Chairman LEVIN. Excuse me. [Pause.]

OK.

Senator INHOFE. I have already voted.

Chairman LEVIN. You have already voted. Terrific.

Senator REED, you have not voted?

Senator REED. I have not, no.

Chairman LEVIN. Do you want to try a couple of minutes before you vote?

Senator REED. Let me just—just a few minutes, and I will go over and vote.

Chairman LEVIN. Please, we will call on Senator Reed. Then we will turn it over to Senator Inhofe.

Senator REED. Let me just first say, once again, I commend all of you for your willingness to serve and particularly to Mr. Brown, who was someone I respected and admired a great deal as a faculty member at West Point. It is a good day for West Point, as I am bracketed between two graduates, 1961 and 1977, so congratulations.

I will just follow up on a question, Dr. Cambone. You in your response suggested that the direction of the missile defense program is going to be abandoning a formal acquisition program with clear stages and milestones.

A simple question: how does one manage a program without clear stages and milestones?

Dr. CAMBONE. Yes, sir.

Senator REED. More importantly for our point, how does Congress effectuate appropriate oversight? Those are two major issues, I believe. Related to that is whether or not that is a strategy driven by policy and budgets rather than a sound acquisition strategy.

Dr. CAMBONE. I am hopeful, sir, that it is sound on all three points.

The proposal is for the Ballistic Missile Defense Office to concentrate more fully on its research and development test, experiment and demonstration activities. As it moves forward in those activities and begins to discover which of the technologies, system designs, and concepts prove to be more effective, more affordable, and able to give support to defense operations across each of the phases of a missile's flight, they will move those programs into acquisition programs.

They will take a program, which has gone through its testing, evaluations, and experimentation, and when we come to that point, the proposal says, when we are prepared to move into acquisition, the proposal is that that system be transferred to a service, whether the Air Force or the Army, and that in its transfer, it be fully funded and brought into then the acquisition process for its subsequent development and deployment.

As we stand today, the Ballistic Missile Defense Office has both its research, development, tests, evaluation, experimentation work, and acquisition responsibilities.

So what the proposal is, is to get it much more closely focused on the first part of the mission, and then as the systems evolve and become appropriate to transfer them to the services for production and procurement.

Senator REED. This begs the question of, then, why originally was it thought that we should combine all those functions into one agency? Again, generically there has been traditionally criticism of military programs as being disjointed, in which some agency does the design; some agency does acquisition; some agency does this; and some agency does that. You seem to be going back to the latter model.

Dr. CAMBONE. There was a closed discussion, sir, between the Secretary, General Kadish, and the Chiefs on this question. There was agreement that this approach would serve the broader purpose of trying to be certain about the nature of the technologies and give the Ballistic Missile Defense Office a freer hand to be able to advance those technologies which work best, to leave behind those which were not succeeding, and to move to new ones as the opportunity presented itself.

When you are managing a research program as an acquisition program, the strictures are much tighter. The ability to adjust from one approach to another approach is oftentimes more difficult.

So what we were looking to do was to make sure that there was a greater facility on the part of the developers to understand what they could accomplish. Then, when they had established the basic capabilities, to then transfer it into a standard acquisition program and to place that acquisition program in the services.

Senator REED. Let me just suggest that this will be a topic of intense interest and scrutiny as the budget comes over, particularly, I believe, on this committee and certainly my interest.

One final comment: It seems to me that this is understandable, but you have a program that is in organizational realignment. You have a technology that has been criticized, frankly, within the ranks of the Department of Defense. Mr. Coyle has rendered some opinions prior to his departure.

All of this would suggest it is not a program that is ready for deployment in the next year or so, which goes back, I think, to the issues that Senator Levin was speaking to.

Dr. CAMBONE. Yes, sir.

Senator REED. But thank you, Dr. Cambone.

Gentlemen, thank you and, again, I commend you all for your willingness to serve the Nation. Thank you.

Dr. CAMBONE. Thank you, Senator.

Senator INHOFE [presiding]. Thank you, Senator Reed.

I have come at a very opportune time, I see. So there are a number of things, I understand, that have been discussed here. I was late because I was having a meeting with Condoleezza Rice on the same subject you were discussing here.

First of all, I know some discussions were taking place on the ABM Treaty. Let me just assure that there are a large number of people who share my ideas about the ABM Treaty.

Sometimes I think it is an advantage not to be a lawyer, so you are not encumbered by all these details and you can look at a treaty that was made between two nations, one of which does not exist

any longer, where the threat is totally changed in accordance with Henry Kissinger, the architect of the ABM Treaty.

The idea of mutually assured destruction might have had a place in the past, but with the proliferation of not just weapons of mass destruction, but the means of delivering those weapons, and when we do not really know who has these technologies.

I was pretty stressed out back in August 1998 when we asked when would North Korea have a multiple rocket capability, and they said it would be sometime in the next 5 to 15 years. And 7 days later, on the 31st of August 1998, they fired one.

So we really do not know who has what out there. But we do know this: That the threat that faces us today is from a number of nations. We know that China, Russia, North Korea all have that capability. We also know that they are trading technology and systems with countries like Iraq, Iran, Libya, Syria, Pakistan.

I just would like to have you aware of the fact that I had asked this question. I think, Dr. Cambone, Condoleezza Rice was on Meet the Press this Sunday. When she was asked the question about the restraints of the ABM Treaty, her response was, "Well, you know, our job is to defend America. If we come up against that, then that is a problem, but we have to do whatever is necessary to build a system that will defend America against incoming ballistic missiles."

Did you hear her make that statement, Dr. Cambone?

Dr. CAMBONE. No, sir. I will confess that I was in church when she was on television, sir.

Senator INHOFE. But anyway, the administration is now getting a little bit stronger in its determination that you cannot construct a system within the framework of an ABM Treaty. You cannot have a sea-based system. You cannot have the radar detections that are necessary to adequately protect yourself.

So I would like, for starters, just to have you share with me, now, maybe it is redundant to what you have said before, but how can we both defend my eight grandchildren and still stay within that treaty?

Dr. CAMBONE. Sir, I do not believe it is going to be possible to do so. The treaty has any number of provisions, which make the type of defense that is the capability that is necessary to defend the United States and might I add, our allies and friends abroad, against missiles of any range increasingly difficult to develop, test, demonstrate, and deploy.

There are four articles of the treaty which come immediately to mind. Article One of the treaty bans the territorial defense of the United States.

Senator INHOFE. Yes. Article Five is—

Dr. CAMBONE. We are hopeful that we are going to be able to do that.

Article Five prohibits the testing and deployment of ABM systems, mobile systems either at sea or air-based and other forms of mobile systems.

Article Six bans the conversion of non-ABM systems, theater defense systems into capabilities that might be able to counter longer range missiles. Might I add, there is no definition in the treaty on

what it means to counter a longer range ballistic missile with a non-ABM system.

Article Nine prohibits us from transferring technology, blueprints, and other forms of information to others of systems that would be capable of intercepting longer range missiles. That includes, ironically enough, the Russians. The treaty as it stands now, if it is to be observed, would, in fact, prohibit that transfer even to the Russians, if an agreement were reached.

Senator INHOFE. You are all five just so qualified. It is very rare that we have a group like this. I will be very proud to be working with each one of you.

You have said it very well. I have used those same four articles in discussions, even once this morning. I think that it is just important that you know, you folks are being nominated by the President, who has a very specific idea about our necessity to defend America and how we are going to do it.

I know there can be some obstacles. Some people have honest differences of opinion as to what the type of threat that is out there is. But George W. Bush is President of the United States, and I happen to agree with his perspectives.

We will have some obstacles. We will have to work out those on this side of the table, the legislative things. I am sure that you will carry out your end of it.

Mr. Montelongo, am I saying that right?

Mr. MONTELONGO. Yes, sir.

Senator INHOFE. You were with Senator Hutchison for awhile, were you not?

Mr. MONTELONGO. At one time, sir, I was a Congressional Fellow in her office.

Senator INHOFE. You have also, I know, had 20 years experience in the U.S. Army, so you have a lot of qualifications.

We have some issues, and having served with Kay Bailey Hutchison and since Kelly was in her district, you are familiar with the air logistics centers. Today, after the four BRAC rounds, we went down, particularly the last round, from five air logistic centers operating at about 50 percent capacity to three operating at about 80 percent capacity.

That 80 percent capacity is now up to about 100 percent capacity, depending on the two ways that they evaluate the capacity.

We have a system that is based on the necessity for national security purposes of having core capability from within. That core capability is very important to protect and until we come up with a better way, this arbitrary 50/50 is the law today. Unfortunately, we have been operating on a national security waiver that has allowed them to go more than 50 percent outsourcing.

This has concerned me quite a bit. It concerns me that when I hear discussions out there that perhaps maybe we can go outside that 50 percent if the air logistic centers are at full capacity. Now, this argument could be used with any other centers, too. I am using this because I am more familiar with air logistic centers.

One of the reasons we are at 100 percent capacity is that we have old equipment. We are not able to do the things that we should be able to do in upgrading and modernizing our equipment. So as new platforms come in, we are not able to adapt to them.

Now, from your perspective, and anyone else who has any ideas on this might respond too, what are your plans to, in terms of financially, getting our air logistics centers and our other depots around the country up to a state of modernization so they can absorb the new responsibilities and be able to keep us compliant with our 50/50 guidelines?

Mr. MONTELONGO. Sir, you certainly cite one area that is very critical and, if confirmed, I intend to certainly give it the priority that it deserves.

You talk about modernization, and that is certainly one of the key things that we have to address going forward, and certainly the depots are part of that whole picture of modernization. As I say, that is one area that I will absolutely give lots of attention to, if confirmed.

Senator INHOFE. Yes. Do you believe, then I appreciate that answer very much and I would assume that you are committed to keeping a core capability in depots, so that we would not face the—some day the problems that we have all been concerned about, being relying upon sole source outside, if a war should come along.

Mr. MONTELONGO. Sir, I do believe that there are missions and tasks that are inherently governmental and that certainly need to belong in that area and in the public domain.

Senator INHOFE. Yes. I would like to hear from anyone else who might have some ideas, even though you might not directly in your job be faced with this. It is still something that each branch of the service is going to have to deal with.

With this changing environment I had noticed—we are down now in the United States of America to primarily three contractors that can build air platforms. When I came in 1986 to the House, we had about 20. So it is a different environment out there. That makes this core capability, in my opinion, even more significant.

Does anyone have any comments to make about that? John?

Mr. YOUNG. Senator, I agree with your point on the consolidation. It is a competition issue, and it is a services issue for the Department. The core capabilities in the depots have served us well.

I think from my work in the Senate that some of the companies have partnered with the depots to try to do positive things to make both sides efficient. If confirmed, I will certainly continue to work towards those goals to make both sides provide good service for the Nation and maintain both an organic capability and the industrial base we need.

Senator INHOFE. Yes. Pardon me for calling you John. I guess that is not proper in a setting like this, but we have worked together for many years and also we witnessed together in the last few weeks where we are relative to the competition out there and our potential adversaries in terms of our air-to-air capability, air-to-ground capability.

While most Americans think that our modernization program is ahead of the rest of the world, they are wrong. We are not. There are platforms out there that are far superior to those that we have.

Any other comments about this subject? [No response.]

Another question, Mr. Montelongo. In terms of flying hours, recently the Navy and the Air Force have under-estimated the cost of flying hours and causing the need for an emergency DOD sup-

plemental. The reasons for this are concerning the increased cost of flying older aircraft and an ineffective budget process. What is your plan to correct this malady?

Mr. MONTELONGO. Senator, I am not familiar with the mechanics of estimating the cost of flying hours at the moment. I will tell you that, as I understand it, certainly flying hours is the heart and soul of the Air Force, an Air Force that is extremely busy today, that is in combat today, that is flying an ever increasing aging fleet, as you have pointed out.

Because it is that important, if confirmed, that is an area that I plan to invest the time necessary to understand and appropriately address the issue.

Senator INHOFE. Good.

Mr. Aviles, the same situation in the Navy: What are your thoughts?

Mr. AVILES. Yes, sir. Senator, I would have to go along with Mr. Montelongo's comments in that I am not particularly familiar with the mechanics of how those models are developed to estimate what the flying hours program costs would be, as the budget is developed in each year.

I would definitely concur with your comments that this has been a systemic problem, it appears, because this theme has cropped up each year as we have seen supplemental requests come up, both in the flying hours program and depot maintenance programs.

If confirmed, I commit to be actively involved in trying to establish what the root cause for these issues are and to try and develop solutions to it.

Senator INHOFE. Yes. I bring this up, because I have chaired the Senate Armed Services Readiness Subcommittee for the last 4 or 5 years and have occasion to really look into this retention of pilots problem, a very expensive problem that we have. It is even more pronounced in the Navy than it is in the Air Force.

One of four or five issues that comes up when I talk to groups of pilots is this thing. They are not getting the flying hours that they need, and they are not getting the red flag exercises and some of these and the constraints are financial constraints. I think it is something that really has to be done.

Do you think that without the supplemental, Mr. Montelongo, that the Air Force can operate effectively without relying on an annual emergency supplemental?

Mr. MONTELONGO. Senator, I am not familiar with the specifics of the supplemental for some obvious reasons. I have not been, obviously, confirmed yet, but I fully agree with your statement that unless our Air Force has the funding to do the flying that it must do, it cannot do its mission.

Senator INHOFE. I just feel very strongly about that.

Mr. Brown, you in your testimony, even though I did not read it, but my staff says that you address this, the problem we are having with retention in some detail and you see this, hopefully, as a crisis that I see it as now.

In terms of recruiting and retaining, I guess I am the only member of this committee that is—you cannot give me a card. I am the only one—oh, no, the Chairman is back now.

I had a pretty good deal going, Mr. Chairman, for awhile.  
[Laughter.]

Chairman LEVIN [presiding]. Keep going. Keep going.

Senator INHOFE. OK. I guess I am the only member of this committee who openly and publicly says that I believe we should return to the draft to compulsory service. I was a product of that.

Do you see that as something on the horizon that might be an alternative? I look and I talk about the cost of retention of these people. Of course, the quality of life has gone down. We need to rebuild that, and we are in the process of doing that right now and taking care of all these things.

But I wonder sometimes if all the services, in order to retain the quality of people, might want to relook at that some day in the future.

Mr. BROWN. Senator, I think that you have put your finger on perhaps the most important element in the volunteer force that we run today, and that is to be able to recruit and retain the people that we need.

When I served on the Defense Manpower Commission in the 1970s that was one of our primary fears, and so we kept the whole apparatus for conscription in place. Twenty years later I look at this, and I am surprised at how well the services have done in meeting their objectives.

So far, the numbers look good. I think we have to continue in that vein and give this volunteer system what it needs in order to work. The incentives that we need deal with the quality of life issues, deal with the OPTEMPO issues. If we do that, I think we can continue to make the targets.

Senator INHOFE. I would hope that you bring out the issues that are there, but you almost have to go to the field to really sense it and talk to these kids that are out there. Go to Fort Bragg sometime during a rain storm and see what it is like inside the barracks. It is raining in there, too.

These guys are covering their own equipment. We have real property maintenance shortfalls that they have swapped around, bought more bullets instead of doing these things.

I hope that you will be able to look at that and see that in the field and respond in this forum. All too often we will have hearings here in Washington, and it is very difficult for people to come in. There is a spirit of intimidation that none of you feel, of course, but others do when they come in.

I would just hope that you would be able to see the real need, the real problems in these shortfalls that are out there.

Mr. BROWN. Yes, sir.

Senator INHOFE. Mr. Chairman, can I have one more question?

Chairman LEVIN. Please, yes.

Senator INHOFE. I know I have abused this, but I do want to take advantage of the opportunity.

You have been probably sensitized, in terms of the Navy to the problem at Vieques. It is very real, and we probably have differing opinions at this table.

We dealt with this problem last year when the Chairman and the current Chairman got together and decided in order to do the best we can to try to make every effort to retain this very valuable

range. I do not believe there is any place else in the world that can duplicate it in terms of the three missions that are performed there simultaneously in the unified training. That is the marine expeditionary landing, the live Navy firing and, of course, the rest of the battle group from the air, the F-14s and F-18s using live ordnance.

In fact, on March 12, we had an accident where we lost six people, five of whom were Americans. The accident report makes it very clear that we did not get adequate live ordnance training.

We need to get back to that, but in the event that it does not happen, we are going to go forward and do the best we can with the referendum in November. If for some reason that does not come out the way it should come out, we would have to start constructing and spending quite a bit of money to try to replicate this training as near as possible.

Mr. Aviles, primarily you are going to be faced with some alternatives. How are you going to fund that?

There are some, perhaps, opportunities out there. I think you know that we rebate back to Puerto Rico about \$300 million a year on rum tax. Primarily a lot of these benefits that are to the advantage of Puerto Rico, do so because we have been able to use that range. We own it, of course, but we are using it.

Do you think that maybe that would be a place where you could look for another \$300 million a year that might help offset the loss of Vieques?

Mr. AVILES. Senator, I just would like to say that I am somewhat out of my element speaking with respect to Vieques policy. Having worked as a staffer on the House Armed Services Committee, I am well aware of the efforts that went into the legislation that was put forward and became law last year.

I guess my concern is I really am in deep water if you are looking for me to comment on tax cut policy. That is something that is completely outside my experience.

Senator INHOFE. It may not be completely outside if the time should come, and the Navy were to lose that referendum, you would be looking for places and opportunities.

So we will be in a position to talk about that later, but I think there are some areas where we can look. Hopefully we will not be faced with that and we will get back to our live range as it has been over the last 50 years.

Mr. AVILES. Yes, sir.

Senator INHOFE. Thank you, Mr. Chairman, for your tolerance, sir.

Chairman LEVIN. Thank you.

Dr. Cambone, back to the different aspects of missile defense and whether or not there ought to be demonstrated effectiveness before they are deployed.

This was the prehearing policy question that you were asked: "Would you recommend acquiring or deploying a weapons system, including a missile defense system, that is not operationally effective?"

Here was your response: "No. Defenses that are substantially less than 100 percent effective, however, can be essential to deterring threats and defending against attacks. We should not face an

all-or-nothing choice in missile defense anymore than we do regarding other defense programs.”

I understand that weapons systems cannot be 100 percent effective all of the time, but “substantially” is the word you used, “less than 100 percent effective.” It sounds to me like a standard that is designed for failure. If an airplane is 80 percent likely to fly, we do not buy it, do not deploy it.

For a national missile defense system that is currently under development, the operational requirement is that the system stop every incoming warhead from a limited attack with a high degree of confidence. That is the operational requirement, is it not?

Dr. CAMBONE. I believe it is, sir, yes.

Chairman LEVIN. Are you proposing to change that?

Dr. CAMBONE. I suspect that it is setting a standard for capability which is going to be such that the cost and time it takes to reach that objective will inhibit us from bringing online capabilities that could be effective in combination with other capabilities in the meanwhile.

Rather than constantly waiting for the system that gets to near perfection, there is an advantage to us in having systems which are confident and capable and militarily useful, both as a way of defending against existing threats and as a way of deterring and dissuading others from proceeding with their own offensive missile programs.

Chairman LEVIN. That operational requirement was set by the Ballistic Missile Defense Office in the uniformed military, was it not?

Dr. CAMBONE. I believe, actually, sir, it came through the military channels, through the CINC and through the ordinary process.

Chairman LEVIN. Right.

Dr. CAMBONE. Yes, sir.

Chairman LEVIN. But are you proposing to override then the CINC's recommendations?

Dr. CAMBONE. Sir, I, personally, no, sir.

Chairman LEVIN. Are you going to propose to the Secretary that he—

Dr. CAMBONE. There has, in fact, been discussion amongst the members of the Joint Chiefs and with the CINCs about how we might think about that requirement in terms of what is militarily useful in a system as they are being developed.

Chairman LEVIN. Would you supply for the record those conversations and discussions?

Dr. CAMBONE. I cannot do that, sir, for—

Chairman LEVIN. That you are familiar with.

Dr. CAMBONE. I am familiar with them, but I cannot give them to you. There is not a record in that sense. It was a discussion amongst them around the table, sir.

Chairman LEVIN. You say you cannot do it?

Dr. CAMBONE. I do not have a written record of it.

Chairman LEVIN. No. Just your recollection of it for the record.

Dr. CAMBONE. Sure. I would be happy to.

[The information follows:]

For a complete response to the above, please refer to my Question for the Record No. 1.

Chairman LEVIN. Thank you.

Relative to your answer on Taiwan, you stated that, if confirmed, you would monitor carefully the situation in the region and take very seriously our obligation to assist Taiwan in maintaining a self-defense capability. Such assistance includes not only making available defense hardware, but also maintaining contacts with the Taiwan defense establishment across a broad range of activities.

Dr. CAMBONE. Yes, sir.

Chairman LEVIN. My question relates to the part of your statement about maintaining contacts with the Taiwan defense establishment across a broad range of activities. Is that meant to signal a change of policy vis-à-vis Taiwan?

Dr. CAMBONE. No, sir, it's not.

Chairman LEVIN. Now, Mr. Young and Mr. Aviles, we will let Dr. Cambone take a rest here for a minute.

We received a report recently from the Navy regarding the potential benefits and risks associated with the use of advanced appropriations for the acquisition of ships. The report indicates that the advanced appropriations would enable the Navy to "increase the number of ship starts in the near term." Over time, the report says, advance appropriations would result in a "loss of flexibility."

According to the report, higher levels of funding will be required to sustain the building rate, and failure to sustain these funding levels will cause disruption to ships already in construction, which will lead to increased costs and the inability to put new ships under contract.

My question is this: Are you concerned that if we relied upon advanced appropriations that the Navy might bet on increased funding in future years and then risk significant disruption to its ship-building program if such funding does not appear?

First, Mr. Young.

Mr. YOUNG. Mr. Chairman, as you have highlighted, advanced appropriations is one potential mechanism to try to increase the rate of ship building. My experience on the Appropriations Committee says we have to be cautious about changing full funding policies. The Secretary has articulated a plan to submit budgets that fully fund the Department annually.

If there are advantages to that mechanism, I want to go to the building, if confirmed, and try to understand those and work with you further on them. But certainly, the hope would be to have a fully funded budget in the current year and future years.

Chairman LEVIN. OK. Mr. Aviles?

Mr. AVILES. Mr. Chairman, in any financing mechanism that is other than full funding that relies on the availability of out-year appropriations to complete an individual ship hull, there is going to be some uncertainty associated with those out-year appropriations. This is the nature of the way that we fund the Defense Department.

Having said that, if confirmed, I would want to take a hard look at any of the alternative arrangements.

Clearly, this is one way to get more ships under construction as stated in the report, but as you noted, there is some risk or uncertainty associated with what that means or portends for the out-years.

If you want to maintain a higher ship building rate, you have to spend more money on ship building whether you do it through an advanced appropriation mechanism or full funding mechanism. Now, I think, as I said, if confirmed, I would need to take a hard look at this and try to decide what provides the best value for the Navy, the taxpayers and other stakeholders, relevant committees of Congress, ship yards, everyone that is involved in this process, to make sure everyone understands both the benefits and the risks associated with it.

Chairman LEVIN. You used "full funding" in the same breath as "advanced appropriations." Is there not a greater uncertainty with advanced appropriations than there is with full funding?

Mr. AVILES. Absolutely, sir. There is risk associated with full funding, as you are aware, Senator, because of problems with prior year programs, we have unfunded costs associated with prior year programs, because of the inability to estimate properly what the ship cost would be.

There are risks associated with full funding. There are risks associated with advanced appropriations. The risk or uncertainty with advanced appropriations is whether you would have the commitment from the administration to budget for that money in the out-years and whether Congress would support it.

Chairman LEVIN. But is not the uncertainty greater with the advanced appropriations approach than with full funding?

Mr. AVILES. The question of uncertainty as to whether a completely funded ship would be less risky because the appropriations would be provided for it, I would have to say, yes.

The uncertainty and the quality of the estimates of the cost of that ship, I think, that is a risk under both scenarios.

Chairman LEVIN. OK.

Mr. Montelongo, how do you think other military services and the Navy would react if there is an over-commitment to the ship building program in the form of advanced appropriations? Then if the Navy had to look outside of its own budget to get the funds necessary to meet day-to-day operating needs, how would the other services, do you think, respond to that?

Mr. MONTELONGO. Mr. Chairman, that is an area that I, if confirmed, want to better understand than I do at the moment. But as I understand it, the Air Force has been a long proponent of the full funding policy and has, in fact, complied with that guidance.

But having said that, again if confirmed, I stand ready to explore all possible procurement alternatives and also perhaps look into this particular issue as to the impacts.

Chairman LEVIN. Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. Forgive me. I was in debate on the floor on the 2001 supplemental. Some effort is being made to get the 2001 up today and have all amendments filed and debated this afternoon and tonight so we can get this voted out before the House leaves town.

Chairman LEVIN. Good.

Senator WARNER. There is an effort. I do not know what the success may be.

Dr. Cambone, the subject of NATO expansion has been one that I have followed and participated in for years here in the Senate.

I have the greatest respect for that extraordinary coalition of nations and the wisdom that put this thing together 50 years ago.

I have to tell you I see an unraveling of what I believe the core values were that held it together these many years. I was actively engaged in trying to restrict the expansion beyond the one or two nations that occurred last time and to throw a note of caution as we proceed to the future.

I want to let you know where I am coming from on it, because I think the pact has served its purpose way beyond the expectations of those who laid it down, and it can continue to provide a rock of stability in the continent of Europe if it is kept pretty much the way it is.

Nevertheless, it is one of the few times that I have some concerns with my President, whom I respect so much, but during his last swing through Europe he said as follows, "For all of Europe's new democracies, from the Baltic to the Black Sea and all that lie between them" with reference to some of the thoughts he has on expansion.

Now, I will just make two observations. I think our highest priority at the moment is to try and work out with Russia a new framework agreement so that we can move forward with a strong and new innovative architecture for the limited missile defense program.

If the Baltics became the subject of expansion, then the question is put to you and other policymakers in the administration: How does that affect the ability to get ahead with this, which I regard as the number one priority, the limited missile defense, given Russia's strong feelings about the Baltics?

I point out that although I have only been there twice in my life, and it was some time ago, I am not prepared to say, maybe you are, that they have a military component to their overall national structure which would aid NATO in its missions. I will leave to others that analysis, but I have not seen it as yet.

So the certainty of this round of negotiations coming up to expand is one that we should take into consideration very carefully. There may be nations other than the Baltics, which are not only deserving, but begin to strengthen NATO.

I do not know that you need to reply, but I just hope that you would take into consideration the views of some of us that we have to preserve NATO, to preserve its original goals. Yes, the world has changed and the Cold War is terminated, but I think we better use the rear view mirror to watch history that unfolded.

When I came to the Senate with Senator Levin 23 years ago, there were many calls to pull out from NATO: "NATO has finished its work. Let us pack up and go home."

We have a defense budget, which you were present for this morning when we listened to our distinguished Secretary talk about the future and the need to reconstitute the basic procurement structure that is needed to plan for our future.

Those are big dollars. I could match up dollars and NATO expenditures with those, if necessary. Just a little comment from a friendly voice here in the Senate.

To our distinguished members that came from the staffs of our committees, the question of the aging of this cadre of aircraft that

we have in all of our services, the Secretary was very good this morning in pointing out how it is becoming more and more costly to our budget to maintain the existing old aircraft fleets of all of our services, and how that maintenance dollar is becoming so significant that it is impeding the process to get the procurement dollars for the newer aircraft.

I just want to hear both of you talk about that a little bit. Are you aware of that situation? Do you have some innovations that you can bring to the attention of our Secretary, if confirmed, to help alleviate this problem?

Why do you not start first, Mr. Young?

Mr. YOUNG. Senator, because of my work here, I am very familiar with the aircraft procurement accounts. You, sir, I am sure, and the committee are very aware that in the 1980s we bought aircraft at very high rates. Those aircraft are by definition now approaching 20 years old.

The current budget does not necessarily foresee buying aircraft at comparable rates. I think the strategic review and the QDR process will deal with the force structure issues.

But from those decisions, I look forward to, if confirmed, trying to work with the Department to increase the aircraft build rates if the force structure requirements support that, and to work with industry and the Department to try to get the costs of those aircraft under control.

Certainly, you are aware of the Joint Strike Fighter and the promise it holds. It will require continued attention to achieve those cost goals. It holds a lot of promise.

Senator WARNER. In addition, we covered at length this morning—the Secretary is right on target with his analysis on ship building. He added one ship in his proposal coming up to Congress, going from five to six.

But he pointed out that you need a minimum of nine to stop this rapid decline in the numbers of ships, which will take us well below 300 if we do not put in corrective steps. Are you aware of that problem, also?

Mr. YOUNG. Yes, sir. Senator Warner, it has been spoken of frequently. As I mentioned earlier, the review process will set the force structure, but regardless of that, I think the Secretary has articulated his expectation that we will have to have more ships than the current build rates support.

My experience in aircraft programs, I have to, if confirmed, get out to the shipyards and look at these issues. But I hope there are some opportunities to bring design tools and other production practices to the shipyards so we can do a better job of delivering ships in a timely manner and at a cost that puts them on an affordable basis.

Senator WARNER. You also heard about some of the innovations with regard to how Congress should fund these ships. Are you basically supportive of trying to explore those innovations of—in other words, we used to call it advanced procurement. We used another term this morning.

I have been associated with this issue for a very long time. We put new names and new titles, but the whole concept is to try and utilize such appropriations as are available for that fiscal year to

maximize the number of ships that we can put into the construction process. Are you open to those innovations?

Mr. YOUNG. Yes, sir, Senator. We talked to the Chairman briefly earlier. I think every acquisition strategy and technique should be on the table to try to get an affordable ship building program, where we know the costs and we can get the build rate up on ships if at all possible.

Senator WARNER. Good.

Mr. YOUNG. We just have to make sure we have the resources in the future to buy the ships. I think we both articulated that we have to have a fully funded budget, where we would like to put as many ships as the strategic review supports and the shipyards can build into that budget.

Senator WARNER. All right.

Mr. Aviles.

Mr. AVILES. Yes, Senator Warner, I would like to echo Mr. Young's remarks. We had a discussion with Senator Levin before you came back, on the subject of advanced appropriations. The discussion chiefly centered around the uncertainty associated with the advanced appropriations model, as I understand it, with respect to the availability of that out-year funding, and balance that against the uncertainty associated with a full funding mechanism as we currently use primarily for ship building; and the uncertainty there chiefly being in the inability to accurately estimate what the true costs of the vessel will be from when Congress actually provides the appropriations until the construction is actually completed.

The point that I would make is that under any scenario, there will be uncertainty associated with the true costs of the ship. Under the advanced appropriation model, the goal there is ostensibly to get more ships under construction at a given period of time.

But the bottom line is if you are going to buy more ships, it is going to cost more money no matter what financing mechanism you use. That is going to take a commitment from the administration and Congress to provide those, in addition to trying to find ways, innovative ways through technology and, or, industrial techniques to trying to reduce the cost of production of those vessels.

Senator WARNER. I thank you both.

Mr. Chairman, I will return to other questions when my time becomes available again.

Chairman LEVIN. On the financial management issues, Mr. Aviles and Mr. Montelongo, the financial management study, which was commissioned by the Secretary as part of his strategic review, concludes that the Department's current financial management systems "do not provide information that could be characterized as relevant, reliable, and timely."

Then that review said that the systems were unable to provide reliable financial and managerial data for effective decision making and management, because what has too often happened is that convoluted practices are used to make decisions in the absence of that information.

I assume that, if you are confirmed, you both would commit yourselves to address the deficiencies in the financial management systems of the respective departments. But I would be interested as

to whether you have any current ideas as to how you would go about that.

Mr. Montelongo, do you want to start?

Mr. MONTELONGO. Mr. Chairman, you bring up a very important issue and certainly one that I believe is a critical one that is facing us in the Department overall. In fact, I think that it is clearly an issue that is department-wide.

I very much look forward to working with my colleagues, my counterparts across the services, and the OSD Comptroller to support the Secretary of Defense and the Comptroller, to implement consistent budgeting and financial management practices.

One of the key components of that will be to address the improving, if you will, and upgrading of the financial management systems.

One of the areas that I am, if confirmed, very excited about and looking forward to is, again, getting with my colleagues to share best practices and adapting what we can to address this particular issue.

One of the things that I think that we certainly need to do is to look at this from an enterprise-wide perspective, beginning with developing a system architecture for the Department and then having the various services plug into that.

Chairman LEVIN. Thank you.

Mr. Aviles.

Mr. AVILES. Yes, Chairman Levin. I would like to, I guess, echo Mr. Montelongo's remarks with respect to specific changes that I would recommend for the Navy.

If I may, I would like to take that for the record. If confirmed, I will certainly be heavily involved in the development of alternatives to the status quo. But I do not have any specific recommendations at this time.

Chairman LEVIN. OK, that is fine. Thank you.

[The information referred to follows:]

This is certainly an important issue of concern for the Department of Defense. If confirmed, I look forward to working closely with the Under Secretary of Defense (Comptroller) and my counterparts in the other military departments to look at an enterprise-wide financial architecture. Integrating our financial management processes, where appropriate, will be critical to providing the visibility and accountability necessary for leaders of the Department of Defense to make effective and timely decisions.

Chairman LEVIN. Mr. Young, relative to the V-22, the Osprey, that program is at a critical juncture as a result of two fatal crashes and allegations about the falsification of maintenance data. A panel established to review the program has recommended redesign and follow-on testing for the aircraft, which would significantly delay that program.

At a recent hearing, we heard testimony that some critical safety information arising out of flight testing of that aircraft may not have been transmitted to the program manager.

Would you agree that the safety of the aircraft is a paramount consideration and we should not move to low-rate initial production until we can be confident of that safety?

Mr. YOUNG. Senator, I could not agree with you more. Safety of that aircraft and the safety of the marines that were flying it is paramount.

Chairman LEVIN. Would you, if confirmed, review the relationship between the Navy testers and the program management and revise procedures as necessary to ensure that critical safety information gets to the program manager?

Mr. YOUNG. Absolutely, Senator. I would be happy to review that and make sure there are processes in place to guarantee that information is shared appropriately.

Chairman LEVIN. Thank you.

Mr. Brown.

Mr. BROWN. Yes, sir.

Chairman LEVIN. A recent report by an Army training and leadership development panel reported that Army culture is out of balance. These are their words now: "There is friction between Army beliefs and practices. Over time that friction threatens readiness. Training is not done to standard. Leadership development and operational assignments are limited and do not meet officer expectations. Officers and their families elect to leave the service early."

Could you give us some ideas as to how you might address some of those concerns that have been raised about Army leadership and Army culture?

Mr. BROWN. Thank you, Senator. This is, indeed, a very important question. The Army has recently completed an extensive review of this subject and has come up with an extensive program of recommendations as to how to address it.

It is in the process of evaluating exactly which of these should be given the highest priority in terms of being addressed. But my understanding is the leadership is very much seized with this problem of officer retention and is forthright in its commitment to address it.

Chairman LEVIN. On a different subject, the Department considers the biological agent anthrax the most serious biological weapon threat to our military forces. The anthrax vaccine immunization program was initiated to address the threat, but a number of service members have refused to take the vaccine, although ordered to do so.

How do you believe the Department should respond to service members who refuse to take a vaccine when required to do so?

Mr. BROWN. This too is a very important topic, Mr. Chairman. I believe that the Army must uphold its good order and discipline and apply applicable regulations in this matter.

Certainly, the Army has taken measures to educate these people and try to bring about voluntary compliance. If voluntary compliance fails, then it has to resort to existing procedures for dealing with this.

Chairman LEVIN. OK.

Senator Warner.

Senator WARNER. Thank you, Mr. Chairman.

Mr. Montelongo, in your capacity as the financial manager for the Department of the Air Force, you will probably be tasked in part to look over the current infrastructure, base structure to advise your Secretary with regard to the possible future of another round of BRAC. Have you studied that subject at all, base closures?

Mr. MONTELONGO. No, sir, I have not studied it in any detail, but certainly that is an area we had previously talked about.

Senator WARNER. Good. I personally think, and I think the Chairman is of the same view, that we, the United States, should look at that and consider possible base closure in the near future.

But the key to the success of it is showing where there will be a savings. Those types of projections in part fall within your purview. If I may respectfully suggest that you early on get up to speed on these subjects, because you will want to advise your Secretary and be a part of the team that addresses that issue for your department and, indeed, in the Department as a whole.

Mr. MONTELONGO. Yes, sir. Indeed, I believe the Secretary, and in fact, I believe all the service secretaries have mentioned that they are concerned about excess capacity and doing what is prudent to rationalize that. I certainly will take your counsel.

Senator WARNER. Good. Well, then you will enjoy your work, and I hope that you meet with some regularity with your counterparts in the other two military departments, so you can share the experiences that each of you are having.

There are, and there should be, certain individualities to the departments. But in the area of financial management, to the extent to which you all can have some parallelism, I think it makes it easier for those of us here in Congress in our oversight responsibility to monitor the areas for which you have responsibility.

Mr. MONTELONGO. Yes, sir. If confirmed, I am very much looking forward to that.

Senator WARNER. Good. Thank you. Again, thank you for your public service.

Mr. Brown, when we had an opportunity to visit here in my office, I stressed with you the importance of overseeing the procedure by which officers are promoted, and as well as the senior enlisted, because therein is the core of the military services.

It has been my experience that all they ask for is fairness and to have uniformity; in other words, that each are treated, depending on their background and accomplishments and so forth, but there is clear understanding to guide them through their career patterns, hopefully 20 years plus.

What are the criteria by which the President and those beneath him pick officers for promotions? That procedure has to be sacrosanct. It has to be fair, and no real or perceived perception that there is anything other than fairness to every officer and senior enlisted. Do you understand that, do you not?

Mr. BROWN. Yes, Senator, and I could not agree with you more.

Senator WARNER. You basically agree. Our committee, the Chairman and I, these many years we have been together, we carefully look at the recommendations by the President, forwarded by the service secretaries for promotion. There are times when we have to give the closest examination to individual persons, because in the course of their career, they have been involved in incidents which bear upon our decision making as to whether or not we give it advise and consent favorable or withhold it for individuals. It is not an easy task.

Just this morning I dealt with one—or last night. I do not know. We work around the clock here. But we have to look at those cases.

So first, I want your commitment that you will provide Congress with information relating to those individuals where that informa-

tion could be viewed as adverse to their promotion. Even though it is a decision of the service secretary to include them on the list for promotion that comes to Congress, we must make our own separate and independent evaluation.

Now, do you commit to do that?

Mr. BROWN. Yes, Senator. I have an advisory role in this with regards to the Secretary, but I can assure you I will do all in my power to make sure that you get the information you need.

Senator WARNER. I would hope that Secretary Abell, who was on our staff for many years in the Armed Services Committee, a highly respected individual now in office over there, would early on bring together persons in your position, if confirmed, and I expect you will be, and get a uniformity among the military departments on how to keep Congress informed in a timely fashion.

There is someone in the audience who can communicate with him very quickly on that subject. [Laughter.]

Mr. BROWN. Yes, Senator.

Senator WARNER. Dr. Cambone, I hope the others here today recognize that this is an opportunity for us to discuss policy issues relating to the security interests of this nation abroad as we have one here who is eminently qualified to take on his position and who will be very integral, not only within the Department of Defense, but with his colleagues and associates and potentially the State Department, but other departments and agencies, CIA, but this committee follows very closely the policy decisions by administrations on various sections of the world.

I come to the subject of North Korea. I frankly think that former Secretary of Defense Perry, who came before this committee on the issue of his work on behalf of the previous administration towards the framework in North Korea, did a wonderful job. I hope you will familiarize yourself with his work, as you undertake yours.

I believe now our administration is going to take steps to build on that framework. Am I not correct in that, Doctor?

Dr. CAMBONE. Yes, sir.

Senator WARNER. Also, China/Taiwan is always an issue that is just beneath the surface and can flare up for various reasons.

We want to enforce the law of our land, this committee does, with respect to issues as they may arise on that theater of operations, but I urge that you spend time regularly on this subject and to hear out both sides as issues arise with regard to that sensitive part of the world.

Dr. CAMBONE. Yes, sir.

Senator WARNER. We certainly do not want to see open conflict.

Dr. CAMBONE. No, sir.

Senator WARNER. We must take every step. I have urged those both in China and Taiwan to use carefully selected, but cautious, rhetoric, because sometimes rhetoric can trigger situations.

I think the package that the President has set up for the additional arms to—we have an obligation under the law of our land to help Taiwan maintain sufficient arms by which they can protect their freedom and democracy.

Dr. CAMBONE. Yes, sir.

Senator WARNER. Likewise India/Pakistan, almost like a volcano, it is quiet and then it will flare up. Therein are weapons possessed

by both that can spread any conflict way beyond the geographic boundaries of those countries.

Likewise, we see Indonesia, a very sensitive situation in Indonesia right now. We have to monitor that. I think the administration has recently decided to restore some military-to-military contact with Indonesia.

There is always risk associated with that. But I think history has shown through the years that our Nation is reaching out to young officers who some day become heads of state and government, reaching out so that they can learn and understand the fundamentals of democracy that is in our Nation, even though it is not practiced in their homelands.

Human rights, how we treat that subject here in our Nation gives them some incentive, I think, to go back to their respective nations and work to achieve many of the things that we have in this country and all too often take for granted.

I wonder if you have any comment on any of those four regions that you wish to put in today's record.

Dr. CAMBONE. It is quite a list, sir. I would first like to say that I am grateful for your wise counsel on this. All four of those regions are, as you suggest, subject to eruptions sometimes unpredictably.

As you well know, the administration has decided to build on the work on North Korea.

The China/Taiwan issue, as you say, is one that is volatile and can be affected by the way in which we talk about it. Therefore, if confirmed, I will take your sound advice on being very careful on how one speaks to that.

India and Pakistan continue to evolve and will continue to evolve in ways that we need to be careful to monitor and not to unconsciously and inadvertently incite one side or the other to do things.

Your words on the training of foreign officers, whether it be Indonesia or any other country, are well placed.

During my time at the National Defense University, I ran into many a chief of staff for foreign countries who had had the opportunity to train in one fashion or another with the United States troops and to, in fact, be educated here in the United States.

That is a very valuable part of our outreach programs and of our military-to-military contacts, and something that we need to continue with, with some vigor.

Senator WARNER. I thank you very much, Dr. Cambone.

Chairman LEVIN. Dr. Cambone, I believe you were the Staff Director of the Commission to Assess the Ballistic Missile Threat to the United States.

Dr. CAMBONE. I was, sir.

Chairman LEVIN. Now, did that commission make any recommendation relative to deployment of a ballistic missile defense?

Dr. CAMBONE. No, sir, it did not.

Chairman LEVIN. Just one other last question for Mr. Brown. We just received a report from the Inspector General of the DOD concluding that the Army has not yet fully incorporated the Gulf War nuclear, biological, and chemical lessons learned, which were identified by the Office of the Special Assistant for Gulf War Illnesses, Medical Readiness, and Military Deployments into its doctrine,

training, organizational structure, leadership development, material policies. So are you familiar with that report?

Mr. BROWN. No, Mr. Chairman, I am not familiar with the report.

Chairman LEVIN. OK. Would you become familiar with it on your confirmation and make the implementation of these lessons learned a high priority for the Department?

Mr. BROWN. If confirmed, I will definitely do that.

Chairman LEVIN. Thank you, all. I also want to thank your families and particularly, if I can single out your children. They have been absolutely wonderful observers here, incredibly patient. I wish I were as well behaved at their age, as they are. They are real testaments to their parents.

We congratulate you all and, again, thank your families for the support which they have given you.

We will stand adjourned.

[Whereupon, at 12:01 p.m., the hearing was adjourned.]

[Prepared questions submitted to Dionel M. Aviles by Chairman Levin prior to the hearing with answers supplied follow:]

JUNE 21, 2001.

Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

DIONEL M. AVILES.

cc: Senator John Warner,  
Ranking Minority Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than 10 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes. The establishment of the combatant commands, the delineation of responsibilities, and most importantly, the focus on joint service operations and integration outlined in the Department of Defense Reorganization Act of 1986 has enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been accepted and implemented. They have clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Chairman of the Joint Chiefs of Staff, the Service Chiefs and the Combatant Commanders. As a result of these reforms, the effectiveness of our joint warfighting forces has improved.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I consider the most significant value of these reforms to be an improvement in joint warfighting capabilities. I believe our military is now stronger and more effective because the our services can work better together.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to

contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate?

Answer. I am unaware of any current proposals to amend the Goldwater-Nichols Act. If confirmed, I will work with the Secretary of the Navy to determine the requirement for any legislative proposals.

*Question.* If so, what areas do you plan to address in these proposals?

