4. Senator BYRD. Mr. Stenbit, intelligence systems will come under your purview as Assistant Secretary of Defense for Command, Control, Communications, and Intelligence (C<sup>3</sup>I). Measurement and Signature Intelligence (MASINT) is one system in which I am very interested. What is your view of the importance of MASINT to the U.S. intelligence community?

Mr. STENBIT. Measurement and Signature Intelligence (MASINT) continues to be a vitally important component of the U.S. intelligence community and has the potential to assist with tracking some of the most difficult and challenging intelligence problems facing the United States in the 21st century. The design and development of future U.S. ballistic missile defensive systems will rely heavily on MASINT derived data to complement multi-int data in an all source analysis process. MASINT has the capability to help overcome some of the foreign denial and deception techniques employed against U.S. collection and to gather critical intelligence against hard targets. MASINT systems are unique in their capability to collect against key aspects of foreign nuclear, chemical, and biological capabilities. Decisions made by our national leadership and tactical decisions made by our operating forces will rely heavily on data and analyses provided by MASINT and fused with other information and data.

5. Senator BYRD. Mr. Stenbit, what role can MASINT play in developing a comprehensive homeland security strategy, as a means of protecting the U.S. against terrorism and weapons of mass destruction? Is an effective MASINT architecture necessary to defend the Nation against such activities?

Mr. STENBIT. The primary contributions MASINT can make to homeland defense and counter terrorism are in the identification and analysis of foreign weapon systems, reducing technological surprise, and developing U.S. countermeasures. MASINT provides unique insight on State and non-State actors who are engaged in the development of weapons of mass destruction (nuclear, chemical and biologi-

cal). MASINT-derived analyses assess the technological progress of potential adversaries having the capability of initiating global crises, and provides timely and accurate intelligence to the counter/non-proliferation community, national policymakers, and warfighters.

The development of U.S. national strategies that deal with stopping the proliferation of the technologies used in WMD, weapon delivery systems (e.g. ballistic missiles), and fully operational WMD rely in part on MASINT. Therefore, I support efforts within the intelligence community that prioritize and maximize the intelligence resources required for current and future MASINT systems, and incorporate them into the overall intelligence architecture.

6. Senator BYRD. Mr. Stenbit, do you believe that additional funding resources for MASINT could be used to improve our national security?

Mr. STENBIT. MASINT is a key contributor, along with the other intelligence disciplines, in assessing the intent and capabilities of potential U.S. adversaries. Over the last decade the demand for MASINT data and analysis has significantly increased. This demand is for data against geographically dispersed targets, targets more difficult to collect against, and data required in near-real time. Furthermore, the collection environment is complicated by denial and deception techniques. Current funding profiles are capable of sustaining existing systems; but, some systems are reaching their end of life, and some require replacement with more capability.

To meet anticipated national and operating forces' requirements additional investments would be required to modernize and deploy new MASINT capabilities. The intelligence community is thoroughly examining MASINT requirements, current system capabilities, system life cycles, R&D investments, and is developing strategies to address the prioritization of competing requirements, shortfalls, gaps in providing certain data, and alternative solutions. The demand for more MASINT data and analysis will require a corresponding increase in resources for processing and exploitation (analysis).

7. Senator BYRD. Mr. Stenbit, we have discussed a proposal to better manage MASINT data resources. Do you support the concept that better coordination of MASINT data resources would be a benefit for our national security? Would you consider the establishment of a centralized coordination center?

Mr. STENBIT. The ability to deliver MASINT-derived intelligence in a timely user-friendly and usable format to the widest possible community of analysts and consumers is something I strongly support. The best approach, and what the associated cost estimates are, is a topic that the DOD Central MASINT Organization and the Director of DIA are currently working. I eagerly await their findings.

8. Senator BYRD. Mr. Stenbit, biometrics is the use of a person's physical traits, such as fingerprints, or patterns of the iris of the eyes, or veins in the arm, to provide access to secure computers, facilities, or other equipment. What is your view of the importance of biometrics to the Department of Defense and to the information assurance needs of the Nation?

Mr. STENBIT. Biometrics has the potential to provide increased security to DOD networks through positive identification of users prior to network access. In addition to assisting in protecting networks from outsiders, biometrics can play an important role in mitigating the insider threat through positive identification of individual network users in trusted environments. Currently the Department of Defense is exploring the use of biometrics and has implemented over 50 "Quick Look" projects that test the feasibility of biometric devices. These "Quick Look" projects explore the use of biometric devices for facility access, shipboard security and, computer access control. One of these "Quick Look" projects is in the C<sup>3</sup>I Directorate, Information Assurance. This quick look is testing the feasibility of using an Iris Scanner to allow access to a sensitive area. Additionally, the Department has created the Biometric Management Office to further the study of biometrics within the department and to foster partnerships between Government, industry and academia for the future of the biometric program.

---

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

9. Senator WARNER. Mr. Stenbit, despite efforts of the Department of Defense to establish standards of interoperability for the command and control systems essential for joint operations, virtually every significant military operation in the last two decades has been plagued by communications, intelligence, operations and logistics systems of the various services that cannot efficiently interact.

How do you propose to make substantive progress in this area that has, heretofore, proved so elusive to your predecessors?

Mr. STENBIT. We have learned that standards are necessary but not sufficient for achieving interoperability for information. The DOD defines information interoperability as the exchange and use of information in any form electronically that allows us to operate effectively together whether on the warfighting or business sides of the department. Information interoperability is one of the critical enablers for effective joint, interagency, and multinational operations. Joint Vision 2020 describes this operational environment as composed of doctrine, organization, materiel, training, leadership, personnel, and facilities (DOMTLPF). Further we have learned that interoperability must be balanced with information assurance. Both interoperability and information assurance are essential enablers to network centric warfare, our analogy to the role of the Internet in commercial and personal worlds.

The Department in compliance with Clinger-Cohen Act (CCA) of 1996 uses the terminology of Information Technology (IT) and National Security Systems (NSS) to cover any system which gathers, processes, or presents information in any electronic form to include what is considered an integral part of weapons or weapon systems. In compliance with CCA, the DOD is using integrated information technology architectures to describe how we do "business", the systems that assist in the business process, and the standards that underpin the systems. We call this an integrated architecture composed of three interrelated views: operational, systems, and technical. These are living documents, which will evolve as business practices and technology changes. We now have integrated architectures for each of the combatant commanders (i.e. CINCs), as well as many of the functional or mission areas (e.g. Airborne SIGINT, Health Affairs) of the department. To provide the overarching context for all of these integrated architectural efforts and as the initial effort toward an organizing construct leading to network centric operations, I as the DOD Chief Information Officer approved on August the first in a series a Joint Task Force Global Information Grid integrated architecture. The standards piece of integrated architectures (i.e. the Technical View) uses the Joint Technical Architecture, the codified listing IT and NSS standards that apply across the DOD now beginning the development of Version 5.0, to assure a common base. The JTA contains approximately 85 percent non-government standards in conformance with congressional direction to use voluntary consensus-based standards. Interestingly, the DOD is recognized as setting the best practices for the development and use of integrated architectures and related documents.

As the DOD Chief Information Officer, using the authorities provided by CCA and Title 10, I am providing the leadership in revamping the interoperability process of the DOD, as well as how interoperability is handled within our requirement generation, acquisition, and budgetary processes. I am also using my Title 10 authorities to develop a DOD strategy to synchronize and rationalize the department's involvement in the development of IT and NSS standards. Notwithstanding my statutory authorities, the pragmatics of achieving the network centric interoperability (and information assurance) underpinning Joint Vision 2020 requires the teaming of USD(AT&L), VCJCS, CINC Joint Forces Command, the DOD Comptroller, and the Director of Operational Test & Evaluation. Lastly, we are continuing to make other improvements such as a small fund to be used to make the down payment on interoperability (to include information assurance) DOTMLPF remedy sets for field capabilities as well as improved facilities and processes for verifying interoperability.

I believe that through the use of teamed leadership and integrated architectures, as well as changes in organization, funding, and verification, we will make progress on interoperability that has proven so elusive to my predecessors.

10. Senator WARNER. Mr. Stenbit, communications systems are critical to the men and women that serve in our Armed Forces. The Joint Staff has mandated specific telecommunications certification standards and I understand that tough standards have been part of military procurement contracts for telecommunications equipment as well. It is important that we maintain the highest standards.

What will you do to ensure these tough telecommunications certification requirements are implemented on all manufacturers on a uniform basis?

Mr. STENBIT. We take very seriously our responsibility to ensure the Department acquires only telecommunications equipment and systems that meet our requirements for interoperability and security. Our certification process guards us against acquisitions that might jeopardize the vital ability of our forces to share information seamlessly and securely. Our Joint Interoperability Test Command (JITC) implements that process in testing and certifying system performance. The process includes utilizing common test requirements for all testing such as the DOD's Generic Switching Center Requirements (GSCR) and commercial standards such as the

Bellcore Local Access and Transport Area (LATA) Switching System Generic Requirements (LSSGR). These specifications are typically included in the governments Request for Proposal, so the prospective vendors know up front what we expect.

Results of the JITC testing and certification are provided to vendors and acquisition activities to allow corrections to be made in system performance prior to acquisition, and to enable prudent acquisition decisions. Those same results are used by the Defense Information Systems Agency in granting approvals for equipment and systems to interconnect with our global networks. Our standards are applied equally to all vendors and commands, and our testing process is open. Vendors are made aware that they are welcome on-site throughout the testing process. This not only ensures openness of the process, but it also enables a far freer exchange of technical information so necessary in the testing of today's complex telecommunications systems. I intend to vigorously enforce this policy of openness.

As a final step to ensure fairness and objectivity, we have instituted a process where any test certification issue that can not be resolved by JITC is forwarded to an interoperability test panel that is chaired by the Joint Staff. This independent group reviews test results that are used to make final or interim fielding decisions.

11. Senator WARNER. Mr. Stenbit, how will you ensure vendors are held accountable for meeting these vigorous procurement requirements?

Mr. STENBIT. We currently utilize a standard process for the test and certification of switches to be installed in the DOD system. The test and certification process is documented in DOD policy Directives and Instructions for all acquisition organizations to use in the execution of the procurement and test process. As a further step to ensure adherence to the test requirements, many of the recent contracts stipulated that switches had to pass these standard interoperability tests before the government paid the full contract amount for the switches. By tying testing and certification to full payment the DOD can ensure that these vital requirements are met. We will not compromise our standards of interoperability or security. The risks are too great to our fighting men and women. We will continue to report our certification testing results openly and honestly, and our reports will continue to be available to all acquisition activities for their use in determining what systems do and don't meet Department standards.

12. Senator WARNER. Mr. Stenbit, at this point in the process, what role do you anticipate playing in the QDR?

Mr. STENBIT. Although arriving towards the end of the review, I am fully engaged in the discussions. Space and information superiority are key contributors towards the Department's transformation efforts. My main role will be to lead the implementation of the C<sup>3</sup>I action items resulting from the QDR. I will keep a close eye on how we lay the transformation base and then support the transformation efforts to achieve information dominance.

13. Senator WARNER. Mr. Stenbit, are you confident that the intelligence community has had the opportunity to make appropriate contributions to the QDR process?

Mr. STENBIT. Yes. From the start, we invited the DCI's staff to participate in the Space, Information and Intelligence (SII) Integrated Project Team (IPT) efforts. They have participated and helped shape the SII input into the QDR; we have briefed members of the Community Management Staff, and have also stayed abreast of the DCI's Quadrennial Intelligence Community Review and NSPD 5 efforts.

14. Senator WARNER. Mr. Stenbit, the U.S. Commission on Space (Rumsfeld Commission) recommended the establishment of an Under Secretary of Defense for Space and Intelligence. Shortly after taking office, Secretary Rumsfeld indicated he would implement most of the recommendations of the Space Commission, but declined to elevate your prospective position to an Under Secretary, indicating he wanted to evaluate the functions of ASD(C<sup>3</sup>I).

In your view, are your responsibilities in military space policy clear?

Mr. STENBIT. Yes, my space policy responsibilities, pending completion of the review of the ASD(C<sup>3</sup>I)'s responsibilities and functions, are currently to develop, coordinate, and oversee the implementation of policies regarding space and space-related activities and, in coordination with the Under Secretary of Defense for Policy, ensure that space policy decisions are closely integrated with overall national security policy considerations.

15. Senator WARNER. Mr. Stenbit, the U.S. Commission on Space (Rumsfeld Commission) recommended the establishment of an Under Secretary of Defense for Space and Intelligence. Shortly after taking office, Secretary Rumsfeld indicated he

would implement most of the recommendations of the Space Commission, but declined to elevate your prospective position to an Under Secretary, indicated he wanted to evaluate the functions of ASD, C<sup>3</sup>I.

What is the status of this review of the functions of ASD, C<sup>3</sup>I, and when do you anticipate it will be completed?

Mr. STENBIT. The review is ongoing. With my confirmation, I am now directly engaged in the process and expect to bring the review to a conclusion in the near future.

16. Senator WARNER. Mr. Stenbit, there has been much discussion of the potential benefits of augmenting our space reconnaissance efforts with commercially available imagery. In theory, use of these commercial assets would free up national systems for the most important missions. To date, however, the investment in commercial imagery has remained relatively modest, in relation to the overall cost of space reconnaissance.

What role do you see for commercial imagery in our overall space reconnaissance effort? Has the investment in commercial imagery, to date, been satisfactory?

Mr. STENBIT. The National Commission for the Review of the National Reconnaissance Office, the Independent Commission on the National Imagery and Mapping Agency, and the Commission to Assess United States National Security Space Management and Organization recommended that the U.S. Government take a fresh look at its strategy for using the U.S. commercial remote sensing industry to satisfy some of its geospatial and imagery information requirements. The Secretary of Defense and the Director of Central Intelligence agree that an effective U.S. Government commercial imagery strategy is necessary and have initiated a thorough review of the strategy being developed by the Directors of the National Reconnaissance Office and the National Imagery and Mapping Agency. This review will be conducted with the advice of an outside panel and will include the government's future use of commercial imagery, how we acquire it, and how we should incorporate it into our intelligence products. The funding required to implement the strategy is part of this assessment.

17. Senator WARNER. Mr. Stenbit, despite efforts of the Department of Defense to establish standards of interoperability for the command and control systems essential for joint operations, virtually every significant military operation in the last two decades has been plagued by communications, intelligence, operations, and logistics systems of the various services that cannot efficiently interact.

How do you propose to make substantive progress in this area that has, heretofore, proved to elusive to your predecessors?

Mr. STENBIT. We have learned that standards are necessary but not sufficient for achieving interoperability for information. The DOD defines information interoperability as the exchange and use of information in any form electronically that allows us to operate effectively together whether on the warfighting or business sides of the department. Information interoperability is one of the critical enablers for effective joint, interagency, and multinational operations. Joint Vision 2020 describes this operational environment as composed of doctrine, organization, materiel, training, leadership, personnel, and facilities (DOTMLPF). Further we have learned that interoperability must be balanced with information assurance. Both interoperability and information assurance are essential enablers to network centric warfare, our analogy to the role of the Internet in commercial and personal worlds.

The Department in compliance with Clinger Cohen Act (CCA) of 1996 uses the terminology of Information Technology (IT) and National Security Systems (NSS) to cover any system which gathers, processes, or presents information in any electronic form to include what is considered an integral part of weapons or weapon systems. In compliance with CCA, the DOD is using integrated information technology architectures to describe how we do "business", the systems that assist in the business process, and the standards that underpin the systems. We call this an integrated architecture composed of three interrelated views: operational, systems, and technical. These are living documents, which will evolve as business practices and technology changes. We now have integrated architectures for each of the combatant commander (i.e. CINCs), as well as many of the functional or mission areas (e.g. Airborne SIGINT, Health Affairs) of the department. To provide the overarching context for all of these integrated architectural efforts and as the initial effort towards an organizing construct leading to network centric operations, I as the DOD Chief Information Officer approved on 1 August the first in a series a Joint Task Force Global Information Grid integrated architecture. The standards piece of integrated architectures (i.e. the Technical View) uses the Joint Technical Architecture, the codified listing IT and NSS standards that apply across the DOD now beginning

the development of Version 5.0, to assure a common base. The JTA contains approximately 85 percent non-government standards in conformance with congressional direction to use voluntary consensus based standards. Interestingly, the DOD is recognized as setting the best practices for the development and use of integrated architectures and related documents.

As the DOD Chief Information officer, using the authorities provided by CCA and Title 10, I am providing the leadership in revamping the interoperability process of the DOD, as well as how interoperability is handled within our requirement generation, acquisition, and budgetary processes. I am also using my Title 10 authorities to develop a DOD strategy to synchronize and rationalize the department's involvement in the development of IT and NSS standards. Notwithstanding my statutory authorities, the pragmatics of achieving the network centric interoperability (and information assurance) underpinning Joint Vision 2020 requires the teaming of USD(AT&L), VCJCS, CINC Joint Forces Command, the DOD Comptroller, and the Director of Operational Test & Evaluation. Lastly, we are continuing to make other improvements such as a small fund to be used to make the down payment on interoperability (to include information assurance) DOTMLPF remedy sets for field capabilities as well as improved facilities and processes for verifying interoperability.<sup>7</sup>

I believe that through the use of teamed leadership and integrated architectures, as well as changes in organization, funding, and verification, we will make progress on interoperability that has proven so elusive to my predecessors.

18. Senator WARNER. Mr. Stenbit, what actions will you take to examine the defense agencies under your jurisdiction to ensure that they are providing the most effective support in the most efficient manner?

Mr. STENBIT. The oversight responsibility for defense agencies and activities is a primary responsibility for me. I intend to conduct regular defense agency reviews to monitor progress in order to ensure the most effective use of funding and resources.

---

#### QUESTIONS SUBMITTED BY SENATOR WAYNE ALLARD

19. Senator ALLARD. Mr. Stenbit, the "Tail to Tooth Commission" Report, a 3-year study led by Senator Rudman, recommended that outsourcing DOD's long haul communication infrastructure could result in \$30 billion in savings, while satisfying requirements for security and interoperability.

a. What is your position on the commission's recommendations?

b. How would you propose going about achieving these vitally important savings?

Mr. STENBIT. The \$30 billion figure in the report was the dollar figure that the commission ascribed to the total cost of intelligence, space, and other command and control programs per year. I am unable to find a \$30 billion figure related to outsourcing long haul communication infrastructure. DISA, as our primary long haul provider, spends less than \$1 billion per year on this. Even if we included intelligence assets, that number does not seem feasible.

With regard to the assumption that DISA is replicating what already exists in industry, this is definitely not the case. Commercial providers have been and will be employed to meet the vast majority of DOD wide area network communications needs. It is how they are employed to provide DOD secure and interoperable solutions of best value that matters. The context in which decisions should be made is a mission context that ensures our forces can communicate with each other in a secure way and reach back from deployed locations, where commercial infrastructure is unavailable, to the sustaining base that supports them. Further, this enterprise view of our global requirements, infrastructure, and systems is also the most economical way to satisfy requirements. Without this view, we will continue the wasteful cycle of stovepipe individual organizational implementations followed by a wave of mandated consolidations. This cycle is a recipe for high total costs, the inability of forces to communicate, and gaps and lapses in security.

The right way to partner with industry is to leverage industry to the maximum extent possible but within the context of the military mission and the enterprise view, as depicted in our Global Information Grid architecture. The Defense Information Systems Network (DISN) is a good example of this. The DISN supports military missions and our deployed forces worldwide. It is designed and operated with the assumption that communications and the computing connected to communications will be a high priority target, both physically and electronically, of any adversary. Let me assure you that even in times of peace, this is the case. Therefore, we engineer the DISN specifically for security and robustness and require that our vendors provide critical military features. These relate to such areas as personnel and phys-

ical security, mix of routes and media diversity, and precedence and preemption capabilities. The recent performance problems experienced by business customers with one major vendor as a result of the Baltimore tunnel fire points to the types of problems you can have when you don't engineer with these types of considerations in mind. It is not whether the DISN is outsourced, because over 90 percent of its costs are for commercial products and services. It is how it is outsourced that matters.

To have the reliability and trust needed when lives and national security are at stake, DOD provides an augmentation of capabilities above what is normal commercial practice. These capabilities include robust NSA-approved encryption and an active network and computer defense capability through our network operations and security centers, with their associated sensor and reporting systems. They also include computer emergency response teams and mandatory accreditation and certification procedures for the networks and systems attached to them. Further, the DISN can extend voice, data and video services communications to deployed forces rapidly through the tie-in to military satellite capabilities from various strategic locations. If you are on the DISN, you have guaranteed interoperability. The capabilities of the DISN stand in fairly stark contrast to buying communications services from a general service, where security and configuration management practices are unknown, the customer base could consist of active adversaries, and the ability to locate and respond to information attack are limited, or do not have extensions to remote locations where our forces are in harms way. The lessons of the past are replete with examples of mission failure and loss of life where we did not attend to these concerns. The mix of employing industry strengths, while never forgetting our military mission, is the right way ahead.

Information technology is strategic to almost all businesses and modern organizations. The loss of in-house expertise, the turnover of infrastructure without the ability to recapitalize, the failure to adequately define baselines or requirements, and the absence of expertise in outsourcing negotiations can and has frequently spelled real trouble. This is especially difficult when de facto private monopolies emerge without the customer having a viable exit strategy. Several major corporations are now engaged in lawsuits with outsourcing vendors as a result of these very issues. Much research on outsourcing promotes the use of selective outsourcing, with the ability to maintain competitive suppliers, vice total outsourcing as a much lower risk and higher payoff strategy. Indeed, that has been our experience. For example, by a combination of consolidation, modernization, and selective outsourcing, DOD has been able to reduce its mainframe computer processing costs from over one billion dollars annually to \$331M, while successfully completing Y2K and accomplishing a dramatically increased processing workload. Further, we have integrated the computing with our networks and provided robust security for both.

We are going to scrub every process we have, employ technology to positive advantage, and use the competitive marketplace effectively to maintain a mission edge and reduce cost.

20. Senator ALLARD. Mr. Stenbit, on DOD's long haul policy, has the Secretary's Strategic Review reached a conclusion on DOD policy to contract out for such services versus DISA providing the DISN Enhanced Program (DEP) network and competing against industry?

Mr. STENBIT. The revised DOD network policy, which resulted from a broad review of alternatives for the Global Information Grid (GIG) supports increased use of commercial sources for Defense networking. In the case of DISN, commercial services and capabilities, such as DEP, have been integrated to provide effective and assured wide area networking. In particular the DEP provides a degree of mandated diverse routing, and accommodates the requirements for security, the visibility of it to the Computer Network Operations Joint Task Force, and the economics of scale provided to all DOD by bundling requirements. The DEP is part of the Defense Information Systems Network (DISN), and the benchmarking studies conducted by a third party last year show DISN costs to be in general below pure commercial service rates. The DEP is a good example of DOD partnering with industry to meet military needs while obtaining significant economies. It is able to handle classified and unclassified voice, data, and video traffic consistent with critical national security missions, while at the same time exploiting best business practices.

21. Senator ALLARD. Mr. Stenbit, many experts have stated that DISA's mission should be "standards and policy." DISA, on the other hand, has the clear intention to become a "telephone company," including voiding existing contracts with domestic carriers and providing the service with in-house resources. What is your position?

Mr. STENBIT. DISA has a significant and critical mission within DOD that goes well beyond standards and policy. The Defense Information Systems Agency (DISA)

is the Combat Support Agency responsible for planning, developing, and operating key Joint command, control, communications, and computing (C<sup>4</sup>) systems that serve the needs of the National Command Authorities, the Services, CINCs, Agencies, and deployed forces under all conditions of peace and war. DISA enables information and decision superiority by providing and operating high quality information-based products and services that form the core of DOD's Global Information Grid (GIG). No other component or Agency has this joint mission. DISA's contributions include:

(1) Planning, building, and operating the Global Command and Control System, the Defense Information System Network, the Defense Message System, and the Global Combat Support System. DISA also operates the six major data processing centers for the combat support functions within the department. These systems and capabilities constitute the core DOD enterprise level systems for C<sup>4</sup>.

(2) Providing the DOD capstone Computer Emergency Response capability and leadership for many DOD information assurance activities. DISA's Vice Director is dual-hatted as the Commander of the Computer Network Operations Joint Task Force, a SPACECOM activity.

(3) Managing the end-to-end integration of components of the GIG and providing technical support to the compatibility, integration, and interoperability activities of the entire GIG (to do this, DISA provides direct hands-on support in the areas of engineering, standards, interoperability testing and certification, spectrum management, planning, modeling and simulation).

(4) Providing direct operational support to the Joint Staff, CINCs, and deployed forces in peace and in all crisis, conflict, humanitarian, and wartime roles through DISA's worldwide field commands and offices and flyaway assets.

(5) Providing key IT products and services in support of the electronic commerce, business and public affairs activities of the department and the sharing of scientific and technical information throughout the department.

(6) Providing operational support to the National Command Authority, including White House Communications and National Security/Emergency Preparedness missions.

It is not in DISA's charter to act as a phone company. In fact GSA commercial service offerings or other commercial service providers meet the majority of the Departments long distance and local telephone requirements. For example, for long distance telephone service the DOD is GSA's largest customer on the FTS 2001 contracts (with MCI Worldcom and Sprint) with over \$90 million of the DOD budget spent annually on the FTS contracts alone. In addition, last year the DOD moved from an Army contract to GSA's WITS commercial services (with Verizon) to meet the department's local telephone service for the national capitol region. Again the DOD is the largest customer on this contract with approximately 150,000 DOD customers. While most of the DOD's administrative telephone services is provided from commercial carriers, DISA's focus is on satisfying command and control and critical combat support telecommunications requirements for voice, data, and video capabilities and for integrating and extending these services to deployed forces.

In summary, DISA is not a telephone company although it does have a mission to provide secure, interoperable, and global communications from the deployed force back to the sustaining base. It uses many commercial providers, while adding military value added features that relate to security, robustness, and global extension to do this. DISA was especially active and effective at getting communications in place to support the Kosovo operations. Within the US, DISA uses domestic providers but obtains the economics of scale provided by bundling DOD requirements. It is not building networks as a competitor to industry, but it is managing the conditions under which DOD obtains communications support and ensuring that the sum of capabilities provide a joint coherent mission oriented capability.

22. Senator ALLARD. Mr. Stenbit, do you plan to revisit the prior administration's OSD/JCS DISN long haul policy?

Mr. STENBIT. Critical policies impacting the evolution and management of Information Technology, including the long haul policies, have been revamped under the GIG initiative. The genesis of our policies were the types of interoperability and communication problems that occurred when there was not effective joint communications and command and control. These types of problems have reappeared whenever we did not pay attention to the integration of our forces or their ability to reach back for support: Cuban Missile Crisis, Pueblo, Grenada, Desert Shield and Desert Storm, and in the Balkans.

The underlying assumption with the current long haul policy is that an enterprise-wide telecommunication network to meet the majority of the DOD's military requirements is the best approach. At the level of the transport layer, I intend to

further review and adjust policy as necessary to ensure a cost effective basis for Wide and Metropolitan Area Networks. This assumption is consistent with provisions of the Clinger-Cohen Act, and the GIG architecture. While the details of how the policy is implemented may be adjusted, the basic premise is to have an integrated and secure network across the DOD.

23. Senator ALLARD. Mr. Stenbit, there are industry claims that DISA is competing against an NMCI commercial provider, possibly in violation of A-76, which prohibits the government from competing against the private sector. Will you investigate those allegations and report back to the committee in a timely manner?

Mr. STENBIT. I will of course investigate any allegations. However, as I have pointed out, from the information I have, it is not a question of in-house versus commercial provider but a question of how industry is partnered with to provide service, the degree to which the military mission is recognized in the acquisition, particularly with regard to security, and the degree to which DOD achieves economies of scale and essential levels of interoperability and how we take best advantage of low density/high demand assets, particularly overseas.

A key factor in this discussion is the unique requirements for security and robustness that the military must have to meet the needs of the warfighter. These requirements were based on experience and were validated by the Joint Staff. The DISN is not in competition with industry but works with industry to meet these requirements.

24. Senator ALLARD. Mr. Stenbit, what is your position on the prior administration's NMCI Memorandum of Agreement among OSD, USN, and DISA regarding NMCI? Does it make good business sense for DISA to try to replicate what industry has already developed, given DOD's limited financial and information technology resources?

Mr. STENBIT. I support both the letter and the spirit of the NMCI Memorandum of Agreement (MOA).

Under its terms, DISA has first right of refusal to provide wide-area telecommunications services for the NMCI. If DISA cannot provide the service then the USN may pursue those services through another source. It is my understanding that in crafting the MOA, the parties sought to ensure that DOD enterprise interoperability, security, and economy are maintained, and that the USN would receive the best service possible.

As discussed in previous answers, DISN does not replicate what industry already offers, because no commercially available service provides the interoperability and security services available under DISN. DISN does depend heavily on industry components and services to develop and provide DISN offerings. DISA has contracted with firms who specialize in wide-area telecommunications services and has added services and procedures that promote security and interoperability for the warfighter. DISA's partnership with industry has resulted in an environment where joint systems are interoperable, with known and rigorous security, global extension, diverse routing, and dynamically shared bandwidth. The best approach is to develop a strategy that best fits the needs of the deployed force, rather than obtaining and evolving them one function or one uniformed service at a time.

---

[The nomination reference of John P. Stenbit follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

John P. Stenbit of Virginia, to be an Assistant Secretary of Defense, vice Arthur L. Money.

---

[The biographical sketch of John P. Stenbit, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF JOHN P. STENBIT

John P. Stenbit has had a long and distinguished career with TRW, Inc., first joining them in 1968. In January 2000, he was named Executive Vice President, Special Assignment, for TRW Aerospace and Information Systems. Prior to that position, he had served since early 1998 as Executive Vice President and General Manager of TRW's telecommunications business, where he helped identify a number of significant opportunities for TRW in the burgeoning commercial telecommunications market.

In 1994, Mr. Stenbit was named Executive Vice President and General Manager of TRW Systems Integration Group, which he had led since 1990 as Vice President and General Manager. Under his leadership, the group broadened its business base from primarily defense to include industry contractors, international customers, and government agencies. The group performed systems engineering services and systems integration and developed and installed systems for strategic and tactical command and control, information processing, and security. Mr. Stenbit was Vice President and General Manager of TRW Command Support Division from 1984 to 1990. Previously, he was Director of Requirements and Group Development for TRW Defense Systems Group.

Mr. Stenbit was with the Department of Defense for 4 years, 2 of which were spent as Principal Deputy Director of Telecommunications and Command and Control Systems. Earlier, he served as Staff Specialist for Worldwide Military Command and Control Systems in the Office of the Secretary of Defense.

Mr. Stenbit joined TRW in 1968 and was responsible for the planning and analysis of advanced satellite surveillance systems. Before joining the company, he was with the Aerospace Corporation, where he worked on command and control systems for missiles and satellites and on satellite data compression and pattern recognition. During this time and under an Aerospace Corporation fellowship, he studied and taught for 2 years as a Fulbright Fellow at the Technische Hogeschool, Eindhoven, Netherlands, concentrating on coding theory and data compression.

Mr. Stenbit is a member of the Board of Directors for AETC, an analysis company. In 1999 he was inducted in the National Academy of Engineering. Previously, Mr. Stenbit served as chairman of the Science and Technology Advisory Panel to the director of Central Intelligence and was a member of the Science Advisory Group to the directors of Naval Intelligence and the Defense Communications Agency. He also chaired the Research, Engineering and Development Advisory Committee for the administrator of the Federal Aviation Administration. Mr. Stenbit received a Bachelor's and a Master's degree in Electrical Engineering from the California Institute of Technology. He is a member of Tau Beta Pi, the engineering honorary society.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by John P. Stenbit in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
John Paul Stenbit; Nickname Pre 1970: Skip.
2. **Position to which nominated:**  
ASD(C<sup>3</sup>I).
3. **Date of nomination:**  
July 12, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
June 1, 1940; Oakland, CA.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Albertine (Heederik) Stenbit.
7. **Names and ages of children:**  
Elisabeth Johnson, 33; Dr. Antine Stenbit, 31.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Palo Alto High School, Palo Alto, CA, 1954–57, Graduated 6/57.  
California Institute of Technology, Pasadena, CA, 1957–62, BS, 6/61; MS, 6/62.  
Techniscite Hoge School, Eindhoven, Netherlands, 1962–63, 1965–67, No Degree.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
TRW, Inc., Fairfax, VA, 1977–April 30, 2001; Exec/VP General Manager, Systems Integration Group, 1990–98; Exec/VP Telecommunications, 1998–99; Exec/VP Special Assignments, 1999–2001; Retired May 1, 2001.  
AETC, Inc. La Jolla, CA, 1999–Present, Member of Board of Directors and Consultant.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
Civil Servant in OSD, 1973–77.  
Chair, Science & Technology Advisory Panel to DCI.  
Chair, Research & Development Advisory Panel to FAA Administrator.  
Defense Science Board.  
National Research Council  
Scientific Advisory Group, Director, Naval Intelligence.  
Scientific Advisory Group, Director, Defense Communications Agency.
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.  
Member, Board of Directors, AETC, Inc.  
Limited Partner, Vast Oaks Properties.  
Active Partner, Wayfarers Investment Club.
12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
Member, Board of Directors, Arts Council of Fairfax County.  
Member, National Academy of Engineering.  
Member, Naval Studies Board.
13. **Political affiliations and activities:**
  - (a) List all offices with a political party which you have held or any public office for which you have been a candidate.  
None.
  - (b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.  
None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Representative Tom Davis, \$100.

TRW PAC, \$150.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Fulbright Fellow.

Aerospace Corp. Fellow.

Member, National Academy of Engineering, TAU BETA PI.

Secretary of Defense Award for Outstanding Public Service.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JOHN PAUL STENBIT.

This 13th day of July, 2001.

[The nomination of John P. Stenbit was reported to the Senate by Chairman Levin on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

---

[Prepared questions submitted to Dr. Ronald M. Segal by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 27, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours truly,

RONALD M. SEGAL.

cc: Senator John Warner,  
*Ranking Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* If confirmed, I will fully support the intent of the reforms and advocate policies that will facilitate accomplishment of joint operations, streamline acquisition management and oversight, and enhance the Department's ability to respond to our 21st century national security challenges.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I think the Department has done a creditable job in implementing defense reforms. However, without periodic Department policy reviews, these reforms can lose their effectiveness and, if confirmed, I will conduct such a review in my area to ensure we are in keeping with today's environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I agree with Mr. Aldridge that the most important aspects of the Goldwater-Nichols Department of Defense Reorganization Act is strengthening civilian control; improving military advice; placing a clear responsibility on the combatant commanders for the accomplishment of their missions; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I agree with the goals.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate?

*Answer.* If confirmed as Director of Defense Research and Engineering (DDR&E), I will work with the Under Secretary of Defense (Acquisition, Technology and Logistics) and other senior DOD leaders to review the extent to which the reforms have been implemented and the extent to which they have achieved their stated goals. As Secretary Rumsfeld has noted, we would consult with Congress on any changes that might be appropriate.

*Question.* If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* It would be premature to offer any thoughts on the question at this time.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Director of Defense Research and Engineering?

*Answer.* If confirmed, I understand my duties and functions to include those stated in DOD 5134.3 issued on August 31, 1994, to be "the principal staff assistant and advisor to the Under Secretary of Defense for Acquisition and Technology (USD(AT&L)) for DOD scientific and technical matters, basic and applied research, and advanced technology development." I would report directly to the USD(AT&L), with the responsibilities like a chief technology officer for the Department to focus on developing capabilities for the warfighter. I would be working with the Director, Ballistic Missile Defense Office (BMDO) and the Assistant to the Secretary of Defense for Nuclear, Chemical, & Biological (ATSD(NCB)), who report to the USD(AT&L) as well as organizations outside of USD(AT&L), such as Assistant Secretary of Defense for Command, Control, Communication, and Intelligence (ASD(C<sup>3</sup>I)), to provide support in matters related to technology. I also understand

that, if confirmed, the results of ongoing reviews may require adjustments in the DDR&E responsibilities.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* If confirmed, I will bring a background and experience in research, technology and program management, military and civil air and space operations, and strategy planning from roles as a Professor, Laboratory Technical Director, Pilot, Dean of a College of Engineering and Applied Science, Astronaut and Military Officer to the position of the DDR&E. My background includes basic and applied research, and advanced technology development, working with the Army, Navy, Air Force, Defense Advanced Research Projects Agency (DARPA), Defense Nuclear Agency (DNA), and industry. Management and leadership experience is found in several organizations with activities spanning technical system integration to setting strategic goals. I have also been an operator of systems from line aircraft and spacecraft to experimental vehicles. Additional details of my experience with the University of Colorado, University of Houston, Frank J. Seiler Research Laboratory, NASA, U.S. Air Force and the U.S. Air Force Reserves are in the biography provided to the Senate Armed Services Committee.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Director of Defense Research and Engineering?

*Answer.* If confirmed, I need to review and refine the strategic direction of the Department's S&T plan to ensure the Department seeks innovative solutions. To do this, I would develop a strategic plan by first reviewing warfighter needs, and then assessing the capability of the Department's S&T plan to meet these needs. From there, I would have to align the technical programs to best meet the areas not being addressed. Finally, I would have to set priorities with clear goals and objectives to maximize the output of the S&T program. I plan to listen to subject matter experts, people in the field, warfighters, and consistently communicate with the Military Departments, Joint Staff, and Congress. Of course, quality people to carry out the mission are our most important asset and I will, if confirmed, work to sustain and hire good people to build a great team.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense will assign to you? Unlike some of your predecessors, do you expect to have regular meetings with the Secretary of Defense on issues such as the level of S&T funding, missile defense technology, defense industrial base, and export controls?

*Answer.* In my meeting with Secretary Rumsfeld, it was clear that he supported a strong S&T program. If confirmed, I understand that I would normally accompany or represent the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD(AT&L)), Mr. Pete Aldridge, in meetings with the Secretary on matters relating to technology.

*Question.* If confirmed, how will you work with the following:

The Under Secretaries of Defense

*Answer.* If confirmed, one of the Under Secretaries of Defense, Mr. Aldridge, would be my reporting official, and I would support him to the best of my ability. With respect to the three remaining Under Secretaries of Defense, I will work with Mr. Aldridge to gain their support for all S&T initiatives and policies.

*Question.* The Assistant Secretaries of Defense

*Answer.* If confirmed, I will work to gain their support for all S&T initiatives and policies Mr. Aldridge and I are seeking to implement through personal contact and routine staffing coordination.

*Question.* The Deputy Under Secretary of Defense for Science and Technology

*Answer.* If confirmed, the Deputy Under Secretary of Defense for Science and Technology will work for me and be my principal deputy.

*Question.* The Service and Agency officials responsible for science and technology funding and program management

*Answer.* If confirmed, I will work most closely with these high level DOD officials. I am aware of a formal group called the Defense Science and Technology Advisory Group (DSTAG) that meets regularly. If confirmed, I intend to continue to hold DSTAG meetings on a regular basis.

*Question.* The Intelligence Community

*Answer.* If confirmed, I intend to work closely with the Assistant Secretary of Defense for C<sup>3</sup>I concerning the role the DOD S&T program can play in supporting the intelligence and space community, as well as to gain insight and leverage other intelligence agency technology development programs.

*Question.* The Joint Chiefs of Staff

*Answer.* The Joint Chiefs of Staff (JCS) represents the warfighting community, which is the customer of the Department's S&T program. If confirmed, I will foster

close formal and informal communication with the JCS to understand warfighter requirements and priorities. For example, if confirmed, I would work with the Deputy Director for Resources and Requirements, Joint Staff, (J-8) as a member of the Defense Science and Technology Advisory Group (DSTAG).

*Question.* The regional combatant CINCs

Answer. If confirmed, I will strive to understand the CINCs requirements both formally, through interface with the Joint Chiefs of Staff, and informally, through the CINCs S&T representatives.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Director of Defense Research and Engineering?

Answer. If confirmed, I see that there are many challenges and these challenges will run the full spectrum of my responsibilities. These challenges are consistent with challenges which drive the goals of the USD(AT&L). These USD(AT&L) goals are:

- Achieve Credibility and Efficiency in the Acquisition and Logistics Support Process;
- Revitalize the Quality and Morale of the Acquisition Workforce;
- Improve the Health of the Defense Industrial Base;
- Rationalize the Weapon Systems and Infrastructure With the New Defense Strategy; and
- Initiate High Leverage Technologies to Create the Weapon Systems and Strategies of the Future.

I believe that the challenges facing the DDR&E are largely the same. The first is to achieve credibility and efficiency of the technology development process, leading to efficient technology transition. The second is to retain and recruit high quality scientists and engineers. Third is continue to foster partnerships, both within and outside of government. Finally, consistent with Mr. Aldridge's fifth goal, the DDR&E will be firmly involved in developing high leverage technologies to create weapons systems of the future. To accomplish this last goal, if confirmed, I will need to address budget stability for DOD science and technology, and maintain DARPA at the leading edge of technology.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I intend to develop a plan to address the challenges by setting specific S&T related goals and objectives responding to each USD(AT&L) goals as briefly outlined in the previous answer.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Director of Defense Research and Engineering?

Answer. I consider people, budget, and technical direction to be the most serious problems to address in performing the functions of the DDR&E. Additionally, I believe it is very important to align the technology program with the strategic goals of this Department, the goals of the USD(AT&L), and if confirmed, I would intend to establish goals for DDR&E. The DDR&E challenges are largely the same as the USD(AT&L), so the goals should be very consistent.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. Similar to my answer above, if confirmed, I would base a management action on objectives and metrics derived from the USD(AT&L) goals. These objectives would also reflect the Department's S&T challenges. If confirmed, I will begin working on these upon my assumption of duties. Without fully understanding the magnitude of the task, it is too early to set any time lines.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues which must be addressed by the Director of Defense Research and Engineering?

Answer. If confirmed, the broad priorities areas I would establish as DDR&E are budget, workforce, technology transition and partnerships. To support an innovative, capabilities driven science and technology program, it is critical to have funding stability, and sufficient resources, to allow the Department to develop technologically superior weapons. Stability is especially important so researchers can work on problems over a period of time, instead of having to start and stop projects. Additionally, the Department needs to continue to emphasize recruiting and retaining a quality workforce to address the technology challenges confronting the Department of Defense. Along with budget and people, there is an added priority to ensure

technology is ready to be delivered to enhance operational capability of our military. Finally, if confirmed, I intend to strengthen our partnerships with other government agencies (NASA, Department of Energy, Department of Commerce, etc), industry, and universities, as well as with other nations. This is a priority because the DOD should leverage what is available, and then develop the technology to provide our military a superior capability. I believe that there already is an emphasis on each of these areas within the Department and it should be maintained.

#### INVESTMENT IN SCIENCE AND TECHNOLOGY

*Question.* Although the S&T budget has steadily increased over the past several years, it is at the lowest share of Total Obligation Authority (TOA) in nearly a decade.

Do you think that this level of funding is adequate given current Departmental priorities?

*Answer.* I believe that establishing the level of Department-wide S&T investment must be set in the overall context of Department priorities. It is my understanding that Secretary Rumsfeld has established a goal to increase the overall level of the investment to 3.0 percent of the overall DOD Total Obligation Authority. Mr. Aldridge has also publicly supported this goal. While the 3.0 percent figure is a goal, this priority must be carefully weighed against other Department needs for maintaining and equipping the force. If confirmed, I see my job as one that must continue to advocate the value of S&T investment to the Department as a whole, and to demonstrate the value of technology.

*Question.* Secretary Rumsfeld stated publicly in his June 28, 2001, testimony that the Department's investment goal for Science and Technology is 3 percent of the entire defense budget.

Is this an adequate and realistic goal for Science and Technology, and, if you agree, when do you foresee that this goal will be achieved?

*Answer.* I believe that the Secretary's goal is both adequate and realistic. Using the benchmark of high technology industry, the 3.0 percent figure seems to be about right to enable technology development. Mr. Aldridge has indicated that he supports the S&T investment getting to the 3.0 percent level as soon as possible, and wants to achieve this level as early as next year. I believe there is a real momentum within this administration to increase the priority of science and technology, and if confirmed, I will encourage it to continue.

*Question.* If confirmed, would you recommend that the services set a similar percent of the service budgets as a goal? If so, in what time frame would you recommend that this be achieved?

*Answer.* If confirmed, I would not recommend setting specific percentage investment goals for individual Services. The stated Department-wide goal of increasing Defense-wide investment to 3.0 percent of the DOD Total Obligation Authority is overarching, and includes the total investment of the Services and Agencies, such as the Defense Advanced Research Projects Agency (DARPA), the Defense Threat Reduction Agency (DTRA) and others. The actual allocations of this investment should be one that best responds to meeting desired capabilities that result from on-going studies such as the Quadrennial Defense Review.

*Question.* Are there any S&T areas that you feel are currently underfunded by the Department?

*Answer.* I don't know if there are specific S&T areas that are underfunded at present. If confirmed, one of my first tasks will be a detailed review of the S&T investment in specific areas to meet emerging threats and desired capabilities articulated in on-going studies. For instance, as mentioned previously, the on-going Quadrennial Defense Review should refine the capabilities the Department seeks to develop. Once these important studies are completed, the Department must review its current and planned S&T investment and determine which areas need more or less funding. The administration has articulated a goal of developing revolutionary or leap-ahead capabilities. The S&T program should respond to these desired capabilities. One of the key functions of the DDR&E is to work with the warfighters and present technology options for future capabilities. By iterating the technological possibility with the warfighters, I believe we will get a clearer definition of the adequacy of funding in specific areas.

*Question.* Will the funding levels in these areas affect our ability to meet the threats of the future?

*Answer.* As the Department refines the desired capabilities of the future, the level of S&T investment will affect how the Nation can meet future threats. There will be capabilities that can be developed more quickly, while other areas will require

more fundamental scientific discovery. However, in general, those areas that are most important to the defense of the Nation will get the highest investment priority.

*Question.* What are the weaknesses of the current Defense S&T strategic planning process? If confirmed, how would you work to ensure that these plans are utilized during the budget planning and programming process?

*Answer.* I believe the S&T strategic planning process needs to be linked with the planning processes of the Department. I am aware of The Joint Warfighting Science and Technology Plan, which is a document updated annually to describe how the Department S&T program will deliver near-term capabilities to the warfighter. The warfighter and technology communities within the Department cooperatively develop this plan. This seems to be an example of an effective near-term process. If confirmed, I will review the total planning process, and will emphasize near-term and strategic planning throughout the S&T community.

*Question.* Are you satisfied with the level of communication and coordination among the technical, policy and warfighting communities in the formulation of the S&T budget planning, prioritization, and management process?

*Answer.* It is too early to answer this question. Good communication and coordination is critical, and if confirmed, will be a high priority for me. This includes communication between the stakeholders in the Pentagon, as well as communication with other government agencies and Congress. Communication and coordination between the S&T and acquisition communities is also critical to enable effective technology transition. However, it is too early to answer the question regarding my satisfaction with the level of communication between stakeholders.

#### COORDINATION WITH S&T IN OTHER AGENCIES

*Question.* The Department of Defense currently executes approximately half of the total Federal science and technology portfolio. Its S&T budget is remaining relatively flat, while those of other agencies, namely the National Institutes of Health, are greatly increasing. Additionally, many scientific advances made in programs managed by civilian agencies are increasingly applicable to military needs.

Do you feel the mechanisms of coordination between Federal civilian agencies and DOD are adequate to ensure that the military can best leverage the advances of agencies such as NSF, NASA, and NIH?

*Answer.* Coordination between Federal agencies and DOD is extremely important, but I am unable at this time to assess whether the mechanisms are adequate. If confirmed, I will examine the existing mechanisms of coordination and recommend improvements, if warranted.

*Question.* Do you feel the mechanisms of coordination between Federal civilian agencies and DOD are adequate to ensure that we avoid duplication and overlap and that we get the best results with limited resources?

*Answer.* Coordination between Federal agencies and DOD is extremely important, but I am unable at this time to assess whether the mechanisms are adequate. If confirmed, I will examine the existing mechanisms of coordination and recommend improvements, if warranted.

*Question.* If not, and assuming you are confirmed, how will you work with other Federal agencies and the Office of Science and Technology Policy to improve this coordination?

*Answer.* N/A.

*Question.* With the increasing importance of the interdependency between the sciences what actions would you take, if confirmed, to ensure an appropriate balance among investments in the various scientific disciplines in order to achieve military objectives?

*Answer.* If confirmed, one of my initial priorities is to review and refine the S&T strategic plan to influence and balance investments in various scientific areas. Some specific actions that I would explore include greater encouragement of multidisciplinary teams attacking problems or exploring opportunities in basic and applied research. I would seek advice from the National Academies, the Defense Science Board, and other established groups to provide valuable input to the Department's scientific program.

#### DEFENSE LABORATORIES AND TEST FACILITIES

*Question.* Congress, the Defense Science Board, and other entities have expressed concern regarding the condition of defense laboratories and test facilities. Implementation of management and personnel reforms and the establishment of innovative cooperative technology development programs have been slow and limited.

What is your opinion of the condition and size of the defense laboratory system?

Answer. I am aware that the Department has conducted a number of internal studies regarding technical personnel and laboratory infrastructure, but I have not seen them. My work in the academic arena has given me first hand insight into the technical workforce problems we are facing as a Nation in government, industry and university communities. The situation in the Department of Defense was outlined on July 12 by Mr. Aldridge who stated before the HASC, "Another non-technical challenge and important priority is maintaining a strong S&T workforce. The number of scientists and engineers we have is down 15,300 from the 1990 level of 43,800. This workforce is also aging with the average age of the laboratory technology at about 45 years and a significant portion of the workforce able to retire in the next 3 years. There have been numerous studies to look at these and related issues, and new efforts are now underway to address." If confirmed, the defense laboratory system will be given high priority during my tenure. For example, a separate office for laboratory oversight would be an option under DDR&E.

*Question.* If confirmed, how will you work to ensure that the defense labs communicate and facilitate the needs of the acquisition and warfighting communities?

Answer. I believe that the defense-wide S&T planning and review process should be linked to the DOD strategic planning process involving the Commanders in Chief (CINCs), the Joint Staff, the Military Departments, and the S&T community. If confirmed, I intend to challenge my staff and the S&T executives to continually assess, update, and modernize our processes to achieve an active working environment with the acquisition and warfighting communities.

*Question.* If confirmed, what new regulatory reforms dealing with personnel will you propose to ensure that the finest technical talent is resident at these facilities?

Answer. If confirmed, I will assess the various personnel initiatives currently being worked in the Department and be open to innovative approaches. It is my understanding that the Under Secretary of Defense for Personnel and Readiness (USD(P&R)) and the USD(AT&L) are in the process of implementing provisions previously approved by Congress. If confirmed, I will strive to ensure that options for hiring highly skilled scientific and technical staff remain a Departmental priority. I will also review existing legislative proposals, and recommend options for additional reforms as appropriate.

#### TECHNOLOGY TRANSITION

*Question.* A number of programs have been established to try to speed the transition of technologies and other innovations from science and technology programs into the hands of warfighters.

If confirmed, what new ideas will you propose to assist in technology transition efforts?

Answer. I believe enhancing technology transition is one of the more important functions of the DDR&E. If confirmed, I will continue to push for efficient technology transition to rapidly provide new capabilities for the warfighter. For example, as an Air Force Reserve officer, I was involved with the TENCAP (Tactical Exploitation of National Capabilities) program, designed to bring capabilities of national intelligence systems to operational warfighters. In this role, I saw first-hand the value of transitioning previously unavailable technologies to the warfighter. I understand that there are existing DOD programs, such as the Advanced Concept Technology Demonstration (ACTD) Program that can provide technology quickly to the warfighter for validation, thus streamlining acquisition. I also believe that the establishment of a current year source of funds could provide a mechanism to speed transition of rapidly maturing technology to system capabilities for warfighter use. If confirmed, I would support an approach of continual involvement of the technology, acquisition, and warfighting communities to give the Department a more efficient technology transition process.

*Question.* What is the role of the Office of Director of Defense Research and Engineering in facilitating communication between technical communities to speed technology transition?

Answer. If confirmed, I believe my role will be as an active participant in establishing strong communication among the Military Services, Defense Agencies, academia, industry, and other government agencies to share best practices and build new initiatives and metrics to ensure mature technologies are ready for insertion into weapon systems.

#### OTHER SCIENCE AND TECHNOLOGY ISSUES

*Question.* What is your assessment of the value of cooperative research and development programs with international partners?

Answer. I believe that cooperative R&D programs have the potential to be very valuable. These cooperative programs can reduce duplication and improve interoperability. At the same time we would need to ensure that our national security interests are protected and that these programs support competitiveness. If confirmed, I would support international programs meeting appropriate criteria.

*Question.* What are the obstacles to more effective international cooperation and, if confirmed, how would you address those obstacles?

Answer. While I understand the importance of effective international cooperation, this is an area I will, if confirmed, need to investigate further. Issues such as export control procedures and intellectual property rights are factors that will need to be understood and addressed.

*Question.* How will increased international technology cooperation affect our domestic defense industrial base?

Answer. I am not an expert in this area. From one perspective, international cooperation could assist our industrial base in the development of joint technical ventures and increase our suppliers' potential business base. If confirmed, I will explore this area with Government and industry leaders.

*Question.* What are the biggest challenges in R&D related to theater and national missile defense systems?

Answer. The lead for the development of near-term missile defense systems is the Ballistic Missile Defense Organization (BMDO). For the long-term program, I understand that R&D efforts would be coordinated throughout the S&T community to provide technology options for future system designs. If confirmed, I will encourage innovative technology approaches to enable future capabilities to include missile defense.

*Question.* If confirmed, what role do you expect to play in addressing these challenges?

Answer. DDR&E will play a support role to BMDO as required for the near-term missile defense programs. R&D challenges for the future missile defense systems include: discrimination, command and control, directed energy, propulsion, software, etc.

*Question.* If confirmed, how will you strengthen the ability of Service and Agency officials to oversee and adequately test these and other rapidly expanding and technically complex programs?

Answer. I will begin by saying that, if confirmed, under the current organization of USD(AT&L), neither formal operational or developmental test and evaluation are under the responsibility of the DDR&E. However, with any technology demonstration, continual design test and evaluation should be part of the technology development process. If confirmed, I will strive to ensure the science and technology community is responsive to the formal test and evaluation communities, and explore appropriate organizational placement of test and evaluation as part of the overall system development process.

*Question.* The domestic defense industrial base, particularly the industrial research and development base, continues to be an issue of concern.

What is your vision of the future of the private sector defense R&D enterprise? Answer. I believe the Nation needs a strong private sector defense R&D enterprise. The past decade has seen major changes in the defense industrial base caused by downsizing and consolidation, and, at the same time, the Department of Defense has downsized. I believe the Department needs to continue to treat the defense industrial sector as a partner in delivering capabilities for the warfighter. If confirmed, I will review the current government-industry cooperative arrangements and explore potential innovative arrangements to provide optimum future capabilities.

*Question.* If confirmed, how will your work to ensure that the private sector technology and research base is adequate to meet our national needs for technical innovation and engineering expertise in militarily critical technologies?

Answer. I believe the issue of ensuring that the private sector technology and research base is adequate is a national level issue, and one that, if confirmed, will receive significant attention from my office. I also believe there is no simple solution to ensuring an adequate technology and research base. Sustained investment is important, and certainly industry operates to make a profit. If confirmed, I will strive to establish and maintain an information exchange with leaders of industry as one step toward addressing this enabler for future military capabilities.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Director of Defense Research and Engineering?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR JOSEPH I. LIEBERMAN

NATIONAL NANOTECHNOLOGY INITIATIVE

1. Senator LIEBERMAN. Dr. Segal, despite DOD's participation in an interagency working group and Subcommittee of the National Science and Technology Council as part of the planning process for the National Nanotechnology Initiative (NNI), I am concerned that the Department is not honoring its commitments to this initiative for fiscal year 2002. I am particularly concerned that, due to significant cuts in the University Research Initiative line in the OSD budget, DOD will not be able to fund the second year of multi-year awards from fiscal year 2001.

How do you plan to ensure DOD is able to honor both its multi-year awards and its fiscal year 2003 and beyond commitments to multi-agency research initiatives such as the National Nanotechnology Initiative?

Dr. SEGAL. The DOD's fiscal year 2002 budget request and fiscal year 2003-2006 plans for the University Research Initiative include the funding needed for the multi-year awards begun in fiscal year 2001 under the National Nanotechnology Initiative (NNI). Although no commitments for specific NNI funding levels in fiscal year 2002 or later years have been made, it is my belief that the Department will continue to strongly support initiatives in research areas important to national defense, including nanoscience and nanotechnology.

2. Senator LIEBERMAN. Dr. Segal, what are your plans for future DOD participation in interagency coordination activities for the National Nanotechnology Initiative?

Dr. SEGAL. DOD will continue to participate in the coordination activities for interagency initiatives in nanoscience and nanotechnology. Our current plans are to continue these activities and provide the support stated in the Memorandum of Understanding amongst the participating agencies, which established the National Nanotechnology Coordination Office.

S&T LEADERSHIP

3. Senator LIEBERMAN. Dr. Segal, particularly given the trends toward modernization and transformation, and the fact that emerging threats are driving us to consider new defenses, it is my opinion that we need very strong leadership in S&T both in the Services and in OSD.

How do you plan to ensure the voice of the S&T leadership is prevalent in the highest levels of DOD? Will you hold formal briefings to the Secretary or the Joint Chiefs on both S&T and T&E programs?

Dr. SEGAL. I am the principal staff assistant and advisor to the Under Secretary of Defense for Acquisition, Technology, and Logistics (USD(AT&L)) for DOD scientific and technical matters, basic and applied research, and advanced technology development. I report directly to the USD(AT&L) and act as the Department's chief technology officer to focus efforts on developing improved capabilities for the warfighter. I will provide formal briefings to the Secretary or the Joint Chiefs of Staff, with the concurrence of the USD(AT&L), when requested or as advocacy for programs with the potential for high payoff. As stated in my Confirmation Hearing, Mr. Aldridge, the USD(AT&L), has told me I will either accompany or represent him in meetings with the Secretary that involve science and technology.

4. Senator LIEBERMAN. Dr. Segal, given the significant potential of Network Centric Warfare to exploit the power of information and information technology to achieve battlefield dominance, how do you plan to:

a. Carry out a joint experimentation program to develop new operational concepts which take full advantage of the advances in network-centric capabilities?

Dr. SEGAL. As you may be aware, DOD has in place a number of activities that deal with experimentation of new ideas and joint matters. These include Joint Warfighting Experiments, joint test and evaluation to develop training tactics and procedures, advanced concept technology demonstrations (ACTDs), and so on. An example of these is the ACTD called Coalition Aerial Surveillance and Reconnaissance (CEASAR), which provides interoperability of ground moving target indicator assets of the U.S. and seven of our allies, and will be demonstrated via NATO military exercises. Another example is the Network-Centric Collaborative Targeting (NCCT) ACTD. NCCT includes numerous sensor types and is developing and applying network-centric techniques, collaborative concepts, and front-end processing to multi-Service intelligence, surveillance, and reconnaissance assets to provide target-quality information on time-critical targets. From the results of this and other similar demonstrations and experiments, the Department will gain residual capabilities and valuable experience that will help us move towards the overarching vision of Network-Centric Warfare. The Deputy Under Secretary of Defense (Advanced Systems and Concepts) reports to me. I will ensure the ACTD program supports the fulfillment of this vision.

4b. Senator LIEBERMAN. Ensure that OSD and the services place the requisite priority on development of the associated technologies?

Dr. SEGAL. One of the initiatives I will undertake is to increase the emphasis on our defense technology base. I also plan to monitor the progress we make on our tech base activity via the various tools that will be available to me. One of these tools is the Department's science and technology (S&T) Reliance process, which includes the conduct of Technology Area Review and Assessments. These assessments involve panels composed of members from the DOD, academia, and industry. They are chartered to review various technology areas, such as information systems technology. Recommendations from these panels are presented to senior Defense officials, including the top Service S&T representatives. They in turn take appropriate action (i.e., enforce adjustments to investments) to ensure the Services and Agencies place the requisite priority on the development of associated technologies that support the concept of network-centric warfare. In addition to defense-unique technology, we need to leverage the commercial sector technology. The commercial sector offers great opportunities in information and communication technologies, which are in the heart of network-centric warfare. We can take advantage of these sectors to get better results faster and at less cost.

5. Senator LIEBERMAN. Dr. Segal, although DARPA has long been recognized as a major leader in developing revolutionary military technologies, there has been some concern lately that, due to the lack of an effective transition mechanism, many of these promising technologies are not fully leveraged in the services. How do you intend to address these concerns?

Dr. SEGAL. The Department is making progress in the area of transitioning promising revolutionary technologies to the Services. DARPA has established a Memorandum of Agreement (MOA) with the Army to develop technology for Future Combat Systems. Another MOA has been established with the Air Force to develop technology for Unmanned Combat Air Vehicles. Each of the three Military Departments actually provide contracting services and technical oversight for a sizable portion of DARPA's S&T investment, and gain in-depth understanding of technology that is available for leveraging. The Department has also established a Technology Advisory Committee to recommend and advise on unique military technologies for "war winning" capabilities. An annual report will outline new opportunities for the DOD S&T program, including DARPA. The report will also track the number of technologies moving to higher technology readiness levels. Finally, the Under Secretary of Defense for Acquisition, Technology, and Logistics has instituted a process to track specific high priority metrics in areas of special interest. One of these metrics will actually track the number of technologies maturing and transitioning from DARPA to the Services.

## DARPA

6. Senator LIEBERMAN. Dr. Sega, in a recent report evaluating DARPA's investment strategy, the Defense Science Board expressed concern that DARPA has shifted much of its portfolio from a focus on revolutionary technologies to a focus on short-term procurement. The DSB called on DARPA to modify their current investment strategy and refocus on mid- and longer-term programs, in an effort to build on their original strengths of funding the types of high-risk, high-payoff programs that have led to our current military technological dominance.

How do you intend to work with the DARPA Director to make sure the agency considers the DSB study recommendations in planning future investments?

Dr. SEGA. As the Director of Defense Research and Engineering, I am responsible for the overall direction, quality, and content of the DOD S&T program. The Director of DARPA reports directly to me. We are currently reviewing the integrated strategic planning and assessment process that supports the S&T program and DARPA is a major player in that process. Our strategic planning process seeks to achieve a balanced DOD S&T program investment that supports the development of advanced emerging operational concepts and systems in the evolutionary acquisition process, as well as investments in technologies and systems that can provide significant improvements in military capability. In the mid-1990s, DARPA was asked to help develop and adapt technologies to help address near-term military capability shortfalls that became apparent during the Gulf War especially in Command, Control, Communications and Computer; and Intelligence, Surveillance, and Reconnaissance. DARPA is increasing its focus on technologies that support the development of long-term, high-risk, and high-payoff military capabilities.

## DOD LABORATORIES AND CIVILIAN PERSONNEL PROVISIONS

7. Senator LIEBERMAN. Dr. Sega, in the past several years, we have been particularly concerned about personnel and management issues in DARPA and the Service Laboratories. We have worked hard to provide legislative relief in the form of several innovative provisions aimed specifically at improving the ability to recruit and retain high-quality personnel. These provisions include both the Pilot Program for Revitalizing DOD Laboratories and Civilian Personnel Provisions (fiscal year 1999, Section 246; fiscal year 2000, Section 245), and a provision to expand the experimental civilian personnel program (fiscal year 2001, Sections 1113 and 1114).

How do you intend to implement these provisions and are there other ideas you have regarding strategies to revitalize the laboratories?

Dr. SEGA. Revitalization of the defense labs and their workforce is a priority discussion and action area for us. Section 246 pilot labs and centers have been designated and appropriate authorities granted to explore innovative ways of improving partnering and efficiency. Section 245 pilot labs and centers have been designated and on June 21, 2001 we issued instruction to the DOD Components initiating the Department's efforts to achieve "expedited hiring" authority and to begin the process of exploring innovative ways of improving the workforce and efficiency in the DOD. I feel these authorities will enable selected DOD laboratories and test and evaluation centers to develop a revitalized workforce with the appropriate mix of skills and experience and to effectively compete in hiring the finest scientific talent. Additionally, I will continue to work with the Department and the Services to find additional ways to expedite hiring for our Defense Laboratories.

I believe Section 1113 will help in the recruitment and appointment of eminent experts in science and engineering. DARPA is aggressively seeking new employees using the special hiring authority under Sections 1102 and 1113. On May 18, 2001, the Deputy Secretary of Defense delegated Section 1113 authority to the Under Secretary of Defense for Personnel and Readiness. In turn, the USD (P&R) re-delegated this authority to the Secretaries of the Military Departments on July 17, 2001. In order to maintain a corporate perspective, the re-delegation to the Service Secretaries contained a provision that requires them to develop a single allocation plan for 40 positions and present it to Director Defense Research & Engineering (DDR&E) for coordination. I will work with the Services to ensure we utilize this authority and I will maintain oversight of this program.

On April 26, 2001, the Secretary delegated authority for implementing Section 1114 to the Under Secretary of Defense for Personnel and Readiness with the coordination of the Under Secretary of Defense for Acquisition, Technology, and Logistics. The Department is examining potential initiatives and options that innovatively utilize the Section 1114 authority. As an example, we have instituted procedural changes to the processing of Federal Register announcements, which has already served to expedite personnel demonstration initiatives.

Throughout the implementation process of these legislated authorities, we will continue to work with Congress to identify additional areas which may support laboratory revitalization.

8. Senator LIEBERMAN. Dr. Segal, with cooperation from Congress, do you feel that you can make noteworthy progress toward revitalizing the labs through incremental improvements such as the ones previously mentioned, or do you foresee the need for a major reform of the civil service?

Dr. SEGAL. As we go forward, I am confident that we will make progress in lab revitalization. I do not foresee, at present, a need for a major civil service reform to accomplish the revitalization. But, I will be attentive to this issue and will seek assistance if current Civil Service law becomes an insurmountable barrier to defense lab revitalization.

#### DOD'S HIGHEST PRIORITY RESEARCH AREAS

9. Senator LIEBERMAN. Dr. Segal, in the Fiscal Year 2000 National Defense Authorization Act, Section 241, Congress requested a report on Emerging Operational Concepts and Technological Objectives for Research and Development. I hoped this report would elucidate DOD's priorities and serve as a roadmap in establishing current research investment strategy.

Either reflecting the results of this report or from your own perspective, could you briefly summarize DOD's highest priority research areas?

Dr. SEGAL. The Section 241 report on Emerging Operational Concepts was based on the framework of Joint Vision 2020; however, this administration has asked the Department to examine leap-ahead technologies in the context of the ongoing Quadrennial Defense Review (QDR). As part of the preparation for the QDR, the Office of the Deputy Under Secretary of Defense (Science & Technology) and the Science and Technology (S&T) Executives from the Services and the Defense Agencies developed a set of 12 S&T Strategic Initiatives this past spring. They are: Counters to Asymmetrical Threats; Time Critical, Standoff, and Concealed Target Defeat; Chem-bio Defense Modeling and Stand-Off Detection; Cruise and Ballistic Missile Defense; Military Operations in Urban Terrain; Network Centric Warfare; Fuller Dominance of Space; Unmanned Systems for Land, Air, Space, Sea, and Underwater; Nanoscience and Advanced Materials; Directed Energy; Advanced Power; and Human Dimension and Psychological Factors. Adjustment of these Strategic Initiatives and associated S&T investment in the highest priority areas may be made following the results of the Quadrennial Defense Review (QDR).

#### S&T FUNDING

10. Senator LIEBERMAN. Dr. Segal, I am concerned that, as a whole, DOD is not investing in S&T at a level which will allow our Nation to maintain technological superiority. A recent Defense Science Board study recommended, based upon trends in industrial research investment, that the Department of Defense should be investing at least 3 percent of its total budget in S&T. The S&T request for fiscal year 2002, at \$8.8 billion, is both less than the request for fiscal year 2001, and less than that which would track the DSB recommendations (\$10 billion).

How will you make the case for increased S&T funding, to meet or exceed these recommendations, in fiscal year 2003?

Dr. SEGAL. It is the Department's objective to grow the S&T budget to be 3 percent of the total DOD top-line budget as soon as possible. However, we also need to ensure that the funding levels of the various components in the Department's total budget are balanced based on our assessment of the most urgent requirements at any given time. The fiscal year 2002 S&T request for \$8.8 billion is a 17.3 percent increase over the fiscal year 2001 S&T request for \$7.5 billion, and moves the Department toward the 3 percent goal.

---

#### QUESTION SUBMITTED BY SENATOR JOHN WARNER

##### DEFENSE LABORATORIES

11. Senator WARNER. Dr. Segal, this committee continues to be concerned about the loss of scientific talent in our Nation's defense laboratories. As you are aware, the labs have experienced a tremendous drop in personnel over the past 10 years and the next 5 years we are faced with an additional 50 percent retirement eligibility.

How will you ensure that these national treasures are revitalized and can provide our military with the best scientific talent available?

Dr. SEGA. Revitalization of the defense labs and their workforce is a priority discussion and action area for both the Under Secretary of Defense for Acquisition, Technology and Logistics (USD(AT&L)) and myself and we are paying close attention to this matter. There are a number of personnel initiatives currently being worked in the Department and I will ensure they remain a high priority within Director Defense Research & Engineering (DDR&E). Additionally, I will work very closely with the Under Secretary of Defense for Personnel and Readiness (USD(P&R)) in developing and initiating activities to take advantage of legislative authorities for hiring and retaining a highly skilled scientific and technical workforce. To help laboratory directors better compete for highly skilled scientific and technical personnel, DDR&E is working hand in hand with USD(P&R) to implement the provisions in Section 245 of the NDAA for Fiscal Year 2000 that gives the laboratory directors "expedited hiring authority". This initiative should provide additional flexibility to the defense laboratories' personnel system and make it easier for the laboratory directors to recruit highly qualified scientific and technical individuals in a timely manner. I will ensure this plan remains on track.

Another legislative authorization that will aid in the recruitment and appointment of eminent experts in science and engineering is Section 1113 of the NDAA for Fiscal Year 2001. This reform provides another means to enable the laboratory directors to attract technical talent. The Military Departments, in coordination with DDR&E, are currently planning implementation procedures to enable the laboratories to appoint up to 120 eminent experts in science and engineering to temporary employment positions without regard to existing civil service laws concerning appointment and compensation. I will work with the Services to ensure we utilize this authority and I will maintain oversight of this program.

The Department will work with the Office of Personal Management and the Office of Management and Budget to define additional authorities that would benefit the laboratory directors. This will be an ongoing process, and I am committed to working with Congress for the purpose of defense laboratory revitalization. Ultimately, DOD is only one of several Federal agencies, which will benefit from enhancing science, mathematics and engineering at the national level.

---

[The nomination reference of Dr. Ronald M. Sega follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. Ronald M. Sega, of Colorado, to be Director of Defense Research and Engineering, vice Hans Mark, resigned.

---

[The biographical sketch of Dr. Ronald M. Sega, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. RONALD M. SEGA

Ronald M. Sega assumed his current position as Dean, College of Engineering and Applied Science, University of Colorado at Colorado Springs in 1996. He has had an extensive career in academia, research, and government service. Dr. Sega began his academic career as a faculty member in the Department of Physics at the U.S. Air Force Academy. As an Assistant Professor, he taught physics courses, designed and constructed a Microwave/Infrared Advance Laboratory, and conducted research in applied electromagnetic field theory. This led to his appointment as an Assistant Professor in the Department of Electrical and Computer Engineering at the University of Colorado at Colorado Springs in 1982. In addition to teaching and research activities, he also served as the Technical Director of the Laser and Aerospace Mechanics Directorate at the F.J. Seiler Research Laboratory at the U.S. Air Force Academy and at the University of Houston as the Assistant Director of Flight Programs and Program Manager for the Wake Shield Facility. Dr. Sega has authored

or co-authored over 100 technical publications and was promoted to Professor in 1990.

In 1990, Dr. Sega joined NASA, becoming an astronaut in July 1991. He served as a mission specialist on two Space Shuttle Flights, STS-60 in 1994, the first joint U.S./Russian Space Shuttle Mission and the first flight of the Wake Shield Facility, and STS-76 in 1996, the third docking mission to the Russian space station Mir where he was the Payload Commander. He was also the Co-Principal Investigator for the Wake Shield Facility and the Director of Operations for NASA activities at the Gagarin Cosmonaut Training Center in 1994-1995.

Dr. Sega is also an officer in the Air Force Reserve, recently promoted to the rank of Major General. A Command Pilot in the Air Force with over 4,000 hours, he has served as an Instructor Pilot and in various operational assignments. Since 1987 he has held many positions in the Air Force Reserves in support of planning and operational activities of the Air Force Space Command. Currently, he is assigned as the Mobilization Assistant to the Commander, Headquarters Air Force Space Command (AFSPC), Peterson Air Force Base, Colorado.

He graduated from the U.S. Air Force Academy in 1974 with a B.S. Degree in Math and Physics, from Ohio State University in 1975 with an M.S. Degree in Physics, and from the University of Colorado in 1982 with a Ph.D. in Electrical Engineering.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. Ronald M. Sega in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Ronald Michael Sega.

2. **Position to which nominated:**  
Director of Defense, Research and Engineering.

3. **Date of nomination:**  
July 12, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
December 4, 1952; Cleveland, Ohio.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Ann Elizabeth Flemke.

**7. Names and ages of children:**

N/A.

**8. Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Nordonia High School, 1965–1970, Diploma (1970).

U.S. Air Force Academy, 1970–1974, Bachelor of Science in Math and Physics (1974).

Ohio State University, 1974–1975, Master of Science in Physics (1975).

Squadron Officers School, 1977–1979, Correspondence Program (1979).

University of Colorado, 1979–1982, Ph.D. in Electrical Engineering (1982).

Air Command and Staff College, 1982–1985, Seminar Program (1985).

Air War College, 1988–1991, Seminar Program (1991).

Harvard University, 1997, Management Institute.

Harvard University, John F. Kennedy School of Government, 2001, Executive Program in Global Security.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

**Civilian Positions Held:**

1996–Present ..... Dean, College of Engineering and Applied Science, University of Colorado at Colorado Springs (UCCS), Colorado Springs, CO 80933–7150.

1990–Present ..... Professor, Department of Electrical and Computer Engineering, University of Colorado Springs (UCCS), Colorado Springs, CO 80933–7150.

1990–1996 ..... Astronaut.

1994–1995 ..... Director of Operations, Russia (Star City).

1990–1991 ..... Astronaut Candidate, National Aeronautics and Space Administration, Lyndon B. Johnson Space Center, Houston, TX 77058.

1990–1996 ..... Adjunct Professor of Physics, University of Houston, Houston, TX 77004.

**Military Assignments**

(Air Force Reserves):

Oct 1989–Aug 1991 ..... Individual Mobilization Augmentee to the Director, Force Enhancement, Headquarters, Air Force Space Command, Peterson Air Force Base, CO.

Aug 1991–July 1993 ..... Individual Mobilization Augmentee to the Director of Space Applications, Headquarters, Air Force Space Command, Peterson Air Force Base, CO.

Jul 1993–Nov 1996 ..... Individual Mobilization Augmentee to the Director of Plans, Headquarters, Air Force Space Command, Peterson Air Force Base, CO.

Nov 1996–Mar 1998 ..... Mobilization Assistant to the Director of Operations, Headquarters, Air Force Space Command, Peterson Air Force Base, CO.

Mar 1998–Feb 2000 ..... Mobilization Assistant to the Commander, Space Warfare Center, Schriever Air Force Base, CO.

Feb 2000–present ... Mobilization Assistant to the Commander, Headquarters Air Force Space Command (AFSPC), Peterson Air Force Base, CO.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

2000–present ..... Service Academy Review Board for Senator Ben Nighthorse Campbell.

2000 ..... International Space Station Operations Architecture Study (Study for NASA through Computer Sciences Corporation).

1999–present ..... Senator Allard's Round Tables on Space/High Technology. Colorado Space Strategy Initiative—Oversight Committee.

1998–1999 ..... Manufacturers Steering Group, Chamber of Commerce.

1996–present ..... NASA Commercialization Advisory Committee.

1997–present ..... NASA Space Station Utilization Advisory Committee.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

1996–present ..... Dean, College of Engineering and Applied Science, University of Colorado at Colorado Springs.

2000–present ..... Board of Directors—INROADS Colorado.

Trustee—Aerospace Education Foundation.

2000 ..... International Space Station Operations Architecture Study, (Study for NASA through Computer Sciences Corporation).

1998–present ..... Board of Directors (Ex-Officio)—Greater Colorado Springs, Economic Development Corporation.

Board of Directors—Colorado Springs Challenger Learning Center.

Chair, Board of Directors—Pikes Peak Observatory.  
Board of Directors—Pikes Peak YMCA Southeast and Armed Services Y.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

1996–present ..... Dean, College of Engineering and Applied Science, University of Colorado at Colorado Springs.  
2000–present ..... Board of Directors—INROADS Colorado.  
Trustee—Aerospace Education Foundation.  
1999–present ..... U.S. Air Force Academy Association of Graduates.  
Colorado Space Strategy Initiative—Oversight Committee.  
1998–present ..... Board of Directors (Ex-Officio)—Greater Colorado Springs Economic Development Corporation.  
Board of Directors—Colorado Springs Challenger Learning Center.  
Chair, Board of Directors—Pikes Peak Observatory.  
Board of Directors—Pikes Peak YMCA Southeast and Armed Services Y.  
1996–present ..... NASA Commercialization Advisory Committee.  
1997–present ..... NASA Space Station Utilization Advisory Committee.  
Space Technology Hall of Fame Selection Committee.  
1991–present ..... American Institute of Aeronautics and Astronautics (AIAA).  
1979–1999 ..... American Physical Society (APS).  
1994–present ..... Association of Space Explorers (ASE).  
1984–present ..... Eta Kappa Nu.  
1980–present ..... Institute of Electrical and Electronics Engineers (IEEE).  
1983–present ..... Reserve Officer Association.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

*Major Military Awards and Decorations:*

Legion of Merit.  
Defense Meritorious Service Medal.  
Meritorious Service Medal with one oak leaf cluster.  
Air Force Commendation Medal with one oak leaf cluster.  
Air Force Achievement Medal.  
Air Force Outstanding Unit Award.  
Air Force Organizational Excellence Award with one oak leaf cluster.

*Other Awards/Achievements:*

Aerospace Education Foundation—Elected Trustee, 2000.  
Educator of the Year 1998–1999, INROADS, Colorado.  
Honorary Doctorate, Bridgewater State College, 1998.  
NASA Outstanding Leadership Medal (Payload Commander, STS–76), 1997.  
American Astronautical Society Flight Achievement Award, 1996.  
NASA Acquisition Improvement Award (X–33), 1996.  
NASA Space Flight Medal (STS–76), 1996.  
Institute of Electrical and Electronics Engineers—Elected Senior Member, 1996.  
Group Achievement Award (NASA—Crew Exchange Working Group with Russia), 1995.  
Superior Achievement Award (NASA—Director of Operations, Russia), 1995.  
Group Achievement Award (Microgravity Measurement Device Development Team), 1994.  
NASA Space Flight Medal (STS–60), 1994.  
Ohio Veterans Hall of Fame, 1994.  
Honorary Doctorate—Clarkson University, 1993.  
Fellow, Institute for the Advancement of Engineering, 1992.  
Associate Fellow, American Institute of Aeronautics and Astronautics (AIAA), 1992.  
Selected as an Astronaut, 1991.  
Reserve Officer (IMA) of the Year—U.S. Air Force, 1988.

Reserve Officer (IMA) of the Year—Air Force Space Command, 1988.  
 Sustained Superior Service Award—Frank J. Seiler Research Laboratory, 1988.  
 Academic Hall of Fame—Nordonia High School, Macedonia, Ohio, 1988.  
 Outstanding Faculty Award—Department of Electrical Engineering, University of Colorado at Colorado Springs, 1985.  
 Air Force Research Fellow—Air Force Office of Scientific Research, 1985.  
 Regional Finalist—White House Fellowship, 1984.  
 Officer of the Year in the Physics Department, U.S. Air Force Academy, 1980.  
 Top Graduate of Pilot Instructor Training Course, 1976.  
 Distinguished Graduate, U.S. Air Force Academy, 1974.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

Speech/presentation topics have not addressed policy issues or systems trade studies, but rather have focused on such topics as my technical research, space flight experiences, importance of math and science education, and the need for a technical workforce. Speeches/presentations (over 100 in the last 5 years) are given extemporaneously or from notes (to my knowledge, transcripts have not been made).

Examples from the last 5 years:

- Commencement—Trinidad State Junior College (Trinidad, CO)
- Educational Speaking Tour through Europe (AF Bases)
- National Science Teachers Conference (Las Vegas, NV)
- University of Colorado Founders Night
- Commencement—Bridgewater State College
- South Bay Economic Development Council (Los Angeles, CA)
- Electronics Industries Association (Mexico)
- Bulgarian Air Force Academy (Bulgaria)
- Josef Stephan Institute (Slovenia)
- Commencement—Front Range Community College
- Nuclear and Space Radiation Effects Conference
- National Association of Newspaper Editors
- ROTC Dining Outs and Awards Ceremonies
- Commencement—Tohatchi High School (New Mexico)
- International Council of Systems Engineers
- Air Force Reserve Senior Leader Meeting
- Commencement—Widefield High School
- National Character and Leadership Symposium (AF Academy)
- Aurora Economic Development Quarterly Meeting
- Blue and Gold Banquet (Boy Scouts)
- Retired Officer Association

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. RONALD M. SEGA.

This 13th day of July, 2001.

[The nomination of Dr. Ronald M. Sega was reported to the Senate by Senator Allard on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

[Prepared questions submitted to Michael L. Dominguez by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 25, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

MICHAEL L. DOMINGUEZ.

cc: Senator John Warner,  
*Ranking Member.*

---

 QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

What is your view of the extent to which these defense reforms have been implemented?

What do you consider to be the most important aspects of these defense reforms?

*Answer.* Yes, I support full implementation of Goldwater-Nichols. Considerable effort has been made to implement these reforms over the past 15 years, and the right mechanisms are in place and working. In my opinion, Goldwater-Nichols is probably one of the most significant pieces of legislation enacted in the second half of the 20th Century—greatly improving the organization of the Department of Defense and focusing our joint warfighting capabilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibilities on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions of the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* Goldwater-Nichols has served the Department of Defense well since 1986; however, there are dynamics today different from 15 years ago that may warrant review of some provisions, such as the personnel assignment rules and how we select joint specialty officers. If confirmed, I would like to explore those issues, in

cooperation with Congress, to ensure we have sufficient flexibility in the management of our personnel resources in a joint environment.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* The principle duties of the Assistant Secretary are to support the tasks assigned by the Secretary of the Air Force. Based on my understanding, the duties will include providing guidance, direction, and oversight for Air Force manpower/personnel programs; medical readiness and health care; plus Reserve component affairs. I've been briefed that the Assistant Secretary also is responsible for programs to prohibit discrimination and oversight of the operation of the Secretary of the Air Force Personnel Council and its component boards—the Air Force Civilian Appellate Review Office and the Air Force Board for the Correction of Military Records.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I am humbled that the President would nominate me for this Assistant Secretary position, and, if confirmed, pledge my sincere efforts to uphold the duties with honor and integrity. There are several components of my background that I believe make me well suited for this position. First, I am a veteran who, as a graduate of the United States Military Academy at West Point, proudly served our Nation at home and abroad. Those experiences shaped my appreciation for the sacrifices made by our men and women who serve in uniform—both Active and the Reserve component. Second, I bring over 15 years experience as a civil servant—serving at various levels of responsibilities within the Office of the Secretary of Defense and the Department of the Navy. That has provided me an invaluable insight into the day-to-day workings of the Department, its civilian/military structure, and its relationship with Congress and other Federal agencies. Last, I bring a strong background in program analysis, the Planning, Programming, and Budgeting System, and business acumen that will provide me the basis to review and assess our various manpower and personnel issues.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* If confirmed, I look forward to learning more about the Air Force, its mission and its people, in order that I can best work the recruiting, retention, health, and quality of life issues impacting our Total Force.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Air Force would prescribe for you?

*Answer.* If confirmed, I look forward to being a part of Secretary Roche's management team, and I would expect him to assign me duties consistent with the position—providing guidance and oversight for the various Air Force manpower and Reserve component programs.

*Question.* In carrying out your duties, how will you work with the Under Secretary of Defense for Personnel and Readiness, the Assistant Secretary of Defense for Force Management Policy, the Assistant Secretary of Defense for Reserve Affairs, the Assistant Secretary of Defense for Health Affairs, the Chief of Staff of the Air Force, and the Chief of Air Force Reserve?

*Answer.* If confirmed, I plan to foster a close working relationship with my civilian counterparts in the Office of the Secretary of Defense and the other Services, plus with the Air Force Chief of Staff and the Chiefs of the Reserve components, in order to effectively oversee our "people" programs.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* From my perspective, the challenges of recruiting and retaining an all-volunteer force in a tight, competitive job market cannot be overstated. If confirmed, I will focus my attention on those two principle areas to ensure we maintain the right level of emphasis and resources. The Air Force must have competitive, flexible personnel programs to attract and retain the best and the brightest in service to their country. Also, I will continue the focus on the Air Force's quality of life programs, such as health care; workplace environment; and affordable housing.

## MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* Air Force people—active military, Reserve, guard and civilian employees—are the key ingredient to our mission success. As such, I would consider the top challenges to be recruitment, retention, civilian force management, and preservation of quality military health care.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I would plan to consult with the Secretary of the Air Force and other key leaders to immediately address these four priorities, establishing timelines and working toward comprehensive solutions. Also, I look forward to working with this committee and other members of Congress to ensure we have a supportable gameplan.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* Not having served in that position, I am not able to identify any shortcomings at this time.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* Not having served in that position, I am not prepared to identify those at this time.

## OFFICER MANAGEMENT ISSUES

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values.

Do you believe the officer corps has confidence in the integrity of the officer promotion system in the Air Force?

*Answer.* I wholeheartedly agree that integrity, character, moral and ethical values are critical qualities for those serving in the Air Force's senior leadership positions. Although I have not been involved personally in the Air Force officer promotion process, my initial impression is that the system appears to be working well.

*Question.* If confirmed, what role do you, as Assistant Secretary of the Air Force (Manpower and Reserve Affairs), expect to play in the officer promotion system?

*Answer.* From my viewpoint, the integrity of the officer promotion system is a critical responsibility of the Assistant Secretary. If confirmed, I will have the opportunity to work with the Secretary of the Air Force to provide oversight of every aspect of the promotion process. My goal will be to continue the fair and equitable consideration of all officers, to ensure confidence and integrity in the system, and to ensure boards are conducted in accordance with applicable laws and Department of Defense directives.

*Question.* If confirmed, what role do you, as Assistant Secretary of the Air Force (Manpower and Reserve Affairs) expect to play in the general officer management and nomination process?

*Answer.* I will have no active role in the general officer nomination process, but will support the Secretary of the Air Force, as needed, on any general officer issue.

*Question.* If confirmed, what steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

*Answer.* I understand that there are ongoing activities in the Air Force to institute a comprehensive leadership development system focused on core competencies needed for future aerospace leaders. If confirmed, I will ensure that leadership development continues to be high priority for the Air Force.

## PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the Armed Forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes, most definitely.

*Question.* If confirmed, what actions will you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If confirmed, I will work with the Secretary of the Air Force to ensure we continue to educate and communicate to the senior military leadership the provisions of this important section of the law.

#### OPERATING TEMPO

*Question.* The services have been very concerned in recent years about the impact of the pace of operations or "optempo" on the quality of life of our people in uniform and specifically on their willingness to reenlist.

If confirmed, what steps do you plan to take to address the Air Force optempo concerns?

Answer. Sustained TEMPO takes a toll on the personnel of any organization, and, if confirmed, I pledge my efforts to explore ideas that will help alleviate the burden on Air Force people. Having read about the new Aerospace Expeditionary Force (AEF), I am encouraged that the Air Force's senior leadership shares that same concern, as the AEF appears to provide greater predictability and stability for Air Force members.

#### RECRUITING AND RETENTION

*Question.* For its Active Duty forces, the Air Force achieved its recruiting goal for 2000 and projects that it will meet its fiscal year 2001 objective. However, it does not appear that the Air Force will meet its 2nd and 3rd term retention goals and will miss its required end strength by 4,100. When this shortage is combined with the Air Force request for an end strength increase of 1,800 for fiscal year 2002, the Air Force may have a significant recruiting challenge next year.

What steps will you take, if confirmed, to assist the Air Force in meeting its recruiting and retention goals?

Answer. If confirmed, I look forward to focusing attention on this difficult challenge. Specifically, I believe that improving retention goes a long way to resolving recruiting challenges. Since retention decisions are generally family decisions in today's military, I'd like to address issues that impact both the member and his or her family.

*Question.* What steps will you take, if confirmed, to assist the Reserve components in achieving their recruiting and retention goals?

Answer. If confirmed, I will support the Reserve components recruiting and retention initiatives, including seeking sufficient funding for various quality of life and advertising programs and working to ensure a reasonable parity of benefits.

#### HOMOSEXUAL CONDUCT POLICY

*Question.* Do you support the current Department of Defense Homosexual Conduct Policy?

Answer. Yes.

*Question.* If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

Answer. I am unaware of any need for change, however, if confirmed, I will work with DOD to ensure fair and equitable personnel policies for all members.

#### ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax to be the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA-approved vaccine.

If confirmed, will you support and enforce the Anthrax Vaccine Immunization Program if DOD reinstates it?

Answer. Biological warfare is a very real threat and I believe we need to provide the best protection available to the men and women serving our Nation. If confirmed, I will pursue all avenues of medical readiness for our troops.

*Question.* How do you believe the Air Force should respond to service members who refuse to take the vaccine when ordered to do so?

Answer. If confirmed, I will work with the Secretary of the Air Force to ensure our policies are consistent and that each case is handled fairly and on its merits.

## MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlement. Many sailors and marines say they would like to stay in the Service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members might stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

If confirmed, will you give serious consideration to how the Air Force could use the transfer of unused GI Bill benefits to family members as a retention tool and provide your thoughts on how we best do this?

*Answer.* From my viewpoint, the significant contribution of the Montgomery GI Bill to the military, and to the Nation as a whole, cannot be overstated. I would be glad to consider the use of transferability and provide thoughts on the proposal to the committee, if confirmed.

*Question.* If confirmed, will you give serious consideration to how the Air Force could use the award of U.S. Savings Bonds as a flexible means to enable sailors and marines to save money for the education of themselves and their dependents?

*Answer.* If confirmed, I will be happy to consider how U.S. Savings Bonds may be used as a reenlistment incentive.

## GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individual's life in the military, is structured and defined differently by each Service. Do you believe the current DOD policy of allowing each of the Services to establish its own policy for gender integration in Basic Training is effective?

*Answer.* From my understanding, gender integrated training has worked well for the Air Force and has been in effect for the last 20 years. I believe that Service Secretaries must have the flexibility to determine the most effective training methods for their individual environment as they are held accountable for training, organizing and equipping their forces.

*Question.* If confirmed, will you propose changes to Air Force policies? If so, what changes will you propose?

*Answer.* I am unaware of the need for any changes.

## CONCURRENT RECEIPT

*Question.* Military retirees with disabilities incurred during their military service are eligible to receive military retired pay from the Department of Defense and veterans' disability compensation from the Department of Veterans' Affairs. However, current law requires that military retired pay be reduced by the amount of the veterans' benefits.

If confirmed, would you support a change in the law to permit disabled military retirees to receive their full retired pay as well as their disability compensation?

*Answer.* Any such change in the law would obviously carry a significant monetary impact and I have not had the opportunity to examine this in detail. I appreciate the importance of this issue to our disabled military retirees, and, if confirmed, will look into the merits of this proposed change.

## MANAGEMENT OF THE CONGRESSIONAL FELLOWSHIP PROGRAM

*Question.* For the past several years, the committee has expressed concern about the management of legislative fellows by the military departments and the Department of Defense.

If confirmed, will you review the Department's policies pertaining to the management of legislative fellows and provide the committee your assessment of which management reforms have been implemented and which require additional action?

*Answer.* If confirmed, I will review the Department's policies and provide the committee an assessment.

*Question.* What are your personal views on the value and current management of the legislative fellowship program within the Air Force?

*Answer.* I have not had the opportunity to evaluate the management of the program within the Air Force. However, I do believe that legislative fellowship programs are valuable to the individual from a career broadening perspective, and that they enhance the important relationship between the military and Congress.

*Question.* After completing their fellowships, are legislative fellows assigned to positions in which the experience and knowledge they gained during their fellowship are used effectively?

*Answer.* I have no knowledge of individual assignment actions that may have taken place in the past. However, I would expect the experience gained by these individuals from a legislative fellowship should enhance their professional development and pay dividends for years to come, wherever they are assigned.

*Question.* In your opinion, is it appropriate to bring a Reserve component member on Active Duty solely to participate in a legislative fellowship program?

*Answer.* Yes. The Reserve components are a critical part of the Total Force and they would benefit from the same exposure and experience.

#### MANAGEMENT OF DEPLOYMENT OF MEMBERS

*Question.* Increasing operational demands on military personnel resulted in enactment of Section 991 of Title 10, United States Code, and Section 435 of Title 37, United States Code. Those provisions require the Services to manage the deployments of members and, if operational necessity so dictates, to pay per diem compensation to members whose deployed periods exceed prescribed limits. Additionally, each Service Secretary is required to establish a system for tracking and recording the number of days that each member of the Armed Forces under the jurisdiction of the Secretary is deployed.

Do you support the statutory framework set forth in the sections cited above? If so, do you believe any modifications to the law are necessary?

*Answer.* I am not sufficiently familiar with the law to determine if modifications are necessary, but will look into the issue if confirmed.

*Question.* What is your understanding of the ability of the Air Force to comply with these statutes and implement the prescribed tracking and recording system?

*Answer.* It is my understanding that the Air Force is implementing a tracking and recording system that will comply with the full intent of the law.

#### ARMED FORCES RETIREMENT HOME

*Question.* The Soldiers' and Airmen's Home in Washington, DC, and the Naval Home in Gulfport, Mississippi, provide unique services to eligible military retirees but have experienced problems in funding and management.

Do you support an increase in the amount of money automatically deducted from the pay of Active Duty enlisted personnel as a means of better funding the retirement homes?

*Answer.* I support the unique services provided by the Armed Forces Retirement Homes to retired military personnel. However, I have no current knowledge of the funding requirements and cannot advise on the appropriateness of budget adjustments.

*Question.* If confirmed, what actions would you take to ensure the successful operation of the retirement homes?

*Answer.* The retirement homes are an important commitment to our retirees, and, if confirmed, I will actively work to ensure their successful operation.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as Assistant Secretary of the Air Force (Manpower and Reserve Affairs)?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

#### QUESTION SUBMITTED BY SENATOR JOHN WARNER

1. Senator WARNER. Mr. Dominguez, at a recent Personnel Subcommittee hearing, the subcommittee received testimony from enlisted recruiters. These recruiters indicated that gaining access to high school directories and students on an equal basis

with colleges and certain vendors (e.g., class ring salesmen) was difficult. Legislation was passed last year to respond to this problem. That legislation will become effective in July of next year.

What will you do to ensure that high school and local school boards are aware of the legal provisions aimed at ensuring equal access by recruiters?

Mr. DOMINGUEZ. Squadron Flight Chiefs, Superintendents, or Commanders of Air Force Recruiting Service will visit Air Force-responsible high schools (those of which we have ASVAB responsibility) that do not provide equal access to recruiters and inform them of the provisions of law. The initial meeting will be with the high school principal or vice principal. In fact, this is a common practice for the Air Force Recruiting Service. For the Air Force, 92 percent of schools already provide equal access.

In accordance with the provisions of the law, the Air Force Recruiting Service will schedule one-on-site visits between principals and Air Force colonels (O-6) beginning this summer for the remaining Air Force-responsible high schools that have not provided access.

---

[The nomination reference of Michael L. Dominguez follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 12, 2001.*

*Ordered.* That the following nomination be referred to the Committee on Armed Services:

Michael L. Dominguez, of Virginia, to be an Assistant Secretary of the Air Force, vice Ruby Butler DeMesme.

---

[The biographical sketch of Michael L. Dominguez, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF MICHAEL L. DOMINGUEZ

Mr. Dominguez was born in Austin, Texas and, as an Air Force dependent, grew up at various U.S. Air Force bases around the world. He attended the United States Military Academy at West Point, New York and graduated in 1975 with a Bachelor of Science Degree. He was commissioned a Second Lieutenant, U.S. Army, and reported to Vicenza, Italy, where he served in a variety of assignments with the 1st Battalion, 509th Infantry (Airborne) and the Southern European Task Force.

After leaving the Army in 1980, Mr. Dominguez went into private business and attended Stanford University's Graduate School of Business where he earned a Masters Degree in Business Administration. In 1983 he joined the Office of the Secretary of Defense's Program Analysis and Evaluation (PA&E) organization as a program analyst in PA&E's Theater Assessments Division. He prepared analyses of management systems and processes which led the Deputy Secretary to adopt landmark changes in the DOD's Planning, Programming, and Budgeting System that preceded by 2 years many of the concepts and ideas embodied in the Goldwater-Nichols Defense Reorganization Act of 1986. He conducted cost-effectiveness analyses of alternative defense programs supporting the President's nation-building and counter-insurgency efforts in Central and South America. He also conducted cost-effectiveness analyses of DOD's force projection programs and programs designed to achieve DOD's military objectives in the Middle East and Southwest Asia. From 1988 to 1991 Mr. Dominguez served as the Executive Assistant to the Assistant Secretary for Program Analysis and Evaluation and was responsible for the smooth and efficient operation of the Assistant Secretary's office. He also attended Harvard University's resident program for Senior Officials in National Security.

Mr. Dominguez entered the Senior Executive Service in 1991 as PA&E's Director for Planning and Analytical Support. In this position, Mr. Dominguez oversaw the production of the DOD's long range planning forecast (the Defense Program Projection), exercised program oversight of DOD's \$12 billion in annual information technology investments, and directed the modernization of PA&E's own computing, communications, and modeling infrastructure. He joined the staff of the Chief of Naval Operations in 1994 where he served as the Associate Director for Programming, and assisted in development of the Navy's multi-year program and annual budgets. He

advised the Chief of Naval Operations on the selection of programs and program funding levels for incorporation into the Navy's funding plans.

In 1997, Mr. Dominguez left the Federal Government to join a small technology services organization and in 1999 he became a Research Project Director at the Center for Naval Analyses where he organized and directed analyses of complex public policy and programs issues. In January 2001 he rejoined the staff of the Chief of Naval Operations as the Assistant Director, Space, Information Warfare, Command and Control Directorate, OPNAV (N<sup>6</sup>B).

Personal awards include the Army Commendation Medal, the Defense Meritorious Civilian Service Medal on two occasions and the Defense Civilian Service Award. In 1998 Mr. Dominguez was designated a Meritorious Executive, a Senior Executive Service Presidential Rank Award.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Michael L. Dominguez in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Michael Luis Dominguez.
2. **Position to which nominated:**  
Assistant Secretary of the Air Force (Manpower and Reserve Affairs).
3. **Date of nomination:**  
July 12, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
September 4, 1953; Austin, TX.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Sheila J. MacNamee.
7. **Names and ages of children:**  
Michelle C. Dominguez, age 19; Michael C. Dominguez, age 17.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

U.S. Military Academy, West Point, NY; 7/71 to 6/75; BS; 6/75. Graduate School of Business, Stanford University, CA; 8/81 to 6/83; MBA; 6/83. J.F.K. School of Government, Harvard University, MA; 4/89 to 5/90; Certificate of Completion; 5/90.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

01/01 to Present, Assistant Director, Space, Information Warfare, Command and Control; Chief of Naval Operations, 2000 Navy Pentagon, Washington, DC 20350; 9/99 to 01/01, Project Director; Center for Naval Analyses, 4825 Mark Center Drive, Alexandria, VA 22311;

4/97 to 9/99, General Manager, Tech 2000 Inc., 520 Herndon Parkway #200, Herndon, VA 20170;

10/94 to 4/97, Associate Director, Chief of Naval Operations, 2000 Navy Pentagon, Washington, DC 20350;

10/91 to 10/94, Director, Planning and Analytical Support, Office of the Director, PA&E, 2000 Defense Pentagon, Washington, DC 20350;

11/88 to 10/91, Executive Assistant, Office of the Director, PA&E, 2000 Navy Pentagon, Washington, DC 20350.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Assistant Scoutmaster, Boy Scouts of America;

West Point Alumni Association;

Stanford Business School Alumni Association.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

U.S. Army Commendation Medal, June 1980;

Defense Meritorious Civilian Service Award, August 1988;

Defense Civilian Service Award, January 1993;

Defense Meritorious Civilian Service Medal, September 1994;

Department of the Navy Superior Civilian Service Award, April 1997;

Senior Executive Service Presidential Rank Award (Meritorious Executive), January 1998.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

MICHAEL L. DOMINGUEZ.

This 13th day of July, 2001.

[The nomination of Michael L. Dominguez was reported to the Senate by Chairman Levin on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

[Prepared questions submitted to Paul Michael Parker by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 20, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

PAUL MICHAEL PARKER.

cc: Senator John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support full implementation of these reforms. I believe that the objectives of the Goldwater-Nichols Act most directly relevant to the mission of the Assistant Secretary of the Army (Civil Works) are as important today as when the act was passed. They provide for more efficient and effective use of defense resources and they improve the management and administration of the Department of Defense (including the Department of the Army).

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* It is my understanding that the Army has fully implemented the Goldwater-Nichols reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The important goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

*Question.* Do you agree with these goals?

*Answer.* Yes, I agree with the goals of Goldwater-Nichols.

*Question.* Recently, there have been articles that indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I have not yet had an opportunity to consider whether changes to Goldwater-Nichols may be warranted.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Army for Civil Works?

*Answer.* The duties and functions of the Assistant Secretary of the Army for Civil Works are specified in Section 3016 of Title 10 of the United States Code and Department of the Army General Orders No. 1, dated January 12, 2001. Section 3016 of Title 10 states that the Assistant Secretary of the Army (Civil Works) "shall have as his principal duty the overall supervision of the functions of the Department of the Army relating to programs for conservation and development of the national water resources, including flood control, navigation, shore protection, and related purposes." General Order No. 1 further specifies that this includes:

- developing, defending, and directing the execution of the Army Civil Works policy, legislative, and financial programs and budget;
- developing policy and guidance for and administering the Department of the Army regulatory program to protect, restore, and maintain the waters of the United States in the interest of the environment, navigation, and national defense;
- developing policy guidance and conducting oversight for the U.S. Army Corps of Engineers activities in support of other Federal and non-Federal entities, except those activities that are exclusively in support of the United States military forces;
- in coordination with the Deputy Under Secretary of the Army (International Affairs), developing policy for and directing the foreign activities of the U.S. Army Corps of Engineers, except those foreign activities that are exclusively in support of United States military forces overseas; and
- overseeing the program and budget of Arlington National Cemetery and Soldiers' and Airmen's Home National Cemetery.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I have always believed that progress is achieved and problems are solved by collaborative efforts of many talented and dedicated people. In bringing this fundamental philosophy to the position of Assistant Secretary of the Army (Civil Works), I would establish a professional environment in which communication and cooperation are the watchwords.

In the 10 years during which I had the honor of representing the Fourth District of Mississippi in the United States House of Representatives, I applied my commitment to finding practical, realistic solutions to problems and issues of importance to my constituents. This common-sense approach to issues also stood me in good stead in my role as a member of several House Committees dealing with very difficult issues of national significance. I have served on five different House Committees whose responsibilities span the range of issues I can be expected to face as Assistant Secretary: Budget Committee, Appropriations Committee, Transportation and Infrastructure Committee; Education and Workforce Committee; and Veterans' Affairs Committee. I served on both Energy and Water Development and Military Construction Appropriations Subcommittees, so I know both the Civil Works and military programs aspects of the Corps of Engineers role in the Army.

One of the principal skills I have developed over my career in the public sector is the ability to work effectively with government and industry leaders, non-governmental organizations, Members of both parties in Congress, and with officials in the Executive Branch.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Army for Civil Works?

*Answer.* Yes, I intend to take several actions to enhance my expertise as Assistant Secretary of the Army (Civil Works). If confirmed, I will travel to each Corps of Engineers division to see first-hand many of the infrastructure development and environmental restoration projects. My goal is to gain a fuller understanding of the issues that surround the planning, design, construction, operation and maintenance of these projects. I also intend to reach out to Members of Congress, the other Fed-

eral agencies, state and local interests, study and project sponsors, and other stakeholders to gain a deeper appreciation of their perspectives in areas of mutual concern. If confirmed, I also will develop a closer working relationship with other offices within the Department of the Army and the Department of Defense in order to make better use of resources and advance the interests of the Civil Works program.

I also will work closely with the Chief of Engineers and the Director of Civil Works to ensure that I am fully informed and prepared to address the important issues I would oversee as Assistant Secretary of the Army (Civil Works). I look forward to the challenge and experience this position affords if confirmed.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Army would prescribe for you?

*Answer.* If confirmed, I expect to be asked to carry out the duties and functions of the Assistant Secretary of the Army (Civil Works) as articulated in General Orders Number 1, dated January 12, 2001.

#### RELATIONSHIPS

*Question.* In carrying out your duties, how will you work with the Secretary of the Army?

*Answer.* If confirmed, I expect to work closely with the Secretary of the Army in furthering the goals and priorities of the President. However, consistent with the General Orders, I expect the Secretary to rely on me to oversee the Civil Works program of the Army Corps of Engineers and the programs of Arlington National Cemetery and Soldiers' and Airmen's Home National Cemetery.

*Question.* How will you work with the Deputy Under Secretary of Defense (Installations and Environment)?

*Answer.* If confirmed, I will work to form a close and constructive relationship with the Deputy Under Secretary of Defense (Installations and Environment) in areas of shared responsibility.

*Question.* How will you work with the Deputy Under Secretary of Defense (Logistics, Materiel Readiness)?

*Answer.* If confirmed, I will work to form a close and constructive relationship with the Deputy Under Secretary of Defense (Logistics, Materiel Readiness) in areas of shared responsibility.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Army for Civil Works?

*Answer.* Communities across the country rely on Army Corps of Engineers water resources projects to reduce flood damages, to enable efficient competition in world trade, to provide needed water and power, and to protect and restore our rich environmental resources. The Civil Works program provides a sound investment in the Nation's security, economic future, and environmental stability. I believe the greatest continuing water resources challenge is to find sustainable ways to strengthen the Nation's economy, while protecting and restoring unique water and related land resources for the benefit of future generations.

I feel that two other challenges the Corps faces are the need to maintain its existing infrastructure and to repair damages to the natural environment. I believe that an efficient water transportation system is critical if we are to remain competitive in international trade. Our system of ports and inland waterways must enable us to efficiently transport goods in an environmentally acceptable manner. Flooding also continues to threaten communities. We must use the Corps limited resources not only to respond to natural disasters when floods and hurricanes occur, but also to work more creatively with nature to prevent or reduce flood damages. Flood damages are a growing drain on the Nation's economy, and we must find ways to reduce them.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* I believe that we must all work together to define the appropriate role for the Corps of Engineers in addressing these problems. The challenges the Corps faces are complex, and there are many difficult decisions to make. It is of paramount importance that we bring all interests to the table and that all have a voice in the development of solutions to our Nation's problems. The Corps must engage in an open and cooperative dialogue with Congress, other Federal agencies, States, Tribes and local governments on the many important challenges that the Army Corps of Engineers faces.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Army for Civil Works?

Answer. The Assistant Secretary of the Army for Civil Works has wide-ranging responsibilities arising from the varied purposes of the Civil Works Program. I believe that the Assistant Secretary must set clear policy and direction so the Corps can effectively execute its important Civil Works mission.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. I have not yet developed a specific plan. If confirmed, one of my first priorities will be to meet with the Chief of Engineers and others in the administration and Congress to seek their input and to develop a plan for how the Corps can best meet the Nation's water resources needs.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues that must be addressed by the Assistant Secretary of the Army for Civil Works?

Answer. If confirmed as Assistant Secretary of the Army for Civil Works I would work to improve the management and administration of the Army Civil Works Program and the Army's national cemetery program and would seek ways to more efficiently use Army's resources in the development and execution of these programs.

#### ARMY CORPS OF ENGINEERS

*Question.* The Army Corps of Engineers does not currently have a system in place to ensure the independent peer review—by experts from outside the agency—of studies supporting major projects before such projects are approved.

Do you believe that it would be appropriate to institute such an independent peer review program? Why or why not?

Answer. I believe that an independent peer review would have value. However, we must find a way to do this so it does not needlessly increase the cost of projects or delay decisions. Any independent peer review program should complement both the existing technical and policy reviews conducted by the Corps and the reviews conducted by the stakeholders, the public and other agencies. Moreover, we must find a way to accomplish the review when it is most effective, that is, as an integral part of the Corps planning process.

*Question.* In recent years, the senior military leadership of the Army Corps of Engineers is alleged to have placed pressure on Corps economists to change economic assumptions during a study of navigation projects on the Mississippi and Illinois Rivers. The Office of Special Counsel found "substantial likelihood" that senior Corps officials violated regulations and engaged in a "gross waste of funds" in connection with these projects.

What is your view of these allegations?

Answer. I have no personal knowledge of the facts surrounding these allegations; however, it is my understanding that all matters relating to these allegations have been resolved. The Chief of Engineers is considering changes in the management and scope of the navigation study in response to the Army Inspector General report and the study conducted by the National Research Council.

*Question.* What is your view of the degree of independence that should be provided to the economists charged with assessing the economic viability of Corps projects and the role of the senior civilian and military leadership of the Corps in reviewing the work of those economists?

Answer. I believe the technical and policy reviews conducted by the Corps of Engineers are an effective way to manage feasibility studies. The process ensures that the many engineers, economists, biologists and other professionals who are involved in those studies are afforded an appropriate level of independence.

*Question.* In testimony earlier this year by Lieutenant General Flowers before congressional committees, he indicated that if the Army Inspector General had had the benefit of the National Academy of Sciences' review of the Corps' Upper Mississippi Navigation Study and whistleblower allegations, the Inspector General would have taken an entirely different view of the proceedings.

Do you agree with Lieutenant General Flowers' opinion? Please explain your answer.

Answer. It is my understanding that the Army Inspector General and the National Research Council were evaluating different aspects of the conduct of the Upper Mississippi River Navigation Study. I am not in a position to speculate on whether the Inspector General would have reached different conclusions because of the National Academy of Sciences' review.

*Question.* The National Academy of Sciences' report found that the Army Corps of Engineers used faulty models to forecast future demand for barge traffic and to estimate benefits. The Academy determined that predictions of future grain exports

were overestimated and did not provide a way to account for key factors such as policy changes and weather that affect global markets. The report urged consideration of the less expensive option of improved scheduling of barges and recommended that future studies by the Army Corps of Engineers be subject to review by outside experts.

Do you believe that the criticism of the Army Corps of Engineers in the National Academy of Sciences' report is valid?

Answer. The National Academy of Sciences/National Research Council recognized the challenges the Corps faced in developing the projections and models used in the study. They complimented the Corps for attempting to advance forecast modeling. I believe that the Council provided extremely valuable and constructive criticism of the Corps efforts. I understand the Corps is responding by making changes to the study.

*Question.* What is your view of the recommendations of the National Academy of Sciences' report?

Answer. I support recommendations of the National Academy of Sciences/National Research Council report.

*Question.* A February 24, 2000, article in the *Washington Post* reported that the senior military leadership of the Corps developed a "Program Growth Initiative" providing financial targets for each of the agency's activities and divisions, without consulting the civilian leadership of the Department.

What is your view of this initiative?

Answer. In light of the current Civil Works construction backlog, reported to be \$40 billion to complete, it is my feeling that the Corps has no need to grow its program. However, I do believe that there should be honest debates about what activities the Corps should be involved in and their priority.

*Question.* What is your view of the role of the civilian and military leadership of the Army Corps of Engineers in developing goals for Corps programs and presenting these goals to the legislative branch?

Answer. If confirmed, it is my intent to provide the civilian leadership needed to enable the Corps to be an even more valuable asset to the Nation. Representing the administration, I will work with Congress to set the proper direction for the Corps.

*Question.* On March 30, 2000, Secretary Caldera announced a series of reforms to strengthen civilian oversight and control over the Army Corps of Engineers civil works program. The Secretary's memorandum stated: "The [Assistant Secretary] shall have full authority to establish the final position of the Department of the Army on any policy, programmatic, legislative, budgetary, or other organizational matter involving or affecting the civil works functions and their implementation, unless directed otherwise by me."

What is your view of this memorandum?

Answer. It is my understanding that the Assistant Secretary of the Army for Civil Works is responsible for the overall supervision of the Army's Civil Works program, including programs for conservation and development of the national water resources, flood control, navigation, and shore protection. The complex issues that arise in this area demand a close, professional relationship between the Assistant Secretary and the Chief of Engineers, based on mutual respect, trust, cooperation and full communication. If confirmed, I am committed to establishing and maintaining such a relationship with the Chief, in order to respond effectively to the President's priorities and the policy directives of Congress.

*Question.* In a press conference in April of this year, Deputy Assistant Secretary of the Army for Management and Budget, Claudia L. Tornblom, indicated that the Army is considering options for strengthening the ability of the Office of the Assistant Secretary for Civil Works to ensure policy oversight of project planning.

What are these options? Do you believe that they are necessary and that they are sufficient to ensure policy oversight?

Answer. I believe Deputy Assistant Secretary Tornblom was referring to improvements noted by President Bush in his Fiscal Year 2002 Budget Blueprint. It is my understanding that no final decisions have been made yet on how to proceed. If confirmed, I intend to work with the Chief of Engineers to identify the correct amount of oversight and project review appropriate to be conducted by the Office of the Assistant Secretary for Civil Works and an efficient means of achieving it. Given the issues that have arisen and the importance of restoring the credibility of the Army Corps of Engineers, I do believe it is necessary to strengthen policy oversight of Civil Works project planning.

*Question.* What is your view of the relative authority of the Chief of Engineers, the Assistant Secretary of the Army for Civil Works, the Secretary of the Army, the Army Chief of Staff, and the Secretary of Defense with regard to the civil works function of the Army Corps of Engineers?

Answer. My view of the relative authority of the Chief of Engineers, the Assistant Secretary of the Army for Civil Works, the Secretary of the Army, the Army Chief of Staff, and the Secretary of Defense with regard to the civil works function of the Army Corps of Engineers follows:

*Question.* Secretary of Defense

Answer. As head of the Department of Defense, the Secretary of Defense has full authority, direction and control over all its elements. He exercises this power over the Corps of Engineers through the Secretary of the Army, whose responsibility for, and authority to conduct, all affairs of the Army is subject to the authority, direction and control of the Secretary of Defense. If confirmed, I will cooperate fully with the Secretary of Defense in fulfilling the administration's national defense priorities and efficiently administering the Corps of Engineers in accordance with the policies established by the Office of the Secretary of Defense.

*Question.* The Secretary of the Army

Answer. As head of the Department of the Army, the Secretary of the Army is responsible for, and has the authority necessary to conduct, all affairs of the Department of the Army. He may assign such of his functions, powers and duties as he considers appropriate to the Under Secretary of the Army, as well as the Assistant Secretaries of the Army, and require officers of the Army to report to these officials on any matter.

*Question.* The Chief of Staff of the Army

Answer. The Chief of Staff of the Army performs his duties under the authority, direction and control of the Secretary of the Army and is directly responsible to the Secretary. The Chief of Staff also performs the duties prescribed for him by law as a member of the Joint Chiefs of Staff. If confirmed, I will establish and maintain a close, professional relationship with the Chief of Staff. I will communicate with him directly and openly as he performs his prescribed duties.

*Question.* The Assistant Secretary of the Army for Civil Works

Answer. The Assistant Secretary of the Army for Civil Works is principally responsible for the overall supervision of the Army's civil works program, including programs for conservation and development of the national water resources, flood control, navigation, and shore protection. The complex issues that arise in this area demand a close, professional relationship between the Assistant Secretary and the Chief of Engineers, based on mutual respect, trust, cooperation and full and open communication. If confirmed, I am committed to establishing and maintaining such a relationship with the Chief, in order to respond effectively to the President's priorities and the policy directives of Congress.

*Question.* The Chief of Engineers

Answer. As a member of the Army Staff, the Chief of Engineers reports to the Chief of Staff, through the Vice Chief of Staff, with respect to military matters. The Chief of Engineers reports to the Assistant Secretary of the Army (Civil Works) on civil works functions of the Army, including those relating to the conservation and development of water resources and the support for others program. The Chief of Engineers also reports to the Assistant Secretary of the Army (Civil Works) with respect to most other matters for which the Chief may be responsible. In the area of installation activities, the Chief reports to the Assistant Secretary of the Army (Installations & Environment), who has principal responsibility for all Department of the Army matters related to installations and the environment.

*Question.* Do you believe that environmental restoration projects are part of the central mission of the Army Corps of Engineers?

Answer. Yes. I believe that projects and programs that protect and restore the natural environment are a priority to the American people and a central mission for the Corps of Engineers. Ecosystem protection and restoration projects, projects that reverse the effects of prior human activities, have become a priority purpose of the Corps' Civil Works Program. Importantly, this current status has been achieved because of changing national priorities, rightfully setting the direction of the Civil Works Program.

*Question.* In your view, how can the Corps be more responsive to environmental concerns?

Answer. I believe the Corps can and must carry out its missions in an environmentally responsible manner. The Corps has a long record of accomplishing its mission in accordance with environmental laws and using the National Environmental Policy Act process to obtain input from interested parties and agencies. This approach will continue to lead to more environmentally sensitive projects and projects specifically for environmental restoration and protection. Under the Regulatory Program processes are in place to ensure that permit applicants avoid or minimize environmental impacts and compensate for unavoidable impacts. In those instances

where impacts to significant resources cannot be avoided, a mitigation plan for the impacts will be developed.

*Question.* In your view, does the Corps need to make fundamental changes in the way it operates?

*Answer.* No. I believe the Corps is a fundamentally sound organization. It has strong technical abilities and has proven time and time again that it can solve difficult problems. It has served this Nation for many years and can be counted on to continue to do so in the future. However, based on recent findings, the Corps does need to re-examine the way it manages policy and technical reviews in order to ensure projects will receive broad support. Also, I feel that the Corps must find better, more effective ways of communicating with the broad range of interests that have a stake in its projects.

#### WETLANDS PERMITS

*Question.* Section 404 of the Clean Water Act requires landowners or developers to obtain U.S. Army Corps of Engineers permits to carry out activities involving disposal of dredged or fill material into navigable waters of the United States, including wetlands. Controversy has grown over the extent of Federal jurisdiction and the impact on private property, the burdens and delay of permit procedures, and roles of Federal agencies and states in issuing permits. Some landowners maintain that changes are needed to lessen the burdens of the regulatory program. Other landowners believe they should be compensated if adversely affected by regulatory "takings" due to Section 404 requirements, particularly since an estimated 74 percent of all remaining wetlands are on private lands.

If confirmed, how would you propose to address such issues in your role as assistant secretary?

*Answer.* It is my understanding that the objective of the Army's Regulatory Program is to provide fair, flexible and efficient evaluations for activities involving waters of the United States. The Corps balances development objectives with the Clean Water Act's requirements to protect the Nation's aquatic ecosystems. The Corps works with permit applicants to allow proposed activities to be authorized, but in ways that are not contrary to the public interest and that protect important aquatic resources. I believe that we can continue to achieve our environmental protection goals while addressing public concerns about regulatory burdens and delays. For example, if confirmed, I will work with the Corps over the coming months to see that the Nationwide permits are reissued. Nationwide permits are designed to provide project authorizations with little or no paperwork. If confirmed, I will work to ensure that we continue to carefully consider all comments we receive from other Federal agencies, but make sure that the public understands that the Corps of Engineers runs the program and makes the permit decisions, as provided for by law.

*Question.* The General Accounting Office has found significant problems with the Army Corps of Engineers program for mitigation of wetlands losses. Last month, the National Academy of Sciences released a report in which it concluded that this program has fallen short of the stated goal of no net wetlands loss.

What is your view of the findings of the General Accounting Office?

*Answer.* I have not yet had the opportunity to review the findings of this report. If confirmed, one of my first priorities will be to discuss this matter with the Chief of Engineers and others in the administration and Congress to seek their input and to develop a plan for addressing the recommendations of the report.

*Question.* What is your view of the findings of the National Academy of Sciences report?

*Answer.* I have not yet had the opportunity to examine the report. If confirmed, I plan to meet with the Corps to seek their input and to develop a plan for addressing the report recommendations.

*Question.* Do you support the goal of no net wetlands loss?

*Answer.* Yes. The goal of "no overall net loss of wetlands" was established by President George Bush in the early 1990s. It is a programmatic goal for the Regulatory Program, and Corps data clearly indicates that the Regulatory Program has exceeded this goal by working with permit applicants to avoid and minimize impacts and by requiring compensatory mitigation for unavoidable impacts. I understand the Corps has required more than one-for-one mitigation for permitted wetland loss (during the period 1993 to 2000 the annual average permitted loss nationwide was 24,000 acres and the annual average mitigation required was 42,000 acres).

*Question.* Do you believe that the Army Corps of Engineers has given wetlands mitigation efforts the priority and attention that it deserves?

*Answer.* I believe that the Corps has worked hard over the years to develop mitigation approaches that offset the losses of wetland functions, such as mitigation

banks and in lieu fee operations, while being fair and reasonable to the regulated public. However, I understand the Corps intends to focus more attention on ensuring compliance with the mitigation conditions for permitted activities.

*Question.* The Army Corps of Engineers issues general permits to developers for draining and filling wetlands. Last year, the rules for this program were tightened to limit the types of activities that may be conducted pursuant to a general permit. The Corps is currently reevaluating the new rules.

What is your view of recently adopted changes to the rules governing the issuance of general permits by the Army Corps of Engineers?

*Answer.* I have not yet had the opportunity to review the changes that were made to the Nationwide permit program last year. If confirmed, I will discuss this matter with the Chief of Engineers in order to understand the impacts of these changes on the regulated public and on the Army's charge to protect the Nation's aquatic resources.

*Question.* What is your view of proposed revisions to those rules?

*Answer.* I understand that most of the Nationwide permits will expire in February in 2002 unless they are reissued. If confirmed, I will work with the Corps as they publish draft and final permit packages for public review and comment. I have not yet been briefed on proposed changes, but will make this a priority should I become the Assistant Secretary of the Army for Civil Works.

#### USE OF MILITARY PERSONNEL

*Question.* Like many Federal agencies, the Corps of Engineers workload is declining in all areas other than operations and maintenance of facilities. Most of this work is done by civilian contractors or civilian employees.

What role do you see for the hundreds of military Corps of Engineers personnel currently working in the districts and divisions?

*Answer.* It is my understanding that there are approximately 275 Active Duty military personnel serving in Districts, Divisions and Headquarters of the Army Corps of Engineers. Although they represent less than 1 percent of the 35,000 personnel within the Corps, they serve a variety of important roles. First, they provide experienced organizational leadership at the District level and higher. Second, they represent the organization's fundamental linkage to the Army. Third, the Army, in conducting operations that range from stability and support to actual war, has successfully leveraged the experience obtained in managing the large construction projects and response to natural disasters characteristic of the Civil Works programs.

#### STATE WATER QUALITY STANDARDS

*Question.* In the past, the United States Army Corps of Engineers has not been required to meet state water quality standards in constructing and operating its water resources projects.

Do you believe that the Army Corps of Engineers should be required to meet state water quality standards in constructing and operating Corps projects in order to protect fishery resources?

*Answer.* Yes, I do.

Section 401 of the Clean Water Act requires that the Army Corps of Engineers obtain certification from states, or interstate water control agencies, that a proposed water resources project is in compliance with established effluent limitations and water quality standards. If a state in question has assumed responsibilities for the Section 404 regulatory program, a state 404 permit would be obtained which would serve as the certification of compliance.

Section 404r of the Clean Water Act waives the requirement to obtain the state water quality certification if the information on the effects of the discharge are included in an Environmental Impact Statement on the proposed project submitted to Congress before the discharge takes place and prior to either authorization of the project or appropriation of construction funds. Nevertheless, it is the policy of the Corps to seek state water quality certification rather than utilizing the Section 404r exemption provision.

#### RELATIONSHIPS

*Question.* If confirmed, how do you propose to ensure a reasonable balance between your oversight authority and the program execution responsibilities of the Chief of Engineers?

*Answer.* If confirmed, I propose to ensure a reasonable balance between my oversight authority and program execution responsibilities of the Chief of Engineers through development of a close professional relationship with the Chief based on

mutual respect, trust, cooperation and communication. If confirmed, I am committed to establishing and maintaining such a relationship in order to respond effectively to the President's priorities and the policy directives of Congress.

CONSULTATION WITH CONGRESS

*Question.* In performing the duties of Assistant Secretary of the Army for Civil Works, you will be confronted with difficult, politically charged issues.

How would you view your role in addressing such matters with Congress?

*Answer.* I would view my role in addressing difficult, politically charged issues as one of facilitating full and open communication among all interested parties, be they others within the Executive Branch, Members of Congress, or the public. In performing my statutory duties, if confirmed, I intend to appropriately involve all interested parties and make decisions that take into account all relevant information.

*Question.* Specifically, would you plan to consult with Congress prior to issuing any secretarial decisions or announcements regarding reforms that may affect the execution of the civil works functions of the Army Corps of Engineers?

*Answer.* Yes.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Army for Civil Works?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR CARL LEVIN ON BEHALF OF SENATOR RICHARD J. DURBIN

MCCOOK AND THORNTON RESERVOIRS, IL

1. Senator LEVIN. As you begin to address the wide array of water resources needs of this country, I would like to direct your attention to a very significant regional project in the Chicagoland area which is critical in addressing the very real flood protection and water quality issues facing Chicago and its suburban surroundings.

The McCook and Thornton Reservoirs are part of the Corps of Engineers' Chicago Underflow Plan (CUP) and were fully authorized in the Water Resources Development Act of 1988 (P.L. 100-676). The CUP is a comprehensive flood protection and water quality protection plan for the Chicago metropolitan area. The State of Illinois, Cook County, the City of Chicago are all supporters of the project and the Metropolitan Water Reclamation District of Greater Chicago is the local sponsor for the CUP. The CUP, which includes a series of underground tunnels and storage reservoirs, was established in order to address the diminished capacity of the area's waterways to handle sewer overflow discharges. This system has been enormously effective in achieving its goals as evidenced by the elimination of 86 percent of combined sewage pollution in a 325 square mile area. The result of this progress is the dramatic increase in water quality of the Chicagoland waterways and the protection of Lake Michigan, our drinking water source. However, the job is far from complete.

The overall project, which is the Tunnel and Reservoir Plan (TARP), consists of 110 miles of tunnels, which have been under construction since the 1970s and now almost complete, by the U.S. Environmental Protection Agency. The project's other significant component, the McCook and Thornton Reservoirs are under construction by the Corps and will provide the comprehensive solution to the flood control and water quality needs by providing significant stormwater storage capacity. Once completed, these reservoirs will provide a storage capacity of 15.3 billion gallons and will produce annual benefits of \$104 million. This translates into protection of over

500,000 homeowners from flooding. Delaying this project results in lost benefits and additional inflation costs of \$120 million per year. This is unacceptable.

Mr. Parker, is this the type of project you will be supporting and will you commit to providing full funding under the Corps' program to keep the project on schedule?

Mr. PARKER. I do support this type of project and, if confirmed, I assure you that I will give McCook and Thornton Reservoirs full consideration during the annual budget process.

2. Senator LEVIN. Mr. Parker, in order for you to better understand the complexity and uniqueness of the McCook and Thornton Reservoir Project and the significant positive impact it is having not only on the health and safety of Chicago land, but on the local and regional economy, as well, will you agree to come to Chicago in the near future to see this important project?

Mr. PARKER. If confirmed, I would welcome an opportunity to visit Chicago to see this project so that I can gain a better appreciation of its complexity and its importance to the Chicago area.