Answer. As I am unaware of any legislative proposals, it would be premature to offer any thoughts on the question at this time.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Navy (Financial Management)?

Answer. If confirmed, I will be responsible for advising the Secretary of the Navy on financial management matters and for directing and managing all financial activities and operations of the Department of the Navy. I will also be responsible for supervising the Naval Center for Cost Analysis, which performs independent cost analysis and cost estimating functions for the Secretary of the Navy.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. I believe my background makes me qualified to serve in the capacity as Assistant Secretary of the Navy (Financial Management and Comptroller). I have worked on many different aspects of defense programs and have gained a thorough understanding of the Department of Defense, executive branch and congressional budget process. Having served as a budget examiner in the Office of Management and Budget and as a Professional Staff Member on the House Armed Services Committee, I believe that, if confirmed, I would bring a solid foundation from which to advise effectively the Secretary of the Navy on financial management matters.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Navy (Financial Management)?

Answer. While I have relevant experience relevant to the position, education is a life long and continuing process. If confirmed, I will continue to learn as much about the position and the issues and challenges facing the Department of the Navy so that, if confirmed, I will be better able to carry out the duties more about the Department and the duties of the Assistant Secretary of the Navy (Financial Management and Comptroller).

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary England would prescribe for you?

Answer. If confirmed, I will be responsible to Secretary England for overall financial management issues and Department of the Navy resources. I will also be charged with carrying out the responsibilities pursuant to 10 U.S.C. § 5025.

*Question.* In carrying out your duties, how will you work with the Secretary of the Navy; the Under Secretary of the Navy; the Under Secretary of Defense (Comptroller); and the Assistant Secretaries of the Army and the Air Force for Financial Management?

Answer. If confirmed as the Assistant Secretary of the Navy (Financial Management and Comptroller), I will be the principal assistant and advisor to the Secretary of the Navy on fiscal and budgetary matters. The Assistant Secretary (Financial Management and Comptroller) also performs such other duties as the Secretary may prescribe.

If confirmed as the Assistant Secretary of the Navy (Financial Management and Comptroller), I will be the principal assistant and advisor to the Under Secretary of the Navy on fiscal and budgetary matters. The Assistant Secretary (Financial Management and Comptroller) also performs such other duties as the Under Secretary may prescribe.

In the role of Assistant Secretary of the Navy (Financial Management and Comptroller), I will, if confirmed, work closely with the Under Secretary of Defense (Comptroller) in the development and execution of the budgetary and fiscal policies

and initiatives of the President, the Secretary of Defense, and the Secretary of the Navy.

If confirmed, I will work closely with the Assistant Secretaries of the Army and Air Force for Financial Management and Comptroller to support the efforts of the Secretary of Defense and the Under Secretary of Defense (Comptroller) to develop a productive working relationship and implement consistent budgeting and financial management policies as appropriate.

#### CIVILIAN AND MILITARY ROLES IN THE NAVY BUDGET PROCESS

*Question.* What will the division of responsibilities be between the Assistant Secretary of the Navy (Financial Management) and the senior military officer responsible for budget matters in the Navy's Financial Management office (the Director of the Office of Budget and Fiscal Management) in making program and budget decisions including the preparation of the Navy Program Objective Memorandum, the annual budget submission, and the Future Years Defense Program?

*Answer.* If confirmed as the Assistant Secretary of the Navy (Financial Management and Comptroller), I will have the responsibility and the authority for all budget matters within the Department of the Navy. The Naval officer who serves as the Director of the Office of Budget will serve under my direct supervision and will be responsible to me for the formulation, justification, and execution of the Navy budget.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the next Assistant Secretary of the Navy (Financial Management)?

*Answer.* I am not completely aware of all the challenges that will face the next Assistant Secretary of the Navy (Financial Management and Comptroller), but I believe that providing adequate resources for the Navy's warfighting priorities and ensuring the availability of accurate, reliable and timely financial management information will be significant challenges. If confirmed, I will evaluate these challenges and attempt to address them.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will work closely with the Under Secretary of Defense (Comptroller), the Secretary of the Navy, the Chief of Naval Operations and the Commandant of the Marine Corps to ensure that sufficient resources are allocated for warfighting priorities and efforts to ensure the availability of useful financial management information are undertaken.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Navy (Financial Management)?

*Answer.* I believe the availability of accurate, reliable and timely financial information is perhaps the most serious issue today in the performance of the duties of the Assistant Secretary of the Navy (Financial Management and Comptroller). I am concerned that financial management systems may not consistently provide needed information.

*Question.* What management actions and time-lines would you establish to address these problems?

*Answer.* If confirmed, I will study this issue and then develop actions and time-lines, as appropriate.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Navy (Financial Management)?

*Answer.* If confirmed, my broad priorities will include improving the quality of financial management information for both budget formulation, budget execution and day-to-day decision making. Another priority will be modernization of financial management systems and processes to ensure that accurate information is available in a timely manner.

#### ADVANCE BILLING

*Question.* In recent years the Navy has had to resort to advance billing of customers for industrially funded work in order to keep cash in its working capital funds above minimum levels more frequently and extensively than the other military departments.

What are your views on the practice of advance billing and what is your assessment of the Navy's ability to manage the cash balance of its working capital fund?

Answer. Generally, working capital funds are designed to ensure sufficient funds are available to cover the cost of operations. The practice of advance billing, the billing of customers in advance of the provision of goods or services, should only be used under exceptional circumstances. If confirmed, I will review current processes and the Department of the Navy's ability to manage the cash balances of the working capital fund.

#### BUDGETING FOR FLYING HOUR COSTS

*Question.* In recent years both the Navy and the Air Force budgets have consistently underestimated the cost of carrying out their planned training for aviation units, that is, their flying hour costs. The most frequently cited reasons for this are the increasing hourly cost to operate older aircraft and a budget process that does not adequately project and budget for likely cost increases above the most recent data on actual costs incurred.

What are your views on the reasons for the consistent underfunding of flying hour costs and the steps that should be taken to correct it?

Answer. I do not have adequate experience to comment on reasons for underfunding of flying hour costs. If confirmed, it will be my intention to work with appropriate Department of the Navy staff to ensure readiness requirements are adequately identified.

#### NAVY-MARINE CORPS INTRANET

*Question.* Last year Congress became concerned that the Navy was embarking on a major acquisition program, the Navy-Marine Corps Intranet (NMCI), for which no funds were identified in the budget and with no adequate process in place to identify to Congress how funds appropriated for other programs would be used to fund this program.

If confirmed, will you ensure that the future Navy budgets identify the funding needed for this program?

Answer. If confirmed, it will be my intention to ensure visibility of the funding for this program in the Department's budget.

#### FINANCIAL MANAGEMENT AND ACCOUNTABILITY

*Question.* DOD's financial management deficiencies have been the subject of many audit reports over the past 10 or more years. Despite numerous strategies and initiatives the Department and its components are undertaking to correct these deficiencies, financial data continues to be unreliable.

What do you consider to be the top financial management issues to be addressed by the Department of the Navy over the next 5 years?

Answer. I believe one of the top financial management issues of the Department of the Navy, or indeed any of the services, is the need for consistent, accurate, and timely financial information for decision makers. To provide accurate information, the Department of the Navy must have financial management systems that are both capable of producing this information and are compliant with Federal standards and controls. To support the timely delivery of this information, the Department must have a reliable, technologically sound infrastructure that links either transaction-level or aggregated information to the decision maker. If confirmed, I will make this a goal.

*Question.* How do you plan to provide the needed leadership and commitment necessary to ensure results and improve financial management in the Department of the Navy?

Answer. If confirmed, I intend to make the improvement of financial management in the Department of the Navy, particularly in terms of the quality and timeliness of financial information, one of my highest priorities. I intend to enlist the support of appropriate personnel to accomplish this.

*Question.* What are the most important performance measurements you would use to evaluate changes in the Department of the Navy's financial operations to determine if its plans and initiatives are being implemented as intended and its anticipated results are being achieved?

Answer. If confirmed, I will enlist the support of senior Department of the Navy leadership to establish logical, useful, and relevant performance measures. This effort would be designed to ensure the necessary auditing conditions of completeness, existence, and proper valuation are achieved—resulting in consistent, accurate, and timely information for decision makers.

## COMPLIANCE WITH CHIEF FINANCIAL OFFICERS ACT

*Question.* The Chief Financial Officers Act requires the annual preparation and audit of financial statements for Federal agencies. However, the DOD Inspector General and GAO's financial audit results have continually pointed out serious internal control weaknesses concerning hundreds of billions of dollars of material and equipment, as well as billions of dollars of errors in Department's financial records.

In your view, is the Navy capable of meeting the requirements imposed by the Chief Financial Officers Act? If not, please describe the actions you think are necessary to bring the Navy into compliance and the extent to which such actions are the responsibility of the Assistant Secretary of the Navy (Financial Management) or other officials in the Department of the Navy or the Department of Defense.

*Answer.* I understand the Department of the Navy is not currently able to meet the requirements imposed by the Chief Financial Officers Act. If confirmed, one of my top priorities will be to take necessary actions to ensure that the Department of the Navy meets the requirements of the Chief Financial Officers Act consistent with the goals set forth by the Under Secretary of Defense (Comptroller). It would be premature for me to comment on the actions necessary until I, if confirmed, have an opportunity to assess fully the current situation.

## STANDARDIZATION WITHIN THE DEPARTMENT OF DEFENSE

*Question.* Many of the financial management initiatives currently underway within the Department of Defense are centrally controlled by the Office of the Secretary of Defense, and most observers believe that financial management practices should be standardized throughout the Department of Defense to the maximum extent possible.

What role do you believe the military departments should have in the decision-making process when DOD-wide financial management decisions are made?

*Answer.* If confirmed, I will work closely with the Under Secretary of Defense (Comptroller) and the Secretary of the Navy in the decision-making process to ensure the Department of the Navy's perspective is considered in the decision making process affecting financial management issues.

*Question.* What are your views on standardizing financial management systems (including hardware and software) and financial management practices across the Department of Defense?

*Answer.* I fully support standardization where it makes sense to do so. The vastness of the information technology infrastructure of the Department of Defense and the Department of the Navy and the many internally and externally driven initiatives being undertaken to improve financial management may not lend themselves to a "one size fits all" solution in all cases. What is important is for the financial and feeder systems, as well as financial management practices and processes, to provide desired information accurately and consistently.

*Question.* Are there areas where you believe the Department of the Navy needs to maintain unique financial management systems?

*Answer.* It would be premature for me to provide comment on any one specific area within the Department of the Navy where unique systems may be appropriate. However, as I mentioned above, a "one size fits all" approach to standardization of systems and practices may not make good business sense in some situations.

## RESPONSIBILITY FOR ACCURACY OF FINANCIAL DATA

*Question.* When the Department of Defense, through the Under Secretary of Defense (Comptroller) or the Defense Finance and Accounting Service, prepares financial or budget information for submission to the Office of Management and Budget or Congress, who will be responsible for the accuracy of such information concerning the Navy?

*Answer.* If confirmed, I will be responsible for the accuracy of the Department of the Navy's finance, budget and accounting information provided to the Department of Defense and the Office of Management and Budget.

*Question.* Who will be responsible for ensuring that the financial management and accounting systems of the Department of the Navy have the interfaces and internal controls needed to produce timely and accurate financial information?

*Answer.* If confirmed, it will be my responsibility to ensure that the financial management and accounting systems of the Department of the Navy have the interfaces and internal controls needed to produce timely and accurate financial information.

## FINANCIAL MANAGEMENT TRAINING

*Question.* In response to the Defense Acquisition Workforce Improvement Act of 1991, DOD has taken action directed at improving the professionalism of its acquisition workforce. This was brought about as a result of the need to better ensure that DOD's acquisition workforce was well-versed in the rapidly changing technical skills needed to keep abreast of acquisition trends. A key part of the effort to upgrade the professionalism (technical currency) of DOD's acquisition workforce was the requirement that each acquisition official receive a minimum of 80 hours of continuous learning every 2 years. While DOD has stated that this should be a goal for financial management personnel, it has not made it a requirement because of uncertainties over whether necessary funding would be available.

What are your views on the merits of establishing a requirement that all Navy financial management personnel receive a minimum of 80 hours of continuous learning every 2 years?

*Answer.* The field of financial management requires a high level of technical proficiency and currency. If confirmed, I will encourage Department of the Navy financial management professionals to pursue on-going training opportunities through available certification programs and other professional training programs.

*Question.* If confirmed, what actions would you take to ensure that the Navy's financial management personnel keep abreast of emerging technologies and developments in financial management?

*Answer.* If confirmed, I intend to work with the Under Secretary of Defense (Comptroller) and the Secretary of the Navy to ensure that the Department of the Navy's financial management workforce is adequately trained. I will encourage Department of the Navy financial management personnel to take advantage of career planning and the existing financial management professional development opportunities.

## PPBS

*Question.* Recently, a commission, which included a number of former Defense officials and former Comptroller General Bowsher, asserted that the Department's Planning, Programming, and Budgeting System (PPBS) is no longer functioning effectively.

What are your views on the PPBS process? Are there any changes that you would recommend?

*Answer.* I believe that the planning, programming, and budgeting process must facilitate top-level decision making efforts and address major resource issues. If confirmed, I will work with the Under Secretary of Defense (Comptroller) and the Secretary of the Navy to evaluate the sufficiency of the current system and make recommendations for improvement if warranted. I do not currently have any changes which I would recommend.

## GOVERNMENT PERFORMANCE AND RESULTS ACT (GPRA)

*Question.* If confirmed as Assistant Secretary of the Navy (Financial Management and Comptroller), what would your responsibilities be with respect to the requirements of the GPRA to set specific performance goals and measure progress toward meeting them?

*Answer.* Both the Secretary of the Navy and the Secretary of Defense have made it clear that they want the Department to operate more like a business and to do so requires the establishment of performance-based measures and metrics. If confirmed, I will support this effort.

*Question.* What additional steps can the Navy take to fulfill the goals of the GPRA to link budget inputs to measurable performance outputs?

*Answer.* If confirmed, it will be my intent to support the development of meaningful performance metrics and integrate them into the budgeting and decision making process.

## INCREMENTAL FUNDING

*Question.* In your view, what are the likely benefits or advantages of incremental funding of naval vessels?

What are the likely costs or disadvantages of such funding?

How do you weigh these competing costs and benefits and what approach do you believe the Navy should take toward incremental funding of naval vessels?

*Answer.* The Secretary of Defense has testified before the Senate Armed Services Committee that, in his personal view, we are probably not procuring enough ships for the Navy and we should be procuring more ships. Careful consider-

ation should be given to innovative alternate methods of financing shipbuilding, such as incremental funding, while seeking to ensuring the Navy gets the best value for each investment dollar spent. If confirmed, I will evaluate the potential advantages and disadvantages of investment financing proposals and make appropriate recommendations to the Secretary of the Navy. I look forward to working with the committee on this matter.

#### ADVANCE APPROPRIATIONS

*Question.* If such an approach were to be available in the future, what criteria should the Navy use in seeking advance appropriations for a program?

What do you believe would be the strengths and weaknesses of funding ships using advance appropriations?

Have you seen any objective analysis of alternative shipbuilding funding mechanisms that demonstrate that advance appropriations would result in lowering unit costs of ships and/or be preferable to using multi-year procurement or any other approach?

*Answer.* The Secretary of Defense has stated that he believes we should be procuring more ships. Careful consideration should be given to innovative methods of financing shipbuilding while seeking to get the best value for the money. I look forward to working with the committee on this matter. The Secretary of Defense has testified before the Senate Armed Services Committee that, in his personal view, we are probably not procuring enough ships for the Navy. Careful consideration should be given to alternate methods of financing shipbuilding, such as advance appropriations, while ensuring the Navy gets the best value for each investment dollar spent. If confirmed, I will evaluate the potential advantages and disadvantages of investment financing proposals and make appropriate recommendations to the Secretary of the Navy.

#### SAVINGS FROM COMPETITION

*Question.* The Navy and other military departments have substantially increased the number of public-private competitions in recent years in order to achieve greater efficiency and effectiveness while reducing costs. Studies have shown that the military departments save money regardless of which side wins the competition.

Do you believe that decisions on whether to outsource work currently performed by government civilians should be made through public-private competition?

*Answer.* If confirmed, I will work with the Department of Defense and the Department of the Navy staff to evaluate the effectiveness of public-private competitions.

*Question.* What steps should the Navy undertake to measure the actual savings achieved after such competitions?

*Answer.* If confirmed, I will review the metrics currently in place to measure savings achieved from competition and determine what could be done to improve visibility of these savings.

*Question.* What are your views on the practice of including "funding wedges" in the budget that anticipate savings from public-private competition or other efficiencies prior to those savings actually being achieved?

*Answer.* Outyear "funding wedges" in a budget are estimates that represent current policy assumptions. If confirmed, I will evaluate the use of such "funding wedges" in the budget.

#### WORKING CAPITAL FUNDS

*Question.* Are there any changes you would recommend to the policies governing working capital funds in the Department of the Navy?

*Answer.* If confirmed, it would be my intention to carefully review the policies associated with the working capital fund and determine what, if any, changes would be desired.

*Question.* Do you believe the scope of activities funded through the working capital funds should be increased or decreased?

*Answer.* If confirmed, I will review the scope of activities funded through the working capital fund.

*Question.* The Navy has established a pilot program at the Pearl Harbor Naval Shipyard. The primary purpose of this pilot program is to increase efficiency by combining the military and civilian maintenance workforces more closely. This pilot program also moved the shifted funding for maintenance at this shipyard from the working capital fund via direct appropriations.

What are your views on removing depot maintenance for some or all of the public depots from the working capital funds?

Answer. It would be premature for me to comment on removing depot maintenance for some, or all, of the public depots from the working capital fund. If confirmed, I will review the appropriateness of financing methods for various activities.

## OVERSIGHT OF SPECIAL ACCESS PROGRAMS

*Question.* As the Assistant Secretary of the Navy (Financial Management), will you be responsible for the financial management of special access programs in the Navy?

Answer. If confirmed, yes. Yes. It is my understanding that the Assistant Secretary of the Navy for Financial Management is responsible for oversight of the financial management structure for Department of the Navy special access programs.

*Question.* Are you satisfied with the oversight standards for the financial management of special access programs? Are these standards as stringent as those for other programs?

Answer. I am not fully aware of the oversight standards for special access programs. If confirmed, I will review these standards and examine this area.

*Question.* Does the Office of the Assistant Secretary of the Navy (Financial Management) have sufficient cleared personnel and authority to review special access programs?

Answer. I am not aware of the status of cleared personnel. If confirmed, I will review these requirements.

## LEGISLATIVE LIAISON RESPONSIBILITY

*Question.* Under the current organization of the Navy, legislative liaison functions affecting congressional appropriations committees are performed by officers under the supervision and control of the Navy Comptroller.

If confirmed, what would be your relationship with the Chief of Legislative Affairs regarding budgetary and appropriations matters?

Answer. If confirmed, I would work closely with both the Chief of Legislative Affairs, as well as the Head, Navy Appropriations Matters Office on all matters germane to Congress.

*Question.* What requirements or procedures, if any, would you put into place, if confirmed, to ensure that financial information is made available on an equal basis to authorization committees?

Answer. If confirmed, it would be my intention to work with both sides of the Department of the Navy legislative liaison organizations to ensure financial management information is made available to the appropriate congressional committees.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Navy (Financial Management)?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. As you may be aware, my colleague, Senator Byrd, has been very critical of the Department's financial management system. I am in full agreement with his assessment and hope that you and your counterparts will bring a new perspective on how to fix the system.

Since you have had exposure to the financial management system during your tenure on the House Armed Services Committee, do you have any specific recommendations for improving the current financial management system?

Mr. AVILES. I am aware of the criticism. This is an area that the Secretary of Defense and the Secretary of the Navy have listed as a top management priority, but the issue is more related to how the total enterprise is managed, rather than just the financial management system.

Reengineering and integrating our business processes, where appropriate, will be critical to providing the visibility and accountability necessary to achieve the goal of clean, auditable financial statements.

As the Secretary of the Navy's principal advisor on financial matters, if confirmed, I will work closely with the Under Secretary of Defense (Comptroller) and my counterparts in the other Military Departments to address these challenges.

2. Senator THURMOND. The Department of Defense has established 2010 as the goal to improve the quality of family housing. The principle vehicle to achieve this goal is the housing privatization initiative, which leverages private sector money to renovate and build military family housing.

How do you evaluate the cost effectiveness of the privatization program?

Mr. AVILES. I would measure the cost effectiveness using a total life cycle cost comparison between the cost of government ownership, as in a traditional family housing project, and any privatization proposal. In making such a comparison I would also try to take into consideration less quantifiable factors such as likely customer satisfaction.

---

[The nomination reference of Dionel M. Aviles follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dionel M. Aviles of Maryland, to be Assistant Secretary of the Navy, vice Deborah P. Christie, resigned.

---

[The biographical sketch of Dionel M. Aviles, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DIONEL M. AVILES

Dionel Aviles is currently a Professional Staff Member on the House Armed Services Committee for defense budget and financial management, Navy procurement, and Merchant Marine issues.

Mr. Aviles was an Examiner at the Office of Management and Budget from 1991 to 1995. Before that, he was an Engineer at the Naval Sea Systems Command from 1990 to 1991. From 1988 to 1991 he was a Support Engineer with Advanced Technology, Inc. He served in the U.S. Navy from 1983 to 1988 as a Surface Warfare Officer in various positions in both the operations and weapons departments.

Mr. Aviles has earned a B.S. degree from the U.S. Naval Academy in 1983 and an M.B.A. from George Washington University in 1993.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Dionel M. Aviles in connection with his nomination follows:]

UNITED STATES SENATE  
 COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
 NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Dionel M. Aviles.

2. **Position to which nominated:**

Assistant Secretary of the Navy (Financial Management and Comptroller).

3. **Date of nomination:**

June 12, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

January 23, 1961, Bryan, Texas.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to the former Kimberly Lee Corbin.

7. **Names and ages of children:**

Thomas William Aviles (4 years old).

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

George Washington University, 1991 to 1993, Master of Business Administration, December 1993.

University of Maryland, 1989 to 1990, no degree granted.

U.S. Naval Academy, 1979 to 1983, Bachelor of Science, Mechanical Engineering, May 1983.

Texas A&M University, 1978 to 1979, no degree granted.

Satellite High School, Satellite Beach, Florida, 1975 to 1978, High School Diploma.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Professional Staff Member, U.S. House of Representatives, Committee on Armed Services, Rayburn House Office Building, Washington, DC 20515. March 1995 to Present.

Budget Examiner, Executive Office of the President, Office of Management and Budget, Washington, DC 20503. April 1991 to February 1995.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Engineer, Department of the Navy, Program Executive Officer for Cruise Missiles and Unmanned Aerial Vehicles, Naval Air Systems Command, Arlington, VA 20361. January 1990 to April 1991.

Naval officer, U.S. Navy, 1983 to 1988, U.S. Naval Reserve, 1988 to present.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

U.S. Naval Academy Alumni Association (1983–present), 247 King Street, Annapolis, MD 21402; (410) 263–4448. Life Member—no offices held.

Our Lady of the Fields Catholic Church (1995–present), 1070 Cecil Avenue, Millersville, MD 21108; (410) 923–3133. Parishoner—no offices held.

Republican Party (1979–present), c/o Republican National Committee, 310 First Street, SE, Washington, DC 20003; (202) 863–8500. Member—no offices held.

National Rifle Association (1993–present), 11250 Waples Mill Road, Fairfax, VA 22030; (800) 672–3888. Life Member—no offices held.

Navy Federal Credit Union (1979–present), P.O. Box 3000, Merrifield, VA 22119–3000; (703) 255–8760.

Anne Arundel Fish and Game Conservation Association (1993–present), P.O. Box 150, Arnold, MD 21146; (410) 757–6800. Member—no offices held.

United Services Automobile Association (1982–present), 9800 Fredericksburg Road San Antonio, TX 78288; (800) 531–8111. Member—no offices held.

Society of American Military Engineers (1988–present), 607 Prince Street Alexandria, VA 22314; (703) 549–3800. Member—no offices held.

Reserve Officers Association (1995–present), One Constitution Avenue, NE Washington, DC 20002; (202) 479–2200. Life member—no offices held.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member of the Republican party. No offices held or services rendered during the last 5 years.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Bush for President Campaign (1999)—\$1,000; Bush Gubernatorial Reelection Campaign (1998)—\$500.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Navy Commendation Medal (2 awards).

Navy Achievement Medal (2 awards).

National Defense Service Medal.

Navy Expert Pistol Medal.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DIONEL M. AVILES.

This 18th day of June, 2001.

[The nomination of Dionel M. Aviles was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

[Prepared questions submitted to Reginald Jude Brown by Chairman Levin prior to the hearing with answers supplied follow:]

JUNE 21, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

REGINALD J. BROWN.

cc: Senator John Warner,  
*Ranking Minority Member.*

---

 QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. I believe these reforms have been fully implemented and that they have greatly clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs. The effectiveness of our joint warfighting forces, especially with respect to communication, interoperability, training, and joint operations, has improved as a result of these reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. In my view Goldwater-Nichols defense reforms initiated a cultural change within the military services that reflected an emerging understanding of the importance of joint training and joint operations in defense preparedness and modern warfare. Key aspects of those reforms include strengthening civilian control, and streamlining the operational chain of command, improving efficiency in the use of defense resources, improving the military advice provided to the National Command Authorities, and joint officer management.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am unaware of any proposals to amend Goldwater-Nichols. If confirmed, I will be in position to better understand and assess whether such proposals would be warranted. The implementation of the Goldwater-Nichols reforms has enhanced the ability of the services to act quickly and jointly.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Army for Manpower and Reserve Affairs?

*Answer.* I understand that my principal duty, if confirmed, will be the overall supervision of manpower and Reserve component affairs within the Department of the Army.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I believe that my military background and diverse experience in the private sector have prepared me to meet the challenges of this office. After graduating from West Point, I served for over 10 years as a regular Army officer, including tours of duty in Vietnam and post-war Korea. In civilian life, I was the Associate Director of the Defense Manpower Commission and Executive Director of the President's Commission on Military Compensation. Service on these Commissions has given me an excellent perspective on enduring manpower issues relating to recruitment, retention, force structure, and utilization. As Director of Administration in two private sector firms, I have had responsibility for human resources programs in the private sector. I believe that my diverse experience and knowledge of human resources issues will enable me, if confirmed, to effectively discharge the duties of this important position during this period of transformation.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Army for Manpower and Reserve Affairs?

*Answer.* I believe that I have the requisite experience, knowledge, and leadership to serve in this position. If confirmed, I will extensively study the vast array of issues that I would be responsible for as the Assistant Secretary of the Army for Manpower and Reserve Affairs.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary White would prescribe for you?

*Answer.* If confirmed, I believe the Secretary of the Army will prescribe specific duties for me that are consistent with my background and experiences and that will support his efforts to ensure that the Department of the Army successfully accomplishes the many demanding and varied missions entrusted to it.

*Question.* In carrying out your duties, how do you expect to work with the following: the Under Secretary of Defense for Personnel and Readiness; the Assistant Secretary of Defense for Force Management Policy; the Assistant Secretary of Defense for Reserve Affairs; the Assistant Secretary of Defense for Health Affairs; the Army Deputy Chief of Staff for Personnel; and the Chief, Army Reserve.

*Answer.* Acting on behalf of the Secretary of Defense, the Under Secretary of Defense for Personnel and Readiness performs responsibilities that require, from time to time, the issuance of guidance to the military departments. If confirmed, I will communicate openly and directly with the Under Secretary of Defense for Personnel and Readiness in articulating the views of the Department of the Army. I will work closely with the Under Secretary of Defense for Personnel and Readiness to ensure that the Department of the Army is administered in accordance with the guidance and direction issued by the Office of the Secretary of Defense.

The Assistant Secretary of Defense for Force Management Policy has functional responsibilities that require, from time to time, the issuance of force management guidance to the military departments. If confirmed, I will establish a close, professional relationship with the Assistant Secretary of Defense for Force Management Policy and will communicate openly and directly in articulating the views of the Department of the Army and in ensuring that the Department of the Army is administered in accordance with the guidance promulgated by the Office of the Secretary of Defense.

The Assistant Secretary of Defense for Reserve Affairs has functional responsibilities that require, from time to time, the issuance of Reserve component guidance

to the military departments. If confirmed, I will establish a close, professional relationship with the Assistant Secretary of Defense for Reserve Affairs and will communicate openly and directly in articulating the views of the Department of the Army and in ensuring that the Department of the Army is administered in accordance with the guidance promulgated by the Office of the Secretary of Defense.

The Assistant Secretary of Defense for Health Affairs has functional responsibilities that require, from time to time, the issuance of health affairs guidance to the military departments. If confirmed, I will establish a close, professional relationship with the Assistant Secretary of Defense for Health Affairs. I will communicate openly and directly in articulating the views of the Department of the Army and in ensuring that the Department of the Army is administered in accordance with the guidance promulgated by the Office of the Secretary of Defense.

The Deputy Chief of Staff for Personnel formulates, manages, evaluates, and executes military personnel plans and programs for the Army for peacetime, contingency, and wartime operations. If confirmed, I will establish a close, professional relationship with the Deputy Chief of Staff for Personnel. I will communicate with him directly and openly as he performs his prescribed duties. I would expect that the Deputy Chief of Staff for Personnel and I would work together as a team on a daily basis.

The Chief, Army Reserve is the principal advisor to both the Secretary of the Army and the Chief of Staff of the Army. The Assistant Secretary of the Army for Manpower and Reserve Affairs is the Secretary of the Army's designated Secretariat agent for dealing with Reserve matters relating to the Department of the Army. If confirmed, I will establish a close, professional relationship with the Chief, Army Reserve. I will communicate with him directly and openly as he performs his prescribed duties.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Army for Manpower and Reserve Affairs?

*Answer.* The Department of the Army continues to face challenges manning the force. If confirmed, that will be a top priority for me. Training, quality of life, and Army integration will also be priorities. I cannot emphasize enough that the Army's people will always be my top priority.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Army for Manpower and Reserve Affairs?

*Answer.* In my view, the fundamental challenge facing the Assistant Secretary of the Army for Manpower and Reserve Affairs is to man the force to meet the challenges of the 21st century and Army transformation. I view recruiting and retaining the right men and women as a major challenge in the Army's drive to maintain readiness. While the Army continues to attract and retain high-quality recruits, challenges are still there, not the least of which is a robust economy with low unemployment. Similarly, retaining the right caliber of soldier in the appropriate grades and skills is becoming increasingly difficult, due, in part, to the increased frequency of deployments and the availability of private-sector opportunities.

I believe a second major challenge is to ensure the well-being of the entire Army team, including active, Reserve, Guard, retirees, and veterans and the civilian workforce, and all family members. Ensuring the well-being of the team contributes to the four key institutional outcomes of performance, readiness, retention, and recruiting.

Finally, among the major challenges I would face, if confirmed, is the need to foster and maintain an environment in which soldiers and civilian employees, regardless of gender, have a work environment free of discrimination and harassment, have assignments and advancement systems that, while responsive to the needs of the Army, are based on individual qualifications and performance, and have an equitable opportunity to succeed.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will forthrightly address these issues to ensure we are doing what we must. I will candidly assess our recruiting and retention posture and do my best to ensure we are not bearing unacceptable risk in these areas. I understand the importance of well-being programs for all of our people (active, Guard, Reserve, civilians, retirees, veterans, and families) and will work to initiate or enhance programs of the type and quality most likely to support the Army's recruiting and

retention needs. I will work closely with the entire Defense community to link all the legacy programs to the well-being campaign plan. Legacy programs, such as Morale, Welfare and Recreation, family programs, and other Quality-of-Life programs will be integrated into the campaign. Finally, if confirmed, I will work to ensure that all of our people are treated with respect and dignity.

*Question.* What do you consider the most serious problems in the performance of the functions of the Assistant Secretary of the Army for Manpower and Reserve Affairs?

*Answer.* In addition to recruiting and retention, which I have discussed above, at this time, I consider continuing to improve the state of relations between the active component and the Reserve component as a primary goal. Over the past few years there has been dramatic improvement in this area, but there is still much to do to enhance active component/Reserve component integration.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* I cannot at this time, specify a timetable or specific management action for addressing these matters. I know that, in each case, there are already actions underway that are intended to address these issues. It is my intention, if confirmed, to focus immediately on these matters, to review those actions that are underway, and to join with the other civilian leaders and with my counterparts in uniform to resolve them to the best of my ability.

#### OFFICER MANAGEMENT ISSUES

*Question.* We consider promotions to general officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values.

Do you believe the officer corps has confidence in the integrity of the officer promotion system in the Army?

*Answer.* Yes. Although some will always question the end-product, I believe that by and large the officer corps understands the rigor and fairness of the promotion board process.

*Question.* What role would you, as ASA M&RA, expect to play in the officer promotion system?

*Answer.* If confirmed, I see myself as the Army Secretariat official principally responsible for developing and overseeing the implementation of promotion policies that comply with the applicable statutes, Department of Defense directives, and Army regulations, and the principal adviser to the Secretary of the Army on these matters.

*Question.* What role would you, as Assistant Secretary of the Army for Manpower and Reserve Affairs, expect to play in the general officer management nomination process?

*Answer.* Again, if confirmed, I see myself in a policy making and advisory role within Army Secretariat.

*Question.* If confirmed, what steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general officer rank?

*Answer.* If confirmed, I will review the current system to ensure that it is fair and advancing the most highly qualified officers. I also intend to work closely with the Deputy Chief of Staff for Personnel to ensure that we are implementing our system to meet these goals. If confirmed, I will also advise the Secretary of the Army as appropriate.

*Question.* A recent study by the Army Training and Leader Development Panel concluded that the Army culture is out of balance and that there is widespread dissatisfaction among junior officers. Complaints about micro-management, diminished well-being, unbalanced life, the officer evaluation system, not training to standards, among others, raised serious questions about the morale of junior officers and the efficacy of efforts to improve the attractiveness of continuing service.

What are your views about the validity and implications of this study?

*Answer.* Since the Army Training and Leader Development Panel findings were based on over 13,000 survey responses, the validity of the report must be respected. Currently, it is my understanding that the Army has an Implementation Process Action Team reviewing the 84 recommendations included in the panel report. The team is determining the implementation processes, as well as, the resourcing implications of each recommendation. The implications of the study are fairly straightforward. The senior leaders of the Army, civilian and military, must do what is necessary to fulfill the commitments we make to our young leaders. We must strive to provide them the requisite command climate and operating environment that al-

lows them to develop skills within their chosen career fields, while providing a just opportunity for advancement.

*Question.* If confirmed, how would you address the issues raised by the panel?

Answer. The issues raised by the report are important. Some are serious policy issues. Some are simply a matter of leaders practicing effective leadership. If confirmed, I will address the policy issues at the Secretariat level, in coordination with the Army Staff, to find the correct implementation process.

#### PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes.

*Question.* If confirmed, what actions will you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If confirmed, I will be vigilant in ensuring that military members whose actions are protected by the act are not subject to reprisals or retaliation. I also understand that the current Department of the Army practice is to brief the requirements of the act to all prospective commanding officers and executive officers. If confirmed, I will ensure that emphasis on the act in the formal Army training courses will continue.

#### OPERATING TEMPO

*Question.* The services have been very concerned in recent years about the impact of the pace of operations, or OPTEMPO, on the quality of life of our people in uniform and specifically on their willingness to reenlist.

If confirmed, what steps do you plan to take to address Army OPTEMPO concerns?

Answer. I recognize the delicate balance between quality of life, retention and meeting the operational requirements of the National Command Authority. Though not completely familiar with all current issues of OPTEMPO, I believe that the Service Chiefs should manage personnel issues in regards to operational demands, in coordination with the Service Secretaries, the Joint staff, the Combatant Commanders and the Office of the Secretary of Defense. If confirmed, I will work with the Secretary of the Army to address the issues associated with OPTEMPO.

#### RECRUITING AND RETENTION

*Question.* Recruiting and retention in the Army have improved significantly over the last year. Yet the Army continues to have shortages in critical specialties.

What steps will you take, if confirmed, to assist in meeting the Army's recruiting and retention goals?

Answer. I understand that the Army has made progress in the areas of recruiting and retention in the past few years to include meeting its end strength and recruiting goals for all three components last year. If confirmed, I will focus on continuing the momentum of the initiatives already begun and will look to introduce additional state-of-the-art best business practices to ensure that we have the right people in the right place at the right time.

*Question.* Recent emphasis regarding recruiting and retention has been focused on the active component. The Reserve components are facing even greater challenges in recruiting and retention.

What steps will you take, if confirmed, to assist the Reserve components in achieving their recruiting and retention goals?

Answer. The Reserve components—National Guard and U.S. Army Reserve—are an integral part of America's Army. I believe that active-Reserve integration must include equity of emphasis across the components and will work with the Chief, Army Reserve, and the Director, National Guard Bureau, to best meet their recruiting and retention needs along with the active component.

*Question.* In a recent hearing before the Personnel Subcommittee, front line recruiters discussed impediments to their efforts, including the inability to gain access to high schools and student directories.

Do you support recent legislation of the Fiscal Year 2001 National Defense Authorization Act that aimed at alleviating this impediment?

Answer. I am supportive of section 563. If confirmed, I will ensure that the Army implements this important legislation effectively and that the whole Army—active and Reserve—shares in the effort in coordination with the Office of the Secretary of Defense.

*Question.* If confirmed, what actions would you take to ensure that in the year ahead effective notification about this provision of law is provided to local educational agencies?

Answer. I believe that we must work congenially and cooperatively with local educational agencies across the Nation to ensure their understanding of the role of the military in maintaining national security, its importance to communities and national defense, and the opportunities for education and growth it affords young people. However, if confirmed, I will support those procedures in place to notify local educational agencies that are in breach of the law.

#### RESERVE COMPONENTS

*Question.* With the extensive commitment of the active components, the Reserve components have been called on to supplement the active components on a more frequent basis. The increased deployments are stressing the relationship between the reservists and his or her civilian employer. Although in periods of low unemployment this may not be a problem, as unemployment rises the employers may not be as accommodating to the absentee reservist.

What is your position on the current program to ensure reservists jobs are protected during periods of extended or multiple military call-ups?

Answer. I am fully supportive of the Federal laws that are currently in place such as the Soldiers and Sailors Civil Relief Act and the Uniformed Services Employment and Reemployment Rights Act that provide protections for our mobilized and deploying soldiers. We must also encourage states to enact similar legislation so that all reservists are completely protected. I feel that it is very important to continue to partner with the National Committee for Employer Support of the Guard and Reserve. The Department must duly recognize that employers are vital to our mission accomplishment.

*Question.* What impact would you expect the high Reserve personnel tempo is having on recruiting and retention?

Answer. It is my understanding that, on the whole, recruiting and retention levels have remained constant as the Reserve component supported the three Presidential Reserve call-ups. I anticipate that this trend will continue. In fact, both Reserve Chiefs have recently reiterated the same message. If confirmed, I will continue to monitor “stress levels” within the Reserve components to ensure that the possible negative effects of high PERSTEMPO are minimized.

#### RECRUITING OF MILITARY HEALTH CARE PROVIDERS

*Question.* The health benefit is a significant component of the military compensation package. The Department of Defense utilizes a combination of bonuses and incentives to recruit and retain health care professionals to provide care throughout their military medical assets. The last legislative revision to those bonus amounts occurred some 10 years ago. Given the inherent reduction in buying power of those programs over time, Congress directed the Department of Defense to submit a legislative plan to reinvigorate those bonus programs.

What are your views on these programs and will you commit to a close examination and development of recommendations on these programs as a priority if you are confirmed?

Answer. I believe that use of special pays to recruit and retain highly skilled professionals is necessary and appropriate. But I also believe that special pays are not the only answer. I understand that the study to which you refer is partially completed and will be delivered to you in its final form by Health Affairs in October of this year. If confirmed, I look forward to evaluating the recommendations contained in the report with my Army subject matter experts and financial analysts. I will indeed work with Health Affairs and Congress on implementing any practical and viable changes for not only the active component health professionals, but I am also greatly interested in the bonuses and educational incentives utilized by the Army Reserve components to recruit and retain health care professionals. Since the Reserve components make up some 70 percent of the Army medical department, I also intend to evaluate the programs that affect them, if I am confirmed.

## MANAGEMENT OF DEPLOYMENTS OF MEMBERS

*Question.* Increasing operational demands on military personnel resulted in enactment of section 991 of Title 10, United States Code, and section 435 of Title 37, United States Code. Those provisions require the services to manage the deployments of member and, if operational necessity so dictates, to pay per diem compensation to members whose deployed period exceed prescribed limits. Additionally, each Service Secretary is required to establish a system for tracking and recording the number of days that each member of the armed forces under the jurisdiction of the Secretary is deployed.

Do you support the statutory framework set forth in the sections cited above?

Answer. Yes.

*Question.* Do you believe any modifications to the law are necessary?

Answer. Not at this time.

*Question.* What is your understanding of the ability of the Army to comply with these statutes and implement the prescribed tracking and recording system?

Answer. It is my understanding that the Army has been tracking and recording the deployed periods of its personnel since the start of this fiscal year. This information has recently been available to soldiers on their monthly Leave and Earnings Statements.

## HOMOSEXUAL CONDUCT POLICY

*Question.* Do you support the current Department of Defense Homosexual Conduct Policy?

Answer. Yes, I do. I believe that the current policy implements the requirements of public law in a manner that recognizes the private nature of sexual orientation while simultaneously providing commanders with the tools they need to enforce standards of conduct upon which the cohesion of our force depends.

*Question.* If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

Answer. I feel that the basic policy is based in public law. The implementation of this policy is currently consistent with the law and I see no need for change. If confirmed, I will continue to promote the Army's two current emphases; educating all soldiers on the provisions of the law and policy and holding commanders closely accountable for the safety of every soldier within his or her command.

## ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax to be the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA approved vaccine.

If confirmed, will you support and enforce the Anthrax Vaccine Immunization Program if DOD reinstates it?

Answer. Absolutely.

*Question.* How do you believe the Army should respond to service members who refuse to take the vaccine when ordered to do so?

Answer. I believe current Army procedures should continue to be used to respond to service members who refuse to take the vaccine. These procedures emphasize commanders' responsibility to ensure that soldiers are continually educated about the intent and rationale behind the immunization requirement. That intent is to protect the health and overall effectiveness of the command and the individual soldier. If confirmed, I will monitor this issue closely.

## MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlements. Many sailors and marines say they would like to stay in the service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members might stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

If confirmed, will you give serious consideration to how the Army could use the transfer of unused GI Bill benefits to family members as a retention tool and provide your thoughts on how we best do this?

Answer. If confirmed, I will look into this. Cost effective policy options that address family issues of central concern to service members will be a key to future retention success.

*Question.* If confirmed, will you give serious consideration to how the Army could use the award of U.S. Savings Bonds as a flexible means to enable soldiers to save money for their education and that of their dependents?

Answer. If confirmed, I would support using a Savings Bond incentive as I believe that it would favorably impact reenlistment. I believe that it would have a more favorable impact if it does not negate or reduce any normal bonuses the soldier may be eligible for at time of reenlistment. I am also concerned that the legislation be inclusive of all soldiers to ensure that none see themselves as forgotten by senior Army leadership and Congress.

#### GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individuals' life in the military, is structured and defined differently by each service.

Do you believe the current DOD policy of allowing each of the services to establish its own policy for gender integration in basic training is effective?

Answer. Yes. In my mind it makes good sense to have the people most familiar with the individual service's culture and training requirements make those informed decisions.

*Question.* If confirmed, will you propose changes to Army policies? If so, what changes will you propose?

Answer. If confirmed, I have no plans to propose changes at this time.

#### CONCURRENT RECEIPT

*Question.* Military retirees with disabilities incurred during their military service are eligible to receive military retired pay from the Department of Defense and veterans' disability compensation from the Department of Veteran's Affairs. However, current law requires that military retired pay be reduced by the amount of the veteran's benefits.

If confirmed, would you support a change in the law to permit disabled military retirees to receive their full retired pay as well as their disability compensation?

Answer. If confirmed, I will devote serious study to this important issue. I believe that disabled service members should be treated with the utmost care and fairness.

#### MANAGEMENT OF THE CONGRESSIONAL FELLOWSHIP PROGRAM

*Question.* For the past several years, the committee has expressed concern about the management of legislative fellows by the military departments and the Department of Defense.

If confirmed, will you review the Department's policies pertaining to the management of legislative fellows and provide the committee your assessment of which management reforms have been implemented and which require additional action?

Answer. Yes.

*Question.* What are your personal views on the value and current management of the legislative fellowship program within the Army?