#### CHICAGO SHORELINE, IL

3. Senator LEVIN. Mr. Parker, the Chicago Shoreline project is addressed in a 1999 Project Cooperation Agreement (PCA) signed by the City of Chicago, the Chicago Park District, and the Corps. The PCA provides a roadmap for a shared work and funding approach for the project. In short, it sets a 2005 completion date. Will you agree to personally review the Chicago Shoreline PCA and to work with OMB to ensure full funding and continued federal cooperation for this important project?

Mr. PARKER. If confirmed, I will review the PCA, as you request, and will work to ensure continued funding and federal cooperation to the extent possible within overall budget priorities and funding constraints.

---

#### QUESTIONS SUBMITTED BY SENATOR MARK DAYTON

##### PROJECT BACKLOG AND FUNDING PRIORITIES (ADDRESSING THE BACKLOG)

4. Senator DAYTON. Mr. Parker, the Corps of Engineers has an enormous backlog (over \$50 billion) of already authorized projects that have received some construction funding.

How would you address this backlog?

Mr. PARKER. If confirmed, I would work closely with OMB and Congress to seek increased funding to reduce the backlog. I would also work with Congress and within the administration to consider other options to reduce the backlog. This could include a review of the current deauthorization process to deauthorize projects that do not satisfy today's needs or do not have adequate local support. Limiting the number of new authorizations could also be considered. All of these considerations would necessitate full consultation with the appropriate committees of the House and Senate.

##### PROJECT BACKLOG AND FUNDING PRIORITIES (BUDGET RECOMMENDATIONS)

5. Senator DAYTON. Mr. Parker, how would you develop your recommendations for which projects should receive study and construction funding in the Corps' proposed budget?

Mr. PARKER. If confirmed, I would give priority to the efficient continuation and completion of efforts that had been initiated in prior years and to properly operating and maintaining the existing water resources infrastructure. I also would propose funding for new studies and projects that provide the highest return or meet the most urgent water resources needs.

##### PROJECT BACKLOG AND FUNDING PRIORITIES (PROJECT DEAUTHORIZATION)

6. Senator DAYTON. Mr. Parker, should any projects be deauthorized?

Mr. PARKER. Yes. As I understand it, hundreds of projects already have been deauthorized under a process established by Congress in 1986 and modified in 1996. This process, or something like it, should continue so that projects that do not meet today's water resources needs are deauthorized. However, any deauthorization should occur only after consultation with Congress.

## PROJECT BACKLOG AND FUNDING PRIORITIES (DEAUTHORIZATION CRITERIA)

7. Senator DAYTON. Mr. Parker, what would you recommend for criteria for determining which projects should be deauthorized to reduce this huge backlog?

Mr. PARKER. If confirmed, I would need to give this matter careful study. That said, if there are authorized projects that would not survive scrutiny using today's standards and do not provide satisfactory solutions to today's water resources problems, such projects would be prime candidates for deauthorization.

## ENVIRONMENTAL RESTORATION (PART OF CORPS CENTRAL MISSION)

8. Senator DAYTON. Mr. Parker, do you believe that environmental restoration projects are part of the Corps' central mission?

Mr. PARKER. Yes, I believe that projects and programs that protect and restore the natural environment are a priority for the American people and a central mission for the Corps of Engineers. Ecosystem restoration and protection projects, projects that reverse the effects of prior human activities, have become a priority purpose of the Corps' Civil Works Program because of changing national priorities.

## ENVIRONMENTAL RESTORATION (FLORIDA EVERGLADES)

9. Senator DAYTON. Mr. Parker, do you support funding for the Corps work on the Everglades?

Mr. PARKER. Yes. The Everglades is truly a national treasure and I believe the Army Corps of Engineers, in partnership with the State of Florida, and working with the Department of the Interior and others, have worked hard in developing a long-term ecosystem restoration plan that will provide for both ecological and economic demands for water in South Florida for the next 50 years. The entire region has experienced growth, and this growth has exerted tremendous pressure on the natural resources of the region, especially the Everglades. It is my understanding that the plan to be implemented over the next 25 years will improve the health of over 2.4 million acres of South Florida ecosystem, including Everglades National Park, Lake Okeechobee, and Florida and Biscayne Bays.

Timely implementation and funding of the Comprehensive Everglades Restoration Plan will ensure the protection of the Everglades and future water supply for the people of South Florida. One of my first priorities, if I am confirmed, will be to discuss this plan's implementation with the Chief of Engineers and others in the administration and Congress, state and local agencies, project sponsors, and other stakeholders, to gain a deeper understanding of the issues and funding needs involving implementation of this important initiative.

## ENVIRONMENTAL RESTORATION (SALMON RESTORATION IN THE PACIFIC NORTHWEST)

10. Senator DAYTON. Mr. Parker, do you support salmon restoration in the Pacific Northwest?

Mr. PARKER. Yes, I fully support rebuilding populations of salmon in the Pacific Northwest that are listed under the Endangered Species Act (ESA). I recognize that this requires a concerted effort by many government agencies and other interests to improve and better manage habitat, harvest, hatcheries and hydropower. If confirmed, I will use the available authorities and funding to advance this effort.

## WETLANDS MITIGATION BACKLOG (MITIGATION COMMITMENTS)

11. Senator DAYTON. Mr. Parker, the law requires the Corps to do wetlands mitigations either prior to or concurrently with construction of its civil works projects. Based on reports, the Corps has failed to complete about two-thirds of the mitigation it has committed to complete.

Mr. PARKER. It is my understanding also that the Corps is required to accomplish fish and wildlife mitigation either prior to or concurrently with construction of its water resources projects. I am not familiar with the reports you refer to that indicate that the Corps has failed to complete about two-thirds of the mitigation it has committed to complete. The Corps has informed me that, while there is a backlog of uncompleted mitigation, something over two-thirds of required mitigation has been accomplished. If I am confirmed, I will make it a priority to work with the Corps and Congress to more precisely identify the fish and wildlife mitigation backlog, and develop a strategy for addressing this important issue.

## WETLANDS MITIGATION BACKLOG (ADDRESSING THE BACKLOG)

12. Senator DAYTON. Mr. Parker, are you committed to addressing this mitigation backlog? How would you proceed to do so?

Mr. PARKER. The Corps has a very large construction backlog, estimated at \$40 billion. Included in this backlog is uncompleted fish and wildlife mitigation. This entire backlog must be addressed to satisfy the water resources needs of the Nation. If confirmed, I will work within the administration and with Congress to develop a plan for addressing the backlog of fish and wildlife mitigation, and seek the necessary funds to implement that plan.

## WETLANDS MITIGATION BACKLOG (CORPS VS. PRIVATE SECTOR REQUIREMENTS)

13. Senator DAYTON. Mr. Parker, do you believe that the Corps should be required to meet the same mitigation requirements as the private sector (at least 1:1 mitigation and more for certain types of water resources damages)?

Mr. PARKER. It is my understanding that the Corps approach to mitigation (i.e., assessing impacts through functional analyses) is generally similar to mitigation approaches used by the private sector. Evaluation of impacts and mitigation using only acreage dimensions can be misleading. Under an acre-for-acre requirement, distinctions may not be made among varying qualities of habitat. The Corps' Civil Works Program approach of looking at habitat value is consistent with the policies of the U.S. Fish and Wildlife.

## WETLANDS MITIGATION BACKLOG (MEETING FUTURE MITIGATION REQUIREMENTS)

14. Senator DAYTON. Mr. Parker, how will you ensure that in the future that all mitigation is completed prior to or concurrently with project construction, as the law requires?

Mr. PARKER. If confirmed, I will work within the administration and with Congress to see that project construction scheduled provide for the completion of mitigation at least concurrently with construction of other project features.

## CORPS REFORM—BUSINESS PROCESSES

15. Senator DAYTON. Mr. Parker, many Members of Congress have called for significant reforms in the way the Corps conducts its business.

Do you think the Corps needs to make fundamental changes in the way it does business?

Mr. PARKER. The Corps has open and inclusive business processes and a tradition of working with private citizens, stakeholders, State and local governments, and other Federal agencies. However, improvement is possible and, if confirmed, I will work with the Chief of Engineers to identify further improvements in the Corps business practices so as to improve the service of the Corps to the Nation.

## CORPS REFORM—INDEPENDENT REVIEW

16. Senator DAYTON. Mr. Parker, would you support an independent review—outside of the Corps—of costly or controversial projects?

Mr. PARKER. The Water Resources Development Act of 2000 authorized a National Academy of Sciences study of independent peer review of Corps projects. I understand that the Academy report on independent review is scheduled for completion in the summer of 2002. In addition, the Chief of Engineers has been examining the question of independent review of large, complex, or controversial studies and has developed some preliminary recommendations. If confirmed, I plan to actively examine the question of independent review, in consultation with the Chief of Engineers and considering the views of the National Academy of Sciences, and to develop a recommendation on this matter.

## WETLANDS (RELAXING WETLANDS PROTECTION)

17. Senator DAYTON. Mr. Parker, do you think protections for wetlands under the Clean Water Act should be relaxed?

Mr. PARKER. No. I believe that we can maintain, and even enhance in some ways, protection of the aquatic environment, while improving our responsiveness to the regulated public. Wetlands are one of many critical elements of the Nation's aquatic

resources, which also include open water streams, lakes, coastal bays, estuaries, and near shore open waters. I am committed to continued strong protection of wetlands under the Corps Clean Water Act regulatory program, and for other Corps activities. The Corps must conduct its review and evaluation of permit applications in a manner that reflects the functions and values of the entire aquatic environment and balances that with the need for proposed development. If confirmed, I will work with the Corps to ensure that they improve permitted compliance with permit conditions, which require wetland mitigation so that the impacts to wetlands will be successfully offset.

WETLANDS (EPA'S OVERSIGHT ROLE)

18. Senator DAYTON. Mr. Parker, do you believe EPA's oversight role on wetlands protections under the Act should be weakened or eliminated?

Mr. PARKER. No. I believe that EPA and its various programs under the Clean Water Act provide important protections for wetlands, and work to integrate Federal wetlands protection with efforts by the states and local communities. EPA is clearly the lead on working with states regarding assumption of the Section 404 program and works effectively at improving state and local programs that protect wetlands. They also play an important role in Federal wetlands protection, including the Section 404 program. As we move to ensure that the taxpayer receives maximum benefit from resources expended in all programs, including wetlands protection, we must ensure that there is not an unnecessary level of duplication among any Federal agencies, including the Corps and EPA. If confirmed, I will work to ensure that the administration makes the best use of both agencies' capability while not doing things twice.

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

WETLANDS (RECENT SUPREME COURT RULING)

19. Senator WARNER. Mr. Parker, if confirmed, what experience will you bring to bear in developing a definition that follows the recent Supreme Court ruling and does not exceed the authority of the Clean Water Act?

Mr. PARKER. If confirmed, I will bring my experiences as a Member of Congress on the Energy and Water Development Subcommittee of the Appropriations Committee, as a landowner, as a businessman and as a private citizen to help develop an appropriate implementation of the important Supreme Court decision in the Solid Waste Agency of Northern Cook County (SWANCC) case. In arriving at the appropriate implementation, I will work closely with Department of Defense and Army leaders, legal experts, and other policy officials within the administration. I will also consult with Congress prior to adopting significant guidelines. While completing this process, it will be important to clearly identify what the Corps will continue to regulate under the Supreme Court's decision. By doing so states can determine the appropriate level of regulation they may want to do in areas where the Corps does not have authority to regulate under the Court's decision.

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

NATIONAL CEMETERIES

20. Senator THURMOND. Mr. Parker, the Assistant Secretary of the Army for Civil Works has the responsibility of oversight of our National Cemeteries. In that regard, he sets the guidelines on who may be buried in these hallowed grounds. Since cemetery space, especially Arlington National Cemetery, is reaching capacity, one of your challenges will be to accommodate the increasing need for burial space for the men and women who served in World War II and the Korean War. In regard to Arlington Cemetery, our Nation's most hallowed ground, you have a choice of expanding the cemetery or limiting the number of burials.

As you reviewed the responsibilities of the Assistant Secretary of the Army for Civil Works, what thought have you given this matter?

Mr. PARKER. In reviewing the responsibilities of the Assistant Secretary of the Army for Civil Works, it is clear there is a challenge in accommodating the burial needs of our service men and women. Arlington National Cemetery is very active with thousands of funerals each year. As I understand it, all currently available space will be used up by 2025. A Master Plan was developed in 1998 to address this issue. The Plan's vision was that Arlington remain open into the 22nd century.

The Plan considered several alternatives for extending the cemetery's life, including land expansion and more restrictive burial eligibility. I am told that the last time there was a change in burial eligibility was in 1967. Although the 1998 Master Plan did not suggest further changes, it did recommend reevaluation of burial policy every 5 years. The first review will take place in 2003. The Master Plan also addressed expansion by looking at potential sites adjacent to the cemetery. A more in-depth analysis of adjacent government-owned sites was performed in a Concept Land Utilization Plan, which I understand was submitted to Congress last year.

I believe the process described above provides a reasonable way to consider options for extending the cemetery's life. If confirmed, I will place a high priority on early coordination with Congress as the review of these options proceeds.

#### ROLE OF THE MILITARY IN CIVIL WORKS

21. Senator THURMOND. Mr. Parker, the Corps of Engineers that most of the country is familiar with is essentially a civilian organization, yet based on the historic role the Army Engineers have had in exploring and developing our Nation there are hundreds of military personnel working in the Corps of Engineer Districts.

As the Army reviews its role and undergoes the transformation to meet the new challenges, should we review the role of the military as it relates to civil works and possibly assign the functions to an agency outside the Department of Defense?

Mr. PARKER. The Corps has a long history of successful development, management and protection of the Nation's water resources. The Civil Works program also brings to the Army an experienced engineering and construction management workforce that can contribute to the defense needs of the Nation. The Army, in conducting operations that range from stability and support to actual war, has successfully leveraged the experience obtained in managing the large construction projects and response to natural disasters characteristic of the Civil Works programs. Transfer of the Civil Works mission to a non-defense agency would compromise this attribute. Therefore, my inclination would be to retain the Corps role in Civil Works within the Defense Department.

#### ROLE OF CORPS ENGINEERS

22. Senator THURMOND. Mr. Parker, although the Corps of Engineers had a significant role in building our Nation's infrastructure, there are many who believe we should now turn over the Corps' Civil Works mission to the private sector.

What is the Corps of Engineers' Civil Works role and what new missions do you expect the Corps to assume in the coming years?

Mr. PARKER. The Army's Civil Works mission is to contribute to the national welfare and serve the public by providing the Nation and the Army with quality and responsive development and management of the Nation's water resources; protection, restoration, and management of the environment; disaster response and recovery; and engineering and technical services in an environmentally sustainable, economically, and technically sound manner. I do not foresee any major new missions in the coming years.

#### HUNTING ISLAND STATE PARK (EXPEDITE THE SECTION 206 AQUATIC ECOSYSTEM RESTORATION STUDY)

23. Senator THURMOND. Mr. Parker, as you may be aware, the beach renourishment project at Hunting Island State Park is the top priority for the South Carolina Department of Parks, Recreation, and Tourism (PRT). There is currently a joint project between the Corps of Engineers and the South Carolina Office of Ocean and Coastal Resource Management regarding Hunting Island. Discussions between the parties have been cordial and productive. I appreciate that the Corps has supported this project, and that a feasibility study is underway. Given the beach condition at Hunting Island, I would appreciate your response to the following concerns:

In 1998, PRT funded a feasibility study to identify options and costs associated with the beach restoration project. The Corps is now conducting its own Feasibility Study as part of a Section 206 Aquatic Ecosystem Restoration Study. Given the earlier study, what measures can be undertaken to expedite the study process and move to the next phase of this project?

Mr. PARKER. I understand that the Corps' feasibility study is evaluating the impacts of high erosion rates on Hunting Island's delicate ecosystem and the park infrastructure, and that the Corps has examined the findings from the study funded by the South Carolina Department of Parks, Recreation, and Tourism. If confirmed,

I will examine the process for completing this study and determine if it can be expedited.

HUNTING ISLAND STATE PARK (BEST-CASE SCENARIO TO START CONSTRUCTION EARLIER)

24. Senator THURMOND. Mr. Parker, in a best-case scenario, the Corps would start project construction in October of 2002. This date has been determined to be problematic because of potential loss of the access road and water line serving the south end of the island. Can project construction begin earlier, to prevent this loss and related consequences?

Mr. PARKER. I am informed that you are correct about the best-case scenario. If confirmed, I will give this matter close attention and keep Congress informed of the status.

HUNTING ISLAND STATE PARK (USE OF SECTION 14 EMERGENCY STREAMBANK PROTECTION AUTHORITY)

25. Senator THURMOND. Mr. Parker, as an interim measure to save the road, discussion has been held between the parties regarding an emergency Section 14 Corps project. Will the Corps support this emergency project and provide adequate resources to proceed in an expedited manner?

Mr. PARKER. I understand that in June, 2001, the Corps' Charleston District received a request from South Carolina Department of Parks, Recreation and Tourism to provide emergency protection for the access road and utilities located at the south end of the island under the authority of Section 14 of the Flood Control Act of 1946. I am told that the District has determined that emergency protection is likely to be justified and has initiated a Planning and Design Analysis. This analysis is scheduled to be completed early in fiscal year 2002 and would include plans and specifications. If funds are available, the emergency protection could be constructed after that.

CHARLESTON DISTRICT ENGINEER

26. Senator THURMOND. Mr. Parker, as I am sure you remember, we recently discussed my concerns about the current rank of the Charleston, South Carolina, District Engineer. I am greatly concerned that this office is the only one in our division where the District Engineer is not a full colonel. From hurricanes on the coast to cleaning up Former Utilized Defense Sites in the Upstate, this office has a huge responsibility over a wide range of matters throughout South Carolina. There is also the issue of the high costs associated with moving a new District Engineer every 2 years rather than 3. I also think that you would agree it is often times very difficult to start and complete a project within a 2 year time frame. Having an additional year for the District Engineer would allow a continuity with other parties involved in projects that is now missing. Given all these factors, I cannot understand why our District Engineer is not equal in rank with his counterparts in the South Atlantic Division.

How do you propose to rectify this situation?

Mr. PARKER. If confirmed, I will examine the process the Corps is using to determine assignment of officers to District Offices. I will specifically reassess the current rank of the Charleston District Office in light of the many challenging missions that the office has.

DREDGING PROJECTS

27. Senator THURMOND. Mr. Parker, throughout South Carolina and the United States, there are many projects that I feel are not receiving the appropriate attention of the Corps of Engineers. With costs continually rising for proper disposal of dredge spoil, numerous smaller dredging proposals at marinas and harbors are being overlooked for the larger plans. Many people associated with these local and smaller projects rely on this business for their livelihood. They cannot compete with the larger companies and plans. As a result of this, I feel that there may be the need to establish a special program within the Corps to specifically assist these smaller projects.

Would you support creating a program that would be solely established to assist these smaller dredging projects?

Mr. PARKER. I have been told that in fiscal year 2000 the Corps spent \$135 million for dredging, structural repairs and other operations at the smaller, shallow

draft projects and \$562 million at deep draft harbors. The amount expended on shallow draft projects was 19 percent of the total. While this represents a fair share of resources, I will, if confirmed, look into whether a special program is needed.

ENVIRONMENTAL RESTORATION (CORPS' ROLE IN DOD ENVIRONMENTAL CLEAN-UP EFFORTS)

28. Senator THURMOND. Mr. Parker, a major problem facing the Department of Defense is environmental restoration of current and former military installations. We are dedicating billions of dollars to this effort and I am not certain the Nation's taxpayers are getting the most out of this effort.

What is the Corps of Engineer's role in the Department of Defense's environmental clean-up efforts? Should it be increased or decreased?

Mr. PARKER. I understand that while the Assistant Secretary of the Army (Installations and Environment) has the Army lead for environmental restoration, the Corps does play an important role. The Corps currently provides environmental support to other Defense Department agencies, the Assistant Chief of Staff for Installation Management, other Major Army Commands and installation commanders. The Corps serves as executing agency for the Formerly Used Defense Sites Program and for assigned projects for the Army Installation Restoration Program and the Base Realignment and Closure Program. The Corps also administers the Defense and State Memorandum of Agreement/Cooperative Agreement Program for the Deputy Undersecretary of Defense for Environmental Security. In addition, the Corps plans and develops the Army Environmental Quality Program, and also integrates the Army Materiel Command's acquisition and industrial pollution prevention programs into the total Army program.

Based on its demonstrated expertise, it would appear that the Corps has the capability for an increased role in the Defense Department's environmental clean-up efforts. However, whether or not it is desirable to increase the Corps' role is a matter for review by the entire DOD and Army leadership.

CONTRACTING REFORM (BENEFITS TO ARMY)

29. Senator THURMOND. Mr. Parker, in Secretary Rumsfeld's recent testimony before the Senate Armed Services Committee he stressed the need to reform the outdated management and acquisition processes in the Department of Defense. As a result of that testimony, Senator Allard and I contacted the Secretary concerning the innovative contracting mechanism being used by the Army for the environmental restoration of the Rocky Mountain Arsenal. According to information I have received, this innovative approach has produced impressive results. It will reportedly reduce program costs by \$200 million and the project completion time by 3 years, while maintaining planned annual expenditures of approximately \$70 million with a competent, yet reduced, Government core oversight team. I have also been informed that the contractor has received numerous accolades due to the meaningful small business involvement they have cultivated.

I believe this is an innovative and dynamic concept that can be applied throughout the Armed Services, especially at the Corps of Engineers, that will allow each of you to quickly and efficiently adopt best commercial practices. In other words, this contracting model may yield dramatic and immediate savings for the Department.

Do you believe that the Department could benefit from contracting reform?

Mr. PARKER. The Corps has benefitted from reforms made possible by the Federal Acquisition Streamlining Act (1994), and the Federal Acquisition Reform Act (1996), especially the development of performance-based contracting, adoption of commercial practices, partnering, teaming, and contractual incentives. These initiatives changed the way the Corps acquires supplies and services, moving from a process-oriented, rules-based, risk avoidance culture, to one emphasizing performance outcomes, business judgment, streamlined procedures, and risk management. If confirmed, I will look forward to working with the Secretary of Defense, the Secretary of the Army and others to find ways to adopt additional contracting reforms that would benefit the Corps.

CONTRACTING REFORM (APPLICABILITY OF ROCKY MOUNTAIN ARSENAL CONTRACT)

30. Senator THURMOND. Will you commit to studying the Rocky Mountain Arsenal Program Management Contract in order to evaluate its applicability to other projects in your Department?

Mr. PARKER. If confirmed, I will study the Rocky Mountain Arsenal Program Management contract process and consider whether that could serve as a model for other projects. I understand the Army is currently evaluating the benefits of several innovative contracting initiatives for environmental cleanup, including the Rocky Mountain Arsenal Program Management Contract concept. The lessons learned in contracting at Rocky Mountain Arsenal should be considered for possible application to other cleanup projects, particularly large, complex, multi-year projects.

---

QUESTIONS SUBMITTED BY SENATOR BOB SMITH

CONSTRUCTION AND O&M BACKLOG

31. Senator SMITH. Mr. Parker, as you are well aware, the Army Corps Civil Works Program faces a construction backlog of \$40 billion in unfunded, but authorized projects. The Senate Environment and Public Works Committee is currently on schedule to report the next biennial Water Resources Development Act in the year 2002. While the Appropriations Committees have adhered to a "no new starts" policy, this seems to unfairly penalize otherwise meritorious projects.

What do you recommend Congress do to fairly address both the massive construction backlog and the backlog of operations and maintenance?

Mr. PARKER. The majority of the construction backlog is made up of projects that are supported in the President's budget. Should I be confirmed, one of my priorities would be to strive for the efficient construction and completion of these projects. I also would propose funding for new projects that would provide the highest return or meet the most urgent water resources needs. Another of my priorities would be to accomplish the most critical maintenance needed to arrest further deterioration of existing Civil Works projects and to ensure adequate project performance. Only with the closest cooperation and consultation with Congress can we decrease these backlogs.

DISTRIBUTION OF RESPONSIBILITIES AND REPORTING AUTHORITY

32. Senator SMITH. Mr. Parker, in November of 2000, then-Assistant Secretary Joseph Westphal and Chief of Engineers General Robert Flowers signed a Memorandum of Agreement (MOA) outlining the distribution of responsibilities and reporting authority between the two positions. Is it your intent to honor this MOA?

Mr. PARKER. I intend to honor this MOA.

UPPER MISSISSIPPI RIVER NAVIGATION STUDY

33. Senator SMITH. Mr. Parker, what measures do you recommend the Army Corps take to avoid a recurrence of the situation encountered with the Upper Mississippi River Navigation Study?

Mr. PARKER. As I understand it, there were some technical problems with the Upper Mississippi Navigation Study. The Chief of Engineers has corrected those problems and the study is back on track. The National Research Council of the National Academy of Sciences found that the model for economic analysis was flawed. The Council also suggested a number of other improvements that could be made in the study. The Corps has subsequently taken a number of actions on the Upper Mississippi Study that will have broader application to similar large-scale studies in the future. The Corps has established a Washington-level principals group, composed of senior people from other key Federal agencies, to advise the Corps on the Upper Mississippi Study. This principals group has contributed to formulating guidance on the resumption of the study. This guidance includes a restructuring of the study to investigate navigation, ecosystem, and related needs in a comprehensive, holistic manner that will consider modifying the navigation system to meet transportation needs and achieve environmental sustainability. The Corps has also formed an Interagency Regional Work Group that will collaborate in the development of a new Project Management Plan for the study.

ENVIRONMENTAL RESTORATION (PRIMARY MISSION OF CORPS OF ENGINEERS)

34. Senator SMITH. Mr. Parker, do you consider environmental restoration to be a primary mission of the Army Corps and will you support it to the same extent you do the other missions of the Corps?

Mr. PARKER. The environmental protection and restoration of fish and wildlife habitats is a primary mission of the Corps and, if confirmed, I would accord it the same priority as flood damage prevention and commercial navigation.

#### HOMESTEAD AIR FORCE BASE AND EVERGLADES RESTORATION

35. Senator SMITH. Mr. Parker, on January 15, 2001, the Air Force issued a Record of Decision (ROD) on redevelopment of Homestead AFB, rejecting the plan to convert the base into a commercial airport and instead approving a plan for mixed use development. The 700 acres of land will be transferred to Miami-Dade County, which prefers the airport alternative. If the county declines the surplus property, the ROD stipulates that the Air Force will consider a request for the property to be transferred instead to the Department of Interior.

Homestead AFB is located approximately 10 miles from Everglades National Park and 2 miles from Biscayne National Park. Last year, the Environment and Public Works Committee authorized an \$8 billion restoration effort in the Everglades. Included in this statute is a Sense of Congress that any redevelopment of the Homestead AFB be consistent with restoration of the Everglades.

What is your position regarding the disposal of Homestead AFB?

Mr. PARKER. I believe the disposal and/or redevelopment of the former Homestead Air Force Base should be consistent with the restoration goals and preservation and protection of the Everglades ecosystem. Further, disposal and redevelopment of the site should also be consistent with other goals of the restoration plan, including providing for water supply and flood protection and maintaining the economic viability of South Florida.

#### CORPS REFORMS

36. Senator SMITH. Mr. Parker, do you think that any reforms are needed in the Corps to restore the faith of the public and Congress in this agency?

Mr. PARKER. I believe the Corps is a fundamentally sound organization. It has strong technical abilities and has proven time and time again that it can solve difficult problems. It has served this Nation for many years and can be counted on to continue to do so in the future. However, based on recent findings, the Corps does need to re-examine the way it manages policy and technical reviews in order to ensure projects will receive broad support. In addition, in this era of scarce resources, the Corps must find better, more effective ways of communicating with the broad range of interests that have a stake in its projects.

#### PRINCIPLES AND GUIDELINES

37. Senator SMITH. Mr. Parker, would you support updating the Principles and Guidelines to reflect recent policy and social changes, such as the inclusion of environmental restoration as a federal purpose, and advances in analytical techniques and technologies?

Mr. PARKER. If confirmed, I would be willing to look at this matter in more detail.

---

[The nomination reference of Paul Michael Parker follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 19, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Paul Michael Parker, of Mississippi, to be an Assistant Secretary of the Army, vice Joseph W. Westphal.

---

[The biographical sketch of Paul Michael Parker, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF PAUL MICHAEL (MIKE) PARKER

Since 1996, Mr. Parker has been the owner and President of GFG Farms, Inc. and Welch Resources, Inc., companies with timber, farming and leasing operations.

In 1999, Mr. Parker ran unsuccessfully as the Republican nominee for Governor of the State of Mississippi. The race was in the closest in Mississippi history, with neither candidate receiving a majority of the popular vote and ending in a tie in the Electoral College. The Mississippi House of Representatives elected the democratic candidate.

In 1989, Mr. Parker was elected to represent the Fourth Congressional District of Mississippi in the United States House of Representatives. While serving in the House from 1989 to 1999, Mr. Parker served on the Budget, Appropriations, Transportation, Education, and Workforce, and Veteran's Affairs Committees. While on the Appropriations Committee, Mr. Parker sat on the Energy and Water Development and Military Construction Subcommittees.

From 1978 to his election to the House, Mr. Parker was the owner of three companies: Brookhaven Funeral Home, Inc.; Community Life Insurance Company; and Brookhaven Funeral Insurance Company.

Mr. Parker graduated from William Carey College, Hattiesburg, Mississippi, with a B.A. degree in 1970. In 1995, he was awarded an Honorary Doctor of Humanities from William Carey College.

Mr. Parker has been married for 31 years to his wife Rosemary. They have three children.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Paul Michael Parker in connection with his nomination follows:]

## UNITED STATES SENATE

## COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

## COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Paul Michael (Mike) Parker.

2. **Position to which nominated:**  
Assistant Secretary of the Army for Civil Works.

3. **Date of nomination:**  
June 19, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

October 31, 1949; Laurel, MS.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to Rosemary Prather Parker.

**7. Names and ages of children:**

Michael Adrian Parker, 26; Marisa Parker, 20; Thomas Welch Parker, 16.

**8. Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Franklin High School, 506 Edison Street, Meadville, MS; January 1966–May 1967; High School Diploma, May 1967.

Dallas Institute of Mortuary Science, 3909 South Buckner Blvd., Dallas, TX; September 1972–August 1973; Funeral Director's License, August 1973.

William Carey College, 498 Tuscan Avenue, Hattiesburg, MS; September 1967–May 1970; BA, May 1970.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Parker-Malvaney Consulting, Inc., 50 Creekview Lane SE, Brookhaven, MS, President/Owner, January 2000 to Present.

Welch Resources, Inc., 50 Creekview Lane SE, Brookhaven, MS, President/Owner, October 1997 to Present.

U.S. Government, 2445 Rayburn House Office Building, Washington, DC; Member of Congress MS 4, January 1989 to January 1999.

Brookhaven Funeral Home, Inc., 230 North Jackson Street, Brookhaven, MS; President/Owner, March 1978 to December 1992.

Franklin Funeral Home, Inc., 230 North Jackson Street, Brookhaven, MS; President/Owner, March 1978 to December 1992.

Brookhaven Funeral Insurance Company, Inc., 230 North Jackson Street, Brookhaven, MS; President/Owner, March 1978 to December 1992.

Community Life Insurance Company, Inc., 230 North Jackson Street, Brookhaven, MS; President/Owner, May 1982 to December 1992.

The Mississippi Hush Puppy Company, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, June 1996 to December 1999.

M&R Services, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, January 1993 to December 2000.

GFG Farms, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, October 1996 to present.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Parker-Malvaney Consulting, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, January 2000 to present.

(Clients of Parker-Malvaney Consulting, Inc.) CSX Corporation, RJ Reynolds Tobacco Company, Mississippi Band of Choctaw Indians.

Welch Resources, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, October 1997 to present.

GFG Farms, Inc., 50 Creekview Lane SE, Brookhaven, MS; President/Owner, October 1996 to present.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

None.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

Member of Congress, 1989 to 1999, Representing the 4th Congressional District of Mississippi.

Republican Gubernatorial Nominee for the State of Mississippi in 1999.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

I have made only one personal contribution to a political candidate. On March 20, 1998, I gave \$1,000 to my Chief of Staff, Art Rhodes, a candidate for Congress in the 4th District of Mississippi.

My campaign committee has given the following contributions:

03/29/00 .....	Jim Talent for Governor of Missouri .....	\$ 1,000
10/18/00 .....	The New Century Project .....	25,000
10/18/00 .....	Rankin County Republican Executive Committee .....	10,000
02/08/01 .....	Friends of John Roberts .....	1,000
02/08/01 .....	Lincoln County Republican Executive Committee .....	5,000
05/15/01 .....	Republican National Committee .....	100,000
05/16/01 .....	Mississippi Republican Party .....	87,000

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

William Carey College, 498 Tuscan Avenue, Hattiesburg, MS, Honorary Doctor of Humanities, Received: 1995.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

While serving for 10 years as a Member of Congress and as a candidate for governor, I gave hundreds of speeches on a variety of subjects; however, there are no formal copies of these speeches, nor have I given a speech specifically on the Corps of Engineers.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

PAUL MICHAEL (MIKE) PARKER.

This 14th day of June, 2001.

[The nomination of Paul Michael Parker was first reported to the Senate by Chairman Levin on August 2, 2001, with the recommendation that the nomination be confirmed. Also on August 2, 2001, the Senate agreed to a unanimous consent agreement which provided that once this nomination was reported from the Committee on Armed Services that it be referred to the Committee on Environment and Public Works for a period of 20 days of session. On August 3, 2001, however, the Senate agreed to another unanimous consent agreement, which provided that all nominations be returned to the President on August 3, 2001, pursuant to Rule XXI paragraph 6 of the Standing Rules of the Senate. The nomination of Michael Parker was resubmitted to the Senate by the President on September 4, 2001. On September 5, 2001 the Senate agreed to

another unanimous consent agreement which again provided that the Parker nomination, once reported by the Committee on Armed Services, be referred to the Committee on Environment and Public Works for a period of 20 days of session. On September 6, 2001 the nomination of Michael Parker was reported to the Senate by Chairman Levin, with the recommendation that the nomination be confirmed. The Parker nomination was then referred to the Committee on Environment and Public Works. That committee held a hearing on the nomination on September 21, 2001. On September 25, 2001, the Committee on Environment and Public Works reported the nomination to the Senate, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on September 26, 2001.]

[Prepared questions submitted to Dr. Mario P. Fiori by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 26, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

MARIO P. FIORI.

cc: Senator John Warner,  
*Ranking Member.*

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I fully support the Department of Defense Reorganization Act of 1986 and related Special Operations initiatives for defense reform.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* From what I have learned to date, these defense reforms have been implemented and have achieved the desired results. Having said that, I believe it is important, and consistent with the intent of the reform legislation, that the Army continues to assess and modify its operations and internal procedures to meet the challenges of a dynamic security environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of these reforms were strengthening civilian control, streamlining the operational chain of command, improving the efficiency in the use of defense resources, improving the military advice provided to the National Command Authorities, clarifying authority for combatant commanders, and enhancing the effectiveness of military operations.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I fully support the congressional goals reflected in the Department of Defense Reorganization Act of 1986 and other related defense reform legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. At this time, I have not had an opportunity to consider whether changes to Goldwater-Nichols may be warranted. If confirmed as the Assistant Secretary of the Army (Installations and Environment) (ASA (I&E)), I will remain open to proposals within the Department that will increase the effectiveness of the organization and missions within my areas of responsibility.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Army (Installations and Environment)?

Answer. Under current Army policy, the Assistant Secretary is responsible for policy development, program oversight, and coordination for a wide variety of Army activities, including installation management, safety, and occupational health programs, and environmental cleanup, compliance, prevention, and conservation. I understand that the ASA (I&E) is responsible for the stewardship of 12 million acres and facility investment totaling more than \$160 billion.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. I have had a diverse background of engineering management, nuclear power discipline, major laboratory management, and most recently, manager of a major Department of Energy facility (Savannah River Site.) In many of these positions I was responsible for landlord functions, research and development, and downsizing and economic development. For example, at Savannah River Site, I was responsible for this 320 square mile area of forest and industrial area. Downsizing of the industrial complex, combined with environmental controls of this large area, including major environmental research (conducted by the University of Georgia as a contractor to DOE), were all part of the DOE manager's area of interest and responsibility. Such experiences, including those in the Naval Service earlier, prepare me very well for the challenges of the ASA (I&E) position.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Army (Installations and Environment)?

Answer. It is never too late to find new and innovative ways to accomplish the very important tasks at hand. If confirmed, I plan to utilize the expertise of the Army's military and civilian workforce, supplemented by independent advice from standing groups such as the Army Science Board, the Institute for Defense Analyses, and from private sector organizations and individuals. For many of the issues that I will face I would utilize a multi-disciplinary project team drawing on expertise in I&E, other Army Secretariat organizations, DOD and outside organizations as appropriate. In my past experiences I always have sought the best talent available both in employees and in advisors to supplement and enhance my personal experience and expertise. I have learned that providing the people an opportunity to perform is key to the success of the organization. People must be challenged and be held accountable.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Army would prescribe for you?

Answer. The duties of the Assistant Secretary are currently defined in a General Order. If confirmed, I will advise the Secretary on issues, initiatives and ideas that fall within my areas of responsibility and I will accept any other assignments he may deem necessary for the successful accomplishment of the Army mission. I look forward to working closely with the Secretary and making the Army team an example for others to emulate.

*Question.* In carrying out your duties, how will you work with the Secretary of the Army, the Under Secretary of the Army, and the Deputy Under Secretary of Defense (Installations and Environment)?

Answer. The organizational relationship between the ASA (I&E) and the Under Secretary of the Army is defined by the Secretary of the Army. The Under Secretary is the Secretary of the Army's principal civilian assistant and senior advisor and I will be available to assist him at all times and always keep him informed of significant issues under the ASA (I&E) purview. If confirmed, I will establish a coopera-

tive and open relationship with the Deputy Under Secretary of Defense and assist him in developing programs that are cost effective and would benefit the entire military structure.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Army (Installations and Environment)?

*Answer.* I believe there are three major challenges in managing I&E. First, the Army faces a major ongoing challenge in its effort to meet mission requirements and provide for the quality of life for soldiers and their families in this era of diminishing resources. Second, the Army needs to move forward aggressively in reducing and realigning its infrastructure to match its requirements into the 21st century. Third, the Army needs to strive to achieve more efficient and cost effective remediation of its properties. The identification and resource programming for the Army's requirements to cleanup munitions and Unexploded Ordnance (UXO) at its non-operational ranges and disposal areas are one of our major challenges.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will quickly evaluate the action plans in place, and with the assistance of staff and other experts, develop changes that have proven effective in other areas or have significant promise to effectively and economically address the challenges. There is a wealth of knowledge in the Army, other government agencies, and in the private sector. I would not reject any help that makes sense and assists the Army in properly marshalling its resources to address these challenges.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Army (Installations and Environment)?

*Answer.* With shrinking budgets, I believe that the Army must strive to achieve an effective balance between the quality of life for Army soldiers and their families, force sustainment, and the modernization necessary to build an effective Army for the future. Moreover, it will be a continuing challenge for the Army to achieve the optimum balance among the competing tools available to meet these needs, such as private sector performance of functions, use of emerging technologies, and the development of innovative programs.

The Army's ability to address requirements for munitions cleanups and dispose of real property is controlled by the absolute need to protect the health of the affected communities and meet the regulatory requirements for environmental cleanup.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will quickly assess the nature and scope of the problems and challenges that ASA (I&E) faces. I will retain those programs that appear to be working well, develop new programs where required, and modify those that have promise. I would work very closely with Congress, the regulators, other stakeholders, and other DOD and Executive Departments.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues that must be addressed by the Assistant Secretary of the Army (Installations and Environment)?

*Answer.* Establishment of policy and programs to address the legacy of unexploded ordnance and munitions residues at closed, closing and formerly used military ranges and disposal areas will be one of my top priorities. The Army must ensure that our legacy of past military activities is addressed in a responsible and timely manner and also ensure that past mistakes are not repeated. Additionally, I will work to streamline the Army's property disposal process and address environmental cleanup concerns so that excess properties are returned to reuse in the public or private sector as rapidly and efficiently as possible.

#### HOUSING PRIVATIZATION

*Question.* Congress has repeatedly expressed its support for improving military family housing. In recent years the Department of Defense and Congress have taken significant steps to improve family housing. However, it will take many more years and a significant amount of funding to meet the Department's housing needs. An alternative option that was created to speed the improvement of military family housing and relieve base commanders of the burden of managing their family housing is the housing privatization program. If confirmed for the position of Assistant

Secretary of the Army (Installations and Environment) you will have a key role in any decisions regarding military family housing.

What are your views regarding the privatization of family housing?

Answer. The legislation enabling privatization initiatives within DOD and the military services provides an effective mechanism to leverage the military Services' limited resources, thereby increasing the availability and quality of family housing for Service members and their families. It appears that privatization may prove to be the most effective and affordable method of revitalizing the Army's large and aging family housing stock and providing essential new housing. I understand that there is enormous interest among the Nation's leading developers in partnering with the Army in this program. It is essential to approach housing issues with a broad-based program perspective that addresses long-term development and management of Army communities—not simply the construction of housing units. Army communities, like civilian communities, include all of the facilities and services that accommodate and support soldiers and their families. If confirmed, my primary goal in this area would be to develop appropriate program strategies to effectively use scarce Army resources and significantly improve the quality of life for our soldiers.

*Question.* What is your view of the structure, pace, and general goals of the Army's current housing privatization program? Do you think the program should be continued, and if so do you believe the program should be modified in any way?

Answer. The privatization authorities that were provided by Congress in 1996 in the Military Housing Privatization Initiative provide a good structure and the appropriate tools to carry out family housing privatization. If confirmed, I will become fully engaged in the Army's housing privatization program and will conduct periodic reviews and/or lessons learned sessions to identify modifications to improve the process.

*Question.* The Army has contracted for a major housing privatization effort at Fort Hood, Texas using a request for qualifications (RFQ) process instead of the more traditional request for proposals (RFP) process.

What are your views on the relative merits of these contracting approaches?

Answer. I understand the Army is using a Request for Qualifications (RFQ) solicitation process in the housing privatization program because this allows the Army to partner with a highly qualified, world-class development partner to design the best residential community for a given installation.

*Question.* The Department of Defense has established 2010 as a goal to improve all of its military family housing.

Do you believe the Department of the Army can achieve this goal?

Answer. Yes, I believe that the Army can achieve the DOD goal of eliminating inadequate family housing by fiscal year 2010 using a combination of traditional MILCON, increases in the Basic Allowance for Housing, and housing privatization.

#### COMPETITIVE SOURCING

*Question.* Over the past several years, DOD has increased its reliance on the private sector to perform activities that are commercial in nature, including many functions relating to running and maintaining our military installations.

What approach would you recommend to balance the need to maintain necessary decision-making functions and technical capabilities in the government's civilian workforce, including the knowledge necessary to be a "smart buyer," and skills such as civil engineering within the military, with the savings that may be available from outsourcing?

Answer. Although inherently governmental functions normally cannot be performed by contractors, I understand that there is a credible process within the Army for identifying those core commercial capabilities required for maintaining a smart buyer capability, and I intend to support that process. In all cases, the military and civilian employees must be trained to be "smart customers." I believe the smarter the customer, the better will be the performance of the supplier and frequently at less cost.

*Question.* Do you support the principle of public-private competition as the preferred means to make the "sourcing" decision for such functions?

Answer. Generally, OMB Circular A-76 and Federal law require public-private competition as the means to make the "sourcing" decision.

*Question.* Do you believe that public-private competition results in significant savings to the Department of Defense regardless of which side wins the competition?

Answer. Yes, according to experts familiar with the process, public-private competition typically results in savings in excess of 30 percent, regardless of which side wins the competition. I feel that these savings are important and must be considered as we plan to manage in the future.

*Question.* OMB Circular A-76, which establishes the guidelines for outsourcing most government functions, is slated for scrutiny by a congressionally-mandated panel of government and private experts in this area. The panel, chaired by the Comptroller General, is scheduled to report to Congress with specific policy and legislative reforms and recommendations for changing the way the government conducts outsourcing decisions and implements them.

What is your view of the current A-76 process?

*Answer.* If confirmed, I intend to thoroughly familiarize myself with the process and ensure the process is effective and will continue to provide substantial savings and efficiencies.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

*Answer.* This is a complex issue, and I believe it is prudent to wait until the Commercial Activities Panel has provided its analysis of the question before I make a final judgment as to whether other effective alternatives exist.

#### BASE CLOSURES

*Question.* The President's February 2001 budget blueprint document states that "with 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently".

Do you believe that we need more base closures?

*Answer.* The Secretary of Defense initiated a broad review of the Department of Defense that is currently ongoing. I would expect recommendations about reshaping our infrastructure to emerge as a result of this review. The Secretary recently indicated that with a round of base closings and adjustments that reduced unneeded facilities we could focus the funds on facilities we actually need.

*Question.* Do you believe the Army has excess infrastructure that uses resources that could be applied to higher priorities within the Department of the Army?

*Answer.* In an April 1998 DOD report to Congress, the Army reported that it had excess infrastructure. A final determination on this point cannot be made until ongoing Defense reviews are completed and the impacts are assessed. If confirmed, I will work to ensure that the Army retains the infrastructure that it needs to support current and future Army force structure, training, and readiness requirements.

*Question.* Do you believe the process established by the Defense Base Closure and Realignment Act of 1990 is a fair and effective way to reduce excess military infrastructure and return the property to local authorities?

*Answer.* Improvement is always possible in a process as complex as the Act of 1990. In the future, the Army will need to reshape its infrastructure to support the Army of the future. Once there is a clear understanding of the direction the Army needs to take, it can be determined if the Act of 1990 is the right process or whether recommendations to modify the process should be made.

*Question.* In your view, would changing the base closure process to exempt some bases from the independent commission's review make the process more or less open, fair, and stressful to communities with military installations?

*Answer.* If confirmed, I will carefully consider any proposed changes to improve the process. I do believe that communities deserve to know the status of their base as quickly as possible. Above all, we need to ensure that the process is open and fair and achieves that objective.

#### REAL PROPERTY MAINTENANCE

*Question.* The military departments have consistently struggled to maintain their base infrastructure. The backlog of real property maintenance has remained high whether budgets were increasing or decreasing, and the military is far behind industry standards for maintaining and modernizing its facilities.

Are there any new approaches to this issue that you believe could help the Army move toward a solution of this perennial problem?

*Answer.* I understand that the Army is taking several approaches to the problem of maintaining its base infrastructure in the face of inadequate funding, including utility privatization. In addition, the military services' leasing authority under Title 10 USC, Section 2667 is an important tool for addressing real property maintenance and revitalization. Also, the Army is involved in an effort to relocate from leased facilities to on-post facilities. All of these programs work together toward eliminating the funding delta for the maintenance of base infrastructure.

#### ENVIRONMENTAL ISSUES

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment" issues. These

include population growth near military installations, environmental constraints on military training ranges, airspace restrictions to accommodate civilian airlines, and the conflicts with civilian users over the use of radio frequency spectrum.

In your opinion, how serious are these problems for the Department of the Army?

Answer. I believe that the Army must provide our soldiers with tough, realistic, battle-focused training in preparation for a wide variety of mission-essential warfighting scenarios ranging from tropical to desert to cold region operations. Ensuring our soldiers have access to the most realistic training possible is a challenge for both our operations and environmental personnel.

Army environmental programs help support this core mission by conserving training lands, preventing pollution, complying with laws and regulations, partnering with local communities, and cleaning up contamination at Army installations.

*Question.* If confirmed, what role do you expect to play in addressing these challenges and what actions would you propose to take to address them?

Answer. If confirmed, I will work to ensure that the Army has a holistic approach to land management. Doctrinal changes and advances in equipment capabilities require that we use more of our land resources than ever before. If confirmed, I seek ways to improve our stewardship so that this valuable resource continues to be available for training our soldiers.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Do you believe that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

Answer. Continued funding of the Army environmental compliance program is critical to all stakeholders, and I will, if confirmed, ensure that we approach our commitments to make sure our communities are protected from harm. I believe that the Army's commitment to comply with Federal, State, and local regulations and laws is sound and it is a key in maintaining good community relations. Americans want to feel safe living and working on or near our installations. This compliance strategy also supports the Army training and readiness goals for mission sustainment. Compliance with environmental requirements builds and maintains community trust and tolerance of our installations activities.

*Question.* Do you believe that the Department of Defense should be exempt from the application of environmental laws?

Answer. I feel that the military should comply with environmental laws and regulations, just as civilian entities must comply. I am mindful that some laws do provide a limited exemption for national security reasons where the activity is uniquely military and critical to the maintenance of national security.

*Question.* Do you support the basic principle of the Federal Facility Compliance Act and other laws that Federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

Answer. I believe that the military should be subject to the same environmental laws and regulations as comparably situated civilian facilities. Nonetheless, I believe it is important to acknowledge that the military has a unique mission that distinguishes it from the civilian sector. Every opportunity must be explored to identify the impacts of the rules/regulations on our mission before the Federal, State, or local law or regulation goes into effect.

*Question.* The Department of Defense faces a bill for the clean up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars and could well be in the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military Services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

Answer. This is a complex issue with many factors. It would be difficult at this time to define an "acceptable" period. I do appreciate the importance of this matter, and if confirmed, will make it one of my top priorities.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department's long-term clean-up liability (and the time required to complete such clean-up)?

Answer. Yes, the Army needs to continue to invest in UXO and munitions response technologies to improve its ability to discriminate ordnance from non-ordnance items. I further believe that the Army should develop procedures and tech-

niques to characterize UXO properties to gain public and regulatory agency acceptance of proposed cleanup plans.

## ENERGY EFFICIENCY

*Question.* Executive Order 13123 lays out a number of specific steps that agencies should take to promote energy conservation. These include the use of energy savings performance contracts, utility energy efficiency contracts, and other contracts designed to achieve energy conservation; conducting energy efficiency audits for approximately 10 percent of an agency's facilities each year; and exploring opportunities for energy efficiency in industrial facilities for steam systems, boiler operation, air compressor systems, industrial processes, and fuel switching.

Do you support the use of these energy conservation approaches?

Answer. Yes.

*Question.* Are there other steps that you would take, if confirmed, to promote energy conservation by the Department of the Army?

Answer. Yes. If confirmed, I would encourage the increased use of renewable energy sources such as wind, solar, photovoltaic, and geothermal when cost effective. I would also support the development and use of new energy saving technologies and business-oriented management techniques.

*Question.* Do you believe that the energy conservation goals established in the Executive Order are achievable?

Answer. Yes.

## INTEGRATION OF INSTALLATIONS WITH LOCAL COMMUNITIES

*Question.* The Department of Defense is in the midst of an effort to increase the Basic Allowance for Housing to eliminate out-of-pocket housing costs for military families who choose to live off base. This policy is intended to encourage more military families to live off base and reduce the demand for government housing. In recent years, outsourcing of base operations functions on military installations has increased substantially. Secretary Rumsfeld has proposed examination of additional contracting out in certain areas, including the operation of commissaries. All of these policies tend to increase the integration of the military into the local community and increase the non-military population on our bases.

At the same time, force protection concerns are leading the military services to take steps to close or restrict access to military installations and to build force protection measures into the construction of schools and other non-military facilities on those installations.

What do you believe is the appropriate level of integration, or separation, between military installations and the surrounding local communities?

Answer. I believe that the military Services have expanded the integration between the military community and adjoining civilian communities. Where once posts were opened only on Armed Forces Day, they now are more accessible and share facilities and areas—recreational areas such as parks and lakes and space in schools located on Army facilities. With respect to economic activity, the Army has never been separated from communities surrounding our posts. The civilian community is a source of medical, health and welfare, and comfort for the military community. If confirmed, I would continue to look for ways to develop or improve partnerships while maintaining focus on force protection, readiness and mission accomplishment.

## DAVIS-BACON ACT

*Question.* 40 U.S.C. Sec. 276a, commonly known as Davis-Bacon, requires that for every contract in excess of \$2,000 involving construction, alteration, and/or repair of public buildings or public works, the prevailing wage in that state shall be paid. When the contract cost-floor was set in the 1930s, \$2,000 was a substantial sum of money, however, inflation during the intervening years has eroded the value of the dollar to the point where there is virtually no project that is not covered by Davis-Bacon.

If confirmed, would you support raising the contract threshold to a more current standard before Davis-Bacon can be invoked?

Answer. Yes.

*Question.* In your personal opinion, what would be an appropriate contract cost before Davis-Bacon should apply?

Answer. I have not examined the issue of raising the contract threshold, and would have to look at the impact of various contract cost levels before making a recommendation. I understand that this is a sensitive issue, which warrants thorough analysis and considered judgment.

## INSTALLATION MANAGEMENT

*Question.* One of the obvious handicaps to the implementation of the Family Housing Privatization initiative is the lack of specialists in real estate and financial management throughout the Department of Defense. A similar shortfall is said to exist in the area of business managers and installation managers.

If the Army is experiencing similar shortfalls, should these positions be filled with contract or civil service personnel? Please explain.

*Answer.* I understand that the Army generally has sufficient personnel resources to meet its mission requirements in the real estate and financial management areas. However, if confirmed, I will review the training of our personnel in this area to independently evaluate their expertise and take action as is necessary.

*Question.* As the Army enters a new era of defense reform and business practices, does it have a program to ensure it has a cadre of real estate and business managers?

*Answer.* The Army has established a real estate career and other personnel programs to provide trained professionals to meet current and future staffing requirements. In addition, contingency real estate support teams provide trained professionals to support deployed forces to assist in national emergencies. I will examine these programs for opportunities to make improvements and to apply commercial practices and concepts to better meet the Army's real estate and business management needs.

## ENVIRONMENTAL ENCROACHMENT

*Question.* Some of the Service Chiefs have asserted that they spend more money each year complying with environmental regulations than they spend on training. In visits to military installations, committee members have observed first hand the barriers to training caused by compliance with environmental regulations.

If confirmed, what steps would you take to reduce the cost to the Department of environmental compliance?

*Answer.* I believe that better management practices are the keys to cost effective environmental program funding and spending while the Army continues to fund all "must fund" requirements. The Army expects to be more effective in minimizing environmental program costs through the implementation of the Environmental Management System approach to identifying and solving environmental problems. I encourage continuation of the effort to promote environmental program tracking, environmental audits, contract management and savings, leveraging science and innovative technologies, and integration of environmental considerations in planning. These are sound and prudent environmental management practices that will continue to engender smart sound program efficiencies.

*Question.* If confirmed, how would you propose to facilitate the development and implementation of a comprehensive strategy to address readiness concerns related to these encroachment issues?

*Answer.* I understand that the Army's Sustainable Range Program (SRP) maximizes the capability, availability, and accessibility of ranges and training land, and in a manner that provides sound environmental stewardship, all in order to support overall doctrinal training and testing requirements.

In order to sustain readiness in light of increasing encroachment, if confirmed, I will work to ensure that the Army improves its management of ranges and land.

## OVERSEAS INSTALLATIONS

*Question.* The Army maintains a network of bases to support our forward deployed forces. In testimony before the Senate Armed Services Committee, both the Supreme Allied Commander, Europe, and the Commander, United States Forces, Korea, stated that the installations in their commands are in serious need of repair. The implication of these statements is that overseas installations are not faring well in the funding allocation process.

In your view, what share of resource allocation should go to our overseas bases?

*Answer.* If I am confirmed, I will study the concerns expressed by the commanders of the Army's overseas forces to ensure that the needs of their commands are adequately addressed.

## 67-YEAR FACILITY REPLACEMENT GOAL

*Question.* One of Secretary Rumsfeld's more significant goals is to fund facility replacement on a 67-year standard, rather than the almost 200-year cycle on which the Department is currently operating. Although this standard is still short of the

industry standard of 57 years, it will significantly increase the readiness of our military installations.

In your view, is it realistic to hold the Army to such a standard when there are fluctuating budget demands and priorities?

Answer. I believe that it is realistic to hold the Army to the 67-year facility replacement cycle. There will always be fluctuating budget demands and priorities, but the only way to plan for facilities that can maintain readiness and support the Army's mission is to set a standard. I feel that facilities requirements should not be determined by the resources remaining after funding the other mission accounts.

*Question.* Other than increased funding for military construction and repair and maintenance, what other tools would you suggest the Department employ to achieve the 67-year replacement goal?

Answer. Although increased modernization funding is necessary to achieve the 67-year replacement goal, I believe it must be tied to increased sustainment funding as is proposed in fiscal year 2002 to continue to properly maintain the facilities.

#### MODERNIZATION/NEW MISSION COSTS

*Question.* All components, including both active and Reserve Forces, face the challenge of providing facilities required for a new weapon system or the assignment of a new mission. This is especially challenging to the Reserve components, which have been assigned new missions or weapons systems and then expected to fund the new facilities from their limited military construction funds.

Do you believe the funding for new equipment support facilities should be programmed as part of any given program's acquisition cost?

Answer. Yes, I believe that the Army should include the RC infrastructure costs as part of the acquisition development program. Funding should be provided in sufficient lead-time for additional modification or construction of the facilities that will support the systems being fielded. These facilities improvements could include the upgrade and construction of new buildings, training ranges, training areas and communications backbone (i.e., digital backbone on installations to tie-in equipment with integrated testing/training components in the motor pools and on ranges). Providing funding for the infrastructure cost as part of the fielding of new equipment allows for better planning, because the full requirement is captured and allows the Program Manager to control the phasing/sequencing of facilities as the new system(s) are acquired or new units activated.

*Question.* What are your views on the assignment of new missions to the Reserve components without specifically programming the funds in the military construction program to support those missions?

Answer. I feel that any new missions should be supported by the appropriate military construction projects.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Army (Installations and Environment)?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

##### INTEGRATED TRAINING AREA MANAGEMENT

1. Senator WARNER. Dr. Fiori, in response to advance questions regarding development and implementation of a comprehensive strategy for encroachment issues, you indicated that you would work to improve the Army's management of ranges. The

Integrated Training Area Management (ITAM) program supports sustainable range use and compliance with environmental laws and regulations. It is my understanding, however, that the fiscal year 2002 budget request reflects funding shortfalls for the ITAM program. Dr. Fiori, if confirmed, how would you propose to address such funding shortfalls in the out years?

Dr. FIORI. I recognize that the ITAM program is a critical component to sustainable ranges and long-term readiness. I will make sustainable ranges a priority within my office. The Army staff will continue to work with the Major Commands to document and prioritize ITAM funding requirements. The ITAM program will continue to compete for funds along with other high priority programs that are critical to readiness. The Army funds ITAM as an Operational Readiness (OPRED) program and will continue to work to meet critical program funding requirements.

#### FAMILY HOUSING IMPROVEMENT

2. Senator WARNER. Based on what you know of the department's ongoing efforts to improve military family housing, do you believe the 2010 goal is achievable and are you committed to the goal?

Dr. FIORI. The Army believes that the 2010 goal is achievable and is strongly committed to it. The Army has a long-range investment plan that reaches the Secretary of Defense's goal to eliminate all inadequate family housing by 2010. It also supports the Department's three-pronged initiative to eliminate out-of-pocket housing expenses for soldiers living in private houses by 2005, to increase the use of housing privatization in the United States, and to continue reliance on traditional military construction for revitalizing Army-owned housing.

#### FACILITY CONDITIONS

3. Senator WARNER. The condition of our military facilities is deplorable. After years of insufficient resources for the construction of new facilities or the maintenance of those in existence, many of the buildings in which our military personnel live and work have deteriorated to an unacceptable level. What actions will you pursue to correct this problem?

Dr. FIORI. The Army plans to implement the Army Facility Strategy (AFS). The AFS is the centerpiece of our efforts to fix the deplorable current status of Army facilities and requires a two-pronged approach. The first prong is full sustainment funding to halt further deterioration of our facilities. The second prong is to restore and modernize those critical facilities that are in the worst shape. We have identified 10-year increments of funding that will bring critical facilities to a C1 condition. We cannot wait on a 67-year recapitalization rate to fix these key facilities. The first 10-year increment includes Vehicle Maintenance Facilities and Supporting Hardstand, General Instruction Buildings, Physical Fitness Facilities, Trainee Complexes (spread over two 10-year increments), and U.S. Army Reserve Centers and National Guard Readiness Centers (both spread over three 10-year increments). The AFS continues the investment strategy that we have followed successfully in the Army barracks upgrade program. We will continue with our current programs to upgrade facilities. The Army began upgrading or replacing its barracks complexes in 1994. This will continue through fiscal year 2008. We are also proceeding on a master plan to privatize or upgrade with Military Construction the Family Housing stock by 2010.

#### ENCROACHMENT

4. Senator WARNER. What actions will you propose to ensure that encroachment does not prevent the Armed Forces from effectively training and operating both at home and abroad?

Dr. FIORI. The Army uses the term "encroachment" to refer to all external influences threatening or constraining testing and training activities required for force readiness and weapons acquisition. Such encroachment stems from environmental (e.g., noise, endangered species, unexploded ordnance, and munitions constituents), social (e.g., urban sprawl), and economic (e.g., changing land values) influences. Impacts include, but are not limited to, restrictions on available testing and training locations; restrictions on available times and duration for testing and training; reduced effectiveness of testing and training activities; and, restrictions on weapons systems, equipment, and munitions used during testing and training.

Unit commanders have not reported lowered training ratings solely due to encroachment issues. However, several units reporting reduced readiness ratings have

provided comments on their Unit Status Reports identifying training constraints. Instead of allowing these constraints to reduce unit training status, commanders have developed “work-arounds” to continue training to maintain their readiness posture and to accomplish the mission. Although these “work-arounds” must support training requirements based on doctrinal standards, they make the training experience sub-optimal. When training combines a number of “work-arounds,” the adverse impacts on training are magnified and cumulative.

The Army’s comprehensive effort to ensure readiness and minimize impacts of encroachment is the Sustainable Range Program (SRP). The objective of SRP is to maximize the capability, availability, accessibility of ranges and training land to support doctrinal training and testing requirements. SRP is based on three tenets: (1) Develop and Maintain Scientifically Defensible Data—have complete data on all aspects of our ranges—their operational characteristics as training facilities, their physical characteristics as real property, and their characteristics as part of the natural and cultural environment. (2) Integrate Management across the four disciplines that directly affect ranges: range operations and modernization; facilities and installation management; explosives safety; and environmental management. (3) Establish Outreach Campaign to inform and influence decision-makers and leaders to improve community understanding of why the Army must conduct training and testing, and how we are moving to a more sophisticated management approach to ensure that the concerns of the public are addressed. The Army Deputy Chief of Staff for Operations and Plans (DCSOPs) has the lead on this initiative and is working with my office and the other functions within the Army staff to develop and implement SRP.

We would ask Congress to support the Army’s effort to ensure that encroachment does not prevent effective training in the following ways.

1. Support and resource implementation of the Army’s SRP program. SRP is the foundation for sustaining live training and the environment on our ranges. As we have in the past, we will continue to improve range operations, range modernization, state-of-the-art land management, research on munitions effects and management of unexploded ordnance, and public outreach. Although final funding levels have not yet been established, we ask Congress to support this important program.

2. Support and foster cooperation among regulators and the military, emphasizing the need to balance military readiness concerns and environmental regulation. The Army believes that Congress should continue to recognize that the training required for Army readiness is a positive societal good and a legal mandate. Defense of our Nation is an important requirement that benefits all citizens. I believe there are ways to balance the needs of the military with the needs of the environment. Congress should encourage regulatory agencies to work with the DOD Components to develop compliance methods that support both regulatory and military objectives.

3. Undertake legislative initiatives to clarify statutory requirements that apply to military operations. As currently written, several statutes contain broad discretionary enforcement thresholds that are based on the assessment of the regulatory authority as to whether a given condition presents a “potential” risk or “imminent” hazard to human health or a particular natural resource. While the Army is not seeking to avoid our responsibilities to the American people or seeking relief from compliance with environmental statutes, the lack of consistent and measurable standards limits the Army’s ability to plan, program, and budget for compliance requirements. In light of the Secretary’s current strategic review, it would be premature to discuss specific proposals, but I look forward to working with other Federal agencies and Congress.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### FAMILY HOUSING IMPROVEMENT

5. Senator THURMOND. Based on what you know of the department’s ongoing efforts to improve military family housing stock, do you believe the 2010 goal is achievable and are you committed to that effort?

Dr. FIORI. The Army believes that the 2010 goal is achievable and is strongly committed to it. The Army has a long-range investment plan that reaches the Secretary of Defense’s goal to eliminate all inadequate family housing by 2010. It also supports the Department’s three-pronged initiative to eliminate out-of-pocket housing expenses for soldiers living in private houses by 2005, to increase the use of housing privatization in the United States, and to continue reliance on traditional military construction for revitalizing Army owned housing.

## 67-YEAR REPLACEMENT STANDARD

6. Senator THURMOND. Although funding is key, proper management of the assets is critical if the Department is to achieve this goal. Based on your knowledge of how the Department currently manages its facilities, what management improvements would you recommend?

Dr. FIORI. The Army manages its installations in an expert and professional manner. We will continue to improve by establishing accountability that ensures maximum performance with funds provided by Congress as measured by well defined metrics.

We have implemented several efficiency initiatives to cut the cost of installation operations and become more business oriented. These initiatives include competitive sourcing, lease reduction, facilities demolition, utilities privatization, family housing privatization, and public/private partnership. Public/private partnership and privatization show great promise for the future and are tools that will help us achieve the desired 67-year facility replacement cycle. Public/private partnership and privatization allow us to maximize use of our resources to manage and maintain our real property assets while taking advantage of private sector experience expertise, and funding. We are working closely with Congress to make these initiatives successful and establish the necessary authorities to achieve ours and DOD's management goals.

After doing all we can to minimize the cost of sustaining our infrastructure, we must fully fund that cost. To that end, our most important recommendation is to fully support the Army's request for sustainment, restoration, and modernization (SRM) funding.

## BASE CLOSURES

7. Senator THURMOND. Since each of you, if confirmed, will have a significant role in any future base closures I would like your views on how we can minimize the impact of the base closure process on our communities.

Dr. FIORI. We have learned valuable lessons from implementing the results of previous base realignment and closure (BRAC) decisions. Reducing base closure impacts can best be achieved by early involvement of the public/private sector in determining potential property reuse, financing of reuse development, and the environmental clean up. The ability to simultaneously plan the reuse in conjunction with the necessary environmental efforts saves limited resources, reduces timelines and is crucial to both the Army and the communities involved. Leveraging private sector funding will significantly increase the communities' ability to move forward with the creation of new jobs. Additionally, the Army should inform the affected communities early-on of the various options available for disposal. The communities must quickly determine whether they want to be directly involved in the disposal or allow the Army to market the closing properties based on Community Reuse Plans. Mutual cooperation, sharing of information and early private sector involvement will greatly lessen the impact the on local communities.

## FORCE PROTECTION

8. Senator THURMOND. One of the greatest issues facing our military services is force protection. Although the focus in this area is on protecting our forward deployed forces, we must be concerned with our Continental United States (CONUS) installations, which in many instances are integrated into our communities. Dr. Fiori, how do we ensure force protection on the installation without completely separating the community from the installation?

Dr. FIORI. Open communication, community interaction, and a thorough information campaign help implement and maintain an installation force protection plan. Each installation Commander performs a risk analysis to make informed decisions on the required levels of restricting access to installations, as well as Random Antiterrorism Measures (RAMs).

Key to this is the involvement of public affairs officers and liaison activities with leaders in local government, public agencies, civic organizations, and the local public media. In drafting and executing the information campaign we begin by identifying installation and community issues while educating the local populace as to the necessity of the decision. In many cases, not all, the local community concerns can be alleviated thus insuring community knowledge while establishing the appropriate force protection measures to counter the threat.

## UTILITIES PRIVATIZATION

9. Senator THURMOND. Based on your knowledge of the utility privatization effort, what are your concerns regarding the total reliance on contractors to provide utility services?

Dr. FIORI. Our main concerns for total reliance on contractors for utilities services focus on security and cost effectiveness. If a privatization effort does not pass these two tests, we do not privatize. Otherwise, we believe it is in the Army's best interest to privatize these non-core functions to entities better equipped to operate and maintain the utilities we need.

## SUPPORT FOR THE RESERVE COMPONENTS

10. Senator THURMOND. Dr. Fiori, what assurance can you provide that the National Guard and Army Reserve will receive funding at levels sufficient to sustain their readiness and quality of life?

Dr. FIORI. We are one Army—Active, Guard, and Reserve. I will continue to develop requirements for all three components alike. The Army Facility Strategy fully integrates Active, Guard, and Reserve requirements into a unified funding posture. I believe funding distributed in this manner will be sufficient to sustain all components' readiness and quality of life.

## RELATIONSHIP WITH ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT

11. Senator THURMOND. Dr. Fiori, what is the relationship between the Assistant Chief of Staff for Installation Management and the Office of the Assistant Secretary of the Army for Installations and Environment?

Dr. FIORI. We have a very close working relationship between the two staffs. Our mission and objectives are closely related, intertwined, and mutually supportive.

We have a small Secretariat staff focused on policy and oversight of installation and environmental concerns. The Assistant Chief of Staff for Installation Management (ACSIM) has a staff responsive to the needs of the Secretariat while programming for installation and environmental functions, and providing implementing guidance and execution oversight.

The separate functions of the two staffs provide the benefits of civilian leadership and oversight of the military on installation and environmental operations, and the opportunity to separate the day-to-day oversight from the long-term vision and policy development. They also provide two separate perspectives on the requirements and solutions to the challenge of furnishing top quality installations for our soldiers, their families and our civilian workforce.

12. Senator THURMOND. Dr. Fiori, what, if any, functions are redundant between the two positions?

Dr. FIORI. While the roles of the two offices are closely related, the only overlap seems to be in the execution of the Residential Communities Initiative (RCI) and Historic Properties initiatives. While these functions have recently been managed from the Army Secretariat, I am considering returning these functions to the Assistant Chief of Staff for Installation Management (ACSIM).

## CONTRACTING REFORM

13. Senator THURMOND. Do you believe that the Department could benefit from contracting reform?

Dr. FIORI. The Army must continue to look for innovative contracting approaches to achieve cost-effective cleanup. However, I do not think that we need major contracting reform within the Department's cleanup program. The Rocky Mountain Arsenal program management contract concept, while the right contract mechanism for Rocky Mountain Arsenal, is not the solution for all cleanup projects. Many sites will benefit from contracting methods such as Guaranteed Fixed Price Remediation and privatization initiatives, while other cleanups will be effectively executed using existing approaches in which we have established a broad base of expertise. I will make every effort to use the best contracting methodology depending of the specific circumstances.

14. Senator THURMOND. Will you commit to studying the Rocky Mountain Arsenal Program Management Contract in order to evaluate its applicability to other projects in your Department?

Dr. FIORI. Yes, I will ensure the Rocky Mountain Arsenal Program Management Contract process is considered in other projects when it makes sense. The Army is currently evaluating the benefits of several innovative contracting initiatives for environmental cleanup, including the Rocky Mountain Arsenal program management contract concept. We will consider the lessons learned in contracting at Rocky Mountain Arsenal for possible application to other cleanup projects, particularly large, complex, multi-year projects.

---

[The nomination reference of Dr. Mario P. Fiori follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Dr. Mario P. Fiori of Georgia, to be an Assistant Secretary of the Army, vice Mahlon Apgar IV.

---

[The biographical sketch of Dr. Mario P. Fiori, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. MARIO P. FIORI

Mario P. Fiori, born in Frankfurt Germany, was raised in Brooklyn, NY. After graduating from Brooklyn Technical High School, he attended and graduated from the U.S. Naval Academy in 1963. After serving 1 year on a diesel submarine, he entered the graduate program at Massachusetts Institute of Technology. He earned a Masters in Mechanical Engineering (1966), a Nuclear Engineer degree (1966), and a Ph.D. in Nuclear Engineering (1968).

He then served in the nuclear submarine force as a department head in attack submarine U.S.S. *Pargo* (SSN 650), Executive Officer in Poseidon missile submarine U.S.S. *George Washington Carver* (SSBN 656), commanding officer in attack submarine U.S.S. *Spadefish* (SSN 668), and Squadron Commander of Submarine Squadron 4. His shore assignments included: submarine analyst on the CNO staff, DOD representative to the Federal Energy Administration, Special Assistant to the President Reagan's Science Advisor, Dr. George Keyworth II, and, prior to retirement, Commander, Naval Underwater Systems Center, Newport, RI.

In 1990–1991, he was President of MPF Associates, his consulting firm. In 1991, Dr. Fiori joined the Senior Executive Service in the Department of Energy and served as the Departmental Representative to the Defense Nuclear Facilities Safety Board. The Board, a congressionally mandated body, has safety oversight of all DOE weapon's facilities. In 1993, the Secretary of Energy reassigned Dr. Fiori to be Manager, Savannah River Site, Aiken, SC.

He left DOE in October 1997 to start his own company, Compass Associates, Inc., a consulting company focusing on proper conduct of operations, safety of operations and business development.

He is married to Susan Bayles and has three daughters, Cristina, Alison, and Katherine.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. Mario P. Fiori in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Mario Peter Fiori (Guenter Georg Kohl—birth name changed upon my adoption by my stepfather, Silvano Louis Fiori in 1951).
2. **Position to which nominated:**  
Assistant Secretary of the Army, Installations and Environment (ASA-I&E).
3. **Date of nomination:**  
July 12, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]  
Compass Associates Inc. is an S-Corp established and owned by Dr. Fiori. He is the only employee.)
5. **Date and place of birth:**  
December 14, 1941; Frankfurt/M, Germany.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Susan Wintfield Bayles.
7. **Names and ages of children:**  
Cristina Fiori Argeles, 28; Alison Paige Fiori, 26; Katherine Leigh Fiori, 23.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Brooklyn Technical High School, Brooklyn, NY, 9/55-6/59—Diploma.  
U.S. Naval Academy, Annapolis, MD, 7/59-6/63—Bachelor of Science.  
Massachusetts Institute of Technology, 9/64-9/68—Master of Mechanical Engineer and Nuclear Engineer Degree, 9/66 and Doctor of Philosophy in Nuclear Engineering, 2/69.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
10/97 to Present—Founder and Owner/President of consulting company, Compass Associates Incorporated. I was sole employee and the company address was the same as my home address. I provided business development advice, served as President of a software company, RTS-Enabling Technology in Richland, WA, served as advisor to different CEOs and participated in several significant “red-team” efforts for various nuclear related companies.  
10/91-10/97—Served as SES-6 in the Department of Energy. I initially worked as the liaison officer between the Department of Energy and the Defense Nuclear Weapons Facility Board. In 1/93 I was reassigned to assume the responsibilities of Manager, Savannah River Site, Aiken, SC.  
5/90-9/91—Sole Proprietor of “MPF Associates,” a consulting firm concentrating on business development and defense related studies. Served as a Senior Fellow at the Hudson Institute, and had several other commercial clients.

11/89–3/90—Engineer, Stone and Webster Engineering Corp, Washington DC office. I was under training as a senior business developer in the Wash DC office.

6/63–10/89—U.S. Naval Officer. Served in various nuclear submarine billets including Commanding Officer of an attack submarine, U.S.S. *Spadefish* (SSN 668) stationed in Norfolk, VA. Submarine Squadron Commander of Submarine Squadron 4 in Charleston, SC, and Commander, Naval Underwater Systems Center, Newport, RI. Shore duties included 4 years at MIT, 2 years as a System Analyst for submarine naval programs in the Pentagon, Washington DC (6 months) and then the DOD Liaison with the Federal Energy Office/Administration for 18 months, 2 years as Executive/Military Assistant to Dr. George Keyworth, President Reagan's Science Advisor.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

President/Owner of Compass Associates Inc. (At present I have no consulting work with the exception of providing management and business development assistance to Trans-Digital Corp, located in Arlington, VA.)

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Organization	Type of Organization	Inclusive Dates	Comments
Citizen's for Nuclear Technology Awareness ....	Educational .....	1995–Present ...	This is org supports all things nuclear.
Inter Agency Seminar Group .....	Social/Educational	1983–Present ...	This group meets approx monthly and invites speakers for luncheons.
West Lake Country Club .....	Social .....	1993–Present ...	This supports our local community.
United Way .....	Charity .....	1995–Present ...	Member of the Board.
American Nuclear Society .....	Professional .....	1989–Present.	
Republican National Comm (President's Club)	Political .....	1998–Present.	
Norwood's Capitol Club .....	Political .....	2000–Present ...	Charlie Norwood (R) is GA 10th District Congressman.
USNA Alumni Assoc .....	Fraternal .....	1963–Present.	
USNA Athletic Assoc .....	Other .....	2001 .....	I have been member in past but allowed membership to lapse.
Church of the Good Shepherd, Augusta GA ....	Religious .....	1993–Present.	
Naval Submarine League .....	Professional .....	1980–Present.	
Navy League .....	Professional .....	1989–Present.	
Association for the Advancement of Retired People.	Civic .....	1991–Present.	
The Retired Officers Association .....	Civic .....	1989–Present.	

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

I was a volunteer and surrogate speaker (never actually provided such service) for the Virginia Bush for President Committee. I also prepared a position paper regarding nuclear submarines.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Individual/Campaign organization	Political Party	Contribution
Lindsey Graham for Senate .....	Republican .....	200.00
Charlie Norwood for Congress .....	Republican .....	250.00
Charlie Norwood for Congress .....	Republican .....	200.00

Individual/Campaign organization	Political Party	Contribution
The Presidents Club .....	Republican .....	110.00
Citizens to Elect Tom Cross .....	Republican .....	250.00
Lindsey Graham for the Senate .....	Republican .....	100.00
Charlie Norwood for Congress .....	Republican .....	200.00
Committee to Elect Lindsey Graham .....	Republican .....	200.00
Norwood for Congress .....	Republican .....	200.00
Norwood for Congress .....	Republican .....	200.00
Norwood for Congress .....	Republican .....	150.00
Bush for President .....	Republican .....	500.00
Charlie Norwood for Congress .....	Republican .....	100.00
Bush Primary for President .....	Republican .....	500.00
Miscellaneous contributions .....	Republican .....	200.00

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Department of Defense Superior Service Medal.  
Four Navy Legion of Merit Medals.  
Department of Defense Commendation Medal.  
Three Navy Commendation Medals.  
Two Navy Unit Commendations (NUC).  
Three Navy Meritorious Unit Commendations (MUC).

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Except for a Ph.D. thesis synopsis, I have had nothing published.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have made no speeches on the topics relevant to the position for which I have been nominated.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

I do agree.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. MARIO PETER FIORI.

This 13th day of July, 2001.

[The nomination of Dr. Mario P. Fiori was reported to the Senate by Senator Cleland on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

[Prepared questions submitted to H.T. Johnson by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 17, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

H.T. JOHNSON.

cc: Senator John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* I am committed to the complete and effective implementation of these reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe these reforms have been accepted and implemented. They have clarified the responsibilities and authorities of the Secretary of Defense, the Secretaries of the Military Departments, the Joint Chiefs of Staff, and the Chairman of the Joint Chiefs. These reforms have improved our joint war fighting capabilities.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I believe the most significant improvement has been to strengthen the joint war fighting capability of our country. Our military is more capable and more lethal because our Services can work better together. If confirmed, I will continue the Department of the Navy's commitment to the principles of joint war fighting.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am unaware of legislative proposals to amend Goldwater-Nichols, and do not have any specific suggestions to offer. If confirmed, I will evaluate any proposal to amend Goldwater-Nichols on its merits.

DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* According to existing practices, the role of the Assistant Secretary of the Navy (Installations and Environment) is to formulate policy and procedures for the effective management of Navy and Marine Corps: real property, housing, and other facilities; environmental protection ashore and afloat; safety and occupational health for both military and civilian personnel; and timely completion of closures and realignments of installations under base closure laws. If confirmed, I will pursue these duties within the context of the overall priorities of the Secretary of the Navy, as well as any other areas he may assign.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I believe I possess extensive experience in the public and private sectors in operating and maintaining facilities in an environmentally responsible manner. I have served in an executive capacity in various phases of the BRAC process. I believe I have demonstrated a deep and abiding commitment to "the military family" in my many previous assignments within the Department of Defense and in the private sector. I will continue that commitment to the sailors, marines, civilians, and their families in the Department of the Navy.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* If confirmed, I will seek and listen to the views of those within the Department of the Navy, as well as those of the Secretary of Defense and the other Military Departments. I will also seek and listen to the advice and counsel of Congress, the communities and states where we operate, and other experts in my areas of responsibility.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Navy would prescribe for you?

*Answer.* I expect the Secretary of the Navy to prescribe the duties and functions listed above. The Secretary has not described any other duties that he may assign to me.

*Question.* In carrying out your duties, how will you work with the Secretary of the Navy, the Under Secretary of the Navy, and the Deputy Under Secretary of Defense (Installations and Environment)?

*Answer.* If confirmed, I will work closely with the Secretary of the Navy, the Under Secretary of the Navy, the Deputy Under Secretary of Defense (Installations and Environment), and the other Assistant Secretaries of the Navy consistent with the appropriate laws and Title 10 of the U.S. Code and the priorities of the Secretary of the Navy. I will work hard to foster cooperation and teamwork among the civilian and military leadership in the Department of the Navy.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* I believe the major challenges include: improving the overall condition of the shore infrastructure, including solving long-standing housing inadequacies; resolving encroachment concerns that may limit the ability of our sailors and marines to train under realistic conditions before going into harm's way; completing the environmental cleanup and property disposal of bases listed under previous Base Closure and Realignment statutes; providing more efficient facilities consistent with future force structure needs; and securing alternative shore facilities for pre-deployment readiness training.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will carefully evaluate the status of ongoing initiatives. I will develop and pursue plans consistent with the priorities of the Secretary of Defense and the Secretary of the Navy. Where feasible, I would like to apply commercial methods and industry practices to address these challenges.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* On a national level, I believe the most serious problem will be maintaining a proper balance between national security and non-defense needs. Within the Department of Defense and the Department of Navy, I expect there will be a strong competition for resources.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* I will work closely with the Secretary of the Navy and the Under Secretary of the Navy to support the Secretary's overall goals and time lines.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* If confirmed, I will establish priorities consistent with those of the Secretary of Defense and the Secretary of the Navy.

## HOUSING PRIVATIZATION

*Question.* Congress has repeatedly expressed its support for improving military family housing. Through the Military Housing Initiative, the Department of Defense has taken a significant step toward improving family housing. However, it will take many more years and a significant amount of funding to meet the Department's housing needs. An alternative option that has frequently been mentioned to resolve the military family housing crisis is to privatize the housing and relieve the Services and its commanders of the burden of maintaining and managing the family housing program. If confirmed for the position of Assistant Secretary of the Navy for Installations and Environment, you will have a key role in any decisions regarding military family housing.

What are your views regarding the privatization of family housing?

*Answer.* I believe that privatization is an essential tool in improving living conditions for sailors, marines, and their families. The ability to leverage Government resources through partnership with the private sector will help the Navy and Marine Corps to obtain better housing faster.

*Question.* What is your view of the structure, pace, and general goals of the Navy's current housing privatization program? Do you think the program should be continued, and if so do you believe the program should be modified in any way?

*Answer.* I understand that the Department of the Navy recently awarded three housing privatization projects, and several more awards are planned in the coming months. It is my opinion that the program should be continued. If confirmed, I will explore all aspects of the program to identify those areas that should be modified.

*Question.* The Department of Defense has established 2010 as a goal to improve the standards of military family housing.

Do you believe this goal is realistic and achievable in regard to the Department of the Navy?

*Answer.* Yes, based on what I have observed, and if confirmed, I would like to see us do it sooner.

## "1+1" STANDARD FOR BACHELOR ENLISTED QUARTERS

*Question.* In recent years the Department of Defense has pursued the so-called "1+1" standard for unaccompanied housing. While building to this standard raises costs, making it more difficult to modernize the Department's unaccompanied housing, many believe the greater privacy the 1+1 standard offers our enlisted personnel is essential to recruiting and retaining quality personnel and is something all personnel deserve. Others argue that the 1+1 standard can reduce unit cohesion and slow the integration of new personnel into the military culture. The Marine Corps, and more recently the Navy, have sought and received waivers to build to a "2+0" standard that affords less privacy but allows them to build new unaccompanied housing faster.

What is your view of the 1+1 standard?

*Answer.* In my view, the 1+1 standard does provide enhanced privacy and, therefore, improves the quality of life for single members.

*Question.* Do you believe the Navy and Marine Corps should build to the same standards as the Army and the Air Force or continue their recent waivers of the 1+1 standard?

*Answer.* I have not yet been fully briefed on the waivers to the 1+1 standard. If confirmed, I will work to ensure our sailors and marines have a quality place to live. This will include consideration of all possible options that are necessary to achieve this goal as quickly as possible.

## COMPETITIVE SOURCING

*Question.* Over the past several years, DOD has increased its reliance on the private sector to perform activities that are commercial in nature, including many functions relating to running and maintaining our military installations.

What approach would you recommend to balance the need to maintain necessary decision-making functions and technical capabilities in the government's civilian workforce, including the knowledge necessary to be a "smart buyer," and skills such as civil engineering within the military, with the savings that may be available from outsourcing?

*Answer.* I understand that the Department of Defense has in place an approach called "Strategic Sourcing" that has wide acceptance. If confirmed, I will work with the Department of the Navy staff to examine this approach carefully, and assist in development of alternatives to achieve any improvements necessary.

*Question.* Do you support the principle of public-private competition as the preferred means to make the “sourcing” decision for such functions?

*Answer.* If confirmed, I will work with the Secretary of the Navy and the Department of the Navy staff and would welcome the opportunity to work with the committee to evaluate the issue of public-private competition and whether it should be a preferred means of sourcing commercial activities.

*Question.* Do you believe that public-private competition results in significant savings to the Department of Defense regardless of which side wins the competition?

*Answer.* I have not reviewed any specific data in this area, so I cannot provide an answer. If confirmed, I would welcome the opportunity to work with the Department of the Navy staff and the committee to evaluate such competition.

*Question.* OMB Circular A-76, which establishes the guidelines for outsourcing most government functions, is slated for scrutiny by a congressionally-mandated panel of government and private experts in this area. The panel, chaired by the Comptroller General, is scheduled to report to Congress with specific policy and legislative reforms and recommendations for changing the way the government conducts out-sourcing decisions and implements them.

What is your view of the current A-76 process?

*Answer.* If confirmed, I would be happy to participate in the review by the congressionally-mandated panel to evaluate and improve the process.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

*Answer.* I believe that the work of the above-mentioned panel may be useful in developing alternatives that may achieve the benefits of public-private competition.

#### BASE CLOSURES

*Question.* The President’s February 2001 budget blueprint document states that “with 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently”.

Do you believe that we need more base closures?

*Answer.* I am aware that the Secretary of Defense has expressed a desire to conduct more base closures. I support that conclusion.

*Question.* Do you believe the Navy has excess infrastructure that uses resources that could be applied to higher priorities within the Department of the Navy?

*Answer.* Any discussion of where there may be excess capacity must await the completion of the Quadrennial Defense Review. That will identify a vision of how the Department of Defense must be reshaped to meet the threats of today and tomorrow to our Nation. Implementing this new defense vision will likely involve a shift in the focus and priorities of the Military Departments, including its supporting shore establishment.

*Question.* Based on your service on the Base Closure Commission, do you have any suggestions on how to improve the base closure process?

*Answer.* Although the base closure process established by the Defense Base Closure and Realignment Act is fundamentally sound, if confirmed, I will work closely within the Department of Defense and Congress to further refine the process in light of the experience gained from previous closure rounds. Any specific suggestions, however, would be premature before considering the results of the Department of Defense’s ongoing reviews and the changes they are likely to recommend.

*Question.* Based on your extensive experience from all aspects of the process—as a military commander, a member of the 1993 Base Closure Commission, and as head of the Greater Kelly Development Corporation—do you believe the process established by the Defense Base Closure and Realignment Act of 1990 is a fair and effective way to reduce excess military infrastructure and return the property to local authorities?

*Answer.* Yes.

*Question.* In your view, would changing the base closure process to exempt some bases from the independent commission’s review make the process more or less open, fair, and stressful to communities with military installations?

*Answer.* Any changes to the base closure process must remain open, objective, and fair to all communities. If confirmed, I will consider any proposed changes to improve the process.

#### VIEQUES

*Question.* For the past 2 years, Naval forces deploying from the East Coast of the United States have been unable to conduct live-fire training on the Navy’s training range on Vieques, Puerto Rico, which has degraded the readiness of these forces to execute their wartime missions.

In your view, to what extent are the difficulties the Navy is having with respect to training on Vieques unique to this particular situation and to what extent might these difficulties be an example of future problems at other training ranges?

Answer. Not having been closely involved with the issues surrounding Vieques, I do not know if this is unique to this situation. If confirmed, this issue will be high on my priority list.

*Question.* The Navy has been looking for an alternative to Vieques for 2 years without success to date. Do you believe there are any alternatives available to replace the range of training capabilities the Navy and Marine Corps have at the Atlantic Fleet Weapons Training Facility ranges on and around Vieques?

Answer. I understand the Secretary of the Navy has established a broad study to examine the possibilities.

*Question.* In your view, how difficult will it be to find new training areas unencumbered by restrictions imposed by neighboring populations, civilian air or sea traffic, or the need to protect sensitive environmental areas or endangered species should the need arise to replace or expand our training ranges in the future?

Answer. It will be challenging. Encroachment is an issue at many military facilities, not just training ranges. If confirmed, I will work to seek appropriate solutions.

*Question.* If confirmed, what actions would you propose to ensure that this kind of problem does not prevent the Navy and Marine Corps from effectively training and operating both at home and abroad?

Answer. If confirmed, I would propose that Navy and Marine Corps continue to be good neighbors and stewards of their ranges. I will work hard to build and nurture healthy partnerships that respect defense and community needs.

#### REAL PROPERTY MAINTENANCE

*Question.* The military departments have consistently struggled to maintain their base infrastructure. The backlog of real property maintenance has remained high whether budgets were increasing or decreasing, and the military is far behind industry standards for maintaining and modernizing its facilities.

Are there any new approaches to this issue that you believe could help the Navy move toward a solution of this perennial problem?

Answer. I believe the solution lies in a combination of reducing any excess infrastructure consistent with the recommendations of the Quadrennial Defense Review, and a commitment to maintain the remaining infrastructure using commercial benchmarks and practices.

#### ENVIRONMENTAL ISSUES

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment" issues. These include environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, and the assignment of radio frequency spectrum away from the Department of Defense.

In your opinion, how serious are these problems for the Department of the Navy?

Answer. I understand encroachment is a very serious problem that is having a negative impact on training and testing. I understand these impacts include decreased days for testing and training, restrictions on the location and timing for testing and training, and limitations on the types of training available. The cumulative effect can diminish readiness.

*Question.* If confirmed, what role do you expect to play in addressing these challenges and what actions would you propose to take to address them?

Answer. If confirmed, I will work with the Secretary of the Navy, the other military components, the Office of the Secretary of Defense, and other Federal agencies to assess the issue from a broad policy perspective and resolve a number of specific encroachment issues. I will also work closely with Congress on potential changes to existing laws to clarify those laws with respect to the proper balance between environmental protection and military readiness.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Do you believe that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

Answer. Yes. In many respects, the Department of the Navy is just like any other big business and must give priority to complying with environmental requirements.

It is vital that the Navy and Marine Corps comply with environmental protection requirements and budget appropriately. If confirmed, I also will look for opportunities to be proactive rather than reactive. For example, achieving compliance through pollution prevention is the preferred method of achieving compliance.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

*Answer.* In general, no. Most of the activities of the Navy and Marine Corps, particularly those associated with operating installations, can and must comply with environmental laws like the private sector. However, application of some environmental laws and regulations to unique military training actions should be examined and may require some regulatory accommodations to ensure national security.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that Federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

*Answer.* In general, yes. There may be circumstances where environmental regulations must be tailored to accommodate a unique military mission or special circumstances related to military training while balancing the need to ensure good environmental stewardship.

*Question.* The Department of Defense faces a bill for the clean-up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars, and could well be in the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

*Answer.* If confirmed, I will work with the other Services and the Office of the Secretary of Defense, in consultation with Congress, to solve this critical question.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department's long-term clean-up liability (and the time required to complete such clean-up)?

*Answer.* It makes sense that better technology will provide more reliable and cost effective solutions for UXO remediation. If confirmed, I plan to address this issue in collaboration with my military department counterparts and the Defense Science Board.

#### ENERGY EFFICIENCY

*Question.* Executive Order 13123 lays out a number of specific steps that agencies should take to promote energy conservation. These include the use of energy savings performance contracts, utility energy efficiency contracts, and other contracts designed to achieve energy conservation; conducting energy efficiency audits for approximately 10 percent of an agency's facilities each year; and exploring opportunities for energy efficiency in industrial facilities for steam systems, boiler operation, air compressor systems, industrial processes, and fuel switching.

Do you support the use of these energy conservation approaches?

*Answer.* Yes

*Question.* Are there other steps that you would take, if confirmed, to promote energy conservation by the Department of the Navy?

*Answer.* If confirmed, I will pursue a combination of investment strategies using appropriated and private sector funding to accomplish energy saving projects.

*Question.* Do you believe that the energy conservation goals established in the Executive Order are achievable?

*Answer.* Yes

#### INTEGRATION OF INSTALLATIONS WITH LOCAL COMMUNITIES

*Question.* The Department of Defense is in the midst of an effort to increase the Basic Allowance for Housing to eliminate out-of-pocket housing costs for military families who choose to live off base. This policy is intended to encourage more military families to live off base and reduce the demand for government housing. In recent years, outsourcing of base operations functions on military installations has increased substantially. Secretary Rumsfeld has proposed examination of additional contracting out in certain areas, including the operation of commissaries. All of these policies tend to increase the integration of the military into the local community and increase the non-military population on our bases.

At the same time, force protection concerns are leading the military services to take steps to close or restrict access to military installations and to build force pro-

tection measures into the construction of schools and other non-military facilities on those installations.

What do you believe is the appropriate level of integration, or separation, between military installations and the surrounding local communities?

Answer. This is a question of risk based on many factors. If confirmed, I will strive to ensure that military core capabilities are protected as necessary, and still seek the appropriate level of integration between military installations and the surrounding communities.

#### DAVIS-BACON ACT

*Question.* 40 U.S.C. Sec. 276a, commonly known as Davis-Bacon, requires that for every contract in excess of \$2,000 involving construction, alteration, and/or repair of public buildings or public works, the prevailing wage in that state shall be paid. When the contract cost-floor was set in the 1930s, \$2,000 was a substantial sum of money, however, inflation during the intervening years has eroded the value of the dollar to the point where there is virtually no project that is not covered by Davis-Bacon.

If confirmed, would you support raising the contract threshold to a more current standard before Davis-Bacon can be invoked?

Answer. Yes

*Question.* In your personal opinion, what would be an appropriate contract cost before Davis-Bacon should apply?

Answer. One approach is to raise the Davis-Bacon threshold to the "simplified acquisition" threshold, which is currently \$100,000. I understand that another approach currently under discussion is to raise the threshold to one million dollars. If confirmed, I will work with the other Services and the Secretary of Defense, in consultation with Congress, to support an appropriate new threshold.

#### INSTALLATION MANAGEMENT

*Question.* One of the obvious handicaps to the implementation of the Family Housing Privatization initiative was the lack of specialists in real estate and financial management throughout the Department of Defense. A similar shortfall is said to exist in the area of business managers and installation managers.

If the Navy is experiencing similar shortfalls, should these positions be filled with contract or civil service personnel? Please explain.

Answer. If confirmed, this will be a matter that requires my review and attention.

*Question.* As the Navy enters a new era of defense reform and business practices, does it have a program to ensure it has a cadre of real estate and business managers?

Answer. I am not aware of any comprehensive program focused on these areas. If confirmed, I intend to ensure the Department has a workforce that is properly sized and has the necessary skills to reap the savings and efficiencies sought through privatization.

#### SHIP DISPOSAL

*Question.* In its December 2000 report to Congress on the Ship Disposal Project, the Navy expressed a commitment to eliminating any environmental risks posed by its inactive ships by reducing the size of the Inactive Fleet. A decision regarding a long-term ship scrapping program was deferred, however. The communities in which these vessels are berthed recognize that the potential for environmental and navigational problems increases with the length of time they are stored.

Do you believe that it is important to develop a budget and long-term procurement strategy for ship disposal to dispose of these ships in an efficient and responsible manner, while considering the full range of competitive contracting procedures?

Answer. Yes. If confirmed, I will work on such a strategy with the Assistant Secretary of the Navy (Research, Development, and Acquisition), who has responsibility for ship disposal

*Question.* If confirmed, how would you propose to approach this problem?

Answer. If confirmed, I expect to provide advice regarding environmental, safety and health issues to the Assistant Secretary of the Navy (Research, Development, and Acquisition). The objective will be to ensure that any ship disposal actions are done in full compliance with environmental, safety, and occupational health laws.

## RESEARCH ON MARINE ENVIRONMENT

*Question.* Tensions between Navy fleet operations and protection of the marine environment is an area that has been characterized as one of several environmental encroachment issues. Some of these tensions may be resolved through continued support for investments in science and technology.

If confirmed, would you support the Navy's ongoing research efforts in this area?

*Answer.* Yes. I understand that the Navy funds numerous research projects and programs to better understand the issue of sound in water and its effect on the marine environment. I support continuing this work so that the Navy can continue to operate and train while still being good stewards of the marine environment.

*Question.* How else might you propose to resolve these tensions?

*Answer.* I believe the Navy must use the best available science, keep the public properly informed, and continue to keep its process open and available for oversight by regulators.

## AIRSPACE MANAGEMENT

*Question.* Commercial air traffic is expected to increase 6 percent annually, and military airspace use will also increase with the next generation of high performance weapon systems. As a result of the pressures associated with commercial air traffic congestion, noise, and other environmental concerns, the acquisition and use of special use airspace has evolved into a challenging endeavor for all of the military departments.

If confirmed, how would you view your role in addressing these issues?

*Answer.* The Nation's airspace is a limited resource that commercial aviation, general aviation, and military aviation must continue to share safely and efficiently. If confirmed, I will work closely with the other military services, the Office of the Department of Defense, and the Federal Aviation Administration to find ways to ensure the availability of special use airspace necessary to conduct the military training and testing that is necessary to defend the Nation while at the same time recognizing the interest of other airspace users.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Navy (Installations and Environment)?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

 QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

## BRAC ENVIRONMENTAL CLEANUP

1. Senator WARNER. Mr. Johnson, in its report on *Issues and Alternatives for Cleanup and Property Transfer of Base Realignment and Closure (BRAC) Sites*, dated August 1, 2000, the Institute for Defense Analyses noted that despite Department of Defense efforts to accelerate the program by working with effected communities and with Congress, property transfer is taking too long and goals are not being met. Many BRAC acres have not yet been transferred. These problems are compounded by recent indications that there are funding shortfalls for BRAC clean-up in the fiscal year 2002 budget, about \$92 million in the Navy account and \$55 million in the Air Force account. The lack of progress in the transfer of BRAC properties and inadequate funding support within the military departments make it difficult to support future rounds of BRAC.

How do you propose to address the effect of the fiscal year 2002 shortfalls in the Navy BRAC account?

Mr. JOHNSON. If confirmed, I will make the transfer of BRAC properties a priority. I will work with the Secretary of the Navy, as well as the Navy and Department of Defense Comptrollers, and the appropriate committees to ensure that the high priority shortfalls are included in the budget.

2. Senator WARNER. What role do you expect to play in addressing the need to renegotiate cleanup milestones and to address concerns regarding delayed property transfers?

Mr. JOHNSON. If confirmed, I will do my best to ensure that Navy meets all agreed milestones. I am committed to make the transfer of BRAC properties to those communities that have long been strong supporters of the defense of our Nation a priority. Before I acquiesce to renegotiating agreed to milestones, however, I will work with the Secretary of the Navy, as well as the Navy and Department of Defense Comptrollers, and the appropriate committees to ensure that the high priority shortfalls are included in the budget and do not impede property transfer.

#### ENVIRONMENTAL ENCROACHMENT

3. Senator WARNER. Mr. Johnson, based on the testimony provided by the Services at the Readiness and Management Support Subcommittee hearing on March 20, 2001, it appears that the time is right for the development and implementation of a comprehensive strategy that addresses both the individual and the cumulative effects of environmental encroachment issues.

How do you propose to facilitate the development and implementation of a comprehensive strategy intended to address readiness concerns related to these encroachment issues?

Mr. JOHNSON. I am committed to developing a comprehensive strategy for balancing military readiness with environmental stewardship. In many cases we have done so well with the latter that there is potential for it to adversely affect the former. Accomplishing this balance will require Department of Defense engaging Federal and state environmental protection agencies to assess the issue from a broad policy perspective and resolve a number of specific encroachment issues. I will also work closely with Congress on potential changes to existing laws to clarify those laws with respect to the proper balance between environmental protection and national security.

#### FAMILY HOUSING IMPROVEMENT

4. Senator WARNER. The Department of Defense has established 2010 as a goal to bring up to standard the family housing for our military families. The vast majority of the existing family housing is more than 30 years old and has had very limited renovation due to fiscal constraints. Although the Department has made progress toward achieving the 2010 goal, the bulk of the improvement effort will have to be funded and enacted under your leadership, assuming you are confirmed.

Based on what you know of the department's ongoing efforts to improve military family housing, do you believe the 2010 goal is achievable and are you committed to that goal?

Mr. JOHNSON. Based on what I have observed, the Department of the Navy can achieve the 2010 goal. If confirmed, I would like to see us do it sooner.

#### FACILITY CONDITIONS

5. Senator WARNER. The condition of our military facilities is deplorable. After years of insufficient resources for the construction of new facilities or the maintenance of those in existence, many of the buildings in which our military personnel live and work have deteriorated to an unacceptable level.

What actions will you pursue to correct this problem?

Mr. JOHNSON. I believe the solution lies in a combination of reducing any excess infrastructure consistent with the recommendations of the Quadrennial Defense Review, and a commitment to maintain the remaining infrastructure using commercial benchmarks and practices.

#### ENCROACHMENT

6. Senator WARNER. Some of the most significant issues that will impact the readiness of the Armed Forces as we enter the 21st century could be categorized as out-

side encroachment upon military resources. This encroachment includes environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

What actions will you propose to ensure that encroachment does not prevent the Armed Forces from effectively training and operating both at home and abroad?

Mr. JOHNSON. In my experience, past responses to what we now call encroachment were frequently issue-specific and not focused on long-term objectives or coordinated with others facing similar challenges. I believe two types of actions are necessary. First, we must assure that our forces assess our training operations to ensure we are in full compliance where possible. Where full compliance may not be possible consistent with our national security mission, I would work with Congress to seek clarifications to appropriate laws.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### FAMILY HOUSING IMPROVEMENT

7. Senator THURMOND. The Department of Defense has established 2010 as a goal to bring up to standard the family housing for our military families. The vast majority of the existing family housing stock is more than 30 years old and has had very limited renovation due to fiscal constraints. Although the Department has made progress toward achieving the 2010 goal, the bulk of the improvement effort will have to be funded and enacted under your leadership, once confirmed.

Based on what you know of the departments ongoing efforts to improve the military family housing stock, do you believe the 2010 goal is achievable and are you committed to that effort?

Mr. JOHNSON. Based on what I have observed, the Department of the Navy can achieve the 2010 goal. If confirmed, I would like to see us do it sooner.

##### 67-YEAR REPLACEMENT STANDARD

8. Senator THURMOND. The Department of Defense has a dismal record in funding the repair and replacement of its infrastructure. Under the historic funding profile, it would take more than 200 years to replace the existing infrastructure. The prevailing industry standard is to replace its facilities on a 57-year cycle. Secretary Rumsfeld, concurrent with his budget submission, has established a 67-year replacement standard for DOD facilities and has established a funding profile to support this standard.

Although funding is key, proper management of the assets is critical if the Department is to achieve this goal. Based on your knowledge of how the Department currently manages its facilities, what management improvements would you recommend.

Mr. JOHNSON. I believe the solution lies in a combination of reducing any excess infrastructure consistent with the recommendations of the Quadrennial Defense Review, and a commitment to maintain the remaining infrastructure using commercial benchmarks and practices.

##### BASE CLOSURES

9. Senator THURMOND. One of the more significant issues that this committee will face this year is legislation authorizing additional base closures to more closely match facility capacity with existing force structure. As you may know, the mere threat of a base closure causes concern and turmoil with the communities that have a long and historic association with our military installations.

Since each of you, if confirmed, will have a significant role in any future base closures I would like your views on how we can minimize the impact of the base closure process on our communities?

Mr. JOHNSON. I believe a successful base closure process involves a constant balancing of military needs with those of the civil sector. Each community is of course different, which precludes using a single approach. Therefore, I believe we must maintain a reasonable level of discretion at every stage. Complimenting that must be a firm commitment to provide adequate funding to avoid having current year budget deficiencies from becoming the driving decision force. I think this flexibility, together with the knowledge gained during the recent rounds, will go a long way towards minimizing impacts on specific communities.

## UTILITY PRIVATIZATION

10. Senator THURMOND. The Defense Reform Initiative requires the military departments to privatize all utility systems not later than September 30, 2003, except those exempt for unique security reasons or when privatization is uneconomical. Although the issue of privatization is driven by the fact that the department avoids the near term cost of modernizing the utility systems, there is concern regarding the long-term implications. These concerns are cost growth and being held hostage to future contract negotiations.

Based on your knowledge of the utility privatization effort, what are your concerns regarding the total reliance on contractors to provide utility services?

Mr. JOHNSON. I am fully committed to applying better business practices in managing the shore infrastructure. By privatizing our installation utility system there is the ability to focus our resources on core warfighting missions. The private sector is fully capable to manage our utility systems and will likely make gains in efficiency. There is an extensive selection process and only the most qualified municipal utilities and private sector contractors will be invited to participate in the sale and utility service contracts. We are very early in the utility privatization process. We plan on applying lessons learned from our first privatization effort and make changes where necessary.

## PRIORITIES

11. Senator THURMOND. Mr. Johnson, the Navy, as have all the other Services, has significant problems with the readiness of its facilities. Although funding is certainly an important factor in resolving this problem, so is setting the appropriate priorities in regard to constructing new facilities versus the repair of existing facilities.

If confirmed as the Assistant Secretary of the Navy for Installations and Environment, what will be your priorities to improve our facilities?

Mr. JOHNSON. If confirmed, I will establish priorities consistent with those of the Secretary of Defense and the Secretary of the Navy.

## CONTRACTING REFORM

12. Senator THURMOND. In Secretary Rumsfeld's recent testimony before the Senate Armed Services Committee, he stressed the need to reform the outdated management and acquisition processes in the Department of Defense. As a result of that testimony, Senator Allard and I contacted the Secretary concerning the innovative contracting mechanism being used by the Army for the environmental restoration of the Rocky Mountain Arsenal. According to information I have received, this innovative approach has produced impressive results. It will reportedly reduce program costs by \$200 million and the project completion time by 3 years, while maintaining planned annual expenditures of approximately \$70 million with a competent, yet reduced, Government core oversight team. I have also been informed that the contractor has received numerous accolades due to the meaningful small business involvement they have cultivated.

I believe this is an innovative and dynamic concept that can be applied through the Armed Services, especially at the Corps of Engineers that will allow each of you to quickly and efficiently adopt best commercial practices. In other words, this contracting model may yield dramatic and immediate savings for the Department.

Do you believe that the Department could benefit from contracting reform?

Mr. JOHNSON. Yes. The Navy has been a leader in the use of innovative contracting for the cleanup and transfer of BRAC property. I support reforms that improve efficiency and reduce costs.

13. Senator THURMOND. Will you commit to studying the Rocky Mountain Arsenal Program Management Contract in order to evaluate its applicability to other projects in your Department?

Mr. JOHNSON. Yes, I will consult with my counterpart in the Army and determine the suitability for use in the Navy.

## REAL PROPERTY MAINTENANCE

14. Senator THURMOND. Mr. Johnson, as a former commander I know you are familiar with the demands on the resources allocated to your command. One of the resources that is most frequently diverted from its intended purposes is the O&M

funding allocated for the repair and maintenance of our facilities. As a result of this diversion and underfunding, our facilities are in a dismal state of repair. To preclude any further diversion there has been support for fencing the repair and maintenance accounts.

What is your position regarding the fencing of the RPM account?

Mr. JOHNSON. I believe we need to maintain financial flexibility during program execution to handle unexpected events.

---

QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

15. Senator COLLINS. Mr. Johnson, regionalization/shore installation management concerns were brought to my attention in the Northeast region back in the March timeframe. I would like to know how things are going with this effort. As such, please provide an answer to the following:

What types of change management strategies were employed at affected installations to transition the consolidation of base operating support functions?

Mr. JOHNSON. I'm not familiar with the details of the planning and execution of regionalization/shore installation management. If confirmed, this will be a matter that requires my review and attention.

16. Senator COLLINS. Mr. Johnson, were standard operating procedures (SOPs) or concepts of operations (COOs) developed to track the consolidation of base operating support functions at each of the military installations?

Mr. JOHNSON. I'm not familiar with the details of the consolidation of base operating support functions. If confirmed, this will be a matter that requires my review and attention.

17. Senator COLLINS. Mr. Johnson, what metrics are being used to ensure that the consolidation of base operating support functions is reaching the proposed targets/goals?

Mr. JOHNSON. I'm not familiar with the details of the consolidation of base operating support functions. If confirmed, this will be a matter that requires my review and attention.

18. Senator COLLINS. Mr. Johnson, what has the projected and actual savings/cost avoidance been with regionalization in each of the naval regions?

Mr. JOHNSON. I'm not familiar with the details of the planning and execution of regionalization/shore installation management. If confirmed, this will be a matter that requires my review and attention.

19. Senator COLLINS. Mr. Johnson, what have been some of the lessons learned with the transition? What have been the actualized benefits of the process?

Mr. JOHNSON. I'm not familiar with the details of the planning and execution of regionalization/shore installation management. If confirmed, this will be a matter that requires my review and attention.

20. Senator COLLINS. Mr. Johnson, what has the impact been on the workforce?

Mr. JOHNSON. I'm not familiar with the details of how regionalization has impacted the workforce in the Northeast Region. If confirmed, this will be a matter that requires my review and attention.

21. Senator COLLINS. Mr. Johnson, how has regionalization affected the existing labor agreements already negotiated or established at each of the military installations?

Mr. JOHNSON. I'm not familiar with the details of how regionalization affected existing labor agreements in the Northeast Region. If confirmed, this will be a matter that requires my review and attention.

---

[The nomination reference of H.T. Johnson follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*June 28, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

H.T. Johnson, of Virginia, to be an Assistant Secretary of the Navy, vice Robert B. Pirie, Jr., resigned.

[The biographical sketch of H.T. Johnson, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF HANSFORD T. (H.T.) JOHNSON

H.T. Johnson has over 41 years of service to our Nation in front-line leadership and planning experience in the military, public, and business sectors. He grew up in Aiken, SC, attended Clemson College, and was the outstanding graduate in thermodynamics and aeronautics in the first class (1959) of the U.S. Air Force Academy. In 1989, he became the first graduate of the Air Force Academy to be promoted to General (four stars). Continuing his education, H.T. received a Master's Degree in Aeronautics from Stanford in 1967 and an MBA from Colorado in 1970. He furthered his military education at the U.S. Army Command and General Staff College in 1972, the National War College in 1976, and the Advance Management Program at Dartmouth in 1980. He qualified as a "Professional Engineer" in Colorado and as a "registered principal" with the National Association of Security Dealers.

He was a forward air controller in Vietnam and flew 423 combat missions. After the combat tour, he served as an Assistant Professor of Aeronautics at the Air Force Academy. After serving in Air Force Plans and attending the National War College, H.T. joined the Strategic Air Command and served as a Wing Commander and in SAC Plans. During a period of defense downsizing (1982-1985), he led the team that successfully rebalanced the Air Force programs in the \$100 billion annual Air Force Budget. H.T. led Strategic Air Command operations in 1985 and directed the refueling and strategic reconnaissance forces during Coronado Canyon, the bombing of Libya. He then became the Vice Commander in Chief of the Pacific Air Force. In late 1987, he became the Deputy Commander in Chief of the Central Command during Earnest Will, the U.S. reflagging of Kuwaiti oil tankers and escort operations in the Persian Gulf. He was intimately involved in all of the conflicts with Iran during the escort operations. In 1989, H.T. served as Admiral Bill Crowe's Director of the Joint Staff, Joint Chiefs of Staff.

As Commander in Chief of the U.S. Transportation and the Military Airlift Commands, H.T. worked directly for Secretary of Defense Dick Cheney; Chairman of the Joint Chiefs Gen. Colin Powell; and Air Force Chief of Staff Gen. Larry Welch in leading all transportation components of the Army, Navy, and Air Force (which he also commanded). His Air Force command provided all airlift and special operations forces for the extremely effective Just Cause invasion of Panama. He very successfully implemented Total Quality Management in the Military Airlift Command. All military and commercial aspects of the Operation Desert Shield/Storm movement of troops, equipment, and supplies to and from the Persian Gulf were led by him and his commands. This was the most concentrated movement in American military history—moving the equivalent of Richmond, Virginia across the world in 4 months.

After retirement from the Air Force, H.T. joined USAA Capital Corporation, part of one of the largest and most successful financial services organizations in America. He was responsible for providing non-insurance services to USAA members through the USAA Federal Savings bank (selected as the Best Bank in America by Money Magazine), the USAA Investment Management Company, the USAA Real Estate Company, and USAA Buying Service. These companies managed \$13 billion in USAA insurance portfolios, over \$16 billion in mutual funds, \$10 billion bank, and \$1 billion in real estate holdings.

While at USAA, President Bush and Secretary of Defense Dick Cheney appointed him to the 1993 Base Realignment and Closure Commission. When the 1995 Commission closed Kelly AFB, H.T. was appointed to lead the Greater Kelly Development Corporation (GKDC). The GKDC was charged with transforming the closing \$7.5 billion Kelly Air Force Base with a workforce of 19,000 into a thriving industrial park employing in excess of 21,000 workers.

He served as an Executive Vice President and Chief Operating Officer of the Credit Union National Association (CUNA) in Madison, Wisconsin. Until reaching

65, H.T. served as the President and CEO of EG&G Technical Service and later of EG&G when purchased by The Carlyle Group. EG&G provides the full range of management, scientific, technical, operational, and support services to both government and commercial customers. H.T. is active in the Air Force Association's Aerospace Education Foundation, the National War College Alumni Association Board, Falcons Landing Air Force Retired Officers' Community Board, and the National Presbyterian Church.

H.T. and his wife of 41 years, Linda, live in McLean, Virginia. They have a son, a daughter, and six grandchildren.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by H.T. Johnson in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Hansford Tillman Johnson.

2. **Position to which nominated:**  
Assistant Secretary of the Navy (Installations and Environment).

3. **Date of nomination:**  
June 28, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
January 3, 1936; Aiken, SC.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Linda Ann Whittle.

7. **Names and ages of children:**  
Richard Tillman Johnson, 41; Elizabeth Ann Johnson McCombs, 39; David Michael Johnson, Deceased, 1998.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
1947-1953—Aiken High School.  
1953-1955—Clemson College.  
1955-1959—U.S. Air Force Academy, BS—Engineering Science.  
1965-1966—Stanford University, MS—Aeronautics.

1968–1970—University of Colorado, MBA.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Associate, Burdeshaw Associates, Ltd., Bethesda, MD, 2001 to Present.

President & CEO, EG&G Technical Services, Gaithersburg, MD, 1998–2001.

Executive VP and Chief Operating Officer, Credit Union National Association, Madison, WI, 1997–1998.

Chair, President & CEO, Greater Kelly Development Corp, San Antonio, TX, 1996–1997.

Vice Chair of Board and President & CEO of USAA CAPCO, USAA, San Antonio, TX 1992–1996.

Commissioner, Base Realignment and Closure Commission, Washington, DC, 1993.

Commander in Chief, United States Transportation Command and Military Airlift Command, 1989–1992.

Director, Joint Staff (JCS), Washington, DC, 1988–1989.

Deputy Commander in Chief, United States Central Command, Tampa, FL, 1987–1989.

Vice Commander in Chief, Pacific Air Force, Hickam Air Force Base, HI, 1986–1987.

Deputy Chief of Staff for Operations, Strategic Air Command, Omaha, NE, 1985–1986.

Director of Programs and Chair of Air Staff Board, Headquarters, U.S. Air Force, Washington, DC, 1983–1985.

Deputy Director of Programs and Chair of the Program Review Committee, Headquarters U.S. Air Force, Washington, DC, 1982–1983.

Other Air Force Positions, 1959–1982.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Associate, Burdeshaw Associates, Ltd., Bethesda, MD.

Director, Aerospace Education Foundation, Arlington, VA.

Vice President, National War College Alumni Association, Washington, DC.

Chairman, Air Force Retired Officers Community (Falcon's Landing), Sterling, VA.

Trustee, Johnson Family Trust (family/personal trust).

Trustee, Johnson Charitable Remainder Trust (family/personal trust).

General Partner, John Whit Limited Partnership (family/personal partnership).

President, Tillin Charitable Foundation (family/personal foundation).

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

National March of Dimes Board, 1994–1997.

Alamo Bowl (Post Season football), 1995–1997, Chair in 1995.

U.S. Air Force Academy Association of Graduates, 1959 to Present.

Air Force Association, 1959 to Present.

Air Force Academy Sabre Society, 1995 to Present.

Order of Daedalians, 1970 to Present.

National Defense Transportation Association, 1989 to Present.

The Marine Society of the City of New York, 1990 to Present.

Airlift/Tanker Association, 1990 to Present.

Stanford Alumni Association, 1967 to Present.

Alexis De Tocqueville Institution, 1993–1997.

Free Trade Alliance of San Antonio, 1993–1997.

Santa Rosa Children's Hospital, San Antonio, TX, 1993–1996.

Cancer Therapy and Research Center, San Antonio, TX, 1993–1997.

St. Mary's University, Business School Advisory Council, San Antonio, TX, 1993–1995.

Texas Research and Technology Foundation, San Antonio, TX, 1993–1997.

University of Texas at San Antonio Development Board, 1994–1996.

Torch Club, San Antonio, TX, 1993–1997.

American Institute of Aeronautics and Astronautics, 1968–1992.

Dominion Country Club, San Antonio, TX, 1992–1999.  
 Falcon Foundation, U.S. Air Force Academy, 1992–1998.  
 Club Giraud, San Antonio, TX, 1992–1996.  
 The Tower Club, Tyson's Corner, VA, 1999–2001.  
 Falcons Landing, Air Force Retired Officer Community Board, 2001 to Present.  
 Aerospace Education Foundation, 1999 to Present (If confirmed, I will resign.)  
 University Methodist Church, San Antonio, TX, 1992–1997.  
 National Presbyterian Church, 2000 to Present.  
 World Affairs Council of Washington, DC, 2001 to Present.  
 Order of the Caribou, 2000 to Present.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

**POLITICAL CONTRIBUTION**

(since March 1996)

Date	Amount	Recipient	Comment
3/28/96	\$1,000	Dole for President.	
7/15/96	\$250	Texans for Henry Bonilla.	
10/21/96	\$250	Friends of John Shields.	
3/25/97	\$500	Friends of Chris Dodd	Luncheon in San Antonio
9/17/98	\$1,000	Alan Mollohan	On behalf of EG&G
2/24/99	\$1,000	Kennedy for Senate	On behalf of EG&G, Home office in Wellesley, MA
3/13/99	\$500	Charlie Gonzalez	On behalf of EG&G
3/13/99	\$500	Texans for Henry Bonilla.	
5/9/99	\$100	Bush for President.	
2/10/00	\$250	McCain 2000	On behalf of EG&G
3/2/00	\$250	George Allen.	
2/22/00	\$1,000	Gore for President	On behalf of EG&G, Energy sector group
3/30/99	\$500	Thornberry for Congress	On behalf of EG&G
4/1/00	\$500	Bush for President.	
4/12/00	\$5,000	EG&G PAC	Initial contribution to PAC
6/27/00	\$200	RNC Victory 2000.	
8/8/00	\$100	Lazio 2000.	
9/7/00	\$500	RNC Victory 2000.	
9/11/00	\$200	Alan Mollohan	On behalf of EG&G
3/11/01	\$500	RNC.	
5/31/01	\$100	Texans for Henry Bonilla.	

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Outstanding Graduate in Aeronautics and Thermodynamics at U.S. Air Force Academy.

Defense Distinguished Service Medal with two oak leaf clusters.

Distinguished Service medal.

Silver Star.

Legion of Merit with two oak leaf clusters.

Distinguished Flying Cross with two oak leaf clusters.

Defense Meritorious Service Medal.

Air Medal with 22 oak leaf clusters.

Presidential Unit Citation.

Navy-Marine Corps Presidential Unit Citation.

Joint Meritorious Unit Award.

Air Force Outstanding Unit Award with "V" device and three oak leaf clusters.

Air Force Organizational Excellence Award.

Combat Readiness Medal.  
 National Defense Service Medal.  
 Armed Forces Expeditionary Medal with service star.  
 Vietnam Service Medal with three service stars.  
 Humanitarian Service Medal.  
 Republic of Vietnam Gallantry Cross with Palm.  
 Republic of Vietnam Armed Forces Honor Medal, First Class with service star.  
 Republic of Vietnam Campaign Medal.  
 Command Pilot.  
 Navigator.  
 Parachutist.  
 Qualified as a Professional Engineer.  
 Qualified as a Registered NASD Securities Broker.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Series of articles written while Commander in Chief of U.S. Transportation and Military Airlift Commands in associated weekly newspapers, 1989–1992.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

No relevant speeches.

Many speeches given while in the Air Force.

Speaker at 1999 Wright Memorial Dinner.

Speaker at Air Mobility training in 2001.

Speaker on Military Role in Diplomacy at Sheppard Center Elder Hostel in 2001.

Lecturer on cruises to Persian Gulf (1997 & 1998) and Vietnam (2000).

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

#### SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

HANSFORD T. JOHNSON.

This 29th day of June, 2001.

[The nomination of H.T. Johnson was reported to the Senate by Chairman Levin on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

---

[Prepared questions submitted to Nelson F. Gibbs by Chairman Levin prior to the hearing with answers supplied follow:]

JULY 25, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

NELSON F. GIBBS.

cc: Senator John Warner,  
*Ranking Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

What is your view of the extent to which these defense reforms have been implemented?

What do you consider to be the most important aspects of these defense reforms?

*Answer.* I fully support Goldwater-Nichols Act and agree with its goal. The Act has improved the organization of the Department of Defense and provided focus on the capabilities of the military to conduct its operations. I believe the act has strengthened the advice provided the Secretary of Defense and has increased the ability of the military departments to integrate their capabilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am not aware of specific proposals that are contemplated. If enacted, I would fully support any changes that resulted from the legislative process.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Air Force (Installations and Environment)?

*Answer.* The duties and functions are varied and cross a large spectrum of the Air Force mission. Central elements include providing quality housing to Air Force members and their families, a critical part of which is privatization. Privatization also extends to strategic outsourcing and utilities infrastructure. Environment, safety, and occupational health as well as airspace and range issues are also a function I will assume if confirmed. Base closure and realignment matters fall within the assistant secretary for installations and environment. If confirmed, I will also exercise oversight of the Air Force logistics system.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I believe my many years at the senior level with Deloitte & Touche and my experience as the Corporate Controller for Northrop Grumman Corporation will translate well into performing the duties of Assistant Secretary, if confirmed. My professional and educational background in civil engineering, financial services, and accounting coupled with my corporate experience at Northrop Grumman will allow me to quickly move into the role of Assistant Secretary, if confirmed.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Air Force (Installations and Environment)?

*Answer.* No. I am confident in my ability to do the job now.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Air Force would prescribe for you?

*Answer.* I would expect Secretary Roche to prescribe the duties and functions commensurate with the position and consistent with those specified in law.

*Question.* In carrying out your duties, how will you work with the Secretary of the Air Force, the Under Secretary of the Air Force, and the Deputy Under Secretary of Defense (Installations and Environment)?

*Answer.* As Secretary Roche stated in his response to questions, as part of his leadership team, I will, if confirmed, assist the Under Secretary of the Air Force,

the General Counsel, the other Assistant Secretaries of the Air Force, along with the Air Force Chief of Staff in forming a close relationship with the Deputy Under Secretary of Defense (Installations & Environment). I will make teamwork and information sharing a top personal priority.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Air Force (Installations and Environment)?

*Answer.* Enhancing our ability to carry out the Air Force mission in the most cost-effective method will always be a priority. Ensuring access to our training ranges and airspace is critical to preparing the warfighters for the ultimate tasking. Improving our family housing and the utility infrastructure and overseeing an immense logistics system will occupy a great deal of my time as well, if confirmed.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will establish broad parameters in all matters within my jurisdiction in order to allow competent people to carry out their tasks with efficiency and within the guidelines of the Air Force mission. These parameters will include improvements in financial analysis; leveraging the funds we do have available and working closely with others both within and out of government who influence Air Force installations, the environment, and our access to airspace and ranges.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Air Force (Installations and Environment)?

*Answer.* The heart of any organization is its people and I want to ensure that I have the right mix of civilian and military personnel with the right skill sets to perform the tasks within the Assistant Secretary's office. Many of the actions within my office would require the expenditure of large sums of money and are mandated by both Congress and Department of Defense. These actions must be executed with precision. I will do so if confirmed.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will work hard to establish a personal and professional relationship with both members of Congress and their staff and the DOD officials directly responsible for matters within the jurisdiction of my office. I will work closely with the Secretary and Under Secretary of the Air Force to enhance the skill levels of all our civilian and military personnel. Timeliness will be critical to all actions within my purview.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Air Force (Installations and Environment)?

*Answer.* Broad parameters will include innovative thinking; cost effectiveness, relationship building; treating people right; and of course doing everything possible to assist the Air Force warfighting mission and our people and families who carry out that mission.

#### HOUSING PRIVATIZATION

*Question.* Congress has repeatedly expressed its support for improving military family housing. In recent years the Department of Defense and Congress have taken significant steps to improve family housing. However, it will take many more years and a significant amount of funding to meet the Department's housing needs. An alternative option that was created to speed the improvement of military family housing and relieve base commanders of the burden of managing their family housing is the housing privatization program. If confirmed for the position of Assistant Secretary of the Air Force (Installations and Environment) you will have a key role in any decisions regarding military family housing.

What are your views regarding the privatization of family housing?

What is your view of the structure and general goals of the Air Force's current housing privatization program? Do you think the program should be continued, and if so do you believe the program should be modified in any way?

Why do you believe the pace of Air Force housing privatization has been so slow?

The Army has contracted for a major housing privatization effort at Fort Hood, Texas using a request for qualifications (RFQ) process instead of the more traditional request for proposals (RFP) process.

What are your views on the relative merits of these contracting approaches?

The Department of Defense has established 2010 as a goal to improve all of its military family housing.

Do you believe the Department of the Air Force can achieve this goal?

Answer. The Air Force housing initiatives are critical to the men, women, and families of the Air Force. If confirmed, I will review this matter in depth to ensure our military members and their families are provided quality housing so that they may better go about conducting the Air Force mission.

#### COMPETITIVE SOURCING

*Question.* Over the past several years, DOD has increased its reliance on the private sector to perform activities that are commercial in nature, including many functions relating to running and maintaining our military installations.

What approach would you recommend to balance the need to maintain necessary decision-making functions and technical capabilities in the government's civilian workforce, including the knowledge necessary to be a "smart buyer," and skills such as civil engineering within the military, with the savings that may be available from outsourcing?

Answer. If confirmed, I will continue to work with my staff and welcome the opportunity to work with the committee to evaluate the effectiveness of outsourcing.

*Question.* Do you support the principle of public-private competition as the preferred means to make the "sourcing" decision for such functions?

Answer. If confirmed, I will work the issue of sourcing decisions with the Air Force and, if requested, with this committee.

*Question.* Do you believe that public-private competition results in significant savings to the Department of Defense regardless of which side wins the competition?

Answer. I will evaluate the issue of public-private competition and whether it does generate greater savings. I will be most happy, if confirmed, to share my thoughts with this committee at a later time.

*Question.* OMB Circular A-76, which establishes the guidelines for outsourcing most government functions, is slated for scrutiny by a congressionally-mandated panel of government and private experts in this area. The panel, chaired by the Comptroller General, is scheduled to report to Congress with specific policy and legislative reforms and recommendations for changing the way the government conducts outsourcing decisions and implements them.