Answer. As I receive briefings on this program I view it as an excellent opportunity for outstanding individuals, both military and civilian, to learn the workings of the legislative branch of Government. Based on briefings I have received, I believe legislative fellowships are generally awarded to deserving military and civilian personnel with demonstrated potential to benefit from the experience.

*Question.* After completing their fellowships, are legislative fellows assigned to positions in which the experience and knowledge they gained during their fellowship are used effectively?

Answer. From my briefings, I understand that after completing their fellowships, legislative fellows return to assignments within their specialties. If confirmed, I will closely monitor this issue to ensure they return to legislative positions to complete their utilization tours.

*Question.* In your opinion, is it appropriate to bring a Reserve component member on active duty solely to participate in a legislative fellowship program?

Answer. From my briefings, it is my understanding that both Army Reserve and Army National Guard soldiers participate in our program. If confirmed, I will continue to support their participation as long as their respective agencies have legislative positions for them to fill for their utilization tours. I do not support bringing them on active duty solely to participate in the program.

## ARMED FORCES RETIREMENT HOME

*Question.* The Soldiers' and Airmen's Home in Washington, DC, and the Naval Home in Gulfport, MS, provide unique services to eligible military retirees but have experienced problems in funding and management.

Do you support an increase in the amount of money automatically deducted from the pay of active duty enlisted personnel as a means of better funding the retirement homes?

Answer. If confirmed, I will study this issue in-depth and work toward a long-term and comprehensive solution that will ensure the solvency of the Armed Forces Retirement Home Trust Fund.

*Question.* If confirmed, what actions would you take to ensure the successful operation of the retirement homes?

Answer. If confirmed, I would support any and all efforts that would ensure that both facilities are operated in an efficient manner and that they provide excellent quality of life for our military retirees.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Army for Manpower and Reserve Affairs?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. With the support of Congress, the Department of Defense has made great strides toward improving the quality of life for our military personnel. Among the most significant improvements has been the increase in compensation. However, despite significant pay increases over the past years, there is a continuing crescendo for additional pay raises. What are your views regarding the adequacy of the military personnel compensation program over the span of a military career?

Mr. BROWN. I want to take this opportunity to thank the members for their attention on this important issue and I thank you for your support. Compensation is of great concern to the Army and will remain so. It is important that we continue to monitor military pay to ensure that it is both adequate for the needs of individual soldiers and the needs of the Army as a whole.

I will continue to review all related recommendations in the future to ensure we stick to our basic needs: maintain competitiveness with the civilian sector, and continue to offer programs and incentives which will allow us to attract and retain qualified soldiers.

2. Senator THURMOND. Due to the increase in the OPTEMPO of the Active Forces, they have called on our Reserve components for support on a more frequent basis. Although the Reserve community has willingly taken on this challenge, a consequence of the increased Reserve OPTEMPO is that the number of active duty soldiers completing their tour of duty who join the Reserves is declining. As a result, the Reserves have a recruiting challenge and incur higher training costs to maintain their readiness challenge.

In your view, how important is the infusion of former active component personnel into the Reserve units?

Mr. BROWN. It is very important. Prior service accessions possess high levels of skills and talents in their military occupational specialties and contribute significantly to the overall quality and readiness of the Army's Reserve components. These

soldiers, whether transitioning from active duty directly into drilling reserve units through the in-service recruiter, or as Individual Ready Reservists transitioning from the Individual Ready Reserve into drilling units, have traditionally made up the majority of the Army's Reserve component enlisted accessions each year. Conversely, non-prior service recruits, while introducing youth and vigor to the force, need costly and time consuming training. Unfortunately, as the Individual Ready Reserve pool shrinks with the downsizing of the regular Army, we have been forced to recruit a greater percentage of non-prior service soldiers.

The rate of prior service accessions has been falling for a number of years. In fiscal year 1996, the Army's Reserve components received 15,112 soldiers directly off of active duty. In contrast, by fiscal year 2000, there were only 11,663 accessions of prior service personnel. Also, the active component is experiencing a significant increase in retention, that further decreases the population available for prior service accessions.

3. Senator THURMOND. A change recommended by the defense strategic review is to eliminate the "up or out policy" that has been the backbone of the military personnel management for the past 50 years. What are your views on this proposal? How do you maintain the young and vigorous fighting force by retaining those who cannot qualify for promotion?

Mr. BROWN. I believe the strategic review is on track in that it does not make sense to automatically eliminate experienced, trained soldiers with 10 to 15 years on the job because they were not competitive for further promotion; however it is important that we maintain a vigorous, young fighting force and this must remain first in our thoughts if there is to be any change in the current long standing policy.

Before any changes are made it would be my intent to ensure that we are able to maintain the highest experience level possible without degrading the capabilities of our fighting force.

---

[The nomination reference of Reginald J. Brown follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Reginald Jude Brown of Virginia, to be Assistant Secretary of the Army, vice Patrick T. Henry, resigned.

---

[The biographical sketch of Reginald J. Brown, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF REGINALD J. BROWN

Reginald J. Brown currently is consulting with two companies; Meridian International and Brown & Lowe International. He was Executive Director and Member of the Board at Alliance for Medical Care from 1996 to 1997. Prior to that he was an independent consultant with Science Applications International Corp (SAIC) from 1996 to 1997, Capital Systems Group, Inc., Executive Vice President and National Policy Forum, Policy Council member from 1995 to 1996.

From 1989 to 1993 he was an Assistant Administrator at the U.S. Agency for International Development, a Senior Fellow at the Center for Strategic and International Studies from 1982 to 1989, and an Executive Vice President at DECA Group, Inc. from 1979 to 1982. From 1974 to 1979 he served in various government positions including: Director, in the Office of Price Monitoring at the Council of Wage and Price Stability, President's Commission on Military Compensation, Congressional Budget Office, Principal Analyst, Defense Manpower Commission. Prior to that he was the Deputy Administrator at the Office of Food, Cost of Living Council from 1973 to 1974.

He was a Special Assistant for Energy and Natural Resources at the MITRE Corporation and an Assistant Vice President at the Urban Institute from 1971 to 1974. He served in various positions with the U.S. Army Infantry from 1961 to 1971.

Mr. Brown graduated with a B.S. from U.S. Military Academy in 1961. The John F. Kennedy School of Government at Harvard University, M.P.A. in 1965. He was a Ph.D. Candidate in Economics at Harvard University, completing his course work from 1965 to 1966.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Reginald J. Brown in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES  
Room SR-228  
Washington, DC 20510-6050  
(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Reginald J. Brown.
2. **Position to which nominated:**  
Assistant Secretary of Army, Manpower and Reserve Affairs.
3. **Date of nomination:**  
June 12, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
February 13, 1940; New Orleans, LA.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Emilia Lowe Chong.
7. **Names and ages of children:**  
Eric F. Brown, 36.  
Denise A. Lawson, 34.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Harvard University, 7/64 to 6/66 MPA 65.  
USMA, West Point, 7/57 to 6/61, BS 61.  
El Cerrito High School, 9/54 to 6/57.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
President, Meridian International, Inc., Alexandria, VA, 5/99 to Present.  
Consultant, Elan Vital, Inc., Alexandria, VA, 3/98 to 5/99.  
Executive Director, Alliance for Medical Care, Alexandria, VA, 3/96 to 10/97.

Executive Vice President, Capital Systems Group, Rockville, MD, 2/95 to 2/96.  
 Consultant, SAIC, worked at Fed. Energy Tech. Ctr., Pittsburgh, PA, 10/96 to 6/97.

President, Brown Lowe Intl, Consulting in Alexandria, VA, 3/93 to Present.  
 Assistant Administrator, USAID, Washington, DC, 8/89 to 1/93.

**10. Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.

1/79 to 7/79, Director, Energy Div., Office of Price Monitoring, Wage and Price Stab.

5/78 to 12/78, Consultant to Congressional Budget Office and to Off. of Tech. Assessment.

10/77 to 4/78, Exec. Director, President's Commission on Military Compensation.

12/75 to 9/77, Principal Analyst, Congressional Budget Office.

12/74 to 11/75, Associate Director, Defense Manpower Commission.

8/73 to 12/74, Dep. Administrator, Office of Food, Cost of Living Council.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Meridian International, Inc., President & CEO.

Meridian Protection Services of CA, Inc., Director.

Brown & Lowe International, Inc., President.

Capital Systems Group, Inc., Exec. Vice President.

Alliance for Medical Care, Inc., Exec. Director.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

American Legions: 1993 to Present.

National Rifle Association: 1989 to Present.

Naval Institute: 2000 to Present.

Elan Vital Inc., Educational and Religious Organization: More than 10 years to Present.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Republican National Committee.

Republican Party of Virginia.

RNC, National Policy Forum, 1995–1996.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Republican National Committee:

05/20/97—\$25

08/05/97—25

01/23/98—50

01/11/99—50

06/25/99—100

01/25/00—50

Republican Party of Virginia:

\$35 to \$50 each year.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Meritorious Service Medal.

Bronze Star Medal.

Army Commendation Medal.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

"Counterterrorism in Modern Warfare: Opportunities and Limitations," Defense Science, March, 1989 (With LTG Ernest Graves).

"Passive ECM: Merchant Ships' Answer to Self Defense," Defense Science 2003, February, 1985 (With Vice Admiral Frederick Turner).

“Natural Gas Vehicles: A National Security Perspective,” CSIS Significant Issue Series Vol. VI, No. 16 (with Charles Ebinger, et al.).

“The Persian Gulf: Upheavals, Instability, and a Preventive Presence,” “The Almanac of Sea power, 1984 (with Admiral Thomas H. Moorer).

“Electronic Warfare in the 21st Century: Implications for Low Intensity Conflict,” Defense Science and Electronics, July 1984.

“The Case for an ANZUS Carrier,” “Defense & Foreign Affairs, May 1983 (with Alvin Cottrell).

“U.S. Naval Strategy for the Twenty-First Century,” Defense Science 2001+, April 1983 (with Alvin J. Cottrell).

The Lessons of Wage and Price Controls, The Food Sector. Harvard University Press, Cambridge, Massachusetts, 1977 (with John Dunlop et. al.).

“Petroleum Storage: Alternative Programs and Their Implications for the Federal Budget,” Congressional Budget Office, October 1976.

“Overseas Rotation and Tour Lengths,” Defense Manpower Commission, Staff Studies, Volume IV, May 1976.

“The Meaning of Professionalism: Purposes and Expectations in a Democratic Society,” American Behavioral Scientist, May–June 1976.

“Regulating Food Prices, Limitations and Possibilities,” MITRE Technical Report, 1976.

“Investment Cost Comparisons for Capacity Additions for Selected Fuels,” MITRE Technical Report, MTR-6769, January 1975.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

REGINALD J. BROWN.

This 19th day of May, 2001.

[The nomination of Reginald J. Brown was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

---

[Prepared questions submitted to Dr. Stephen A. Cambone by Chairman Levin prior to the hearing with answers supplied follow:]

JUNE 22, 2001.

Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours Truly,

STEPHEN A. CAMBONE.

cc: Senator John W. Warner,  
Ranking Minority Member.

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support the implementation of these reforms. The focus on “jointness” outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* These reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America’s security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* From my point of view, the most important aspects are the clear responsibility and authority given the CINCs for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the reforms of the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I have not identified any major changes that are needed to Goldwater-Nichols. As you well know, the Secretary has studies underway regarding the organization of the Department. If any changes are identified as a result of these studies, the Department would consult closely with Congress, especially this committee.

## DUTIES

*Question.* Section 134a of Title 10, United States Code, provides that the Deputy Under Secretary of Defense for Policy shall assist the Under Secretary of Defense for Policy in the performance of his duties. Department of Defense Directive 5111.3 emphasizes that the Deputy Under Secretary of Defense for Policy advises and assists the Under Secretary of Defense for Policy, particularly on strategy formulation, contingency planning, and the integration of Department of Defense plans and policy with overall national security objectives.

What is your understanding of the duties and functions of the Deputy Under Secretary of Defense for Policy?

*Answer.* If confirmed, I will perform the duties provided by statute and regulation. The Deputy Under Secretary of Defense for Policy, as the primary assistant of the Under Secretary of Defense for Policy (USD(P)), advises and assists the USD(P) for all responsibilities in providing staff advice and assistance to the Secretary of Defense and the Deputy Secretary of Defense, particularly on strategy formulation, contingency planning, and the integration of DOD plans and policy with overall national security objectives, and by law is empowered to act in his or her stead.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I am fortunate to have served in a number of positions that provide useful experience to perform the duties of the Deputy Under Secretary of Defense for Policy.

From 1990–1993, I served in the Department of Defense as Director of Strategic Policy in the Office of the Undersecretary of Defense for Policy. My responsibilities included participation in the Ross-Mamedov talks on cooperative missile defense activities and oversight of U.S. missile defense programs. After I left DOD, I was a Senior Fellow at the Center for Strategic and International Studies until 1998. My work there focused on the new security challenges confronting the U.S. and its allies after the end of the Cold War.

In 1998, I was the staff director of the Commission to Assess the Ballistic Missile Threat to the United States. I led a staff that conducted extensive investigation into the threats posed by the proliferation of missiles and weapons of mass destruction. During this period, I worked with prominent defense policy experts, the intelligence community, and DOD. From 1998–2000, I served as Research Director at the Institute for National Strategic Studies (INSS) at the National Defense University. I oversaw research on key issues of strategy and policy to support senior decision-makers in OSD, the Joint Staff, and the CINCs. Specifically, I focused on the changing nature of deterrence and the trends in key transatlantic security issues. In 2000, I was detailed from INSS to direct the staff of the Commission to Assess United States National Security Space Management and Organization.

Since January of this year, I have been serving as the Special Assistant to the Secretary of Defense and the Deputy Secretary of Defense. In this capacity, I coordinated the series of reviews directed by Secretary Rumsfeld to identify critical issues related to defense strategy for consideration and integration in the Quadrennial Defense Review (QDR).

These experiences, I believe, provide a solid base of experience to perform the duties of the Deputy Under Secretary of Defense for Policy.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Deputy Under Secretary of Defense?

Answer. Please see my previous answer.

*Question.* Assuming you are confirmed, are there any other duties and functions that you expect that Secretary Rumsfeld would prescribe for you?

Answer. I would expect Secretary Rumsfeld to look to the Deputy Under Secretary of Defense for Policy to fulfill all the duties assigned to that office by statute and regulation—in particular, assistance and advice on the formulation of national security and defense policy. This would likely include strategy formulation, contingency planning, crisis management and the integration of DOD plans and policy with overall national security objectives. In addition, I would expect the Secretary would, from time to time, ask me to undertake various other special projects.

*Question.* If confirmed, what would your responsibilities be with respect to strategic and nuclear weapons policy for the Department of Defense?

Answer. Under the anticipated reorganization of OSD Policy, the Assistant Secretary of Defense for International Security Policy would, among other things, be charged with the development, coordination, and oversight of all policy issues related to nuclear weapons and forces. The Assistant Secretary would report through the Deputy Under Secretary of Defense to the Under Secretary for Policy. My responsibilities would thus be quite broad, including representing the Under Secretary and the Secretary of Defense in interagency deliberations and international negotiations in this area.

#### RELATIONSHIPS

*Question.* If confirmed, what will be your relationship with: the Secretary of Defense; the Deputy Secretary of Defense; the Under Secretary of Defense for Policy; the other Under Secretaries of Defense; the Assistant Secretaries of Defense in the Policy Directorate; the other Assistant Secretaries of Defense; the General Counsel of the Department of Defense; the Service Secretaries; the Chairman of the Joint Chiefs of Staff; the Vice Chairman of the Joint Chiefs of Staff; the Director of the Joint Staff; and the National Security Council.

Answer. If confirmed, I will report to the Secretary and Deputy Secretary of Defense through the Under Secretary of Defense for Policy. I will work closely with and help to coordinate the work of the Assistant Secretaries in the Office of the Under Secretary for Policy. I expect to maintain a close and cooperative working relationship with the other Under Secretaries and Assistant Secretaries of Defense and the General Counsel of the Department. If I am confirmed in this position, it will be a high priority for me to develop a close working relationship with the Service Secretaries, the Chairman, Vice Chairman and Director of the Joint Chiefs of Staff, and with the Joint Staff in general. I also will, if confirmed, continue to work closely with the staff of the National Security Council to coordinate the administration's international security and defense policy with Congress.

## MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Deputy Under Secretary of Defense for Policy?

*Answer.* The major challenges that will confront the Deputy Under Secretary of Defense for Policy will be in the areas relating to reaching the goal of the President and Secretary of Defense to transform U.S. military capabilities, operational concepts and organizations to meet the security challenges of the 21st century.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* The Quadrennial Defense Review process will provide a basis for addressing these challenges. If confirmed, I look forward to working with senior DOD civilian and military officials and with this committee in using the results of the QDR process as a guide.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Deputy Under Secretary of Defense for Policy?

*Answer.* I am not in a position to assess problems in the performance of the functions of the Deputy Under Secretary of Defense for Policy.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I plan to make an early assessment of the functions and resources of the Deputy Under Secretary of Defense for Policy and work with the Under Secretary and this committee to take the necessary actions to address shortfalls, if there are any.

## PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Deputy Under Secretary of Defense for Policy?

*Answer.* The U.S. faces a rare opportunity to transform its defense posture to meet emerging threats, maintain stability in critical regions, and preserve our leadership and freedom of action for the future. Taking those actions necessary to implement the transformation, decided by the senior civilian and military leadership, will be my highest priority.

In addition to implementing and resourcing the Department's transformation efforts, my principal priorities, if confirmed, will also include strategy formulation and implementation, contingency planning, and crisis management.

## STRATEGY FORMULATION AND CONTINGENCY PLANNING

*Question.* One of the purposes of Goldwater-Nichols was to increase attention on the formulation of strategy and contingency planning. Department of Directive 5111.3 specifically assigns a major role to the Deputy Under Secretary of Defense for Policy for those important matters.

How do you see the civilian role, as compared to the military role in the formulation of strategy and contingency planning?

*Answer.* Civilian control is essential, and starts with the President, the Commander in Chief. His senior civilian subordinates—including the Secretary of Defense, the Under Secretary for Policy, and the Principal Deputy Under Secretary of Defense—have a major role in formulation of strategy and contingency planning. The senior civilian leadership plays a vigorous role in ensuring the development and implementation of planning in the Department.

Civilian oversight of the contingency planning process is at its most mature state since enactment of the Goldwater-Nichols Act. The Office of the Under Secretary of Defense for Policy maintains very close working relations with the Joint Staff and CINCs' planning staffs to ensure proper oversight.

*Question.* Secretary Rumsfeld has given the highest priority to accomplishing a defense strategy review.

Has this review process produced the foundation of a defense strategy that will guide the Quadrennial Defense Review (QDR) process?

*Answer.* The Secretary initiated a number of studies to identify critical issues related to defense strategy. The results are now being integrated into the QDR process. Among the studies undertaken are Acquisition Reform, Financial Management, Conventional Forces, Missile Defense, Morale/Quality of Life, Space, Transformation, Crisis Management, Nuclear Forces, and Strategy. As the Secretary has testified, he has been closely involved with the senior military leadership in developing an alternative approach that could be tested in the QDR process.

*Question.* Will the QDR further review and refine the Secretary's defense strategy?

*Answer.* In accordance with the National Defense Authorization Act for Fiscal Year 2000, the QDR will be a comprehensive examination of the national defense strategy, force structure, force modernization plans, infrastructure, budget plan, and other elements of the defense program with a view toward determining and expressing the defense strategy of the United States. As Secretary Rumsfeld has testified, the QDR process will integrate the results of a variety of studies and the views of the senior military leadership in the QDR process. From this process, the Department will develop a national defense strategy.

*Question.* What role did you play in the Secretary's defense strategy review?

*Answer.* Acting in my appointed role as the Special Assistant to the Secretary and the Deputy Secretary of Defense, I have worked closely with the Secretary and his staff in support of the overall review process.

*Question.* If confirmed, what role would you expect to play in the QDR?

*Answer.* If confirmed, I would expect to provide substantial support to the Secretary and the Deputy Secretary in their direction of the QDR. Specifically, I would play a major day-to-day role working closely with senior civilian and military leadership, directing and reviewing staff studies and QDR analyses, and developing decision options and alternatives for the Secretary.

*Question.* Department of Defense Directive 5111.3 also assigns a major role to the Deputy Under Secretary of Defense for Policy for the integration of DOD plans and policy with overall national security objectives.

If confirmed, how will you know what those overall national security objectives are in the absence of the issuance of a National Security Strategy by President Bush?

*Answer.* A new National Security Strategy for the Bush administration is now under development. In addition, there is frequent and ongoing interaction among the senior leadership—including the President, the Vice President, the National Security Advisor, the Secretary of State, and the Secretary of Defense, and likewise among my interagency counterparts and myself. The Department will remain fully cognizant of the administration's national security priorities and objectives, and will integrate these into the national defense strategy.

#### THE BALKANS

*Question.* It appears that NATO may be called upon to play a role inside Macedonia, which could involve the use of NATO troops on the ground, perhaps overseeing the voluntary disarmament of ethnic Albanian insurgents.

If NATO should agree to play such a role, what are the criteria you would recommend be used in deciding whether U.S. forces should participate with the forces of our allies on such a mission?

*Answer.* The situation in Macedonia is very fluid and sensitive. The U.S. already has a significant presence in Macedonia, in order to support KFOR logistical operations. Specifically, over 500 U.S. personnel are stationed with KFOR Rear at Camp Able Sentry in Skopje.

As Secretary of State Powell stated on June 20 before the Senate Foreign Relations Committee, we have not made any commitments of troops for the purpose of a potential NATO mission to assist in disarmament in Macedonia, because we really do not see a need for such a contribution under current circumstances. I agree with that statement.

*Question.* Last December marked the 5-year anniversary of the NATO-led military presence in Bosnia. Despite over 5 years of an international military presence in Bosnia, we are far from achieving the goal of a unified, multi-ethnic nation, as envisioned in the Dayton Accords.

In your opinion, what should the United States do to break the stalemate in Bosnia and help create the conditions for the withdrawal of U.S. troops?

*Answer.* NATO and associated military forces are being used to secure the environment in which civil implementation of the Dayton Accords can take place. Decisions on the circumstances and timing of continued military presence in Bosnia are linked to an alliance process of periodic assessments. Overall force levels are reviewed every 6 months. We are committed to act as a member of the alliance in defining any reductions. Force levels must be de-linked from civil implementation requirements.

At their most recent meeting in June, NATO defense ministers agreed on the need to accelerate the development of civil institutions and local police so they may be able to take more responsibility for local security and the maintenance of law and order.

*Question.* According to NATO Secretary General Lord Robertson, Heads of State and Government decided at their special meeting on June 13, 2001 that NATO “hopes and expects, based on current and anticipated progress by aspiring members, to launch the next round of enlargement at the Prague Summit in 2002.”

What criteria do you believe should be applied to decide which aspiring members, if any, should be invited to join NATO at that time?

*Answer.* As President Bush stated in Warsaw, NATO membership should be possible “for all of Europe’s democracies that seek it and are ready to share the responsibilities that NATO brings.” The key factor in considering which aspirants should be invited to join the Alliance is whether their membership will contribute to the Alliance’s capacity for collective defense and other agreed missions to build security and stability in Europe.

I believe there should not be a “checklist” of criteria required for NATO membership; however, new members must be prepared to commit themselves to:

- Accept the responsibilities that come with NATO, including possible participation in an Article 5 defense of another ally.
- Contribute their fair share in terms of added military value to the Alliance.
- Make the necessary investments in the creation and maintenance of effective military forces that are interoperable with other NATO allies.

*Question.* The gap in capabilities between the United States and potential allies and coalition partners is wide, and may grow larger as we transform our defense capabilities. What roles should we expect allies and coalition partners to play across the spectrum of military operations? A number of our European NATO allies have assured us that the European Union’s (EU) European Security and Defense Policy (ESDP) would result in greater popular support for defense spending. They also have told us that many of the improvements that would have to be made to implement the ESDP are the same improvements that are called for by NATO’s Defense Capabilities Initiative (DCI) and that the increased defense spending would enable their military forces to be more capable NATO partners. However, we now know that European defense spending has been decreasing at a rate of 5 percent per year. Are you concerned about the decrease in European defense spending and do you have any suggestions for how the United States can get our European allies to reverse this trend? What are your thoughts about the ESDP?

*Answer.* There are worrisome imbalances and shortfalls in Alliance capabilities—for example, in the areas of precision strike, mobility, command, control, and communications, and strategic airlift. Several of these were highlighted in Operation Allied Force in 1999. The Alliance is aware of these imbalances and shortfalls, and the allies must continue to work to improve their national and Alliance capabilities, including through NATO’s Defense Capabilities Initiative (DCI). Not every NATO ally needs or can afford the newest or best fighter aircraft, long-range tanker aircraft, or surveillance systems, but I believe our goal should be to provide NATO forces with compatible and complementary capabilities that meet our collective requirements.

European nations must do more to ensure both appropriate priorities for defense and adequate spending, and I believe the U.S. should press the allies to move forward on their defense restructuring plans and to improve spending levels. The Alliance will not remain healthy if the allies are unwilling or unable to make investments to field 21st century forces that are fully capable of meeting 21st century challenges.

With regard to ESDP, I believe that NATO will continue to be the indispensable anchor of American engagement in European security matters and the foundation for assuring the collective defense of Alliance members. That said, I believe the administrations approach to ESDP is correct. NATO and the European Union must work in common purpose, and the U.S. should welcome an ESDP that develops EU capabilities in a manner that is fully coordinated, compatible, and transparent within NATO, provides for the fullest possible participation by non-EU European NATO members, embeds defense planning within NATO, and applies only where NATO has chosen not to act collectively.

#### VALUE OF PEACEKEEPING

*Question.* A number of recent newspaper articles have reported the views of U.S. military personnel participating in peacekeeping missions in the Balkans. In a statement reflective of the general view, an Army tank company commander is quoted in the *New York Times* edition of January 18, 2001 as saying about his re-

sponsibilities as a member of the American force in Kosovo that “In the Army, you spend practically all of your time training. Here, we are executing a real-world mission. We get to interact with the other NATO militaries. Things are so decentralized that I have a lot more autonomy in making decisions. It’s good experience.”

Do you believe that peacekeeping missions can make a valuable contribution to troop readiness, particularly at the individual and small unit level?

Answer. The participation of United States forces in peace operations can strengthen military skills in several areas, such as operating in coalition, providing logistics, communications, engineering, medical support, small unit leadership, civil affairs, and other key areas. Readiness depends in great part on mission-based training, which we must balance between preparing for traditional military missions and for peacekeeping and other missions. While this is an ongoing challenge, I believe we can maintain that balance. If confirmed, I will be diligent in the review of U.S. force commitments worldwide, including in peace operations.

#### MILITARY DEPLOYMENTS

*Question.* The administration is conducting a comprehensive review of all U.S. military deployments abroad. At a September 1999 speech at The Citadel announcing his intention to direct such a review, then-Governor Bush spoke of problems with “open-ended deployments and unclear military missions.”

What do you believe are the proper criteria to apply when deciding whether or not to involve U.S. Armed Forces in military operations overseas, including small-scale contingencies and peacekeeping activities?

Answer. The United States should be selective in its international military interventions, especially where there is danger of combat. As President Bush said at The Citadel on September 23, 1999, “If America is committed everywhere, our commitments are everywhere suspect.”

At the same time, the United States will not be able to, nor should it, remain indifferent to significant humanitarian crises. But in these cases, we should seek as a first resort to help develop mechanisms whereby other nations can work together and take the leading responsibility. The United States may be willing to provide assistance but others should take the lead wherever possible.

If confirmed, I will work with DOD officials, others in the administration, and this committee to help ensure that when we deploy our Armed Forces, the mission is justified and well-defined and the strategy is well-conceived.

#### COUNTER-NARCOTICS

*Question.* For more than 10 years the Department of Defense has been a key player in the Federal Government’s counter-narcotics efforts. The Department is designated as the lead agency for detection and monitoring, but also makes a significant contribution in other counter-narcotics missions, such as interdiction and demand reduction. While many see this as a law enforcement function, others believe that, given the impact of the drug trade on the stability of the Andean Ridge countries, it is a national security function.

In your opinion what is the appropriate role of the Department of Defense in U.S. counter-drug efforts?

Answer. As the President recently said, a successful counter-drug effort depends on a thoughtful and integrated approach. The Department’s counter-drug activities support the wide range of programs. At the same time, the Secretary has tasked the Department to review its overall mission to include support to other Federal Agencies. I am ready, if confirmed, to oversee the support the President and the Secretary feel is required to support other agencies in their counter-drug efforts.

*Question.* Does the Department’s counter-drug efforts contribute to the defense of our national interests?

Answer. I believe the Department’s counter-drug activities play a significant role in contributing to the administration’s overall National Drug Control Strategy.

*Question.* Do you support the DOD’s practice of providing information to Andean Ridge governments who engage in the shutdown of suspected drug trafficking aircraft?

Answer. At this time, the Department of Defense is participating in the ongoing review led by the State Department on USG assistance to host nation interdiction programs, including the recent tragic events in Peru. If confirmed, I would make certain that, upon completion of the review, further information will be made available to Congress.

## REGIONAL ISSUES

*Question.* President Bush and his advisors have emphasized the increasing significance of Asia for U.S. foreign and defense policy.

Do you believe that our national interests dictate that we place greater emphasis on Asia? If so, how does this affect our interests in Europe, Latin America and elsewhere?

*Answer.* We have vital interests in several regions. Our national interests are not a zero-sum game. As the Secretary stated on June 7, "Increased U.S. attention to the security situation, for example in the Persian Gulf or Korea, in no way implies any American intention to de-emphasize Europe."

While the overall security picture in the Asia-Pacific region is generally positive, we nonetheless face some of the greatest challenges to U.S. defense policy in that region, specifically China, North Korea, and instability in key countries such as Indonesia.

U.S. military presence has long provided a crucial element of stability in the Asia-Pacific region, and that will certainly continue to be the case. In the context of the Quadrennial Defense Review, we will look at the best ways to protect U.S. interests and ensure regional stability in the future. We will be examining possible ways of restructuring our force posture and capabilities within the region; we may have to rearrange our forces and capabilities to face new threats that may arise.

*Question.* What is your understanding of President Bush's statement that the United States would do "whatever it took" to defend Taiwan?

*Answer.* The President's statement did not signal a change in U.S. policy toward Taiwan, or in the U.S. position on "One China." We remain committed to help Taiwan defend itself; we have done so since 1979.

U.S. policy toward Taiwan is guided by the Taiwan Relations Act (TRA) of 1979. The TRA's basic premises are that an adequate defensive capability on Taiwan is conducive to the maintenance of peace and security in the region, so long as differences remain between the PRC and Taiwan, and that the U.S. "will make available to Taiwan such defense articles and defense services in such quantity as may be necessary to enable Taiwan to maintain a sufficient self-defense capability."

If confirmed, I will monitor carefully the situation in the region and take very seriously our obligation to assist Taiwan in maintaining a self-defense capability. Such assistance includes not only making available defense hardware, but also maintaining contacts with the Taiwan defense establishment across a broad range of activities.

*Question.* How does this statement affect United States-China relations?

*Answer.* Our unofficial relationship with Taiwan is an issue that is frequently raised in discussions between the United States and the People's Republic of China, a condition likely to persist so long as differences remain between the PRC and Taiwan.

*Question.* The administration has initiated a dialogue with North Korea on a "broad agenda," which includes implementation of the Agreed Framework, ending North Korea's missile production and export programs and reducing the conventional threat from North Korea.

Do you believe the administration should attempt to achieve progress on all of these as a package? Will progress on one item be linked to progress on another?

*Answer.* Pursuing a comprehensive approach with North Korea allows us to address the issues of concern to the U.S., and issues of equal concern to South Korea and Japan. A comprehensive approach also supports South Korea's engagement with the North. The administration is realistic that progress with North Korea will be difficult, but that should not preclude us from putting a number of important issues on the table to expand our opportunities for progress.

It would be difficult to justify diplomatic progress with the North if the DPRK regime fails to address our concerns on missile production and export, Agreed Framework implementation, and reduction of the conventional force threat.

I would support an approach that reaches effectively verifiable agreements with the North and that encourages progress toward North-South reconciliation and a constructive relationship with the United States.

*Question.* The Bush administration has recently engaged India on a number of regional and bilateral issues.

In your opinion, how will continued dialogue with Indian officials on such matters be in our national security interests?

*Answer.* Dialogue on strategic issues will build U.S.-India understanding and could lay the foundation for cooperation in such areas as the President's new Strategic Framework, controlling the proliferation of weapons of mass destruction, and enhancing stability in South Asia.

Dialogue on counter-terrorism and peacekeeping also address areas of mutual security interest. We will continue to benefit from cooperation and interaction with India on these and a growing number of other issues, particularly as India's growing economic and military power make it an increasingly important player in South Asia, the Indian Ocean and beyond.

*Question.* Do you support similar U.S. engagement with Pakistani officials?

*Answer.* While we still have many unresolved issues between our countries, Pakistan is an important nation in its own right. United States policy in South Asia needs to take account of Pakistan, to seek to resolve our differences, and to establish a relationship that enables us to influence Pakistan's policies and actions.

*Question.* The administration is currently conducting a comprehensive review of U.S. policy toward Iraq.

What elements—to include military options—do you believe should be part of the administration's policy to ensure Iraqi compliance with the obligations Iraq accepted at the end of the Persian Gulf War?

*Answer.* Ensuring Iraqi compliance with U.N. Security Council resolutions since the Gulf War will, I believe, require a comprehensive approach. Strengthening the sanctions regime is one part of such an approach. Enforcing the no-fly zones and other aspects of the U.N. Security Council resolutions, as coalition forces are now doing, is also important, and the United States should, I believe, look for ways to accomplish this more effectively. Finally, as expressed on a bipartisan basis in the Iraq Liberation Act, regime change should be an element of U.S. policy.

*Question.* According to a January 31, 2001, presentation before the Nixon Center, Ambassador Elizabeth Jones, Special Advisor to the President and Secretary of State for Caspian Basin Energy Diplomacy, stated "that the Bush administration has four strategic goals in the Caspian region consisting of (1) assuring sovereignty and independence; (2) supporting economic interdependence; (3) assuring reliable sources of energy; and (4) supporting American companies' investments in the region."

What is your view of this policy and what strategic role do you envision the Department of Defense playing in supporting this policy?

*Answer.* The Department supports the administration's strategic goals in the Caspian region and has been an active participant in developing policy for the region. We recognize that sovereignty and independence of these countries is a top priority. The Department's support for these emerging democracies will foster peace and stability in the region, and therein strengthen U.S. access to strategic natural resources and markets.

#### TRANSFORMATION

*Question.* What should the objectives of military transformation be, and how urgently should they be pursued?

*Answer.* In transforming the military we must address an uncertain future strategic environment while staying ready to meet our current security responsibilities. This is a difficult challenge that will take some time to achieve, but two requirements are crystal clear. First, our military forces must transform in a manner that outpaces competitors by pursuing new technologies, operational concepts, and organizational constructs. Second, we must do so in a way that makes our most valuable resource—our soldiers, sailors, airmen, and marines—as operationally effective as they can be.

Recent operations and ongoing experimentation strongly indicate that we need to transform now. They have shown the need for forces that are rapidly deployable over greater distances, ready for quick commitment upon entering a theater, and able to decisively affect the outcome of any operation to which they are committed. This necessitates that our forces have a command and control system that is truly joint, integrated and interoperable.

*Question.* What is the role of experimentation, including joint experimentation, in this transformation process?

*Answer.* Experimentation—particularly joint experimentation—ensures that our transformation efforts are fully integrated from inception to implementation. To achieve these objectives, our transformation efforts must encompass several tenets:

1. Our experimentation efforts must focus on how we can best introduce new and emerging technologies to our forces in combination with maintaining the legacy systems we will be required to retain for some time yet.

2. Experimentation initiatives must be robust in nature, striking in design and sufficiently publicized and imposing that they provide a deterrent impact of their own, to any potential adversary.

3. Our efforts must be suitably balanced between near, mid, and long range, objectives. While our thinking must clearly be “out-of-the-box”, we must not lose sight of the issue of providing enhanced capabilities to our forces today.

4. We must aggressively pursue new concepts of warfare. Network centric, reach back connectivity, sensor-to-shooter, and enhanced reconnaissance, surveillance, and target acquisition concepts all warrant continued exploration.

5. Our experimentation efforts must focus on providing enhanced, full-spectrum, command, control, and communications capabilities to our military forces. Shared, distributed, templated, “systems of systems”, providing real-time, relevant information to widely dispersed forces, conducting combat/contingency operations is the required end state.

#### EXPORT CONTROLS

*Question.* Are you in favor of passing a new Export Administration Act to reauthorize the national export control regime for dual-use items?

*Answer.* Yes, I am. The current bill, S.149, has several provisions that will help transition the current system based on Cold War policies into a more modern system that focuses on WMD, end-user and end-use controls.

*Question.* If so, what elements of such a reauthorization are essential to protect national security interests?

*Answer.* First, we must protect our military personnel and our security interests by ensuring that sensitive technologies are not exported to potential adversaries or to foreign entities that represent a significant diversion risk. Second, we must have sensible and effective policies and procedures to ensure appropriate transfers of military and commercial systems and technologies that support our coalition warfighting objectives are permitted. Finally, we must be mindful that the U.S. is not the only country with advanced military and commercial technology. If confirmed, I look forward to working with this committee on the issue.

*Question.* What role should the Department of Defense have in the dual use export control process?

*Answer.* The Defense Department must have a strong role in the export control policy process. Defense has a tremendous amount of talent and technical expertise in the export control area and should have the ability to apply these assets to the overall export control process. If confirmed, I look forward to working with this committee on the issue.

#### HOMELAND DEFENSE

*Question.* How do you think the Department of Defense can best contribute to the national effort to combat terrorism within the United States?

*Answer.* Consistent with law and regulations, the Department of Defense continues to support the lead Federal agencies regarding issues dealing with combating terrorism. The Department of Justice, through the FBI, is the lead Federal Agency for crisis response when dealing with incidents involving domestic terrorism. The Department of Defense also supports the Federal Emergency Management Agency that is designated as the lead Federal Agency in dealing with issues related to consequence management.

I believe that the Department’s focus should be to continue to provide unique resources and capabilities that may not reside within other agencies such as the ability to mass mobilize and provide extensive logistical support.

*Question.* What do you believe are the appropriate roles and missions for the Department in support of homeland defense?

*Answer.* Defending the American homeland is not a new role or mission for the Department of Defense. The U.S. military has a long and proud tradition of protecting and supporting the American homeland and its institutions from a wide variety of threats.

The Department possesses an array of response assets in both the active and Reserve components that can be task organized to support lead Federal agencies and civil authorities in dealing with man-made events and natural disasters. For example, the Department has created the Joint Task Force for Civil Support to assist Federal, state, and local first responders in mitigating the consequences of weapons of mass destruction (WMD) terrorist incidents.

If confirmed, I will support the efforts of the Office of National Preparedness and the Vice President to develop a preparedness strategy for Federal, state, and local governments to do the best possible job in preparing for and defending against WMD.

## NUCLEAR WEAPONS

*Question.* Do you support repeal of section 1302(b) of the National Defense Authorization Act for Fiscal Year 1998?

Answer. Yes, I support repealing this section of the Authorization Act.

I support the Bush administration's intention to reduce the U.S. nuclear arsenal to the lowest level consistent with our national security requirements, including our commitments to our allies.

If confirmed I will work with the committee to review current legislation that requires the U.S. to maintain the current levels of nuclear forces, and to reach a position that is consistent with the results of the strategic review recommendations.

*Question.* Do you support prompt retirement of the Peacekeeper ICBM?

Answer. This is currently being examined. The President has indicated that he wants to reduce nuclear forces quickly, and I expect a decision on whether to retire the Peacekeeper ICBM to be made this summer.

*Question.* Do you support unilateral reductions in strategic nuclear forces? If so, to what levels?

Answer. Clearly, unilateral reductions under the proper circumstances may be an attractive and appropriate approach to take. The Presidential Nuclear Initiatives of 1991 and 1992 resulted in significant unilateral reductions to our tactical nuclear forces, and termination or curtailment of modernization programs for our strategic forces, without requiring years of detailed negotiations in the context of the Strategic Arms Reduction Treaties. Until the Nuclear Posture Review is complete I cannot say to what level we should reduce our forces.

*Question.* Would you support reductions below START II force levels? If so, to what levels?

Answer. I support reductions below existing levels, which are a vestige of the Cold War. Again, the issue of how far to reduce U.S. nuclear forces is being addressed in the Nuclear Posture Review.

*Question.* Would such reductions be unilateral, pursuant to treaty, or other government-to-government agreement?

Answer. Reductions could be accomplished in a number of ways, including through unilateral initiatives, reciprocal approaches, formal arms control agreements, or some combination thereof. The choice among these approaches hinges on many military and diplomatic considerations. Again, these issues are being addressed in the review of nuclear forces.

*Question.* Do you support dismantling warheads removed from deployment?

Answer. I believe we need to address the dismantlement of warheads removed from deployment on a case-by-case basis.

*Question.* In your view what is the appropriate size of the nuclear arsenal?

Answer. I support the Bush administration's intention to reduce the U.S. nuclear arsenal to the lowest level consistent with our national security requirements, including our commitments to our allies.

*Question.* Do you support a hedge strategy and if so for what purpose?

Answer. We cannot reliably predict the future. Unforeseen circumstances will arise, despite our best efforts to anticipate them. The United States needs to take steps to reduce its nuclear forces, while at the same time ensuring that we have the flexibility and capacity to deploy an effective deterrent against any potential aggressor.

*Question.* How do you define "hair trigger alert" and what U.S. weapons fit the description of being "on hair trigger alert"?

Answer. "Hair trigger alert" is a term used by many to describe any nuclear forces, on alert, that are vulnerable to attack and are not supported by a warning system in which the leadership of a country has confidence and that would allow a decision-maker sufficient time to consider appropriate actions. There are no U.S. nuclear weapons that fit that description.

*Question.* Would you support prompt de-alerting of any Russian or U.S. weapons that are to be retired?

Answer. This measure is not without precedent. This issue will be looked at as a part of the Nuclear Posture Review. Until this review is complete and I have understood the military and political implications, I cannot have an informed personal view.

*Question.* What other weapons, if any, would you recommend de-alerting?

Answer. Again, until the Nuclear Posture Review is complete I cannot have an informed personal view on this issue. This issue will be carefully considered during the Nuclear Posture Review, and if confirmed, I would study this issue carefully before making a recommendation to the Secretary of Defense.

*Question.* Do you support the Department of Energy's Stockpile Stewardship Program?

*Answer.* Yes, I support the Department of Energy's Stockpile Stewardship Program for its contribution to maintaining a credible nuclear deterrent. Ensuring the safety, reliability, and effectiveness of U.S. nuclear weapons is important to the national security interests of the United States.

*Question.* It is estimated that a new facility for manufacturing plutonium pits will cost approximately a billion dollars.

Do the Department's nuclear weapons requirements support the need to design and construct such a facility?

*Answer.* Yes. The United States has not had a capability to remanufacture and certify replacement pits since operations ceased at the Rocky Flats Plant in 1989. Destructive surveillance testing forces the retirement of a number of warheads in the stockpile each year. Today, the Department of Energy (DOE) has no way to replace them. Current DOE plans reflect a capability to begin production of one type of replacement pit by fiscal year 2009, with other types following later. I support this effort.

*Question.* Does this cost impact your view on whether we should proceed with such a facility?

*Answer.* No. Nuclear weapon facilities with the necessary safeguards and environmental standards are expensive by their very nature. In my opinion, the DOE must restore its capability to produce plutonium components in order to sustain the safety and reliability of the nuclear deterrent.

*Question.* What role should strategic nuclear forces continue to play in United States policy and strategy in the foreseeable future?

*Answer.* I believe that nuclear weapons contribute substantially to the ability to deter aggression against the U.S., our forces abroad, and our allies and friends. Nuclear weapons must and will remain a critical component of our security posture. Nuclear weapons also serve as a means of upholding U.S. security commitments to our allies, as a disincentive to those who would otherwise contemplate developing or acquiring their own weapons, and as a hedge against an uncertain future.

*Question.* What criteria should the United States use in determining an appropriate strategic nuclear force posture for the foreseeable future?

*Answer.* These criteria will be developed as a part of the congressionally-mandated Nuclear Posture Review. It is too early, at this point, to discuss details of the review, including what criteria will be applied in determining an appropriate strategic nuclear force posture for the foreseeable future.

*Question.* In your view, what impact would the introduction of missile defense have on deterrence, which in the past has been based exclusively on offensive nuclear forces?