What is your view of the current A-76 process?

Answer. I believe that the on-going Commercial Activities Panel, directed by Section 832 of the 2001 NDAA, is a good venue in which to address issues associated with the A-76 process and if requested, I will provide any necessary input to the panel.

*Question.* Are there other effective alternatives to achieve the benefits of public-private competition?

Answer. If confirmed, I will evaluate all effective alternatives to public-private competition and if requested, communicate my views to this committee.

#### BASE CLOSURES

*Question.* The President's February 2001 budget blueprint document states that "with 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently".

Do you believe that we need more base closures?

Answer. If confirmed, I will support the Secretary of Defense's position on issues associated with the evaluation of the efficient use of facilities.

*Question.* Do you believe the Air Force has excess infrastructure that uses resources that could be applied to higher priorities within the Department of the Air Force?

Answer. Recent testimony of the Secretary of Defense, as well as the service secretaries and the service chiefs referred to excess capacity. If confirmed, I will support the Secretary in his decisions on this matter.

*Question.* Do you believe the process established by the Defense Base Closure and Realignment Act of 1990 is a fair and effective way to reduce excess military infrastructure and return the property to local authorities?

Answer. I am a firm believer in the legislative process and will support any decision that process yields.

*Question.* In your view, would changing the base closure process to exempt some bases from the independent commission's review make the process more or less open, fair, and stressful to communities with military installations?

Answer. If confirmed, I will carefully consider any proposed changes to improve the process. In general, I believe that any proposed changes must ensure that the process remains open, objective and fair to all communities.

#### REAL PROPERTY MAINTENANCE

*Question.* The military departments have consistently struggled to maintain their base infrastructure. The backlog of real property maintenance has remained high whether budgets were increasing or decreasing, and the military is far behind industry standards for maintaining and modernizing its facilities.

Are there any new approaches to this issue that you believe could help the Air Force move toward a solution of this perennial problem?

Answer. If confirmed, I will take a fresh look at approaches to this issue and if requested, share my views with this committee.

#### ENVIRONMENTAL ISSUES

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as “encroachment” issues. These include population growth near military installations, environmental constraints on military training ranges, airspace restrictions to accommodate civilian airlines, and the conflicts with civilian users over the use of radio frequency spectrum.

In your opinion, how serious are these problems for the Department of the Air Force?

If confirmed, what role do you expect to play in addressing these challenges and what actions would you propose to take to address them?

Answer. If confirmed, I will take a key Air Force role in addressing encroachment associated with military installations, ranges, and airspace. These are readiness issues and I clearly understand their importance.

*Question.* The Department of Defense makes it a practice to request funding only for those environmental compliance areas that are already out of compliance and subject to an enforcement action, and those that will be out of compliance before the next budget cycle.

Do you believe that continuing funding for this type of environmental cleanup is critical to maintaining a positive relationship with local regulatory authorities and the communities around our military bases?

Answer. I believe that maintaining a positive relationship with the regulatory authorities and local communities is important to our entire environmental cleanup program.

*Question.* Do you believe that the Department of Defense should be exempt from the application of the environmental laws?

Answer. No.

*Question.* Do you support the basic principle of the Federal Facilities Act and other laws that Federal facilities, including DOD facilities, should be subject to the same standards as comparably situated civilian facilities?

Answer. Yes.

*Question.* The Department of Defense faces a bill for the clean-up of unexploded ordnance (UXO) that is at least in the tens of billions of dollars, and could well be in the hundreds of billions of dollars. At current funding levels, it has been estimated that it would take the military services several thousand years to remediate UXO problems on a DOD-wide basis.

What do you believe would be an acceptable time period for cleaning up unexploded ordnance problems throughout the Department of Defense?

Answer. If confirmed, I will work with the Air Force and with my service counterparts and DOD to establish a methodology for solving this most complex problem.

*Question.* Do you believe that increased investment in UXO remediation technologies would be likely to produce more effective and efficient remediation processes and substantially reduce the Department’s long-term clean-up liability (and the time required to complete such clean-up)?

Answer. If confirmed, I will review this long-term liability issue both with the Air Force and with my service counterparts and DOD.

#### ENERGY EFFICIENCY

*Question.* Executive Order 13123 lays out a number of specific steps that agencies should take to promote energy conservation. These include the use of energy savings performance contracts, utility energy efficiency contracts, and other contracts designed to achieve energy conservation; conducting energy efficiency audits for approximately 10 percent of an agency’s facilities each year; and exploring opportuni-

ties for energy efficiency in industrial facilities for steam systems, boiler operation, air compressor systems, industrial processes, and fuel switching.

Do you support the use of these energy conservation approaches?

Answer. I support energy conservation, and if confirmed, I will review the entire Air Force effort in this area.

*Question.* Are there other steps that you would take, if confirmed, to promote energy conservation by the Department of the Air Force?

Answer. I will address the issue in detail if confirmed.

*Question.* Do you believe that the energy conservation goals established in the Executive Order are achievable?

Answer. If confirmed, I will attempt to meet all goals established by Presidential Executive Order.

#### INTEGRATION OF INSTALLATIONS WITH LOCAL COMMUNITIES

*Question.* The Department of Defense is in the midst of an effort to increase the basic allowance for housing to eliminate out-of-pocket housing costs for military families who choose to live off base. This policy is intended to encourage more military families to live off base and reduce the demand for government housing. In recent years, outsourcing of base operations functions on military installations has increased substantially. Secretary Rumsfeld has proposed examination of additional contracting out in certain areas, including the operation of commissaries. All of these policies tend to increase the integration of the military into the local community and increase the non-military population on our bases.

At the same time, force protection concerns are leading the military services to take steps to close or restrict access to military installations and to build force protection measures into the construction of schools and other non-military facilities on those installations.

What do you believe is the appropriate level of integration, or separation, between military installations and the surrounding local communities?

Answer. If confirmed, I will address this very complex issue in detail.

#### DAVIS-BACON ACT

*Question.* 40 U.S.C. Sec. 276a, commonly known as Davis-Bacon, requires that for every contract in excess of \$2,000 involving construction, alteration, and/or repair of public buildings or public works, the prevailing wage in that state shall be paid. When the contract cost-floor was set in the 1930s, \$2,000 was a substantial sum of money, however, inflation during the intervening years has eroded the value of the dollar to the point where there is virtually no project that is not covered by Davis Bacon.

If confirmed, would you support raising the contract threshold to a more current standard before Davis-Bacon can be invoked?

In your personal opinion, what would be an appropriate contract cost before Davis-Bacon should apply?

Answer. If confirmed, I will review the issues associated with the Davis-Bacon Act and consult with senior Air Force leadership for their views.

#### INSTALLATION MANAGEMENT

*Question.* One of the obvious handicaps to the implementation of the Family Housing Privatization initiative is the lack of specialists in real estate and financial management throughout the Department of Defense. A similar shortfall is said to exist in the area of business managers and installation managers.

If the Air Force is experiencing similar shortfalls, should these positions be filled with contract or civil service personnel? Please explain.

As the Air Force enters a new era of defense reform and business practices, does it have a program to ensure it has a cadre of real estate and business managers?

Answer. If confirmed, I will address the issue of real estate and financial management specialists and illicit the views of senior leaders in the Air Force.

#### AIRSPACE MANAGEMENT

*Question.* Commercial air traffic is expected to increase 6 percent annually, and military airspace use will also increase with the next generation of high performance weapon systems. As a result of the pressures associated with commercial air traffic congestion, noise, and other environmental concerns, the acquisition and use of special use airspace has evolved into a challenging endeavor for all of the military departments.

If confirmed, how would you view your role in addressing these issues?

Answer. I view my role as working closely with senior Air Force civilian and military leaders to address this critical readiness issue.

#### UNEXPLODED ORDNANCE CLEANUP AND TECHNOLOGICAL DEVELOPMENT

*Question.* Unexploded ordnance (UXO) and other by-products of test and training activities can cause environmental contamination and safety concerns that may trigger restrictions on military testing and training. The technology presently available to address these issues is labor intensive and not cost effective, but technological advancements have shown promise. The Air Force's budget request for fiscal year 2002 does not contain any funding to support such critical environmental technology investments.

If you are confirmed, how would you propose to address this issue?

Answer. If confirmed, I will address this issue within the Air Force, with my service counterparts and DOD representatives.

#### ENVIRONMENTAL ENCROACHMENT

*Question.* Some of the Service Chiefs have asserted that they spend more money each year complying with environmental regulations than they spend on training. In visits to military installations, committee members have observed first hand the barriers to training caused by compliance with environmental regulations.

If confirmed, what steps would you take to reduce the cost to the Department of environmental compliance?

If confirmed, how would you propose to facilitate the development and implementation of a comprehensive strategy to address readiness concerns related to these encroachment issues?

Answer. Environmental costs, readiness, and encroachment are issues I will address, if confirmed.

#### OVERSEAS INSTALLATIONS

*Question.* The Air Force maintains a network of bases to support our forward deployed forces. In testimony before the Senate Armed Services Committee, both the Supreme Allied Commander, Europe, and the Commander, United States Forces, Korea, stated that the installations in their commands are in serious need of repair. The implication of these statements is that overseas installations are not faring well in the funding allocation process.

In your view, what share of resource allocation should go to our overseas bases?

Answer. If confirmed, I will study resource allocations for all installations in the Air Force and determine if special circumstances are warranted.

#### 67-YEAR FACILITY REPLACEMENT GOAL

*Question.* One of Secretary Rumsfeld's more significant goals is to fund facility replacement on a 67-year standard, rather than the almost 200-year cycle on which the Department is currently operating. Although this standard is still short of the industry standard of 57 years, it will significantly increase the readiness of our military installations.

In your view, is it realistic to hold the Air Force to such a standard when there are fluctuating budget demands and priorities?

Other than increased funding for military construction and repair and maintenance, what other tools would you suggest the Department employ to achieve the 67-year replacement goal?

Answer. If confirmed, I will review all issues associated with infrastructure replacement from both an installation and cost standpoint. Installation upgrades are clearly a part of both readiness and quality of life.

#### MODERNIZATION/NEW MISSION COSTS

*Question.* All components, including both active and Reserve Forces, face the challenge of providing facilities required for a new weapon system or the assignment of a new mission. This is especially challenging to the Reserve components, which have been assigned new missions or weapons systems and then expected to fund the new facilities from their limited military construction funds.

Do you believe the funding for new equipment support facilities should be programmed as part of any given program's acquisition cost?

What are your views on the assignment of new missions to the Reserve components without specifically programming the funds in the military construction program to support those missions?

Answer. New weapon systems and new missions and their impact on infrastructure for the active, Reserve and Guard forces will be an agenda item should I be confirmed.

## BRAC ENVIRONMENTAL CLEANUP

*Question.* There are funding shortfalls for Base Realignment and Closure (BRAC) cleanup in the fiscal year 2002 budget, including about \$92 million in the Navy account and \$55 million in the Air Force account. Such funding shortfalls adversely effect cleanup milestones, undercut the timeliness and value of property transfers, further harm communities already impacted by base closure, and threaten the overall credibility of the BRAC process.

If confirmed, how would you propose to address the effect of the fiscal year 2002 shortfalls in the Air Force BRAC account?

What role do you expect to play in addressing the need to renegotiate cleanup milestones and to address concerns regarding delayed property transfers?

Answer. BRAC environmental cleanup shortfalls would be an issue within my authority and if confirmed, I will attempt to resolve this issue to the satisfaction of the Air Force and the local communities.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Air Force (Installations and Environment)?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

## ENVIRONMENTAL CLEANUP

1. Senator WARNER. Mr. Gibbs, in response to advance questions regarding funding shortfalls for Air Force BRAC cleanup you indicated that, subject to confirmation, you would attempt to resolve this issue to the satisfaction of the Air Force and the local communities.

If confirmed, what role would you expect to play in renegotiating cleanup schedules and addressing concerns related to delayed property transfers?

Mr. GIBBS. The Air Force has a strong record of supporting the cleanup requirements at BRAC installations that are needed to support communities. I would work with the Department of Defense and Congress to fully fund the cleanup requirements needed to facilitate property transfer.

## FAMILY HOUSING IMPROVEMENT

2. Senator WARNER. The Department of Defense has established 2010 as a goal to bring up to standard the family housing for our military families. The vast majority of the existing family housing is more than 30 years old and has had very limited renovation due to fiscal constraints. Although the Department has made progress toward achieving the 2010 goal, the bulk of the improvement effort will have to be funded and enacted under your leadership, assuming you are confirmed.

Based on what you know of the department's ongoing efforts to improve military family housing, do you believe the 2010 goal is achievable, and are you committed to that goal?

Mr. GIBBS. I consider the housing needs of our Air Force men and women and their families area top priority and I am fully committed to achieving the 2010 goal.

## FACILITY CONDITIONS

3. Senator WARNER. The condition of our military facilities is deplorable. After years of insufficient resources for the construction of new facilities or the maintenance of those in existence, many of those buildings, in which our military personnel live and work, have deteriorated to an unacceptable level.

What actions will you pursue to correct this problem?

Mr. GIBBS. I agree the rundown state of our bases is caused by years of reduced facility funding that has led to a steady deterioration in Air Force infrastructure. Previous underfunding of military construction and operation and maintenance required the Air Force to develop "work-arounds," which impacted combat capability, operational efficiency, and quality of workplace environment. Although we continue to operate and support the world's premier aerospace force, we cannot correct overnight the negative impact reduced funding has had on the infrastructure. I agree with another round of base closures and realignments to balance Air Force manpower and force structure with infrastructure. Done right, the Efficient Facilities Initiative (EFI) provides a vehicle for properly sizing our infrastructure to our force structure and allows us to reallocate critical funds to force modernization, readiness and quality of life issues. We will continue the use of public and private resources to accelerate the rate at which we revitalize our inadequate housing inventory to meet DOD and Air Force goals to fix all inadequate housing by 2010.

## ENCROACHMENT

4. Senator WARNER. Some of the most significant issues that will impact the readiness of the Armed Forces as we enter the 21st century could be categorized as outside encroachment upon military resources. This encroachment includes environmental constraints on military training ranges, local community efforts to obtain military property, airspace restrictions to accommodate civilian airlines, and many others. Unless these issues are effectively addressed, our military forces will find it increasingly difficult to train and operate at home and abroad.

What actions will you propose to ensure that encroachment does not prevent the Armed Forces from effectively training and operating both at home and abroad?

Mr. GIBBS. Encroachment at our installations, ranges and airspace is a serious and growing challenge to the Air Force. Encroachment issues are complex and involve multiple Federal, State, tribal, and local agencies, as well as Congress and the public. We continue to work with state regulators and local communities to ensure we have the flexibility to base aircraft at installations that have access to ranges and airspace. We must monitor activities outside our fencelines and engage with local communities including at our overseas locations. The Air Force has found that where we have good relationships with regulators, we have been able to develop co-operative strategies that allow the AF to accomplish its mission while at the same time providing the necessary stewardship of our natural and host county natural resources.

---

 QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

## MILITARY FAMILY HOUSING STOCK

5. Senator THURMOND. The Department of Defense has established 2010 as a goal to bring up to standard the family housing for our military families. The vast majority of the existing family housing stock is more than 30 years old and has had very limited renovation due to fiscal constraints. Although the Department has made progress toward achieving the 2010 goal, the bulk of the improvement effort will have to be funded and enacted under your leadership, once confirmed.

Based on what you know of the department's on going efforts to improve the military family housing stock, do you believe the 2010 goal is achievable and are you committed to that effort?

Mr. GIBBS. I give great weight to the housing needs of the Air Force men and women and therefore am fully committed to achieving the 2010 goal.

## FACILITIES MANAGEMENT

6. Senator THURMOND. The Department of Defense has a dismal record in funding the repair and replacement of its infrastructure. Under the historic funding profile, it would take more than 200 years to replace the existing infrastructure. The prevailing industry standard is to replace its facilities on a 57-year cycle. Secretary

Rumsfeld, concurrent with his budget submission, has established a 67-year replacement standard for DOD facilities and has established a funding profile to support this standard. Although funding is key, proper management of the assets is critical if the Department is to achieve this goal. Based on your knowledge of how the Department currently manages its facilities, what management improvements would you recommend?

Mr. GIBBS. The Air Force's challenge remains unchanged—balancing shortfalls among our priorities of people, readiness, modernization, and infrastructure. Increases in defense spending provided last year were helpful in meeting most pressing needs—however, those increases do not meet all of the needs. As the Air Force has sought to accomplish its various goals, it made a conscious decision to fund people, readiness and modernization at the expense of the infrastructure programs.

I see few management actions not already implemented that would significantly improve management of facility assets. However, there is one management action the Air Force is currently working on that has tremendous asset management potential. The Air Force's Next Generation Installations (NGI) approach could be the primary asset management tool to assist the Air Force in meeting the Secretary's 67-year replacement standard for facilities. NGI is a system that provides information regarding Air Force installations, missions, and quality of life. NGI can: expedite and facilitate fact-based decisions by making data visible and accessible; identify needed data that is not available; and most importantly, enable actions.

#### BASE CLOSURES

7. Senator THURMOND. One of the more significant issues that this committee will face this year is legislation authorizing additional base closures to more closely match facility capacity with existing force structure. As you may know, the mere threat of a base closure causes concern and turmoil within the communities that have a long and historic association with our military installations.

Since each of you, if confirmed, will have a significant role in any future base closures I would like your views on how we can minimize the impact of the base closure process on our communities?

Mr. GIBBS. Once recommended closures are approved, we will work with the communities as we have in the past to minimize the impacts. The proposed Efficient Facilities Initiative (EFI) incorporates the lessons we learned from the past four rounds of closures and includes such things as no cost economic development conveyances and transfer-leaseback authority. I believe the team the Air Force has in place is extremely competent and familiar with all the concerns that will be voiced by communities. I will ensure our Base Conversion Agency responds equally aggressively to any new base closure and realignment round.

#### UTILITY PRIVATIZATION EFFORT

8. Senator THURMOND. The Defense Reform Initiative requires the military departments to privatize all utility systems not later than September 30, 2003, except those exempt for unique security reasons or when privatization is uneconomical. Although the issue of privatization is driven by the fact that the department avoids the near term cost of modernizing the utility systems, there is concern regarding the long-term implications. These concerns are cost growth and being held hostage to future contract negotiations.

Based on your knowledge of the utility privatization effort, what are your concerns regarding the total reliance on contractors to provide utility services?

Mr. GIBBS. The Air Force is taking a measured approach to utility privatization. They have come to realize that in many cases utility privatization does not make good business sense and has limited private sector interest. Due to readiness constraints and economics, not all utility systems will be eligible for this program and of those eligible, all will necessarily be privatized.

I do have a few specific concerns regarding the total reliance on contractors to provide utility services. First, total reliance on contractors could adversely affect the Air Force's ability to beddown expeditionary forces. The Air Force's internal ability to beddown forces in bare-base environments, especially in the area of utility services i.e. water, sewerage, electrical and HVAC could be lost. Contracting out utility service results in the loss of "blue-suiters" capable to accomplish expedient utility service in a contingency environment.

Another concern is the utility industry voiced problems with saturation caused from too many solicitations open simultaneously. In Dec. 1998, DepSecDef directed the Services to privatize all eligible utility systems by Sept. 30, 2003. As of June

30, 2001, 23 of the 1,590 DOD-owned utility systems had been privatized and solicitations had been issued for another 702 systems. This leaves 701 systems to be solicited before Sept. 30 (excluding 164 sitemaps declared exempt or found to be uneconomical to privatize). The utility industry and I are also concerned about the quality of some solicitations: some are too vague, others too prescriptive. I will address these qualitative issues.

#### ENVIRONMENTAL CONCERNS

9. Senator THURMOND. Mr. Gibbs, there has been a concerted effort to restrict overflight by high performance aircraft of vast regions in the West because of environmental concerns. I believe that if we permit this limitation to go into effect, it will have a significant detrimental impact on the training of our flight crews.

In your view what steps should the Air Force take to ensure continued access to these open-training spaces?

Mr. GIBBS. Maintaining continued access to ranges and airspace is absolutely critical; the ability to train aircrews is the reason we have the air combat edge. It is well acknowledged that America's military air superiority in the past was not only based on our technological superiority but also on our ability to produce superbly trained aircrews. In the past few years, as our technological advantage has diminished, our ability to train has served us well. In the coming years, our ability to modify ranges and airspace will be critical to maintaining Air Force readiness. The goal is to meet evolving military needs while addressing and resolving, to the maximum extent possible, public concerns and federal, tribal, state, and other agency issues. The Air Force has adopted a spirit and practice of flexibility and willingness to adapt without compromising operations. Sustainable access to ranges benefit many stakeholders and I realize the importance of establishing and maintaining permanent relationships with all of them. They understand that the ranges contain significant cultural and natural areas, are used for grazing and crop production, and allow hunting or other forms of outdoor recreation. So they are generally very supportive of the Air Force and our mission.

#### MOTH-BALLED INSTALLATIONS

10. Senator THURMOND. Although we all understand the need to close military installations, it is important that we keep in mind that once we eliminate the base structure it will difficult, if not impossible, to replace. We should all be particularly concerned about the Army because its forces need vast land areas for maneuvers and training.

Mr. Gibbs, in view of this concern, could you give us your personal views on mothballing valuable installations rather than disposing of them as is the current practice?

Mr. GIBBS. Because the DOD evaluation process for identifying bases to close will place primary emphasis on the military value both now and in the future, installations selected for closure should not need to be mothballed.

There are a number of considerations that suggest mothballing would not be a practical option for the Air Force. If the DOD proposed legislation is enacted, the Efficient Facilities Initiatives (EFI) provides specific authorities to help us deal with unneeded facilities on installations that do not have flying or missile missions. In these cases, we would not need or want to mothball these facilities.

With respect to our flying and missile mission bases, mothballing would not be a practical solution for several reasons. Unused real estate rapidly becomes unusable. We can preserve buildings and utilities. But runways, parking aprons, taxiways, and missile silos are subject to rapid deterioration that would be prohibitively costly to maintain in useable condition.

Mothballing the airspace associated with the particular base would be an even more significant problem. If needed, we would transfer the training and range airspace to other installations, but the airspace immediately around the installation would be much harder to withhold from other uses. Normally, airspace associated with a base is not mothballed. When an Air Force unit no longer has a use for airspace, that airspace is offered to another Air Force unit or the other DOD services for their use. If the DOD no longer needs the airspace, it's returned to the National Airspace System.

In addition, if we mothball installations, we would also have to have procedures and funding to preserve and return them to operational status at some unknown time. Finally, mothballing property would also prevent its use by other parties imposing an unrecoverable economic burden on the communities.

## CONTRACTING REFORM

11. Senator THURMOND. In Secretary Rumsfeld's recent testimony before the Senate Armed Services Committee, he stressed the need to reform the outdated management and acquisition processes in the Department of Defense. As a result of that testimony, Senator Allard and I contacted the Secretary concerning the innovative contracting mechanism being used by the Army for the environmental restoration of the Rocky Mountain Arsenal. According to information I have received, this innovative approach has produced impressive results. It will reportedly reduce program costs by \$200 million and the project completion time by 3 years, while maintaining planned annual expenditures of approximately \$70 million with a competent, yet reduced, Government core oversight team. I have also been informed that the contractor has received numerous accolades due to the, meaningful small business involvement they have cultivated.

I believe this is an innovative and dynamic concept that can be applied through the Armed Services, especially at the Corps of Engineers that will allow each of you to quickly and efficiently adopt best commercial practices. In other words, this contracting model may yield dramatic and immediate savings for the Department.

Do you believe that the Department could benefit from contracting reform?

Mr. GIBBS. Yes, we believe the Department of Defense and the Air Force would greatly benefit by contracting reform.

## ROCKY MOUNTAIN ARSENAL PROGRAM

12. Senator THURMOND. Will you commit to studying the Rocky Mountain Arsenal Program Management Contract in order to evaluate its applicability to other projects in your Department?

Mr. GIBBS. The Air Force is currently evaluating the benefits of several innovative contracting initiatives for environmental cleanup. If I'm confirmed, we will include the Rocky Mountain Arsenal program management contract concept and consider the lessons in contracting learned at Rocky Mountain Arsenal for possible application to our cleanup projects, particularly large, complex, multi-year projects.

[The nomination reference of Nelson F. Gibbs follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 12, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

Nelson F. Gibbs, of California, to be an Assistant Secretary of the Air Force, vice Keith R. Hall.

[The biographical sketch of Nelson F. Gibbs, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF NELSON F. GIBBS

Nelson F. Gibbs is currently the Executive Director of the Cost Accounting Standards Board within the Office of Management and Budget, Executive Office of the President.

Mr. Gibbs spent almost 30 years with the accounting firm of Deloitte and Touche. He began with them in 1962 and worked as a general management and financial systems consultant for clients in government, manufacturing, aerospace and defense and financial service industries. In the 1970s, he was an audit partner in the Audit Division and in 1982 became director of Audit Operations in Los Angeles and a member of the Accounting and Auditing Executive Committee. In 1986, he was promoted to Lead Client Service Partner and became a Senior Partner in Tokyo in 1988.

Mr. Gibbs left Deloitte and Touche in 1991 to become the Corporate Controller for the Northrop Grumman Corporation, a position he held for the next 8 years until he left at the end of 1999 to assume his current position.

A native of Rochester, NY, Nelson Gibbs is a 1959 graduate of Clarkson University in Potsdam, NY, where he was awarded a Bachelor of Civil Engineering. He was commissioned a Second Lieutenant in the U.S. Army upon graduation, serving until he resigned his commission in 1961. In 1962, he was awarded a Master of Science, Industrial Management, from Purdue University in Lafayette, Indiana.

Mr. Gibbs is also a Certified Public Accountant in California, and resides in Washington, DC.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Nelson F. Gibbs in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Nelson Frederick Gibbs.

2. **Position to which nominated:**

Assistant Secretary of the Air Force.

3. **Date of nomination:**

July 12, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

January 8, 1938; Rochester, NY.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Priscilla (Scheib) Gibbs.

7. **Names and ages of children:**

Nelson E. Gibbs, 35; Jennifer G. Bauer, 32; Claire E. Gibbs, 31.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Benjamin Franklin High School, Rochester, NY, 1950-1955, Diploma, 1955.

Clarkson University, Potsdam, NY, 1955-1959, Bachelor of Civil Engineering, 1959.

Purdue University, W. Lafayette, IN, 1961-1962, Master of Science in Industrial Management, 1962.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Executive Director, Cost Accounting Standards Board, U.S. Government, Washington, DC, Sept. 1999–present.

Vice President and Controller, Northrop Grumman Corporation, Los Angeles, CA, June 1991–Sept. 1999.

Partner, Deloitte and Touche, Los Angeles, CA and Tokyo, Japan, August 1962–May 1991.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Co-Chairman, Cost Accounting Standards Board Review Panel, 1998–1999.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Institute of Management Accountants, California Society of Certified Public Accountants, Jonathan Club, Lakeside Golf Club.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

None.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

**17. Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

I agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

NELSON F. GIBBS.

This 13th day of July, 2001.

[The nomination of Nelson F. Gibbs was reported to the Senate by Chairman Levin on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

**NOMINATION OF GEN. JOHN P. JUMPER,  
USAF, FOR REAPPOINTMENT TO THE  
GRADE OF GENERAL AND TO BE CHIEF OF  
STAFF UNITED STATES AIR FORCE**

---

**WEDNESDAY, AUGUST 1, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:30 a.m. in room SD-106, Dirksen Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Cleland, Ben Nelson, Carnahan, Warner, and Inhofe.

Committee staff member present: David S. Lyles, staff director.

Majority staff member present: Madelyn R. Creedon, counsel.

Minority staff members present: Romie L. Brownlee, Republican staff director; Charles W. Alsup, professional staff member; Judith A. Ansley, deputy staff director for the minority; Brian R. Green, professional staff member; Carolyn M. Hanna, professional staff member; Ambrose R. Hock, professional staff member; Patricia L. Lewis, professional staff member; Thomas L. MacKenzie, professional staff member; Cord A. Sterling, professional staff member; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Thomas C. Moore, Michele A. Traficante, and Nicholas W. West.

Committee members' assistants present: Andrew Vanlandingham, assistant to Senator Cleland; Eric Pierce, assistant to Senator Ben Nelson; Neal Orringer, assistant to Senator Carnahan; Brady King, assistant to Senator Dayton; Wayne Glass, assistant to Senator Bingaman; J. Mark Powers, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders and Charles Cogar, assistants to Senator Allard; Arch Gallo-way II, assistant to Senator Sessions; and Jeff Prichard, assistant to Senator Lott.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. The committee will come to order. We meet today to consider the nomination of Gen. John P. Jumper to be Chief of Staff of the United States Air Force. General Jumper, on behalf of the entire committee I welcome you, I congratulate you

on the nomination, and I greet you and your family as you prepare to undertake this new service to this Nation.

It's customary at these hearings that we also address the families, because they are such a critical part of your success and of your future efforts. The Jumpers are no strangers to sacrifice. The Air Force runs in the family. General Jumper is the son of an Air Force general. He and his wife Ellen are the proud parents of three children, two of whom are Air Force officers. Mrs. Jumper, welcome to the committee and I thank you for the sacrifices which you have always made in support of your husband and your larger Air Force family.

General Jumper, I think you're the father of three daughters?

General JUMPER. Yes sir.

Chairman LEVIN. I am also the father of three daughters, so one of the questions I will not ask you, at least in open session, is where the decision making authority rests in your family.

General JUMPER. I appreciate that Mr. Chairman.

Chairman LEVIN. The 17th Air Force Chief of Staff will inherit the strongest Air Force in the history of air power. The men and women of today's Air Force look to their chief to guide and to motivate them as they meet the many missions which America asks of them: from conducting sorties over the Balkans and the dangerous skies over Iraq, to deterring aggression on the Korean Peninsula, to providing the critical air lift in humanitarian operations from Africa to Southeast Asia. The next chief of staff will also inherit an Air Force facing the unique challenges that come with preparing for the new challenges of a new century.

How can the Air Force continue its transformation into an expeditionary aerospace force that balances the heavy demands on the force with the stability and the predictability that our airmen and their families need to stay in the Air Force? How can the Air Force continue its transformation into an aerospace force to include a cadre of skilled space professionals capable of preserving America's freedom of action and superiority in both air and space?

During these twin transformations, and given the high pace of operations, how can the Air Force ensure an attractive quality of life that recruits and retains the high quality personnel and families who are the backbone of the force? How can the Air Force achieve needed savings to help fund these transformations when, as General Ryan recently told this committee, the Air Force is overbased for the force structure that we have today?

General John Jumper is well-qualified to lead the Air Force as it confronts these and other challenges. A military assistant to two secretaries of defense, Secretary Dick Cheney and Secretary Les Aspin, and a special assistant to then-Air Force Chief of Staff Ron Fogleman, General Jumper is well-known to this committee. A Vietnam vet and a decorated pilot, General Jumper understands the dangers that our forces face every day. A commander of two major Air Force commands, General Jumper is a calm and skillful leader in times of crisis, such as during Saddam Hussein's 1994 mobilization near Kuwait and the 1999 air war over Kosovo. In his most recent assignment as commander of Air Combat Command, General Jumper has displayed the vision and the leadership qualities demanded of a member of the Joint Chiefs of Staff.

General Jumper has responded to the committee's pre-hearing policy questions and our standard questionnaire, and these responses will be made a part of the record. The committee has a long tradition of relying on the frank and candid advice of senior military officers when they testify before this committee, even when those views may differ from the policies of the administration in office at the time. When General Jumper was asked whether he would give his personal views before any duly constituted committee of Congress, he responded that he would, in fact, do so.

I want to thank you for that and the other commitments that you've made, General, and to note that this committee counts on the best possible military advice from you and from our other senior military officers in the Department of Defense.

Senator Warner.

#### STATEMENT OF SENATOR JOHN WARNER

Senator WARNER. Thank you, Mr. Chairman. That was a very fine introduction. I shall not try to duplicate it. I ask unanimous consent that my statement be placed in the record.

Chairman LEVIN. It will be.

Senator WARNER. I'd like to touch on one or two points, though. I'm very proud that this wonderful family are really constituents in many ways, and that the nominee today is a VMI graduate. Of course, Gen. George C. Marshall came from VMI, after General Peay, another four star. VMI has a curriculum and standards that very closely match those of our three distinguished service academies. Year-after-year it turns out a number of very fine officers. Many go on active duty.

In visiting with the nominee yesterday, he told me 10 percent of his graduating class lost their lives in Vietnam as young officers. So, VMI takes its place in history. All across the Nation today VMI graduates are wishing they were in that seat with you. We're very proud of you, General.

General JUMPER. Sir, thank you sir.

Senator WARNER. Mrs. Jumper, who's been by your side all these many years, you would not, as you said yesterday, have been able to achieve your successes without strong family support.

General JUMPER. Yes sir.

Senator WARNER. I think we should reflect today on Gen. Mike Ryan who will step down the first week in September. Mike Ryan's father was Chief of Staff of the Air Force when I was privileged to serve in the building as Secretary of the Navy. What a fine family tradition he had, and superb leadership.

I remember so well, Mr. Chairman, the times when we as a committee met to receive the testimony of the service chiefs regarding budget battles. General Ryan would speak very forthrightly. General, as you well know, in your capacity you'll be called before this committee to give your personal, professional opinion on issues. At times, the chiefs have had opinions at variance with the Chairman of the Joint Staff and indeed the Secretary of Defense. It has happened in the past and I expect it may happen on your watch, and we'll receive that testimony.

As I said, Mr. Chairman, he has a most impressive career. My statement details that. Yesterday in the course of our discussions

we talked about the current status of fighter aircraft and your grave concern about the need for the F-22 to restore America's capability to maintain air superiority over a battlefield. Also the extent to which other elements of our military, most particularly the ground forces and such associated naval forces that may be involved, are severely limited in their ability to fulfill their mission unless we have air superiority.

I notice in the background the former chief of the Air National Guard just gave me a thumbs up on that comment. The Air Guard plays a vital role and I hope you continue to foster the role of the Air Guard. There's very little distinction in capabilities between an Air Guard and regular aviator today.

So you're taking on with your family a great challenge. We look forward to it. As a Virginian, I express my tremendous pride in your being selected by our President and recognized as the man most capable to lead our Air Force for the next 4 years.

Thank you Mr. Chairman.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

Welcome, General Jumper, and congratulations on your nomination. I start with a bit of history. Most people probably do not know that General Jumper—if confirmed—will be the first VMI graduate to serve as Chief of Staff of the Air Force, and the first VMI graduate since Gen. George C. Marshall to serve as chief of a military service. Today is a proud day for VMI—and particularly for its Class of 1966.

General Jumper, you are extraordinarily well-qualified for this important billet and your nomination comes at a critical juncture in the history of the United States Air Force. I do not make that statement lightly. In a changing world marked by newly emerging threats, extraordinary competition for resources, including the services of highly motivated and skilled men and women, and the requirement for transformation of our Armed Forces, the future course of the Air Force may well be determined during your tenure.

Your qualifications to assume the duties of Chief of Staff of the Air Force are impressive: command pilot with over 4,000 flying hours; combat experience in the cockpit in Vietnam; and Commander, Allied Air Forces Central Europe, during the Kosovo air campaign. You have commanded a fighter squadron, two fighter wings, and the 9th Air Force. You know the inner workings of the Pentagon from your service as Deputy Chief of Staff for Air and Space Operations, as Special Assistant to the Chief of Staff for roles and missions, and as Senior Military Assistant to two Secretaries of Defense (Cheney and Aspin). As Commander, Air Combat Command, at Langley Air Force Base, Virginia, you have successfully headed the premier organization in the world for training, equipping and maintaining combat-ready forces for rapid deployment.

General Jumper, you and I have seen the Air Force transition from large standing forces to smaller, highly lethal and rapidly deployable units. We have seen the advent of Goldwater-Nichols and its application in Operations Desert Shield and Desert Storm and in the Balkans. We have seen the Air Force mission change from what General Ryan has called "set-piece deterrence of a reliable enemy" into a mission that must be highly flexible, and able to respond rapidly to unpredictable threats.

The United States Air Force is the pre-eminent aerospace force in the world today. Dominance of the air is key to successful operations on the land and at sea. Potential adversaries are making ever-increasing investments in advanced aircraft and integrated air defense systems, including surface-to-air missile systems, to challenge our dominance in this part of the three-dimensional battlespace. We must always stay one step ahead.

We look forward to your comments on how the Air Force can maintain the technical edge currently provided by our aerospace forces in the years ahead.

Mr. Chairman, I look forward to supporting this nomination. I believe General Jumper will be an outstanding Chief of Staff of the Air Force.

Chairman LEVIN. Thank you very much Senator Warner. Any other opening statements?

General Jumper, do you have an opening statement?

**STATEMENT OF GEN. JOHN P. JUMPER, USAF, NOMINEE,  
CHIEF OF STAFF, UNITED STATES AIR FORCE**

General JUMPER. Sir if you permit me, I do. I'd like to thank you, Mr. Chairman, members of the committee. I'm honored to be here today as nominee for the post of chief of staff of the United States Air Force. I'm humbled by the trust and confidence demonstrated by President Bush in forwarding my nomination, and I'm thankful for the support of the Secretary of the Air Force, Jim Roche, and Secretary of Defense Rumsfeld.

Allow me also, Mr. Chairman, to express my gratitude to you and to the committee for arranging these hearings so promptly in the stiff legislative agenda you all are putting up with over these last few days. If confirmed, Mr. Chairman, I will embrace the privilege of continued service to our Nation with all the energy at my command. Sir, I intend to follow the objectives put forth by Secretary Rumsfeld and Secretary Roche. Expressed in my own way, those include: transformation, readiness, retention and recapitalization.

In transformation, we will continue the work started by General Mike Ryan to transition fully to an Air Expeditionary Force (AEF) structure. This puts predictability into the lives of our people. It includes the ability to fully incorporate the Guard and the Reserve into our operations. Today, Mr. Chairman, as you know fully 25 percent of our deployed forces are from the Guard and the Reserve. This is a level of support that is higher than during the middle of Desert Storm, and they sustain that now on a daily basis. It's a source of great pride to the United States Air Force in its total force concept.

In transformation, as you said Mr. Chairman, we have to prepare for new threats posed by theater ballistic missiles and the threats those pose to anti-access; terrorist threats, both at home and abroad that we have to look forward to. Our job in the United States Air Force, as I see it Mr. Chairman, is to make sure that we leverage our technological edge to ensure that we have the best asymmetrical advantage in warfare.

What we bring to the table and what we bring to the joint fight with our other service colleagues is stealth, standoff, precision, information technology and space. Perhaps nowhere greater is that leverage available to us than in space. In that regard, Mr. Chairman, the Air Force has fully embraced the findings of the Space Commission. General Ryan and Secretary Roche are implementing provisions of those recommendations as we speak. If confirmed sir, I will continue to do the same thing.

In terms of readiness, this is the heart and soul of our capability to perform today's mission, and it emphasizes the imperative to keep one foot in today's world as we look forward to transformational technologies. Sir, we need to recapture our ability to fly all of our flying hour programs. We need to recapture the capability to fix our airplanes. For the first time in 5 years, Air Combat Command will fully fly its flying hour program. When you put the pilots in the air and the maintainers feel the pride of fixing those air-

planes, you improve your retention. I thank you, Mr. Chairman, and members of the committee, for your support over the last 3 years. We have infused more than a billion dollars into the spare parts problem, and we are beginning to reap the benefits of that now. I thank the committee for that.

In the area of retention, we are a retention force in the United States Air Force. We depend on retaining the highly-skilled people that we train. It hurts when you lose a sergeant with 8 years of experience, because it takes 8 years to replace that sergeant. The emphasis that the committee has placed on housing, pay, and bonuses has helped very much in that regard, Mr. Chairman. We thank the committee for their efforts and their support.

As far as the Air Force, sir, if I am confirmed we will continue to also emphasize the intrinsic values of service to Nation. Often when guys like me say "quality of life," what's heard out there is higher standard of living. But quality of life is more than just a higher standard of living, it's a higher standard for your whole life. Our youngsters out there look only for the opportunity to be a part of something that's bigger than they are.

Mr. Chairman, I know that you, Senator Warner, and others visited over in Europe during the Kosovo crisis. You walked the flight-lines and the battlefields of that war-torn area. You saw our great, young Americans—Active, Reserve, Guard—performing. They were no less committed than any generation of Americans has ever been committed. They look for leadership, and when you give them that leadership they perform with all the patriotism and commitment of any generation.

Finally, sir, in terms of recapitalization, we need your help and I hope to confer with you in the future, if I'm confirmed, to recapitalize a force that now has an average aircraft age of 22 years. If we are able to procure everything that's on the books now, in full quantity, in 15 years the average age of our aircraft will be 30 years of age. We need to recapitalize our force, not only in terms of force structure, but in terms of technology. I fear that our technological edge is waning.

I know that Senator Inhofe and Senator Warner have heard me say this before, but in our testing of some foreign aircraft—and I can't go into details at this level—but our best pilots flying their airplanes beat our best pilots flying our airplanes every time. I'd be honored, Mr. Chairman, to give you the details of the tests that went into that.

But it does go forth to emphasize the need for the F-22. The F-22 not only beat the things in the air, but the F-22 with the supercruise capability will also be able to penetrate the highest defenses that we know are coming down the road. It will enable the B-2 bomber to come into the daytime for the first time. In that regard, we also need to recapitalize our bomber force and continue to modernize so that our long-range strike assets can communicate en route to targets and have the ability to carry larger loads into the target area.

Mr. Chairman, if I'm confirmed I can think of no greater honor than to lead the greatest Air Force in the world. Our people are our greatest asset. They ask only that their sacrifices be appreciated, that they have the resources to do their job, and that when

they win they're able to do so by a score of 100 to nothing for their Nation. I thank this committee for providing the resources to bring us these great young people, great Americans one and all. I vow that if I am confirmed I will continue to do everything in my power to earn the right to lead them.

Mr. Chairman, I'd like to offer my detailed written statement for the record, and sir, I'm prepared to answer any questions from you.

Chairman LEVIN. It will be made part of the record, thank you. [The prepared statement of General Jumper follows:]

PREPARED STATEMENT BY GEN. JOHN P. JUMPER, USAF

Thank you Mr. Chairman. I am honored to be here today as nominee for the post of Chief of Staff of the United States Air Force. I am humbled by the trust and confidence demonstrated by President Bush in forwarding my nomination and am thankful for the support of Secretary of the Air Force Jim Roche and Secretary of Defense Rumsfeld. Allow me also, Mr. Chairman, to express my gratitude to you and to the committee for arranging this hearing so promptly. If confirmed, Mr. Chairman, I will embrace the privilege of continued service to our Nation with all the energy at my command.

Mr. Chairman, if confirmed I intend to follow the objectives put forth by Secretary Rumsfeld and Secretary Roche that include transformation, readiness, retention, and recapitalization.

The word "transformation" has become commonplace today. However, we believe that during the course of our relatively brief history the United States Air Force has been on a consistent course of transformation. True to form, during most of the decade of the 1990s the Air Force was in an especially intense period of transformation. Indeed, we completely reshaped ourselves from a Cold War configuration that had us focused on a Warsaw Pact invasion of Europe into an agile force able to respond quickly in the contingency world we live in today. General Mike Ryan has led the creation of our Aerospace Expeditionary Forces (AEF). The AEF is a rotational force construct that allows Air and Space forces to respond rapidly throughout the spectrum of conflict and has produced a deployment rhythm that provides our Airmen predictable rotation schedules around which to include time for family, off-duty education and leave. The AEF is the tool we need to manage an Air Force that has decreased in size by 35 percent over the past 10 years while contingency taskings have increased by 300 percent. If confirmed, I will continue to maximize the many benefits of our AEFs in order to provide our warfighting commanders in chief potent capabilities to produce the effects they need.

Transformation also includes how we deal with an uncertain future. We have learned throughout the conflicts of the 1990s how America values the benefits of asymmetrical advantage. Our Nation's Air Force provides many of the tools that lever our technological superiority and produce asymmetrical advantage. Stealth, standoff, precision, information dominance, and space are examples of these leveraging technologies. In Air Combat Command we have developed a concept called Global Strike Task Force that combines the attributes of stealth; the horizontal integration of manned, unmanned and space platforms; the art and science of prediction; and real-time command and control. The asymmetrical advantage of these capabilities will combine with those of the other services to overcome emerging anti-access challenges. In addition, many of these technologies will enable capabilities against other new types of threats such as terrorist activity. If confirmed, I will continue to pursue operational concepts and capabilities that leverage our asymmetrical advantage.

Perhaps the greatest opportunity to leverage asymmetrical advantage is space. The Commission to Assess National Security Space Management and Organization, chaired by Secretary Rumsfeld, focused the Air Force on its unique competencies in space and the need for the Air Force's leadership role. General Ryan and Secretary Roche have been fully engaged in implementing the commission's recommendations. If confirmed, I will continue to advance the work of developing a space culture. The Air Force will also work with the other services and agencies to insure proper levels of support for their space requirements and the robust integration of space into joint warfighting.

Readiness in the Air Force will continue to require our focused attention. At the beginning of the decade of the 1990s, as we entered Operation Desert Storm, 95 percent of our Air Force combat units were in the top two categories of readiness. Since 1996 we have seen that number drop to 68 percent. Likewise, the Mission Capable

(MC) rate for our fighter aircraft at the beginning of Desert Storm was 88 percent; by the year 2000, the MC rate for fighter aircraft was 75 percent. These trends were clearly the result of budget pressures that, when combined with the difficulties of aging aircraft, resulted in inadequate spare parts and sustainment engineering for our combat forces. In addition, an important factor in readiness is the maintenance of our bases' infrastructure, an area that has been neglected over the past decade. With the help of Congress and support from this committee, we have arrested the decline in some of these areas and are beginning to see some positive trends. If confirmed, I will work with Secretary Roche to keep our aircraft combat ready, and to give our Airmen on the flight line the resources and facilities they need to do their job. Retention also improves when our Airmen are able to take pride in their workplaces and their high mission capable rates that accompany safe and reliable aircraft.

There can be no doubt that the quality of our Air Force is directly attributable to the quality of the men and women who volunteer to serve. That quality has to be sustained in the people we recruit and, more importantly, in the people we retain. With the help of incentives supported by Congress, in fiscal year 2000 the Air Force achieved its recruiting goal of more than 34,000 new Airmen. In fiscal year 2001 we are at 101 percent of our goal to date, all without lowering our recruiting standards. Retention issues are also improving but are more difficult. Pilot retention is especially difficult. Improvements in readiness enhance the retention of pilot and flight line maintenance skills. Just as buying spare parts keeps the airplanes flying, a fully funded flying hour program keeps the pilots in the air—right where they want to be. I deeply appreciate the commitment made by Congress to fully fund our flying hour program. This year, for the first time in 5 years, Air Combat Command will have the resources to fly its full program. We in the Air Force also appreciate the incentives provided by the Congress that have helped offset the lure into civilian life inspired by a vibrant economy. Dual-career families and extended time away from home remain issues. If confirmed, I will join with the Secretary of the Air Force to promote the values of service to country while working to keep an appropriate balance of compensation for those who serve.

This committee is well aware of the need we have to recapitalize our force both in air and space. In space, for example, I believe the acquisition of space-based radar will be critical to the integrated constellation of air and space-borne sensors. This will allow us to combine the persistence of airborne systems with the high ground of space. In the air, the F-22 will be crucial to our ability to “kick down the door” with the Global Strike Task Force. Many have characterized the F-22 as strictly an air-to-air fighter, but the main strength of the F-22 will be its unique ability to combine stealth and supercruise to penetrate and precisely bomb future surface-to-air missile systems. The leverage of the F-22 will allow us to bring stealth into the daytime. The F-22, combined with the B-2 and F-117, will provide 24-hour stealth as the F-22 both protects the force and suppresses the most difficult threats. This does not detract from the F-22s air superiority capability. We fully understand the capabilities of the next generation of potential threat aircraft, specifically the SU-27 and SU-30 series of fighters-airplanes that have been produced, are available, and are being actively marketed. They outperform our current generation F-15 and F-16. The F-22 will provide us another generational leap over these aircraft and anything we see on the horizon. At the low end of the fighter modernization mix is the Joint Strike Fighter (JSF) which for the first time will provide persistent stealth over the battlefield for the agile and rapidly emerging targets that require close proximity for timely response.

The modernization of our Air Mobility fleet is critical as we set goals of improving the C-5 Mission Capability rate and properly sizing our Air Mobility force. We also face critical aging issues with our Boeing 707 airframe fleet that includes KC-135 tankers and surveillance platforms that now average 40 years of age. If confirmed, I would ask Secretary Roche to support a plan for transition to a new, more reliable airframe.

Long range strike modernization, that is, modernization of the B-1, B-2 and B-52, has also suffered from inadequate funding. Our plan continues to emphasize data-link communication for enroute retargeting and threat information; full integration of precision weapons; and reliability upgrades to control operating costs. The stealthy B-2 will continue to be our leading long-range penetration capability; the B-1 will be our heavy hauler in a medium threat environment; and the B-52 will provide needed stand-off capability. If confirmed, I will continue to pursue the investments needed to sharpen the “teeth” of our long-range strike assets.

Unmanned aircraft will continue to evolve. The PREDATOR UAV will be modernized with laser designation capability as we continue to field the current production version. Global Hawk will also continue its development. The UCAV will emerge as

a conventional weapons capable UAV. If confirmed, I will continue to support—as I have in the past—operational concepts that include comprehensive use of unmanned vehicles as they continue to prove their capabilities.

Finally, Mr. Chairman, Secretary Rumsfeld and Secretary Roche have both testified to this committee about the need for acquisition reform and the increasing amounts of time required to develop, test and field systems. I have told Secretary Roche, from my position as Air Combat Command commander, that I believe at least one part of acquisition reform is requirements reform—requirements that are crafted by the operators to pass to the acquisition community. I believe we can close the wide gap that currently exists between the requirements and acquisition process and work together for greater efficiency. If confirmed, I will undertake that task.

Mr. Chairman, allow me to restate my gratitude to you and the committee. I can think of no greater honor than to lead the greatest Air Force in the world. Many on this committee traveled through Europe during Operation Allied Force and saw first hand our superb men and women at work. You saw a generation of young Americans, who many think incapable of commitment, dedication or patriotism. You saw, as I see every day, a generation no less committed, dedicated or patriotic than any generation that ever served their Nation. They only ask that their sacrifices be appreciated, that they have the resources to do their job, and that when they win they can do it by a score of 100–0 for their Nation. I thank the committee for providing the resources to bring us these great young Americans and I vow that I will continue to do everything in my power to earn the right to lead them.

Thank you.

Chairman LEVIN. We call on Senator Warner first.

Senator WARNER. I thank you, Mr. Chairman. I'm just going to ask that my questions be put in the record. But I do want to lead off with a subject we talked about yesterday, and that's the unmanned programs that are becoming increasingly vital to our national security. You share that objective of this committee and its legislation.

Also yesterday, you told me in a very dramatic way about the concern you have about control of the airspace over a battlefield today. I think you just touched on it.

General JUMPER. Yes sir.

Senator WARNER. Namely that, unless we move ahead—hopefully successfully on a technological basis with the F–22 program and the Joint Strike Fighter—we'll be yielding that ground to control the airspace above a battlefield. Isn't that your professional judgment?

General JUMPER. That's correct.

Senator WARNER. I thank the Chair and members of the committee. Good luck to you. You'll have my support.

General JUMPER. Thank you, sir.

Chairman LEVIN. Thank you Senator Warner. General, my impression of the fiscal year 2002 budget is that the Department of Defense has put a lot of money in personnel, readiness, and quality of life programs, which we have also emphasized, as you point out. But where there is a shortfall is in the area of modernization. That seems to have been put off until next year in that budget request. Would you say that's an accurate assessment?

General JUMPER. Sir, I would and I have not been close to the budget process in my position at Air Combat Command. But yes sir, I would agree with that assessment.

Chairman LEVIN. Can you give us an assessment as to whether, if the Air Force budget request for next year stays about where it is this year in real terms, what impact that would have on your modernization plans?

General JUMPER. Well sir, we will continue to have disconnects, especially in our bomber force, as we try to upgrade our bomber force. We will continue to have disconnects in our ability to repair our bases and the working facilities for our people. As a matter of fact, it's that piece of the budget that goes to the very bottom and we use that to pay a lot of the other bills. It will definitely stall our ability to recapitalize ourselves, Mr. Chairman.

Chairman LEVIN. The February budget blueprint document of the president states that: "With 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently". Do you believe that the Air Force has excess infrastructure that uses up resources that could be better applied elsewhere?

General JUMPER. I do, Mr. Chairman.

Chairman LEVIN. You made reference to recapitalization of our bomber fleet. According to the 1999 report, it says the following: "Based on current operating procedures, attrition models and service lives, the total bomber inventory is predicted to fall below the required 170 aircraft fleet by 2037." The report also highlights the range of modernization efforts that will be needed in the near-, mid-, and long-terms to keep bombers flying through 2040. On the Air Force priority list for unfunded items, there is a priority for upgrades to our bombers. The cost of that would be \$800 million. That would keep our B-52s going through the year 2040, as I remember the report.

General JUMPER. That's correct Mr. Chairman.

Chairman LEVIN. Which would mean that their life would be extended to 80 or 90 years. These are the B-52Hs. That is what the Air Force hopes for, is that correct?

General JUMPER. That's correct Mr. Chairman.

Chairman LEVIN. Now you made reference to the average age of our bombers. That age is going to be even greater the way we're going, but it seems at least in terms of the first blush at looking at the Air Force needs, you want the B-52Hs at least to be in service for another 40 years, which means that the age of our fleet will continue to grow. But that's what the Air Force wants, if we provide you the upgrades.

Now can you explain to us how we're going to tell those pilots and their families that hey—we won't be doing it, somebody sitting here in 29 years will be doing it—"You're going to be flying a B-52H, which is now 60 years old, but hey, back there in the year 2001, they wanted it that way." Why do you want it that way?

General JUMPER. Yes, Mr. Chairman, it is counter-intuitive. We benefit, Mr. Chairman, from the way they built airplanes back in the 1960s before the advent of computer-aided design. Not knowing all we know about structures today, they over-built them by two or three times. So the structure of the B-52, at the rate we fly it today, is very sound out to those years. I might add, Mr. Chairman, that as you well know there is very little on the B-52 that is as old as the airframe itself, as we continue to upgrade and modernize the avionics. Also, we don't put that airframe, the B-52 airframe, into the high-threat areas. The B-52 in its balance of capabilities across our bomber force, we use to stand-off, and primarily the use of cruise missiles. In that way, it does not go as much in harms

way as the other more penetrating bombers do. So it's taking advantage of this over-engineering of the 1960s, sir, that allows us to do this. We want to take full advantage of the capability of that airframe. It's a very good long-range asset.

Chairman LEVIN. Is it also then, in summary, a very different plane that would be flying 20 years from now or 30 years from now, than the one that is flying now?

General JUMPER. Absolutely right sir, as we continue to upgrade them.

Chairman LEVIN. I'm just trying to help out those Senators that will be sitting here 20 years from now.

General JUMPER. I understand.

Chairman LEVIN. They'll be able to look back at a record and say, "Hey, that chief of staff said that's what we ought to be doing."

General JUMPER. Yes sir, I understand.

Chairman LEVIN. I'm just trying to lend a hand to those future Senators of America.

General JUMPER. It is counter-intuitive.

Chairman LEVIN. On to the missile defense budget request, General. There's a proposal for a \$3 billion increase for missile defense, which would be a 57 percent increase over the current fiscal year. At the same time, we're decreasing the investments in certain other critical areas, such as procurement, science and technology. In your view, are we risking putting a disproportionate level of resources into those missile defense programs?

General JUMPER. Mr. Chairman, I would say that first of all, the Secretary of Defense's detail plan on missile defense has not been rolled out. I certainly wouldn't want to pre-empt his conclusions in that regard. What I would say, sir, is that I agree that it's going to mean some very tough trade-offs. My belief is that we need to make sure that the technologies that emerge with regard to national missile defense have to prove themselves worthy as we invest in those into the future, because the trade-off will be very difficult indeed.

Chairman LEVIN. Thank you, my time has expired. At this time I would ask unanimous consent that the statement of Senator Thurmond be placed in the record.

[The prepared statement of Senator Thurmond follows:]

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman.

Mr. Chairman, I join you in welcoming General Jumper as the committee considers his nomination to be the next Chief of Staff of the United States Air Force. In his more than 35 years of distinguished service to our nation, he has served as a fighter pilot during the Vietnam War, as a staff officer both on the Air Staff and Joint Staff, as the Commander of the United States Air Forces in Europe, as Commander, Air Forces Central Europe, and most recently as the Commander of the Air Combat Command. I believe it would be difficult to find a more qualified officer to take charge of our Air Force and lead it through the transformation that all our services must undergo in order to meet the ever-changing threats of the post-Cold War era.

General Jumper, I recall your tour as Commander of the 9th Air Force at Shaw Air Force Base. I know all your friends in South Carolina, especially the Sumter area, join me in congratulating you on your nomination. We wish you success and hope you will not forget your tour in our great State.

Thank you, Mr. Chairman.

Chairman LEVIN. Senator Inhofe.

**STATEMENT OF SENATOR JAMES M. INHOFE**

Senator INHOFE. Thank you, Mr. Chairman. I'll just start off by saying I can't think of anyone in America who is better qualified for the job that you are pursuing than you are, General Jumper. We're very proud that you're willing to do this, and that your family is willing to do this.

One of the things you pointed out in your oral statement was the significance of fixing an aircraft. That leads me into the depot situation. Of course, we went through some depot rounds. We went from five air logistics centers down to three, three that were operating at 100 percent if you're taking an 8 hour operation. I agree with that because we have to protect a surge capability in times of war. On the other hand, our three depots are really in a kind of bad repair. A lot of it is World War II technology and there's a need to upgrade these facilities. What is your thought about the future of our depots and about our need for the depots—whether we use 50/50 or any other criteria—to have that capability, not just on existing, but on new platforms, of doing it internally in a core basis?

General JUMPER. Senator, the founding notion behind the depots is that we have a capability within our service to surge and to repair when needed and in times of crisis. I see no reason to erode that philosophy in any way and I'm committed to that philosophy. If I'm confirmed, sir, there's a lot I do not yet know about the depot issues. With your indulgence and permission I'd like to make the same commitment that Secretary Roche made, to make early on in my tenure, if I am confirmed, visits to the depots.

Senator INHOFE. Good, that would be very helpful. Secretary Roche did go with me out to Tinker Air Force Base and we were able to extract from him his feelings, which are essentially what you just articulated. In the area of encroachment, this is a problem. We have four major areas. One I'm very familiar with is environmental encroachments, because I served on the Environment and Public Works Committee. We see what's happening not just in the Air Force but services all around. Second, urban sprawl. Third, the spectrum problem that's up. Fourth, what's happening with our ability for live ranges.

I'd suggest the problems that we're going through right now in Vieques are not just the Navy's and the Marines' problems, they're your problems. Because if we allow a bunch of law-breaking renegades to kick us off of ranges that we own, we're going to have a very serious problem around the world on all of our ranges, and domestic ranges, too. When you are confirmed, how are you going to handle some of these encroachment problems?

General JUMPER. Senator, that's a tough one. The environmental issues are tough enough. The only way that we've been successful working with this is that we dedicate people to the job of coordinating with the interested parties.

The tribal issues in the West, the environmental issues, we remain in daily face-to-face contact with the concerns of those and we try to address those one at a time. The encroachment issue is a creeping issue. We can't afford to wake up one morning and discover that encroachment prevents us from launching our live ammunition training out of Nellis Air Force Base, for instance.

The only way that we've been successful working this is to stay engaged. When we bring on the new systems that require greater stand-off, like the F-22, new weapons in the B-2, this is going to be a more and more difficult problem and will require greater and greater attention.

Senator INHOFE. One aggravating problem is that the better the job we do, the more the problem. Certainly some of our ranges down in Senator Cleland's area—just to defend the red-cockaded woodpecker on some of our ground training ranges, we're doing such a good job that their expected habitat is actually growing, which takes up more of our training space. So it is a problem that's getting worse.

You've addressed the F-22 and the necessity to get in some new platforms. One of the characteristics you have that I appreciate so much, and I say this in all honesty, is your willingness not to be politically correct. A couple of years ago it took a lot of courage for you to admit that our platforms, contrary to public belief, are not the best out there; that our air-to-air F-15 is inferior, in many ways, to the SU-27. Our air-to-ground F-16 is inferior in many ways, in maneuverability, range, range detection and radar detections, than the SU-30.

Yet, we've seen just in last week's paper "China Signs \$2 Billion Deal for Russian Fighter Jets". So this equipment that's out there, that's better than ours, is on the open market. China may have somewhere around 240 SU-27s and SU-30s, not delivered, but ordered—some delivered. We don't know the exact number, but it's growing every day. So this is a proliferation.

There's no reason I can see that Iran, Iraq, and other countries wouldn't have access to this superior equipment. I'd like to have you at least make an expression to this fact so that all of America will hear that this modernization program is absolutely essential. Up until recent years we've always had the best.

We had a friend of mine here during the last hearing from the Vietnam era who had done 288 missions. He said, "Whether it was the F-4, F-100, F-105 or the A-6 or an A-4, we knew during that time that we had the best equipment." So what are your thoughts about our relative advantages at this date?

General JUMPER. Thank you for that question Senator. We talk often about skipping a generation of technology. As you saw first hand in Operation Allied Force, the pilots from the Air Force, the Navy and the Marine Corps that we put over downtown Belgrade during the height of that war had over 700 surface-to-air missiles shot at them. I can guarantee you that it didn't occur to one of them at the time that this technologically inferior country down here was so inferior that we didn't have to worry about those 700 surface-to-air missiles. We did.

As we progress into this next generation this F-22 puts us as far ahead of anything that we know is coming down the road, as the F-15 did over the MiG-21 25 years ago. We have had, Senator, two new bombers before we've had the last new fighter. We've fielded two new bombers before we've had the last new fighter. That's why we put the emphasis now on the F-22, not to the denigration of the other platforms, but just because of the necessity to upgrade.

The F-22 will enable us to kill the most difficult SAMs. It will allow us to bring stealth into the daytime for the first time. This is the generation of technology we need to lever this technological advantage.

Senator INHOFE. Thank you very much. My time is expired but I have more for the second round. Thank you sir. Thank you Mr. Chairman.

Chairman LEVIN. Senator Nelson.

#### STATEMENT OF SENATOR E. BENJAMIN NELSON

Senator BEN NELSON. Thank you, Mr. Chairman. General, congratulations on your nomination. The Air Force is of vital importance not only to our country but, on a very parochial basis, to the state of Nebraska because of Offutt, the Fighting 55th located in Nebraska.

One of the concerns that everyone expresses with regard to the military is recruitment and retention. I think you've heard me raise the point before, and I shall do it again today, about the importance of total force and a Total Force Initiative that's in place in a number of installations around the country today, but particularly in the 55th. The relationship between the Air National Guard and Nebraska—that I had the privilege of heading as Governor of Nebraska for 8 years and have some familiarity with it in that capacity—the relationship between the Air Guard, the Air Reserve and the regular military and what we can do to make sure that all components of the Air Force are integrated in a meaningful, cost-effective and helpful manner to help with the retention of those sergeants that had been trained for 8 years that are now lost, and the pilots that had countless thousands of dollars invested in their skill levels. I'm interested in your attitude toward this and what plans you may have not only to retain what we're doing with Total Force Initiative today, but how you may be planning to expand it as the chief of staff?

General JUMPER. Senator, thank you for that. We are well aware of how well that works in the 55th. That's a model, actually, for where we need to go.

Sir, in the Reserve Forces today we have more than a third of our strike capability in between the Guard and Reserve. It's not only the support forces but it's the combat forces that are very much integrated with the active duty. I know Secretary Roche is anxious to find new ways to take advantage of the great skill that goes from our active duty Air Force and into our Guard and Reserve units, skill that can be used to train our youngsters.

We're right now about 60 to 70 percent manned in the proper skill levels in our maintenance force in the active duty. A lot of these skilled maintainers go out and go into the National Guard and Reserve. There are ways to take advantage of that skill and integrate it into our active units and Secretary Roche is pledged to find those ways. We have had some tests in some of our fighter units, and we will continue to test with maintenance capability as well on the right mix and how we do this. So, I am very proud, sir, of the United States Air Force and its Total Force effort and the way we continue to find new ways to take advantage of the great experience we have in our National Guard and our Reserve.

Senator BEN NELSON. It's encouraging to note that when you are dealing with active and Reserve and Guard units, that the pride of the Air Force can be in the solidarity of the program rather than in competition among the units. So, continuing to upgrade the training and the skill levels of those outside the active forces is obviously very important so that we don't end up with any inferior mix of the forces.

General JUMPER. Yes Senator, I'd be honored if I could come over and have you share those ideas with me, because we're looking for ways to do just that.

Senator BEN NELSON. I appreciate it, thank you very much. Thank you Mr. Chairman.

Chairman LEVIN. Thank you, Senator Nelson.  
Senator Cleland.

#### STATEMENT OF SENATOR MAX CLELAND

Senator CLELAND. Thank you very much. General, we appreciate your service to our country. I appreciate your willingness to tackle this tough job. I might say to my fellow members on the committee if you want to really see the extent to which General Jumper was involved in the Balkan War and was the eyes and ears of the NATO commander, General Wesley Clark, just read a book called *Waging Modern War*. I agree with Senator Inhofe, I think we are blessed. No one is better prepared than you are, coming right from the battlefield to lead the Air Force and our American military into a new era of how we wage modern war.

One of the great lessons of that war that General Clark brought to our attention was that we took the use of precision munitions to a new level, as he testified about a year ago. My concern is that this budget does not address the shortfall. Could you tell us what is the current shortfall, generally, in what is called war reserve munitions, especially precision guided munitions?

General JUMPER. Yes Senator, in the current budget we have attempted to fix some of our training munitions shortfalls, but we continue to be behind in procuring our most beneficial precision munitions; complicated by the expenditure rate of over 5,000 of these weapons in Operation Allied Force and also we continue every day to expend a certain number of weapons in Iraq in Northern and Southern Watch, in retaliation to offensive action on the part of the Iraqis. The combination of these episodic contingency operations, like Operation Allied Force, and sort of the daily expenditure rate, has kept us from being able to replenish the spares that we need.

Senator, if I'm confirmed this is going to be a major point of emphasis for me as we replenish. I will tell you, there's another problem we have that we're going to have to address, and that is with the advent of these new precision munitions. We're not sure yet how we're going to train with these joint standoff weapons that are very expensive, whether we're going to have to do it with a synthetic training device in a simulator of some type, and how we're going to actually be able to practice with live munitions in the air. It's a problem we're going to have to address. If I'm confirmed, Senator, I'm going to take both those issues on very aggressively.

Senator CLELAND. Well, you certainly have my support in this regard. I would hope that you'd just continue to share with us all that you feel strongly about that we might help you in waging modern war, if we have to do that, and being successful. The whole precision munitions issue, I think, is a critical one.

Let me just move on. There are a couple of parochial issues in Georgia other than the red-cockaded woodpecker. I wish it was that simple. The decision on the B-1 for Warner Robins was like a B-1 bombing raid, left \$70 million worth of infrastructure standing and devastated some 800 to 1,000 people. So our people there are still trying to recover from that raid. May I say that I appreciate your willingness, voluntarily, to come down with me to Warner Robins and see that facility for yourself.

The issues of depot maintenance that Senator Inhofe raised have been issues that we have been jointly struggling with for a long, long time simply because we believe together that any military service needs a basic, fundamental, core capability without which we cannot wage modern war. We cannot sustain ourselves on the battlefield once we get in a conflict or crisis. It's kind of a no-brainer to us and we've had a number of years here trying to deal with that question. Of course, Warner Robins is deeply involved as one of the great three ALCs that support our Air Force.

May I say that, in terms of Warner Robins, it maybe is a microcosm in terms of one base of how you go to war in a modern way. The old JSTARS program, coming out of Warner Robins, the whole emphasis on increased surveillance and reconnaissance on the battlefield that General Clark wanted to see, that you've testified for, is there. The whole issue of the F-22—there's not been a bigger supporter of the F-22 since day one since I got here 5 years ago. I believe in air dominance. I believe in first-see, first-fire, first-kill.

There's been no bigger booster of the C-130J program, the ability to move to a theater with great lift capability. We know we're going to have to move. The Army is actually sizing its transition divisions and forces to the C-130 itself. Again, the way we wage modern war.

I stand fully behind you in your effort to upgrade and innovate so that we maximize our leverage, as you point out, our technology in every way to minimize our risk and our carriers. I want everyone to know that this whole discussion on the B-1 is not some retrograde movement. We would like to just take care of the people that have invested their lives in this effort. We hope that when you come to Warner Robins you can have some insight as to what new missions these wonderful people might enjoy.

May I just get you on the record on a couple of points? Retention. It seems to me that when you spend \$6 million to train a pilot, or that great NCO who has had 8 years in the service and is really beginning to pay back in leadership skills and everything else for the training you invested in him, it's a crying shame for those 8- to 9- to 10-year veterans to bail out of the military, many with tears in their eyes. Saying what? Not that they don't like their job, but their family needs begin to take precedence.

One of those family needs is education. We have some legislation that we'll be putting forward to make the GI Bill more family-friendly, to allow that service man or woman a choice of having

that spouse and their kids pick up at least half of their unused benefits. Is that something that is in agreement with your thinking of some of the arrows in your quiver that you need to help with the retention challenge?

General JUMPER. Senator, as you and I have discussed before, we have a saying that we recruit the member but we retain the family. I am familiar with the Montgomery GI Bill and its provisions, and in my personal opinion that is exactly the sort of thing that helps us retain that family and keep that skilled member in our United States Air Force, yes sir.

Senator CLELAND. Thank you very much for your service to our country. Thank you very much Mr. Chairman.

Chairman LEVIN. Thank you, Senator Cleland.  
Senator Carnahan.

#### STATEMENT OF SENATOR JEAN CARNAHAN

Senator CARNAHAN. Thank you, Mr. Chairman. I want to welcome you here today General Jumper. Certainly your experience and your innovation in reshaping the Air Force makes you an exceptional candidate, and I commend you for that.

General JUMPER. Thank you.

Senator CARNAHAN. The B-2 has an impeccable track record, as was evidenced by the Kosovo operation. In prior testimony General Ryan indicated that the B-2 is "a centerpiece of our capability to project power now and it will be in the future." I certainly believe that statement to be true and I hope that the B-2 will further be used strategically to close the Air Force's access gap to Central, East and Southern Asia. Would you agree with this?

General JUMPER. I would, Senator, indeed. The B-2 in the performance and operation of Allied Force was better than any of us thought. I took great pains personally at the very beginning of that conflict to make sure that the B-2, the B-52 and the B-1 were part of that conflict.

With regard to the B-2, Senator, we have \$3.7 billion over the Future Year Defense Plan invested in the B-2 for its survivability, its lethality and its supportability, \$300 million in 2002. It does not do all that we would like to do with the B-2. But what it does do is it begins a program where we'll be able to take the aircraft from the current load of 16 precision guided or near-precision guided munitions up to 80 near-precision guided munitions. We think that this increase in lethality is going to help us with the fixed target problem that we have and enable us to, in combination with the F-22, handle any threat we see out there in the future. I appreciate your support for this marvelous airplane, Senator.

Senator CARNAHAN. Secretary Roche, when he was testifying here before this committee, indicated that in our future force F-22s may be required to escort the B-2 in battle. I understand that you have been developing a concept for such deployments in your Global Strike Taskforce plan. Would you describe the circumstances under which they would require such a force?

General JUMPER. Thank you for that question, Senator. We've developed a concept at Air Combat Command called Global Strike Taskforce which is a concept that will try to integrate us with the other services. As a matter of fact, I'm working closely with the

Navy, the Army and the Marine Corps so that we can develop jointly this concept.

Essentially what it does is it combines the attributes of stealth, as I've described before the F-22 and the B-2, to bring the B-2 into the daytime. The second element of it is that it describes an architecture for the horizontal integration of manned platforms, unmanned platforms and space platforms. When I say manned, I don't just mean airplanes, I also mean eyes on the ground with our special operations forces. When I say unmanned, I don't just mean UAVs, I mean unattended ground sensors and the technology that brings. Of course, combined with the high ground of space.

When you combine the persistence of the airborne platforms with the high ground of space, you have no place to hide. We would integrate these at the machine level, at the digital level, so we don't have human beings that have to interpret the digits in order for us to get precise target location and precise identification. That's the second element.

The third element is that we re-engineered the way we do our intelligence, so we refined and advanced the art of prediction. Right now our intelligence is based on a collection mentality. What we are trying to do is advance the art of prediction so that we are using our ISR assets during combat more to confirm that which we predicted than for pure discovery.

Finally, Senator, the concept provides for us to take the product of this information and provide what I call decision quality data to the commander on the ground, so that commander can take full advantage of these digital interfaces to get rapid decision quality data to decide whether you're going to strike the targets or make the next move or not, sensitive to the rules of engagement and the other sensitivities that go along with modern warfare. We're trying to advance this notion as the second phase of our transformation in the United States Air Force, and our contribution to joint transformation with the other services.

Senator CARNAHAN. If the B-2 will be escorted by F-22s, it seems to me that the B-2 will require the enhancement of its communication ability to make it more interoperable with other aircraft. I understand that some of the upgrades that were cut in the 2002 budget would have honed these capabilities for the B-2.

General JUMPER. Senator, you're exactly right.

Senator CARNAHAN. Would you explain the importance of upgrading the B-2s communications?

General JUMPER. It is on our top unfunded priority list to try and get those back. We fully intend to re-address this as we prepare the 2004 Program Objective Memorandum (POM). But in the trade-offs that had to be made we opted for the lethality first, and that's the incorporation of the new generation of 500 pound precision-guided munitions that will allow us to carry 80 on the airplane. These are tough tradeoffs, Senator, and we were forced to make them. I would hope to be able to come over and consult with you on ways to deal with this problem.

Senator CARNAHAN. Thank you Mr. Chairman.

Chairman LEVIN. Thank you Senator Carnahan. Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman. Three or four times you've had to use that term "tough tradeoffs." I don't want those

tradeoffs to be that tough. I don't think that we're adequately funded to take care of all of our needs. These things we're trading off are really critical. I'm glad Senator Carnahan brought up this thing on the upgrades, the Link-16. If we're going to fully utilize the opportunity that we have we're going to have to get it upgraded and get it in proper order.

Back when I was important, before the Democrats took control of the United States Senate, I was the chairman of the Senate Armed Services Subcommittee on Readiness and Management Support for about 5 years. I was able to visit virtually every installation of all the services around the world, or at least I tried to. I remember so well when I was looking at some of these problems that have to do with pilot retention and other things too; when out in the desert we had dropped from six Red Flag exercises down to four. Now, I'd like to hear your professional opinion, because I have heard this from the pilots. A lot of the things I've heard from the pilots you don't hear in these hearings up here. But in terms of their being able to keep their skills honed, do you think we should get back up to six Red Flag exercises?

General JUMPER. Senator, I do. The biggest advantage we have, and you and I have discussed this before, is our edge in training. Every air force in the world out there that could contend against us in some way is trying to figure out a way to deal with and beat the United States Air Force. This training edge that we have is one that we absolutely have to keep. It's absolutely precious to us. By the way, we are still the best trained air force in the world, make no mistake about it.

Senator INHOFE. This is when you use our pilots flying their aircraft, their pilots flying our aircraft, we beat them every time, in spite of problems we're having with modernization?

General JUMPER. The good news is when we go up against these aircraft it's their pilots flying their airplanes and that's what gives us the advantage. I agree with you completely, Senator, we should get back up to six Red Flag exercises.

Senator INHOFE. OK, Senator Carnahan brought up the Global Strike Taskforce. Is there anything more that you want to say about that?

General JUMPER. No sir. I think I've explained it and our efforts to try to—the main thing I want to emphasize is our efforts to try and coordinate this. It's an operational concept with the other services. This is not just the United States Air Force.

Senator INHOFE. OK. Getting back now to retention, I think Senator Cleland is right. It costs so much less to retain than to retrain. There are so many villains out there. It's not all one thing. They like to say the economy's good and the airlines are attracting these people. But it has been my experience that most of the pilots that we have in the Air Force and the Navy are there because they want to be the best, they want to defend their country. There's a deep sense of patriotism and pride in what they do. I remember one time a pilot when I guess it was at Corpus Christi Naval Air Station, he stood up and he said, "Well, this country has lost its sense of mission," thinking about some of these deployments that they didn't feel really related to their skills and their abilities. The programs that we have, the SRB, the Selective Re-enlistment Bo-

nuses, and the pilot bonuses, are they working? Are they helping? How much are they helping?

General JUMPER. Sir, on the pilot side it's too early to tell. But yes, they are indeed helping. On the enlisted side we for the first time this year will meet our goal in the first term retention.

Senator INHOFE. That's 55.6 percent?

General JUMPER. Fifty-five percent. The 75 percent and the 95 percent we attempt to get in the second term in the career. We're still going to be two or three or four percentage points short. But it's improving so I'm encouraged in this regard. I will tell you, Senator, there's another category of people out there that make it very encouraging. In fiscal year 2001 we expect to get 1,000 airmen back into the service who got out over the last few years. I tell the story of a young sergeant I met in Kuwait who told me the story of going out to work for a video graphics firm. It's exactly the job he wanted. He went out to California. He was making twice as much money as he had when he left. When he arrived he determined that the people he was working with were only staying as long as it took to be offered a higher salary, and then going to the next job. They didn't want to make friends. They didn't want the comraderie that he was used to in the Air Force. He said, "I couldn't get back in the Air Force quick enough." We see more and more of that, Senator, as time goes on. I'm encouraged by these things, but we are not over the hill yet.

Senator INHOFE. That would be interesting to see how that factors in statistically, because I'd like to believe that too. I think if they see that we're going to get back into a more intensified training and the things that originally attracted them to the services, perhaps that will have that same effect that you're mentioning.

General JUMPER. If you can indulge me for just another second Senator, when you go to Lackland Air Force Base at our basic training, you'll see the same scene at every graduation. You'll see some mother or father standing there being shaken by one of these young airmen saying, "Yes mom, it is me." They don't recognize their child after the basic training experience because they come out, as these young Americans I described before, no less patriotic, committed, dedicated, than any generation of Americans that ever served.

Senator INHOFE. I know that's true. Well in this day and age the necessity of dealing, of training and fighting wars in an integrated way with the other services, as well as the allied environment, what types of efforts are underway to ensure that the Air Force is able to successfully integrate with the other services and nations, and what role would the Joint Strike Fighter play in this?

General JUMPER. The Joint Strike Fighter brings stealth, persistent stealth, over the battlefield for the first time. This is necessary, as opposed to the targets that I described before, the Global Strike Taskforce, those are largely fixed targets that you use to what I call kick down the door to create the conditions for access. The Joint Strike Fighter is the persistence force. That's the one that stays over the battlefield to do things like close air support when the troops come ashore, time critical targeting, and to handle those critical targets that emerge very quickly that you can't deal with with a bomber that's 3,000 miles away. So we think that the Joint

Strike Fighter is also critical to our future capability. We look forward to that.

Now as far as the allies and the other services go, the alliance part is the toughest because as we go through this horizontal integration of space assets, and as I described before, much of that is classified and not available, not accessible to our allies. We've got to work around this and part of our effort with Global Strike Taskforce is to create this Air Operations Center structure that puts the classification at the proper level for us to share with our allies. This is going to be a big part, because when we go to war we go to war as a coalition or we go to war as an alliance. This happened throughout the decade of the 1990s and we've got to be ready for it. We're working on that very hard, Senator.

Senator INHOFE. That reminds me of another thing. During Kosovo, and during the target selection process, on many occasions I was up at Ramstein when they were going through this thing, and these target decisions by committees is something that really bothered me. I'm hoping if we get ourselves in a mess like that again that we can go in with the understanding, with our allies, if you want us in we've got to make these decisions—some way to streamline that process. My time has expired and I just will say to you I look forward to and it will be my honor to be serving with you in your new capacity.

General JUMPER. Thank you, Senator.

Chairman LEVIN. Thank you, Senator Inhofe. The 1999 White Paper on the long-range bombers, which has been referred to, emphasized the role that bombers are going to play in the Aerospace Expeditionary Force as follows: "Long-range bombers with their global range, massive firepower, and stealth integrate with air superiority, support, and other strike aircraft to form a synergistic force that is at the core of a lean, lethal, tailored, and rapidly responsive AEF, as was recently demonstrated in Operation Desert Fox." Now the report assumes, I believe, that bombers are going to operate mainly from the United States. Are operations from the United States consistent with assumptions which are made about the operating life of the bombers?

General JUMPER. Mr. Chairman, if you'll allow me, our concept calls actually for forward deployed bomber assets in these contingencies, at our bases in England and Diego Garcia and other places that are specified as bomber bed-down bases. We want to include the B-2 in this forward deployment capability and we are now, as you're aware sir, developing a shelter that will allow us to do the stealth maintenance on the B-2 in forward locations. When we do put these bombers forward we get greater sortie rates out of them and they're much more useful to us. When we have to, for surprise—strategic surprise—we can operate these airplanes from the continental United States. You saw us do this in Operation Allied Force where the B-2s flew as long as 17 hours one way, 34 hours round trip in some cases, 3 days on an airplane essentially to go back and forth.

Chairman LEVIN. Without the capability of retargeting.

General JUMPER. Yes sir. Well, we developed actually during the course of the battle. I was frustrated with our inability to retarget, so I went to Whiteman Air Force Base myself and sat down with

the young captains and we figured out how to do it. We created a very meager, flexible targeting capability which is exactly the type we're trying to expand, as was explained earlier, and become more sophisticated.

Chairman LEVIN. That's helpful. Is the assumption about the life of the bombers then that there will be these forward deployments?

General JUMPER. Yes sir, indeed.

Chairman LEVIN. Could you give us your views on the appropriate role for space assets and the use of space in the future?

General JUMPER. Yes sir. As I said before, I think our greatest leverage lies in space and we are familiar with Secretary Rumsfeld's work with the Space Commission and we embrace the findings of that commission. I know Secretary Roche and General Ryan are putting those provisions into effect. My perspective as the commander of Air Combat Command has been from the perspective of the impact on the battlefield. I look at systems like SBIRS and other ISR platforms that are in space, and see the benefit of being able to take the high ground of space to always fill in the blanks for our other ISR assets.

I also see the threat emerging, the threat that allows you to take your Visa card and dial up an address on the Internet and get a picture, almost instantly, of anywhere you want on the Earth. This is going to impact our ability to provide strategic surprise. We're going to have to learn to deal with this problem in our space control mission in the future. Because we won't be able to hide our intent to deploy into airfields, or the fleet hovering out there over the horizon, or Norm Schwartzkopf's left hook in Operation Desert Storm. We're going to have to be able to deal with this in the future. Mr. Chairman, I have not been deeply involved in this in my position at Air Combat Command, but if I am confirmed this will be a subject of primary concern for me in the future.

Chairman LEVIN. Senator Warner has led an initiative in the committee to increase the contribution of unmanned systems to our operating forces with the goal of contributing one third of our operational deep strike aircraft capability by the year 2010. I think there's wide-spread support for that approach in this committee. In order to achieve that objective the Defense Department will have to do an awful lot more in the next 4 years to position the Air Force and the other services to achieve that goal. Can you tell us your reaction to that goal and if you support it? Even if you don't, assuming the goal is adopted by the civilian authorities, how you would achieve that goal? What steps would you take?

General JUMPER. Mr. Chairman, I'm the guy who's supposed to fear UAVs the most. I'm the white-scarf fighter pilot that everybody says hates UAVs. As you may be aware, Mr. Chairman, I've worked personally very hard to accelerate the Global Hawk. I'm the guy who had us install Hellfire missiles on the Predator UAV, and we've tested over a dozen shots of the Hellfire missile off the Predator.

I do not fear UAVs, especially the UCAV which promises to give us great leverage in the suppression of enemy air defenses with its stealth capabilities. I would like personally to pursue the marriage of the UCAV with directed energy weapons to see if this promising technology would combine well with UCAV to pay off, which I

think it will. I don't know, Mr. Chairman, if the goal of one-third is correct or not. We have to work very hard on the concept of operations to make sure that we don't disturb other necessary elements of our readiness.

For instance, if the concept for UCAV is to put them into boxes and load them aboard C-5s or C-17s, we've got to make sure that the balance of airlift is proper. We have to make sure that when we get there, if you have to reassemble them and then test fly them, that we don't then jeopardize our ability to rapidly react by having that requirement at the other end. If we decide to fly them across the ocean we have to work on things like automatic air refueling and ways to get through airspace, etcetera. These are things that we have to work on.

None of these are insurmountable, but we have to make sure we've got the concept of operations correct, along with our commitment. But, Mr. Chairman, I hope I have demonstrated personally my commitment to UAVs. I'm committed, if I'm confirmed, you can count on the fact that commitment will continue.

Chairman LEVIN. That's a very thoughtful answer and you are extraordinarily well-prepared for the job to which you will be hopefully promptly confirmed. We again thank you for your service to this Nation, for your future service. We thank your family. We will hope to get your nomination acted upon soon.

General JUMPER. Yes sir.

Chairman LEVIN. We'll see if we can't get this confirmed just as quickly as humanly possible around here. We will stand adjourned with that optimistic note.

General JUMPER. Thank you, Mr. Chairman.

[Whereupon, at 4:40 p.m., the committee adjourned.]

[Prepared questions submitted to Gen. John P. Jumper by Chairman Levin prior to the hearing with answers supplied follow:]

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. My experience has shown that these reforms have been institutionalized and made part of the daily operations, oversight, and management of the Department of Defense in general and the U.S. Air Force in particular. I am aware that the sweeping changes produced by Goldwater-Nichols require continued diligence to ensure full compliance with the intent of the legislation.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. Goldwater-Nichols has been remarkably successful in getting the Services to work together as a Joint Team. For a decade and a half now, we've been a much more effective instrument of national security policy due, in part to the clearly defined position and authority of the Chairman, Vice Chairman, and combatant commanders.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their

missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. Almost 15 years of experience under Goldwater-Nichols has meant significant changes in the way the Defense Department operates. I am certain that legislative changes could provide further improvements. However, I would prefer reserving judgment on this until after I have studied any specific proposals and acquired some experience as a member of the JCS. At that time, I would be pleased to share my thoughts with the committee as appropriate.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Air Force Chief of Staff?

Answer. The Chief of Staff of the Air Force organizes, trains, and equips America's Air Force to best provide the Secretary of Defense and the combatant Commanders in Chief the forces they need to accomplish our national security objectives.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. It has been my distinct honor to serve on Active Duty in the United States Air Force for more than 35 years. During this time, I have been privileged to serve at every level of command, culminating with my current duties at Air Combat Command, overseeing all combat airpower based in the continental United States. My experience in the Pentagon as Deputy Chief of Staff for Air and Space Operations, and my earlier tours as Senior Military Assistant to the Secretary of Defense and as a Deputy Director for Pol-Mil Affairs on the Joint Staff provided me with a firm foundation in military operations at the tactical, strategic, and operational levels. My tour of duty as Commander, U.S. Air Forces in Europe, during the Kosovo conflict was particularly crucial in crystallizing my views on the effective employment of airpower in a Joint and Allied effort. My background provides extremely good preparation for the critical duties of Air Force Chief of Staff.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Air Force Chief of Staff?

Answer. A complete understanding of current Air Force and Defense Department issues is essential to my ability to discharge these important duties. Since my nomination, I have taken action to enhance my knowledge of such issues, and I pledge to diligently continue to study the broad national security issues that will require my attention if I am confirmed.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Air Force would prescribe for you?

Answer. I believe Secretary Roche will expect me to continue the efforts and initiatives of Gen Ryan in enhancing the readiness and resources of the Air Force, and to focus on the re-capitalization needed for our aging aircraft fleet. I also believe Secretary Roche will expect me to engage in the Quadrennial Defense Review discussions that will shape our strategy and force structure for the next decade. I pledge to work these issues alongside my colleagues in the other services.

*Question.* In carrying out your duties, how will you work with the following:

The Secretary of Defense.

Answer. I will work closely with the other members of the Joint Chiefs of Staff to provide the best possible military advice for the Secretary of Defense. As Chief of Staff, I will diligently work to ensure the readiness of air forces to accomplish the aerospace side of the Secretary's Defense Planning Guidance.

*Question.* The Secretary of the Air Force.

Answer. Americans are rightfully proud to have the world's preeminent aerospace force. I will work very closely with the Secretary of the Air Force to ensure we meet our Air Force Vision: Global Vigilance, Reach, and Power.

*Question.* The Chairman of the Joint Chiefs of Staff.

Answer. I will assist the Chairman in formulating military advice as a member of the JCS. I will diligently advise the CJCS on the capabilities of the Air Force and its preparation to support military operations by combatant commands. I will advise the President, NSC, and Secretary of Defense on matters within my expertise as required.

*Question.* The Vice Chairman of the Joint Chiefs of Staff.

Answer. I will assist the Vice Chairman to execute duties prescribed in statute and otherwise as directed by the Chairman or Secretary of Defense. I will advise the Vice Chairman of the capabilities and future requirements of the Air Force. I will also assist the Vice Chairman when he or she performs the duties of the Chairman because of a vacancy in the Office of the Chairman or in the absence or disability of the CJCS.

*Question.* The Chiefs of the other services.

Answer. I will cooperate and work closely with the Chiefs of our other services to help them carry out their responsibilities as members of the Joint Chiefs of Staff. I will seek to encourage synchronization of service capabilities to better produce the effects desired by our CINCs.

*Question.* The Air Force Vice Chief of Staff.

Answer. Like most commanders, I view my Vice as the person who has the insight and confidence to tell me when I'm wrong. I'll rely on my Vice for candid, resourceful counsel on the multitude of complex issues we face. I'll also expect my Vice to complement my efforts in communicating key Air Force issues.

*Question.* The Commander in Chief, U.S. Space Command.

Answer. I intend to support the efforts of CINCUSSPACECOM, to ensure America's interests are both protected and advanced in space. Space offers tremendous potential for our country and I will work very closely with my colleagues in U.S. Space Command as we implement the recommendations of the Space Commission.

*Question.* The Commander in Chief, U.S. Transportation Command.

Answer. I view TRANSCOM as absolutely indispensable to our Air Force, from the way it moves a young airman's family between duty stations, to its ability to project our forces into harm's way with the sustainment necessary to protect our people and win the fight. I'll work with the CINC to improve our ability to do these things.

*Question.* The Commander in Chief, U.S. Strategic Command.

Answer. I will keep the Commander in Chief U.S. Strategic Command advised of the readiness of the air forces to support Strategic Command operations.

*Question.* The Commander in Chief, U.S. Special Operations Command.

Answer. Clearly an area of critical importance, I'll ensure that the Air Force is providing the CINC with the right equipment and fully trained people to execute these demanding missions. As with the other officials named above, a forthright dialogue is the way to get that done.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Air Force Chief of Staff?

Answer. As we continue to refine our National Security Strategy and National Military Strategy our Expeditionary Aerospace Forces (EAFs) must continue to evolve to include the robusting of our low density high demand assets. Our greatest challenge remains the requirement to advance new capabilities while maintaining the robust readiness required to meet day-to-day warfighter requirements. It is imperative we develop our Global Strike Task Force (GSTF), a kick-down-the-door force that will assure access and aerospace dominance for all our joint forces, yet our current aging airframes must be sustained at a level enabling rapid response to any present threat. We will continue to address the challenge of retaining our skilled personnel, as well as meeting the needs of our deteriorating base infrastructure.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. Day-to-day readiness of our aging aircraft fleet depends on continued robust funding of spare parts, aggressive efforts to enhance retention of skilled personnel, and engaged unit leadership on our flight lines. I plan on focusing much of my efforts on these three essentials. Moreover, I plan to actively pursue implementation of the Global Strike Task Force concept alongside my fellow service chiefs so as to provide the Department a compelling joint capability that incorporates the key lessons of the 1990s and addresses the emerging threat.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Air Force Chief of Staff?

Answer. Because the Chief of Staff is primarily responsible for providing properly trained and equipped forces to the Combatant Commanders, the most serious problem facing us today is adequate resources to accomplish that task. No matter how you slice it, the Air Force needs more funding to provide the essential tools to our warfighting commanders. Without recapitalization of our aircraft fleet, we face a downward spiral in capability that will affect the options available to the National Command Authority. Furthermore, without recapitalization we can never achieve the savings, both in dollars and American lives that could be realized through the completion of the AEF concept and the implementation of capabilities like the Global Strike Task Force.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. I recognize that fiscal realities will constrain the funds available to us and I'm prepared to aggressively manage the funding entrusted to the Air Force to ensure we get the absolute maximum in combat power for every dollar of the taxpayer's money we spend. The Air Staff cannot do this alone, however. I will tell subordinate commanders, at all levels, that I consider sound fiscal management an integrity issue. We can accept nothing less from those who spend the funds. The immediate timeline for solutions has already been dictated by the budgeting process—we already know what we can buy and when. Obviously, I would hope to affect that process in the long term by continuing to keep this administration and Congress informed of our needs.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues, which must be addressed by the Air Force Chief of Staff?

Answer. I intend to follow the objectives put forth by Secretary Rumsfeld and Secretary Roche that include transformation, readiness, retention, and recapitalization.

Transformation, because the Air Force is inherently transformational—constantly adapting ourselves to new threats and leveraging new technology in order to posture ourselves to face the challenges of an uncertain future.

Readiness, because it is the heart and soul of our ability to perform our mission on a day-to-day basis, and is the hallmark of our combat capability.

Retention, because we can only be successful through the energy and dedication of skilled and motivated personnel.

Recapitalization, because we must recover from a decade-long spending hiatus to provide the tools our Airmen need to fly, fight and win.

#### STRATEGIC AIRLIFT REQUIREMENTS

*Question.* What is the biggest challenge for the Air Force in meeting strategic airlift requirements and what would you do, if confirmed as Chief of Staff of the Air Force, to meet that challenge?

Answer. The largest challenge remains the reliability of the C-5 Fleet and the modernization of this fleet. If confirmed, I will place a strong emphasis on the AF's 2-phase program to modernize the C-5. Phase I is an Avionics Modernization Program that replaces unreliable and unsupported avionics components. Phase II is a reliability and re-engining program providing for commercial replacement of the aircraft's powerplants and the replacement of "bad actor" hydraulic, landing gear, and fuel system components among others. The resulting goal of this program is a 75 percent mission-capable rate for the C-5 fleet.

*Question.* The Air Force has completed, but has not made available to the committee, the Outsize/Oversize Analysis of Alternatives for strategic lift aircraft. That analysis is required for Congress to evaluate possible alternatives for providing strategic airlift.

If confirmed, when do you intend to forward that analysis to Congress?

Answer. The Outsize/Oversize Analysis of Alternatives is currently in final coordination with AMC/CC. We intend to forward the study to Congress following the OSD Strategic Review and QDR.

#### MOBILITY REQUIREMENTS STUDY

*Question.* What priority would you place on carrying out the strategic airlift recommendations of the Mobility Requirements Study (MRS-05)?

Answer. MRS-05 provided the most in-depth analysis of airlift requirements to date; CJCS, Service Chiefs, and CINCs agreed to the airlift requirement of 54.5 MTM/D. However, MRS-05 did not resolve the fleet mix. The Outsize/Oversize Analysis of Alternatives (O/O AoA), the OSD Strategic Review, and the QDR will address the most effective and fiscally responsible fleet mix. The AF is awaiting firm

follow-on requirements as well as requirements derived from MRS-05, O/O AoA, and the QDR before negotiating follow-on contracts.

#### STRATEGIC FORCES

*Question.* Do you believe that the United States should retain a strategic Triad of offensive nuclear forces for deterrent purposes?

Answer. Yes.

*Question.* Do you believe the current Air Force bomber roadmap is sufficient to sustain a bomber force to perform its strategic nuclear missions?

Answer. Yes, the Next Generation Bomber Study demonstrates how modernization of the bomber fleet will provide new bomber equivalent capability at significantly less cost. However, as a part of the DOD's National Military Strategy Review all force structure and modernization priorities are being re-evaluated. The Air Force needs a minimum of 157 bombers (B-52, B-1, B-2) at their *full capability* to employ a *variety of weapons* across the full spectrum of conflict.

#### INTELLIGENCE, SURVEILLANCE, AND RECONNAISSANCE (ISR)

*Question.* On a recurring basis, regional Commanders in Chief (CINCs), express significant concern about the responsiveness and availability of intelligence, surveillance and reconnaissance (ISR) assets to support their respective theaters, both in peacetime and during conflict. A review of recent budgets indicates relatively modest investment in the airborne ISR assets CINCs are most concerned about, compared to the large investment in national level ISR assets.

In your view, is the investment strategy in theater level and national level ISR assets appropriately balanced?

Answer. Yes. There are important modernization and acquisition priorities for both theater- and national-level ISR assets. If confirmed, I will work to ensure that the needs of the regional CINCs are appropriately reflected in the Air Force budget.

*Question.* In view of the risks associated with manned reconnaissance, as pointed out by the recent EP-3 incident, what is your vision for ISR in the future, both manned and unmanned?

Answer. We will continue to move forward with manned, unmanned and space reconnaissance assets, but will look to better integrate the information collected by horizontal integration of all of these assets. This combination of manned, unmanned and space platforms will talk together at the digital level to resolve ambiguities of target location and target identification. Together, they will provide the right information to predict the enemy's intentions and successfully execute air operations to defend national interests.

#### INFORMATION DOMINANCE

*Question.* As you are well aware, Joint Vision 2020 identifies information dominance as a key enabler of mission success. This is especially true for precision strike operations, wherein full situational awareness and assured communications are critical. Information operations and information assurance assume key roles in current and future warfare.

What is your view of the role of information operations in current and future military operations?

Answer. Information Operations personnel are part of our new warrior class, an integral arm of the Air Force, and information operations in synchronization with traditional kinetic means, will remain a critical element of our strategy to fight and win future conflicts.

*Question.* Are you satisfied with the unity of effort within the Air Force and within the Department of Defense towards integrating information operations into overall military operations?

Answer. The Department of Defense has done an excellent job of focusing on the discipline of Information Operations. As technology develops and there are more available, reliable means of communications, there will be new opportunities and challenges faced by DOD. The Air Force will continue to work with all DOD agencies to seek out better ways for exploiting those opportunities and protecting our systems from adversary countries' efforts to do the same. In particular, we must bring IO to the operational and tactical levels of war.

#### JOINT RESPONSE FORCES

*Question.* A recurring theme in the on-going strategic review and Quadrennial Defense Review has been the need for standing joint task forces or joint response

forces that habitually train together and can quickly respond to support contingencies around the world.

Do you believe that there is a need for such joint response forces?

Answer. The concept of joint response forces is still in proposal stage and I have only limited exposure to the details of the proposal. I'm certainly willing to study any concrete proposal along these lines or to offer my views on how best to proceed. I believe that the current Title 10 system, refined under Goldwater-Nichols, has proven its worth and yielded real success. The Services operate effectively to provide trained, equipped, and ready forces for the specific needs of the combatant commanders. There may be a place for a standing Joint Task Force (or Joint Response Force) Headquarters, consisting of command and planning elements organized under a warfighting CINC and exercised jointly by USCINCFCOM. However, that requires further study and coordination with the services.

*Question.* What implications does this concept have for the way the Air Force is currently organized, including strike assets, global response assets, and ISR assets?

Answer. The AEF provides the current Air Force construct for organizing and presenting forces to combatant commanders. Air Expeditionary Force (AEF) packages represent capabilities designed to produce the effects every CINC calls for while helping us better manage the tempo of our personnel and equipment. If a new joint response force concept were created, the Air Force would perform our role within the existing EAF construct.

*Question.* What improvements are needed in current Air Force and joint command and control systems to support such a concept?

Answer. We are very focused on development of a horizontally-integrated Command and Control, Intelligence, Surveillance, and Reconnaissance (C<sup>2</sup>ISR) system that will link together space, manned, and unmanned platforms using machine-level conversations to produce decision quality information for commanders and target quality information for cockpits. This system, by its very nature, will include and integrate all service C<sup>2</sup>ISR capabilities. Such a system would also enhance the effectiveness of a Joint Response Force if it were to come to pass.

#### OFFICER MANAGEMENT ISSUES

*Question.* We consider promotions to general and flag officer ranks as identifying military officers for very senior positions that should be filled only by officers with the very highest moral and ethical values.

Do you believe the officer corps has confidence in the integrity of the officer promotion system in the Air Force?

Answer. Yes.

*Question.* What role do you expect the Air Force Chief of Staff to play in the officer promotion system?

Answer. Title 10 calls for the SECAF to oversee the officer promotion process and govern all promotion board actions. I will advise the secretary as he seeks to ensure only the highest caliber individuals are nominated and promoted.

*Question.* What role do you expect the Air Force Chief of Staff to play in the general officer management and nomination process?

Answer. I will engage in continuous collaboration with the secretary on the management and nomination of general officers with the goal to ensure only those officers who possess the highest standards will be nominated. U.S.C. Title 10 guides the SecAF and CSAF in the management of general officers, which I intend to use as a starting point for guaranteeing that USAF senior leaders remain the best possible officers in the USAF.

*Question.* If confirmed, what steps will you take to ensure that only the most highly qualified officers are nominated for promotion to general and flag officer rank?

Answer. The Air Force has already taken several important steps to ensure our system is fair and effective. Throughout the last decade, revisions in our promotion system have withstood scrutiny from both outside and inside the Air Force. I will make certain my predecessors' efforts to improve the promotion system remain viable and I will provide the best possible advice to the SecAF as part of my U.S.C. Title 10 responsibilities. I will work this particular issue energetically, and will help guarantee my staff and that of the secretary maintains an open dialogue with this committee on these critical general officer matters.

#### PROTECTED COMMUNICATIONS

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the armed forces as reprisal for making a protected communication. By definition, protected communications include communica-

tions to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. I strongly support the statutory prohibition on taking retaliatory personnel actions against those who make protected communications. I believe any such retaliation strikes at the heart of honest discourse that must occur between airmen and their leaders, inside and outside the chain of command. In Air Combat Command, my Inspector General has made investigation of all IG complaints, including reprisal, a priority.

*Question.* If confirmed, what actions will you take to ensure that senior Air Force leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. If I am confirmed, I will do three things to ensure Air Force members remain confident they will be protected when they make these types of communications: (1) I'll ensure every airman and civilian member of the Air Force understands their right to make these statements and to be afforded the protections of the statute, where necessary; (2) I'll devote the needed resources to permit the Inspector General to properly investigate allegations of reprisal whenever they occur; and (3) I'll stress to commanders the importance of acting appropriately to punish those found to have engaged in reprisal.

#### OPERATING TEMPO

*Question.* The services have been very concerned in recent years about the impact of the pace of operations, or "ops-tempo," on the quality of life of our people in uniform and specifically on their willingness to reenlist.

What steps do you plan to take to address the Air Force opstempo concerns?

Answer. We are stretched too thin and are wearing people and equipment out. Sustained operations tempo is a major factor in recruiting and retention efforts. It has taken its toll on the force—which is still deploying over 3 times more often despite the drawdown—a total force now 67 percent (AD now 60 percent) of its former size. High ops-tempo also compounds challenges of an aging fleet, by putting additional stresses on airframes that already require extensive maintenance to maintain mission capable status. High ops-tempo, downsizing, and other factors have placed us in a position of doing more with less. The Air Reserve component is integral to reducing Active Duty ops-tempo, however, high operations rates also challenges ARC recruiting and retention. The Expeditionary Aerospace Force (EAF) brings much needed predictability and stability, incorporates total force, and provides for a reconstitution period, providing tools to better manage the force. The EAF construct determines how the Air Force is organized, trained and equipped, and provides the tools to better manage the force. Additionally, we are working with ANG and AFR to better manage the tempo of our operations.

#### RECRUITING AND RETENTION

*Question.* The Air Force achieved its recruiting goal for Active Duty personnel for fiscal year 2000 and projects that it will meet its Fiscal Year 2001 Active Duty recruiting objectives. The Air Force Reserve missed its fiscal year 2000 recruiting goal, and it does not appear that the Air National Guard will achieve its fiscal year 2001 goal.

What steps will you take, if confirmed, to assist the Air Force in meeting its recruiting and retention goals?

Answer. Your continuing support of our recruiting initiatives has helped us meet our recruiting goals without lowering our standards. That support included bonuses, adjusted pay initiatives, retirement reforms, and improvements in medical benefits, which helped us achieve our fiscal year 2000 recruiting goals, and has kept us on track again this year. We still need your help to attract the highest quality individuals into the military service. If confirmed, I will aggressively work with the appropriate agencies to ensure the AF continues to meet the recruitment goal, both in terms of quality and quantity.

In an effort to meet our recruiting goals, the Air Force held a comprehensive review of recruiting and accessions processes. One of the most important initiatives from this review was to increase our recruiter force. We increased the number of recruiter authorizations from 1,209 to 1,450 in fiscal year 2000, and we project 1,650 recruiter authorizations by the end of 2001. The Active Duty drawdown has also created an additional recruiting challenge for our Guard and Reserve components. As

a result, the Air Force Reserve is increasing its recruiting force in fiscal year 2001 by 50 recruiters (to 564), and the Air National Guard is adding 65 recruiters (to 413) over the next 3 years.

Furthermore, we launched a multi-faceted marketing campaign, including NASCAR, television and movie theater advertising. We are synchronizing our efforts through a newly established marketing and advertising office. Our ads depict the teamwork, dedication, and technological sophistication that characterize the Air Force. The Air Force Reserve and Air National Guard also launched a national campaign that includes television, radio, and outdoor advertisements. We also continue to emphasize to all our Air Force people that "We Are All Recruiters." With an emphasis on publicity and our own people telling the Air Force story, we broaden the Nation's awareness of the Air Force.

The Air Force is also expanding accession incentives. Enhanced enlistment bonuses are focused on 85 critical skills, which have resulted in and increase in 6-year enlistment from 11 percent in fiscal year 1998 to 55 percent in fiscal year 2000. In January of this year the AF Recruiting Service and the AF Directorate of Personnel began evaluating "signing bonuses" of up to \$5,000 for Mechanical, Electrical and other designated skills to help meet recruiting goals during the hard-to-recruit months of February through May. We are considering several initiatives to attract more Reserve Officer Training Corps (ROTC) candidates, including offering cadets contracts after their freshman year rather than waiting until the end of their sophomore year, as well as recommending legislation to permit an officer accession bonus. We actively pursue the talent in our enlisted force through enlisted commissioning opportunities—we have nearly quadrupled the number of prior service commissioning accessions from 169 in fiscal year 1998 to 647 so far in fiscal year 2001. This program offers a great incentive for people who want to continue their Air Force career.

*Question.* Current projections indicate that the Air Force will not meet its 2nd- and 3rd-term retention goals and will miss its required end strength by 4,100.

Why do you believe the Air Force is having trouble retaining 2nd- and 3rd-term airmen?

*Answer.* The Air Force is recovering from several years of low retention rates from first-term airmen through career airmen. With your support we have extended reenlistment bonuses, increased housing allowances, and expanded the Montgomery GI Bill benefits, helping us to successfully turn the corner on first-term enlisted airmen retention. Part of the trouble with retaining second-term and career airmen is they have been overtasked year after year; collectively changing their mind to stay in the AF is more difficult than convincing a 1st-term airmen to give us a second chance. These airmen are the backbone of our enlisted force and they endure the increased load to train our new accessions plus carry out the day-to-day work required of experienced technicians. The AF increased total accessions to offset poor retention in an effort to meet end-strength goals. AF apprentice (3-level) manning is currently at 115 percent and journeyman (5-level) manning is at 80 percent. In the short-term, this significantly impacts our experience levels. Our journeyman, who make up the majority of 2nd-term reenlistments and a portion of the career reenlistment categories, are working hard to carry the load as we work to balance the experience within the force. If, however, we sustain our 1st-term reenlistment goal, these people will become tomorrow's experienced technicians and mentors, easing some of the experience inequities.

*Question.* If confirmed, what steps would you take to address this problem?

*Answer.* If confirmed, I will continue to fight against the key factors that cause low retention. These factors include wages, high operations tempo, quality of life issues, and leadership. The primary tool to mitigate low retention is the Selective Reenlistment Bonus, which offers a bonus to 76 percent of our enlisted skills. We continue to look for initiatives to improve retention. The AF held a Retention Summit composed of MAJCOM senior officer/enlisted representatives, AFPC and ANG reps—19 initiatives were approved, including Career Assistance Advisors, Patient Advocates, Retention Toolkit, enhanced Spousal Employment program and subsidized in-home childcare in support of extended hours. Four Red Team/Integrated Process Teams are now studying NCO Retraining, Enlisted Bonuses, Pay Structure and Montgomery GI Bill/Tuition Assistance.

*Question.* The Air Force has requested an end strength of 358,800 personnel, an increase of 1,800 over the fiscal year 2001 authorized end strength of 357,000.

Do you think the Air Force can achieve this increased end strength if it misses its fiscal year 2001 authorized end strength by more than 4000 airmen?

*Answer.* The requested end-strength is justified and we will increase accessions and improve our retention to meet our goals. People are our most vital resource, our most crucial readiness component. Our long-term goal is to stop the decline in

end-strength and start growth to size the force to support increased operations tempo. The Air Force has undergone a 38 percent decrease in end strength since fiscal year 1998. We base military end-strength needs on combat capability after rightsizing infrastructure, taking advantage of technology, reengineering functions, and competing non-military essential support functions. However, the number of peacekeeping missions, relief efforts and other military operations have steadily increased—driving the need to increase aircrews, maintainers and combat support. Also, updated manpower requirements models, driven by lessons learned from real-world operations, and stresses on the fleet due to aging aircraft and longer sortie durations, have resulted in increased manpower requirements.

*Question.* The Air Force is having difficulty retaining officers with skills that are in high demand in the private sector. This includes pilots, scientists, engineers, and communications computer systems officers.

If confirmed, what steps would you take to improve officer retention, particularly in these high demand areas?

*Answer.* For pilots, increased production and longer Active Duty service commitments improve overall accessions and the average time a pilot remains on Active Duty. With your help, the Air Force significantly improved the Aviation Continuation Pay (ACP) program. For both our pilots and non-rated officers, our AEFs are helping to manage operations tempo, and recent Quality of Life improvements have removed some of the “irritants” that drive quality people to other jobs in the civilian economy. The cumulative effect of bonuses, the improved rhythm of our AEFs and improvements in quality of life help our total retention efforts.

#### QUALITY OF LIFE ISSUES

*Question.* The Air Force has made significant strides toward improving the quality of life of its personnel. Despite these improvements there are still significant problems. By some estimates the Air Force must still revitalize over 58,000 housing units and an equally large number of barracks spaces.

In this period of constrained resources, if confirmed, how would you weigh the allocation of resources to modernization of the Air Force and improving quality of life?

*Answer.* People are our most vital resource. We must continue to maintain a balance between caring for our Airmen and paying for the tools needed for mission accomplishment. Your help over the years on pay, retirement and health care has been much appreciated. Quality of life issues are terribly important to attract and retain great people, but so is quality of service. Quality of service addresses the need to ensure we give our airmen the proper tools to do the tough jobs we ask them to do in places like Kuwait and Saudi Arabia and Turkey, in the no-fly zone enforcement where combat occurs on a daily basis. The same is true in the Balkans and Korea. Quality of service is not just about equipment with which they operate, but the ranges and hangers and buildings and shops in which we ask them to do their work. Therefore, I will work to ensure an effective balance between quality of life and modernization spending is maintained.

*Question.* Should the Air Force allocate more resources toward improving quality of life for our forces deployed overseas? If so, why?

*Answer.* Focus on quality of life is required for all of our forces, wherever they are stationed. As a result of my recent experience as COMUSAFE, I am aware of some the unique quality of life initiatives (COLA, DOD schools, etc.) that require particular attention. If confirmed I will ensure these special emphasis areas continue to be properly addressed.

*Question.* In your view, can and should our allies provide more support toward improving the quality of life of our military personnel and their families deployed in Europe and the Far East?

*Answer.* Our allies in the Far East and Europe already provide significant support to our forces overseas, and our regional commanders are actively engaged with our allied counterparts to ensure that level of support is sustained. Consideration of increased support should be addressed at policy level. If confirmed, I will work to keep appropriate policymakers informed of Air Force requirements for continued overseas support.

#### HOMOSEXUAL CONDUCT POLICY

*Question.* Do you support the current Department of Defense Homosexual Conduct Policy?

*Answer.* Yes, I support the current policy.

*Question.* If confirmed, do you plan to make any changes to the basic policy or its implementation? If so, what changes will you propose?

Answer. No, I don't plan to make any changes if I am confirmed. The Air Force/JA monitors all cases other than those at Basic Military Training School (BMTS). BMTS separations are mostly voluntary. The AF system for monitoring these cases has been praised by DOD and there have been only a handful of violations of the policy within the Air Force over the past 5 years, and those have been characterized by a lack of familiarity with the policy rather than through malice or prejudice.

#### ANTHRAX VACCINE IMMUNIZATION PROGRAM

*Question.* DOD considers the biological agent anthrax to be the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA approved vaccine.

If confirmed, will you support and enforce the Anthrax Vaccine Immunization Program if DOD reinstates it?

Answer. Yes.

*Question.* How do you believe the Air Force should respond to service members who refuse to take the vaccine when ordered to do so?

Answer. We should carefully educate our people on the very real danger posed by anthrax, and we should inform them of the safety and effectiveness of the vaccine. This is a force protection issue. We will continue to make experts available to answer any questions our service members have. In the past, almost everyone who has been fully informed of the threat and the protection afforded by the vaccine has chosen to be inoculated. For those few members who ultimately refuse an order to be vaccinated, appropriate disciplinary action should be considered. Any disciplinary response will be accomplished at the lowest appropriate level.

#### MONTGOMERY GI BILL

*Question.* Almost all new service members enroll in and contribute to the Montgomery GI Bill. Only about half use their benefits, and many do not use all of their entitlement. Many airmen say they would like to stay in the Service, but feel they have to leave so that they can provide for the education of their spouses and children. Some of these service members might stay in the service if they could transfer all or a part of their unused entitlement to GI Bill benefits to family members in return for a service commitment. Service Secretaries could use this retention tool selectively, just as they use reenlistment bonuses.

Do you support this approach?

Answer. Yes, I have always been a firm believer in the theory that we recruit the individual but retain the family. I see the transfer of educational benefits to family members as another way of helping us achieve our retention goals.

*Question.* If confirmed, will you give serious consideration to how the Air Force can use the transfer of unused GI Bill benefits to family members as a retention tool?

Answer. Yes, if confirmed I will work to package the transfer of these benefits in the manner that best meets the needs our airmen and our service's retention goals.

#### GENDER INTEGRATED TRAINING

*Question.* Basic training, which may be the single most important phase of an individual's life in the military, is structured and defined differently by each Service.

Do you believe the current DOD policy of allowing each of the services to establish its own policy for gender integration in Basic Training is effective?

Answer. Yes. Each of the Services has its own needs when it comes to basic training. I know that a great deal of time and effort has been devoted to find the right answers for the Air Force and I expect that work to continue. The essential element for me is that we must train our newest members to handle the physical and psychological tests that await our Air Force—our training program must address that squarely and I'm dedicated to achieving that objective.

*Question.* If confirmed, will you propose changes to Air Force policies? If so, what changes will you propose?

Answer. I am sure that I will gain additional perspective on this issue if I am confirmed as Chief of Staff but, at present, there are no immediate changes I would make in our basic training policies.

#### PRIORITIES IN TACTICAL AVIATION

*Question.* Over the past several years, the Senate Armed Services Committee has devoted substantial attention to the condition of tactical aviation. The committee

concluded that there are persistent and serious problems, including aging of the aircraft fleet, shortages of certain types of tactical aircraft, and inefficient production rates. There have been continuing concerns about the affordability of the overall tactical aviation modernization effort, focusing on the three major programs, F-22, the F/A-18E/F, and the Joint Strike Fighter.

Do you believe that all three tactical aviation modernization plans are affordable?

If not, what criteria should Congress use in deciding which programs should go forward?

Answer. Current fighters in the Air Force inventory are rapidly approaching obsolescence due to new fighter and air defense threats. At the F-22 Initial Operational Capability (IOC) date (Dec 05), the average age of the F-15C will be 26 years. Supportability is becoming very expensive in terms of maintenance and manpower costs. Many of our parts suppliers are moving on to commercial work. The F-22, a truly transformational design with its unique maneuverable stealth and super-cruise, will provide rapid air dominance.

A-10 and F-16 survivability against advanced threats are also becoming an issue, and the F-16 is rapidly approaching the end of its service life. Additionally, we have planned to cross flow new technologies from the F-22 to the JSF, so it is critical to keep F-22 development on schedule to ensure JSF can affordably replace F-16 and A-10 prior to the end of their service lives. This mix is the most cost effective fiscal and operational solution to Air Force fighter modernization.

The Air Force has historically (fiscal years 1975-2005) averaged 16 percent of service Total Obligation Authority (TOA) on RDT&E and Procurement of aircraft. Procuring both the F-22 and the JSF, both of which are critical to our modernization, will expend less than this historical average. In its peak expenditure year, the F-22 encompasses just 5.6 percent of Air Force TOA or 1.7 percent of the DOD TOA, both of which are comparable to past modernization investment levels. If we committed the same percentage of national resources for the F-22 that we did for the F-15, we would be buying an inventory of 1000 F-22s.

#### F-22 PROGRAM

*Question.* Over the past several years, the F-22 program has been operating under a legislated production cost cap. This cap was based on the Air Force's assessment of what would be required to complete the buy of 339 aircraft. At the time, it was understood that there were other offices, including the Congressional Budget Office (CBO) and the Cost Analysis Improvement Group (CAIG) that had higher estimates of F-22 production costs. Over the past couple of years, the committee has believed that F-22 production would fit within the cost cap, largely due to Air Force assurances that the various cost estimates were beginning to converge.

This year, the Air Force estimate of production costs for the F-22 is up by roughly \$2 billion. In such a circumstance, we should have expected that this increase would have indicated some further convergence of the cost estimates. Press reports, however, indicate that the independent cost estimates have begun to diverge from the Air Force estimate.

Why, in your opinion, are these cost estimates diverging?

Answer. F-22 funding projections are well within historic norms of spending for aircraft development and procurement as a percentage of AF TOA, and the AF is proactively managing costs to remain within Congressional caps.

*Question.* What steps should the Air Force take to ensure that it will be able to produce enough aircraft to meet the requirements for the program within the cost cap?

Answer. Currently, the F-22 program is structured around a buy of 339 aircraft. We are studying in this strategic review capabilities needed for the future, and what number of F-22s will meet those needs. The F-22 is a huge leap in capability—an airplane that can super-cruise at well above 1.5 Mach; has very good legs; has stealth capabilities that are revolutionary. So the need for this airplane is very clear. The numbers will be the question as we go through this review. It is in testing right now and doing very well. In fact, its signature, its capability to super-cruise, its avionics capability and its aerodynamic capabilities are as we predicted them and, in some cases, better. We are behind on testing, but we're not going to rush that at the expense of safety or missing something as we develop this airplane. Testing is something you don't want to rush. It's not something that you restrict to a timeline—you do this in a very structured way. Overall, the program is in very, very good shape.

## MODERNIZATION

*Question.* At a recent committee hearing, Air Force officials testified that the F-22 will not be able to meet its congressionally-mandated cost caps for either development or production.

What are your views on cost caps in general, and, specifically, on the F-22 cost caps?

*Answer.* F-22 funding projections are well within historic norms of spending for aircraft development and procurement as percentage of AF TOA and the AF is proactively managing costs to remain within Congressional caps, but caps are currently constraining our testing. The F-22 flight-testing has been extremely successful—over 1260 hours, and the aircraft is demonstrating some revolutionary capabilities. Some delays have been encountered, due in part to late airframe deliveries, requiring additional time before initiating operational testing. To meet the additional costs associated with these delays, the Air Force recommends removal of the EMD cost cap. The actual development is 95 percent complete—EMD caps are currently constraining continued flight-testing.

*Question.* The Source Selection decision for the Joint Strike Fighter is scheduled in the near future.

Do you think the programmed quantities of the Air Force variant of this aircraft will be affordable?

*Answer.* The JSF program is focused on affordability. JSF will provide a lower cost, multi-role fighter—the bulk of the force and a compliment to the F-22. The quantity of aircraft purchased will help keep costs lower. In addition, our contracting strategy provides incentives to the contractor to meet affordability goals. Three of eight key performance parameters for this program directly target reductions to Total Ownership Costs. Cost as an independent variable (CAIV) has been used during development to balance cost and operational capability in established weapon system requirements; the CAIV process will continue to be an integral part of the JSF program, ensuring a next-generation fighter—in the numbers we require—at a price we can afford.

*Question.* What are your views on the future roles that will be played by Unmanned Combat Aerial Vehicles in the Air Force?

*Answer.* TheUCAV will join the B-2, F-22 and JSF in our vision of an all stealth force. TheUCAV holds great promise for the future. Many challenges remain in terms of how we operationalize its capability as we move into the future.UCAVs will allow us greater degrees of stealthiness to be able to operate against projected anti-access threat. If confirmed, I intend to see to the development of a low life-cycle cost, mission effective system design and demonstrate the critical technologies, processes, and system attributes for aUCAV weapon system as well as potential SEAD/Strike capabilities.

*Question.* In recent operations, it appeared a larger percentage of weapons used were precision-guided.

*Answer.* PGMs were highly effective in the Air War Over Serbia, resulting in decreased risk and limited collateral damage. The USAF employed over 5,289 precision munitions against nearly 64 percent of all desired impact points. The collateral damage rate was less than 0.1 percent.

*Question.* Are inventories of precision-guided weapons sufficient?

*Answer.* No. They are still well below desired inventory level and failure to increase stockpiles risks wartime shortfalls. Northern/Southern Watch and Allied Force significantly reduced inventory levels such that we must use War Reserve Munitions for training. Major acquisition programs will begin to increase precision inventories with the addition of JDAM, JSOW-B, and JASSM, however, serious shortfalls in standoff and legacy munitions persist through FYDP.

*Question.* What are the major developmental thrusts that are necessary to improve the accuracy and lethality of our weapons inventories?

*Answer.* I believe the JDAM, WCMD, JASSM, SDB, and ABL programs are the major developmental thrusts and these programs are on track.

## F-22 EVENT-BASED DECISION MAKING

*Question.* The Air Force is required to manage the F-22 program on the basis of achieving certain milestones, rather than “graduating” when certain time on the calendar has elapsed. There have been delays in the testing program that will delay the start of operational testing by up to one year from the previously planned date. Nevertheless, there is still some risk that developmental testing may not be able to support operational testing even on this delayed schedule.

Can you assure the committee that the Air Force will not proceed to operational testing before the program has completed sufficient developmental testing?

Answer. Yes! If confirmed, I will be committed to ensuring the F-22 does not proceed to operational testing until sufficient developmental testing has been completed. It is critical that developmental testing be fully conducted in order to have the best possible capabilities ready for the operational testing. I will ensure the Air Force completes all necessary testing prior to certifying the F-22 is ready to enter DIOT&E.

#### UNMANNED AIR VEHICLES

*Question.* In the Fiscal Year 2001 Floyd D. Spence National Defense Authorization Act, Congress set a goal that within 10 years one-third of U.S. military operational deep strike aircraft would be unmanned. In addition, Congress invested an additional \$50 million above the President's budget request in the Air Force Unmanned Combat Air Vehicle.

Do you support the 10-year goal of one-third of U.S. military operational deep strike aircraft being unmanned?

Answer. Yes. I fully support the AF/DARPA project that is underway and that was chartered to achieve that very goal. The focus today is on developing UCAVs for the SEAD/Strike mission; other potential UCAV roles we're exploring include directed energy, electronic attack, and ISR.

*Question.* Do you feel the current level of investment, the fiscal year 2002 President's budget request of \$60 million, is sufficient to realize this goal?

Answer. No. Although combined DARPA and AF funding of UCAV through fiscal year 2003 exceeds \$200 million, no funding exists in the President's budget beyond fiscal year 2003. Fielding 30 deep-strike UCAVs will require an additional \$1.3 billion between fiscal year 2002-2007.

#### RESERVE COMPONENTS

*Question.* Although the Department of Defense claims a commitment to the "Total Force," some question this commitment. Those who question the Department's support of the Reserve components claim that the Reserve components do not receive an appropriate share of the defense budget and that they are not assigned appropriate missions. The most recent example of concern is raised by the Air Force proposal to retire the B-1 wings in the Air National Guard.

What is your response to these concerns?

Answer. I am a firm believer in the total force concept. We cannot complete our mission successfully without our Reserve component. The Air Force is a recognized leader in the integration of its Guard and Reserve Forces. The ARC is a full partner in the AF's corporate programming and budget process. Additionally, Guard and Reserve units participate in combat and combat support operations on a daily basis.

The decision to consolidate B-1s is a monetary one. The money saved from consolidating the B-1 units onto two bases will be used to bring the remaining B-1 fleet up to current modernization levels. With over \$2 billion in unfunded requirements, we can pour that money back into modernizing the remaining B-1 fleet.

*Question.* What is the appropriate criteria for deciding on the appropriate missions and level of contribution from the Reserve components?

Answer. On a larger scale, to be relevant in the present and future AF, which is key to funding and survival, the ARC must at all times mirror their AD counterparts. If the missions ever separate into an ARC vs AD mission, then funding, organization, training, equipping, etc. becomes threatened.

From an AEF perspective: The appropriate criteria should be the same for the ARC as for any other Active Duty (AD) MAJCOM in the AF. If the ARC has a designed operational capability (DOC) statement tasking it to deploy F-16s to various theaters, the F-16 mission should be the same for the ARC as it is for the AD. If there is an air-to-ground, air-to-air, SEAD/DEAD mission, that criteria for that mission should be the same across the board.

The level has to be based on a measure of volunteerism and what the Reserve components do is look at their historical participation and project how long per person and how long can the ARC sustain that mission over time. Subjectively, with volunteerism, the ARC on ECS can handle about 10 percent of the total steady state mission for AEFs.

It is erroneous to dictate that it takes six ARC personnel for one AD person equivalent. By weapon system and position, on average for AEFs the ARC really is on a 1 for 3 or 1 for 4 level. It takes 3 to 4 people/volunteers to fill one Active Duty position for one 3-month AEF rotation. If there is a PRC, we're back to one for one. To clarify, there are not 3 to 4 reservists on station for one AD person. There is only one person there. So to do the job on a daily basis, it takes only one person, but over the entire span of the deployment, 3 or 4 people.

*Question.* Are the Reserve components used to the maximum extent practicable? If so, do they still have excess structure that can be eliminated?

*Answer.* The ARC annually participates in all major contingencies, exercises, and competitions. Additionally, it is the linchpin of our humanitarian and North American Air Defense efforts.

*Question.* Do you foresee any significant shift in the roles and missions currently performed by the Air National Guard and Air Force Reserve?

*Answer.* The ANG and AFR currently play an integral part in reducing Active Duty tempo and we will continue to look for additional ways to use them in support of AF requirements.

#### BASE CLOSURE

*Question.* The President's February budget blueprint document states that "with 23 percent in estimated excess infrastructure, it is clear that new rounds of base closures will be necessary to shape the military more efficiently."

Do you believe that we need more base closures?

*Answer.* Yes, BRAC is an integral part of readiness and modernization as infrastructure is reshaped to match changing mission needs and other requirements.

*Question.* Do you believe the Air Force has excess infrastructure that uses resources that could be applied to higher priorities within the Department of the Air Force?

*Answer.* Yes, the Air Force is over-based for the force structure we have today. We think that we can avoid significant costs in the out-years with a base closure process.

*Question.* Do you believe the process established by the Defense Base Closure and Realignment Act of 1990 is a fair and effective way to reduce excess military infrastructure and return the property to local authorities? What changes, if any, would you propose to this process?

*Answer.* The facts clearly support our burden of excess infrastructure. The BRAC is the only method by which we have fairly reduced our burden in the past; thus, I believe BRAC is effective. Changes to the BRAC process may be in order. Such changes would be products of legislation on which I am not yet in a position to comment.

*Question.* In your view, would changing the base closure process to exempt some bases from the independent commission's review make the process more or less open, fair, and stressful to communities with military installations?