*Answer.* The world has changed. The United States and Russia are no longer enemies whose relationship should be based on mutual assured destruction, and we now face new threats, which pose new challenges to our security. We require missile defenses to make clear that we will not be blackmailed from supporting allies and friends by threats of ballistic missile attack. Stability and deterrence will be enhanced when we can help dissuade potential adversaries from investing in ballistic missiles by devaluing their political and military utility, and when we can defend allies and friends as well as the U.S. if deterrence should fail.

*Question.* Do you believe that the introduction of missile defenses by the United States could stimulate a nuclear arms race between Russia and the United States?

*Answer.* No. We intend to deploy limited defenses against handfuls of longer-range missiles, not against hundreds of missiles or warheads. Those limited defenses will not threaten the Russian strategic deterrent, even under significantly reduced levels of forces.

*Question.* And/or between China and the United States?

*Answer.* No. China's nuclear modernization program predates U.S. missile defense efforts. China is likely to continue this modernization regardless of what the U.S. does. In my opinion, China does not want to create a "Cold War" relationship with the U.S. We have made clear that our limited missile defense is intended to protect the U.S., our allies and our friends only from those who would seek to threaten or coerce us.

*Question.* Do you believe that other arms races might be stimulated by the introduction of missile defenses by the United States?

*Answer.* Missile defenses are a response to proliferation, not the cause of it. U.S. and allied vulnerability to ballistic missile attack serves as a strong incentive to proliferation. Missile defenses will help dissuade potential adversaries from investing in ballistic missiles by devaluing their political and military utility.

## ARMS CONTROL

*Question.* Do you believe that arms control treaties can be in the national interests of the United States?

*Answer.* Yes, arms control agreements and actions can be in the national interest of the United States.

*Question.* If so, under what circumstances?

*Answer.* Each proposed treaty or unilateral action needs to be evaluated to determine whether it is in the U.S. national interest. Relevant considerations regarding treaties include: Is a proposed treaty's purpose in our national interest? Will the proposed terms accomplish the purpose? Is the proposed treaty verifiable? How likely is it that other parties will comply? How effective are efforts likely to be to enforce compliance if the treaty is violated? Are there collateral benefits of the proposed treaty even if its terms are violated by other parties?

*Question.* The Department of Defense plays the lead role in developing and implementing arms control technology in support of arms control agreements.

What do you believe should be the key capabilities, e.g. monitoring, verification, that the Department should pursue and develop? What challenges do you believe exist in developing these key capabilities?

*Answer.* The Department's focus should be on technologies that permit DOD and the United States to protect DOD and other national security equities while allowing us to collect information regarding the treaty-relevant activities of treaty states of concern. I would defer to my colleagues in the intelligence community regarding the challenges associated with the development of national technical means. With regard to on-site and other cooperative capabilities, the key challenge is to develop capabilities that: are selective and whose use would not lead to the disclosure of sensitive information, that minimize the cost to the U.S. of compliance, that enhance safety, that reduce the potential intrusiveness of any on-site arms control provisions in the U.S., and that can be widely shared with other countries without raising the potential risk of disclosure of sensitive technologies.

*Question.* The Biological Weapons Convention (BWC) prohibits the stockpiling of biological materials in quantities that are not justifiable for solely peaceful purposes. Currently, the parties to the Convention are discussing details of a proposed protocol that consists of a legally binding regime for verification that goes beyond confidence building measures. Some critics of these discussions believe that such verification measures are too difficult to enforce. Others believe the proposed protocol does not go far enough.

What is your view of the Convention and of the desirability of greater verification of it? Do you believe it is possible to establish and verify measures beyond confidence building?

*Answer.* The Biological Weapons Convention establishes a norm against the development, production, acquisition and stockpiling of biological weapons. However, given the nature of biological weapons and biotechnology, the Convention is inherently unverifiable.

## THREAT OF GROWING BIOTECH CAPABILITIES

*Question.* During the next 10 years expected advances in biotechnology will lead to greater capability to manipulate biological agents. While we are attempting to protect ourselves against known biological agents, we may be several steps behind in addressing near-term threats posed by these near-term advances in biotechnology.

Do you believe our current policies and programs for biological warfare defense are adequate for current threats? If not, what additional steps would you recommend?

*Answer.* No. Director of Central Intelligence George Tenet has acknowledged that there is "a continued and growing risk of surprise" in the biological warfare (BW) area, especially in light of bio-technology advances and steps being taken by determined rogue states to hide their BW-related activities. DOD therefore must avoid placing too much emphasis on "validated" threats in its bio-defense preparations, because we are unlikely to have knowledge of the range of biological agents that have been, or are available for, weaponization. For example, we did not know until well after the Persian Gulf conflict ended that Iraq had weaponized anthrax for ballistic missile delivery. Nor did we understand the scope of the Soviet BW program—which included BW agents for inter-continental ballistic missile delivery—until defectors came to the West in the early 1990s. Capabilities-based planning will be needed to mitigate risks from emergent BW threats.

## COOPERATIVE THREAT REDUCTION (CTR)

*Question.* Do you support the Nunn-Lugar Cooperative Threat Reduction Programs?

*Answer.* Yes. The elimination of former Soviet strategic nuclear weapons, other weapons of mass destruction, and their delivery vehicles funded by the CTR program has benefited U.S. national security. The United States also has an interest in ensuring that Russia eliminates its stockpile of chemical munitions and biological agents. At the same time we do not want the CTR program to become a means by which Russia frees resources to finance its military modernization programs.

*Question.* If so, does this support include support for funding for the Russian chemical weapons destruction facility at Shchuch'ye?

*Answer.* I do not have a personal view on funding for Shchuch'ye. If confirmed, I would get briefed on all relevant facts and circumstances to allow me to formulate a view.

*Question.* Do you believe the CTR programs are making a long-term contribution to increasing U.S. security?

*Answer.* Yes. Please see first CTR answer above.

*Question.* Do you believe the CTR programs are reducing the probability of an accidental or unauthorized launch of a Russian ballistic missile?

*Answer.* The CTR program does not address directly the issue of accidental or unauthorized launches. To the extent that the program funds the elimination of former Soviet strategic nuclear weapons and their delivery vehicles, it can be said to contribute to the reduction of that danger.

*Question.* Do you support increasing funding for the CTR programs as necessary to improve control over all aspects of Russia's nuclear arsenal, including dismantlement of nuclear warheads, accounting storage and control of weapons-usable plutonium and uranium, and shutting down the last three Russian plutonium producing reactors?

*Answer.* I support the CTR program. As to the particular elements of the program, I would, if confirmed, get briefed on all relevant facts and circumstances to allow me to formulate a view on appropriate funding levels.

*Question.* In your view, do any increases during the past year in Russia's gross domestic product, military spending and arms exports, affect Russia's ability to assume more of the cost share associated with CTR efforts in Russia?

*Answer.* Russia should do more to fund the reduction of the weapons of mass destruction left by the Former Soviet Union. Part of the ongoing administration review of assistance programs to Russia is to identify whether Russia is doing as much as it can to fund these reductions. The recent upturn in Russia's economic situation and increase in military spending should be taken into account.

*Question.* In light of Russia's increasing priority on military spending, what is your view regarding the fungibility of U.S. funds associated with threat reduction assistance?

*Answer.* Investment in the CTR program and other U.S. nonproliferation programs should not become a means by which Russia frees resources to finance its military modernization programs. The current review of these programs should look at such questions.

*Question.* Would you propose limiting or prohibiting CTR assistance to Russia until Russia ceases its proliferation activities with Iran?

*Answer.* I have been informed that the administration is currently reviewing its options for encouraging Russia to cease its proliferation activities with Iran, including possible steps in the event that Russia does not cease such cooperation. If confirmed, I would expect to participate actively in that review.

## NUCLEAR TEST DETECTION

*Question.* Do you support continued and full funding for the U.S. project in support of the International Monitoring System for nuclear testing?

*Answer.* The U.S. contribution to the CTBT Organization, which includes support for the International Monitoring System is in the Department of State's budget. If confirmed, I would support a review of all DOD activities associated with the CTBT.

*Question.* Do you believe that the United States' existing nuclear monitoring capabilities are sufficient to deter and detect any nuclear explosions?

*Answer.* I understand that the Department deems our existing monitoring capabilities sufficient to detect some, but not all, nuclear explosions. The risk of detection will not necessarily deter testing. Whether a country will be deterred depends on its own calculations of whether the benefits of the test exceed possible penalties resulting from possible detection.

*Question.* Are there steps that should be taken to enhance our nuclear monitoring capabilities, including the possibility of bilateral or other international monitoring collaboration?

*Answer.* An answer to this question would require an examination of U.S. nuclear monitoring requirements and the extent to which current capabilities can satisfy them. If confirmed, I would review the adequacy of our ability to detect foreign nuclear tests and the cost-effectiveness of potential improvements.

#### NUCLEAR TESTING

*Question.* Do you believe the United States should return to underground explosive testing of nuclear weapons? If so, under what circumstances would you favor a return to testing and for what purpose would you conduct a test or series of tests?

*Answer.* I have not been briefed on a DOD requirement for the United States to resume nuclear explosive testing at this time. If confirmed, I would support a review of how we can assure the reliability, safety, and effectiveness of the nuclear weapons in our stockpile.

#### COMPREHENSIVE TEST BAN TREATY (CTBT)

*Question.* What do you believe the policy should be within the Defense Department regarding DOD programs that support the CTBT?

*Answer.* Secretary Rumsfeld has said that he has concerns with CTBT: the risks to the reliability and safety of our nuclear weapon stockpile and the difficulty of verification. Because the CTBT has not been ratified by the United States or entered into force, the United States is under no obligation to implement it. If confirmed, I would support a review of all planned DOD activities associated with the CTBT, to determine whether they are useful on their own merits.

*Question.* What programs within the Department, if any, support only a CTBT?

*Answer.* I do not have such detailed information. If confirmed, I expect that I will be briefed on issues related to the CTBT.

#### SPACE COMMISSION

*Question.* Do you support creation of an Under Secretary of Defense for Space, Intelligence, and Information as recommended by the Commission to Assess National Security Space Management and Organization?

*Answer.* I support Secretary Rumsfeld's decision not to request legislation to establish an Under Secretary of Defense for Space, Intelligence, and Information. As the Secretary's response to Congress on the Space Commission's recommendations indicated, he has asked staff to review the responsibilities and functions of the Assistant Secretary of Defense for Command, Control, Communications, and Intelligence and provide him with recommendations to ensure appropriate senior-level policy, guidance, oversight, and advocacy for space, intelligence, and information activities.

*Question.* If confirmed, what would your responsibilities be with respect to space policy for the Department of Defense?

*Answer.* If confirmed, I would assist the Under Secretary of Defense for Policy in carrying out the responsibilities currently prescribed by the Secretary of Defense, to ensure that space policy decisions are closely integrated with overall national security policy considerations, in coordination with the Assistant Secretary of Defense for Command, Control, Communications, and Intelligence, and review contingency and operations plans to ensure the proposed employment of space forces are coordinated and consistent with DOD policy and the National Military Strategy. I would also assume any additional responsibilities for space policy prescribed by the Secretary of Defense, Deputy Secretary of Defense, or Under Secretary of Defense for Policy.

*Question.* In your view, how important is it for the United States to develop a wide range of space control capabilities, including the ability to negate hostile satellites?

*Answer.* The security and well-being of the United States, our allies, and friends depend on our ability to operate in space. Our increasing dependence and the vulnerability it creates, however, require us to have the means to deter and dissuade threats to our national interests in space. In this regard, I support the 1996 National Space Policy that directs that "consistent with treaty obligations, the United States will develop, operate and maintain space control capabilities to ensure freedom of action in space and, if directed, deny such freedom of action to adversaries. These capabilities may also be enhanced by diplomatic, legal or military measures to preclude an adversary's hostile use of space systems and services." A broad range of military capabilities may be required to implement this policy. I understand the

administration has included in its on-going strategic review the range of capabilities necessary to implement this policy, and I support this effort.

#### NON-PROLIFERATION POLICY

*Question.* The United States faces a number of threats from the proliferation of weapons of mass destruction.

What role do you believe non-proliferation should have in our national security policy and what role should the Department of Defense play in this effort?

*Answer.* Non-proliferation is a component, complementary to other elements, of our national security policy. The Department of Defense will continue to take part in interagency policy development to ensure effective non-proliferation policy.

*Question.* In December 2000, Secretary Cohen met with then Russian Defense Minister Igor Sergeev to discuss U.S. concern over Moscow's continued arms sales and proliferation activities with Iran. While this meeting and subsequent State Department meetings were considered positive, the United States did not receive concrete assurances from Russia that these proliferation activities would cease. In fact, subsequent actions by Russia indicate that Russia intends to continue to increase its arms sales and nuclear technology transfers to Iran, despite U.S. concerns.

If confirmed as Deputy Under Secretary of Defense for Policy, what policy options would you propose to address any ongoing prohibited or non-prohibited proliferation activities of Russia with Iran?

*Answer.* If confirmed, I would look at the full range of available options. I would underscore for Russian policy makers that this is a new administration and that positive, concrete steps on their part to address our security and stability concerns in this area can provide a basis for a constructive bilateral relationship.

#### MISSILE DEFENSE

*Question.* If the administration concluded that, for whatever reason, deploying a particular missile defense system would actually decrease our security, would you recommend deploying that system?

*Answer.* No, but at this time I cannot envision a limited system that would decrease our security.

*Question.* President Bush has called for missile defenses to protect ourselves, our allies and friends against the possibility of limited ballistic missile attacks.

Should we proceed with missile defense programs in a manner such that our allies, friends and, if possible, Russia and China do not perceive our missile defense programs as threatening or destabilizing?

*Answer.* In my view, the United States should proceed in this area in accordance with its national interests, taking into account the views of our allies. I believe, however, that in the area of missile defense, the United States and our allies have fundamentally harmonious interests. Good alliance relations are an important element of U.S. national interests. I think there are reasonable grounds for hoping that the United States and our allies will work closely and cooperatively in coming years to protect against the threats resulting from the proliferation of weapons of mass destruction and missile capabilities. The United States has begun a cooperative allied consultation process. The desirable and, I believe, likely outcome is alliance consensus, which enlightened U.S. leadership has often over the years been able to produce.

We are also discussing such concerns with Russia and China. We are talking about defenses to protect against handfuls of missiles and warheads, not hundreds. We intend to move forward on defenses against ballistic missiles of all ranges—defenses which would protect our friends and allies as well as the United States against the new threats which we all face. Our proposed system will not threaten the Russian strategic nuclear deterrent, even at significantly reduced levels of forces.

Nor is our missile defense system a threat to China. It is intended to defend against threats or attacks from states currently attempting to acquire longer-range missiles. Since the late 1980s, China has been engaged in the modernization of its nuclear forces; this modernization is likely to continue regardless of what the U.S. does.

*Question.* The Department of Defense designs, develops and acquires weapon systems intended to be operationally effective in combat, and demonstrated to be capable of meeting their operational requirements. To date, our missile defense programs have followed this long-standing policy.

Do you believe that our missile defense systems should continue to meet the operational requirement for effectiveness?

Answer. Yes. The current operational requirement, however, needs to be reviewed in the context of the overall missile defense review.

*Question.* Would you recommend acquiring or deploying a weapon system, including a missile defense system, that is not operationally effective?

Answer. No. Defenses that are substantially less than 100 percent effective, however, can be essential to deterring threats and defending against attacks. We should not face an all-or-nothing choice in missile defense any more than we do regarding other defense programs.

*Question.* You have testified that the ground-based national missile defense architecture developed under the previous administration is inadequate to the Nation's needs.

In your view, to what extent should the United States utilize this ground-based architecture and technology as a starting point for implementing the President's missile defense plans?

Answer. As the President has stated, the U.S. plans to deploy missile defenses capable of defending all 50 states, deployed forces, and friends and allies. The previous administration's ground-based system, which would only provide for the defense of the United States, fails to provide for the defense of our friends and allies. Other system architectures could be more effective overall and capable of defending our friends, allies, and deployed forces. Furthermore, a layered system, capable of intercepting ballistic missiles in their boost, midcourse, and terminal phases, increases the likelihood of a successful intercept.

I believe the current ground-based system could play an important role in the layered defense concept. Its role, however, will depend on a number of factors, such as test results and the availability and effectiveness of other promising technologies.

*Question.* The administration has stopped describing missile defense systems as either "national" or "theater." What are the advantages to eliminating such a distinction?

Answer. The President has said we will deploy defenses capable of defending the U.S., our deployed forces, and our allies and friends. Whether a particular system is a "national" system or a "theater" system depends on where you live and how close you are to the threat. Some systems—boost-phase system for instance—may be effective against short-, medium-, and long-range ballistic missiles, whether they are directed at the United States or at allies in the theater. These systems should be used where they are effective.

*Question.* Ballistic missile defense systems would not be able to defend against weapons of mass destruction delivered by non-missile systems such as ships or trucks.

Answer. We are determined to defend against such threats. We already have some defenses against terrorist threats, and are working to strengthen them. The U.S. spends billions of dollars annually to address these types of threats.

Regardless of other means of striking the U.S., some countries are currently putting significant resources into developing or acquiring long-range missile capability, probably because we have no defenses against long-range ballistic missiles. Continued vulnerability would only encourage others to acquire long-range ballistic missiles, to blackmail or coerce the U.S.

#### ANTI-BALLISTIC MISSILE (ABM) TREATY

*Question.* In a speech at The Citadel in September, 1999, then-Governor Bush said: "At the earliest possible date, my administration will deploy anti-ballistic missile systems, both theater and national, to guard against attack and blackmail. To make this possible, we will offer Russia the necessary amendments to the Anti-Ballistic Missile Treaty. If Russia refuses the changes we propose, we will give prompt notice, under the provisions of the treaty, that we can no longer be a party to it."

If we can reach agreement with Russia on modifying the ABM Treaty to permit the deployment of a limited missile defense system to defend the Nation against the possibility of a limited attack, do you believe it would be in our interest to do so?

Answer. President Bush has made clear that the ABM Treaty should be replaced with a new framework that reflects a break from Cold War thinking and facilitates development of a new, cooperative relationship between the United States and Russia. The exact nature of the new framework and whether it includes agreements, parallel or unilateral actions, or a combination thereof, is still something that is being developed. The President is looking at a wide range of ideas for the framework, and whether amendments will be part of it remains under consideration. In any case, it is clearly in our interest to reach agreement with Russia, if possible, and President Bush has made it clear that he seeks to move beyond Treaty constraints cooperatively with the Russians. To that end, the administration is consult-

ing with the Russians, with allies, and with Congress on the concept of such a framework. This should provide the opportunity for openness, mutual confidence, and a real chance for cooperation, including in the area of missile defense.

## THREATS AND RESPONSES

*Question.* The United States faces many security challenges and threats.

Do you believe it is important to have a balanced response, in terms of policy, strategy, and resource allocation, to the full range of threats and challenges we face?

*Answer.* Yes. Our overall approach to defense must recognize the changes in the world, and requires that we balance the risks we face. If confirmed, I will work with this committee to ensure sufficient resources to deal with these challenges.

*Question.* How do you believe that we should assure that we achieve such a balance between threats and responses?

*Answer.* We must recognize that the world poses a wide and unpredictable array of security challenges to which we must be ready to respond. These risks include near-term operational challenges as well as long-term challenges that require fundamental transformation of our military forces and defense processes. Among our top resource priorities to address these challenges are effectively managing the force and taking care of our people; promoting experimentation with new concepts, organizations, and capabilities; pursuing robust research and development for the future; and modernizing and focusing our infrastructure and logistics.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Under Secretary of Defense for Policy?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR CARL LEVIN

1. Senator LEVIN. At your nomination hearing, we discussed the issue of operational effectiveness of a National Missile Defense system, and you mentioned that there were discussions of the idea of changing the standard for NMD operational effectiveness. The NMD system has an Operational Requirements Document (ORD) as do all major weapon systems, that was approved by the Joint Requirements Oversight Council (JROC). At an unclassified level, the NMD ORD specifies that the NMD system must defeat all warheads from a limited ballistic missile attack (no leakers) with a very high degree of confidence.

Please describe all conversations to which you have been privy this year with persons associated with the Defense Department that have taken place relative to the standards for operational effectiveness for a National Missile Defense program.

Dr. CAMBONE. Since January of this year, in my role as the Special Assistant to the Secretary and Deputy Secretary of Defense, I have worked closely with the Secretary, the Deputy Secretary, and their staffs in the coordination of, and in support of, the series of reviews directed by Secretary Rumsfeld. Missile defense is a high priority for this administration and, naturally, discussion of a missile defense program is a topic receiving substantial attention. Consequently, in my role as the Special Assistant to the Secretary of Defense and the Deputy Secretary of Defense, I have participated in numerous conversations with senior civilian and military officials in which issues associated with the operational requirements for missile defense have arisen. My conversations with DOD officials have included discussion of the operational requirements process within DOD and the different types of requirements examined by DOD, including both threshold and objective requirements.

2. Senator LEVIN. Who has taken part in those discussions?

Dr. CAMBONE. Please see the answer to Question 1.

3. Senator LEVIN. What reasons have been given in favor of wanting to change those operational effectiveness standards?

Dr. CAMBONE. In my opinion, the current standards for operational effectiveness for the National Missile Defense system, as approved in the Operational Requirements Document, need to be reviewed. I understand generally that the reasons for changing the operational effectiveness requirements include: that the existing requirements for missile defense are unprecedented for a weapon system; that no system can be 100 percent effective in meeting threshold or objective requirements; and that missile defense deployment is not an all-or-nothing proposition and rudimentary systems less than 100 percent effective could make substantial contributions to both deterrence and defense.

I understand that the primary argument for not changing the operational effectiveness requirement is that an extremely high degree of effectiveness should be the goal of any weapon system. This does not mean, however, that a system that does not fully meet the objective requirement would not be militarily useful. In fact, the operational requirements process within DOD recognizes that there will be both threshold requirements, which are the minimal requirements a system should meet to be deployed, and objective requirements, which represent the desired evolutionary capability, both of which can be modified for reasons such as excessive cost or military necessity.

I will carefully consider these matters in advising the Department's leadership of my views on this question.

4. Senator LEVIN. What reasons have been given against changing the operational effectiveness standards?

Dr. CAMBONE. Please see the answer to Question 3.

5. Senator LEVIN. What are the views of the Joint Chiefs of Staff, the Commanders in Chief (CINCs) and the Joint Requirements Oversight Council (JROC) on this question of changing the NMD operational requirements standard?

Dr. CAMBONE. I am not in a position to speak for the Joint Chiefs, the CINCs and the JROC on this matter.

6. Senator LEVIN. Have the Joint Chiefs, the CINCs or the JROC requested that the operational effectiveness of NMD be changed from the current ORD standard?

Dr. CAMBONE. I understand that U.S. Space Command is now reviewing the missile defense operational requirement in light of the missile defense review.

7. Senator LEVIN. Have they made such requests for any other missile defense system, or any other weapon system?

Dr. CAMBONE. As I understand the process, formal requests to review operational requirements need not be made; in fact, a CINC can initiate them. I believe there is recognition of the need to review requirements for missile defense programs overall to ensure our ability to defeat the full range of ballistic missiles that we and our friends and allies and deployed forces face today as well as in the future.

7a. Senator LEVIN. If so, for what systems?

Dr. CAMBONE. The Airborne Laser is an example of a system for which, I understand, there is general recognition of the need to review the requirement.

8. Senator LEVIN. Have there been any conclusions or recommendations from those discussions?

Dr. CAMBONE. The discussions are ongoing.

8a. Senator LEVIN. If so, what are they?

Dr. CAMBONE. See above answer.

8c. Senator LEVIN. If not, is there an intention to make recommendations or reach a conclusion on this issue in the foreseeable future?

Dr. CAMBONE. As discussed above, I understand that CINCSpace is now reviewing missile defense operational requirements in light of the results of the missile defense review.

9. Senator LEVIN. Have there been similar discussions to which you have been privy within the Department on changing operational requirements standards for other missile defense systems, or for other weapon systems?

Dr. CAMBONE. I am aware of discussions about the possible need to review requirements with respect to all missile defense systems. I understand that this is driven by the need to develop the most effective overall systems capable of defending our territory, our friends, allies and deployed forces. I believe that a layered system, capable of intercepting ballistic missiles in their boost, midcourse, and terminal phases, increases the likelihood of a successful intercept.

10. Senator LEVIN. Has the Department recommended, or has the JROC approved, any changes to the operational requirements for any weapon system since Secretary Rumsfeld assumed office? If so, please describe such changes.

Dr. CAMBONE. I am not aware of any such changes.

11. Senator LEVIN. Will the Department continue the policy of having operational requirements for weapon systems, and of having those weapon systems demonstrate that they meet the operational requirements before they are deployed?

Dr. CAMBONE. I understand that the Department will continue the practice of having operational requirements and of testing to those requirements as required by statute. I would note, however, the Department has on occasion deployed a system that was not fully compliant with existing ORD requirements, when necessary to meet increased threats. A good example of this is the deployment during the Gulf War of Joint Surveillance Target Attack Radar System (JSTARS).

---

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

12. Senator THURMOND. Although the United States has established significant relationships with the countries of South and Central America regarding the counter-drug effort, our interaction with these countries is insignificant when compared to other nations of the globe.

Considering the economic, political and migration issues associated with Central and South America, what are your views on our current military and diplomatic relationships with these regions?

Dr. CAMBONE. The United States has important security interests in Latin America. The security, prosperity and demographic makeup of the U.S. is profoundly influenced by the stability of the region. Latin America countries are some of our most important friends and allies and largely share a commitment to democracy, human rights and free markets. One of our fundamental goals for the region is the promotion of regional stability. The principal threats facing this hemisphere are transnational ones, including drug and arms trafficking, money laundering, illegal immigration, and terrorism. The vast majority of countries of the western hemisphere have reaffirmed their commitment to combat these challenges together.

Given the obvious challenges in the Andes and the President's firm intention to work more closely with Latin American governments to achieve economic and security objectives, the Department of Defense is reviewing existing policies and programs and consulting with regional defense officials to make DOD's role in that process more effective.

13. Senator THURMOND. Many former Soviet republics are seeking to establish their own identity independent of Russia's central government. In your personal view, how should the United States respond to these independence movements?

Dr. CAMBONE. The basic U.S. security interest for all 12 of the independent states of Eurasia that emerged from the former Soviet Union is to support their independence, sovereignty and territorial integrity. We seek to support the transition of these states to free market economic systems and democratized political systems. In security terms, the Department of Defense is working to facilitate the reform, restructuring and professionalism of the ministries of defense and the armed forces of these states in an effort to shed their Soviet military heritage. We hope to build the basis for long-term American influence in the development of professional militaries and in the security decisions that these countries will make for years to come.

---

[The nomination reference of Dr. Stephen A. Cambone follows:]

## NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. Stephen A. Cambone of Virginia, to be Deputy Under Secretary of Defense for Policy, vice James M. Bodner, resigned.

[The biographical sketch of Dr. Stephen A. Cambone, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF DR. STEPHEN A. CAMBONE

Stephen A. Cambone is currently the Special Assistant to the Secretary and Deputy Secretary of Defense. Prior to that, he was the Staff Director for the Commission to Assess United States National Security Space Management and Organization from July 2000 to January 2001.

Dr. Cambone was the Director of Research at the Institute for National Strategic Studies, National Defense University (INSS/NDU) from August 1998 to July 2000. Before that, he was the Staff Director for the Commission to Assess the Ballistic Missile Threat to the United States from January 1998 to July 1998, a Senior Fellow in Political-Military Studies at the Center for Strategic and International Studies (CSIS) from 1993 to 1998, the Director for Strategic Defense Policy in the Office of the Secretary of Defense from 1990 to 1993, the Deputy Director, Strategic Analysis, SRS Technologies (Washington Operations) from 1986 to 1990, and a Staff Member in the Office of the Director, Los Alamos National Laboratory from 1982 to 1986.

Dr. Cambone graduated from Catholic University in 1973 with a B.A. degree in Political Science, from the Claremont Graduate School in 1977 with an M.A. degree in Political Science, and from the Claremont Graduate School in 1982 with a Ph.D. in Political Science. His numerous awards include the Secretary of Defense Award for Outstanding Service in 1993 and the Employee of the Year Award with SRS Technologies (Washington Operations) in 1988.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Dr. Stephen A. Cambone in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Stephen Anthony Cambone.
2. **Position to which nominated:**  
Principal Deputy Under Secretary of Defense for Policy.
3. **Date of nomination:**  
June 12, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
June 22, 1952; Bronx, New York.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Margaret Taaffe Cambone.
7. **Names and ages of children:**  
Maria Cambone, 11 years.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Our Lady of Lourdes High School, 9/1966–6/1970; H.S. Diploma 6/1970.  
Catholic University 9/1970–5/1973; B.A., Political Science 5/1973.  
Claremont Graduate School 1974–1977; M.A., Political Science 1977.  
Claremont Graduate School 1977–1981; Ph.D., Political Science 1982.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
Director, Strategic Defense Policy, Office of the Secretary of Defense/ISP, DOD, Room 2D459, Pentagon, Washington, DC 20301; 4/1990–4/1993.  
Self-employed, Los Alamos Lab/SAIC/National Institute for Public Policy, 1809 Barbee Street, McLean, VA 22101; 5/1993–10/1997.  
Senior Fellow, Political-Military Studies, Center for Strategic and International Studies, 1800 K Street, NW, Washington, DC 20006; 6/1993–7/1998.  
Staff Director, IPA, Ballistic Missile Threat Commission, HQ CIA, Langley, VA; 11/1997–7/1998.  
Director of Research, Institute for National Strategic Studies, National Defense University, Marshall Hall, Fort McNair, Washington, DC; 8/1998–11/2000.  
Distinguished Research Professor, Institute for National Strategic Studies, National Defense University, Marshall Hall, Fort McNair, Washington, DC; 12/2000–Present.  
Staff Director, Commission to Assess United States National Security Space Management and Organization (detailed from National Defense University), 2100 K Street, NW, Suite 300, Washington, DC; 7/2000–1/2001.  
Staff Assistant, Presidential Transition Office (detailed from National Defense University), 1800 G Street, NW, Washington, DC; 1/13/2001–1/21/2001.  
Special Assistant to the Secretary of Defense (detailed from National Defense University), 1000 Defense Pentagon, Washington, DC; 1/22/2001–Present.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
Nominated to serve on the Commission to Assess United States National Security, Space Management and Organization.
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.  
Guest Scientist, Los Alamos Laboratory. See SF 278.
12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
None.
13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Detailed to the Bush/Cheney Transition Team from National Defense University.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Dole Campaign, 1996, \$1,000.

I may have contributed to other local campaigns:

Colleen Sheehan, Congress, PA, c. 1996.

John Eastman, Congress, CA, c. 1998.

William B. Allen, Senate, CA, c. 1996.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Secretary of Defense Award for Outstanding Service, 1993.

Employee of the Year, SRS Technologies (Washington Operations), 1988.

Ph.D. awarded with High Honors, Claremont Graduate School, 1982.

Best Master's Degree Thesis, Government Department, Claremont Graduate School, 1977.

Earhart Fellow, 1976–1977.

Blue Key, Honorary Award, 1973.

Pi Sigma Alpha, +9, c. 1974–1980.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

"Threats and Risks Prompting a Commitment to Ballistic Missile Defense (BMD)," *National Missile Defence and the Future of Nuclear Policy*, Occasional Paper, Institute for Security Studies—Western European Union, September, 2000, with Ivo Daalder, Stephen J. #### TESTIMONY

- “Iran’s Ballistic Missile and WMD Programs,” Testimony before the Subcommittee on International Security, Proliferation and Federal Services, Committee on Government Affairs, United States Senate, 106th Congress, September 21, 2000.
- “Elements of a Decision to Deploy National Missile Defense,” Testimony before the Armed Services Committee, House of Representatives, 106th Congress, June 28, 2000.
- “Elements of a Modern, Non-Proliferation Policy,” Testimony before the Senate Foreign Relations Committee, March 21, 2000.
- “Issues Surrounding the 50th Anniversary Summit of NATO,” Testimony before the Senate Foreign Relations Committee, Subcommittee on European Affairs, April 21, 1999.
- “Qualifications of Poland, Hungary and the Czech Republic for NATO Membership.” Testimony prepared for the Senate Committee on Foreign Relations, 105th Congress, October 22, 1997.
- “Prepared Statement on the Costs of NATO Enlargement” Appendix 4, *The Debate on NATO Enlargement*, Hearings before the Committee on Foreign Relations, United States Senate, 105th Congress, 1st Session, Committee Print S. Hrng. 105-285.
- “The ABM Treaty and Theater Missile Defense,” Testimony before the Military Research and Development Committee of the Committee on National Security, House of Representatives, 104th Congress, March 21, 1996.
- “Space Programs and Issues,” Testimony before the Subcommittee on Strategic Forces of the Senate Armed Services Committee, 104th Congress, May 2, 1995.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have not delivered formal speeches. I have, however, participated in numerous panel discussions, colloquies, etc. Those presentations frequently were developed into articles. Examples include:

- “After the Assessment: Responding to the Findings of the Rumsfeld Commission.” Director’s Colloquium, Los Alamos National Laboratory, February 9, 1999.
- “Demarcation Issues Between Strategic and Theater Systems: A Response [to an Administration View],” Robert L. Pfalzgraff, Jr., ed., *Security Strategy and Missile Defense* (Cambridge, MA; Institute for Foreign Policy Analysis), 1996.

- “Organizing for Security in Europe: What Missions, What Forces, Who Leads, Who Pays?” Graduate Program in International Studies, Working Paper 95.5, Old Dominion University, 1996.
- “Role of the United States in the Future of Europe,” Ann-Sofie Dahl, ed., *Security in Our Time. Four Essays on the Future of Europe*, (Stockholm, National Defense Research Establishment), 1995.
- “Time to Define a New U.S.-CIS Relationship,” Europe Orientale et Centrale: Les Options de L’Europe Occidentale (Brussels: Centre d’Etudes de Defense, Institut Royal Supérieur de Defense), 1995.
- “The Political Setting,” Dick A. Leurdijk, ed., *A U.N. Rapid Deployment Brigade. Strengthening the Capacity for Quick Response* (The Hague: Netherlands Institute of International Relations/Clingendael), 1995.
- “Principles of Operational Concepts for Peacemaking,” Ernest Gilman, Detlef E. Herold, eds., *Peacekeeping Challenges to Euro-Atlantic Security* (Rome: NATO Defense College), 1994.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. STEPHEN A. CAMBONE.

This 18th day of June, 2001.

[The nomination of Dr. Stephen A. Cambone was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 19, 2001.]

---

[Prepared questions submitted to Michael Montelongo by Chairman Levin prior to the hearing with answers supplied follow:]

JUNE 21, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

MICHAEL MONTELONGO.

cc: Senator John Warner,  
*Ranking Minority Member.*

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

What is your view of the extent to which these defense reforms have been implemented?

What do you consider to be the most important aspects of these defense reforms?

Answer. Yes, I fully support the Goldwater-Nichols Act. It enhanced the organization of the Department of Defense, establishes a clearer focus on military capabilities and responsibilities and facilitates improvement in the advice provided to the Secretary of Defense. Service capabilities are more integrated.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revision to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I'm not aware of specific proposals, but I do not think changes are contemplated in financial management. I believe strongly in the legislative process. I'm committed to fully supporting all laws as enacted.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Air Force (Financial Management & Comptroller)?

Answer. The duties and functions of the Assistant Secretary of the Air Force (Financial Management & Comptroller) are stated in Public Law 100-456, section 8022. As stated, the Assistant Secretary of the Air Force for Financial Management shall direct and manage financial management activities and operations of the Department of the Air Force, including ensuring that financial management systems of the Department of the Air Force are compliant. The Assistant Secretary of the Air Force for Financial Management shall supervise and direct the preparation of budget estimates of the Department of the Air Force and otherwise carry out, with respect to the Department of the Air Force, the functions specified for the Comptroller of the Department of Defense in section 137(c) of Title 10. Other duties include financial management systems responsibilities, asset management systems responsibilities, 5-year plan strategies, and providing the Secretary of the Air Force an annual report each year on the activities of the Assistant Secretary during the preceding year to include a description and analysis of the status of Department of the Air Force financial management.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. I am quite familiar with the military, having served 20 years as an Army officer. I have had invaluable opportunities to work with Pentagon personnel and many people on the Hill as a Special Assistant to the Army Chief of Staff and as a legislative fellow on the staff of Senator Kay Bailey Hutchison. My Bachelor of Science degree in General Engineering is from West Point and my MBA is from Harvard. The quantitative focus in my academic training will be of great use in the numerical world of financial management and in working financial systems reform.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Air Force (Financial Management & Comptroller)?

Answer. No. I believe I have the right abilities.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Roche would prescribe for you?

Answer. As noted above, I'd expect the Secretary would prescribe duties and functions commensurate with the duties and functions outlined in Public Law 100-456, Section 8022.

*Question.* In carrying out your duties, how will you work with: the Secretary of the Air Force; the Under Secretary of the Air Force; the Under Secretary of Defense (Comptroller); and the Assistant Secretaries of the Army and the Navy for Financial Management?

Answer. As the Secretary of the Air Force shared with this committee, if confirmed I'd expect to be a member of the nucleus of the Secretary's leadership team. Additionally, if confirmed, I look forward to working closely with the Under Secretary of Defense (Comptroller) and the Assistant Secretaries of the Army and the Navy for Financial Management. I think this administration, beginning with the President, has established an environment that encourages this collaboration. There are also various forums that have been created within DOD so the services can talk to OSD and each other and work issues.

#### CIVILIAN AND MILITARY ROLES IN THE AIR FORCE BUDGET PROCESS

*Question.* What will the division of responsibilities be between the Assistant Secretary of the Air Force (Financial Management & Comptroller) and the senior military officer responsible for budget matters in the Air Force's Financial Management & Comptroller office (the Deputy Assistant Secretary for Budget) in making program and budget decisions including the preparation of the Air Force Program Objective Memorandum, the annual budget submission, and the Future Years Defense Program?

Answer. If confirmed, I will directly supervise the Deputy Assistant Secretary (Budget). The Assistant Secretary for Financial Management has sole responsibility for all financial management functions including the preparation of the budget. Budgets are important statements about priorities regarding readiness, investment, and other key activities. Therefore, many personnel other than the Assistant Secretary for Financial Management play important roles during the preparation of the Air Force budget. Additionally, if confirmed, I will have formal oversight responsibility for the Secretary for the financial aspects of the POM preparation and the Air Force portions of the annual President's budget submission, along with all the entries in the Future Years Defense Program (FYDP).

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the next Assistant Secretary of the Air Force (Financial Management & Comptroller)?

Assuming you are confirmed, what plans do you have for addressing these challenges?

What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Air Force (Financial Management & Comptroller)?

What management actions and time lines would you establish to address these problems?

Answer. If confirmed, I believe a key challenge will be to improve financial management systems, both budget and finance systems. The services need to lay out a roadmap that supports the DOD plan. The DOD plan includes reducing the number of finance and accounting systems, and then improving the balance.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Air Force (Financial Management & Comptroller)?

Answer. Consistent with my previous response and if confirmed, the broad priorities I would focus on are 1) aggressively pursuing improvements in financial management systems and their related critical feeder systems to achieve auditable financial statements and compliant systems, 2) constructing budgets that meet Air Force priorities and fiscal constraints, and 3) executing budgets in a way that address rapidly changing environments and military needs.

#### BUDGETING FOR FLYING HOUR COSTS

*Question.* In recent years both the Air Force and the Navy budgets have consistently underestimated the cost of carrying out their planned training for aviation units, that is, their flying hours costs. The most frequently cited reasons for this are the increasing hourly cost to operate older aircraft and a budget process that does not adequately project and budget for likely cost increases above the most recent data on actual cost incurred.

What are your views on the reason for the consistent underfunding of flying hour costs and the steps that should be taken to correct it?

Answer. While I'm not familiar with the specific details of flying hour costs, if confirmed, I will make this issue a top priority. I understand the increased strain that

is placed on resources, budget planning and budget execution when actual costs significantly differ from budgeted costs.

#### FINANCIAL MANAGEMENT AND ACCOUNTABILITY

*Question.* DOD's financial management deficiencies have been the subject of many audit reports over the past 10 or more years. Despite numerous strategies and initiatives the Department and its components are undertaking to correct these deficiencies, financial data continues to be unreliable.

What do you consider to be the top financial management issues to be addressed by the Department of the Air Force over the next 5 years?

If confirmed, how do you plan to provide the needed leadership and commitment necessary to ensure results and improve financial management in the Air Force?

If confirmed, what are the most important performance measurements you would use to evaluate changes in the Air Force's financial operations to determine if its plans and initiatives are being implemented as intended and the anticipated results are being achieved?

*Answer.* I consider the top financial management issues for the next 5 years to parallel the priorities I noted previously. If confirmed, I'll provide the necessary leadership, strong commitment, and emphasis to the priorities outlined by the President, the Secretary of Defense and the Secretary of the Air Force. The key driver and critical success factor is sustained senior management level attention, and we have it. It is my understanding that the Secretary of Defense and the Under Secretary of Defense (Comptroller) are very concerned with financial management improvement and so is the Secretary of the Air Force.

#### COMPLIANCE WITH CHIEF FINANCIAL OFFICERS ACT

*Question.* The Chief Financial Officers Act requires the annual preparation and audit of financial statements for Federal agencies. However, the DOD Inspector General and GAO's financial audit results have continually pointed out serious internal control weaknesses concerning hundreds of billions of dollars of material and equipment, as well as billions of dollars of errors in the Department's financial records.

In your view, is the Air Force capable of meeting the requirements imposed by the Chief Financial Officers Act? If not, please describe the actions you think are necessary to bring the Air Force into compliance and the extent to which such actions are the responsibility of the Assistant Secretary of the Air Force (Financial Management & Comptroller) or other officials in the Department of the Air Force or the Department of Defense.

*Answer.* I think the Air Force is capable of meeting the requirements imposed by the Chief Financial Officers Act and I'm aware that other agencies have made great strides in this area. Since complying with the CFO Act is a legislative duty, if confirmed, I will make this a high priority item.

#### STANDARDIZATION WITHIN THE DEPARTMENT OF DEFENSE

*Question.* Many of the financial management initiatives currently underway within the Department of Defense (DOD) are centrally controlled by the Office of the Secretary of Defense, and most observers believe that financial management and comptroller practices should be standardized throughout the Department of Defense to the maximum extent possible.

What role do you feel the military departments should have in the decision-making process when DOD-wide financial management decisions are made?

What are your views on standardizing financial management systems (including hardware and software) and financial management practices across the Department of Defense?

Are there areas where you believe the Air Force needs to maintain unique financial management systems?

*Answer.* I believe standardization promotes efficiency and jointness. While OSD has key responsibility for DOD-wide financial management decisions, the services are important customers, paying a large amount of the cost, and must ensure necessary information is provided. I'm not currently aware of any areas where the Air Force needs to maintain unique financial management systems, but there may be areas where practical applications and cost require it. If confirmed, financial management systems will be one of my top priorities.

## RESPONSIBILITY FOR ACCURACY OF FINANCIAL DATA

*Question.* When the Department of Defense, through the Under Secretary of Defense (Comptroller) or the Defense Finance and Accounting Service, prepares financial or budget information for submission to the Office of Management and Budget or Congress, who will be responsible for the accuracy of such information concerning the Air Force?

Who will be responsible for ensuring that the financial management and accounting systems of the Department of the Air Force have the interfaces and internal controls needed to produce timely and accurate financial information?

*Answer.* I believe the responsibility must be shared. The Air Force is responsible for the accuracy and timeliness of its input information and for ensuring its financial regulations are followed. OSD, working through the Comptroller, and DFAS are responsible for developing and operating the systems and procedures that compile financial management information.

## FINANCIAL MANAGEMENT TRAINING

*Question.* In response to the Defense Acquisition Workforce Improvement Act of 1991, DOD has taken action directed at improving the professionalism of its acquisition workforce. This was brought about as a result of the need to better ensure that DOD's acquisition workforce was well versed in the rapidly changing technical skills needed to keep abreast of acquisition trends. A key part of the effort to upgrade the professionalism (technical currency) of DOD's acquisition workforce was the requirement that each acquisition official receive a minimum of 80 hours of continuous learning every 2 years. While DOD has stated that this should be a goal for financial management personnel, it has not made it a requirement because of uncertainties over whether necessary funding would be available.

What are your views on the merits of establishing a requirement that all Air Force financial management personnel receive a minimum of 80 hours of training every 2 years?

If confirmed, what actions would you take to ensure that the Air Force's financial management personnel keep abreast of emerging technologies and developments in financial management?

*Answer.* I support the requirement that all Air Force financial management personnel receive a minimum of 80 hours training every 2 years. If confirmed, I would ensure the Air Force's financial management personnel remain current with emerging technologies and developments in financial management by supporting programmed and work-in-progress initiatives.