*Answer.* Again, any changes to the BRAC process would be products of legislation on which I am not yet in a position to comment.

*Question.* Over the past several years, members of the Joint Chiefs of Staff have testified that there is excess defense infrastructure and requested Congress to authorize another round of base closure.

Do you believe that we have excess defense facilities and, if so, where does this excess capacity exist?

*Answer.* I will only speak for the United States Air Force, because I don't have insight into the other services' needs. I would say we as an Air Force are over 10 percent overbased.

#### BRAC ENVIRONMENTAL CLEANUP

*Question.* In its report on *Issues and Alternatives for Cleanup and Property Transfer of Base Realignment and Closure (BRAC) Sites*, dated August 1, 2000, the Institute for Defense Analyses noted that despite Department of Defense efforts to accelerate the program by working with effected communities and with Congress, property transfer is taking too long and goals are not being met. Many BRAC acres have not yet been transferred. These problems are compounded by recent indications that there are funding shortfalls for BRAC cleanup in the fiscal year 2002 budget of about \$92 million in the Navy account and \$55 million in the Air Force account. Such funding shortfalls adversely effect cleanup milestones, undercut the timeliness and value of property transfers, further harm communities already hurt by base closure, and threaten the overall credibility of the BRAC process.

Do you believe that adequate funding for BRAC cleanup should be an Air Force priority?

*Answer.* I believe it is important to keep BRAC cleanup on schedule for the benefit of the communities. The Air Force is committed to responsible environmental stewardship.

*Question.* What is your response to the shortfalls in the fiscal year 2002 budget?

*Answer.* If confirmed, I will work to alleviate shortfalls in the fiscal year 2002 budget in order to keep clean up on time and meet the program goals.

## INVESTMENT IN INSTALLATIONS

*Question.* The military departments have consistently struggled to maintain their base infrastructure. The backlog of real property maintenance has remained high, whether budgets were increasing or decreasing. The military is far behind industry standards for maintaining and modernizing its facilities. Even the substantial increase in the Operation and Maintenance accounts in the fiscal year 2002 budget request does not provide sufficient funding to maintain the Air Force's facilities in their current status.

Are there any new approaches to this issue that you believe could help the Air Force move toward a solution of this perennial problem?

*Answer.* If confirmed, I will support BRAC to eliminate excess infrastructure. BRAC is an integral part of readiness and modernization as infrastructure is reshaped to match changing mission and other requirements. Other DOD initiatives should augment (not replace) BRAC.

*Question.* Traditionally, funding the upkeep of installations has been a low priority in the services' budgets. It is anticipated that after the completion of the current Quadrennial Defense Review, future budgets will devote a greater share of resources to modernization and transformation efforts.

Do you expect that funding for real property maintenance will decline even further once the QDR is completed?

*Answer.* It is too early to tell. But, if real property maintenance (RPM) continues to decline, we will feel the impact on readiness and retention. Our people deserve more than a 191-year plant replacement value rate for their facilities.

## OUTSOURCING OF COMMERCIAL ACTIVITIES

*Question.* Over the past several years the Department of Defense has increased its reliance on the private sector to perform certain activities including equipment maintenance and facility operations.

Do you believe that the military services should retain a core capability to perform certain key support activities such as equipment maintenance?

*Answer.* Yes. In the Air Force, we have improved efficiency and saved money by privatizing areas such as utilities, housing, and demolition, and A-76 conversions have added to savings, but the Air Force must retain core capabilities for any support activities which have the potential to adversely affect our combat capability (such as for maintenance on equipment which is essential for deployment).

## ENCROACHMENT ISSUES

*Question.* The Senior Readiness Oversight Committee is currently reviewing a group of readiness challenges it has characterized as "encroachment" issues. These include population growth near military installations, environmental constraints on military training ranges, airspace restrictions to accommodate civilian airlines, and the conflicts with civilian users over the use of radio frequency spectrum.

In your opinion, how serious are these problems for the Department of the Air Force?

*Answer.* Encroachment is a very serious problem for the Air Force. Maintaining continued access to our ranges, airspace and frequency spectrum is absolutely critical; in fact, if our ability to train our aircrews continues to diminish, America will soon lose its only edge in air combat proficiency. We can no longer rely on current Air Force technology to provide an advantage against our next adversary-that next adversary already has access to more advanced equipment than ours. It is only our superior training that enables our pilots to have the upper hand in air combat. That training depends on the right amount and the right type of ranges and airspace. These areas are national assets that allow the Air Force to test new equipment, develop new tactics, and train our forces to be combat-ready. AF ranges also accommodate important civilian industry aeronautical testing, and provide for public use and natural and cultural resource protection.

*Question.* If confirmed, what role do you expect to play in addressing these challenges and what actions would you propose to take to address them?

*Answer.* If confirmed, my role will be to direct the Air Force to meet military needs while addressing public concerns along with Federal, tribal, state, and other agency issues. We have adopted a spirit and practice of flexibility and willingness to adapt without compromising our operations. In fact, in 1994 the AF organized and stood-up an airspace and range staff in the Pentagon to work the issues facing our combat forces, and in 1995, Air Combat Command created an interdisciplinary staff that works range and airspace issues on a daily basis. Additionally, we realize the importance of establishing and maintaining permanent relationships with stake-

holders. These stakeholders are supportive of the AF and our mission. Sustainable access to ranges benefits many people. Our ranges contain significant cultural and natural areas, are used for grazing and crop production, and allow hunting or other forms of outdoor recreation.

*Question.* Of particular concern to the Air Force, commercial air traffic is expected to increase 6 percent annually, and military airspace use will also increase with the next generation of high performance weapon systems. As a result of the pressures associated with commercial air traffic congestion, noise, and other concerns, the acquisition and use of special use airspace has evolved into a challenging endeavor for all of the military departments.

If confirmed, what actions would you propose to address this challenge?

*Answer.* With the advent of the F-22 and JSF, we will go to the limits of our current range and airspace capability to accommodate both Operational, Test and Evaluation (OT&E) and training requirements. Not only will more sophisticated instrumentation be needed but more complex surface-to-air threat emitters will be required. These two sophisticated systems will allow us to maximize our daily training by providing proper feedback of our missions and give us realistic threats to simulate actual combat. As our weapons, weapons systems and tactics evolve, we cannot endure further encroachments that will decrease the size or quality of the airspace and ranges we use or our training will suffer, thereby affecting our combat readiness.

Efforts are also underway now to link space and information operations (IO) test and training capabilities to the range and airspace structure. Such physical and virtual connectivity will allow air, space, and IO capabilities to test and train in an integrated fashion. This will not create an increased requirement for physical range space, but we will have limited funding and manpower to perform the integration of these capabilities as well as exercising them on the range.

We not only need land and airspace, but we rely heavily on critical parts of the electronic spectrum to carry out our missions. We must also ensure we can continue developing new electronic countermeasures and counter-countermeasures systems and capabilities as well as exercise existing systems as closely as possible to how we would employ them in conflict. In the future, we expect to encounter increasing challenges not only with our current level of operations, but also with beddowns of new weapon systems or realignments.

Maintaining our edge in air combat is directly linked to robust training capabilities, capabilities inherent in continued access to AF ranges and airspace. The AF recognizes the need to balance its test, training, and readiness requirements with responsible stewardship. We continue to look to our installations, ranges and airspace to provide the AF the operational flexibility, efficiency, and realism necessary to continuously enhance readiness while allowing commanders to minimize, to the extent possible, the impacts of their mission on the community, the environment, and the National Airspace System. The challenges we face require effective communication with all affected parties. The partnerships we have with our sister services, civilian government agencies, and other stakeholders are essential. Moreover, legislative and fiscal initiatives are also needed. Together, we can meet these challenges head-on and sustain America's readiness into the 21st century.

#### READINESS LEVELS

*Question.* What is your assessment of the current readiness of the Air Force to execute its assigned missions?

*Answer.* Our dominance of the full spectrum of operations tends to overshadow what has happened to our readiness. Responding across this full spectrum of operations necessitates we have a certain number of units ready to deploy in the first 30 days of conflict. This is the basis of our readiness requirement of 92 percent. Since 1996, our worldwide combat force readiness rates have decreased 23 percentage points to a rate of 68 percent in April 2001. Furthermore, our overall Air Force readiness is lower than any time since June 1987. We are capable of winning today; however, we are concerned about these trends in readiness indicators.

The Air Force's major areas of concern are aging aircraft, retaining an experienced workforce, and working with constrained resources and parts (aging infrastructure, cannibalization of "hangar queens").

*Aging Aircraft:* A major factor in the decline is the increasing age of our aircraft. On average, our aircraft are about 22 years old, and getting older. An aging fleet costs more, both in effort and dollars, to operate and maintain. For example, our flying hours have remained relatively constant over the past 5 years, but their cost has increased by over 45 percent after inflation. Older aircraft are simply more difficult to maintain as mechanical failures become less predictable, repairs become

more complicated, and parts become harder to come by and more expensive. But, even with these contributing factors, we had the best year in our history for aviation safety, a clear measure of our people's professionalism.

**Experienced Workforce:** People are our most vital resource; the most crucial readiness component. Loss of experienced personnel contributed to 24 percent decline in readiness since 1996.

**Constrained Resources:** We are also experiencing infrastructure shortfalls in our facilities (i.e., bases), vehicles and support equipment, and communications infrastructure. Sufficient inventories of weapon system spare parts are crucial to mission readiness. Lack of spares puts a severe strain on the entire combat support system, creating increased workload for our logistics personnel and reducing the number of mission-capable aircraft available to our operational forces. When our logistics system suffers parts shortages, maintenance personnel must either cannibalize parts from other equipment or aircraft to serve immediate needs, or accept degraded readiness while they wait out long-delivery times for back-ordered parts.

**Spare Parts:** With recent financial assistance from the administration, Office of the Secretary of Defense (OSD), and Congress, we are turning our spare parts problems around. However, as our fighter, ISR, combat search and rescue, mobility, and tanker aircraft continue to age, they need more frequent and substantial repairs, driving up readiness costs. This, in turn, reduces the number of aircraft available for missions and creates higher demands on the remaining fleet. Reversing this trend will take additional funding and a concerted recapitalization effort. In addition, the maintenance tasks and materiel growth inherent in supporting our aging aircraft fleet have increased our depot workload. Limited depot infrastructure investment over the past decade, coupled with constrained funding, adds to our already significant challenges in meeting readiness requirements.

*Question.* What are your recommendations for addressing your major areas of concern?

**Answer. Aging Aircraft:** The increasing cost of readiness (including operations and maintenance) is consuming the funds required to modernize our systems and our infrastructure. We have developed a responsible, time-phased plan to modernize our force without sacrificing readiness or capability goals.

**Experienced Workforce:** We have reshaped ourselves into an Expeditionary Aerospace Force (EAF) to balance impacts of a less experienced workforce and improve retainability by providing predictability and stability through our AEFs. We have also increased the use of Air Reserve Component (ARC). If confirmed as CSAF, I will continue to work on improving retention. People are our most important asset. Other improvement programs include compensation packages and quality of life programs that will make the AF competitive and desirable. I will also continue to work on improving access to quality health care, workplace environments, and providing safe, affordable housing.

Continue to reduce the military pay gap relative to private sector; Reduction of out-of-pocket expenses; Enhanced legislative flexibility on Special Pays and Bonuses to target critical skills; Pursue force shaping initiatives to optimize civilian workforce; Improve TRICARE for Active Duty members, retirees, and family members.

**Spare Parts:** Recent improvements in spare parts funding are turning this situation around. Through internal funding realignment, the administration, OSD and congressional plus-ups, we were able to spend an additional \$2 billion for spare parts over the past 2 years. This helped replenish inventories drained during Operation Allied Force. During the summer 2000 program review, the DOD fully supported our efforts to fill shortfalls in the spare-parts pipeline which were impacting operational requirements. Additional administration and OSD support for fiscal year 2002 includes full funding of the flying hour program and our airlift readiness spares packages, and increased funding to reduce the spares repair backlog.

**Overall:** We need to fix readiness shortfalls in key logistics resources including people, skills, spares, munitions, bare base assets, and vehicles. We need to improve our capability to rapidly develop deployment and sustainment plans for fast-breaking contingencies. Finally, we are making enhancements to our ACS command and control capability to make it more responsive, better integrated, and sufficiently robust to support EAF needs. These agile combat support initiatives are crucial to sustaining current and future combat operations.

#### READINESS ASSESSMENTS

*Question.* General Shinseki recently described our current readiness standards as "a Cold War legacy" that "reflect neither the complexity of today's strategic and operational environments nor other important factors."

What do you believe are the critical elements of a readiness assessment system?

Answer. The critical elements of a readiness assessment system look at personnel factors as well as weapon systems issues. A valid assessment system would then look at the possible operational environments and determine how and to what degree the Air Force can achieve the desired effects.

*Question.* Does our current system contain these elements?

Answer. Yes.

*Question.* Do you believe the Department can create a new readiness measurement system that will be able to better assess readiness for joint operations and predict future readiness?

Answer. I think we can be more consistent across the Services regarding how we assess readiness. Per CSAF direction, as CAF Lead, I am responsible for certifying to USCINCFJCOM that each of our 10 Aerospace Expeditionary Forces (AEFs) we present to him meets the requirements for its 3-month deployment vulnerability window. To ensure accurate reporting, we have developed an AEF Certification process, designed to increase chain of command involvement by moving readiness processes from the functional level to the command level. This process, in conjunction with our current Status of Operational Readiness and Training (SORTS) report, will provide us a clearer picture of current and future readiness.

#### READINESS REPORTS VS. STATEMENTS FROM THE FIELD

*Question.* One of the principal readiness concerns of the committee is the apparent disconnect between the official readiness reports the committee receives from the Pentagon and the concerns we hear from the operating forces. In the past, official reports and statements often indicated that the readiness of our military forces was high. Statements made by individuals in the operating forces, however, cast a far different picture. Recently, we have seen the official reports indicate that the readiness of the forces has been in decline. This more accurately reflects what we see in the field.

In your view, does the foregoing reflect a problem with the way we measure and report readiness?

Answer. No. However, we are instituting a process that will help address this issue. Per CSAF direction, as CAF Lead, I am responsible for certifying to USCINCFJCOM that each of our 10 Aerospace Expeditionary Forces (AEFs) meets the requirements for its 3-month deployment vulnerability window. To ensure accurate reporting, we have developed an AEF Certification process, designed to increase chain of command involvement by moving readiness processes from the functional level to the command level. This process, in conjunction with our current Status of Operational Readiness and Training (SORTS) report, will provide us a clearer picture of readiness. The objective of certification is to hold commanders at each level accountable for organizing, training and equipping Unit Tasking Codes (UTCs), in order to provide required mission capability and to inform the CINCs on the status of deploying forces. Bottom line, commanders must send every individual and UTC into theater full-up and ready to fight.

*Question.* If confirmed, what actions would you take to ensure that you are kept abreast of the readiness concerns of the Air Force operating forces that may not always be represented in the official reports?

Answer. Key readiness concerns that impact operations and training are accounted for in our Status of Readiness and Training (SORTS) Reports. Additionally, we have developed an AEF Certification process designed to increase chain of command involvement by moving readiness processes from the functional level to the command level. The objective of certification is to hold commanders at each level accountable for organizing, training and equipping UTCs, in order to provide required mission capability and to inform the CINCs on the status of deploying forces. That includes the responsibility of raising concerns to the appropriate level to obtain remedy or relief, when applicable. Bottom line, commanders must send every individual and UTC into theater full-up and ready to fight.

*Question.* If confirmed, what actions would you take to ensure that these concerns are captured in the reports that the Air Force provides to the DOD as a whole as well as Congress?

Answer. I firmly believe that effective leadership demands the ability to provide an honest assessment of capability, which includes the highlighting of shortages. I expect my commanders to be aware of and raise readiness concerns to the appropriate level to obtain remedy or relief as applicable. If nominated, I will continue to drive this point home with AF leaders at all echelons.

## READINESS

*Question.* Over the last few years we have heard increasing reports that the readiness of the U.S. Armed Forces has begun to deteriorate as a result of the over-commitment of an under-resourced Department of Defense.

What do you view as the major readiness challenges that will have to be addressed by the Air Force over the next 4 years, and, if confirmed, how will you approach these issues?

*Answer.* The Air Force has and will continue to focus on aggressive transformation to the extent our budget allows. This Fiscal Year 2002 budget shores up some of our most critical people and readiness concerns and allows us to remain the world's most respected aerospace force.

Total Air Force readiness has declined 23 percentage points since 1996. We attribute this decay to the problems associated with supporting the oldest aircraft fleet in Air Force history; the inability to retain an experienced workforce; and constrained resources and spare parts. With recent financial assistance from the administration, Office of the Secretary of Defense (OSD), and Congress, we are turning our spare parts problems around. However, as our fighter, ISR, combat search and rescue, mobility, and tanker aircraft continue to age, they need more frequent and substantial repairs, driving up readiness costs. This, in turn, reduces the number of aircraft available for missions and creates higher demands on the remaining fleet. Reversing this trend will take additional funding and a concerted recapitalization effort. In addition, the maintenance tasks and materiel growth inherent in supporting our aging aircraft fleet have increased our depot workload. Limited depot infrastructure investment over the past decade, coupled with constrained funding, adds to our already significant challenges in meeting readiness requirements. We are also experiencing infrastructure shortfalls in our base facilities, vehicles and support equipment, and communications infrastructure. Overall, we are committed to improving readiness, and it must be synchronized with our people, infrastructure, and modernization programs.

## CINC IDENTIFIED READINESS DEFICIENCIES

*Question.* The latest Quarterly Readiness Report to Congress identified 87 CINC-identified readiness related deficiencies. Thirty one of these are listed as Category I deficiencies, which entail significant warfighting risk to execution of the National Military Strategy. Most of the specific deficiencies have been reported for the past several years and have not as yet been effectively addressed.

If confirmed, what actions would you take to ensure that the Air Force dedicates sufficient resources to address these CINC-identified readiness deficiencies?

*Answer.* Thanks to the tremendous talent of our people, we have enjoyed great victories in combat. These victories tend to overshadow what has happened to our readiness. Responding across this full spectrum of operations necessitates we have a certain number of units ready to deploy in the first 30 days of conflict. This is the basis of our readiness requirement of 92 percent. Since 1996, our worldwide combat force readiness rates have decreased 23 percentage points to a rate of 68 percent in April 2001. Furthermore, our overall Air Force readiness is lower than any time since June 1987. We are capable of winning today; however, we are concerned about these trends in readiness indicators. A major factor in the decline is the increasing age of our aircraft. For example, our flying hours have remained relatively constant over the past 5 years, but the cost of those flying hours has increased by over 45 percent after inflation. Older aircraft are simply more difficult to maintain as mechanical failures become less predictable, repairs become more complicated, and parts become harder to come by and more expensive.

The increasing cost of readiness (including operations and maintenance) is consuming the funds required to modernize our systems and our infrastructure. We have developed a responsible, time-phased plan to modernize our force without sacrificing readiness or capability goals.

## NEAR-TERM READINESS VS. MODERNIZATION

*Question.* One of the long-standing concerns of the committee is that the services, in an attempt to maintain near-term readiness and pay for numerous contingency operations, have under-funded long-term readiness, i.e., modernization accounts. This has resulted in equipment becoming old and increasingly expensive to maintain. This increased expense has created an additional hurdle in the way of our ability to maintain current readiness and modernize for the future.

If confirmed, what recommendations would you make to the Secretary of the Air Force in order to resolve this downward readiness cycle?

Answer. Contingency operations are a reality for today's Air Force. We must recognize that reality in our force structure, modernization, budgeting, and planning processes. The ongoing QDR does contain criteria which accurately reflect our operating environment: we must be able to win a major theater war, while maintaining the capability to halt aggression in other parts of the world and continue numerous small-scale operations elsewhere. In future reviews, we must also take into account backlogs such as we have in real property maintenance. These are areas which we must work to resolve, and every year of delay simply puts us that much deeper into the hole.

#### QUADRENNIAL DEFENSE REVIEW

*Question.* Congress required the Department of Defense to conduct the Quadrennial Defense Review to include a comprehensive examination of the defense strategy, force structure, force modernization plans, infrastructure, budget plan, and other elements of the defense program and policies with a view toward preparing the Armed Forces of the United States for the security environment of the 21st century.

Please outline your views on how to best organize and equip the Air Force to support the National Military Strategy. What do you believe should result from the QDR process?

Answer. The QDR process will give us a clear idea of the force structure required across the Services to fulfill the National Military Strategy. In past QDRs, we used the two-major-regional-contingencies and two-major-theater-wars scenarios to calculate the depth of force structure required, and we assumed that any other activities would be lesser-included cases of those two scenarios. However, this QDR uses a different scenario, recognizing that we need to continue to be able to win one major theater war, while maintaining the capability to repel attack in other areas of the world, and continuing to do a series of smaller, lesser-scale contingencies at the same time. We are in the process right now of putting forces against those requirements to measure our required force structure. The result of this process will give us a clear idea of how best to organize and equip the Air Force.

#### FLYING HOUR COSTS

*Question.* For the past several years, the Air Force has requested increases above their budget requests to deal with unanticipated growth in the cost of their flying hour program. The Air Force budget for fiscal year 2002 contains significant increases in funding for flying hours.

Do you believe this year's budget request fully funds your program so that you will not need to seek additional funding to execute your flying hour program?

Answer. Your support of the fiscal year 2001 supplemental request will further help us maintain our readiness levels. However, we still need your continued support to improve our readiness. Your United States Air Force is currently operating and maintaining the oldest aircraft fleet in our history. On average, our aircraft are about 22 years old, and getting older. An aging fleet costs more, both in effort and dollars, to operate and maintain. Last year, while we flew only 97 percent of our programmed hours, they cost us 103 percent of our budget. Over the past 5 years, our costs per flying hour have risen almost 50 percent.

*Question.* What steps is the Air Force taking to control this cost growth?

Answer. The only way we can control these costs is to recapitalize the aging fleet.

#### NEED FOR OVERSEAS INSTALLATIONS

*Question.* The Air Force currently maintains a network of bases to support our forward deployed forces.

Do you believe that an increased emphasis on long-range power projection would decrease the need for permanent basing for forward deployed Air Force personnel?

Answer. No. We have already drawn down our overseas basing to a critical level. As we saw with Operation ALLIED FORCE (OAF), our forces are capable of traveling thousands of miles to conduct precision strikes. However, to conduct an effective air campaign such as OAF, you must have persistent air power and the capability to perform time-critical strike which dictate that either permanent or temporary forward basing will continue to be a requirement for effective operations.

#### REDUCING COMMITMENTS

*Question.* In recent years there has been concern over the level of deployments and the time service members spend away from home. The Air Force has created the Expeditionary Aerospace Force (EAF) concept to make deployments more pre-

dictable. Congress has enacted a per diem payment for members deployed above a specified number of days. Another approach to controlling or reducing time away from home is to reduce the number of overseas commitments.

What are your views on the contributions that each of these three approaches has made or could make to managing the OPTEMPO of Air Force personnel?

Answer. The Expeditionary Air Force concept has done an excellent job of providing predictability and stability to our Airmen. While there are still some areas to be worked out, we continue to improve our capability to deploy customizable Aerospace power packages to theater CINCs. The congressional initiative to compensate personnel for extended deployments may also help our young Airmen deal with the challenges of our worldwide commitments. We need to continue to do everything possible to take care of our personnel meeting the deployment needs associated with our national strategy. That strategy will dictate the amount of overseas commitments, and the Air Force stands ready to support those commitments, whatever they may be. In addition, we are prepared to assist in assessing our current overseas commitments.

#### OVERSEAS CONTINGENCY DEPLOYMENTS

*Question.* Congress has long been concerned about the impact on readiness of the numerous deployments of our military personnel over the last 8 years.

What are your views regarding the impact of contingency operations on military readiness?

Answer. We must continue to address years of constant high tempo, aging equipment, and reduced defense spending to meet the high demands we place on our people and systems. Several years of sustained high operations tempo, aging equipment, and reduced funding have led to a slow, steady decline in readiness. It will take several years of significant investment to recover. We must restore readiness through substantial and sustained recapitalization of people, equipment, infrastructure and "info"-structure. However, contingency operations are a reality in today's Air Force, and we must recognize that reality in force structure, modernization, budgeting, and planning processes.

#### ASSOCIATE WINGS

*Question.* The Air Mobility Command has had great success with its Associate Wings. These Wings allow the Air Force to maximize the use of airlift aircraft without incurring the high cost of increased Active Duty end strength.

Based on the success that the Air Mobility Command has had with the Associate Wing concept, why has this concept not been expanded to the Air Combat Command? What are your views on expanding the Associate Wing concept to include the Air Combat Command?

Answer. There are obvious synergies and benefits to Reserve associate programs throughout the Air Force. As you probably know, we have completed a very successful test of a fighter Reserve Associate Program at Shaw AFB. AMC has indeed been very successful in such programs, and ACC and AFRC are in the midst of developing the requirements for expansion to other weapon systems. Reserve associate programs have tremendous potential to leverage the experience resident in the Air Reserve Component.

#### SPACE COMMISSION

*Question.* What are your views on the need for legislation to implement the recommendations of the Space Commission?

Answer. We support the decisions and recommendations of the Space Commission. The Air Force is the right service for department-wide responsibility for planning, programming and acquisition of space systems. We are currently realigning to effectively organize, train, and equip for prompt and sustained offensive and defensive space ops. This move reduces fragmentation within both DOD and intelligence committee and improves space advocacy by implementing a single chain of authority. We must employ space to speed transformation of the military and effectively prepare for future conflicts.

*Question.* If confirmed, how will you ensure that interests and requirements of all services are preserved under an Air Force Executive Agency for Space?

Answer. A new and comprehensive national security space management and organizational approach is needed to promote and protect our interests in space. It was the commissions assessment that DOD and the intelligence community are not currently focused to meet 21st century national security space needs. The relationship between the Secretary of Defense and Director, Central Intelligence will continue to be critical for future development. It was the commissions conclusion that current

methods of budgeting for national security space programs lack visibility and accountability. The Air Force will work to correct that to meet the needs of all DOD space users.

*Question.* Do you see a need to maintain a strong cadre of space professionals in all the services?

*Answer.* The demands for integration of space capabilities and information for modern warfighting will continue to grow in the future. It will be essential that all the services understand how to integrate space into combat operations. If confirmed, I will ensure that the U.S. Air Force works closely with other services to coordinate efforts to effectively use space assets.

*Question.* If confirmed, how will you ensure that the Air Force helps to develop and sustain such a DOD-wide cadre?

*Answer.* If confirmed, I will ensure that the Air Force makes available the coordinated training to ensure that an appropriate level of expertise is in all services to ensure effective application of space assets.

#### SPACE FUTURE

*Question.* What is your vision for the future of the space component of the Air Force?

*Answer.* We are working toward increased funding for space surveillance to hone a developing space-based capability. The Air Force is working to fund and lead technology efforts, developing capabilities for offensive and defensive systems. The Air Force continues to ensure we are creating an effective organizational structure for space control. This led to the creation of new Space Control and Space Aggressor squadrons. We have also created a Counterspace Oversight Council to deal with future threats to our space-based assets.

*Question.* In your view, how should the Air Force approach its mission of ensuring continued access to space?

*Answer.* The AF recognizes its unique capabilities and responsibilities with respect to space operations and is committed to meet the space leadership challenge. To ensure continued access to space, the Air Force is working in close, active partnership with our sister services, agencies, and industry to implement the recommendations from the Broad Area Review on spacelift. We will also work to improve the organization, management, and employment of space to meet the growing Joint Warfighter needs. Finally, the Air Force will continue to work closely with the Intelligence, civil, and commercial space communities to enhance and exploit the full range of our Nation's space capabilities.

*Question.* Do you agree with the recommendation of the Space Commission that the "U.S. must participate actively in shaping the space legal and regulatory environment?"

*Answer.* Yes, there must be an effective means to monitor and control space assets, and we in the U.S. Air Force will be an active participant in shaping the environment based on our capabilities and expertise.

*Question.* Do you agree with the recommendation of the Space Commission that "To protect the country's interests, the U.S. must promote the peaceful use of space. . .?" In your view, how should the Air Force participate in implementing this portion of the recommendation?

*Answer.* Yes, the peaceful use of space is essential to our Nation's, and the international community's, interests. We need safe and reliable space-based communications and research capabilities to further U.S. interests. Additionally, space assets are increasingly critical to our national security. The Air Force will ensure continued access to these technologies through a new and comprehensive national security space management and organizational approach designed to promote and protect our interests in space.

*Question.* Do you agree with the Commission observation that U.S. dependence on and vulnerability of its space assets makes the U.S. "an attractive candidate for a 'Space Pearl Harbor'?"

*Answer.* I agree that much like other U.S. military resources, space assets make a lucrative target for those that wish to discredit or damage the United States. However, we are aware of the threats posed to space-based assets and are vigilant to finding ways to counter possible threats. It is unlikely we would be taken completely unaware by an attack on our space capabilities.

*Question.* Do you agree with the Commission recommendation that the U.S. "develop and deploy the means to deter and defend against hostile acts directed at U.S. space assets and against the uses of space hostile to U.S. interests?" How would you recommend that the Air Force support this recommendation?

Answer. I agree with the space commission findings, the U.S. Air Force will work to ensure that space remains a safe environment to support U.S. interests. The Air Force is realigning to effectively organize, train, and equip for prompt and sustained offensive and defensive space ops, protecting the space realm as we do the environment over the world's battlefields.

*Question.* Do you agree with the Commission assessment that deterrence would be strengthened through development of the capability to project power in, from, and through space?

Answer. Yes, the inherent nature of space-based assets gives the Air Force better access to all regions across the face of the earth. By continued development of space systems we gain not only access to collect information from denied or difficult to reach regions, we will also be better able to communicate and command operations in those areas. Through the continued, controlled development of space, we increase our ability to observe regions of instability, or monitor peacekeeping/enforcement operations, increasing U.S. overseas influence without increasing deployed presence.

#### ICBMS

*Question.* Do you support retirement of the Peacekeeper ICBM?

Answer. Yes. The Program Budget Directive supports the transition of Peacekeeper warheads to the Minuteman III force. The Air Force has been planning for the retirement of Peacekeeper and the SecDef has announced his intention to retire PK beginning in fiscal year 2002, and I support that move.

*Question.* The deactivation will take a minimum of 3 years to remove the 50 boosters and reentry systems and an unknown number of additional years to successfully complete clean-up activity.

Do you support retirement of the W62 warhead from the Minuteman III ICBM?

Answer. Yes. The Air Force has programmed the retirement of the MK12/W62 warhead from the active ICBM warhead fleet. The Safety Enhanced Reentry Vehicle (SERV) program will provide the design and equipment to place the MK21/W87 warhead, (being removed from the Peacekeeper) on the MMIII as a replacement for the W62.

*Question.* Will you support full funding in the future to retire the Peacekeeper beginning in fiscal year 2003?

Answer. I support the President's Budget and the placement of the PK retirement within that process.

*Question.* If the W62 warhead is retired, is there an existing or refurbished nuclear weapon in the stockpile which will fill the DOD's requirement met by the W62 or is it no longer required?

Answer. The MK21/W87 and MK12A/W78 Warheads are planned to replace the present MK12/W62 on the MMIII system.

*Question.* If the W62 warhead is retired, would it be dismantled or would it be placed in the nuclear weapons stockpile Reserve?

Answer. The current plan is to place the MK12/W62 warhead into storage until final disposition is determined.

*Question.* Do you support de-alerting any ICBMs?

Answer. The Nuclear Posture Review (NPR) is currently being conducted by the Department of Defense and I understand alert status is being examined in this review. I anticipate being fully engaged with the NPR as it unfolds more completely in the coming months. There are some enduring fundamentals that are at the foundation of deterrence that the NPR will have to take into account. ICBMs are an essential element of the United States' nuclear forces and I believe will remain so in whatever future framework evolves. As such, I believe that those systems should be operated as designed—on alert. To do otherwise by increasing the time it takes to employ these forces increases safety, security, stability, and possibly even proliferation risks. As a matter of military practice, lowering military readiness lessens credibility.

#### SCIENCE AND TECHNOLOGY INVESTMENT

*Question.* Secretary Rumsfeld, in his June 28, 2001 testimony, publicly stated that he has set a goal of 3 percent of the total defense budget for the Defense Science and Technology program.

If confirmed, would you support a similar goal for the Air Force Science and Technology portfolio as a percentage of the entire Air Force budget?

Answer. I am in lock step with Secretary Rumsfeld. Our Science and Technology portfolio is our investment in the future and cannot be forsaken. Already, potential adversaries possess capabilities beyond those of our own. We cannot afford to fall

farther behind. To do so would violate the sacred trust of our Airmen because we owe it to them to arm them with the most advanced technology possible.

#### SCIENCE AND TECHNOLOGY PLANNING PROCESS

*Question.* In Section 252 of the Fiscal Year 2001 Floyd D. Spence National Defense Authorization Act, Congress required the Secretary of the Air Force to conduct a review of the long-term challenges and short-term objectives of the Air Force science and technology programs. This review is scheduled for completion in October, 2001.

If confirmed, how would you ensure that the uniformed officers are engaged in the science and technology process for determining long-term challenges and short-term objectives critical for future defense superiority?

*Question.* I firmly believe we must focus our science and technology, and acquisition efforts, on valid warfighter requirements. If confirmed, I will ardently work to foster constant science/technology and warfighter interface. The goal of this is a streamlined acquisition and development process geared exclusively at addressing warfighter requirements.

*Question.* In your view, does the current Air Force science and technology portfolio adequately support the warfighter of today and the future?

Answer. AF science and technology supports the AF vision of an Expeditionary Aerospace Force in the 21st century and is funded at a level to achieve Critical Future Capabilities. Our fiscal year 2002 budget reflects a real growth increase of 5.2 percent for science and technology compared to fiscal year 2001.

*Question.* If confirmed, how do you intend to facilitate communication between the science and technology community and the warfighter?

Answer. If confirmed, I will establish a recurring system of conferences whereby the warfighter and the science and technology community regularly meet to discuss requirements and possible solutions.

#### EDUCATION SAVINGS PLAN

*Question.* Another legislative proposal under consideration by the committee to address the cost of education for dependent spouses and children envisions the award of United States Savings Bonds to military members in connection with reenlistment. If implemented, it potentially could provide a flexible, tax-leveraged means for service members to fund the cost of college tuition for their dependent family members.

If confirmed, will you give serious consideration to how the Air Force could use the award of U.S. Savings Bonds as a means to enable Airmen to save money for the education of themselves and their dependents?

Answer. Yes. I firmly believe we recruit the individual but retain the family. Helping to reduce the cost of education for both service members and family members is another way of helping us achieve our retention goals.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Air Force Chief of Staff?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTION SUBMITTED BY SENATOR EDWARD M. KENNEDY

## COMMAND AND CONTROL

1. Senator KENNEDY. General Jumper, as a result of your experiences in Kosovo, I know you are concerned about improving command and control for the warfighter. As you are aware, Air Combat Command (ACC) is working with the Electronic Systems Center (ESC) at Hanscom Air Force Base on making these essential improvements. Could you elaborate on your goals for command and control, and how ACC and ESC are working together to meet these challenges?

General JUMPER. Senator, my goal for command and control (C<sup>2</sup>) is to have a C<sup>2</sup> system that effectively commands airpower. Several capabilities and concepts will contribute to that end. A primary objective is to provide decision-quality information to the right warfighter at the right time. Collection and dissemination of that information is the first step to accomplishing this objective and calls for several ISR platforms to be integrated into a Multi-sensor Command and Control Constellation (MC<sup>2</sup>C). Today, this means legacy air and space platforms collect order-of-battle data sufficient to refine target lists. In the future, this phase will take advantage of platforms that integrate and dialog at the machine level. To the extent technology allows, a Multi-Sensor Command and Control Aircraft (MC<sup>2</sup>A) will perform most of the surveillance, reconnaissance, and C<sup>2</sup> functions that currently require several specialized platforms. When the MC<sup>2</sup>A is teamed with UAVs, such as Global Hawk, and mechanized to interact directly with space platforms, the power of machine-level integration will close the seams that currently delay our ability to precisely locate and identify critical targets.

The power of integrated ISR will expand as we develop our predictive analysis tools. Horizontally integrated ISR, combined with these predictive tools, will take the concept of intelligence preparation of the battlefield into an emerging concept called Predictive Battle-space Awareness (PBA). This concept will allow a shift of ISR platform utilization from collection, used for pure discovery, to targeting those events that our predictive power leads us to anticipate. We are aiming for a forensic-level understanding of the battle space in all dimensions.

Pivotal to commanding the rapid and dynamic air operations likely to be experienced in the future, we have developed a Combined Air Operation Center Experimental (CAOC-X) to integrate the analyzed information in a timely fashion in order to command airpower at the operational level of war. Within the CAOC-X, the fusion of decision-quality information derived from PBA and collected from a MC<sup>2</sup>C will ensure a Joint Force Air Component Commander (JFACC) has the capabilities to employ airpower in the most effective manner.

ACC and ESC have teamed together to develop and implement many of these capabilities. The CAOC-X offers an outstanding example of how ESC and ACC are working together. We bring together our operational warfighters, developers from ESC, and the test community to develop C<sup>2</sup> applications and systems in a spiral fashion so that solutions delivered to the warfighter reflect current technology. For example, we took the concept for a common coalition C<sup>2</sup> system developed by CENTCOM's Air Component, CENTAF, and made that a reality within months of being handed the concept. I see synergy in the relationship between ACC and ESC, and that synergy ensures we'll keep our advantage in C<sup>2</sup> and remain the force that can move the quickest, smartest and with greatest lethality when called upon to accomplish our Nation's objectives.

---

 QUESTIONS SUBMITTED BY SENATOR JACK REED

## BANDWIDTH

2. Senator REED. General Jumper, as we enter the 21st century, there is competition between the military's use of bandwidth for communications and radars and commercial needs. This competition has resulted in military limitations, waivers for usage, and contingency planning for loss of rights over bandwidth. Depending upon the course selected, the military could be facing a huge bill to re-engineer systems to different frequencies. What is your viewpoint on this issue of bandwidth and how would you approach this issue as Chief of the Air Force?

General JUMPER. The critical decision on the 1755–1850 MHz band should be made only after a thorough analysis of the risks. The analysis needs to be comprehensive and include not only DOD satellites, but also non-space systems and capabilities essential to military operations. Unimpeded access to the electromagnetic spectrum is absolutely critical to the success of our Air Force. It is the backbone for our Nation's current information superiority. The potential loss of 1755–1850

MHz would cause a loss of ability to command and operate over 120 military satellites essential for national security. The Air Force uses this spectrum to gather intelligence, conduct combat training on our ranges, deliver precision-guided weapons, and assess battle damage. It is integral to our ability to command air and space power. As Chief of Staff, I will actively work with our sister services and all applicable agencies and departments to ensure continued access to the frequency spectrum for the Air Force.

SPACE COMMISSION

3. Senator REED. General Jumper, could you discuss your view of the Secretary's decision to implement the recommendations of the Space Commission? How do you think this initiative will impact the Air Force's roles and missions? Do you see any issues/problems that might occur with the relationship between the Air Force and the other services over the roles assigned to the Air Force from this commission?

General JUMPER. The Space Commission recommended, among other things, that the Air Force be assigned as the executive agent for Department of Defense Space Planning, Programming, and Acquisition. In the Secretary of Defense's 8 May response to Congress, he agreed with the Commission's recommendations. The Air Force is in the process of implementing the SecDef's direction. Our efforts will lead to more operationally effective and efficient space capabilities for the Air Force, the other Services, and the Joint warfighter. This new focus and priority will lead to enhanced capabilities in the mission areas of force enhancement, space control, space support, and force application. While the Air Force has provided the preponderance of space capabilities and expertise for decades, we welcome the formal role and responsibilities of the executive agent for space. The Services specific roles and responsibilities still need to be worked out in detail, but we are confident that by working through multi-Service organizations, we can act together to provide better and new space capabilities to the Joint Team, the National Command Authorities, and the Nation. Additionally, we will assess the specifics of realigning Air Force Space Command headquarters as well as the other initiatives outlined in the Space Commission's report. The Air Force is anxious to lead these important Department of Defense space initiatives.

---

QUESTION SUBMITTED BY SENATOR MARK DAYTON

148TH FIGHTER WING

4. Senator DAYTON. The Air National Guard Bureau informed me that, by fiscal year 2003, Minnesota's 148th Fighter Wing in Duluth will receive 17 Block 30 F-16C aircraft currently located at Cannon AFB, New Mexico. I was assured that these aircraft would undergo all the CUPID modifications scheduled for the F-16C fleet prior to the aircraft being transferred to the 148th. Moreover, I understand that the aircraft will also receive the FALCON-UP structural modifications before arriving in Duluth. Could you please respond to the above information and confirm that it accurately represents the Air Force's commitment to the 148th Fighter Wing?

General JUMPER. Your information accurately represents the Air Force's commitment to the 148th Fighter Wing. The 148th Fighter Wing will receive F-16 Block 30 aircraft. The last of these aircraft are currently receiving FALCON-UP structural modifications. The CUPID, Combat Upgrade Plan Implementation Details, modification program will be complete in fiscal year 2002.

---

QUESTIONS SUBMITTED BY SENATOR JEFF BINGAMAN

AIR NATIONAL GUARD AND RESERVE

5. Senator BINGAMAN. General Jumper, could you please provide the committee with your overall assessment of the value and performance of the Air National Guard and the Air Reserve in meeting Air Force operational goals and requirements?

General JUMPER. The Air Force cannot complete its mission successfully without our air Reserve component. The Air National Guard and Air Force Reserve are full partners in the AF's corporate programming and budget process. Additionally, Guard and Reserve units participate in combat and combat support operations on a daily basis. Fully 24 percent of our deployed expeditionary forces are from the Guard and Reserve. This is a level of support that is higher than during the middle of Desert Storm, and they sustain that now on a daily basis. Additionally, the Guard

and Reserve participate in all major contingencies, exercises, and competitions while serving as the linchpin for our humanitarian efforts and virtually all our North American Air Defense efforts.

6. Senator BINGAMAN. General Jumper, there are 20 Fighter Wing equivalents in the Air Force and approximately 7 in the Guard and Reserve. What is the mix within the Guard and Reserve?

General JUMPER. Senator Bingaman, the mix within the Reserve component is approximately 6 Fighter Wing Equivalents in the Guard and 1 in the Reserve.

7. Senator BINGAMAN. General Jumper, Secretary Roche recently testified to the committee that fighters would stay in the National Guard. What are your plans in this regard? What are your plans regarding integration of the Guard, Reserve, and active forces in other Air Force mission areas?

General JUMPER. Our intent is to maintain a healthy balance between Active, Guard, and Reserve fighter forces. Our force structure today supports the steady-state contingency deployment requirements of the Air Force in its responsibilities to National Defense, using the current Air Expeditionary Force (AEF) construct to support steady-state contingency operations. Any substantive change in our total fighter force structure, or any other mission areas, will require us to address this balance to ensure we maintain supportable force structure that sustains our AEF.

8. Senator BINGAMAN. General Jumper, given the importance of Guard and Reserve units and the reality of a constrained budget, could you please provide the committee with an outline of the current or most recent Air Force plans to modernize, train, and equip Guard and Reserve units during the Future Years Defense Plan period? Please provide specific information with regard to quantity and types of aircraft and their modifications, training hour goals and funding, and other major equipment and facility upgrades or expansions that are planned.

General JUMPER. Air Combat Command, as the lead command for combat aircraft in the Combat Air Forces (CAF), manages the modernization of all fighter and bomber aircraft, including the ANG and AFRC. Current plans for modernization of all fighters and bombers, including those assigned to the ANG and AFRC are listed. The Future Years Defense Plan includes datalink and smart weapons integration on the entire AoA-10 fleet at a cost of \$320 million. Engine sustainment and radar upgrades on all F-15A/B aircraft are programmed at \$600 million. All F-16 aircraft are scheduled for structural updates, datalink capability, Joint Helmut Mounted Cueing System (JHMCS) capability, threat warning and engine safety upgrades, and targeting pods at a cost of \$1.6 billion. The B-52 aircraft will receive new inertial navigation system upgrades at \$300 million.

The ANG and AFRC are fully funded and capable of executing their flying hour programs that permit them to achieve all their training objectives. Additionally, there are programmed actions that will ensure all ANG F-15A/B units receive upgraded F-15C/D model aircraft as the F-22 is delivered. Also, all F-16A combat units are scheduled to convert to the F-16C not later than fiscal year 2003. ANG and AFRC MILCON projects compete in conjunction with Active Duty projects for a Total Force ranking ensuring that the highest priority projects receive funding whether ANG, AFRC or Active Duty.

9. Senator BINGAMAN. General Jumper, as Chief of Staff of the Air Force, are you committed to continue your direct involvement, communications, and use of the Air National Guard and Reserve within the context of the Total Air Force?

General JUMPER. Yes. We cannot complete our mission successfully without them.

10. Senator BINGAMAN. General Jumper, could you please provide the committee with your assessment of implementation of the Expeditionary Air Force (EAF) and its impact on Air Force personnel and their families?

General JUMPER. The implementation of the EAF has had a profound impact on airmen and their families. As an inclusive concept that seeks to bring all Air Force deployable capabilities into the rotational schedule to handle our steady-state contingency commitments, active duty personnel tempo has decreased by approximately 20 percent from our previous deployment concept. Also, the EAF 10-month train-to-task preparation time has made our airmen teams better prepared, focused and more confident in their ability to get the job done while forward deployed.

As more active duty and Reserve component airmen experience combat missions at our overseas locations, their enthusiasm for remaining in the AF also grows. Consequently, these experiences have allowed us to turn the corner on retention and re-enlistment rates. Of course many factors have improved our airmen's lives and

future careers, but providing a predictable and stable schedule has become a significant factor in our retention efforts.

Scheduling predictability has also allowed families to plan and commit for the future as never before. Families can now commit to a vacation or family event with more certainty. Personal education plans for members and spouses now become possible. Airmen can now plan and prepare for their next promotion testing cycle. In short, placing the entire Air Force on a rhythmic, predictable EAF schedule is slowly but positively changing what it means to live, work, and succeed in the Air Force.

11. Senator BINGAMAN. General Jumper, how do the Air National Guard and Air Force Reserve fit into the EAF strategy? Do they help relieve Air Force ontempo and perstempo? Are the Guard and Reserve important elements of the EAF? Could the Air Force meet worldwide commitments without them?

General JUMPER. The Guard and Reserves are critical participants in our global engagement strategy. They provide and operate approximately 24 percent of our deployed aircraft and 10 percent of our deployed combat support. Because of that unprecedented involvement, the ARC has saved nearly 7000 active-duty 3-month deployments each 15-month cycle. ARC involvement also means that world events have more meaning to more people in a positive way if their employee/neighbor is in the Guard or Reserve. This long term, large-scale assistance to the active duty force and our country is critical. We cannot meet our global commitments while maintaining a quality, Active-Duty Force without their voluntary participation.

#### COMBAT

12. Senator BINGAMAN. General Jumper, what is your definition of “combat” as applied to Air Force assets?

General JUMPER. NCA authorities call on the military, in conjunction with other instruments of national power, to achieve specific policy objectives. For the Air Force, combat is just one portion of the spectrum of military operations. When we approach any military operation, combat/conflict may be right around the corner. To simply define an asset as a combat coded asset denigrates the full range of options that asset can perform. Rather, we approach each military operation with an understanding of how that asset contributes to achieving the desired military effect (be that attacking industrial centers, enemy fielded forces, or airlifting supplies to remote villages in need of aid). It is counter-productive to define the term combat and delineate between combat and noncombat assets when Air Force assets perform missions that span the entire spectrum of military operations.

13. Senator BINGAMAN. General Jumper, what is your view of Guard and Reserve capabilities, including “combat”? Where has the Air Force called on Guard and Reserve fighter units to serve during the past 15 years and how have they performed? Do you intend to revise or otherwise assign different combat roles to active, Reserve, and Guard units in the future?

General JUMPER. Senator Bingaman, unlike the Vietnam era, when they flew older model aircraft, today’s Guard and Reserve Forces fly nearly the same aircraft as active duty units. They use the same flying regulations and have essentially the same training requirements in their Ready Aircrew Program (RAP) criteria. While the total number of sorties required by RAP tasking for ARC units is slightly lower than that required of active duty units, this is more than offset by their higher experience levels. I consider them equally capable. Over the past 15 years, Guard and Reserve units have participated in a number of combat operations. Reserve component units were activated for Desert Storm and Allied Force. They have provided units on a volunteer basis for Operation Just Cause in Panama, Operation Provide Comfort, Operations Northern and Southern Watch, and Operation Deny Flight. In all cases, their performance has been indistinguishable from that of their active duty counterparts. Indeed, I believe the Air Force Reserve component forces are an integral part of the AEF. All in all, ARC members have reduced active duty combat support requirements by 10 percent. In addition, the ARC AEF aviation contribution has reached an unprecedented 24 percent of current steady state requirements during “peacetime.” The Air National Guard and the Air Force Reserve fighter forces are an essential element of aerospace combat power. I don’t see how we can operate without them. Not only do they provide the requisite force structure for meeting U.S. responsibilities around the world, they also capture and retain valuable rated experience that would otherwise be lost as pilots leave the active force for other occupations. I expect Guard and Reserve combat units to continue as an integral part of the Total Force for the foreseeable future.

## QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

## SPACE PROGRAMS

14. Senator WARNER. Some Air Force critics have contended that the Air Force is too focused on aircraft programs and is not providing enough support to space programs. Yet, the Rumsfeld Space Commission recommended that responsibility for management of space programs and activities should be concentrated to an even greater extent than previously in the Air Force, and that the Under Secretary of the Air Force should serve as the acquisition executive for DOD space programs. This has led to concerns in the Army and Navy that their service unique space interests might not be well protected. How will the Air Force coordinate with the Army and Navy to ensure that Army and Navy equities in space programs and activities are protected?

General JUMPER. The Department of Defense is implementing a number of recommendations from the Space Commission that will significantly enhance the integration and coordination of all the Department's space activities. The Air Force sees itself as a leader in this process, and, as the executive agent for space in the Department of Defense, will have specific responsibilities in the planning, programming, and acquisition of space capabilities. The Air Force will have overall responsibility for most Department of Defense space development and operations, but expects all Services and Agencies to continue to be responsible for integrating space capabilities into their forces and fielding any Service-unique space capabilities. The Air Force will lead these activities with the full cooperation and involvement of all the Services, Agencies, and the Joint community. By using organizations such as the Joint Staff, U.S. Space Command, the National Security Space Architect, and others, we will ensure that the equities of every member of the defense space community are protected.

15. Senator WARNER. The Rumsfeld Space Commission recommended that the Department of Defense and the intelligence community create and sustain a cadre of space professionals capable of developing complex space system technologies, developing doctrines and concepts for space operations, and operating space systems. Do you believe that this is an important goal?

General JUMPER. Yes. The demands for integration of space capabilities and information for modern warfighting will continue to grow in the future. It will be essential that all the services understand how to integrate space into combat operations. We must remain at the forefront of new technologies and fully integrate them into doctrine, operational concepts, and procedures.

16. Senator WARNER. General Jumper, would you recommend that the Air Force support the development of a cadre of space professionals, and if so, how?

General JUMPER. Our future leaders will need to be better prepared to field, integrate and employ highly complex space systems. We will look into the Space Commission's suggestions to create a Space Corps and determining—the best path for the Air Force. One option may be to send our warfighters through specially designed training, education and career paths so they can better employ space capabilities and integrate space operations with air, land, and sea operations.

## READINESS

17. Senator WARNER. Over the last few years we have seen increasing evidence that the readiness of the U.S. Armed Forces has begun to deteriorate as a result of the over-commitment of an under-resourced Department of Defense. The Air Force submitted a \$95.7 billion request as part of the Department of Defense's Fiscal Year 2002 amended budget submission. At the request of this committee, the Air Force submitted an unfunded priority list for an additional \$9 billion. Does the fiscal year 2002 budget contain sufficient resources to meet your requirements for readiness and modernization? Will these increases be enough to avoid the need for a fiscal year 2002 supplemental?

General JUMPER. Sir, let me address the readiness issue first—the short answer is no. Based upon a particular number of units being ready for universal deployment within a timeframe of 30 days, our goal is a readiness rate of 92 percent. Since 1996 we have experienced a decline of 23 percent to a 68 percent level of readiness as of April 2001. This is lower than at any time since 1987. The resources the Air Force has directed toward readiness over the past few years have gone a long way toward slowing the decline in our readiness rate, but we still have a great deal to do to get that rate back to a historically acceptable level.

The cost of infrastructure exacerbates this problem. Over the past few years the infrastructure replacement rate for the Air Force has run between 200 and 250 years. This is in contrast to the accepted business model of 50 to 60 years. We will obviously be unable to increase our readiness to a comfortable level and generate the required infrastructure enhancements within a single budget cycle.

Addressing the modernization issue, the story is much the same. The average age of Air Force aircraft has increased to 22 years and will continue to rise over the next 20 years to approach an average age of 30 years. Flying hour costs, due both to increased cost of fuel and the fact that older aircraft simply require more intense and frequent maintenance, has gone up almost 45 percent in the last 5 years. Last year we spent 103 percent of our flying hour budget on only 97 percent of our flying hour requirement. Again, the answer is no.

18. Senator WARNER. General Jumper, how will the fiscal year 2002 budget request address your service's most pressing near term readiness needs?

General JUMPER. The plus-up made significant contributions in the areas of flying hours, OPTEMPO, Training and Ranges, Low Density/High Demand (LD/HD) assets, and Contract Logistics Support (CLS). We still find ourselves underfunded in the areas of mission support, base operating support (BOS), communications, and real property maintenance (RPM). Additionally, we still have a need to fix readiness shortfalls in personnel, skills, munitions, bare-base assets and vehicles. Our immediate requirement is to ensure that we have enough people to do the job and that those people have the proper training and the assets they need to do the job. We have addressed our most pressing needs but still have a long way to go to put USAF readiness back on a solid footing.

#### SCIENCE AND TECHNOLOGY

19. Senator WARNER. As you may be aware, the Air Force Science and Technology program has suffered tremendous atrophy over the past several years. Congress is particularly concerned that the Air Force has reduced its S&T program from the largest of the three military service programs to the smallest since fiscal year 1989, the Air Force S&T investment is down by 46 percent. How do you plan to turn around the Air Force's science and technology program?

General JUMPER. The USAF has recently expressed interest in increasing its Science and Technology (S&T) investment by providing additional fiscal year 2002 funding in the 2002 President's Budget Request. Program Budget Decision (PBD) 803 resulted in a net increase of nearly \$83 million to the AF S&T line. This brings S&T funding to approximately 1.7 percent of the AF Blue Total Obligation Authority (TOA). Our goal is to grow S&T funding to between 2.0 percent and 2.4 percent of AF Blue TOA.

Historically, AF S&T technologies have formed the foundation for the Air Force's military successes in the last fifty years. The contributions of these technology transitions span several decades. For example, in the 1970s to 1990s, AF S&T investment transitioned approximately \$900M of technology to the F-22. This investment enabled advancements such as Stealth, Composite Structure, Supercruise Engines, Thrust Vectoring, Integrated Flight Controls, and Weapons Launchers, to name a few. AF S&T has made significant contributions to Defense-wide applications in areas such as Global Positioning System (GPS), Low Observables, Precision Navigation, Smart Munitions, Airborne Command and Control, Global Communications, and Battlefield Management. Present transitions from S&T will enhance C-17 survivability, the Unmanned Combat Aerial Vehicle, and advanced, more efficient fuels and engines for JSF.

New technologies on the horizon today, in areas such as directed energy, biotechnologies, information, and space, will give us the same opportunities to revolutionize today's aerospace force that stealth technologies did 20 to 30 years ago. To achieve the Air Force vision for Global Reach, Global Power, and Global Vigilance we will require a healthy investment in AF S&T. Therefore, I agree that increased investment is important to the Air Force.

#### AIRBORNE RECONNAISSANCE ASSETS

20. Senator WARNER. The Air Force, like all the other services, has experienced a high operational tempo over the past decade. We have become familiar with a new term—high demand, low density. One of the best examples of this phenomenon are our airborne reconnaissance assets. They are in such demand for peacetime vigilance and for military operations, but we have a very finite number, and like all

military aircraft, are showing signs of age. What are your plans for modernizing our ISR fleet?

General JUMPER. Modernization of ISR is needed to keep pace with the changing strategic environment and emerging threats. ISR is an enabler that cuts across the full spectrum of operations from peacetime to full-scale combat at every level of war. My vision is to field a constellation of manned, unmanned, and space systems that are interoperable with other joint and National ISR assets. The constellation approach is not focused on a single platform, but is a system of systems that is horizontally integrated with machine-to-machine interfaces that automatically turn sensor data into decision quality information. In addition to the ability to collect, we need a robust command and control capability for tasking this constellation and processing and exploiting the data, and the communications to rapidly disseminate it. The constellation will be fully integrated into the Combined Aerospace Operations Center where the information will be presented for the warfighting commanders to act upon. Key to the future of information operations is the development of the art and science of Predictive Battlespace Awareness, where we move away from pure discovery based on Intelligence Preparation of the Battle Space (IPB) and develop the ability to predict the enemy actions.

Some ISR capabilities will migrate to space as the pace of technology and funding allows. Although, our current manned airborne platforms are characterized as low density/high demand (LD/HD), we will continue to require manned airborne systems in the foreseeable future to maintain flexibility and persistence over the battlespace. We are leading our initiation into UAV operations by starting with ISR and are in concept development for other combat missions. We began by building a concept of operations for a network-centric architecture where a specific sensor or platform is not the overriding concern but fusing and correlating data where it is seamlessly pushed or pulled between nodes depending on the information needs of specific users. We are looking at recapitalizing our aging C<sup>2</sup>ISR aircraft as we are facing increasing costs to sustain and modernize them. My vision is to put as many of the present and future ISR capabilities as technology will allow on a common, commercially derived platform that will serve as the basis for both a new tanker and a new consolidated ISR platform. The constellation with leading edge sensors, networked operations, innovative processes and state of the art tasking, processing exploitation and dissemination will transform our ISR capability and be the critical force multiplier and enabler for making Global Strike Task Force a reality.

21. Senator WARNER. General Jumper, have issues associated with the retention of pilots and analytical personnel associated with these assets been solved?

General JUMPER. Within the Air Force, retaining the right mix of people associated with these high-demand, low-density weapon systems has become increasingly difficult. Many of these issues have been addressed but not yet resolved. Our expeditionary mission and complex weapon systems require an experienced force, and we depend on our ability to attract, train and retain high quality, motivated people to maintain our readiness for rapid global deployment. While patriotism is the number one reason our people, both officer and enlisted, stay in the Air Force, the constant "push" and "pull" factors that influence career decisions put our human resources at risk. We expect the "pull" on our skilled enlisted members to leave the Air Force to persist. Businesses place a premium on the skills and training our people. In fact, exit surveys indicate the availability of civilian jobs is the number one reason our people leave the Air Force. In addition to the "pull" from the civilian sector, factors such as manning shortfalls, increased working hours and OPTEMPO continue to "push" our people out of the Air Force. We fight back with retention initiatives that address the factors that influence the career decision. Current initiatives include initial enlistment and selective reenlistment bonuses specifically designed to attract and retain our enlisted personnel; enhanced compensation in the form of targeted pay raises; and increased flight and aviator continuation pay. We are making progress with these programs but there is still work to be done.

22. Senator WARNER. The Air Force has continued to experience problems with retaining pilots and career NCOs. There is no question that industry highly values the skills and experience of our career NCO force. Similarly, the airlines seem to have a never ending "jobs available" notice out for military pilots. While pilot retention may be "leveling out," i.e., the decline has been arrested, what are the facts regarding pilot retention?

General JUMPER. Senator Warner, current Air Force pilot production roughly equals our losses, but over the next several years we expect to make modest gains in the overall pilot shortage. Fiscal year 2001 projections for the Air Force indicate a shortage of 1190 pilots. By fiscal year 2010 we expect that number to shrink to

730, but almost all of these will be in the fighter and bomber weapon systems. The Air Force pilot shortage is a long-term problem that we will remain focused on for at least the next decade. To date, 27.5 percent of this year's initially eligible pilots have accepted a long-term pilot bonus that will keep them in the service for a minimum of another 5 years.

23. Senator WARNER. General Jumper, what officer/pilot communities within the Air Force have been hardest hit, and what do you plan to do to address this problem?

General JUMPER. In the Air Force pilot community, fighter and tactical airlift weapon systems requirements are currently filled at 88 percent and 89 percent respectively. While we maintain 100 percent manning within the operational units, the shortage of available personnel is felt most acutely at the staff level, as many billets remain unfilled. To correct this, the Air Force will maintain its current pilot production of 1,100 per year and continue other retention initiatives, such as the bonus, in order to fill our currently empty billets.

Within the non-rated community, mission support officers are currently manned at 92 percent of requirements, but extreme demographic imbalances exist within this number. Many experienced officers are exiting the Air Force, requiring us to use an excess number of junior officers to fill the empty billets. Currently, Captains, Majors, and Lieutenant Colonels are manned at levels below 80 percent of requirements and Lieutenants are manned in excess of 200 percent of requirements. The correction for this demographics problem is a combination of retention, quality of life, and personnel management initiatives. Over time, through these efforts, the Air Force will overcome these imbalances.

24. Senator WARNER. General Jumper, what initiatives are you considering to improve retention of our experienced NCOs?

General JUMPER. The factors that cause low retention include wages, high OPMEMO, reduced quality of life, and leadership. The primary tool to mitigate low retention amongst our experienced NCOs is the Selective Reenlistment Bonus, which offers a bonus to 76 percent of our enlisted skills. We continue to look for initiatives to improve retention. Recently, during a Retention Summit, the Air Force approved several initiatives, which include the creation of a Career Assistance Advisor position, Patient Advocates, a Retention Toolkit for advisors and commanders, enhanced Spousal Employment Program, subsidized in-house child care in support of extended hours, studies on NCO re-training, improved enlisted bonuses, pay structure enhancements, and Montgomery GI Bill/Tuition assistance.

#### MANNED RECONNAISSANCE AIRCRAFT

25. Senator WARNER. General Jumper, what is your view concerning the future of manned reconnaissance aircraft?

General JUMPER. Our ISR assets are on duty every day whether we're at peace or in combat. We've found they are actually more stressed during peacetime than during actual contingency operations. Manned reconnaissance is a key element of our total ISR capability and will continue to be for the foreseeable future. Many functions, such as real time Communications Intelligence done with linguists, require manned aircraft solutions. We are looking hard and analyzing which capabilities can be migrated to UAVs and space, but there are some significant threats that have caused us to spend large S&T funding on highly classified capabilities for these airborne platforms. There are also definite technological reasons that don't allow us to migrate some of these capabilities to space and drive us to continue fielding these new capabilities on large manned aircraft.

That brings us to the issue of the aging manned ISR fleets. We're at an average age of 35 years with these assets and the increasing costs of sustaining and modernizing them is a major concern. We are on the threshold of a new generation of sensors and I think it prudent that we study a new aircraft to field these new systems that will allow us to achieve our vision of a horizontally integrated architecture. To the extent that technology will allow, we are looking at consolidating the missions of five different ISR aircraft onto a new wide-body aircraft that can also provide a platform for a new Tanker. This consolidation will serve to ease the LD/HD burden with an open architecture system of configurable avionics. Depending on the mission of the day for that aircraft, the crew can be tailored accordingly. The increased capability envisioned for this new aircraft as a C<sup>2</sup> and ISR asset will provide the ability to operate in the dynamic battle and allow us to pursue the hardest target sets (i.e. SAMs and SCUDs) that we characterize as time critical targets. The

critical C<sup>2</sup> and ISR functions performed on today's manned systems are still required and will be even more robust on future manned aircraft.

26. Senator WARNER. Much has been discussed in recent years about asymmetric threats and the changing nature of warfare. Specifically, many are concerned about potential adversaries who would attempt to deny us the use of forward airfields and seaports that have been such a critical part of recent military operations. What is your vision of how the Air Force can respond to the limited availability of forward airfields?