## PPBS

*Question.* Recently, a commission which included a number of former Defense officials and former Comptroller General Charles Bowsher asserted that the Department's Planning, Programming, and Budgeting System (PPBS) is no longer functioning effectively.

What are your views on the PPBS process? Are there any changes that you would recommend?

*Answer.* If confirmed, I would welcome the opportunity to review the PPBS process. Because there are a number of agencies other than just the services that are involved with the process, I think a senior level group composed of key players should be formed to study the issue and prepare a report that may or may not recommend changes.

## GOVERNMENT PERFORMANCE AND RESULTS ACT (GPRA)

*Question.* If confirmed as the Assistant Secretary of the Air Force (Financial Management & Comptroller), what would your responsibilities be with respect to the requirements of the GPRA to set specific performance goals and measure progress toward meeting them?

What additional steps can the Air Force take to fulfill the goals of the GPRA to link budget inputs to measurable performance outputs?

*Answer.* Since the GPRA report includes the measurement and reporting of resources, the Assistant Secretary of the Air Force (Financial Management & Comptroller) has collateral responsibility with respect to GPRA publication; and of course, DFO requirements include broad performance measures. I believe that steps the Air Force can take to fulfill the goals of the GPRA include the judicious selection of measurable and meaningful metrics.

## INCREMENTAL FUNDING

*Question.* In the fiscal year 2000 budget request, the previous administration proposed to shift from the traditional full funding of military construction projects to an incremental funding approach. This proposal was unanimously rejected by the congressional defense committees.

What are your views regarding full-funding versus incremental funding of major weapons systems?

*Answer.* I completely support the full-funding policy that has served the department well for decades. There may, however, be an occasional need to waive that policy.

## SAVINGS FROM COMPETITION

*Question.* The Air Force and the other military departments have substantially increased the number of public-private competitions in recent years in order to achieve greater efficiency and effectiveness while reducing costs. Studies have shown that the military departments save money regardless of which side wins the competition.

Do you believe that decisions on whether to outsource work currently performed by government civilians should be made through public-private competition?

What steps should the Air Force undertake to measure the actual savings achieved after such competitions?

What are your views on the practice of including "funding wedges" in the budget that anticipate savings from public-private competition or other efficiencies prior to those savings actually being achieved?

*Answer.* I believe some tasks are so inherently governmental they should remain in the public arena. Otherwise, I believe competition produces greater benefits for reduced costs and I support competition. My view on the practice of "funding wedges" before those savings are achieved is that it forces an unrealistic amount for planned costs and consequently results in variances to budgeted costs.

## WORKING CAPITAL FUNDS

*Question.* Are there any changes you would recommend in the policies governing working capital funds in the Department of the Air Force?

Do you believe the scope of activities funded through working capital funds should be increased or decreased?

*Answer.* I am not currently familiar enough with working capital funds to recommend any changes. Based on my experience, I believe the scope of working capital funds is adequate. Especially in the areas of supply and depot maintenance, the working capital fund concept promotes competition and encourages a private sector method of business. This gives the customer visibility to costs so informed decisions and trade-offs can be made.

## OVERSIGHT OF SPECIAL ACCESS PROGRAMS

*Question.* As the Assistant Secretary of the Air Force (Financial Management & Comptroller), will you be responsible for the financial management of special access programs in the Air Force?

Are you satisfied with the oversight standards for the financial management of special access programs? Are these standards as stringent as those for other programs?

Does the Office of the Assistant Secretary of the Air Force (Financial Management & Comptroller) have sufficient cleared personnel and authority to review special access programs?

*Answer.* Yes. If confirmed, I will have responsibility for the financial management of all special access programs in the Air Force. My understanding is that the oversight standards for the financial management of special access programs are as stringent as those for other programs. The Office of the Assistant Secretary of the Air Force (Financial Management & Comptroller) has one office with appropriately cleared personnel, dedicated to the financial management of Air Force special access programs.

## LEGISLATIVE LIAISON RESPONSIBILITY

*Question.* Under the current organization of the Air Force, legislative liaison function affecting congressional appropriations committees are performed by officers under the supervision and control of the Air Force Comptroller.

If confirmed, what would be your relationship with the Chief of Legislative Affairs regarding budgetary and appropriations matters?

What requirements or procedures, if any, would you put into place, if confirmed, to ensure that financial information is made available on an equal basis to authorization committees?

Answer. If confirmed, I will be responsible for budget appropriations matters while the Chief of Legislative Affairs has responsibility for budgetary authorization matters. Our responsibilities are spelled out in accordance with Public Law. In the past, the two organizations have enjoyed a congenial relationship that I would expect will continue.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that the committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities, as the Secretary of the Air Force?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communication of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. Based on your private sector and military experiences, what is the most immediate change that must be made to improve financial management within the Department of Defense?

Mr. MONTELONGO. I believe we must give Congress and the American people full confidence in the way the department manages and accounts for funds—we must ensure the systems and processes are in place to achieve this goal. Also, our planning, programming and budgeting processes must remain relevant as we face the demands of the new century.

2. Senator THURMOND. As you may be aware, many of our military installations are in a poor state of repair due to the under-funding of the repair and maintenance accounts. Although the habitual under-funding of these accounts is a primary cause, diversion of funds to other areas is a contributing factor.

What controls would you initiate to limit the diversion of funds from the real property maintenance accounts?

Mr. MONTELONGO. Past experience tells me that this diversion is probably caused by efforts to meet primary mission requirements within a constrained funding level. By ensuring there is enough funding for all basic requirements—mission operations, operations support, people programs, physical plant, and modernization, we limit this migration of funds.

3. Senator THURMOND. Outsourcing of activities to the private sector seems to be the Department's immediate answer for achieving savings in the operating budget. In your personal view, how can we guarantee that these are long-term savings rather than a buy-in on the initial contract?

Mr. MONTELONGO. Certainly there is risk in making any long-term savings assumptions. However, I understand that the process the Department uses to outsource activities allows these decisions to be revisited in the future. At that time, if a function is more cost-effective to be accomplished in-house, it is returned to the government.

---

[The nomination reference of Michael Montelongo follows:]

## NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Michael Montelongo of Georgia, to be Assistant Secretary of the Air Force, vice Robert F. Hale.

[The biographical sketch of Michael Montelongo, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF MICHAEL MONTELONGO

Michael Montelongo is currently the Customer Care Consulting Manager at Ernst & Young in Atlanta, Georgia. Prior to that he was the Operations Consulting Manager at Ernst & Young from 1999 to 2000.

Mr. Montelongo was the Chief of Staff and Director of Small Business Services at BellSouth from 1996 to 1998. He was a Congressional Fellow in the U.S. Senate from 1995–1996, a Special Assistant to the Army Chief of Staff from 1994–1995. From 1992 to 1994 he was the Chief of Staff and General Manager for the U.S. Army at Fort Bliss, Texas, a Senior Analyst and Associate Professor at the U.S. Military Academy from 1988 to 1991.

Mr. Montelongo graduated from U.S. Military Academy with a B.S. degree in 1977 and from Harvard Business School with a M.B.A. in Corporate Strategy, Finance in 1988.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Michael Montelongo in connection with his nomination follows:]

## UNITED STATES SENATE

## COMMITTEE ON ARMED SERVICES

Room SR–228

Washington, DC 20510–6050

(202) 224–3871

## COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A–9, B–4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Michael Montelongo.

Michael Montelongo, Jr.

Michael (“Mike”) Joseph Montelongo.

**2. Position to which nominated:**

Assistant Secretary of the Air Force (Financial Management and Comptroller).

**3. Date of nomination:**

June 12, 2001.

**4. Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

August 20, 1955; New York, N.Y.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to the former Debra Annette Tenison.

**7. Names and ages of children:**

Amanda K. Montelongo, 11.

**8. Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

U.S. Army Command & General Staff College—8/91–6/92, Diploma—6/92.

Harvard Business School—8/86–6/88, MBA—6/88.

U.S. Military Academy—7/73–6/77, BS—6/77.

Xavier High School—9/69–6/73, Diploma—6/73.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Description	Employer	Location	Dates
Music Minister .....	Self-Employment .....	St. Peter Chanel Catholic Church Roswell, GA.	4/01–Present
Music Minister .....	The Catholic Church of St. Ann.	Marietta GA .....	9/00–Present
Music Minister .....	Self-Employment .....	The Cathedral of Christ the King, Atlanta, GA.	8/00–Present
Sales Executive Consulting Manager.	Cap Gemini Ernst & Young, U.S. LLC.	Atlanta, GA .....	5/00–Present
Consulting Manager .....	Ernst & Young LLP .....	Atlanta, GA .....	3/99–5/00
Staff Director .....	BellSouth .....	Atlanta, GA .....	11/96–10/98
Congressional Fellow .....	U.S. Army .....	U.S. Senate, Washington, DC	7/95–10/96
Special Assistant .....	U.S. Army .....	Pentagon, Washington, DC ...	4/94–7/95
Operations Officer, Executive Officer.	U.S. Army .....	Fort Bliss, TX .....	7/92–4/94
Student .....	U.S. Army .....	Fort Leavenworth, KS .....	7/91–6/92
Assistant Professor .....	U.S. Army .....	West Point, NY .....	1/91–6/91

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

BellSouth Telecommunications, Inc., Atlanta, GA, Consultant (Cap Gemini Ernst & Young).

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Harvard Business School Club of Atlanta, Vice President for Community Affairs.

Georgia Hispanic Voter Registration Campaign, Board of Directors.

Association of West Point Graduates Minority Outreach Committee, Member.

National Society of Hispanic MBAs, Member.

TEC Ministry and Catholic Parishes, Music Director.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Spirit of TEC Award (Service to youth ministry program).

Department of the Army Legion of Merit, Meritorious Service Medal, Commendation Medal.

Congressional Fellowship.

Army Civil Schooling Fellowship.

Service Academy and ROTC Scholarships.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Case study co-author of "Florida Power Light Quality Improvement Story Exercise" for Harvard MBA curriculum. Published in 1988.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

MICHAEL MONTELONGO.

This 15th day of June, 2001.

[The nomination of Michael Montelongo was reported to the Senate by Chairman Levin on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

---

[Prepared questions submitted to John J. Young, Jr., by Chairman Levin prior to the hearing with answers supplied follow:]

JUNE 21, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Respectfully,

JOHN J. YOUNG, JR.

cc: Senator John W. Warner,  
*Ranking Minority Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been accepted and implemented and that they have clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs. The effectiveness of our joint warfighting forces has improved as a result of these reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I believe the most significant value of these reforms to be improved joint warfighting capabilities. Our military is stronger and more lethal because our services can work better together. If confirmed, I will maintain and extend the Navy's commitment to the principles of joint warfare including interoperability and joint doctrine.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* If confirmed, I expect to play an active role in this administration's efforts to continue defense reforms. The Department has made excellent progress on acquisition reform and much of this program is due to the support of Congress in passing historic reform legislation. I will continue to emphasize reform and work with Congress, if and when additional legislation is required.

I believe the Department will continue to need Congress' help over the course of the next several years as we continue to work this area. Legislative proposals may be necessary, but I am not aware of any in particular at this time. Most importantly, the Department will need your help in resisting new restrictions.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

*Answer.* It is my understanding that, at the present time, the Assistant Secretary of the Navy (Research, Development, and Acquisition) serves as the Navy Acquisition Executive and has the authority, responsibility and accountability for all acquisition functions and programs within the Department of the Navy.

*Question.* What background and experience do you have that you believe qualifies you for this position?

*Answer.* I believe that my responsibilities and experience as a professional staff member on the Senate Appropriations Defense Subcommittee as well as experience working in a variety of positions in private industry provides me with a solid background in research, development, and acquisition issues. In addition, my experience reviewing the DOD's most advanced procurement programs and research projects dovetails perfectly with the Department of the Navy's move toward a high technology future.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Navy for Research, Development, and Acquisition?

*Answer.* I am professionally and technically prepared to assume the duties of the Assistant Secretary of the Navy (Research, Development, and Acquisition). If confirmed, I expect to have a close working relationship with the Secretary and the Under Secretary of the Navy. I would be aided in my duties with the expertise resident in the strong acquisition management team that currently exists within the Department. However, where opportunities exist for strengthening the team, I would seek to do so with members of the career workforce as well as individuals from industry and academia.

Furthermore, I plan to establish a close working relationship with the operational side of the Navy and Marine Corps team including the Chief of Naval Operations, Commandant of the Marine Corps, as well as others. We will need to understand each others' problems and concerns and how we can help each other and ultimately provide sailors and marines with the required systems and platforms that are effective, reliable, and affordable.

Lastly, I plan to establish a close working relationship with my counterparts in the Army and Air Force as well as the Under Secretary of Defense for Acquisition, Technology and Logistics to ensure coordination of key issues. I also expect to personally work with the Directors of the Ballistic Missile Defense Organization and the Defense Advanced Research Projects Agency to advance the warfighting capabilities of naval systems.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Rumsfeld would prescribe for you?

*Answer.* The Secretary's Management Committee consisting of the Deputy Secretary of Defense, three Service Secretaries, and Under Secretary of Defense for Acquisition, Technology and Logistics has been discussed as an operating model for the Department of Defense. If implemented by the Secretary of Defense, this may result in the assignment of additional duties. However, at this point in time, I am not aware of any other additional duties.

*Question.* In carrying out your duties, how will you work with the following: the Under Secretary of Defense (Acquisition, Technology, and Logistics); the Secretary of the Navy; the Under Secretary of the Navy; and the other Navy Assistant Secretaries.

*Answer.* If confirmed as the Assistant Secretary of the Navy for Research, Development, and Acquisition, I plan to establish and maintain close relationships with each of those identified below to execute the best possible acquisition program for the Department.

If confirmed as the Assistant Secretary of the Navy (Research, Development, and Acquisition), I would represent the Department of the Navy to the Under Secretary of Defense on all matters relating to Navy acquisition policy and programs. In addition, the Assistant Secretary of the Navy (Research, Development, and Acquisition), as the Service Acquisition Executive, provides recommendations on all Navy ACAT ID programs to the Under Secretary of Defense.

Under the Goldwater-Nichols Act, the Secretary of the Navy has explicit authority to assign such of his powers, functions, and duties, as he considers appropriate to the Under Secretary of the Navy and to the Assistant Secretaries. It is my understanding that the Secretary of the Navy has made the Assistant Secretary of the Navy (Research, Development, and Acquisition) responsible to ". . . establish policy and procedures and manage all research, development, and acquisition . . ." within the Department and serve as the Navy's Service Acquisition Executive and Senior Procurement Executive, among other duties. If confirmed, I will work closely with the Secretary and Under Secretary in furtherance of these assignments and duties.

As the Assistant Secretary of the Navy (Research, Development, and Acquisition) has responsibility for the Navy's acquisition system, the three other ASNs have responsibility for their respective areas: Manpower and Reserve Affairs, Installations and Environment, and Financial Management and Comptroller. If confirmed, I will work with the other ASNs on joint issues and on matters affecting their particular responsibilities as appropriate.

*Question.* The Secretary of Defense has determined that the Secretaries of the military departments will represent their departments on the Defense Acquisition Board. This role has traditionally been performed by the Assistant Secretaries of Research, Development, and Acquisition.

How do you believe this change will affect the acquisition role of the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

Answer. My understanding is that the Service Secretaries' participation in the Defense Acquisition Board process does not change the relationship between them and their Service Acquisition Executives.

*Question.* In your view, is this change consistent with the role of the Assistant Secretary of the Navy (Research, Development, and Acquisition) as the Service Acquisition Executive?

Answer. Yes.

*Question.* To whom will the Navy's Program Executive Officers report on acquisition matters—to the Secretary of the Navy, the Assistant Secretary of the Navy (Research, Development, and Acquisition), or both?

Answer. If confirmed, I do not anticipate changing the reporting process for acquisition matters. I understand that the Navy Program Executive Officers report to the Assistant Secretary of the Navy (Research, Development, and Acquisition), and the Secretary of the Navy is kept aware of, and is engaged in, program matters.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

Answer. I believe the most important challenge facing the Department of the Navy today is how to maintain our Nation's naval forces in view of a rapidly evolving threat and today's fiscal realities. If confirmed as the Assistant Secretary of the Navy (Research, Development, and Acquisition), my challenge will be to integrate the research, development, and acquisition functions in the context of this complex equation. These critical challenges are:

- (1) Maintaining our technical advantage over all adversaries;
- (2) Developing and fielding affordable systems; and
- (3) Maintaining a viable industrial and technological base.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. These are interrelated challenges, and cannot be resolved individually. They must be addressed in the context of improving the way the acquisition community and the government conducts business.

First, if confirmed, I will be an active participant in the acquisition reform initiatives being undertaken by the Secretary of Defense and the Secretary of the Navy. Only through comprehensive reforms can the barriers between the defense and commercial sectors of the economy be reduced or eliminated. Better integration of the defense and commercial sectors will leverage our Nation's technology base and reduce overhead costs. This will result in a technically superior and affordable product for our warfighters.

I will work to ensure that the Navy and Marine Corps establish an achievable balance between resources and requirements. Once this balance is achieved, it will be important to properly fund the development and production efforts and avoid the funding disruptions that add serious inefficiency to fielding new capabilities. In addition, I will work to continue efforts to measure accurately the value delivered for each investment and procurement dollar.

Second, I also believe we must ensure that our infrastructure and workforce capabilities respond to the changing world threat environment. If confirmed, I will work with the Secretary of the Navy to properly size our R&D and acquisition infrastructure to meet this new world reality.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

Answer. At this time, as the prospective Assistant Secretary of the Navy (Research, Development, and Acquisition), I cannot comment on what may be the most serious problems in the performance of the functions of the position.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. If confirmed and problems were to arise, I would do my best to solve problems as expeditiously as possible to maintain the integrity of the acquisition process.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues, which must be addressed by the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

Answer. I believe that the set of priorities stated by the Secretary of the Navy represent an excellent framework for the Department. These priorities include: im-

proving the Navy's combat capability; enriching the lives of sailors and marines; swiftly incorporating technology across the total operation; and dramatically improving the Department's business practices. If confirmed, I will work hard to address these challenging priorities as part of the Department's acquisition process.

#### STREAMLINING THE ACQUISITION PROCESS

*Question.* Both Secretary Rumsfeld and Under Secretary Aldridge have indicated that they believe that there is a compelling need to streamline the acquisition process to reduce the fielding times for new weapons systems and capabilities.

What specific steps could the Navy take to reduce cycle time for major acquisition programs?

*Answer.* I believe that there are three key steps that we must take to reduce cycle time.

First, we must employ demonstrated technology, military and commercial, as much as possible. We should use all available techniques and resources in order to identify developing and maturing technologies that can be used in our weapon and combat control systems.

Second, we should time phase our set balanced, achievable requirements in order which will permit the Navy and Marine Corps to employ evolving technologies and to avoid applying technologies that have not been proven in the planned or near planned operating environment.

Third, we must efficiently apply simulations, engineering test beds, and integrated testing and evaluation to rapidly deliver products and insert new technologies as they mature.

*Question.* Do you believe that incremental or phased acquisition approaches could help address this problem?

*Answer.* Yes, I believe incremental, phased, evolutionary acquisition or time-phased approaches, whatever term you choose to use, can be important and useful approaches to placing the best capabilities in the hands of our warfighters as rapidly as possible.

*Question.* Some would point to the testing process as an overall area that should be scrutinized in this effort to reduce these cycle times. However, the increasing complexity and interaction of complex systems would tend to argue for achieving higher confidence during testing that these systems will work as advertised.

If you are confirmed as the Assistant Secretary of the Navy (Research, Development, and Acquisition), how would you propose to achieve the appropriate balance between the desire to reduce acquisition cycle times and the need to perform adequate operational testing?

*Answer.* I agree that testing is critical to providing confidence in new weapons systems that our sailors and marines deserve. A review of all acquisition processes (including testing) and process changes is necessary to improve acquisition cycle times. If confirmed, I would work to ensure an appropriate balance between reducing acquisition cycle times and adequate operational testing by capitalizing on the benefits of spiral development and new testing technologies.

*Question.* Do you anticipate the need for changes in legislative or regulatory authority?

*Answer.* As I mentioned earlier, I expect to play an active role in this administration's efforts to continue defense reforms. The Department has made excellent progress on acquisition reform and much of this is due to the support of Congress in passing historic reform legislation. If confirmed, I will continue to emphasize reform and work with Congress, if and when additional legislation is required.

*Question.* One of the features of the Department's acquisition system that is frequently criticized is the extensive "concurrency," or overlap, between the development and production phases of major weapon system acquisition programs.

Where and under what conditions should concurrency be used in the development and production phases of Navy's major weapon system acquisition programs?

*Answer.* Concurrency, or the overlap of program development onto production, must be carefully considered. In general, complex programs that attempt to complete development and operational testing without demonstrating technical maturity may increase program risk by incurring additional cost and delivery delays. A degree of concurrency may be acceptable between development and production phases when the remaining development is very low risk. It should be used in major weapon system acquisition programs when there are near-term threats that must be addressed, and suitable technology is available to address the threat. It is one methodology that may help reduce cycle time. For example, combining developmental testing and operational testing—when it makes sense and while still allowing for an independent assessment—is a form of concurrency that can streamline acquisi-

tion. If confirmed, I will strive to ensure concurrency is used only when appropriate to reduce cycle time without undue risk.

*Question.* Do you believe there has been too much concurrency?

*Answer.* The answer depends on the specific acquisition program. The amount of concurrency in a program is a business judgment—balancing risk, cost, production line flow, and manufacturing and design team personnel workload against (technology maturity, etc.) and early fielding of (cycle time reduction) capability for the warfighter. Concurrency is not always bad. When operational requirements can be met with low risk technologies such as commercial items, concurrent development and production concepts may be effectively used within acceptable schedule and cost risk.

*Question.* If so, what steps should be taken to reduce such concurrency?

*Answer.* Acquisition strategies should specifically address the benefits and risks associated with reducing lead-time through concurrency, and the including risk mitigation and testing planned, to compensate for the use of a concurrent development strategy if concurrent development is used. During the milestone review process, I believe there must be an increased emphasis placed on the review of technical risk, cost management, and schedule performance associated with concurrency for those programs using a concurrent strategy. If confirmed, I will work to ensure that concurrent development is used only where appropriate.

*Question.* Department of Defense Instruction 5000.2, which governs the acquisition of major weapon systems, was recently rewritten to require that new technologies be demonstrated in a relevant environment (preferably an operational environment) before they may be incorporated into DOD acquisition programs.

Are you familiar with the revised version of DOD Instruction 5000.2, and if so, what are your views on this revision?

*Answer.* Yes, I am familiar with the revised version of DOD Instruction 5000.2. I believe that the revision supports “spiral acquisition” and provides the testing requirements that will ensure sailors and marines receive weapons systems that meet their needs in an operational environment.

*Question.* Do you believe that the process of testing and demonstrating new technologies is more efficiently conducted in the context of major acquisition programs, or in stand-alone technology program?

*Answer.* I believe that testing and demonstrating new technologies is appropriate in both stand-alone technology programs as well as major acquisition programs. To ensure the efficient use of our limited resources, new technologies must demonstrate their value before incorporating them into weapon systems. Once incorporated into a weapon system, they must demonstrate that they perform as intended and interact properly with the more complex system of systems. If confirmed, I will seek to ensure the proper testing and evaluation of new technologies.

*Question.* Would the Navy’s major acquisition programs be more successful if the Department were to follow the commercial model and mature its technologies with research and development funds before they are incorporated into product development programs?

*Answer.* The increasing capability, complexity and interdependency of modern weapons are a result of the application of new technologies. As I mentioned previously, I believe that demonstrating new technologies is appropriate in both technology programs as well as major acquisition programs. If confirmed, I will work to ensure that new technologies receive the appropriate research and development funding.

#### TEST AND EVALUATION

*Question.* The Department has frequently been criticized for failing to adequately test its major weapon systems before they are put into production.

Would you agree that a strong, independent Director of Operational Test and Evaluation is critical to the success of the Department’s acquisition program?

*Answer.* If confirmed, I will review roles and criticality of all participants in the Navy acquisition process. The critical ingredient to the success of Navy acquisition programs is a disciplined process for design, development, testing, and fielding. Success in this process also requires both adequate funding and sufficient time to complete thorough testing. If confirmed, I will seek to ensure realistic and complete testing of systems in development. The DOD Director of Operational Test and Evaluation provides the Department with an important assessment of the adequacy of our operational testing.

*Question.* Would you recommend that the Department proceed with an acquisition program in the absence of a determination by the operational test agencies that the system is effective and suitable for combat?

Answer. No, because under normal circumstances, I believe it would be unacceptable to proceed with an acquisition program that is not operationally effective and suitable. Further, it is my understanding that the Law 10 U.S.C. 2399 does not permit proceeding in the "absence" of a favorable operational test agency determination (Title 10 U.S.C.—Sec 2399, Para. 2.(b) 1.(1) and (b) 2.(2) 1.(A) and 2.(B)) and it would be wrong to field a system that has not been tested. In rare instances where there is an urgent and immediate need for a system to counter an emergent threat, there are procedures for the Milestone Decision Authority to determine necessary testing in order to meet the threat.

#### ACQUISITION WORKFORCE

*Question.* There has been considerable pressure to reduce acquisition organizations on the basis of absolute numbers. DOD has reduced its acquisition workforce approximately 50 percent, from the end of fiscal year 1990 to the end of fiscal year 1999, while the workload has essentially remained constant, and even increased by some measures.

Are you concerned that reductions to the acquisition workforce will have a negative effect on effective program management, and if so, how do you plan to address this problem?

Answer. If confirmed, I intend to review this issue carefully and develop appropriate strategies to ensure that the acquisition workforce continues to meet the evolving needs of the Department.

*Question.* As the Department continues to emphasize contracting out and competitive sourcing, the skills, training and experience of the acquisition workforce will be critical in effectively managing these contracts. In addition, the Department's Acquisition Workforce 2005 Task Force has reported that DOD will be faced with a significant demographic challenge as 50 percent of the acquisition workforce will be eligible to retire in the next 5 years.

Does current acquisition workforce have the quality and training to adapt to new acquisition reforms, as well as to the increased workload and responsibility for managing privatization efforts?

Answer. In my view, the workforce must become increasingly knowledgeable in all aspects of acquisition reform including privatization efforts. If confirmed, I will support the Department of the Navy's current emphasis on training and continuous learning for the acquisition workforce, with a focus on management and leadership, as well as technical competencies.

*Question.* What is your view of the recommendations of the Acquisition Workforce 2005 Task Force and what role do you expect to play in implementing these recommendations?

Answer. If confirmed, I will examine the recommendations of the taskforce to develop a strategy to shape the Department's acquisition workforce of the future.

#### ACQUISITION PROCESS PROBLEMS

*Question.* The committee has been concerned about schedule and cost problems in a number of Navy acquisition programs. The acquisition system seems to have been surprised by some of these problems. Various Department officials have testified that the implementation of earned value management systems and integrated product teams should have provided greater visibility into cost and schedule, but there would appear to have been some shortcomings in that regard.

What structural changes or policy changes to you feel are appropriate to help avoid similar problems on current and future Navy programs?

Answer. I share the committee's view of the overall importance of this area. If confirmed, one of my primary thrusts will be to ensure that the Navy's acquisition programs are well-managed and that cost and schedule problems are kept to a minimum. Earned Value Management and Integrated Product Teams are powerful tools for achieving those objectives. I believe that it would be appropriate to review the Navy's acquisition programs and determine how Earned Value Management and Integrated Product Teams are being employed prior to considering any structural or policy remedies.

Acquiring a grasp of the true state of the Navy's acquisition programs, as well as an understanding of the underlying causes of their condition, are essential precursors to improving performance.

#### SHIP ACQUISITION INFORMATION

*Question.* In the past, the Navy has not provided Congress sufficient "heads-up" on key information regarding ship acquisition costs when known cost differences occur.

What will your policy be on providing Congress information in a timely manner on cost changes regarding ship acquisition programs?

Answer. If confirmed, my policy will be to provide Congress information on cost performance changes on ship acquisition programs in conformance with congressional statutory requirements in a timely manner.

*Question.* The Navy's DDG-51 Industrial Base Study update provided to Congress in October 2000 and the Analysis of Certain Shipbuilding Programs provided in May 2001 were required by Public Law 106-398. Both studies fell short of the requirements stated in the law.

What will your policy be on providing Congress the information it requires and specifically how do you intend to change the process to ensure that required reports provide the information required on the date required?

Answer. If confirmed, my policy will be to provide Congress the information required by the requested date. I will review and implement appropriate internal process improvements as needed to meet congressional information deadlines.

The Navy has recently rebaselined a number of acquisition programs. There are some programs that have been rebaselined more than once in the past 3 years.

*Question.* What do you intend to do to review the process used to monitor program managers and the metrics they use to determine problem areas and progress of programs?

Answer. If confirmed, I will examine the issue and if required develop metrics to evaluate programs both on a day-to-day management basis as well as at the corporate level.

*Question.* What initiatives do you intend to take to correct the problems with the ship acquisition cost estimates that result in cost differences as the FYDP outyears become budget years?

Answer. If confirmed, I will work with the senior leadership of the Department to develop a better budgetary process that would accurately reflect shipbuilding cost estimates for out-year ships. My goal would be to correct the current process to ensure that costs estimates are accurate and that budgets support these estimates.

#### AEROSPACE INDUSTRIAL BASE

*Question.* The Department has decided to make a winner-take-all selection for moving to engineering and manufacturing development phase of the Joint Strike Fighter program. This raises questions about the future viability of the aircraft industrial base.

To what extent do you see a connection between maintaining a healthy aerospace production base and maintaining superior warfighting capabilities?

Answer. The Navy Department has a vital interest in the concern assessing and ensuring that the aerospace industrial base has its ability to produce the aircraft and weapon systems needed by the Navy and Marine Corps in the 21st century. The health of the aerospace industrial base is a critical component to the future of our combat capabilities. If confirmed, I will strive to identify aerospace industrial base issues that may impact Navy acquisition programs and work with the OSD team and Congress to determine how best to resolve those issues.

#### DEPOT MAINTENANCE

*Question.* Some defense contractors have argued for a cradle-to-grave approach where the production facility becomes the maintenance facility over the life of a system. Others argue that there are certain capabilities that must be maintained in government-owned facilities to ensure that the services will have ready access to this capability during a national emergency.

How do you believe that the government should decide on the appropriate balance between these competing views of the maintenance strategy?

Answer. I am aware that this issue has been studied numerous times before, both internal and external to the Department of Defense. While some additional savings may be achieved through further outsourcing, if I am confirmed, I would not support outsourcing decisions based solely on unsubstantiated or marginal savings. Alternately, I believe that outsourcing should be considered as a serious option when such a strategy is appropriate and can reduce cost and ensure weapon system performance and readiness.

I believe that it is important to remember that depot maintenance is a core capability (measured in direct labor hours), which must be maintained in government-owned facilities to ensure that the services will have ready access during a national emergency. There are unacceptable risks associated with the wholesale outsourcing of all depot maintenance to the private sector.

I am aware that there are public laws that impact this balance. For example, 10 U.S.C. 2464 requires DOD to maintain or establish core logistics capabilities to support weapons systems within 4 years of the initial operating capability. 10 U.S.C. 2466 requires that at least 50 percent of each service's depot maintenance be accomplished by government employees (measured in dollars). If confirmed, I will work to ensure that the Department of the Navy complies with these statutes.

#### MODERNIZATION AND RECAPITALIZATION

*Question.* The Navy has just over 300 ships and the average age of Navy aircraft is approaching 20 years.

Do you believe that the Navy can meet its modernization and recapitalization goals without a significant infusion of funds?

*Answer.* I have been advised that the Department has had to realign significant funding from its recapitalization and modernization programs in order to meet increasing readiness and manpower demands. As a result, the shipbuilding and aircraft procurement accounts are substantially below the levels required to maintain our current force structure. Additionally, modernization programs have been reduced to historically low levels.

*Question.* What, in your view, are "leap-ahead" technologies that the Navy is or should be pursuing?

*Answer.* Today's complex threat environment, coupled with the accelerating pace of technological progress and the globalization of commerce, requires that the Navy pursue a variety of technology options in order to be ready for an uncertain future. It also means that what appear today to be "leap-ahead" technologies may not look that way tomorrow. I believe that enhancing the range, survivability, and precision of Navy and Marine Corps weapons and weapon platforms will allow the Navy and Marine Corps to defeat all future adversaries. If confirmed, I will work with both the Navy's in-house research organizations, the other services and defense agencies, and industry technology leaders to identify those technologies that have the highest payoff and transition them to the warfighter in a timely manner.

#### MULTI-MISSION MARITIME AIRCRAFT

*Question.* The Navy has announced that it is embarking on a multi-mission maritime aircraft (MMA) program, with procurement scheduled to commence later in this decade. At that time, the Navy will still be procuring the F/A-18 E/F and will be about to procure the Joint Strike Fighter.

Do you think procurement of another major platform at the same time is possible?

*Answer.* Clearly, there are many programmatic and fiscal challenges facing the naval services and Department of Defense at this time. It is my understanding that the Navy and OSD continue to study a variety of MMA options to keep procurement and operating costs within projected fiscal constraints. My experience with remanufacture programs leads me to believe that new procurement may be a more economical solution than remanufacture of legacy airframes. If confirmed, I will work with the senior Department leadership to structure an appropriate program that meets warfighting requirements within fiscal constraints.

#### V-22

*Question.* The V-22 Osprey program is at a critical juncture. If the recommendations of the Panel to Review the V-22 Program are implemented, there will be delay in the program, with redesign and follow-on testing required.

How do you perceive your role, if confirmed, in ensuring that this program is adequate to ensure a safe, effective, and suitable platform is delivered to the Marine Corps and the Special Operations Command?

*Answer.* I have not had an opportunity to review the V-22 Program in detail regarding the implementation of the Panel recommendations. If confirmed, I will work closely with the V-22 Program Executive Committee to establish the proper level of program oversight, and I will execute all of my assigned and delegated responsibilities and authorities to ensure a safe, effective and suitable V-22 is produced.

#### SCIENCE AND TECHNOLOGIES ISSUES

*Question.* Under Secretary Aldridge has testified that the Department needs to be increasing its level of science and technology to a level roughly equivalent to 2.5 to 3 percent of the total DOD budget.

Do you support such an increase in the technology base funding?

Answer. Naval science and technology activities are important to the Navy, Marine Corps and our Nation. If confirmed, I will review the S&T budget to ensure the Department and the Nation's needs are met.

*Question.* Over the last 2 years, the Navy has undertaken a lengthy planning process to identify "grand challenges" and "future naval capabilities" to serve as a focus for prioritizing future S&T program needs.

Are you familiar with this review, and if so, do you support it?

Answer. I am not familiar with this review. If confirmed, I will review both the Grand Challenges and the Future Naval Capabilities science and technology programs.

*Question.* Do you expect this planning process to result in a significant realignment of Navy science and technology budgets for fiscal years 2002 and 2003?

Answer. I have no insight into the fiscal years 2002 and 2003 budget process of the Department of the Navy, so I cannot provide a response to this question.

*Question.* Over the last 3 years, a number of outside panels have been highly critical of the performance of the service laboratories. These panels have indicated that the civil service system is slowly calcifying the defense laboratories and depriving them of the new talent that they need to continue to make a valuable contribution to defense science and technology. Congress has enacted a number of legislative provisions to try to address these problems.

Do you believe that these legislative provisions are having the desired effect, or do we need to consider additional measures, such as the partial privatization of one or more laboratories?

Answer. I believe there will always be a need for a permanent cadre of world-class scientists and engineers in the DOD labs and centers. While some legislative provisions have helped, the current Federal system may no longer be capable of providing or retaining the very best scientists and engineers in this economy. As such, additional legislation may be necessary. If confirmed, I would work with the other services, OSD and Congress to develop proposals that will improve the laboratory system.

*Question.* Are there other steps that you would recommend to increase the flexibility and performance of the defense laboratories?

Answer. If confirmed, I will examine methods to increase the performance of the Navy's laboratories and centers.

*Question.* The Department of Defense has attempted to make increasing use of technologies developed in the private sector. These technologies frequently need to be adapted for defense use—either at the front end, as they are being developed, or at the back end, after they have been developed. The Dual Use Applications Program (DUAP) and the Commercial Operations and Support Savings Initiative (COSSI) have been funding mechanisms through which DOD has supported such adaptations.

Are you familiar with the DUAP and COSSI programs, and do you know if the Department plans to continue funding these programs?

Answer. I am familiar with the Department's DUAP and COSSI programs. I have no insight into the budget process of the Department of the Navy, so I cannot provide a response to this question.

#### OCEAN SCIENCES AND POLICY

*Question.* There remains an essential need to maintain assured access in the littoral regions of the world.

How do you intend to assure there are adequate resources available for such critical ocean science issues as anti-submarine warfare, mine warfare, ocean surveillance, and environmental prediction capabilities?

Answer. I understand that the research conducted in ocean science is transitioned to the Navy's operational community. This is accomplished by close working relationships between the research community and the operational program sponsors, including the Oceanographer of the Navy, who identify operational requirements. As long as these important mission areas are supported by operational requirements, if confirmed, I will support the allocation of resources to continue the science necessary to support them.

*Question.* Do you support the need for a robust Navy budget for basic and applied research? In this regard, what new priorities in the ocean sciences would you address?

Answer. Maintaining a robust naval science and technology program is important to the future of our Navy, Marine Corps and our Nation. If confirmed, I will become familiar with the Department's ocean sciences program. In general, I believe that

important priorities for all science and technology programs are maintaining strong support for the academic community and building industry involvement.

*Question.* The upcoming Presidential Commission on Ocean Policy presents the unique opportunity to assess our national ocean programs.

What is the Navy doing to work with other Federal agencies to support this new commission?

*Answer.* It is my understanding that the Chief of Naval Operations has designated the Oceanographer of the Navy as his principal point of contact for the Commission. Both the Oceanographer of the Navy, and the Office of Naval Research are coordinating their activities with other agencies, through formal participation in the Interagency Working Group of the National Oceanographic Partnership Program, as well as the State Department Ocean Policy Interagency Working Group.

*Question.* What role could the National Ocean Research Leadership Council (NORLC) play to ensure that the Commission is a success?

*Answer.* I am not familiar with the NORLC. If confirmed, I will gain an understanding of the Council and the role it plays in the area of ocean research.

*Question.* The National Oceanographic Partnership Program (NOPP) recently took the first steps to manage an evolving integrated ocean observation system.

Will you support this NOPP effort? Will your support include financial commitment?

*Answer.* I am not familiar with the NOPP. If confirmed, I will gain an understanding of the Program and the role it plays in the area of ocean research.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Navy (Research, Development, and Acquisition)?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

#### [Questions for the record with answers supplied follow:]

##### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

1. Senator THURMOND. The Department has identified the aging acquisition workforce as one of the critical issues facing the Department. What is your understanding of the problem? What recommendations do you have to resolve this problem?

Mr. YOUNG. It is my understanding that the expected large-scale retirements of the "baby-boomer" generation, coupled with a tight labor market pose challenges to sustaining workforce capabilities in the near future. It appears that the Department no longer has the on-board strength in the younger age groups to naturally replace employees as they retire or as they simply leave for other work.

To improve this situation, I believe the focus needs to be on both attrition and retirement. We must reinvigorate the hiring of new college graduates as well as more experienced people, and we must take advantage of the best human resource and business management practices available. As an increasing proportion of our workforce has the opportunity to retire in the next decade, we must prepare for an orderly transfer of knowledge. We must offer opportunities for professional growth and continue to provide interesting and challenging work to hire and retain the best and brightest.

2. Senator THURMOND. Although our Navy's nuclear submarine fleet is the envy of all nations, most nations prefer conventional power submarines because they are cheap and easy to maintain. Since there is a significant market for these conventional submarines, are you aware of any interest by U.S. shipyards to build conventional submarines for foreign military sales and would you support such a program?

Mr. YOUNG. Senator, there are two circumstances in which U.S. shipyards are expressing interest regarding the construction and export of conventional submarines for foreign customers. The most recent circumstance involves the decision made during the 2001 Taiwan Arms Talks this past April to approve the release of diesel submarines to Taiwan. Northrop Grumman (Ingalls Shipbuilding) possesses a marketing license to discuss potential opportunities with Taiwan. General Dynamics (Electric Boat) has also indicated they will be approaching the USN in the near future for a marketing license. In the second circumstance, which is not contemplated as a foreign military sale, Northrop Grumman (Ingalls Shipbuilding) is seeking to construct, under license at its yard in Mississippi, two submarines of Dutch design for Egypt.

I would support the construction of conventional submarines in U.S. shipyards for export with the adherence to critical submarine technology transfer restrictions. There must be adequate measures in place to protect against the transfer of nuclear submarine technology to foreign nations. In addition, there are other sensitive submarine construction and design technologies that make modern U.S. submarines superior to the rest. It is for these reasons that our critical submarine technologies must be protected. Such a task is challenging, given that our submarine industry's experience base has been exclusively in nuclear submarine design and construction for the past 40 years. This issue was addressed in detail in the Secretary of the Navy's 1992 Report to Congress.

3. Senator THURMOND. What are your views on the vitality and competitiveness of our shipbuilding industrial base?

Mr. YOUNG. Since 1990, the Navy's active fleet and Navy shipbuilding infrastructure have seen considerable downsizing: from 550 ships to 316 ships today and from 14 private shipyards to 6 private shipyards. During the 1980s, the Navy was ordering an average of about 20 ships per year. That average has now fallen to about eight ships per year during the 1990s leaving the shipbuilding industry with overcapacity.

I believe the Navy's current shipbuilding plan is barely adequate to sustain the remaining naval shipbuilding industrial base including the suppliers that provide supporting equipment and associated engineering services. Furthermore, I understand that the Office of the Secretary of Defense has expressed a similar concern and is examining these critical national shipbuilding issues.

If confirmed, I plan to work with Navy, DOD, other government, and industry leaders to identify mechanisms to improve our Nation's shipbuilding industrial base.

[The nomination reference of John J. Young, Jr., follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

John J. Young, Jr., of Virginia, to be Assistant Secretary of the Navy, vice Herbert Lee Buchanan III.

[The biographical sketch of John J. Young, Jr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF JOHN J. YOUNG, JR.

John J. Young, Jr., is currently a Professional Staff Member on the Senate Appropriations Committee, Subcommittee on Defense, a position he has held since 1993. Prior to that, he was an AIAA Congressional Fellow with the Subcommittee on Defense from 1991 to 1993.

From 1988 to 1993, Mr. Young was a Member of the Technical Staff at the Sandia National Labs. He was also a Member of the Technical Staff at Rockwell International from 1987 to 1988. From 1985 to 1986, he was an Associate Staff Member with the Engineering Group at The BDM Corporation, and from 1980 to 1985 he was a Co-operative Ed. Engineer with General Dynamics. Finally, in 1984, he was a Press Intern for former Senator Sam Nunn.

Mr. Young graduated from the Georgia Institute of Technology with a B.A. Degree in Engineering in 1985 and from Stanford University with an M.S. Degree in Aeronautics in 1987.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by John J. Young, Jr., in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

John Jacob Young, Jr.

2. **Position to which nominated:**

Assistant Secretary of the Navy (Research, Development, and Acquisition).

3. **Date of nomination:**

June 12, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

May 29, 1962; Newnan, Georgia.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Barbara Joan Schleihauf.

7. **Names and ages of children:**

Nathan Jacob Young, 9.

William Joseph Young, 7.

Kathryn Elizabeth Young, 4.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Stanford University; 10/85-6/87; Master's in Aeronautics and Astronautics; Stanford, CA.

Georgia Institute of Technology; 6/80-6/85; Bachelor's in Aerospace Engineering; Atlanta, GA.

Newnan High School; 9/78-6/80; High School Diploma; Newnan, GA.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

United States Senate, Committee on Appropriations; Washington, DC, Professional Staff Member, Defense Appropriations Subcommittee, Washington, DC; 12/93–Present.

Sandia National Laboratory; Albuquerque, New Mexico, Member of the Technical Staff serving the U.S. Senate as an American Institute of Aeronautics and Astronautics (AIAA) Congressional Fellow on the U.S. Senate Defense Appropriations Subcommittee, Washington, DC; 1/91–12/93.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Member—American Institute of Aeronautics and Astronautics.

Member—Jamestown Parent Teacher Association.

Member—National Presbyterian Church.

Member—The Briarean Society, Phi Kappa Phi, Tau Beta Pi, Sigma Gamma Tau, and Phi Eta Sigma college honor societies.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Selected for the 1996 National Security Leadership Course at Syracuse University.

Selected for the 1996 class of Georgia Institute of Technology Council of Outstanding Engineering Alumni.

Selected for the 1993–94 Massachusetts Institute of Technology Seminar XXI program.

1993 Who's Who in America in Science and Engineering.

AIAA 1991 Congressional Fellow.

AIAA 1991–1994 National Public Policy Committee.

AIAA 1989–1991 Region IV Deputy Director for Public Policy.

AIAA 1988–1989 Region II Director-at-Large for Young Member Activities.

AIAA Atlanta Section 1988 Mini-Symposium Outstanding Young Engineer Award.

1985–87 Stanford University College of Engineering Fellowship.

1986–87 General Electric Foundation Fellowship.

1986 Outstanding Young Men of America.

1983–1984 Sam Nunn U.S. Senate Intern Program. 1984–85 AIAA/General Dynamics Scholarship.

1980–85 Georgia Tech Lowry, McLendon, Fitten and Towers Scholarships.

Member of the Phi Kappa Phi, Tau Beta Pi, Sigma Gamma Tau, Phi Eta Sigma, and The Briarean Society.

1984–85 Briarean of the Year (Cooperative Education Honorary Society).

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

“Key Objectives for the Strategic Defense Initiative”; American Institute of Aeronautics and Astronautics (AIAA) Student Journal; Fall, 1986.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

While I have spoken to groups and conferences occasionally over the last 5 years, I have not written formal speeches for these sessions.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JOHN J. YOUNG, JR.

This 13th day of June, 2001.

[The nomination of John J. Young, Jr., was reported to the Senate by Senator Warner on July 11, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on July 12, 2001.]

**NOMINATIONS OF JOHN P. STENBIT TO BE ASSISTANT SECRETARY OF DEFENSE FOR COMMAND, CONTROL, COMMUNICATION, AND INTELLIGENCE; DR. RONALD M. SEGA TO BE DIRECTOR OF DEFENSE, RESEARCH AND ENGINEERING; MICHAEL L. DOMINGUEZ TO BE ASSISTANT SECRETARY OF THE AIR FORCE FOR MANPOWER AND RESERVE AFFAIRS; PAUL MICHAEL PARKER TO BE ASSISTANT SECRETARY OF THE ARMY FOR CIVIL WORKS; DR. MARIO P. FIORI TO BE ASSISTANT SECRETARY OF THE ARMY FOR INSTALLATIONS AND ENVIRONMENT; H.T. JOHNSON TO BE ASSISTANT SECRETARY OF THE NAVY FOR INSTALLATIONS AND ENVIRONMENT; AND NELSON F. GIBBS TO BE ASSISTANT SECRETARY OF THE AIR FORCE FOR INSTALLATIONS AND ENVIRONMENT**

---

**TUESDAY, JULY 31, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:37 a.m. in room SD-106, Dirksen Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Cleland, Akaka, E. Benjamin Nelson, Carnahan, Warner, Inhofe, and Allard.

Other Senators present: Senators Lott and Cochran.

Member of Congress present: Mr. Pickering.

Committee staff member present: David S. Lyles, staff director.

Majority staff members present: Gerald J. Leeling, counsel; Michael J. McCord, professional staff member; and Arun A. Seraphin, professional staff member.

Minority staff members present: Romie L. Brownlee, republican staff director; Judith A. Ansley, deputy staff director for the minority; Charles W. Alsup, professional staff member; Brian R. Green,

professional staff member; William C. Greenwalt, professional staff member; Carolyn M. Hanna, professional staff member; Patricia L. Lewis, professional staff member; Ann M. Mittermeyer, minority counsel; Suzanne K.L. Ross, research assistant; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Gabriella Eisen, Michele A. Traficante, and Nicholas W. West.

Committee members' assistants present: Andrew Vanlandingham, assistant to Senator Cleland; Davelyn Noelani Kalipi, assistant to Senator Akaka; Eric Pierce, assistant to Senator Ben Nelson; Brady King, assistant to Senator Dayton; John Gastright, assistant to Senator Thurmond; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; and Derek Maurer, assistant to Senator Bunning.

#### **OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Good morning, everybody. The committee meets today to consider the nominations of seven individuals to high positions in the Department of Defense. Because of the number of nominees, we have divided today's hearing into two panels. During the first panel, we will consider the nominations of John Stenbit to be Assistant Secretary of Defense for Command, Control, Communication, and Intelligence; Ron Segal to be Director of Defense Research and Engineering; and Michael Dominguez to be Assistant Secretary of the Air Force for Manpower and Reserve Affairs.

On behalf of the entire committee, I would like to welcome you and your families to the Armed Services Committee. We have a tradition of asking our nominees to introduce family members who are present, so let me start with that. We will start with you, Mr. Dominguez. If you would, introduce any family members you have with you.

Mr. DOMINGUEZ. Thank you, Mr. Chairman. I have with me today my wife, Sheila, and my daughter, Michelle.

Chairman LEVIN. Welcome both of you. Mr. Stenbit.

Mr. STENBIT. I have with me my wife, Albertine.

Chairman LEVIN. Thank you. Dr. Segal.

Dr. SEGAL. Mr. Chairman, it is my pleasure to introduce my wife, Ann, who has provided me tremendous support.

Chairman LEVIN. We welcome all of you. None of these nominees would be able to serve in these positions without the support of their families, so we thank them for their service, and we also thank you for your service.

Mr. Stenbit previously served as the Deputy Director of Telecommunications at Command and Control Systems in the Defense Department, and most recently as an executive vice president at TRW. Dr. Segal's military and academic career includes service as a Brigadier General in the Air Force, an astronaut on two Space Shuttle missions, and most recently at the University of Colorado.

Mr. Dominguez's military and civilian experience includes service in the U.S. Army and as Assistant Director of Space Information,

Warfare, and Command and Control, Director for the Chief of Naval Operations.

The committee looks forward to your testimony. Before I call upon Senator Allard for his introduction, I will call upon my good friend and colleague, Senator Warner, for his opening statement.

#### STATEMENT OF SENATOR JOHN WARNER

Senator WARNER. Thank you, Mr. Chairman. I join you in welcoming the nominees, and would ask unanimous consent that my statement, which is biographical, be put in the record.

I would just add a personal comment. Senator Levin and I have been privileged to serve here on this committee some 23 years now. We have seen a lot of appointees, and I say unreservedly I think our President and the Secretary of Defense have really picked a first-class team to serve our Nation. I use the word pick. I have seen several draft choices, and I do not know how they persuaded you to come back and give up what you had in the private sector, but that again lends itself to the commendation of our President and others who have worked so hard to get you here.

To the families, I have had some modest experience in the building, and I remember very well the day I sat in this chair before some of you were on Planet Earth, and I would just be mindful of the wives particularly, and children, because any decisions made after 7:00 are usually reversed the next morning, so bring them home, freshen them up, and send them back for the next day.

Thank you very much.

Chairman LEVIN. That is unless they are responding to congressional inquiries at night. [Laughter.]

[The prepared statement of Senator Warner follows:]

#### PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in welcoming the nominees and their families. We have a distinguished group of nominees before us this morning.

#### FIRST PANEL

Mr. Sega—Major General Sega—has had a remarkable career in academia, research, and government service. He was recently promoted to the rank of Major General in the Air Force Reserve, and is currently assigned as Mobilization Assistant to the Commander, Headquarters, Air Force Space Command. General Sega is a former astronaut, having made flights on the Space Shuttle in 1994 and 1996, and also a distinguished academician. He is currently the Dean of the College of Engineering and Applied Science at the University of Colorado. General Sega, welcome, and thank you for your willingness to serve in this important Defense position.

Mr. Stenbit, if confirmed, will be returning to the Pentagon for an additional tour. He served previously in the Office of the Secretary of Defense as Principal Deputy Director of Telecommunications and Command and Control Systems and as a Staff Specialist for Worldwide Military Command and Control Systems. In addition to his impressive credentials as an Executive Vice President for TRW Corporation's Aerospace and Information Systems, Mr. Stenbit has served as Chairman of the Science and Technology Advisory Panel to the Director of Central Intelligence. Mr. Stenbit was also a member of the Science Advisory Group to the Directors of Naval Intelligence and the Defense Communications Agency.

Michael L. Dominguez, the President's nominee for Assistant Secretary of the Air Force (Manpower and Reserve Affairs), has a distinguished career of military and government service. He is a graduate of the United States Military Academy at West Point, and served on active duty in Europe with the 1st Battalion, 509th Airborne Infantry. In 1983, Mr. Dominguez joined the Office of the Secretary of Defense working in the Program Analysis and Evaluation Division. He ultimately rose

through the ranks to become PA&E's Director for Planning and Analytical Support. Mr. Dominguez later joined the staff of the Chief of Naval Operations where he served as the Associate Director for Programming and, more recently, as the Assistant Director for Space and Information Warfare within the OPNAV Command and Control Directorate. Thank you for your willingness to serve in this vitally important manpower policy position.

SECOND PANEL

I would like to introduce to the committee a constituent of mine, Gen. H.T. Johnson.

Gen. H.T. Johnson has over 41 years of service to our Nation in military and government service. He is a combat veteran with 423 missions as a forward air controller in Vietnam. He became one of the U.S. Air Force's most accomplished senior leaders, serving as Deputy Commander in Chief of the U.S. Central Command; Director of the Joint Staff under Admiral William Crowe; and as Commander in Chief of the United States Transportation Command and Military Airlift Commands. He served as TRANSCOM Commander during Operations Desert Shield and Desert Storm, and led one of the most rapid, concentrated, and highly successful movements of troops, equipment, and supplies in American military history. Subsequent to his retirement from the Air Force, he served as a member of the 1993 Base Realignment and Closure Commission. We welcome General Johnson and his family, and thank him for his willingness to return to government service.

Mike Parker has a distinguished career in government. As a member of the U.S. House of Representatives from 1989 through 1999, Mr. Parker ably represented the Fourth Congressional District of Mississippi. In this capacity, he served on the Appropriations Committee and its Subcommittees on Energy and Water Development and Military Construction. He also served on the House Budget, Transportation, Education and the Workforce, and Veterans' Affairs Committees. We thank you for your willingness to return to service in the Executive Branch in this most challenging assignment.

Dr. Mario Fiori, the nominee for Assistant Secretary of the Army (Installations and Environment) has achieved great success in both his military and government careers to date. After graduating from the U.S. Naval Academy, he qualified as a nuclear submariner and served in U.S.S. *Pargo* (SSN 650), an attack submarine, U.S.S. *George Washington Carver* (SSBN 656), a Poseidon missile submarine, and as Commanding Officer of U.S.S. *Spadefish* (SSN 668). Following his retirement, he joined the Senior Executive Service in the Department of Energy. Dr. Fiori served as the Departmental representative to the Defense Nuclear Facilities Safety Board. In 1993, the Secretary of Energy assigned Dr. Fiori to be Manager of the Savannah River Site in Aiken, South Carolina.

I note that among those in attendance is Dr. Fiori's daughter, Cristina, who drove down from Allentown, Pennsylvania, for the occasion. Cris served this committee with great diligence and dedication as a Staff Assistant, and we are delighted to have her present with us today.

Nelson Gibbs is currently the Executive Director of the Cost Accounting Standards Board within the Office of Management and Budget. Following a tour of active duty in the U.S. Army, he built an impressive record of accomplishment in the private sector, gaining expertise in the fields of defense industry management and financial oversight. After rising to the position of Corporate Comptroller with the Northrop Grumman Corporation, he assumed his present position in OMB. Mr. Gibbs, welcome.

Mr. Chairman, I look forward to hearing from the nominees.

Chairman LEVIN. I think we will call on you, Senator Allard.

**STATEMENT OF SENATOR WAYNE ALLARD**

Senator ALLARD. Mr. Chairman, thank you, and Senator Warner, and my fellow members on the committee, I want to thank you for allowing me to introduce someone who I believe is an extraordinary individual sitting here on my right, and that is Dr. Ron Sega. He is the nominee to be the Director of Defense Research and Engineering.

I have known Ron for many years, and I have found him to be one of the brightest and most forward-thinking individuals I have ever met. Each year I hold defense and space roundtables in Colo-

rado, and Ron has been a very valuable resource with his participation in those roundtables.

I believe his resume speaks for itself. You reviewed some of that, Mr. Chairman, but I would like to go and just again highlight a few of those areas that I think are very significant. Since 1996, Dr. Sega has been the Dean of the College of Engineering and Applied Science at the University of Colorado at Colorado Springs, where he has taught since 1982.

Ron was instrumental in adding six degrees to the college, realigning the program with the needs of information technology, aerospace, and complex electronics sectors, and in 1990 Dr. Sega joined NASA, serving as an astronaut from 1991 until 1996. During that time, he participated in two Space Shuttle missions, STS-60 and STS-74, and was Director of Operations in Russia and was the coprincipal investigator of the windshield facility, plus many other technical assignments.

Dr. Sega has also taught physics at the University of Houston and at the Air Force Academy in Colorado Springs. In addition to his teaching duties, Dr. Sega is currently serving this country in the Air Force Reserve. He has achieved a rank of Major General, and is the mobilization assistant to the Commander at Air Force Space Command.

After graduating from the Air Force Academy, Dr. Sega has been an instructor pilot and has been involved with space systems operations and plans. To name a few of the many awards he has received, Dr. Sega has been awarded two honorary doctorates. He has been named Reserve Officer of the Year by the U.S. Air Force and the Air Force Space Command, named Educator of the Year by Inroads Colorado, received the NASA Outstanding Leadership Award Medal for his service as the payload commander on STS-76, and was a distinguished graduate at the Air Force Academy.

However, beyond all these awards and commendations, I can personally attest to the fact that he is a man of vision, honor, and dedication. This is seen best through his service to the students at the University of Colorado at Colorado Springs. He has been a force behind establishing an Office of Student Support to improve recruiting and training of undergraduate students, diversity, interaction with K through 12, and coordination of scholarships and internship activities.

He also sponsored new student clubs for the college, including the American Indian Science and Engineering Society, the National Society of Black Engineers, the National Society of Hispanic Professional Engineers, the American Society of Mechanical Engineers, and the American Institute of Aeronautics and Astronautics.

Mr. Chairman, I heard Senator Roberts once say, true believers are needed in the area of science and technology research. I believe Dr. Sega fits that description. He is a true believer, and is perfectly suited to be the Director of Defense Research and Engineering. I look forward to his confirmation, and thank you for consideration of this fine man, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Allard, for your fine introduction.

Senator WARNER. I join in that, Senator Allard. You have given him a real rocket-boost take-off.

Chairman LEVIN. Today's nominees have all responded to the committee's prehearing policy questions and to our standard questionnaire, and these responses will be made a part of the record.

The committee has also received the required paperwork on each of the nominees, and we will be reviewing that paperwork to make sure that it is in accordance with the committee's requirements.

There are several standard questions we ask every nominee who comes before the committee, and your response to advance policy questions. Do you agree, each of you, to appear as a witness before congressional committees when called to ensure that briefings, testimony, and other communications are provided to Congress?

Mr. DOMINGUEZ. Yes, sir.

Mr. STENBIT. Yes, sir.

Dr. SEGA. Yes, sir.

Chairman LEVIN. Have you adhered to the applicable laws and regulations governing conflict of interest?

Mr. DOMINGUEZ. Yes, sir.

Mr. STENBIT. Yes, sir.

Dr. SEGA. Yes, sir.

Chairman LEVIN. Did you assume any duties or undertake any actions which would appear to presume the outcome of the confirmation process?

Mr. DOMINGUEZ. No, sir.

Mr. STENBIT. No, sir.

Dr. SEGA. No, sir.

Chairman LEVIN. Will you ensure the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings?

Mr. DOMINGUEZ. Yes, sir.

Mr. STENBIT. Yes, sir.

Dr. SEGA. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers to responsible requests?

Mr. DOMINGUEZ. Yes, sir.

Mr. STENBIT. Yes, sir.

Dr. SEGA. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. DOMINGUEZ. Yes, sir.

Mr. STENBIT. Yes, sir.

Dr. SEGA. Yes, sir.

Chairman LEVIN. Let me now call upon our nominees for any opening remarks you may wish to make. Mr. Dominguez.

**STATEMENT OF MICHAEL L. DOMINGUEZ, NOMINEE TO BE ASSISTANT SECRETARY OF THE AIR FORCE FOR MANPOWER AND RESERVE AFFAIRS**

Mr. DOMINGUEZ. Thank you, Mr. Chairman, Senator Warner, and other distinguished members of the committee. I am honored to appear before you this morning as President Bush's nominee to serve as the Assistant Secretary of the Air Force for Manpower and Reserve Affairs. I would like to thank the President, the Secretary of Defense, and the Secretary of the Air Force for their support and confidence in me by recommending me for this position. If con-

firmed, I look forward to the opportunity to continue service to my country and to the men and women of the United States Air Force.

Mr. Chairman, I can think of no finer job that directly affects the lives of Air Force personnel, enlisted, officer, active, Guard, Reserve, and civilian, than the position for which I have been nominated. If confirmed, I pledge my full support and energies to take care of Air Force people. Toward that end, I would plan to focus my attention on three key issues. First is recruiting and retention. They go hand-in-glove, and their importance cannot be overstated, especially in light of the very competitive tight labor market.

From my perspective, viable recruiting and retention programs are critical links to keeping the total force ready for the future. I pledge to you my support to keep this a top priority.

Second, I believe we must continue to focus on our quality-of-life programs that are so essential to meeting our readiness, recruiting, and retention goals. Among those are top-notch military health care, safe, affordable family housing, an improved workplace environment, enhanced family and community programs, improved educational opportunities, and last, if confirmed, I will work to improve our personnel systems to facilitate management of the military and civilian workforce for the 21st century.

Thanks to this committee, we are already on this path. We need to continue this momentum, improving the hiring process, addressing compensation and benefits, and focusing on programs that will help us attract men and women to a life of service to the Nation.

In closing, if confirmed, I will look forward to an active relationship with you, Mr. Chairman, Senator Warner, and the members of this committee as we work together to support and care for men and women and families who selflessly serve our Nation and its Air Force.

Thank you.

Chairman LEVIN. Thank you.

Mr. Stenbit.

**STATEMENT OF JOHN P. STENBIT, NOMINEE TO BE ASSISTANT SECRETARY OF DEFENSE FOR COMMAND, CONTROL, COMMUNICATION, AND INTELLIGENCE**

Mr. STENBIT. Thank you, Mr. Chairman, Senator Warner. I would like to thank Secretary Rumsfeld for picking me, as Senator Warner said, and President Bush for nominating me. I have had the opportunity to briefly meet with Senator Warner and Senator Inhofe. I look forward to meeting with Senator Nelson and you Mr. Chairman as that need arises, if I am confirmed. I am very grateful you are taking the time to consider this application this morning.

I have been nominated to be Assistant Secretary of Defense for Command, Control, Communications, and Intelligence. That is quite a mouthful. All of my reviewing of the office says that it is a handful, and I look forward to having your support as we move forward, if I am confirmed. Thank you.

Chairman LEVIN. Mr. Stenbit, thank you very much.

Dr. Sega.

**STATEMENT OF DR. RONALD M. SEGA, NOMINEE TO BE  
DIRECTOR OF DEFENSE RESEARCH AND ENGINEERING**

Dr. SEGA. Thank you, Mr. Chairman. I would like to thank Senator Allard for his kind introduction, and Chairman Levin, Senator Warner, and members of the Armed Services Committee, it is truly an honor and privilege for me to be here before this committee today.

I would like to thank President Bush, Secretary Rumsfeld, and Under Secretary Aldridge for their support and trust in nominating me for the position of Director of Defense Research and Engineering. I appreciate their confidence, and I pledge that, if confirmed, I will do everything that I can to justify their confidence while serving in this important position. Thank you.

Chairman LEVIN. Thank you, Dr. Sega. We will just start with rounds of 6 minutes each. First, Mr. Stenbit, let me ask you a few questions.

In your response to the advance policy questions you said the following: "In light of U.S. dependence on vulnerable space assets, it would be contrary to U.S. security interests not to develop, test, and deploy the means of deterring attack on and defending space systems."

Now, when you say the United States must develop the means of deterring attack on our space systems, is it your view that we should develop and deploy offensive weapons in space?

Mr. STENBIT. I believe that the deterrence is an act that is in the eyes of the beholder. What we need to do is be very firm in our demonstrations of how we intend to both decrease the reward of a potential attack, or increase the risk of a potential attack. I believe that space includes the assets in space—it includes the launchers, it includes the ground stations—and I believe there are passive methods, and there are defensive active methods. There are sometimes offensive methods, for example, potentially doing something destructive to a jammer.

I do not believe that anything I have seen would require active, full-time on-orbit offensive capability, other than potentially some ability for a satellite to defend itself against an attack. I personally have worked on a study of Gatlin guns on a satellite to shoot something coming at it. I believe that might be within the realm of what might be required, but I do not believe there is any one set of answers. It is, in fact, a broad set of issues that cause deterrence to exist.

Chairman LEVIN. Mr. Stenbit, the Defense Department has been criticized for its failure to completely comply with the capital planning business process, reengineering and the other requirements of the 1996 Clinger-Cohen act, which was enacted to get the Department's chaotic information systems under control and to improve the security and the interoperability of those systems. If confirmed, would you make it a priority to bring the Defense Department into complete compliance with the Clinger-Cohen act?

Mr. STENBIT. Yes, sir, to the best of my ability.

Chairman LEVIN. Do you believe you have the authority to make that happen?

Mr. STENBIT. I believe the authority is appropriate, yes.

Chairman LEVIN. When you say appropriate, do you also mean adequate?

Mr. STENBIT. Well, it is a coordination and staff authority, as opposed to execution authority, and that is the way the Department works, but certainly the access to the Secretary and the ability to have access to everything and review the budget appears to me to be adequate, yes.

Chairman LEVIN. Dr. Sega, a number of programs have been established to try to speed the transition of technologies and other innovations from science and technology programs into the hands of warfighters. The Director of Defense Research and Engineering is in a unique position to hasten the insertion of these technologies into the hands of the warfighters who need them. Do you believe that it would be helpful to establish a rapid response fund to help expedite that transition and, if so, would you support that within the Department to achieve an appropriate level of funding for it?

Dr. SEGA. Yes, Mr. Chairman, if confirmed I would support a rapid response fund. I believe that it gives a flexibility during the current year to take advantage of maturing technologies and accelerate their application to the warfighter.

Chairman LEVIN. Congress and the Defense Science Board and others have expressed concern about the condition of defense labs and test facilities, the slow implementation of reforms to improve management, personnel, technology development programs, and the degree to which defense labs support the needs of the acquisition and warfighting communities. If confirmed, what specific reforms would you pursue to ensure that defense laboratories continue to make a positive contribution to our defense science and technology programs?

Dr. SEGA. Mr. Chairman, if confirmed, I would look into that and review the situation with respect to the condition of our laboratories both with respect to infrastructure and personnel. I think it is a very important and critical problem that needs to be addressed, and I would take that on as one of my priorities.

Chairman LEVIN. Mr. Dominguez, the Air Force projects that it is going to miss the 2001 statutory end strength by over 4,000 personnel, and the primary reason for this appears to be lower than expected reenlistment rates, and you mentioned that in your opening remarks. What is your view as to why the larger-than-expected numbers of airmen are leaving the Air Force during their second and their third terms and, if confirmed, what specifically would you do to improve retention rates?

Mr. DOMINGUEZ. Senator, I think that is one of the most important issues we must face here in the coming years. I want to take this opportunity to thank the committee for its assistance to all of the services, and improving their ability to recruit and retain qualified personnel.

As to the specific causes for our missing our goals for second and third-term reenlistment, I am happy to research that for you and get back with you on that, and to work with your staff as we understand that problem, but certainly the work this committee has already done in terms of giving us special pay authority and aviation pay for the pilots and the quality of life initiatives that this committee has supported are very, very important to making the

rigors of military life manageable for families, because it is the families who reenlist.

Chairman LEVIN. Finally, Mr. Dominguez, do you support the current Department of Defense homosexual conduct policy?

Mr. DOMINGUEZ. Sir, I understand again that is a very difficult issue. I know that the members of this committee and the staff of this committee were very involved in the policy that now appears to be in place, and I presently have no knowledge of any compelling reason why that policy needs to be changed. It appears to me to be, and from what I know that it seems to be working adequately, but I would be happy, if confirmed, to work with you and your staff on understanding more about that issue.

Chairman LEVIN. Senator Warner.

Senator WARNER. Thank you very much, Mr. Chairman. I will start off with Dr. Segal. You really have a great challenge, and having had the opportunity to visit with you and sharing the views of our distinguished colleague from Colorado, I think you are eminently qualified to take this thing on. I think you probably have as much an opportunity as anyone in the Department of Defense, including the Secretary, to drive the Department and to drive the cutting edge of the next generation of weapons.

It has been my experience through the years, regrettably, that we encounter the old syndrome, which you know well, not invented here. Sometimes some good ideas emanate from beyond the Department of Defense, and they are deserving of equal consideration within the Department once they are presented. Do you share that view?

Dr. SEGAL. Yes, Senator Warner, I do. From my background with the University, as the dean of the College of Engineering, it was our goal to form partnerships between industry, Government, and the university. I think various sectors that develop technology, that have innovative ideas, should be included in the process to get the very best capability for the warfighter.

Senator WARNER. Also you will be dealing with the annual battles within the Department to get your share of the budget. I am concerned that America is not keeping up in its research and development as much as it should, and we should try and increase those budgets. I would hope you would commit to this committee to put on your body armor and go in there with your fellow colleagues and go for it. Am I understanding that is the case?

Dr. SEGAL. Mr. Chairman, I share your concern, and I would be a strong advocate for the S&T program in the Department of Defense.

Senator WARNER. You also have the DARPA organization. How familiar are you with that organization?

Dr. SEGAL. I understand it in an overall sense, sir.

Senator WARNER. Well, therein is kind of an uncut diamond. Do not try and polish it up too much. Leave it rugged and rough, but give it sufficient support to originate some ideas and come up with concepts as they go along. Can you commit to do that?

Dr. SEGAL. I will.

Senator WARNER. This committee last year increased the President's budget by \$200 million for unmanned advanced capability for combat systems. At that time, we established a goal for the De-

partment that within 10 years one-third of the U.S. military operational deep strike aircraft would be unmanned, and within 15 years one-third of the operational ground combat vehicles would be unmanned. How does that notion strike you? It happens to be the law of the land, but what are your views?

Dr. SEGA. I believe the technology in unmanned and robotics systems has been used in a variety of sectors in the past, has been used to a certain extent in our Department of Defense, and I believe that is a good direction, to continue to push technologies toward unmanned vehicles.

Senator WARNER. I find that very reassuring, and I hope that you will in due course, as you become more fully understanding of this concept, not only adopt it, but even push it harder where you think it can be done efficiently to achieve those goals.

Dr. SEGA. Sir, if confirmed I will look seriously at all of those options.

Senator WARNER. Mr. Dominguez, this committee has a long-standing commitment to ensuring that only military officers, men and women of the highest character and qualifications, rise to the most senior positions. The procedures for identifying adverse information about officers selected for promotion are in place, and we ensure that these matters are fully considered.

Senator Levin and I spend a good deal of time together with our Chairman and Ranking Member of the Personnel Subcommittee and other members of the committee getting into these cases very thoroughly, objectively, and fairly. As a matter of fact, this afternoon I am going to spend some time on these issues. If confirmed, what do you anticipate your role will be in reviewing the promotion boards for nominations for senior flag and general officer positions?

Mr. DOMINGUEZ. Senator, I will take as active a role in that as Secretary Roche requires, but I believe that would entail at a minimum reviewing oversight of the process to ensure compliance with applicable laws and records to ensure the process is fair, and thirdly to ensure that the appropriate information and relevant information is provided to all of the decisionmakers involved in this, and I want to ensure you and the members of this committee that Secretary Roche and I understand our obligation to this committee in that regard.

Senator WARNER. I want you to underline the word fair, because this system is dependant upon fairness and equity when it come to promotions. There simply cannot be any compromise along those lines. Not only the individuals themselves, but their families make an enormous commitment.

So often the spouse has to move every 2 or 3 years, relocate the children and care for the children when the spouse is overseas, or deployed away from home, and this all adds up. When that promotion board comes, something that is anticipated, there is great emotion, and as long as they feel it was fair, they accept the results even though the results might not be what they had hoped.

It is definitely a family situation, and it is interesting. In my time here on the committee I have come to learn more and more about the value of the family in the decisions, particularly those relating to a second hitch, those relating to a critical decision by an

officer to continue on past the 6 or 7 year mark. Those decisions are made around the family table, so bear that in mind.

You have a wonderful family yourself. You understand those values, and I hope that you will follow that with great care.

Mr. DOMINGUEZ. I will, sir.

Senator WARNER. Now, Mr. Stenbit, we hope you will inject yourself in this quadrennial review process. That process, no matter how it comes out, is going to be the subject of tremendous controversy. But that is for the good, because unless it engenders that type of constructive controversy, then little will have been achieved.

It takes forceful personalities like our President and the Secretary of Defense to deal with those sensitive issues in our Department. Nothing is so valued as roles and missions, and I repeat that. Nothing is so valued, and there is a good, strong competition, as there should be, between the military departments. But the ability of that eventual report to become a constructive building block for our Nation's defense will largely be determined on the extent to which persons with responsibility and knowledge are able to feel that they made a contribution, that their voices were heard and their ideas were considered, even though they may have been rejected.

Is my philosophy generally what yours is? I am just curious.

Mr. STENBIT. Absolutely. Constructive, adversarial relationships, and I mean that in the best of senses, in the process are very important to get good ideas out. I have not had the privilege of being involved in that so far, but if confirmed I look forward to being there, and I do not think they hired me to be a weak voice.

Thank you very much, Mr. Senator.

Senator WARNER. I think that is true.

Now, my next question, I think I have said it, and other members on this committee have said it every time a nominee for your position has come up, and I do not say that by way of criticism for those that have preceded you, but there are no limits to which you can move this particular frontier that will not enhance our Nation's defense, so listen carefully.

Despite the efforts of the Department of Defense to establish standards of interoperability in the command and control systems essential for joint operations, virtually every significant military operation in the last 2 decades has experienced communications, intelligence, and operations and logistics systems of the various services that failed to properly interact.

I have just a modest, as I explained to you, knowledge of electronics and so forth from years past, but I am sitting and watching a process by which central switching areas for communications, the Army, Navy, and the Air Force, are now up for rebid and replacement. I find the Army is marching off in one direction and the Navy and Air Force seem to be pretty well joined marching off in another direction. Since the switch is common to the military branches, I cannot figure it out. One wants one contractor, another one wants another contractor.

I am not here to decide which contractor is best qualified, but I keep saying to myself, why should there be a different communications switch for the military services? Why can't one switch better

serve the Nation, and enable some cost savings in training those who constantly have to go in and repair and operate the switch, and save us on the spare parts inventory. I could go on and on. Take a look at that one when you get there.

Mr. STENBIT. I would be happy to, sir, if I am confirmed. There are times when having two different kinds are useful, because then the software bug in one will not destroy them all, but I am absolutely not familiar at all with the details of the one you are talking about.

Senator WARNER. I purposely did not give a lot of detail, but I am just trying to use an example. You may be right, and maybe two systems are needed.

Mr. STENBIT. If I am confirmed, that is clearly on the plate, no question about it.

Senator WARNER. If the Navy cannot get its switch to talk to the Army's switch, where are we?

Mr. STENBIT. Even my solution does not work then, sir. They do not back each other up.

Chairman LEVIN. Thank you, Senator Warner. Senator Thurmond has another commitment. We are going to call on him out of order. We thank Senator Ben Nelson for permitting us to do that.

Senator Thurmond.

Senator THURMOND. Good morning, gentlemen. I am partial to my home town of Aiken, South Carolina, and I always have a special place for those from the Aiken area for going out and doing well. We have two men before us today who can claim the Aiken area as home, Gen. Hansford T. Johnson and Dr. Mario Fiori.

Mr. Johnson grew up in Aiken. I knew his father and had the utmost respect for his entire family. He attended my alma mater before transferring to the United States Air Force Academy, where he graduated in the first class in 1959. Many of us were fortunate to work with him during his career in the Air Force, and as a member of the Base Realignment and Closure Commission.

Dr. Mario Fiori is not actually from Aiken, but I claim him. I got to know him during his tenure as site manager at the Department of Energy Savannah River Site. I even hired his daughter to work for me in 1993. After his successful career as a naval officer, Dr. Fiori was selected to be the manager of the Savannah River Site. The site manager is a demanding post that requires the finesse of a politician, the expertise of a scientist, and the financial skill of a professional accountant. As manager, Dr. Fiori was all of these and much more.

Mr. Chairman, we are fortunate to have these two fine men available to the Department of the Navy and the Department of the Army. They are fine Americans who have dedicated their lives to the service of our Nation, and I am confident that, once confirmed, each will serve with distinction.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Thurmond. I know how appreciative they are of your comments, and how important those comments are to this committee. We thank you for them, and we will make the rest of your statement part of the record at the appropriate place, right before the second panel comes on as you have requested.

Senator Nelson.

Senator BEN NELSON. Thank you, Mr. Chairman. First, I would like to welcome all of the nominees and their families to this gathering today and to say to all of you that it is a daunting task to enter public life, but it is one that I am sure you have fully considered, having such a strong background in each of your cases, so I welcome you and appreciate that very much.

Mr. Dominguez, one of the things that I think can be very helpful in terms of the retention and the staffing for the military has already been established in some cases, certainly where I have some knowledge of the 55th Wing in Omaha at Offutt Air Force Base they have established what is called a future total force initiative, where there is a tie-in between the Nebraska Air National Guard and the regular Air Force, and it has been suggested also that the Reserve can play a role in dealing with the staffing needs of the military.

If we look at the staffing in a layering structure so that you are dealing with the Reserve and the Air Guard putting together all of the staffing needs, particularly with respect to the pilot requirements, because there are so many pilots leaving the regular service who will still be associated with the Reserves or the Air Guard, I wondered if you have any particular plans to work with that system or that initiative in the future and not just with respect to the Air Force, but with respect to other services as well, whatever you have heard.

Mr. DOMINGUEZ. Thank you, Senator. I think the total force concept is an extraordinarily powerful concept, and extraordinarily important to all of the services, and the United States Air Force takes a second seat to no one in the enthusiasm with which they have embraced and integrated the Reserve components in the Guard and Reserve into the missions and life of the active Air Force. I would expect, Senator, that if I am confirmed that will also be a major focus of mine.

There is enormous value in the Reserve components, and there are enormous opportunities in front of us to continue to investigate and explore ways that we can more fully integrate those Reserve components into our missions and capitalize on their unique contributions.

Senator BEN NELSON. In that regard, of course, General Segal is in the Reserves, so who knows, maybe he will be more than a weekend warrior with respect to that continuing service. We appreciate that very much, General.

Mr. Dominguez, in that regard, have you seen any studies, or are you thinking about any studies, that would tie the cost of, let us say, pilot training or other investment that the military makes in its personnel as to what the financial implications and economic implications are in hanging onto well-trained, qualified staff in the total initiative effort?

Mr. DOMINGUEZ. Senator, I am not aware of any particular studies, and have at present no plans to initiate any, although cost-effectiveness is a very, very important decision criterion for us all, as there will always be fewer resources that are necessary to get all of the jobs done across the services, and the Air Force is no different.

Senator BEN NELSON. What I am getting at is, even if we did not have a shortage of available personnel, it probably would still be cost-effective to try to hang on to trained personnel in whom we have invested countless thousands of dollars and have established relationships with, hanging onto old friends, rather than spending our time making new friends.

Mr. DOMINGUEZ. That is absolutely correct, Senator, and there is no question that, once you have invested in training these people and bringing them into your culture and aligning their values and goals with the goals of service to the Nation, you do want to hang onto those people, and that is one of the things I understand that the administration will be looking at.

I believe Dr. Chu may have addressed that in his confirmation hearing, about looking at all of the personnel policies, including the up-or-out route, but basically we have to put everything on the table to see how we can retain the best possible human component of the Air Force of the 21st century.

Senator BEN NELSON. That is why it is so essential to have the re-upping be a family-friendly experience, so that all of the conditions for the families—I guess the comment is often made that you sign up single individuals but you retain families. That is why it needs to be family-friendly with respect to living conditions, benefits, and the quality-of-life issues. I hope that you will factor those into the staffing and retention issues.

I see my time is up. I appreciate very much your answers. Thank you.

Mr. DOMINGUEZ. Thank you, Senator.

Chairman LEVIN. Thank you, Senator Nelson.

Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman. I regretfully will not be able to stay for the next panel, and so I would like to make just a couple of comments, and perhaps in the opening statements some references can be made, particularly to General Johnson. I have had the opportunity, though, Mr. Chairman, to speak with each of these individuals, and I think we will be well-served to have them confirmed and on the job as quickly as possible.

Last Sunday we had an election on the Island of Vieques which frankly I thought—I was shocked that it came out as well as it did. Thirty-eight percent of the people said, after being brainwashed by both the Governor and the mayor, that they liked our Navy and they wanted the Navy to stay, and it seems to me, Mr. Chairman, starting with that, and building between now and November 6, I have very little doubt in my mind that we are going to be able to save that island, and I say that because we had a hearing not too long ago where we talked about the value of live-fire training, and three of the people on the next panel understand the value of live-fire training.

On March 12 of this year we lost six people, five of whom were American troops. The accident report showed that range, and what happened in that tragedy in Kuwait, was because they did not have live-fire training. Inert training is not the same, and so I would hope that during the opening statement, General Johnson, you might address that and express your commitment to live-fire train-

ing on that particular range, and then maybe the others—this is not going to happen in a vacuum.

If for some reason we are, for the first time in history, kicked off of the range that we own by a bunch of law-breakers, then that is going to have a domino effect on all other ranges, and of course that includes the Air Force and the Army, so you might make some reference to that during your opening remarks. I would appreciate that.

Building a little bit, Mr. Dominguez, on questions that have already been asked of you, the chairman asked you about those in the second and third terms. Let us go back to the first term, and I would like to get your idea of the SRB, the selective reenlistment bonus, how effective it has been. It is my understanding that we for the first time since 1998 are getting that first full reenlistment up to 55.6 percent, which I would like to see get a lot higher.

I am one of the last ones up here, I guess, who is still an advocate of the draft, but nonetheless I would like to have your evaluation of that program and how we can build on it.

Mr. DOMINGUEZ. Thank you, Senator. I will be happy to look into that in more detail if confirmed, and get back to you on that, but I do know that bonus program as a general rule is very successful and very important to retaining or reenlisting people in the specified skills where that bonus is targeted.

I do know the Air Force is meeting its goals this year for its first-term reenlistment. That is a success story, and I want to thank the members of this committee for the support they provided to the Air Force in the past.

[The information referred to follows:]

The number of Selective Reenlistment Bonuses (SRBs) skills was small in the heavy drawdown years fiscal year 1989 through fiscal year 1994. As the economy prospered and at the completion of the drawdown, we had to compete with the civilian community to retain our highly trained and marketable enlisted personnel. As such, the number of SRB skills increased from 68 in fiscal year 1997 (\$25 million) to 154 in fiscal year 2001 (\$165 million). SRBs currently apply to 78 percent of our enlisted skills. In fiscal year 2002 our projected SRB budget jumped to \$258 million. It will likely remain at or about this level for the next several years.

For the first time in 3 years, the Air Force met its first term airmen retention target, achieving a 55 percent re-enlistment rate against a goal of 55 percent. This success continues a positive 1st term trend, up from 49 percent in fiscal year 1999. A large part of our success is attributable to an active, aggressive targeted Selective Reenlistment Bonus program. Further, bonuses have been effective in enabling the Air Force to maintain second term and career airmen retention rates. Continued funding of SRBs is a critical element of our retention strategy.

In addition to SRBs, the Air Force continually works toward and supports initiatives to improve the overall compensation package in order to retain our enlisted force. Recent increases in other areas of compensation include higher Basic Allowance for Housing (BAH) rates to reduce out-of-pocket cost from 18.9 percent in 2000 to 15 percent in 2001. Out-of-pocket expenses will continue to decrease until they ultimately reach 0 percent in 2005. The fiscal year 2000 National Defense Authorization Act (NDAA) changed the law to allow military basic pay raises to be set at 0.5 percent above the ECI through the year 2006. In 2001, pay table reform raised basic pay for E-5 through E-7, and in 2002, with support from this committee, we will likely see the largest targeted basic pay increases since the early 1980s. Additionally, we have sponsored recent initiatives that have increased other special and incentive pays for enlisted members such as Foreign Language Proficiency Pay and Hardship Duty Pay for Location. Though all of these are positive gains in our overall compensation package, SRBs continue to fill a significant pay gap for those critical skills competing with higher private sector salaries. SRBs help boost our retention and ultimately our readiness.

Senator INHOFE. That is mostly enlisted personnel. Where the pilot situation is right now we went down—the Navy is a little bit below the Air Force, but it was down below 20 percent at one time. Do you have that figure now, and the trend lines, and what you might be able to do to improve that?

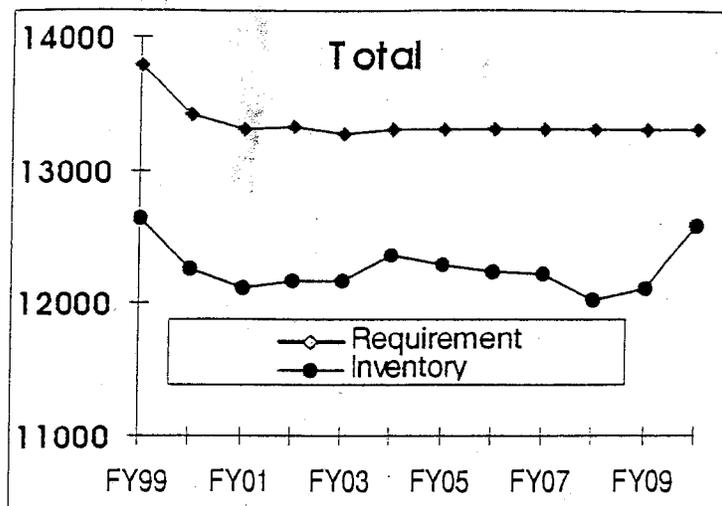

Mr. DOMINGUEZ. Senator, I do not have the percentage, but I would be happy to provide that to you. I know that our pilot retention has leveled off, or appears to be leveling off, and so the trend line for us is no longer declining in the Air Force.

[The information referred to follows:]

PILOT RETENTION RATES

The Air Force is experiencing a 9 percent (1,179) shortage in pilots. The shortage is reflected in the inventory versus requirements chart below. The pilot force manning is projected out to fiscal year 2010 based on current and historical retention trends, the increased active duty service commitment of 10 years for pilot training, bonus take rates, and a constant production level of 1,100 pilots per year.

Category	FY00	FY01	FY02	FY03	FY04	FY05	FY06	FY07	FY08	FY09	FY10
Requirement ....	13,424	13,306	13,338	13,269	13,318	13,319	13,319	13,319	13,319	13,319	13,319
Inventory ..	12,245	12,116	12,161	12,168	12,366	12,292	12,232	12,214	12,020	12,105	12,589
Percent .....	-9%	-9%	-9%	-8%	-7%	-8%	-8%	-8%	-10%	-9%	-5%

One measure taken by the Air Force to help lessen the pilot shortage is Aviator Continuation Pay. The take rates for this program are shown below. The long-term bonus take rate reflects the percentage of initially eligible pilots that accept a 5, to 20 or to 25-year agreement.

The long-term initial eligible acceptance rate for fiscal year 2001 was 30 percent; down 2 percentage points from fiscal year 2000's 32 percent, down 12 percentage points from fiscal year 1999's 42 percent, and down from the decade high of 81 percent in fiscal year 1994. In the month since September 11, there has not been any significant increase in the pilot long-term bonus take-rates.

Category	FY94	FY95	FY96	FY97	FY98	FY99	FY00	FY01
Long Term Bonus Take Rate .....	81%	78%	59%	35%	27%	42%	32%	30%

The overall pilot continuation rates are reflected below. These are referred to as cumulative continuation rates (CCR). The CCR indicates the percentage of officers entering their 6th year of service that will complete 11 or 14 years of service given existing retention rates. A 45 percent CCR for Air Force pilots in the 6–14 year group means that for every 100 pilots entering the 6th year of commissioned service, 45 would complete the 14th year.

Pilot retention, currently estimated at a relatively low 46 percent, has continued to experience challenges in sustainment and ability to counter current inventory shortfalls.

Category	FY91	FY92	FY93	FY94	FY95	FY96	FY97	FY98	FY99	FY00	FY01
Pilot CCR	35%	34%	62%	82%	87%	77%	71%	46%	41%	45%	45%

Rated retention is a major concern. The push of operations tempo and historical pull of airline hiring have played major roles in pilot separation decisions and leading indicators, including pilot separations, cumulative continuation rates, initial bonus long-term take rates, and historical airline hiring to date point to a challenging retention environment.

- The AF has a retired rated recall program, which is currently expanding in light of the Nation's wartime tasking (currently 96 personnel participating in this program).
- Increasing Pilot Production and Service Commitment: In fiscal year 2000, pilot production increased to 1,100/year from <500 in fiscal year 1995; pilot training ADSC increased from 8 to 10 years as of 1 Oct 99.
- Improving Aviator Compensation: Aviation Career Incentive Pay increased from \$650 to \$840 per month in fiscal year 1999; Aviation Continuation Pay (ACP) restructured in fiscal year 2000 to increase compensation from \$22,000 to \$25,000 per year and extend ACP agreements through 25 years of aviation service.
- Managing Operations Tempo/Quality of Life: AF transition to new Expeditionary Aerospace Force (EAF) construct allows better integration of Active, Guard, Reserve, and Civilian members—improves stability, predictability for Air Force members. Also, reduced Joint and AF exercises and restructured inspection system. Post-deployment stand-down policy, expanded family outreach programs, video/internet email links with deployed forces, fiscal year 2001 NDAA medical care improvements, and Basic Allowance for Housing increases improves quality of life.

Senator INHOFE. Then the Reserve component has been a problem, and I think primarily, and I have gotten this from those individuals as well as from some of the papers they have to fill out when they leave, that the op tempo is the main villain there, all of these deployments to places where in my opinion we should not have been deployed in the first place, and apparently also in the opinion of many of the reservists. Consequently, some of the critical MOSs are having a serious problem. Do you have any ideas on how you can improve that situation with the Reserve component?

Mr. DOMINGUEZ. Thank you, Senator, for that question.

The Air Expeditionary Force concept I think, as has been briefed to me, has gone a very long way to addressing the concerns of all members of the Air Force with regard to that problem. So with that concept, they now have some predictability and stability and in the Reserve components it is my understanding that again, we are operating without presidential call-up, so it really is volunteers who go from the units.

Senator INHOFE. Thank you very much.

Mr. Stenbit, before my time expires I want to get into a subject you and I talked about in my office, and that is spectrum. It is a

very significant thing. In the event we should lose the 1.7, 1.8 Gigahertz: number 1, what alternatives do you see right now, and number 2, what disruptions would take place, and what is your opinion today as to the significance of maintaining DOD's control of those bands?

Mr. STENBIT. Thank you for the question. I have not been deeply involved in those discussions, and have just recently gotten involved, but I do know that the real issue is, it is not a question of the DOD's moving. It will probably take about 15 to 17 years for the satellites that are dependent on frequencies in that band to fly out and be replaced with those that have other frequencies. It is conceivable there are alternatives for the DOD in other frequency spectrums, but this debate appears to me to be the wrong one.

The people who want to pay money, quote-unquote, to have us move are not accepting the full responsibility to replace the absolutely fundamental national security capabilities we have. They want us to take all the risks about whether the actual other frequency will be there. Whether the costs are correct and how fast the satellites fly out and so forth, and so there is a real asymmetry in this particular debate from my point of view.

We have hard core requirements that are built into major weapons systems and training systems, and those requirements have to be met or we are not going to have an effective military, and that is a little different from whether the venture capital guy gets his money back fast enough when he auctions the spectrum.

There is a different risk involved here, and I am very concerned about the haste with which, on the one side, apparent financial risk is being measured against real national security risk. I am very willing to work on that problem, if confirmed, but it is an asymmetrical battle right now.

Senator INHOFE. Well, that is a very good answer, and I wish the people would talk in those terms a little bit more, because all we hear, as Members, is the fact that there is a very large block of people out there that want it and are going to pay for it, but there are other problems. It is more complicated than that.

I guess the request I would make of you, and I know my time has expired, would be that if we go out, as we did last year, and we have previously, and fight for the Defense Department to maintain control of these bands, will you see to it that you do everything within your power—that the administration does not change its mind after we have done all of that, and change their position on whether or not we should keep those bands?

Mr. STENBIT. I can absolutely promise you that if confirmed, or even if not confirmed, I will try.

Senator INHOFE. Thank you very much.

Chairman LEVIN. Thank you, Senator Inhofe.

We will excuse this panel and move to our second panel. We have a couple of our colleagues here that are waiting to introduce one or more of our nominees in the second panel that we would like to get to immediately. Thank you all.

During this second panel, we will be considering the nominations of Michael Parker to be Assistant Secretary of the Army for Civil Works; Dr. Mario Fiori to be Assistant Secretary of the Army for Installations and Environment; H.T. Johnson to be Assistant Sec-

retary of the Navy for Installations and Environment; and Nelson F. Gibbs to be Assistant Secretary of the Air Force for Installations and Environment.

On behalf of the committee, let me welcome each of you and your families. In a moment we will ask you to introduce your family members. We will go a little bit out of order here because of our colleagues' schedules. We have two of our colleagues here to introduce Congressman Parker, and we will call first upon our good Republican Leader, Senator Lott, and then call upon Senator Cochran for that purpose. Then we will call upon Senator Cleland.

[The prepared statements of Senators Bingaman, Thurmond, and Smith follow:]

PREPARED STATEMENT BY SENATOR JEFF BINGAMAN

Mr. Chairman, thank you for holding this confirmation hearing today on these seven nominees. These are all very important positions in the Pentagon, and I am pleased that the administration has sent us these nominations. I expect the committee will quickly report the nominations and they will soon be confirmed by the full Senate.

I'd like to take this opportunity to talk for a few minutes about the position of Assistant Secretary of the Army for Civil Works. This position oversees the Army Corps of Engineers, and the 340-member work force of the Corps' Albuquerque District.

For nearly 75 years, the Albuquerque District of the Corps has played a major role in many important water resources development and management projects in New Mexico. Through a number of projects, the Corps has helped improve the quality of life for citizens all over my State. The Corps built the Conchas Dam in San Miguel County and later built the Jemez, Abiquiu Galisteo, Two Rivers, and Santa Rosa Dams. These projects provide flood control, irrigation and recreation for the people of New Mexico.

The Albuquerque District provides design, construction, and operations and maintenance services to three important Air Force bases in New Mexico—Kirtland, Cannon, and Holloman. The district also works with some of our local communities on critical water resource and flood-prevention projects authorized by Congress, including cooperative projects in Alamogordo, Las Cruces, Bernalillo County, as well as others around the state.

The Corp's role was especially visible in the recent emergency response to last years tragic Cerro Grande Fire. The district provided temporary housing to 114 families whose homes were destroyed and responded quickly to the threat of flooding in Los Alamos after the fire.

I want especially to recognize the Albuquerque District's recent efforts to implement Section 593 of the Water Resources Development Act of 1999. With the first-year appropriation Congress provided in fiscal year 2001, LTC Raymond Midkiff and his staff, especially James White and Bill Spurgeon, have moved quickly to identify eligible projects and to implement Project Cooperation Agreements. The first PCA was signed earlier this month and several more are in the works. I look forward to seeing soon a number of projects under construction in Central New Mexico.

I very much appreciate the continuing support the Albuquerque District has provided the citizens of New Mexico, and I want to express my thanks to the district's dedicated staff for their always prompt responses to requests from my office for project information and status reports.

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman.

Mr. Chairman, I join you and Senator Warner in welcoming our distinguished group of nominees. This is the largest group of nominations that the Armed Services Committee has considered at one time. It shows this committee's bipartisan effort to provide Secretary Rumsfeld the quality people that will be key to transforming the Department of Defense into the organization that it must become to cope with the post Cold-War era challenges to the United States.

Mr. Chairman, I believe each nominee will bring to the position for which they have been nominated unique and professional experience. They are highly qualified and most importantly dedicated to serving our Nation and the men and women of

our Armed Services. Although I will have make additional comments regarding Dr. Fiori and General Johnson, I am pleased to have had a role in recommending both individuals to the President. Each has served in most challenging positions. Dr. Fiori as the Site Manager for the Savannah River Site. General Johnson, a native of South Carolina, as the Commander of the Air Mobility Command.

To each of our nominees I want to state that you my support and that of this committee. I wish you success, and hope that you will consider the committee a partner in your efforts to improve the readiness of our Armed Forces.

Thank you, Mr. Chairman.

---

PREPARED STATEMENT BY SENATOR BOB SMITH

Good morning. Welcome to Mike Parker, who has been nominated by President Bush to assume the position of Assistant Secretary of the Army for Civil Works. Although in the past, the nomination for this position was referred solely to the Senate Armed Services Committee, this year I am hopeful that the nomination will be sequentially referred to the Senate Environment and Public Works Committee, on which I am the Ranking Republican Member.

Virtually all of the responsibilities of the Assistant Secretary relate to matters that are within the legislative jurisdiction of the Environment and Public Works Committee. The Environment Committee has jurisdiction over the issues of flood control, improvement of rivers and harbors (including environmental aspects of deepwater ports), public works, bridges and dams, and water resources. Members surely are familiar with the fact that every 2 years, the Environment Committee considers a Water Resources Development Act, which authorizes projects nationwide under the Army Corps Civil Works Program.

The Assistant Secretary of the Army for Civil Works is responsible for all aspects of the Army Civil Works Programs, including:

- policy formulation and program direction for water resources development, including: navigation, flood control, hydropower, water supply, shore protection and beach erosion control, recreation, fish and wildlife conservation and enhancement, and emergency response to natural disasters;
- regulatory activities conducted under the River and Harbor Act of 1899, the Clean Water Act, and various other acts;
- legislation, including the biennial Water Resources Development Act; and
- annual budget review, approval and submission.

The Assistant Secretary of the Army for Civil Works is the steward of these areas, which fall directly in the jurisdiction of the Environment Committee. Thus, it is only fitting that the two committees share consideration of the nominee for this key position.

I look forward to learning more about Mr. Parker and his background and qualifications.

Thank you, Mr. Chairman.

**STATEMENT OF HON. TRENT LOTT, U.S. SENATOR FROM MISSISSIPPI**

Senator LOTT. Thank you, Mr. Chairman, Senator Warner. It is a pleasure to be back before this distinguished committee. I had the pleasure of serving on this committee for 6½ years, and enjoyed it, and miss it until this very day. I appreciate the job that you do and the opportunity to appear before you today on behalf of my good friend and our former colleague from Mississippi, Congressman Mike Parker, who has been nominated to be Assistant Secretary of the Army for Civil Works. I am very pleased with this nomination, and very proud to appear on his behalf, Mr. Chairman.

Did you say the nominees will introduce their families?

Chairman LEVIN. We will give them that opportunity.

Senator LOTT. I will just have to note Congressman Parker's wife and daughter and one son are here, and he has one son that has met with great success in life. He is a golfer, and he is trying to work with the former Congressman to improve his capabilities to make some money later on in life, perhaps as a golfer. [Laughter.]

Chairman LEVIN. How hopeless is it? [Laughter.]

Senator LOTT. There is some real concern that it is hopeless. [Laughter.]

I promised my friend here that this would not be a roast, Mr. Chairman, but I am tempted for it to be so, in life, some of your best friends are the ones you pick on the most, and Congressman Parker and I have had a lot of fun together representing the State of Mississippi in years gone by, and we even used to do an occasional TV show together, and at one point—before he tells this story on me I am going to tell it on him. He grew a mustache, and it seemed to have an adverse effect on the rest of his hair. I noted that on a live television program, to which, without a crack and a smile, he said—well, he explained why he was doing that, and he did say that at least he did not have the temerity to wear a toupee like I did. [Laughter.]

It went downhill from there and degenerated into a poorly rated show, and it was eventually canceled. [Laughter.]

But that is the kind of relationship we have had. I just want to say that I am really pleased to be here on his behalf. He certainly has the background to do this job. He has good education credentials. He did serve in Congress, representing the Fourth Congressional District. He served on all the important committees in the House, including the Budget Committee, the Appropriations Committee, Transportation, Education, and Workforce and Veterans Affairs, and he was a very active legislator.

He would get engaged to try to find a way to build consensus. I must confess that in order to build that consensus he went to great extremes, including sitting on both sides of the aisle, first as a Democrat and then as a Republican, and so he clearly has been and can be bipartisan, and I mean that in the finest sense of the word.

But he showed that he was an active legislator. He was engaged in issues when he was in Congress and in his private life that give him the background that he needs to do this job, and he has been in business. He has been a successful businessman. He owned a funeral home, a life insurance company and a funeral insurance company. He has also been involved with GFT Farms, Incorporated, and Wilkes Resources Incorporated.

He has been involved with wildlife, nature and land management, and when he was in Congress, of course, serving on Appropriations, including the Energy and Water Appropriations Subcommittee, he was involved with civil works with the Army Corps of Engineer projects, and I think he is just a superior choice for this position.

His wife, Rosemary, and their kids are just as fine as you would ever hope for, and so I hope that he will receive expeditious consideration, and I want you to know with full confidence that he will handle this job very carefully. He will make sure that he understands the concerns of Congress, the House and the Senate, on both sides of the aisle. He will make sure the job is done ethically, efficiently, and effectively, and I am delighted to be here on his behalf. Mr. Chairman and Senator Warner, I commend him to you and to the Environment and Public Works Committee that I believe will also be involved in this confirmation.

Thank you for this opportunity.

Chairman LEVIN. Thank you, Senator Lott, for that wonderful introduction. I know how much Congressman Parker welcomes it, and we do, too. It is important to us.

Senator Cochran.

**STATEMENT OF HON. THAD COCHRAN, U.S. SENATOR FROM MISSISSIPPI**

Senator COCHRAN. Thank you, Mr. Chairman. I am very happy to be here to endorse this nomination and to urge the committee to report favorably on the nomination to the full Senate. I have known Mike Parker since he began a campaign for Congress in the district that I used to represent in Mississippi when I was in the House of Representatives, the Fourth Congressional District of our State that is in the southwest corner of Mississippi.

It included parts of the largest county in our State, Hinds County, where the capital city of Jackson is located, and the old river counties on the Mississippi River, very historic farm country. Cattle and dairy farm businesses, as well as colleges and universities are located in this district. It is really a microcosm, I think, of the entire State, and Mike represented it. He was elected in 1988, and he represented that area of our State with distinction.

He was always conscious of his responsibilities. He took them seriously. He used his personal experiences as a businessman and as a farmer to bring to the legislative process an insight and understanding that was very valuable to the legislative process. He was always very thoughtful in the way he approached his job.

I think you can consider him, too, as a conservationist. He has been involved personally with land management. He understands timber management. He understands the importance of preserving soil and water resources, and he has demonstrated that in his personal businesses as well as his public life as well. I am hopeful that this committee will appreciate, as I do and Senator Lott does, the value that he can bring to this job as Assistant Secretary of the Army, because of his experience and his talent and his intelligence and his good judgment.

Chairman LEVIN. Senator Cochran, thank you very much for your words, very significant, very relevant to this nomination, to our consideration. We are very appreciative of them.

Senator LOTT. Mr. Chairman, could I also just recognize, and I know he probably would, too, but we do have another one of our colleagues here, Congressman Chip Pickering from an adjoining district that served in the House with Congressman Parker, and he wanted to be here to show his support. Here he is, right here.

Senator WARNER. Why don't we invite him up. He ought to be recognized and be a part of the record.

Chairman LEVIN. We will take that wave as an indication of strong support.

Senator WARNER. We thank our colleagues for coming. Those are two powerful statements. There is little left for the committee to judge here.

Chairman LEVIN. Thank you both.

Senator Cleland.

**STATEMENT OF SENATOR MAX CLELAND**

Senator CLELAND. Thank you very much, Mr. Chairman. I would just like to thank you for this hearing. I am sorry I will not be able to stay for the duration, but I look forward to working with all of the nominees. I just want to take this opportunity to introduce Dr. Mario Fiori, who has been nominated by the administration to be Assistant Secretary of the Army for Installations and Environment.

Before I begin, I just want to recognize that Michael Parker, nominated to be Assistant Secretary of the Army for Civil Works, enjoys the support of the Georgia Ports Authority. I look forward to working with him and hope that his early show is not canceled. We hope this is just the beginning of his show, and we look forward to working with him. It is my hope to talk with him in the near future about Georgia's ports and Savannah and Brunswick.

Mr. Chairman, my real purpose is to be here to introduce to the committee today Dr. Mario Fiori. Dr. Fiori is one of my constituents who currently resides in Hinesville, Georgia, but he was born in Frankfurt, Germany, and raised in Brooklyn, two foreign countries. [Laughter.]

Also a 1963 graduate of the U.S. Naval Academy, after a year on a diesel submarine, he began his graduate degree at the Massachusetts Institute of Technology. While there, he completed his master's degree in mechanical engineering, a nuclear degree, and earned a Ph.D. in nuclear engineering.

Upon finishing his education, he continued his Navy career in various positions. He served as department head aboard the U.S.S. *Pargo*, and later as executive officer on the missile submarine U.S.S. *George Washington Carver*.

In 1979, he became commanding officer of the nuclear attack submarine U.S.S. *Spadefish*. From 1983 to 1985, he served as Special Assistant to President Reagan's science advisor, Dr. George Keyworth.

In 1985, he served as commander of Submarine Squadron 4 based in Charleston, South Carolina. He later became Commander of the Naval Underwater Systems Center in Newport, Rhode Island, where he served until his retirement in 1989. Following up on this extremely distinguished naval career, Dr. Fiori was then appointed by the Secretary of Energy to serve as a representative to the Defense Nuclear Facility's Safety Board. He was later assigned by the Secretary of Energy to become manager of the Savannah River operations, where he continued Government service.

In 1997, he left the Department of Energy to become founder and president of Accomplice Associates in Georgia.

Dr. Fiori is married and has three daughters. His daughter Cristina is here today, accompanying her father.

Mr. Chairman, I look forward to a continuation of this hearing and the early confirmation of Dr. Fiori's nomination. He is an incredibly qualified individual.

Thank you, Mr. Chairman.

Chairman LEVIN. Senator Cleland, thank you.

Dr. Fiori, you cannot do better than getting an introduction from Senator Cleland. That is as good as it gets.

Senator WARNER. Or have a wonderful daughter who worked on this committee and traveled a long distance to join us today. Thank you.

Chairman LEVIN. Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. I am privileged to say a few words about my constituent, General Johnson. He has 41 years of service to our Nation in the United States military and other Government service. That is extraordinary. A combat veteran, he has 423 missions as a forward air controller in Vietnam. I observed that type of action in a previous conflict, and I know the risks involved in that type of flying. It is not exactly high altitude flying.

He became one of the U.S. Air Force's most accomplished senior leaders, serving as Deputy Commander in Chief of the U.S. Central Command, Director of the Joint Staff under Admiral William Crowe—a remarkable responsibility, under a very able individual. As Commander in Chief, United States Transportation Command and Military Airlift Commands he served as Transcom Commander during a critical period in our history, Operation Desert Shield and Desert Storm. He led one of the most rapid, concentrated, and highly successful movements of troops, equipment, and supplies in American military history. Logistics played a major role in the successes we had in those operations.

Subsequent to his retirement from the Air Force, he served as a member of the 1993 Base Realignment and Closure Commission. Therefore we welcome you today. BRAC is a subject you can slightly distance yourself from for a while, until you get across the river. We join you and your family in thanking you for continuing your willingness to return to public service.

I was trying to search my mind. I believe you are perhaps the first four-star that has returned to a military department, which is a bit of history in itself. I was talking to some of my Army colleagues here. I remember so well when General Goodpaster stepped down, with a very distinguished career like yours, to go back to West Point, where he laid aside his four stars, and my recollection is he took on two. I am going to have that checked out.

We talked about that yesterday, and I think it is a reflection on your humility and love of this country that you are willing to now undertake another tour of duty in the Department of Defense. I am confident you will do well, and I wish you and your family well.

Mr. JOHNSON. Thank you very much.

Senator WARNER. Mr. Chairman, I think we can now proceed to the panel with questions.

Chairman LEVIN. Thank you, Senator Warner.

Mr. Parker has already been introduced, and is well-known to members of this committee for the 10 years of service which has been referred to in the House of Representatives. Dr. Fiori has also been introduced, as we have been informed served in the Navy for nearly 30 years, most recently served as manager for the Department of Energy's Savannah River Site. Mr. Johnson, as we have just been informed, is an Air Force veteran, served with great distinction, served on the Base Closure Commission in 1993, and Senator Warner was right that you have distanced yourself for a few years from base closures, but it will not last long.

Mr. Gibbs previously served as corporate comptroller for Northrop Grumman, and most recently as Executive Director of Cost Accounting Standards at the Office of Management and Budget, OMB. We welcome all four of you here today. You have all responded to the committee's prehearing policy questions to our standard questionnaire. These responses will be made a part of the record.

We are reviewing the paperwork required for each of you, and we will make certain that it is in accordance with the committee's requirements. We will now ask you the standard questions which are asked of every nominee who comes before this committee.

You have agreed already to appear as a witness before congressional committees when called. You have already agreed to ensure that briefings, testimony and other communications are provided to Congress, and we will now ask you the following questions.

First, have you adhered to applicable laws and regulations governing conflict of interest?

Mr. PARKER. Yes, sir.

Dr. FIORI. Yes, sir.

Mr. JOHNSON. Yes, sir.

Mr. GIBBS. Yes, sir.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

Mr. PARKER. No, sir.

Dr. FIORI. No, sir.

Mr. JOHNSON. No, sir.

Mr. GIBBS. No, sir.

Chairman LEVIN. Will you ensure the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings?

Mr. PARKER. Yes, sir.

Dr. FIORI. Yes, sir.

Mr. JOHNSON. Yes, sir.

Mr. GIBBS. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Mr. PARKER. Yes, sir.

Dr. FIORI. Yes, sir.

Mr. JOHNSON. Yes, sir.

Mr. GIBBS. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. PARKER. Yes, sir.

Dr. FIORI. Yes, sir.

Mr. JOHNSON. Yes, sir.

Mr. GIBBS. Yes, sir.

Chairman LEVIN. All right. Let me now call upon each of you for any opening remarks you would like to make, and why don't you use this occasion also to introduce any family members that are with you?

**STATEMENT OF PAUL MICHAEL PARKER, NOMINEE TO BE  
ASSISTANT SECRETARY OF THE ARMY FOR CIVIL WORKS**

Mr. PARKER. Thank you, Mr. Chairman, distinguished members of the committee. It is a privilege to introduce my family. My wife of 31 years is Rosemary, sitting over here, and next to her is a young man that is 2 years older than my son, and is our next-door neighbor back home in Mississippi, Eli Ferguson, and my son Thomas, who is 16 and is getting smarter every day, and my daughter, Marisa, who is a junior in college, at Millsaps College in Jackson, Mississippi.

I also want to thank Senator Lott and Senator Cochran, and also Congressman Pickering for coming by. For full disclosure, Chip is my cousin, and so you have to watch what he says about me.

It is a great honor and privilege to appear before this committee as the nominee to be the Assistant Secretary of the Army for Civil Works. I am very grateful to the President, the Secretary of Defense and the Secretary of the Army for the trust and confidence that they have placed in me. If confirmed, I pledge that I will work as hard as I possibly can to serve the soldiers, civilians, and families that make the United States Army the most powerful and professional army in the world.

The Corps of Engineers has a proud history stretching back almost to the beginning of the country. Over the years, the Corps has evolved to emphasize its major responsibilities of today, conservation and development of the Nation's water resources, which includes flood control, navigation, shore protection, and related purposes. All of these tasks are important, all are complex and demanding, and all require significant resources.

With competing demands for the limited dollars, fulfilling these requirements becomes more and more difficult. However, the dedicated and able staff of military and civilian employees who make up the Corps of Engineers has risen to the challenge, and continues to carry out its responsibilities to the people of this country in these important areas.

In the 10 years during which I had the honor of representing the Fourth District of Mississippi in the United States House of Representatives, I applied my commitment to finding practical, realistic solutions to problems and issues of importance to my constituents. Having served on various House committees that deal with the range of issues I can expect to face as the Assistant Secretary, I know both the civil works and the military program aspects of the Corps of Engineers.

Should I be confirmed, I look forward to serving with the Army during this landmark era of change and transformation. I look forward to serving with the Army team of active, Reserve, and National Guard soldiers who distinguish themselves every day by their dedication and hard work. I am prepared to undertake the important responsibilities of this post, and am enthusiastic about the opportunities it presents to me to continue to serve this great country.

Mr. Chairman, if confirmed, I look forward to a strong working relationship with you and this committee. I would be pleased to answer any questions at this time. Thank you.

Chairman LEVIN. Thank you, Mr. Parker.

Dr. Fiori.

**STATEMENT OF DR. MARIO P. FIORI, NOMINEE TO BE ASSISTANT SECRETARY OF THE ARMY FOR INSTALLATIONS AND ENVIRONMENT**

Dr. FIORI. Chairman Levin, it is an honor and a privilege to appear before this committee. I am very grateful to President Bush for the confidence and trust he has shown in me by nominating me for the position of Assistant Secretary of the Army for Installations and Environment.

I also appreciate the efforts of Secretary Rumsfeld and Secretary of the Army Tom White to bring me in as one of their team. I certainly very much appreciate and sincerely thank Senator Thurmond and Senator Cleland for their very kind words and introductions.

I am particularly pleased to have the opportunity to serve in the Pentagon once again. My two previous tours were shortened by events beyond my control. Back in 1973, after only 6 months in the Pentagon, my then boss, Rear Admiral Harry Train, sent me to a civilian agency, the Federal Energy Office, to assist in efforts to control fuel shortages resulting from the Arab oil embargo. Then in 1983, after 4 days in the Pentagon, the Chief of Naval Operations, Admiral Watkins, detailed me to work in the White House as Military Assistant to the President's Science Advisor, Dr. Keyworth. I hope, if confirmed, that this tour will last the full term.

During my naval assignments, and also while in the Department of Energy, my highest priority was to take care of people, nurture their exceptional talents, improve their quality of life, and make their service both exciting and rewarding.

Now, I consider myself truly fortunate to be in a position to make a similar contribution to the support of the Army family. If confirmed, I will dedicate myself to improve the living and working conditions of our soldiers, civilians, and families. Also, I will work very hard to enhance our reputation as an agency that will attack our environmental legacy problems efficiently and effectively, and at the same time ensure that mistakes of the past are not repeated in the future.

If confirmed, I will work closely with the members of this committee and our sister Services, other Government agencies, and interested non-Government organizations to ensure that the Army's installation and environmental programs meet the needs and goals of the Army of the 21st century.

Mr. Chairman, I would be remiss if I did not acknowledge the strong support of my family, who have made innumerable adjustments to their lives in order to support my military and Government career. I regret that Susan, my wife and advisor of 33 years, could not be here today, but I am delighted that Cristina, our oldest daughter, is here with me. Cristina, of course, is also very pleased to visit all of her contemporaries and friends on the Senate Armed Service Committee staff on which she served for 2 years between 1996 and 1998.

If confirmed, Mr. Chairman, I will serve the Army with energy, enthusiasm, and loyalty (perhaps with a slight lapse during the Army-Navy game.) I am eager to get started, and thank this com-

mittee and staff for their significant efforts in scheduling this hearing so quickly. I thank you for your time and attention, and look forward to your questions.

Chairman LEVIN. Thank you. We welcome you and your daughter. Cris, welcome back. We are delighted to see you again.

Mr. Johnson.

**STATEMENT OF H.T. JOHNSON, NOMINEE TO BE ASSISTANT SECRETARY OF THE NAVY FOR INSTALLATIONS AND ENVIRONMENT**

Mr. JOHNSON. I would like to introduce a woman who has been my best friend and partner throughout my entire life, Linda Johnson.

Mr. Chairman, Senator Warner, distinguished members of the committee, it is a distinct honor and privilege to appear before you again, this time as the nominee to be the Assistant Secretary of the Navy for Installations and Environment. I thank President Bush for the nomination, Secretary Rumsfeld and Secretary England for their strong support to again serve our Nation, this time with the Department of the Navy.

While serving in the military I had the opportunity to work with the members and the staff of this committee, and have seen firsthand your unwavering support to making sure our Nation has the strongest military in the world. I am very proud, as a citizen, for the outstanding work that all of you do. Should I be confirmed, I look forward to working with Secretary England, the members and staff of this committee, and other Members of Congress, to provide the Department of the Navy, the sailors, marines, and civilians, with the tools necessary to ensure the continued maritime dominance of our naval forces.

As Senator Inhofe mentioned, one of the important parts of that is live fire training, and I commit to you to work that issue very hard if confirmed.

In closing, Mr. Chairman, if I may be permitted, I would like to thank the mentors and associates in the public and private sector who have given their strong support and encouragement over the years. Should I be confirmed, I will focus my entire talents and energies on serving the Department of the Navy and our great Nation. I thank you for hearing us today, and this concludes my remarks.

Chairman LEVIN. Thank you. We welcome you and welcome your wife, both.

Mr. Gibbs.

**STATEMENT OF NELSON F. GIBBS, NOMINEE TO BE ASSISTANT SECRETARY OF THE AIR FORCE FOR INSTALLATIONS AND ENVIRONMENT**

Mr. GIBBS. Thank you. Before I start my remarks, I would like to introduce Priscilla Gibbs, my wife of more years than she allows me to recount publicly any longer. I want to thank you, Mr. Chairman and Senator Warner, for the opportunity to appear here today. It is, indeed, an honor to appear before this committee seeking confirmation of my nomination to be the Assistant Secretary of the Air Force for Installations and Environment and Logistics.

I want to thank President Bush, Secretary Rumsfeld, and Secretary Roche for the trust that they have shown in me as the nominee for this position, and I want to thank you, Mr. Chairman, and the other members of this committee who have taken time out of your busy schedules to hold this hearing today, and to those, the many that have helped me throughout my entire career, and for the continuing support of my family. I would like to take this opportunity to give a public thank you to all of them.

Mr. Chairman, if confirmed, I will work closely with you and this committee to ensure that the resources allocated by Congress to programs under my jurisdiction are used wisely and with fiscal integrity. Our Air Force men and women who put themselves in harm's way deserve no less than my full attention.

My goals are three: installations that are model places to work and to live, a responsive logistics system, and a program of fiscally sound environmental stewardship. I promise my best effort to carry out the mandates of the office for which I have been nominated. I know the issues I will face directly impact readiness and quality of life and, if confirmed, I accept that challenge.

Again, Mr. Chairman, it is indeed an honor to appear before this committee, and I will be pleased to accept any questions from the committee. Thank you.

Chairman LEVIN. Thank you very much, Mr. Gibbs. We would all echo your sentiments about the role of your families in getting to where you have been able to come, and the role that they are going to play in your lives from here on out. The demands are great in these jobs, and their commitment to your service is just as essential as your own commitment to that service, and we commend and thank them for that commitment.

Mr. Parker, let me start with you, relative to the Army Corps of Engineers and the question of whether or not there should be peer review. Currently, the Corps does not have a system in place to assure that independent peer review by experts from outside of the agency takes place for studies which support major projects before such projects are approved. You have indicated that you believe such independent peer review would have value. Would you institute such independent peer review if you are confirmed?

Mr. PARKER. Mr. Chairman, it would have great value, but certain questions have to be answered. Number 1 would be the cost, and what types of projects, what the level of funding would be before a peer review would be required. You also would have to have in place some type of structure where the peer review would not delay the projects. So the answer to your question is yes, I would support a peer review of some type.

I believe that it could be done on certain types of projects, but it would take a tremendous amount of work on the part of all the interested parties to come up with the concept of how it would be instituted. If confirmed, I will be working with not only the Corps, but also with the House and the Senate and all the interested parties involved to come up with some concepts to see what we can do to make that work.

The reason it is so important is because the Corps has had a lot of bad publicity in the last couple of years. It is necessary that not only Members of Congress but the American people know that

when the Corps says something they can depend upon it, and that they can rely on the facts that are given by the Corps and know they are valid. A peer review would serve that purpose, and I think it is something that needs to be explored. If confirmed, I would look forward to working with you and other Members of the House and Senate to make that a reality.

Chairman LEVIN. Would you let us know after you are confirmed, after a reasonable period of time in the office, the status of your consideration and deliberation on that issue so we can keep track of how you are doing?

Mr. PARKER. Yes, I will, and let me point out that I do not know all the information as far as where the Corps is now looking at that. But if confirmed I will let you know. Also, I want to make sure the committee understands that a decision will not be made until consultation is made with the House and Senate to make sure we all understand where we are going with this, because it would be a major change as far as policy.

Chairman LEVIN. Thank you. The General Accounting Office has found some problems with the Army Corps of Engineers program for mitigation of wetlands loss. Last month, the National Academy of Sciences released a report in which it concluded the program was falling short of its stated goal, which was no net wetlands loss, and I know you have not had a chance to review those reports yet, but do you generally support the goal of no net wetlands loss?

Mr. PARKER. I totally support that.

Chairman LEVIN. Let me ask our other three nominees this question. Each of you, relative to base realignment and closure, or the BRAC process, the President's February budget blueprint says that with 23 percent in estimated excess infrastructure it is clear that new rounds of base closures will be necessary to shape the military more efficiently. I would ask each of you, do you believe that the Defense Department has excess infrastructure and that we need more base closings to address the problem? Why don't I start with you, Dr. Fiori.

Dr. FIORI. Sir, I definitely believe we have excess infrastructure, and to run an organization or business we should eliminate as many of the mortgages as we can. As for the process of eliminating these extra properties or facilities, I come to the table with no preconceived notions about it. I know that there are difficult decisions, and it must be done in an open and fair process, and with that I would dedicate our abilities to accomplish the closures in a satisfactory manner that would satisfy the committee and also help us reach our goals for the 21st century.

Chairman LEVIN. Mr. Johnson.

Mr. JOHNSON. Sir, from all indications, we do have excess infrastructure, and we need to do something about that. I know from personal experience from the 1993 BRAC that the system is fair and equitable and certainly can be refined, but it is a very good system for handling the excess. If confirmed, I will work the issues very hard with no previous suggestions on how to do it, but will have an open mind.

Chairman LEVIN. Mr. Gibbs.

Mr. GIBBS. Yes, I also concur with my two colleagues that there appears to be excess facilitization in the military services, and if

confirmed it will be very high on my agenda to ensure that whatever process is chosen by the President and Congress to pursue the rationalization is carried out in a fair and equitable manner.

Chairman LEVIN. Thank you. Mr. Gibbs, do you believe as a general proposition that the Air Force should clean up property due to base realignment, property which has been closed due to that realignment? Do you believe that it should clean up that property to a level which is consistent with the local reuse plan developed by a community, assuming that it is feasible and cost-effective to do that?

Mr. GIBBS. Yes, sir. I believe that the Air Force needs to comply with the environmental laws and regulations of the land.

Chairman LEVIN. But where the local community has a local reuse plan, do you believe that the property should be cleaned up pursuant to that plan, provided it is cost-effective, and provided it is feasible to do that?

Mr. GIBBS. Yes, sir, I certainly do, sir.

Chairman LEVIN. My time is up. Senator Warner.

Senator WARNER. Thank you, Mr. Chairman.

Mr. Parker, I think we are as a Nation indeed fortunate that you are willing to step up and take on this very difficult task. I think most Members of Congress have at one time or another a need to receive consultation from the person in your position with regard to their projects back home. You bring to this office a knowledge of Congress which will help you and those of us here in Congress to achieve a fair and unbiased analysis of the programs.

You are going to have to make tough decisions. As I have come to know you, and as your two former colleagues have stated, you can handle it, and so I wish you well. I am also the senior Republican on the Environment Committee, and I will communicate today with the chairman of that committee so that hopefully we can expedite your hearing and move you through the Senate as expeditiously as we can.

Now a question about this Nation-wide permits issue. The Corps has established 41 Nation-wide permits, in addition to the regional and local permits for specific activities. There are indications that additional Nation-wide permits may be appropriate and necessary. The Corps, however, has been under considerable pressure to restrict access to Nation-wide permits. If confirmed, how would you begin to address the Corps' ongoing efforts to define the use of Nation-wide permits. I am a great supporter of the concept of preserving the current wetlands, and no loss, and I think it is a good one. I think this issue impacts on it.

Mr. PARKER. I think it does also, and I personally support the continuation of Nation-wide permitting, and also regional, the purpose of which is to speed up the process and also cut down paperwork when those things are identified, and it is an ongoing process. It is not something that is just done, and you sit back and say, well, we have done the process and it is over.

I think the Corps has an ongoing process to look at ways that the system can be utilized properly and be able to protect the environment and at the same time not put undue regulatory burdens on the public. It is a matter that will be of constant discussion be-

cause the permitting process is dynamic, it is not a passive thing, and so there will always have to be discussion from here on out.

We are not talking about just this administration, but from here on out, whoever is head of the Corps is going to have to be discussing Nation-wide permitting and regional permitting as things change, and as technology changes, in order to keep the process moving forward.

Senator WARNER. I like your phrase, it is dynamic. That is a good approach to this issue. It is highly sensitive.

The Assistant Secretary of the Army for Civil Works is historically responsible for oversight of our national cemeteries. Included is the guidelines for the burial, and again are subjects that involve tremendous sensitivity occasionally with our constituents.

Arlington, where I have more than a passing interest—my father is buried there—is reaching capacity, and soon there will be before you, I hope, an option by which we could increase the acreage at Arlington. I want to make certain that the local community is going to join us in this endeavor to do so, but I think some expansion of the cemetery to accommodate World War II, Korea and Vietnam veterans is in the national interest, so let us work together on that. I just want you to know you have a partner, certainly when it comes to Arlington, and indeed it is a magnificent asset for our Nation.

Now, gentlemen, I want to go into the area that involves facilities. Through the years on this committee we have seen a growing risk to our force structure overseas. I think this Secretary of Defense, as have his predecessors, put the correct emphasis on protecting our forward-deployed forces.

But I have commended the President many times and will continue to do so for his speech at the Citadel, where he drew the attention of America to the phrase, homeland defense, and that is a reality. It is a sad one, but we have a problem here at home now with regard to our military installations, indeed, Government-wide, but I have always felt that the military is particularly vulnerable.

I am going to ask you to represent to this committee that you will commit to work amongst yourselves. It should be a uniform challenge in the Department of Defense to make sure that our bases and installations and the families and others who work thereon, whether they are uniformed or civilian, are accorded that level of force protection that is required to repel, discourage, and deter any attack on these installations. We will start with you, Mr. Gibbs, if you have some views on that.

Mr. GIBBS. Certainly, Senator. The protection of our resources is paramount, both from an installations point of view and from a personnel point of view, and if confirmed I will assure you that I will make that a high priority that it is carried out effectively.

Mr. JOHNSON. I agree, sir, the protection of our facilities and our installations is very important. Perhaps the most important is the people, and that also involves the local communities, so I commit to you to work the entire spectrum of homeland defense.

Senator WARNER. Dr. Fiori.

Dr. FIORI. I certainly commit myself to working this issue, sir. We have to work not only to protect our military assets and our facilities and our people and their welfare and health, with our

communities, who are so much integrated with our military facilities in many, many fashions. We have to work with them to ensure the maximum safety that we can for our people, and I will certainly work very hard to make that happen.

Senator WARNER. On the subject of a future round of BRAC decisions, as late as last evening I met with senior officials at the Department of Defense and suggested, if it indeed is their intent to have legislation this year, that it be sent forward as quickly as possible, and it might, as I told the chairman, come this week. I say that because the House in all likelihood will not incorporate that into its markup, Mr. Chairman. I do not know if you are aware of that, and therefore significant responsibility would fall on the Senate for initiating such that it could become a conference item.

In the past, I have supported these BRAC rounds, and in fact I was coauthor with Senator Dixon years ago of the statute. Regrettably in the last administration, and I am speaking just for myself, I felt there were some errors made which violated the spirit of trying not to let political influence make the decisions.

So I would hope that each of you would commit to the committee two things: one, to keep a watchful eye out to preclude any political decisions that might influence, or, make it impossible for the Department of Defense to eliminate in a fair and careful way such infrastructure as it deems no longer necessary for our national security—assuming we do get legislation through.

Second, as this procedure is followed by the military departments, that you be ever mindful of the impact of these closures on the local communities. I have had an opportunity to travel through all of our 50 States and spent a lot of time on military installations. It is not just an economic connection between the community and the installation. It goes back for generations.

The communities embrace the men and women who come periodically and stay for only 2 or 3 years, and then go on to other assignments, but they embrace them as a family, and this is a very difficult decision for these communities to accept if, in fact, a BRAC commission decides that this particular installation in their community which they have loved and cared for so well for many years is no longer needed.

So take into consideration those two things, and I will start with you, Dr. Fiori, one, the politics, two, the communities.

Dr. FIORI. I will absolutely commit to you, sir, that I will keep a watchful eye to prevent political decisions, or effects of the decisions of the BRAC. I think it should be an open and fair process, whatever the follow-on to the BRAC might be.

As far as being with the community, having been in the military for many years, I always remember how kind and helpful the communities have been in the years I was in, and I have in the past worked quite a bit to helping communities. That is, as they downsize Government facilities, and working with the community, if it can be done in a fair and equitable manner, that is what I will dedicate myself to once we know what facilities have to be shut down.

Mr. JOHNSON. I would redouble the comments of my colleague. Certainly, the communities are very, very important, and it is important to make sure that the process is fair. I was a little naive,

perhaps, in 1993, but I saw that as an open and fair process and did not feel political pressures. I was hosted very well at these communities that you speak of, sir, and I could feel the pain, and I have also seen it from the other side, and I appreciate your support, and I commend to you that we will be open, fair, and also work with the communities.

Senator WARNER. I thank you very much for that, and I did not suggest that it was the BRAC commission, but the problem came subsequent to the actions of the BRAC commission.

Mr. Gibbs.

Mr. GIBBS. Yes, Senator, I certainly will do all that I can, if confirmed, to ensure that the process for right-sizing, if you will, the military installations and establishments is—the political influence is reduced to the minimum amount possible. Having had some experience in the right-sizing of the defense industry during the 1990s, and having had two closed facilities, I have seen first-hand the impact that it has on communities. It is essential that it be done in all fairness to the communities involved, and it will be if I am confirmed by you.

Senator WARNER. Mr. Chairman, I am very satisfied with our hearings today. I thought we had an excellent round, and again I commend the President and the Secretary and each of you who come forward to volunteer your services for continuation in public office. I wish you well, and you are going to have my support.

Thank you.

Chairman LEVIN. Senator Warner, thank you. While Senator Warner and I may not agree as to whether or not there was a political factor that intruded in the last round, we do agree that there needs to be an additional round of base closings. That is what is important, because this is a question that we are going to face in the Senate.

Senator McCain and I have already introduced a BRAC bill. The administration's version, as I understand it, coming to us perhaps this week, and we welcome that.

There is no way we are going to be able to adopt an additional round or rounds of base closings and realignments without the full support of the Pentagon and the administration. It just will not happen.

A political factor that was debated last time, frankly, was not a relevant concern in the last vote, because the last vote had nothing to do with the last administration running around the base closing. It had to do with the next administration, whichever it might be, and yet it was defeated also. It was defeated for the reason that Senator Warner gave, I think, which is the fear that local communities understandably have, and the closeness that local communities have to our bases.

We have been through it in Michigan many times. I know first-hand the pain, and I know that fear. I also know that it can be overcome. That if, after closings, we really work with the local communities well, that some of those fears can, in fact, be overcome, that the reuses can be very economically productive, indeed, to the local community. They do not have to represent the feared loss. They can be a plus instead of a minus. In many cases where the

fear was the most severe, it turned out that the benefit turned out to be the greatest.

So we just simply have to be efficient with the use of our resources. We are going to look to you, the three of you particularly that have addressed this issue this morning, to give us the best advice you can on why it is we will be saving money if there is another BRAC, and what those savings are. We need the three of you to look immediately upon confirmation at the history of base closings.

Mr. Johnson, you have been personally involved in one, but we need all three of you to look at the history, to tell us what savings, in fact, there have been, or cost avoidances, as it is sometimes called, because there is some skepticism here on the Hill as to whether or not our defense agencies have shown savings.

Now, common sense tells us if you have excess infrastructure, you close it. That is the business common sense that I think most of us have. You cannot afford to keep something going if it is not serving a full purpose, an efficient purpose, but I have to tell you, there is a great deal of skepticism about the numbers involved here as to whether or not the reported savings are, in fact, accurate.

So I would encourage and urge each of you, when you get to your offices, to weigh in on that issue, because our colleagues do need the assurance that, in fact, this is not just a theoretical savings that we are talking about, but that history has shown that in fact the reported savings have been fairly, indeed, assessed.

Senator WARNER. If I might further comment. We have a rather challenging schedule before the committee as far as our markup, and a decision has to be made by the committee as to whether or not we will have a hearing before our markup and if not, whether this action should be reviewed by the committee and then brought in as a floor amendment. I think you and Senator McCain could come back to the committee with a recommendation. I want to try to be supportive in this matter.

Chairman LEVIN. We appreciate that, and I think as you have suggested we will try to work a hearing in if we possibly can in the schedule that we have. There has been a great deal of debate on this subject, and a great number of votes over the years. Nonetheless, if we can plan a hearing I think it would be valuable.

Senator WARNER. But that issue of the savings to the Defense Department is an integral question, if not the pivotal one, that has to be answered, in my judgment, in a favorable way, before you would get sufficient votes on both sides of the aisle.

Chairman LEVIN. Thank you again, Senator Warner. Thank you for your support of this issue.

Senator CARNAHAN.

Senator CARNAHAN. Thank you, Mr. Chairman. I want to welcome this distinguished panel here this morning, and I look forward to working with you on issues that affect the Department of Defense.

I would like to direct my comments specifically to the nominee for Assistant Secretary for Civil Works. Congressman Parker will have considerable influence over an issue that greatly affects Missouri's agriculture, recreation, environment, and economy, and that is the Missouri River. As many of you will recall, 8 years ago Mis-

sourians faced one of the worst floods in memory. This year, we saw communities up and down the river battling against a flood once again.

Meanwhile, the U.S. Fish & Wildlife Service has proposed to shift the flow of the Missouri River so more water passes through our State in the spring and less in the summer. If this so-called spring rise proposal goes into effect, it could have devastating consequences, including increased likelihood of flooding, a shutdown of the barge industry and hundreds of millions of dollars of economic loss. It is up to one agency, the Army Corps of Engineers, to decide whether or not to implement the Fish & Wildlife Service's plan.

The Corps could propose an alternative plan, one that would protect endangered species and yet not pose such a threat to farmers and families and businesses in Missouri. Just recently, Senators Kit Bond, Tom Harkin, Chuck Grassley and I added language to the Energy and Water Development Appropriations bill that would give the Corps more leeway in choosing a plan to manage the Missouri River.

Should this language survive the House-Senate conference, which we fully expect it to, the Corps of Engineers should no longer feel obligated to adopt the Fish and Wildlife Service's recommendation for spring rise. Certainly, we want and fully expect the Corps to assist in recovery of endangered species along the Missouri River, but we believe the Corps can do this without implementing a spring rise or a summer low flow on the river.

Congressman Parker, I would welcome your comments on this issue before asking you a couple of questions.

Mr. PARKER. Senator Carnahan, first of all let me thank you for sending some questions over to the Corps. When I walked into the hearing they handed me the status and so if you would permit me, let me just read their statement to you on what is the current status.

The master manual revision has been on hold for a little more than a year, during which the Army Corps of Engineers has been involved in a consultation process with the Fish & Wildlife Service under the terms of the Endangered Species Act. By the end of the summer, the Corps will produce a revised draft environmental impact statement on the master manual revision.

At this point, no preferred alternative has been selected by the Corps, nor will a single alternative be identified as a recommended alternative in the revised draft environmental impact statement. A Corps recommendation for the operation of the Missouri River system will not be developed before the end of the National Environmental Policy Act process.

Now, in saying that, I do not understand all the details about the situation. A lot of that information has not been shared with me, but I can assure you that the Missouri Master Water Control Manual will not be revised without the personal oversight of the Assistant Secretary of the Army for Civil Works, if I am confirmed, and in that process I will be dealing directly with your office on that, and with you.

Senator CARNAHAN. Well, that takes care of most of my questions, but I will just follow up with this one, because I am concerned about a report that the process is currently being driven by

Corps officials out in the field. Can you assure me that upon taking office this process will receive your attention and the attention of high-level Corps officials?

Mr. PARKER. I can assure you of that, if confirmed.

Senator CARNAHAN. Thank you very much. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Carnahan.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman. I want to thank you for having this hearing. I want to add my welcome to the distinguished panel, and also your families that are here gathered. I know how important the families are to your future, and to what you will be doing for our country. I have some questions here.

My first one is to Mr. Gibbs. In dealing with privatization of services and outsourcing, how do you plan to ensure that the goal of cost-savings is actually achieved? What are your views in requiring contractors to account for their performance?

Mr. GIBBS. Well, certainly I support the concept, Senator, of having the most effective and most cost-efficient manning of our installations and facilities, privatization being one of those, the public-private competition done under A-76. Certainly I think it is incumbent upon the agencies that do go into that to report back periodically as best they can as to how the actual outcomes compare to those estimated at the time the process is undertaken and a decision is made.

I do not have any specific plans at this point to develop a reporting process, but I can assure you that, if I am confirmed, there will be one.

Senator AKAKA. Thank you.

Mr. Johnson, in your position as Assistant Secretary for Installations and Environment for the Department of the Navy, what role will you have in addressing the training needs of the Navy and Marine Corps with respect to the situation on Vieques, and what are your thoughts regarding finding an alternative training site to replace the training facility in Vieques?

Mr. JOHNSON. I am sure, if you confirm me, one of my largest tasks will be to find the opportunity for sailors and marines to train and, as Senator Inhofe mentioned, in a live fire situation. I believe that, as we go forward, we have to find good ranges, but we also have to have a good balance between the military needs and the environmental and other encroachment needs, so I will work that very, very hard for the proper balance.

Senator AKAKA. Do you have a place in mind, an alternative?

Mr. JOHNSON. No, sir. I have not been involved in any discussions on Vieques. I have read a lot, but I have not been involved, and do not know the status, sir.

Senator AKAKA. I took note of your assessment that encroachment is a serious problem, and it is, and it is a serious problem that is having a negative impact on training. What are your thoughts regarding the relationship between communities and the military in addressing the issue of encroachment?

Mr. JOHNSON. In everything that we do, we have to involve the communities. As proud as I am of our Armed Forces, first we are citizens of our country and our community, so we have to work

very closely with the community. Normally we can find a balance with the community, and we will work on that.

Senator AKAKA. I think you know that in Hawaii we are working with the community on Koamokoa. It is a training site with live fire, and I must commend the Army there, General Dubik, who has been dealing with this and has, I thought, worked very well with the community, and you are correct, you have to work with the community in dealing with this.

Dr. Fiori, I took note of your support for increasing the contract threshold under the Davis-Bacon Act. What assurances can you provide to mitigate the negative impact this would have on Federal workers and local economies, and what steps would the Department take to avoid problems experienced by States that have repealed prevailing wage laws, which include cost overruns and expensive change orders, to correct mistakes and poor workmanship?

Dr. FIORI. Senator, the Davis-Bacon laws and requirements have been very successfully addressed in activities that I have participated in in the past, whereby we were able to meet those requirements, and also perhaps not prevent cost overruns and other contractual problems by working together with the appropriate unions, the appropriate people.

I think we can be very successful working with Davis-Bacon. The question I was asked is, should we increase the limits, and I think I answered that in a positive fashion, but until I get confirmed and really study the problem in depth, I doubt that I could be much more proficient in my answer, based upon my past experiences.

Senator AKAKA. My time is up.

Chairman LEVIN. Please finish. I have no more questions, so when you are done, we are done.

Senator AKAKA. Thank you, Mr. Chairman.

I am pleased to see, Dr. Fiori, your willingness to work with both the military and civilian workforce to accomplish your mission. I also took note of your assessment that the establishment of policy and programs to address the legacy of unexploded ordnance and munitions need to be a top priority. What types of procedures and techniques do you believe should be developed to characterize the properties to gain public and regulatory agency acceptance for the proposed cleanup plans?

Dr. FIORI. The UXO, the unexploded ordnance, is certainly a major issue, and one of the three, actually one of my four top priorities. I think we can address it in many ways, and the most important way is to prioritize the difficulty of the different facilities, because there have been all sorts of predictions on how many years and how much money it will take to clean everything up, and I am accepting that as factual for the moment at least, and with that in mind we have to look at those areas that need immediate cleanup, those areas that affect the local communities, or our military capabilities the most.

We need to do additional research and development when it is appropriate. I would say the different explosives have different problems, and I am not an explosives expert, and I do intend to be much more involved in the whole issue of unexploded ordnance. I think we can develop a priority listing and go after the highest priority things. How do you go after the highest priority things? You

look at what your R&D base is, and in many cases you are going to find solutions. So we have to be very smart in looking at the entire research and development community.

I am not aware at the moment how much work we have done with the national laboratories on high explosives, and I would be very willing and anxious to inquire much more about how we work with the national labs. It is a very difficult problem. We also have to work with the community, because in some cases, as was testified recently, it could affect people's property and their safety where they are living, and we have programs in place to make that a very high priority.

So with that, I would share with you, Senator, that I look forward to studying this issue a lot more and trying to come up with an intelligent solution that can serve the Army and also our communities.

Senator AKAKA. Thank you for your responses.

Mr. Chairman, I do not want to leave Mr. Parker out. I want to say, Mr. Parker, that I feel the Corps of Engineers has served the Pacific very well, and I hope we can continue to do that.

As you pointed out, there are some problems, but that is what we are here for, to try to correct them as best we can. They have done well and helped the communities out in the Pacific as well, all the way down to Asia, and I hope we can continue to do that.

Thank you very much. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Akaka. We will leave the record open for the usual period of 48 hours. We will continue to review the various paperwork which has been presented to us, to get answers to questions which have been asked relative to that paperwork, and to try to get these nominations before the full committee for markup and consideration as soon as possible, and then before the Senate as quickly as possible, and we will stand adjourned.

[Whereupon, at 11:40 a.m., the committee adjourned.]

[Prepared questions submitted to John P. Stenbit by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 27, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

JOHN P. STENBIT.

cc: Senator John Warner,  
*Ranking Member.*

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I whole-heartedly support full implementation of the Goldwater-Nichols and Special Operations reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I am not yet fully familiar with the Department's efforts to implement these reforms. However, if confirmed, I will review the extent to which these reforms have been implemented and assess appropriate actions I can take to promote further implementation.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* It is my understanding that these reforms have significantly improved the organization of the Department of Defense, focused our joint warfighting capabilities, enhanced the military advice received by the Secretary of Defense and provided for more efficient and effective use of defense resources in responding to national security challenges.

The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

*Answer.* Yes, I agree with these goals.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* My understanding is that the Department is continuing to examine ways to better support the goals of the reform in light of our ever-changing environment. If confirmed, I will fully support the intent of the reforms and advocate legislative proposals and policies that will enhance the Department's ability to respond to national security challenges of the 21st century.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

*Answer.* If confirmed, my principal duty will be to advise the Secretary of Defense on space and information superiority. I will exercise policy, guidance, planning, resource management, and program oversight of mission areas.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I have over 30 years of practical and managerial engineering experience in the defense industry and with the DOD. As an industry executive I was ultimately responsible for fulfilling corporate obligations on a myriad of defense contracts ensuring successful program delivery to the government and a reasonable profit for our employees and shareholders. I saw and experienced both the best and worst in DOD program management and execution. If confirmed, I will consider and recommend any changes that might improve the organizational process.

I received both my undergraduate and master's degree in electrical engineering from CalTech and was later fortunate enough to study and teach for 2 years as a Fulbright and Aerospace Corporation Fellow at the Technische Hogeschool in the Netherlands.

In addition to the 4 years that I served in the Pentagon as a DOD employee I have also served on Defense Science Boards, Air Force and Navy Study Boards, Science Advisory Groups for Naval Intelligence and the Defense Communications Agency (now DISA), S & T Panel Chairman for the Director of Central Intelligence, and Chairman of an Advisory Committee for the Federal Aviation Administration Administrator.

I believe that my education, government and industry experience, and successful, executive level defense industry career have prepared me to face the exciting challenges and opportunities resident in the position of ASD C<sup>3</sup>I.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

Answer. I am unaware of any specific actions that I should take to further prepare myself for the position as ASD C<sup>3</sup>I.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense would prescribe for you?

Answer. The ASD C<sup>3</sup>I is principal adviser to the Secretary of Defense for space and information superiority. As DOD's Chief Information Officer, the ASD C<sup>3</sup>I is also responsible for oversight of all DOD information systems and information management activities.

*Question.* Are these roles—advocate, operator and overseer—in conflict?

Answer. I am aware of the debate regarding the ASD C<sup>3</sup>I and the DOD CIO being dual-hatted. If confirmed, I will solicit views on both sides, analyze the pros and cons, and develop my position based largely on what is in the best interest of the Department.

*Question.* Do you believe the CIO function should be separated from the ASD C<sup>3</sup>I position?

Answer. It is my understanding that there are cogent arguments for and against separation. This issue merits a more in-depth study and assessment of the benefits and impacts. If confirmed, I will examine the pros and cons and offer a recommendation to the Secretary of Defense on a way ahead.

*Question.* In carrying out your duties, how will you work with the following:

The Secretary of Defense

Answer. If confirmed, I will function as DOD Chief Information Officer (CIO) and as the principal staff assistant and advisor to the Secretary of Defense for all space and information superiority matters. In particular I will be responsible for providing policy, guidance and oversight for functions including:

- Command, control, communications, intelligence, surveillance, and reconnaissance sensors;
- Information technology, management, operations, assurance, and superiority;
- Electronic commerce and business process reform;
- Intelligence and counterintelligence;
- Personnel, industrial, and classification security;
- Frequency-spectrum management;
- Space systems; and
- Critical infrastructure protection.

*Question.* The Deputy Secretary of Defense

Answer. If confirmed, my relationship with the Deputy Secretary of Defense will be the same as that described above in relation to the Secretary of Defense.

*Question.* The Under Secretaries of Defense

Answer. If confirmed, my relationship with the Under Secretaries of Defense and other senior officials of the Department will be based on the role of each principal official within the Department of Defense with respect to my functions as described above in the relationship to the Secretary of Defense. With respect to acquisition of information superiority and space systems, I will report to the Deputy Secretary of Defense through the Under Secretary of Defense for Acquisition, Technology and Logistics.

*Question.* The Assistant Secretary of Defense for Special Operations and Low Intensity Conflict

Answer. If confirmed, my relationship with the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict will be similar to that described below in relation to the other Assistant Secretaries of Defense. In particular, I will coordinate the Psychological Operations aspect of Information Operations.

*Question.* The other Assistant Secretaries of Defense

Answer. If confirmed, my relationship with the Assistant Secretaries of Defense and other senior officials of the Department will be based on the role of each principal official within the Department of Defense with respect to my functions as described above in the relationship to the Secretary of Defense.

*Question.* The General Counsel of the Department of Defense

Answer. If confirmed, my relationship with the General Counsel will be based on my role as principal staff assistant to the Secretary of Defense for space and information superiority matters and as DOD CIO.

*Question.* The Chairman of the Joint Chiefs of Staff

Answer. If confirmed, I will continue to coordinate and exchange information with the Chairman of the Joint Chiefs of Staff on space and information superiority matters to ensure all policy and guidance issues under my cognizance are supportive of the Commanders in Chief and Military Services.

*Question.* The Commander in Chief United States Special Operations Command

Answer. If confirmed, my relationship with the Commander in Chief United States Special Operations Command will be based on my role as the CIO and as principal staff assistant to the Secretary of Defense for space and information superiority functions. I will coordinate and exchange information with the Commander in Chief United States Special Operations Command and Assistant Secretary of Defense for Special Operations and Low Intensity Conflict on matters of mutual interest to ensure policy and guidance matters under my cognizance are supportive of the CINC's roles and missions.

*Question.* The regional combatant CINCs

Answer. If confirmed, my relationship with the regional combatant CINCs will be based on my role as principal staff assistant to the Secretary of Defense for space and information superiority functions and as CIO, and I will coordinate and exchange information with the CINCs on matters of mutual interest to ensure management policy and guidance are supportive of the CINCs' roles and missions.

*Question.* The Director of the Defense Intelligence Agency

Answer. If confirmed as the Secretary of Defense's principal staff assistant for space and information superiority functions, I will exercise authority, direction and control over the, Defense Intelligence Agency. Accordingly, I will work with the Director of Central Intelligence to ensure that their space and information superiority programs follow DOD guidance in the areas of architecture, interoperability, security, acquisition and related areas.

*Question.* The Director of the National Imagery and Mapping Agency

Answer. If confirmed as the Secretary of Defense's principal staff assistant for space and information superiority functions, I will exercise oversight of the National Imagery and Mapping Agency. Accordingly, I will work with the Director of Central Intelligence to ensure that their space and information superiority programs follow DOD guidance in the areas of architecture, interoperability, security, acquisition and related areas.

*Question.* The Director of the National Security Agency

Answer. If confirmed as the Secretary of Defense's principal assistant for space and information superiority functions, I will exercise oversight of the National Security Agency. Accordingly, I will work with the Director of Central Intelligence to ensure that their space and information superiority programs follow DOD guidance in the areas of architecture, interoperability, security, acquisition and related areas.

*Question.* The Under Secretary of the Air Force.

Answer. If confirmed, I will coordinate and exchange information with the Under Secretary of the Air Force on space and information superiority matters particularly relating to space matters, appropriate to ensure all policy and guidance issues under my cognizance are supportive of the Commanders in Chief and Military Services.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

Answer. If confirmed, one of my major challenges will be to help the Department achieve space and information superiority. Information needs to be seen as a strategic asset rather than a supporting element.

I believe that key challenges include: promoting secure, reliable, interoperable solutions that break down stovepipes and enable joint and coalition operations, transforming business practices to accelerate acquisition and development to keep pace with commercial world, changing the mind set throughout DOD to examine and incorporate transformational concepts, ensuring intelligence capabilities keep pace with the emerging threats, paying more attention to people and protecting critical cyber and physical infrastructures, information, and advanced technologies.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I will ensure that ASD C<sup>3</sup>I is properly organized to address these challenges. In coordination with my counterparts elsewhere in the Department, I will develop a strategy for addressing each of these areas and implement it through policy, planning guidance, and effective oversight.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

Answer. If confirmed, I will look to address the following:

- Need to reform business practices for the information age;
- Be able to acquire key IT on commercial time scales;

- Need to leverage the limited numbers of acquisition professionals within C<sup>3</sup>I;
- Need to fix outdated IT infrastructure within OSD.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, my focus will be on creating management mechanisms and metrics to transform the military in space, intelligence, information operations and assurance, C<sup>3</sup> and IT.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

*Answer.* If confirmed, my priorities will be to implement actions to achieve space and information superiority.

#### INFORMATION SUPERIORITY

*Question.* Many have described the major responsibility of the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence) as “information superiority.”

Describe your vision of information superiority for DOD, including any major impediments to information superiority facing the Department.

*Answer.* To me, information superiority means the right information, to the right place and the right people, at the right time, assured and protected while denying our adversaries the same.

#### INFORMATION OPERATIONS

*Question.* Joint Vision 2020 and most defense experts advocate “information superiority” as a critical element of success in 21st century conflict. Disrupting the information systems of adversaries, while protecting our own systems from disruption (i.e., information operations) may well be a major element of warfare in the future.

Describe your vision for the role of information operations in the conduct of military operations.

*Answer.* It is my understanding that as discussed in Joint Vision 2020 and the Quadrennial Defense Review, the vision is to evolve Information Operations from a supportive capability to a “core” capability and a mission area not unlike air, land, sea, and fully integrated into the full spectrum of military operations. I believe we should continue to evolve our capabilities, enabling us to shape the information environment and provide pre-conflict management courses of action. If conflicts arise, we will ensure that IO capabilities will integrate with our traditional kinetic force capabilities.

*Question.* What is your assessment of the unity of the efforts across the Department, the Defense Agencies and the respective military services in this area?

*Answer.* If confirmed, I will review this topic aggressively. I feel that there are well meaning, dedicated professionals working for the best interests of their organizations or programs. As IO continues to evolve within DOD, I believe we should look for refinements in how the Department organizes to plan and execute IO.

#### INFORMATION ASSURANCE

*Question.* The vulnerability of Department of Defense information systems has been repeatedly demonstrated. The protection of our critical information infrastructure has become a high priority. Training and retention of personnel in this developing profession of computer security and infrastructure protection has been challenging.

Are you satisfied with the current level of effort to protect critical Department of Defense information infrastructures?

*Answer.* I believe that the Department has made significant progress over the past few years to protect its information infrastructure, however, protection of defense information infrastructure is an ongoing effort that will never reach a final conclusion. Not only can we not rest on our laurels, but also we need to find new ways to do business to respond more rapidly. If confirmed, this will be a focus area.

*Question.* Have sufficient resources been allocated for this task in the President’s budget request for defense?

*Answer.* For Information Assurance, it is my understanding that there are sufficient resources allocated for protection of our information infrastructure. That does not mean that an increase in resources would not improve the situation—clearly it

would. But resource needs for this task must be balanced against other critical requirements.

*Question.* What are your views on the professional development and retention of the highly skilled personnel required to assure the security of our Department of Defense information systems?

*Answer.* I believe that in DOD, as in most organizations, development and retention of skilled people is a critical task and one of the most challenging. It is my understanding that the DOD has been making strides to identify and improve the management of these critical personnel, but there is a lot of work to be done, especially in the development and retention arenas. We can't employ technical solutions without the trained personnel to implement them and operate the networks correctly.

*Question.* In Section 922 of the Fiscal Year 2001 Floyd D. Spence National Defense Authorization Act, an Information Security Scholarship Program was authorized. The purpose of this program is "to encourage the recruitment and retention of Department of Defense personnel who have the computer and network security skills necessary to meet Department of Defense information assurance requirements."

What is the status of implementation of this program?

*Answer.* It is my understanding that this upcoming Academic Year 2001–2002 will serve as a pilot year in which the Department will prototype programs at schools that have been designated by DOD as Centers of Academic Excellence in Information Assurance Education. These will provide scholarships with internships for non-DOD students at these institutions, as well as scholarships for current DOD civilian employees and military members, in exchange for a period of obligated service with the Department as provided for by the statute. These prototype approaches will be evaluated for cost effectiveness and management efficiencies, and lessons learned will be incorporated into program planning for future years. A request for proposal has been released to the 23 institutions designated as Centers of Academic Excellence and DOD is awaiting their response.

#### RESPONSIBILITIES IN SPACE

*Question.* In the past, the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence) has been assigned the lead within the Office of the Secretary of Defense for military space matters. With the realignment of responsibilities identified by the Secretary of Defense in implementing the recommendations of the Space Commission, it is not clear exactly what role the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence) will have in oversight of military space matters.

Please describe the role you will fill in overseeing military space matters if you are confirmed.

*Answer.* If confirmed, it is my understanding that my role would be to ensure appropriate senior-level policy, guidance, oversight, and advocacy for space. I will work closely with the heads of DOD components in carrying out my responsibilities.

*Question.* Please describe the most significant challenges facing the Department of Defense and the intelligence community in providing space support to the warfighter.

*Answer.* With respect to challenges facing the United States, the DOD is increasingly dependent on its civil, commercial, and defense and intelligence space assets. With that dependence comes vulnerability to hostile acts. The Nation needs a capability to deter attack on space assets, and systems to defend satellites in orbit, the ground stations that control them, and the electronic links between them.

The U.S. and other nations that make use of space face real threats to the operations of their satellites. We know that other nations have jammed telecommunications, that Russian entities market devices that can jam GPS signals, and that foreign satellites manufacturers market so-called "micro satellites" to other foreign countries that can be used for offensive actions against satellites. In light of U.S. dependence on vulnerable space assets, it would be contrary to U.S. security interests not to develop, test, and deploy the means of deterring attack on and defending space systems.

In addition, U.S. space capabilities must be modernized to support our 21st century needs. Space is critical to strengthening our intelligence, to serve both our short-term and our long-term national security needs. If confirmed, I will personally make establishing a strong spirit of cooperation between the Department of Defense and the rest of the intelligence community, under the leadership of the DCI, one of my top priorities. I believe we must strengthen our intelligence and our space ca-

pabilities, along with the ability to protect those assets against various forms of attack.

#### FUNDING CHALLENGES

*Question.* During testimony before the Senate Armed Service Committee, the previous incumbent in the position for which you have been nominated indicated that the Department of Defense faced significant funding shortfalls in the area of information assurance.

What is your opinion of the status of the Department's information assurance program?

*Answer.* It is my understanding that the program is in relatively good shape, but there is always room for improvement—especially in a field where technology is changing rapidly, the threat is enabled by this same technology, and the operational concepts are still maturing. I believe there are improvements that have to be made with how we manage and retain our people, how fast we develop and deploy information assurance technology, and how we operationalize that technology.

*Question.* If you believe that there are shortfalls, and assuming you are confirmed, will you seek increases in funding in this area as part of future budget preparations?

*Answer.* It is my understanding that this issue is being addressed as part of the Quadrennial Defense Review. I believe that additional resources for information assurance must, of course, be balanced against other critical Department requirements.

#### SMART CARDS

*Question.* In November 1999 the Deputy Secretary of Defense directed all Department of Defense (DOD) components to implement the use of a standard smart card containing integrated circuit chips, magnetic stripes and bar codes for use as the Department-wide common access card and as a Public Key Infrastructure authentication device, and assigned responsibility for this program to the DOD Chief Information Officer. To date the Department has not fully implemented the deployment of this technology.

If confirmed, what steps would you plan to take to provide central direction to fully implement the use of smart card technology within DOD?

*Answer.* It is my understanding that the Department is embarked on an aggressive and accelerated program to implement smart card technology as a common access card. Smart card technology can be used in many areas to do the business of the Department smarter and faster while providing security for our classified information and the proprietary property of our business partners. I feel that the application of smart card technology will contribute to the Department's efforts to transform business processes, enhance missions, increase security, reduce costs, and improve quality of life.

Understandably, implementation of such cutting-edge technology in a large, worldwide organization takes time and has many challenges. Nonetheless, if confirmed, I would support the implementation of this technology in the Department. To this end, I would direct my attention to the implementation plan of the program to ensure the Department is leveraging the many smart card technologies.

*Question.* Do you believe that the Navy, which has served as the lead agency for development of this technology, should be designated as the executive agent for smart cards within DOD?

*Answer.* My understanding is that the Navy is working diligently as the lead for the development of the smart card technology in the Department. This and continued significant progress in this program would certainly be important factors in any consideration of a designee for executive agency. If confirmed, I will work quickly to consider this decision.

#### NAVY/MARINE CORPS INTRANET PROGRAM

*Question.* The committee understands that there may be differences of opinion within the Department about the pace at which the Navy/Marine Corps Intranet (NMCI) program is proceeding. At least some of these differences appear to focus on the extent of testing that must be conducted to ensure that the program is ready to proceed to broader implementation.

What are your views on the appropriate level or duration of testing the Department should conduct on the NMCI program?

*Answer.* I believe that systems such as NMCI must demonstrate that the capabilities satisfy user requirements and that interoperability with military systems are fully demonstrated. It is my understanding that the ASD C<sup>3</sup>I staff is currently

working with Director Operational Test and Evaluation and other OSD offices to develop a final test strategy that is consistent with a reasonable fielding rate for NMCI.

#### INTELLIGENCE PROGRAMS

*Question.* With the development of increasingly advanced information technologies, and the evolving role of intelligence in support of military forces and operations, the current intelligence categories—NFIP, JMIP, and TIARA—appear to be increasingly blurred.

In your view, should these categories be reevaluated?

*Answer.* I agree. There is a blurring of these categories. I feel that it may be useful to revamp our intelligence categories to more effectively focus on the customer and mission capabilities.

*Question.* Do you believe that the current management and budgeting oversight of these programs between the Secretary of Defense and the Director of Central Intelligence is adequate?

*Answer.* I believe the existing legislation is adequate. Nonetheless, if confirmed, I would like to study this issue in more detail before I make any recommendations for change.

*Question.* If not, what changes would you recommend?

*Answer.* N/A.

*Question.* In your view, do the Office of the Secretary of Defense and the Joint Staff have sufficient influence over major programmatic and architecture decisions within the National Foreign Intelligence Program?

*Answer.* I have no knowledge of the effectiveness of this influence, but it is certainly critical that it be effective. If confirmed, I'll work to enhance communication and improve the quality of the budget dialog to reach consensus with the DCI in this important area. I look forward to engaging on these issues if confirmed.

#### OVERSIGHT OF MODERNIZATION OF INTELLIGENCE PROGRAMS

*Question.* There have been continuing questions about whether the National Security Agency (NSA) will be able to modernize signals intelligence mission capabilities to respond to new intelligence challenges.

The Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 directed the Office of the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence), the Director of Central Intelligence's Senior Acquisition Executive and the Director of NSA to establish a disciplined acquisition strategy with strong oversight mechanisms for NSA's modernization program. In part, this direction resulted from concerns about NSA's capability to implement better acquisition management techniques and conduct rigorous, enterprise-wide systems engineering.

In addition, recent conflicts have illustrated continuing deficiencies in the area of map production, analysis, and dissemination. Unfortunately, there have also been questions about the ability of the National Imagery and Mapping Agency (NIMA) to manage and implement a major modernization and transformation of its capabilities.

What is your view of the appropriate oversight role that the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence) should play in management of major acquisition programs at NSA and NIMA?

*Answer.* I believe that the ASD C<sup>3</sup>I oversight role is to ensure that appropriate acquisition processes are in place and executed to ensure the successful delivery of the NSA and NIMA programs so critical to our Nations security. For NSA and NIMA acquisition programs, the ASD C<sup>3</sup>I staff has worked extensively with the DCI's Senior Acquisition Executive. If confirmed, I will actively work with my DCI counterpart to build on the progress made to date.

#### COMMERCIAL VS. MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* In recent years, growing demands for the use of the frequency spectrum for defense and civilian communication needs have increased the competition for this finite resource.

If confirmed, what would be your role in spectrum management issues within the Department of Defense?

*Answer.* If confirmed, my responsibility in spectrum management is to ensure DOD has assured access to the necessary spectrum it needs to conduct operations and warfighter training to effectively execute those operational missions.

*Question.* If confirmed, would you represent the Department of Defense (DOD) in interagency and international negotiations regarding spectrum management issues?

Answer. Yes.

*Question.* What steps would you recommend the Department of Defense take to improve its spectrum management policies?

Answer. If confirmed, I would make one of my highest priorities the review of current policies and processes, and the development of a strategy to make full use of emerging spectrum-efficient technologies.

*Question.* If confirmed, what actions would you take to review the Department's total spectrum requirements and ensure that new systems are designed to ensure efficient spectrum utilization by the Department of Defense?

Answer. If confirmed, I expect to update requirements projections and to identify solutions that include new spectrum-efficient technologies.

*Question.* What do you see as the proper balance between defense and other uses of the frequency spectrum, and what is your view of the current process by which those needs are balanced?

Answer. Although I am not familiar with the details, I understand the current process for spectrum allocation provides equal opportunity to both the private sector and our government to request and debate frequency spectrum based upon requirements. If confirmed, I will continue to support this process.

*Question.* What are your views of proposals to reallocate spectrum in the 1755–1850 frequency band from DOD and other Federal users to make this band available for third-generation internet (3G) use?

Answer. Although I am not completely familiar with all the details of this issue, it is important to protect the military capabilities that need the 1755–1850 MHz band. If additional spectrum is needed, I would encourage exploring all alternative bands and I will, if confirmed, work with concerned parties to help us reach the best decision for the Nation on this matter.

*Question.* If confirmed, what actions would you take if the study currently being conducted within the Department of Defense determines that there will be a significant cost and operational impact if the military services surrender the 1755–1850 MHz band of frequencies?

Answer. If I understand correctly, studies have already indicated the defense of our Nation is at risk by vacating this spectrum. If confirmed, I will work with other branches to help determine the best decision for the Nation on this matter.

*Question.* Do you believe that potential solutions exist that would allow DOD to shift to other frequency bands, assuming sufficient funding were available to compensate DOD for its relocation costs?

Answer. I understand this is a matter that is still under study. If confirmed, I will work with the spectrum regulators to determine if potential solutions exist that would allow DOD to shift to other frequency bands.

#### INFORMATION MANAGEMENT

*Question.* In 1995, GAO designated the Department of Defense effort to streamline business operations and deploy more efficient standard information systems as a “high-risk” area, indicating that it was especially vulnerable to waste and mismanagement. Since 1995, GAO has continually reported that the Department of Defense has lacked effective management and oversight controls of the information technology (IT) investments. The areas of concern include controls and processes to:

- (1) ensure that the costs and risks of multimillion-dollar projects are justified;
- (2) monitor progress and performance; and
- (3) stop projects shown to be cost ineffective or technically flawed.

A significant change in the Department of Defense IT management and oversight process occurred in July 1998 when the Department of Defense disestablished the Major Automated Information Review Council which was the primary body for overseeing major automated information systems and other IT investments.

What is the status of efforts to improve the Department of Defense IT oversight process?

Answer. I understand the implementation of the Paperwork Reduction and Clinger-Cohen Acts provides a strong statutory foundation for IT oversight. I support the progress the Department has made in building on that foundation by developing information and oversight controls in areas such as capital planning and investment, acquisition regulation revisions, major acquisition programs, and mission critical systems tracking.

The Department of Defense reported on December 1, 1998 to the Defense Committees that the Department recognizes that its current IT management process has the following shortfalls:

- (1) minimal linkage between IT investments and functional process changes;
- (2) individual systems narrowly focused on specific functions and organizations rather than mission; and
- (3) fragmented systems and infrastructure, resulting in a lack of fully integrated and interoperable capabilities.

*Question.* Please comment on each of these problems and explain what the Department of Defense is doing to correct them.

*Answer.* The Clinger-Cohen Act calls for the need to improve management processes, including the selection and management of IT resources. It is my understanding that DOD is developing an investment portfolio process to improve investment oversight for families of systems. This process would establish direct links between IT investment decisions and DOD mission priorities—not only those of individual organizations—ensuring functional outcomes as well as compliance with the Clinger-Cohen Act and related reform legislation. Portfolio management and oversight would also promote synchronized development of individual systems and their supporting infrastructures.

By the same token, I feel that the Global Information Grid (GIG) policy and implementation should significantly improve the interoperability and integration of DOD's IT communications and computing infrastructure. In essence, GIG is the globally interconnected, end-to-end set of information capabilities, associated processes and personnel for collecting, processing, storing, disseminating and managing information on demand to warfighters, policy makers and support personnel. This overarching model will provide at once, a blueprint and an overlay for the development, implementation and integration of dependent and sub-architectures. By using or building to this model, the Department and its components will be able to overcome much of the fragmentation and narrowly focused IT solutions.

*Question.* The Clinger-Cohen Act of 1996 introduced requirements emphasizing the need for the Department of Defense to significantly improve management processes, including how it selects and manages IT resources. For instance, a key goal of the Clinger-Cohen Act is that the Department of Defense should have institutionalized processes and information in place to ensure that IT projects are being implemented at acceptable costs, within reasonable time frames, and are contributing to tangible, observable improvements in mission performance.

What is the status of the Department's efforts to implement the Clinger-Cohen Act?

*Answer.* As I understand it from a brief review, the Department's approach to implementing the act has been one that builds on past successes and seizes the opportunities the act offers to reinvent and reinvigorate how information is delivered to warfighters and those who support them. Specifically, it is my understanding that the Department:

- Established a governance structure that fosters a more collaborative approach to policy-making and IT budgeting.
- Uses the Planning, Programming and Budget System in conjunction with the requirements and acquisition processes, to ensure that the correct information investments are selected. Changes have been made in the budget process to ensure full participation of the DOD CIO in the decision making process.
- Included procedures for implementing the Clinger-Cohen Act and related legislation in the most recent version of its acquisition regulations.
- Made significant progress on actions to manage its worldwide information infrastructure as a coherent GIG, including the development of an IT architecture with operational, systems and technical views that can be applied to IT investment decisions.
- Has a Defense-wide Information Assurance Program to build and sustain a secure information infrastructure.
- Is engaged in a number of initiatives to improve the processes for recruiting, hiring, retaining and training information technology professionals.

#### AUTOMATION AND MANAGEMENT REFORM

*Question.* GAO and others have criticized various DOD's business units (such as finance, accounting, personnel, inventory, transportation) for failing to change their business processes to take advantage of new commercial information technology products.

If confirmed as DOD's Chief Information Officer, what would you do to ensure that DOD changes the way it does business before it spends new money on automation?

Answer. I understand that the DOD CIO is responsible for promoting improvements to DOD work processes and supportive information resources. IT and process reforms are critically interrelated and represent a major focus for the DOD CIO. If confirmed, I intend to make “business process improvement” a key factor in determining whether to support IT investments. In addition, for reforms to be durable, a clear relationship to the basic business of the Department must be established in the context of a sound enterprise architecture.

## DEFENSE INFORMATION SYSTEMS AGENCY

*Question.* Over the past several years, a number of concerns have been expressed about the growth in the “tooth-to-tail” ratio and the resource drain that the defense agencies impose on the military services. The Defense Information Systems Agency is often used as an example of how defense agencies continue to grow and continue to absorb resources that should otherwise be dedicated to weapons procurement.

If confirmed, what actions would you take to examine the defense agencies under your jurisdiction to ensure that they are providing the most effective support in the most efficient manner?

Answer. I believe the Defense Information Systems Agency is an example of an entity that has a critical role in this era of information superiority and “the network as a weapons system.” The oversight responsibility for defense agencies and activities is a serious charge. If confirmed, I intend to review, scrub, and set serious goals, while applying the best management principles.

## JOINT COMMAND AND CONTROL

*Question.* A recurring theme within the on-going strategic review process is that U.S. Armed Forces lack an agile, deployable joint command and control system. After-action analyses of all major U.S. military operations in the past decade similarly conclude that communications and information technology systems of our respective military services are not fully interoperable.

In your view, what are the major impediments to the development of an interoperable, deployable command and control system for our military forces?

Answer. In my opinion, there are several major impediments:

1. Services develop their own Command and Control (C<sup>2</sup>) systems and there is no process or central engineering authority in place
2. There are insufficient joint Tactics, Techniques, and Procedures
3. In addition to these above, the greatest impediment to operating closely with coalition forces is restrictions on national information sharing policies.

If confirmed, I would address these issues and work with Department leaders to resolve them.

*Question.* What role should ASD C<sup>3</sup>I play in ensuring the development of reliable and agile command and control systems?

Answer. If confirmed, my role would be to issue policy, planning guidance, and to integrate and oversee service Command and Control acquisition. I firmly believe that OSD, working closely with Congress, the Services, agencies, and industry can achieve huge progress in this challenging and critical area of support for our warfighters. If confirmed, I will make this effort a primary goal during my tenure and hold myself personally accountable to achieve measurable progress that I will report annually to Congress.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense (Command, Control, Communications, and Intelligence)?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

## [Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR EDWARD M. KENNEDY

1. Senator KENNEDY. The Federally Funded Research and Development Centers (FFRDCs) are unique organizations that assist the U.S. Government with scientific research and analysis, systems development, and systems acquisition. They bring together the expertise and outlook of government, industry, and academia to solve complex technical problems that can't be solved by any one group alone. The Assistant Secretary of Defense for Command, Control, Communications, and Intelligence (C<sup>3</sup>I) sponsors a C<sup>3</sup>I FFRDC that is run by MITRE Corporation.

The MITRE C<sup>3</sup>I FFRDC is a vital part of the Electronic Systems Command (ESC), the Air Force's Center of Excellence for Command, Control, Intelligence, Surveillance, and Reconnaissance (C<sup>2</sup>ISR). ESC is located at Hanscom Air Force Base. Like all of the FFRDCs, MITRE has demonstrated the value of focused and unbiased research and development in meeting our defense and governmental technology needs. ESC has recognized the exceptional value and contributions of MITRE by naming them the Chief Engineer for ESC. In addition to software integration and interoperability, MITRE has become a leader in the field of information security and information superiority.

Mr. Stenbit, what is your opinion of the contributions of the FFRDCs to our Nation and the Department of Defense?

Mr. STENBIT. The Federally Funded Research and Development Corporations are the Department of Defense's primary source of objective expertise for meeting emerging national security priorities and procuring key defense programs. As our strategic partners, they are essential elements of the Department's competency to accomplish the Secretary of Defense's direction for the services, intelligence agencies and acquisition communities to transform military operations to achieve joint capabilities. The FFRDCs bring special talent to bear in high interest areas, acting as the "honest broker" with the depth and breadth of knowledge and experience built through long-term involvement with our systems, substantial domain knowledge and thorough understanding of today's technological opportunities.

In the case of the C<sup>3</sup>I FFRDC, for which I am the Primary Sponsor, MITRE Corporation is mission critical to the principal DOD organizations pursuing the SECDEF's priority to "modernize U.S. command, control, communications, intelligence and space capabilities." The C<sup>3</sup>I FFRDC has played a critical role in modernizing U.S. C<sup>4</sup>ISR capabilities to provide commanders with the right information at the right time—securely—to dominate the battlefield. The C<sup>3</sup>I FFRDC brings special talent to bear in the high interest areas of missile defense, exploitation of space, acquisition reform, as well as in the development of the C<sup>3</sup>I infrastructure. With their in-depth, unbiased understanding of the advanced IT available in the commercial marketplace, the C<sup>3</sup>I FFRDC provides critical modern C<sup>2</sup> architecture and general systems engineering and integration of joint C<sup>4</sup>ISR capabilities. More pointedly, the C<sup>3</sup>I FFRDC is particularly well positioned to support the Secretary of Defense's objective of working across the DOD and intelligence communities to realize both efficiencies and synergies.

In addition to the profound contributions to the Air Force and the Electronic Systems Command, MITRE is helping the Army to develop its vision of network centric operations and the Navy in enhancing its capability for joint battle management. The C<sup>3</sup>I FFRDC is supporting the National Imagery and Mapping Agency, National Security Agency and the National Reconnaissance Office, as well as the services, in laying out architectures and acquisition strategies that integrate and exploit resources and improve dissemination and operational utility. The C<sup>3</sup>I FFRDC is providing expertise to many of our organizations in assessing and countering new world threats such as cyber terrorism, which can undermine critical infrastructure and endanger information assurance. The C<sup>3</sup>I FFRDC is assisting with the evolution of communications, surveillance and reconnaissance functions in space, contributing its technical capabilities to solving problems in areas ranging from frequency spectrum conflicts to radar detection to information processing and management. The C<sup>3</sup>I FFRDC is working with Joint Chiefs of Staff and the Combatant Commanders on improving interoperability and integrating existing systems for interdependent joint and multinational operations.

2. Senator KENNEDY. Mr. Stenbit, does the Department of Defense plan to continue, or possibly expand, their investment in the C<sup>3</sup>I FFRDC?

Mr. STENBIT. The ASDC<sup>3</sup>I fully supports the continued use of the MITRE C<sup>3</sup>I FFRDC as a vital part of the Electronic Systems Command (ESC). However, we are constrained with respect to expansion by the number of staff years of technical sup-

port (STE) authorized by Congress annually. Requests from C<sup>3</sup>I FFRDC customers throughout DOD on both the Air Force and Army programs continually exceed the authorized limits. Therefore, careful prioritization and focus on critical national and DOD information superiority goals is a key controlling factor in making STE allocations.

3. Senator KENNEDY. Mr. Stenbit, the federally Funded Research and Development Centers (FFRDCs) are unique organizations that assist the US government with scientific research and analysis, systems development, and systems acquisition. They bring together the expertise and outlook of government, industry, and academia to solve complex technical problems that can't be solved by any one group alone. The Assistant Secretary of Defense for Command, Control, Communications, and Intelligence (C<sup>3</sup>I) sponsors a C<sup>3</sup>I FFRDC that is run by MITRE Corporation.

The MITRE C<sup>3</sup>I FFRDC is a vital part of the Electronic Systems Command (ESC), the Air Force's Center of Excellence for Command, Control, Intelligence, Surveillance, and Reconnaissance (C<sup>2</sup>ISR). ESC is located at Hanscom Air Force Base. Like all of the FFRDCs, MITRE has demonstrated the value of focused and unbiased research and development in meeting our defense and governmental technology needs. ESC has recognized the exceptional value and contributions of MITRE by naming them the Chief Engineer for ESC. In addition to software integration and interoperability, MITRE has become a leader in the field of information security and information superiority.

The President's Commission on Critical Infrastructure Protection noted that our Nation is increasingly vulnerable to cyber attacks from both foreign and domestic sources.

What role do you see for the FFRDC organizations, such as the MITRE Corporation, in protecting our Nation's critical infrastructure from cyber attack?

Mr. STENBIT. FFRDCs, including the MITRE Corporation, provide the Department of Defense (DOD) a unique support capability. They provide a depth of specialized research talent that would otherwise not be available to DOD. The operational readiness of the Department, and the successful execution of the spectrum of its national security missions, depend on the reliability of physical infrastructure products and services including fuels, transportation, electricity, and water. Because of the inextricable interdependencies between information and physical infrastructures, FFRDC talent is needed to address physical, cyber, and human (to include "insider"), threats to all Defense-related critical infrastructures.

#### QUESTIONS SUBMITTED BY SENATOR ROBERT C. BYRD