General JUMPER. The Global Strike Task Force (GSTF) will rapidly establish air dominance and subsequently creates the conditions to guarantee that joint aerospace, land, and sea forces will enjoy freedom from attack and freedom to attack. GSTF is the next step in our Expeditionary Aerospace Force (EAF) evolution; its focus is to rapidly roll back the emerging access threats that might prohibit friendly freedom of action and improve our ability to employ the effects of sustained persistent air operations, as guaranteed by our Aerospace Expeditionary Force (AEF) construct. While it is forged from the experience we gained in the past decade, it also looks forward to future challenges affecting our ability to employ joint forces. GSTF offers our nation a new capability allowing assured access to achieve the combat effects our nation needs.

The F-22 is key to expanding the B-2s stealth advantages beyond moonless-night-only operations; indeed, 24-hour-a-day operations will be possible. F-22s will pave the way for the B-2 and other bomber "heavy lifting" from extended ranges by providing initial local air superiority through the traditional "sweep" role and through air-to-ground targeting of the enemy's air defense network. The unparalleled combination of stealth with supercruise will reduce threat rings, allowing it to establish air dominance and deliver its near-precision weapons deep inside enemy territory.

Implied within GSTF is the ability to command and control rapid and dynamic operations as well as support a vigorous air refueling requirement. Advances in our Combined Air Operations Centers, and our ability to push decision quality information to the warfighter, are key components as is the leveraging of reachback and information technology advances.

Thus, with F-22s and B-2s, the GSTF will be crucial to the joint team's capability to overcome enemy attempts to deny access. Joined with other standoff and special-operations capability, GSTF will provide a capacity to systematically destroy hundreds of targets, negate enemy anti-access systems, and clear the way for follow-on forces in the first days of the conflict. In subsequent days, bombers will orbit in combat air patrols, awaiting tasking for fixed and time-critical targets located and identified by our Multi-mission Command and Control Constellation (AWACS, Rivet Joint, JSTARS, Global Hawk, Satellites, etc. working together to collect order-of-battle data sufficient to refine target lists).

Once anti-access targets are negated, sustained AEF airpower, including the Joint Strike Fighter (JSF) in the air-to-ground and suppression-of-enemy-air-defenses roles, and non-stealthy fighters with precision-attack capability, along with joint and allied forces, will roll into the fight as the threat diminishes, beddown locations open, and survivability increases. These persistent operations will provide continuous presence over the battlefield; the presence required to sustain full-spectrum joint and combined operations, such as the targeting of time-critical mobile targets. The combination of the "kick-down-the-door-force" and the persistent force will compress airpower operations to overwhelm enemy decision-making resulting in the expeditious completion of military operations.

In sum, GSTF is a rapid-reaction, leading edge, power-projection concept that delivers massive around-the-clock firepower. GSTF empowers us to overcome barriers while providing the means to rapidly negate adversary threats. It will mass effects early with more precision, and fewer platforms, than our current capabilities and methods of employment; it will give adversaries pause to quit and will virtually guarantee air dominance for our CINCs.

#### STRIKE CAPABILITIES

27. Senator WARNER. General Jumper, are you satisfied that the investment in short-range tactical aircraft and long-range strike capabilities is properly balanced?

General JUMPER. Determining the correct number of aircraft will be dependent on the findings of the QDR. Until that time, we will continue to analyze the geo-political environment and determine the capabilities necessary, to attain the effects desired across the entire spectrum of military operations. However, I believe that we

need to address some serious funding issues that may affect the future. We need to fund the F-22 program at the appropriate level to ensure air dominance in all future conflicts. Simply cutting force structure to solve cost overruns reduces operational flexibility. We also need to keep the Joint Strike Fighter program on track to ensure a timely replacement for both the F-16 and A-10 to avoid shortfalls in the fighter force structure.

Long-range bomber aircraft also face capability shortfalls if funding falls below what is necessary to keep our fleets viable. Enemy defensive systems continue to improve; therefore airborne systems need to keep pace to be survivable. Improvement in low observable materials, on and off-board defensive systems, and maintaining the right mix of standoff and direct attack munitions for both fighter and bomber aircraft is critical to maintaining combat superiority in future conflicts.

#### JOINT OPERATIONS

28. Senator WARNER. Over the past two decades, our ability to plan and, ultimately, execute joint military operations has improved significantly. However, post operational reviews regularly point out continuing problems with interoperability of service weapons systems, and command and control systems. Are you satisfied that the Air Force is making all prudent efforts to ensure its weapons, and information systems are fully interoperable and integrated to best serve the joint force commander?

General JUMPER. As the Air Force develops and procures new weapon systems our Operational Requirements Documents (ORD) stipulate a Key Performance Parameter (KPP) addressing interoperability. Additionally, new weapons being brought into service are "Joint" systems, for example Joint Direct Attack Munition (JDAM), Joint Standoff Weapon (JSOW), and the Joint Air-to-Surface Standoff Missile (JASSM). Our newest systems under development are going to great lengths to insure other services' requirements are being considered for interoperability. In the case of the Joint Strike Fighter (JSF), within the Interoperability KPP, there are 142 Interface Exchange Requirements (IERS) identified with 61 of those IERS categorized as critical. Interoperability enables the Joint Force Commander (JFC) to call for an effect without regard to which service may provide it.

Our Nation's Air Forces now share a common set of weapons. Two such weapons, HARM and AMRAAM have already proven the importance of interoperability with their success in both the Gulf War and in Kosovo. In these conflicts, U.S. as well as allied Air Forces employed both missiles to protect our force against enemy surface to air missile systems and air threats. The JFC asked for a combat effect (protection of our forces) that was ultimately supplied by several branches of our Nation's Air Forces. Further, the Air Force works with CJCS J-6 to ensure that our new information systems satisfy interoperability requirements. As a recent example, our new Theater Battle Management Corps System (TBMCS) can pass planning and reporting information directly to our sister services' Global Command and Control Systems (GCCS). We are committed to ensuring seamless connectivity with service and allied platforms as we modernize with tactical datalinks such as Link-16—the DOD and NATO standard. We are building a tactical datalink roadmap that incorporates DOD guidance to ensure interoperability as we field this powerful combat multiplier.

Additionally, the Air Force is working to define requirements for "gateways" that provide connectivity between Link-16 and otherwise non-interoperable datalinks such as the Situational Awareness Datalink (SADL), even as we migrate all of our warfighting platforms to Link-16.

Finally, we are also implementing processes that provide "cradle to grave" tactical datalink interoperability management of our weapons systems—Through Life Interoperability Process (TULIP). I believe that interoperability is paramount to the success of any system we develop or consider in order to fully leverage our Nation's combat assets.

#### GOLDWATER-NICHOLS

29. Senator WARNER. The Goldwater-Nichols legislation is now almost 15 years old. I think most will agree it has had a profound, positive effect on the armed forces. Two weeks ago, we asked all the service chiefs to comment on needed improvements or changes to ensure the continuing viability of this legislation. In your view, what changes or improvements are needed to update and enhance the original Goldwater-Nichols legislation?

General JUMPER. I am aware that there are a number of proposals to continue the advancements we've made under the Goldwater-Nichols legislation. Some have suggested we need to make changes with the training of personnel assigned to the Joint Staff, and perhaps also adjust its size and responsibilities. Others have commented on what they see as a need to restructure the joint acquisition programs and planning processes. I have not yet formed an opinion on the appropriateness of these concepts and I am confident I will hear still more proposals as I take on my new responsibilities. I look forward to working with Congress to build on the solid foundation that Goldwater-Nichols has provided to the Department of Defense and our Air Force.

#### FORCE PROTECTION

30. Senator WARNER. On April 25 of this year, Deputy Secretary of Defense Wolfowitz submitted to Congress a report—mandated by last year's Defense Authorization bill—which addresses the preparedness of military installation first responders to react to incidents involving weapons of mass destruction. The report stated that the "Air Force program deficiencies include a lack of policy and guidance, an integrated training and exercise program, and first responder equipment." Force protection is of critical importance to this committee. What corrective actions will you take to address the Air Force's force protection deficiencies as outlined in this report?

General JUMPER. The report delivered to Congress by Deputy Secretary of Defense Wolfowitz put a spotlight on our ability to respond to incidents involving weapons of mass destruction (WMD). Since then, we have made great strides to improve our preparedness and support Secretary Rumsfeld's efforts to ensure the military can provide our nation with enhanced, flexible and integrated response capability. General Mike Ryan established the Air Force First Responder and WMD Program. The goal of the program is to provide all Air Force commanders the resources to enhance their existing installation Disaster Preparedness Programs and Emergency Response Capability (ERC) by being prepared to detect, assess, contain, and recover from terrorist WMD attacks/incident. The Air Force First Responder and WMD Program is the tool we need to leverage existing emergency response command and control concepts and equipment while establishing a 24-hours/7 days response capability. As a part of this program, the Air Force developed a Baseline Equipment Data Assessment Listing (BEDAL) to protect Air Force first responders. This equipment listing provides an initial capability, and will roll into and support the Lead Federal Agency designated to oversee the larger-scale incident recovery and investigation. Additionally, a "first responder training strategy" was created that takes advantage of all military schools and staff colleges, Federal Emergency Management Agency (FEMA) training, as well as, state and local courses. Finally, the Air Force will continue to pursue joint training opportunities with other services and Federal agencies in the form of exercises and training workshops. I will continue to focus the Air Force's attention to stay in a state of preparedness to respond quickly and effectively.

#### B-1 FLEET REDUCTION

31. Senator WARNER. You are well aware that the fiscal year 2002 budget request includes a reduction in force structure and consolidation of operating locations for the B-1 bomber fleet. One of your predecessors at the Air Combat Command, General Loh, said that this decision was made in a "strategy vacuum". How do you respond to this criticism of the B-1 decision?

General JUMPER. I have the utmost respect for General Loh, he is a good friend and a great mentor. The B-1 decision was made from a strategic viewpoint constrained by the realities of the fiscal budget. Our crews increasingly face more advanced air defense systems and given the B-1s current defensive limitations, theater CINCs are reluctant to use this asset in response to regional crisis. The B-1 currently has over \$2.0 billion in unfunded requirements across the FYDP for all 93 aircraft. These unfunded requirements are essential to ensure B-1 survivability and capability against current and future adversaries. The required upgrades will give the B-1 a long-range future that brings speed, penetration, precision, and targeting flexibility to our strategic force. The savings achieved by consolidating our B-1s and reducing the number combat coded aircraft result in a fully modernized and sustainable B-1 fleet. Consolidation allows us to provide: improved survivability to place more targets at risk; increased weapons flexibility by fully integrating precision stand-off missiles and bombs; global connectivity to better engage time-critical tar-

gets; and cost saving maintenance improvements. This strategy allows us to maximize the strategic and operational effectiveness of America's long-range strike fleet for the 21st century.

THE F-22

32. Senator WARNER. In the National Defense Authorization Act for Fiscal Year 1998, cost caps were established for both the development and the production of the F-22 fighter. Until this year, the Air Force supported the continuation of the development cost cap. Now the Air Force has recommended that the development cost cap be removed, since the Air Force is clearly unable to complete F-22 development with the cap. Why has the Air Force encountered problems with this cost cap in the past year? If the cap is removed, how will the Air Force fix the problems with this program?

General JUMPER. Senator, the cap has been an effective cost control tool for the F-22 program. The F-22 engineering and manufacturing development (EMD) program has resulted in a weapon system that is currently meeting or exceeding all key design goals, and the production configuration is essentially complete. The EMD contract is over 95 percent complete with all hardware design finalized; all Key Performance Parameters (KPP) and technical Acquisition Program Baseline (APB) criteria are being met. The current projections for production are that the current congressional cap will be breached to purchase 339 aircraft, but the government/contractor team is engaged in cost control efforts that rely on the implementation of effective cost reduction initiatives. These initiatives have become known as the F-22 Production Cost Reduction Plans (PCRPs), a critical tool enabling the Air Force to deliver F-22 aircraft within the production cost cap. More importantly, PCRPs will continue to drive down aircraft costs over the life of the production program.

The F-22 program has a well-structured plan that continuously pursues cost savings initiatives. An exceptional management framework is established to provide real time monitoring and oversight of cost savings initiatives. Finally, performance to date is within the performance guidelines established for target price performance during the transitioning from development into production. The F-22 team continues to make progress in cutting the cost to produce F-22s. The key management focus for the F-22 team is to constantly pursue cost savings initiatives adequate to ultimately deliver the program within the appropriated production budgets. The production cap forms the basis for the team management approach in establishing the affordability objectives and cost savings targets for PCRP cost reductions. The F-22 team built an efficient management structure to jointly oversee the development and implementation of PCRP projects. The management effort includes an on-line interactive database that allows real time reporting of PCRP status spanning idea generation, approval, implementation and tracking.

33. Senator WARNER. It has been reported that both the Air Force cost estimators and the Defense Department cost estimators have determined that the F-22 production program cannot be executed within the congressionally established cost caps. The Defense Department estimate is almost 25 percent, (or \$9 billion), over the current \$37.6 billion cap. Do you believe the Air Force will have to limit the numbers of F-22 aircraft for affordability reasons?

General JUMPER. At this point it doesn't look like the Air Force will have to limit the buy of F-22s. The Air Force remains committed to producing 339 aircraft. We have a critical need for the F-22 and will continue to work closely with the contractors to produce the desired quantity with the funds we can commit to the program.

34. Senator WARNER. Within this decade the Air Force intends to go into production of the F-22 fighter and the Joint Strike Fighter. In addition, there is a documented requirement for additional strategic airlift, and the Air Force has requested funds for analysis of a follow-on tanker. With more money being required to support the current aging fleet of Air Force aircraft each year, how will the Air Force be able to afford the new aircraft it needs?

General JUMPER. The Air Force has been very successful at maintaining critical combat capability by ensuring our key capabilities are sustained at levels that provide our warfighters the instant response they need to negate any adversary. We balance that by planning and programming requirements for future systems, in the context of future threats and concepts of operations.

Sustaining our current fleet of aircraft has always been a top priority. Efforts such as the recent establishment of the Aging Aircraft System Program Office, to develop technologies that slow down the aging process, will be money well invested.

Using common systems across our platforms and innovative modernization planning and execution will reduce upgrade costs for our older platforms. Through all the efforts combined, we have been successful in reducing cost growth while maintaining combat effectiveness.

Our modernization efforts will be aimed at upgrading our legacy platforms and acquiring systems that directly relate to attain specific effects. Revolutionary technology will ensure we are more than capable to handle any aggressor.

We can balance our future modernization needs and at the same time maintain the current assets we have by careful planning, phasing of new systems, and the meticulous projection of future sustainment needs. We cannot effectively plan for the future, until we make sure we have today covered.

#### STRATEGIC LIFT

35. Senator WARNER. It appears that one of the Department of Defense's transformational "thrusters" is the ability to deploy anywhere, delivering decisive force rapidly. Strategic lift enables that vision. The Mobility Requirements Study for 2005, delivered to Congress this past year, concluded that while sealift appears to be sufficient, there is a significant shortfall in meeting the strategic airlift requirement. What are some of the actions that are necessary for the Air Force to address this shortfall?

General JUMPER. Senator Warner, the Mobility Requirements Study 2005 (MRS-05) identifies the strategic airlift requirement to be 54.5 million ton miles per day (MTM/Day). This figure was a 10 percent increase from the 49.7 MTM/Day requirement identified by the 1995 Mobility Requirement Study Bottom-Up-Review (BURU). The combination of procuring more C-17s and increasing the reliability of our C-5 fleet is our answer to meeting this increased requirement. With that in mind, the challenge to this plan is the proper mix of C-17s and modernized C-5s. Purchasing more C-17s and modernizing part or all of the C-5 fleet is costly, so we want to proceed with due diligence. Assuming the ongoing QDR supports the MRS-05 requirement of 54.5 MTM/Day, we will utilize data from the AMC Outsize and Oversize Analysis of Alternatives to determine the proper mix of C-17s and modernized C-5s to meet the shortfall.

#### JOINT STRIKE FIGHTER

36. Senator WARNER. The Air Force intends to procure almost 1,700 of the Joint Strike Fighter (JSF) aircraft. With that many aircraft, it is important that the unit cost be held to a reasonable number. The Navy and Marine Corps have established ranges for the unit cost of their JSF variants, yet it is our understanding that the Air Force has yet to establish a number for the high end of its price range. When will the Air Force decide on the upper limit of the unit price range for the Air Force variant of the Joint Strike Fighter?

General JUMPER. The Joint Requirements Oversight Council approved the Conventional Take-Off and Landing (CTOL) variant Unit Recurring Flyaway Cost (URF) objective at \$28 million (fiscal year 1994\$) and left the threshold as "to be determined (TBD)" pending the Milestone II decision in fall 2001. The CTOL threshold amount will not be established until Milestone II (for entry into EMD), receipt and evaluation of contractor proposals, an independent cost estimate by the Department of Defense, and review and approval by the Defense Acquisition Executive. The EMD baseline will also be updated and the procurement baseline established at Milestone II.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### INTEROPERABILITY

37. Senator THURMOND. As you are aware a lesson learned from the Balkan Campaign was that our allies failed to keep pace with the technology that the United States deployed in its aircraft and weapons systems. Although the consequences were minimal, it could have been disastrous had we faced a more sophisticated enemy. The Air Force is now undertaking significant modernization efforts and I fear we may again be ignoring the problem of interoperability. In your judgment, is the Department focusing on the issue of interoperability as it modernizes?

General JUMPER. The Air Force has long recognized the importance of interoperability with our sister services and allies. General Ryan recently stood up the Tactical Datalink (TDL) System Program Office and identified TDLs (with Link 16 as

the objective) as an AF major system acquisition program. We are building a TDL roadmap that defines future modernization programs and ensures interoperability between all American and allied platforms. We also participate in the AF Operational Interoperability Requirements Group. This group is the primary forum for operator inputs into the tactical C<sup>2</sup> interoperability management structure and the means for verification and validation of TDL information exchange and operational requirements. Additionally, we are implementing a process that will improve systems interoperability during their development and testing phases in accordance with Defense Department Policy contained in the Joint Tactical Data Link Management Plan.

#### ENCROACHMENT

38. Senator THURMOND. A challenge you will be facing during your tenure as Chief of Staff will be the issue of encroachment, both on the ground by development and in the air by increased air traffic. Contrary to what some Department of Defense officials may believe, these are issues that are found to some degree throughout the United States and cannot be resolved through base closure. How do we deal with this ever-increasing challenge to our facilities?

General JUMPER. Our installations and training areas are national assets, essential to our combat capability. The AF manages approximately 9 million acres of bases and ranges. When many of these installations and training areas were established, they were in rural, sparsely populated areas. Now our installations and training areas are experiencing double-digit increases in population growth. Proactively working with the community to predict and resolve competing demands is the first step toward ensuring that the rapid pace of urban growth does not endanger our existing capital investment in base infrastructure and our ability to test and train.

Not only is physical encroachment on our bases an issue, but frequency encroachment also threatens our ability to train effectively. These issues demand that we maintain open communication and close cooperation with all affected parties. The partnerships we have with our sister services, civilian leaders, government agencies, and the community provide an important forum to mutually resolve this challenge.

#### AGING AIRCRAFT

39. Senator THURMOND. One of the most critical issues facing the Air Force is how to maintain its aging fleet of aircraft. This problem is having a direct impact on readiness, flying hour cost, and the time our airmen spend on the flight line maintaining these aircraft. Based on the current efforts to modernize our aircraft fleet, how long will this issue of aging aircraft be with us and what interim steps can we take to resolve this problem?

General JUMPER. The issue of aging aircraft will be with us into the next decade, and despite modernization plans we will continue to depend on aging aircraft to meet future force requirements. The average age of Air Force aircraft is now 22 years, and it will continue to increase to nearly 30 years by fiscal year 2020.

To ensure we maintain a viable force during this time of airframe average age increases, the Air Force has programmed several major upgrades to its aircraft fleet. The F-16C is programmed to receive Falcon STAR, the A-10 is programmed to receive Hog UP, and the F-15 is continuing to receive structural upgrades during programmed depot maintenance visits. The C-5 is programmed for avionics upgrades and engine replacement, and the C-130 will receive avionics improvements.

The long-term solution is the recapitalization of the aircraft fleet. This rests firmly on the purchase of the F-22 to replace the aging F-15, the Joint Strike Fighter to replace the A-10 and F-16, a next-generation tanker, KC-X, to replace the KC-135, and a common wide-body aircraft to replace AWACS, Rivet Joint, and other C<sup>2</sup>ISR platforms.

#### SPACE

40. Senator THURMOND. General Jumper, the current leadership in the Department of Defense is advocating a greater role in space for our military services. Although the Air Force is at the forefront of this challenge, and already has a significant role, what is your vision of the Air Force's future role in space?

General JUMPER. Our vision for the Air Force's future role in space is one that recognizes the unique contributions and advantages space provides to our national security. The organizational changes recommended by the Space Commission and

directed by the Secretary of Defense will lead to streamlined acquisition, more comprehensive planning and programing, and better capabilities for the warfighter. I believe space will be a crucial "center of gravity" in all future conflicts and we must fully integrate space capabilities into current and future warfighting missions.

---

QUESTIONS SUBMITTED BY SENATOR BOB SMITH

B-2

41. Senator SMITH. General Jumper, it is my understanding that the B-2 radar may have significant limitations on its operation due to frequency conflicts with commercial uses after the year 2007. Is this the case? If so, given the long lead times necessary to plan and execute radar modification or development programs, what are the Air Force's plans to address this limitation?

General JUMPER. The B-2 is designated as a secondary user in the band and has not been granted a long-term operational frequency assignment. The spectrum community has since authorized new primary users to operate in the band. Currently, we are operating on temporary waivers, as the potential for interference is not considered significant. Unfortunately, by 2007, a more significant interference potential exists as commercial satellite and downlink users are expected to begin using the frequency in mass numbers. This could subject the Air Force to significant liabilities, in addition to an order to cease and desist the interference. All solutions and systems are being considered, under a current study, to provide the most affordable and technically correct solution to the problem. Multi-Platform-Radar Technology Improvement Program (MP-RTIP) and its applications are some of the options being considered under the study. The bottomline is that every effort is being pursued to provide a program that meets the projected need date and is affordable by the U.S. Air force.

42. Senator SMITH. General Jumper, I understand that the Federal Communications Commission has already ruled that the current B-2 operating frequency will not be available after 2007. Doesn't this ruling preclude the waiver option?

General JUMPER. In 1995, an application for a permanent operational waiver was disapproved. For now, B-2s are operating under a series of temporary test permits until the FCC issues a cease and desist order, at which time we must stop using the radar. Recently, the National Telecommunications Information Administration (NTIA) sent a letter to the Director of Spectrum Management requesting a DOD transition plan for moving out of the existing band by the stated date. Every effort is being pursued to provide a program that meets the projected need date and is affordable by the U.S. Air Force.

---

QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

BUDGET SHORTFALLS

43. Senator SANTORUM. In briefings and materials provided to Congress on the Fiscal Year 2002 Budget Amendment, the Air Force noted there are very clear indicators that future problems will be compounded if not addressed in a timely fashion.

For example, only 69 percent of the Air Force's combat units are rated at either C<sup>1</sup> or C<sup>2</sup> readiness levels. The stated Air Force requirement is 92 percent. In addition, readiness levels continue to decline as modernization fails to keep pace with the aging fleet, which requires additional sustainment resources. Also of concern is the \$2 billion shortfall in both general purpose and preferred munitions for the Air Force. The backlog of Air Force maintenance and repair continues to grow reaching \$5.6 billion in fiscal year 2002. However, the fiscal year 2002 request seeks only 86 percent of plant replacement value. Taken together, these figures indicate that without corrective action, the Air Force may be forced to incur higher than acceptable levels of risk to execute its mission. What specific actions would you recommend to the Secretary of the Air Force and/or the Secretary of Defense to address these issues in the absence of an increase in the Air Force's topline? That is, assuming that there is not a substantial increase in defense funds for fiscal year 2002, what are some of the hard decisions that you would recommend be executed so that the Air Force could better address its most pressing problems?

General JUMPER. Senator Santorum, you have hit at the very heart of the balancing problem for not just the Air Force, but for all the services, given our current fiscal realities. Without an increase in the Air Force's topline and given the depreciation of our capital infrastructure, the hard decisions that will have to be made

will require significant study and effort. Defining specific actions and recommendations to the secretaries at this time would be premature in the absence of a finalized QDR. I assure you that as I dig into my new position, I will work the Air Force's major concerns of retaining an experienced workforce, maintaining a state of readiness to meet national objectives and recapitalizing and modernizing an aging fleet.

#### F-22 COST CAP

44. Senator SANTORUM. Last year, the Airland Subcommittee received testimony on the progress of F-22 testing, which raised concerns about the rate at which flight test hours and test points were being achieved. Although the program achieved the "exit criteria" for entry into low rate initial production, the Secretary of Defense has delayed that decision pending the completion of a strategic review of all programs by the new administration. In the meantime, Congress has provided authority for the Department to use available funds for an expanded long lead production of aircraft for the program through the end of fiscal year 2001.

The fiscal year 2002 budget request is for producing 13 F-22 aircraft, instead of the 16 F-22 that were projected for fiscal year 2002 in last year's budget request. Media reports indicate that the Air Force intends to delay production of some aircraft in the near-term in order to allocate funds to incorporate cost reduction measures for later lots of aircraft. Could you please comment on the efficacy of the cost cap for the engineering and manufacturing development phase of the program, along with the cost projections for the production phase of the program? Also, please comment on possible cost reduction measures, and the evaluation criteria that the Air Force is using to screen cost reduction candidates.

General JUMPER. The cap has been an effective cost control tool for the F-22 program. The F-22 EMD program has resulted in a weapon system that is currently meeting or exceeding all key design goals, and the production configuration is essentially complete. The EMD contract is over 95 percent complete with all hardware design finalized; all Key Performance Parameters (KPP) and technical Acquisition Program Baseline (APB) criteria are being met. The current projections for production are that the current congressional cap will be breached to purchase 339 aircraft, but the government/contractor team is engaged in cost control efforts that rely on the implementation of effective cost reduction initiatives. These initiatives have become known as the F-22 Production Cost Reduction Plans (PCRPs), a critical tool enabling the Air Force to deliver F-22 aircraft within the production cost cap. More importantly, PCRPs will continue to drive down aircraft costs over the life of the production program.

The F-22 program has a well-structured plan that continuously pursues cost savings initiatives. An exceptional management framework is established to provide real time monitoring and oversight of cost savings initiatives. Finally, performance to date is within the guidelines established for target price performance during the transition from development into production. The F-22 team continues to make progress in cutting the cost to produce F-22s. The key management focus for the F-22 team is to constantly pursue cost savings initiatives adequate to ultimately deliver the program within the appropriated production budgets. The production cap forms the basis for the team management approach in establishing the affordability objectives and cost savings targets for PCRP cost reductions. The F-22 team built an efficient management structure to jointly oversee the development and implementation of PCRP projects. The management effort includes an on-line interactive database that allows real-time reporting of PCRP status spanning idea generation, approval, implementation and tracking.

Three cost saving measures currently being implemented are listed for the record. The Radar Transmit/Receive (T/R) module design was updated, parts were reduced, and the cycle time reduced for the acceptance test program. New high speed milling machines have been purchased at Marietta to machine parts more quickly, cutting time to locally machine parts by 40 percent. Pratt and Whitney/Chemtronics Integrated Product Team addressed the exhaust nozzle transition duct structural bulkhead, the thermal protection liners and eliminated the conformal structural spars saving \$120K per engine. Criteria used to evaluate PCRPs include upfront investment required, total return on investment, cycle-time savings, and manpower/man-hours savings.

## QUESTIONS SUBMITTED BY SENATOR SUSAN COLLINS

## F-22 PRODUCTION

45. Senator COLLINS. General Jumper, I want to discuss modernization of our tactical air forces from several perspectives.

First, I know the Air Force is enthusiastic about the F-22 and know you understand the need to modernize our tactical air forces, especially since you are currently the Commander of the Air Combat Command. I am somewhat concerned however, that the anticipated production rates of the F-22 may not provide adequate assets to fully meet all the training and operating needs of the Air Expeditionary Forces. It is critical that we procure the right number of assets to meet the requirements and to ensure that our Air Force can adequately counter those threats with sophisticated fighter aircraft, and that we provide the assets, which will have the best chance of returning our airmen home safely. Does building 339 F-22s give us enough flexibility to fully modernize our Air Expeditionary Forces to sufficient levels to meet the threats of the 21st century? If not, what is the optimum number of F-22s to meet these demands?

General JUMPER. In the event that 339 aircraft can be purchased with available funds, we will equip 9 operational squadrons with 24 F-22s each. Those nine squadrons would be assigned to support the 10 Aerospace Expeditionary Forces (AEFs). This force structure will allow the Air Force to meet current predicted threats, however, it is not optimum. Ten operational, one for each AEF, would be a desirable force structure, but prior to the outcome of the QDR it is premature to quote an optimum number of F-22s.

## JOINT STRIKE FIGHTER

46. Senator COLLINS. The time has come to focus more attention on the Joint Strike Fighter and its role in the Air Force. In my opinion, the key to the JSF is "jointness"—i.e., the Air Force, Navy, and Marine Corps all operating essentially the same aircraft—and the taxpayers reaping the benefit of having common systems among the variants. But the program is international, too. From your previous assignments in Europe, how committed are the Europeans to this effort? Will they be able to afford the JSF given the current state of the European economy? Also, can you talk to how important it is for our NATO allies to be able to be interoperable with the U.S. in time of conflict?

General JUMPER. Our European allies are very interested in the JSF Program and their level of commitment is growing as we near the Milestone II decision and the beginning of the next phase which is the engineering and manufacturing development (EMD) phase. The UK is already an EMD partner, having signed a Memorandum of Understanding (MOU) effective January 2001. They are contributing \$2B to this joint and international cooperative effort and have been active in the source selection process to determine the winning contractor for the next phase of the program. A combined JSF Program Office/OSD/Services negotiating team has successfully concluded negotiations with Italy, Netherlands, Denmark and Norway. These countries are entering their respective national staffing processes, which will lead to MOU signatures before or shortly after the Milestone II decision in Fall 2001. The total international requirement for the JSF exceeds 780 aircraft, a strong signal of the international level of commitment and state of their economies.

Regarding interoperability, it is extremely important that our NATO allies be as interoperable with us as possible. Past contingency operations have highlighted the interoperability problems we have with our allies. Several initiatives are ongoing to reduce these problems. In any future conflict we can expect to conduct joint operations with our coalition partners. In order to be an effective fighting force we must expand interoperability beyond communications and data flow to include tactical capabilities. Flying a common platform, such as the JSF, will be an important step to overcoming interoperability problems with our allies.

## ENGINE THRUST

47. Senator COLLINS. Under the Air Force's concept of Air Expeditionary Forces, or AEFs, the Air Guard has become increasingly utilized—and important. I frequently hear the term "seamless" used. Under this concept, is important to ensure that Guard units on active deployment also have the safest, most up-to-date equipment that their active colleagues enjoy. I say this because for several years now, several colleagues have worked to upgrade the Air Guard F-16 engines to a Block 42 configuration. I am told that increased engine thrust is one of the most impor-

tant and immediate requirements for those deployed units. Would you agree that in a “seamless” Air Force this issue needs to be addressed and—if you do—how do you plan on accomplishing such a goal?

General JUMPER. The F-16C/G Block 42 is currently equipped with the 25,000 lb thrust-class F100-PW-220 engine. The Block 42 fleet consists of 161 total aircraft, of which 50 are combat-coded. All 50 combat-coded aircraft are assigned to the Air National Guard: 132 FW Des Moines, IA; 180 FW Toledo, OH; 138 FW Tulsa, OK. The remaining 111 Block 42s are assigned to training and test units. The Block 42, like the Block 40, was specifically designed for the Low Altitude Navigation and Targeting Infrared for Night (LANTN) mission. While the Block 42 possesses the same rugged airframe and avionics as the Block 40, its performance is somewhat less than the F110-GE-100-powered Block 40 (28,000 lb thrust-class).

We continue to work toward the goal of keeping a seamless Air Force by ensuring the ANG and AFRES aircraft are modernized in a timely and consistent fashion with the active duty Air Force. I will agree the re-engine issue is important to the three ANG units flying the F-16 Block 42, however the re-engine issue is lower on the list of Fleet F-16 modernization projects. There are numerous programs that could benefit from the additional money being funded through congressional plus-ups, which better serve the Air Force and ANG. We could enhance combat capability and correct deficiencies in the entire F-16 Fleet through procurement of additional systems. Some examples of these systems are: Advanced Targeting Pod, radar upgrades for both the Block 40/42 and 50/52 [APG-68(v)9], new (Common Central Interface Unit (CCIU) for the Block 25/30/32, Color Multifunctional Displays (CMFD) for the Block 25/30/32, and Pyrophoric Flares to increase survivability of all F-16s. In essence, while the Block 42 engine upgrade is a worthwhile project, it is just one modernization project among many being considered for the F-16. It is important to note that as part of our Total Force, the three Block 42 F-16 units have successfully deployed to both Northern and Southern Watch while seamlessly integrating into combat operations with active operations. I will continue to make certain that the ANG and AFR remains integrated in our Total Force.

#### C-17 PROCUREMENT

48. Senator COLLINS. I believe most defense observers regard the C-17 as a success. Yet, in fiscal year 2003 we will reach the end of the 120 aircraft buy we originally thought prudent. In the 21st century with American forces no longer able to enjoy a “forward presence” around the world, the strategic airlift capability the C-17 provides is critical. Would you support extending the multi-year procurement for the C-17 to some number beyond 120? If so, what number of aircraft do you now regard as prudent for our forces?

General JUMPER. The Mobility Requirements Study 2005 (MRS-05) identifies the strategic airlift requirement to be 54.5 million ton miles per day (MTM/Day). This figure was a 10 percent increase from the 49.7 MTM/Day requirement identified by the 1995 Mobility Requirement Study Bottom-Up-Review (BURU). The combination of procuring more C-17s and increasing the reliability of our C-5 fleet is our answer to meeting this increased requirement. With that in mind, the challenge to this plan is the proper mix of C-17s and modernized C-5s. Purchasing more C-17s and modernizing part or all of the C-5 fleet is costly, so we want to proceed with due diligence. Assuming the ongoing QDR supports the MRS-05 requirement of 54.5 MTM/Day, we will utilize data from the AMC Outsize and Oversize Analysis of Alternatives to determine the proper mix of C-17s and modernized C-5s to meet the shortfall.

[The nomination reference of Gen. John P. Jumper follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*July 17, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

The following named officer for appointment in the United States Air Force to the grade indicated while assigned to a position of importance and responsibility under Title 10, United States Code, Section 601 and to be appointed as Chief of Staff, United States Air Force under the provisions of Title 10, United States Code, section 8033:

*To be General*

Gen. John P. Jumper, 7457.

[The résumé of Gen. John P. Jumper, USAF, which was transmitted to the committee at the time the nomination was referred, follows:]

DEPARTMENT OF THE AIR FORCE,  
HEADQUARTERS UNITED STATES AIR FORCE,  
Washington, DC, July 20, 2001.

Hon. CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: The President, under the provisions of section 601, Title 10 of the United States Code, has submitted to the Senate the nomination of the following general officer for appointment to the grade of general with assignment as indicated:

Name, grade and SSAN	Age	Assignment (from/to)
John P. Jumper, General, 7457 .....	56	From Commander, Air Combat Command. To Chief of Staff, United States Air Force.

General Jumper is replacing Gen. Michael E. Ryan, United States Air Force, upon his departure. Confirmation action during July 2001 will help insure a smooth transition for General Jumper. This action will not result in the Air Force exceeding the number of generals authorized by law.

For the information of the committee, I am enclosing a military history on General Jumper.

Sincerely,

DONALD L. PETERSON,  
*Lieutenant General, USAF, Deputy*  
*Chief of Staff, Personnel.*

Attachment Military History.

## RÉSUMÉ OF JOHN P. JUMPER, GENERAL, REGAF, 7457

*Date and place of birth:* 4 Feb 45, Paris TX.*Years of active service:* Over 35 years as of 12 Jun 01.*Schools attended and degrees:* Virginia Mil Inst, BS, 1966; Golden Gate Univ CA, MS, 1979; Air Command and Staff College, 1978; National War College, 1982.*Joint specialty officer:* Yes.*Aeronautical rating:* Command Pilot.

[The Committee on Armed Services requires certain senior military officers nominated by the President to positions requiring the advice and consent of the Senate, and certain senior military officers as determined by the committee, to complete a form that details the biographical, financial and other information of the nominee. The form executed by Gen. John P. Jumper, in connection with his nomination follows:]

1375

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
John Phillip Jumper.

2. **Position to which nominated:**  
Chief of Staff, United States Air Force.

3. **Date of nomination:**  
July 17, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
February 4, 1945; Paris, Texas.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Ellen McGhee Jumper (formerly Ellen Elizabeth McGhee).

7. **Names and ages of children:**  
Catherine J. Schafer—age 28.  
Janet E. Jumper—age 25.  
Mellisa D. Jumper—age 15.

8. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed in the service record extract provided to the committee by the executive branch.  
None.

9. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.  
None.

10. **Memberships:** List all memberships and offices held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
Ninth Air Force Association—Member.  
Counsel on Foreign Relations—Member.  
Caribous Association—Member.  
Daedalions—Member.  
Air Force Association—Member.

11. **Honors and awards:** List all memberships, fellowships, honorary society memberships, and any other special recognitions for outstanding service or achievements other than those listed on the service record extract provided to the committee by the executive branch.  
Wings Club of New York City—Honorary Member.  
Air Force Sergeants Association—Honorary Member.  
Logistics Officer Association—Honorary Member.

Respect For Law Alliance—Military Honoree.  
Aviation Week—Laurette.

12. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

13. **Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?

Yes.

---

[The nominee responded to the questions in Parts B–E of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–E are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

GEN. JOHN P. JUMPER.

This 27th day of July, 2001.

[The nomination of Gen. John P. Jumper was reported to the Senate by Senator Warner on August 2, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on August 3, 2001.]

**NOMINATION OF GEN. RICHARD B. MYERS,  
USAF, TO CHAIRMAN OF THE JOINT CHIEFS  
OF STAFF**

---

**THURSDAY, SEPTEMBER 13, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 2:39 p.m. in room SH-216, Hart Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Lieberman, Cleland, Landrieu, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, Carnahan, Dayton, Warner, McCain, Smith, Inhofe, Roberts, Alard, Hutchinson, Sessions, Collins, and Bunning.

Committee staff member present: David S. Lyles, staff director.

Majority staff members present: Madelyn R. Creedon, counsel; Richard D. DeBobes, counsel; Evelyn N. Farkas, professional staff member; Richard W. Fieldhouse, professional staff member; Maren Leed, professional staff member; Gerald J. Leeling, counsel; Peter K. Levine, general counsel; Michael J. McCord, professional staff member; Arun A. Seraphin, professional staff member; and Terence P. Szuplat, professional staff member.

Minority staff members present: Romie L. Brownlee, Republican staff director; Judith A. Ansley, deputy staff director for the minority; Charles W. Alsup, professional staff member; L. David Cherington, minority counsel; Edward H. Edens IV, professional staff member; Brian R. Green, professional staff member; Gary M. Hall, professional staff member; Carolyn M. Hanna, professional staff member; Mary Alice A. Hayward, professional staff member; Ambrose R. Hock, professional staff member; George W. Lauffer, professional staff member; Patricia L. Lewis, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, minority counsel; Suzanne K.L. Ross, research assistant; Cord A. Sterling, professional staff member; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Gabriella Eisen, Daniel K. Goldsmith, Jennifer L. Naccari, and Nicholas W. West.

Committee members' assistants present: Andrew Vanlandingham, assistant to Senator Cleland; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; Eric Pierce, assistant to Senator Ben Nelson; Neal Orringer, assistant to Senator Carnahan; Brady King, assistant to Senator Dayton; Christopher J. Paul and Dan Twining, assistants

to Senator McCain; Margaret Hemenway, assistant to Senator Smith; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; James P. Dohoney, Jr., assistant to Senator Hutchinson; Kristine Fauser, assistant to Senator Collins; and Derek Maurer, assistant to Senator Bunning.

#### **OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Today, in New York City and across the Potomac in Virginia, our fellow citizens continue to sift through the rubble 2 days after the most deadly and cowardly attack ever against the United States. The terrorists behind this sought to destroy more than structures. They sought to destroy the American spirit. But those who unleashed this horror now understand they have failed.

Through our rage at these attacks on our people and on our free institutions shines a focused determination to recover our loved ones and friends who are still lost, and to assist their loved ones in coping with the devastating void into which they have been plunged. Our fury at those who attack innocents is matched by our determination to protect our citizens from more terror, and by our resolve to track down, to root out, and relentlessly pursue the terrorists and those who would shelter or harbor them.

Two nights ago, Senator Warner and I joined Secretary Rumsfeld, General Shelton, and General Myers at the Pentagon, and witnessed first-hand that determination. Brave men and women were attending to the victims and fighting the fires all just a few feet away from loved ones and friends who were still missing or presumed killed. Many of them have been working nonstop ever since the attack. America salutes them as the genuine heroes and heroines that they are, and our prayers are with the victims and their families and friends who grieve for them.

For every person who has perpetrated a barbaric act, thousands of Americans have engaged in acts of extraordinary courage. Those acts are still unfolding, and will unfold in the days, weeks, and months ahead.

Debate is an inherent part of our democracy, and while our democratic institutions are stronger than any terrorist attack, in one regard we operate differently in times of national emergency. We set aside our differences, and we ask decent people everywhere to join forces with us to seek out and defeat the common enemy of the civilized world.

As Chairman of the Joint Chiefs of Staff, General Hugh Shelton assured the Nation 2 nights ago that America's Armed Forces are ready. General Shelton has served in the demanding position of Chairman of the Joint Chiefs of Staff for the past 4 years with great distinction. The Nation and every man and woman who wears our country's uniform owes him a tremendous debt of gratitude. Now General Richard Myers is ready to assume the duties that General Shelton so magnificently shouldered.

The President has nominated General Myers to be the next Chairman of the Joint Chiefs of Staff. General Shelton's term ex-

pires on September 30. This committee must act on General Myers' nomination, and we will do so.

The tragic events of the last 2 days vividly remind us again of the importance of this position. The Chairman of the Joint Chiefs of Staff is the highest-ranking military officer in the United States Armed Forces, and is the principal military advisor to the President, the National Security Council, and the Secretary of Defense.

General Myers is uniquely well-qualified to serve as the next Chairman of the Joint Chiefs. He is a decorated Vietnam veteran who knows the dangers faced by our men and women in uniform. He has led U.S. forces in Japan and in the Pacific with a steady hand. He has served as Assistant to the Chairman and as Commander in Chief, U.S. Space Command, since February of the year 2000. He has served as Vice Chairman of the Joint Chiefs, the Nation's second highest-ranking military officer, at times acting as Chairman in General Shelton's absence.

General Myers is, I believe, the first Vice Chairman to be nominated as Chairman. At times when we are reminded almost daily of the dangers to our military personnel, and the sacrifices of their families, we particularly want to welcome General Myers' wife, Mary Jo. Mrs. Myers, we welcome you. We thank you for your service to the Nation. You, too, will be called upon for sacrifice in addition to the extraordinary sacrifice which you and your family has already undertaken.

This is no ordinary time. This will be no ordinary nomination hearing. As Vice Chairman, General Myers has been personally involved in the rescue efforts at the Pentagon, and in guiding the United States Armed Forces during these difficult days. He is in a unique position to update the committee and the country on the situation, and we have asked him to do so.

General Myers, we welcome your testimony on the status of your efforts at the Pentagon, the extent of the damage and the loss of life, the role that the U.S. military forces are playing in support of rescue and relief efforts in New York City, and what steps this Nation might take to strengthen our ongoing efforts to combat the scourge of terrorism.

I just want to make two very brief announcements before I call on Senator Warner and then on our two colleagues who will be introducing General Myers. First, at the conclusion of our open session, Senator Warner and I have determined we will go into a Members-only classified session in the Intelligence Committee hearing room, SH-219. General Myers will be there with other members from the uniformed staff, but also Secretary Wolfowitz will be joining us at that time.

Second, we are making arrangements for bus transportation, and I want to thank Senator Warner for his leadership in this, for members of the committee who would like to go to the Pentagon at approximately 6:30 this evening. There are a number of members who have made their own arrangements to go over in the last couple of days, and Senator Warner and I thought it would be helpful to arrange for transportation for those who might wish to go to the Pentagon. We will be back to you as soon as possible with details about the precise time and place. It will be after our executive session, and at a place to be determined.

Senator Warner.

**STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Thank you, Mr. Chairman. I do hope as many members as possible will take this opportunity to visit the Pentagon this evening. Just moments ago I left the site. I have been on it twice now. General Myers, I want to thank you for taking the time to go there today to recognize the hardworking people from primarily Virginia, Maryland, and the District of Columbia—firefighters, rescue workers, Red Cross aids, and engineers. I say to my colleagues, it is a remarkable scene. I think no matter how many times you view this on television, it doesn't prepare you for the horrific site and precise manner in which that plane was directed at the building.

Mr. Chairman, I just received a call from the White House. I am to meet with the President at 3:10, so I am going to put my statement into the record.

I thank Mrs. Myers, as the chairman said, for your career opportunities not only for yourself, but for your distinguished husband. It is a team effort, so often, in the military. It is a team effort.

So if you will excuse me, I am going to depart. I hope to return in time for the executive session.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in welcoming General Myers and his family.

As I know you appreciate, it was imperative that we go forward with this hearing and demonstrate our resolve to both our allies and our enemies. The Joint Chiefs of Staff and, particularly, their Chairman, are a vital link in our national security organization. Proceeding with the orderly transfer of this key office is a unequivocal indicator that our national security institutions are intact and fully operational.

General Myers, as Senator Roberts noted in his introduction, is eminently well qualified for this position. He is a command pilot with over 600 combat flying hours and operational experience as the 5th Air Force Commander. He has commanded the United States Space Command, NORAD, and United States Air Forces, Pacific. He understands today's defense challenges and those of the future. In this time of transformation—made all the more challenging and urgent as a result of the escalation of the asymmetric threat this Nation faces—General Myers' experience as the Vice Chairman will be of enormous relevance.

General, you have my support, and, if confirmed, you will be thrust into one of the most challenging positions of responsibility I have ever observed. I applaud your willingness to serve, and I look forward to working with you.

Senator Levin.

Chairman LEVIN. Thank you very much, Senator Warner.

General Myers has responded to the committee's prehearing policy questions and our standard questionnaire. Without objection, these responses will be made a part of the record.

The committee has already received the paperwork on General Myers and we will be reviewing it. There are several standard questions that we ask nominees who come before the committee and I will ask General Myers these questions first.

Do you agree, if confirmed for this position, to appear before this committee and other appropriate committees of Congress and to give your personal views, even if those views differ from the administration in power?

General MYERS. Mr. Chairman, yes, I do.

Chairman LEVIN. Have you adhered to applicable laws and regulations governing conflict of interest?

General MYERS. Yes, I have.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

General MYERS. No, I have not.

Chairman LEVIN. Will you ensure that the Joint Staff complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings?

General MYERS. Yes, sir, I will.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

General MYERS. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

General MYERS. Absolutely.

Chairman LEVIN. At this point, we have two colleagues who both claim General Myers as their own, and we understand fully why. It is nice to be fought over in this way, General. We will first call upon, with the agreement of both of our colleagues, Senator Carnahan for the first introduction, and then Senator Roberts for the second introduction.

#### STATEMENT OF SENATOR JEAN CARNAHAN

Senator CARNAHAN. Thank you, Mr. Chairman. America is enduring one of the gravest moments in its history, but as Holy Scripture reminds us, and it always gives us hope, we are reminded from the Book of Esther that there are those who are called to the forefront in just such times. Sitting next to me is the military leader for our time. He has been tried and proven time and time again.

Our country is indeed fortunate in this hour of need to have Gen. Richard B. Myers as the nominee for the Chairman of the Joint Chiefs of Staff. He will inherit a post of paramount responsibility. He is charged with taking on new battles and with deploying new weaponry against the current and insidious threats to our Nation. I believe General Myers is the right man to lead our military forces in this endeavor, and I enthusiastically endorse his nomination for the chairmanship of the Joint Chiefs of Staff.

It is a great honor to join Senator Roberts in introducing General Myers to this committee. Kansas and Missouri have long disputed claims to territory, as well as collegiate sports titles. Well, today we add to the historic rivalry between our States. We have a disputed claim over just which State should claim the nominee for the highest military post in the land, but I believe we can agree on one thing: General Myers would make an excellent Chairman of the Joint Chiefs of Staff. His extensive leadership in space-based defense, U.S.-Asia policy and defense acquisition make him an ideal candidate to oversee the military's transformation in the 21st century.

He is a decorated command pilot with more than 4,000 hours in the cockpit, including 600 as a fighter pilot in Vietnam. General Myers has been awarded the Distinguished Flying Cross twice and 19 air medals. He has served with distinction as Commander in

Chief of United States Space Command and Commander of the Pacific Air Forces, and for the last 2 years he has served on the Joint Chiefs of Staff as the Vice Chairman, leading the Joint Requirements Oversight Council (JROC) and Defense Acquisition Board (DAB). But above all, General Myers has emerged as a powerful voice for America's service men and women.

As the highest-ranking officer in the United States military, the Chairman of the Joint Chiefs of Staff must promote the quality of life for our soldiers, sailors, airmen, and marines. I have no doubt that General Myers will be a strong advocate for men and women in uniform, both Active and Reserve components. As a distinguished warrior himself, he can relate to the rigors and sacrifices endured by our servicemen and women today.

Mr. Chairman, I urge this committee to recognize the extraordinary credentials of this nominee with a favorable reporting to the United States Senate.

Chairman LEVIN. Senator Carnahan, we thank you for that strong endorsement.

Senator Roberts.

#### STATEMENT OF SENATOR PAT ROBERTS

Senator ROBERTS. Mr. Chairman and Senator Warner, my dear friends and colleagues, it is both an honor and a privilege for me to introduce to the Senate Committee on Armed Services General Richard B. Myers as the nominee to be the next Chairman of the Joint Chiefs of Staff. But first, like our distinguished chairman, let me offer my prayers, my thoughts to the families of the Americans that lost their lives in the attack on the United States, an attack not only on them and our country, but also on American democracy and freedom. This will not stand.

I wish to associate myself with the outstanding remarks from my colleague and friend from Missouri. Senator Carnahan, I would like to revise and extend just a portion, however. General Myers was born at St. Luke's Hospital. That is a fine hospital just across the Kansas border. However, just as soon as he was ambulatory he was rescued and taken back to Kansas—[Laughter.]

—to a community called Miriam, where he has lived ever since. General Myers is not only a Kansan, but as President John Wefald of Kansas State University will point out, just as importantly, he is a graduate of Kansas State University, the home of the ever-optimistic and fighting Wildcats—[Laughter.]

Now rated number 10 in the football polls.

His wife, Mary Jo, is a K State graduate and a resident of Manhattan, Kansas, which we call the Little Apple. She is an English major, and I have been informed that Mary Jo has spent the last couple of days staffing the phones at the Army Family Service Center. Well done, Mary Jo, and thank you so very much.

Please understand, as important as being a fighting Wildcat, that it is an honor for me to present a man I feel is exceptionally qualified to prepare and lead our military as we deal with emerging threats, so tragically portrayed on 11 September. We must understand the nature of the warrior class that makes up these State-sponsored or rogue groups that are capable of perpetrating the attack the United States suffered on Tuesday.

Make no mistake about it, although the possibility of the classic force-on-force military conflict must be part of our military's capability, we must also be prepared to realign our military strength to address the asymmetry in warfare demonstrated so graphically Tuesday. I am confident that General Myers understands these issues, and is certainly ready for them.

I believe that the General has shown he has a grasp of the requirement for military transformation. I am confident that the events of the past few days will reflect the direction and the amount of transformation our military must undergo under his leadership.

Part of the equation for transformation is the supporting role the United States military must play in handling the consequences of an act of terrorism. Again, the events of this week point out the value of the role played by our military, our Active-Duty Forces, our guard and our Reserve, but the military must have this as a mission, and be prepared and trained to respond.

Now, I am not going to read the impressive military background of the General, but only add that he is clearly well-qualified to lead our military in this new age that burst in vivid reality on our doorstep on the 11th, and I urge my colleagues to support General Myers for this most important post.

It again is a privilege and honor to recommend him to you. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Roberts, and to use the football analogy a little further, in the competition here to introduce you it is a tie between Missouri and Kansas. They both won, and they are both winners indeed.

General Myers, do you have an opening statement for us?

**STATEMENT OF GEN. RICHARD B. MYERS, USAF, NOMINEE TO  
BE CHAIRMAN, JOINT CHIEFS OF STAFF**

General MYERS. Mr. Chairman, I do have a short opening statement.

Mr. Chairman, distinguished members of the committee, thank you for the opportunity to appear before you today. I especially want to thank Senator Carnahan of Missouri, my birthplace, for your very kind words, and I sincerely appreciate your remarks. Senator Roberts, both because you are a fellow man of the plains and a K-Stater, but more importantly, today because of your recent chairmanship of the Subcommittee on Emerging Threats and Capabilities. You have been part of a great team at the leading edge of our efforts to address the challenge of asymmetric warfare, and for that we are all in your debt.

Two days ago, our Nation suffered a sudden, horrific attack by terrorists. They attacked two symbols of our national power, one economic and one military, but not the heart of that power. The heart of America's strength is found not in its symbols, but in its people, 270 million determined citizens, and similarly, the heart of American military power is not a symbol called the Pentagon. The heart of that power resides in every soldier, sailor, airman, marine, Coast Guardsman sworn to defend our Constitution and the American way of life.

These despicable acts have awakened a national resolve in the American people and its Armed Forces that rivals any seen since Pearl Harbor. Today, due in large measure to the outstanding support of the Members sitting before me, America's military is trained, ready, and extremely capable of responding to the President's clarion call.

If confirmed, I pledge to keep our Armed Forces at that razor's edge first and foremost by sustaining our quality force and taking care of the heart of our military, our people. They are our decisive edge. We have made great strides in recent years under the outstanding leadership of Gen. Hugh Shelton, but we have to continue the momentum to improve their quality of life. Hugh Shelton was key in getting us this far, and of course with your assistance we can take it to the next level.

I will also work tirelessly with our service chiefs and commander in chief's (CINCs) to ensure that our troops continue to receive the training, equipment, and support they need to carry out the wide range of missions that we have assigned to them.

Finally, my third priority will be preparing our military for the security challenges of the future, modernizing and transforming the force with new, joint capabilities, even as we face the threats of today.

Members of the committee, if confirmed, I look forward to your wise counsel and a bipartisan spirit as we look forward to addressing today's issues and tomorrow's challenges. I join you in honoring those of our citizens, military and civilian, who were injured or died in these recent attacks. Our hearts go out to all who have lost loved ones in this terrible tragedy, and we will never forget them.

So thank you, Mr. Chairman. I look forward to your questions in a minute, but first with your permission I would like to talk on two issues: the status of the Pentagon, and the civil support measures we have taken by the Armed Forces in providing support in New York and Washington, DC.

First of all, I think as some of you know that have been to the Pentagon, the fire is out. There are some areas that are water-damaged, and we are starting to clean those up and move back into those areas. It will leave about a whole wedge of the Pentagon—maybe not quite a wedge, but almost a wedge of the Pentagon—that will need to be rebuilt, so they are in the process right now of recovering the remains, of determining the stability of the structure where the airplane hit, and already planning to rebuild that structure.

I was with Senator Cleland when this happened, and went back to the Pentagon, and they were evacuating, of course, the Pentagon at the time, and I went into the National Military Command Center, because that is essentially my battle station when things are happening. It proved to be as resilient as our people did and have been throughout this crisis, and that is where we stayed. The air got a little acrid at times. The air filtration system shut down for moments, but we got it back up and were able to stay there throughout the whole effort.

In terms of military support in New York and Washington, DC, for the Pentagon, that support, some of you have seen it, but it is from the soldiers and sailors, airmen, marines, and Coast Guards-

men from this area and the local authorities, and there were many first responders. I cannot catalogue all the names on all the sides of ambulances and fire trucks that responded, but they were from all over the District, from Virginia, and from Maryland, and they all pitched in and did exactly what they had to do.

In New York, the Department of Defense active duty and Reserve component, the Guard and Reserve have supported every request from FEMA, and to my knowledge there may be some outstanding requests, but we are fulfilling those requests. We fulfilled all the ones that I know of. We are in the process of maybe a few that we have not quite responded to yet because of just the time it takes to move the assets. They mainly fall in the logistics area, in the medical area, and in transportation, and we are doing that.

There has also been, as you are probably aware, quite a bit of activity by the North American Aerospace Defense Command in the skies over this great country, and of course the Coast Guard has taken special measures regarding our ports and waterways and our coastline.

With that, Mr. Chairman, I am prepared to take your questions.

Chairman LEVIN. Thank you very much, General. We will now proceed on the basis of the early bird rule with the first round of 6 minutes each. I understand that approximately 20,000 people work at the Pentagon, perhaps a few more, that there were 132 killed at the Pentagon, 64 on the plane that hit the Pentagon. Can you tell us about what percent of the Pentagon's work space is out of commission? Do you have any estimate of that?

General MYERS. I do not know the exact square footage, sir.

Chairman LEVIN. What approximate percentage of space would it be, 20 percent?

General MYERS. I would say it is roughly 20 percent or less, and as I said, there are some areas that are water-damaged. The desks and the chairs are fine, and they will be moving back into those, but it is going to be, like I said, about a wedge, so roughly 20 percent of the square footage.

Chairman LEVIN. General, in your personal view, are there capabilities or equipment that the Armed Forces need today to respond to the terrorist attacks that they do not currently have, or are they able to respond today, should that decision be made, to those attacks?

General MYERS. Sir, I think we are able to respond today. Of course, there are always ways to enhance our capabilities, and I think you will see in a supplemental that is either here or heading this way what some of those capabilities will be. I am happy to go into that if you want. Some of them will be in the intelligence area, of course. Some will be in command and control, and there will be some in the force protection arena. There will be others, of course, but let me just reiterate, we have what we need today to do what we need to do.

Chairman LEVIN. Was the Defense Department contacted by the FAA or the FBI or any other agency after the first two hijacked aircraft crashed into the World Trade Center prior to the time that the Pentagon was hit?

General MYERS. Sir, I do not know the answer to that question. I can get that for you for the record.

[The information referred to follows:]

The following times answer Chairman Levin's question regarding when the Defense Department was notified by the FAA during the September 11, 2001, Hijacking Attacks (all times in EDT):

0838: Federal Aviation Administration (FAA) notified the North American Defense Command (NORAD) of a hijacking.

0843: FAA notified NORAD of second hijacking.

0846: American Airlines Flight 11 crashed in the North Tower of the World Trade Center (WTC).

[Deleted.]

0903: United Airlines Flight 175 crashed into the South Tower of the WTC.

[Deleted.]

[Deleted.]

1010: United Airlines Flight 93 crashed in Somerset, PA.

Chairman LEVIN. Was the Defense Department asked to take action against any specific aircraft?

General MYERS. Sir, we were.

Chairman LEVIN. Did you take action against—for instance, there have been statements that the aircraft that crashed in Pennsylvania was shot down. Those stories continue to exist.

General MYERS. Mr. Chairman, the Armed Forces did not shoot down any aircraft. When it became clear what the threat was, we did scramble fighter aircraft, AWACs, radar aircraft, and tanker aircraft to begin to establish orbits in case other aircraft showed up in the FAA system that were hijacked, but we never actually had to use force.

Chairman LEVIN. Was that order you just described given before or after the Pentagon was struck? Do you know?

General MYERS. That order, to the best of my knowledge, was after the Pentagon was struck.

Chairman LEVIN. General Myers, you have agreed to give us your personal views even when they might disagree with the administration in power, but the Secretary was quoted in a July article as saying that his choice for Chairman would have to possess candor and forthrightness, of course, he said, but he wanted this willingness to disagree to show up only in very direct, private counsel. Now, have you been told that your willingness to disagree should show up only in private counsel, or are you committed to give us your personal views when asked, even if those views might differ from that of the Secretary?

General MYERS. Sir, I have never been told to limit my views to private discussions, and as I said earlier, Mr. Chairman, absolutely.

Chairman LEVIN. Thank you.

General, you indicated in response to one of the committee's pre-hearing policy questions as to what your priorities would be if confirmed, that one of your priorities would be to better define the military's role in homeland security. I am wondering if you could tell us what your concerns are in this area, and what role you believe the military should play.

General MYERS. Mr. Chairman, that issue was debated in our Quadrennial Defense Review (QDR) and it is still being debated. I think this current tragedy puts that issue at center-stage.

As the Commander in Chief of North American Aerospace Defense Command (NORAD), as well as United States Commander in Chief Space Command (USCINCSpace), we have plans to deploy

our fighters to defend the U.S. from external threats. I never thought we would see what we saw the last few days, where we had fighters over our cities defending against a threat that originated inside the United States of America, so I think this whole issue of homeland defense, or homeland security, needs a lot more thought.

There is a role, obviously, for the Department of Defense. What that role is, I am not confident I know that answer today, but I just know that the debate needs to take place now.

We have had other issues that we have worked in seminar games, if you will, or exercises, where we have looked at other incidences of weapons of mass destruction, and what we found in some of those is that local authorities are often quickly overcome by the situation, and there is going to be a reliance, I believe, on some of the capabilities we have inside the Department, so we need to sort through those issues.

To tell you exactly what our role ought to be, I do not know for sure. I just think we need to think through that so the next time we have a terrible tragedy, we are ready to act in a unified way, in a focused way. That is not to say we have not done that in this crisis. I think we have come together very, very well, but it certainly raises those questions, Mr. Chairman.

Chairman LEVIN. Thank you very much.

Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman. First of all, in spite of what my distinguished friends and Senators from Missouri and Kansas said, it has always been recognized that a military man's life begins at his first training, which was Vance Air Force Base, so I look forward to voting to confirm my fellow Oklahoman. [Laughter.]

There has been one question I am going to ask just for the record, because I do not think there is an answer today, but it is one I would like you to give some thought to, and that is the idea of depots.

I think we recognize that we need a core capability. With the depots we have gone through a BRAC round where we eliminated two of the five and transferred the workloads, which is the appropriate thing to do. However, we are using antiquated World War II plants, buildings, maintenance operations, and for the record, at a later date, if you would submit something, your ideas as to where they should fit in, and how we can modernize them, I would appreciate it.

General MYERS. Will do, Senator.

[The information follows:]

Our organic depot maintenance organizations provide robust and invaluable industrial repair capabilities. They have repeatedly proven their ability to rapidly increase output and to change priorities to meet warfighter requirements when national emergencies emerge, such as we find ourselves in now.

Thanks to the Base Realignment and Closure process, we have been able to consolidate much of our core depot maintenance capability. This has helped reduce our overhead costs. As you stated, however, many of our depot facilities are quite old. Just as our base housing and other base infrastructure suffered degradation from lack of capital investment over the past decade due to increasingly high operations tempo requirements, our depot maintenance facilities have felt the pinch as well.

I do believe we are turning the corner on depot plant and equipment recapitalization. The Department of Defense applied \$205.9 million of its Working Capital Fund

and \$37.6 million of its Military Construction money to its depot programs in fiscal year 1998. It added \$231.6 million and \$40.6 million respectively in 1999 and \$255.8 million and \$61.9 million in 2000. This trend is encouraging but, bear in mind, it will take time for this capital investment to manifest itself in modernized building and equipment.

I can also tell you, that we are modernizing our depot maintenance business processes as well. The Services have implemented some truly innovative programs, such as public-private partnerships and use of emerging automation technologies, to enhance the efficiency and effectiveness of our depot maintenance programs.

Senator INHOFE. Having chaired the Readiness and Management Support Subcommittee for a number of years, I have been concerned with a lot of readiness problems. One is encroachment, everything from the environmental constraints to training ranges, the urban sprawl, and, of course, at Nellis you experienced that, and it is still a problem out there, aerospace restrictions, loss of frequency spectrum, these are all very, very serious problems.

Recently, we have been concerned with the Vieques range, which of course is Navy and Marine. However, if we, for the first time in our Nation's history, would allow some law-breaking trespassers to close down a live range, it would have a domino effect throughout not just America, but throughout the world, and so I would like to have you address the encroachment problems as you see them, and what possible solutions are out there.

General MYERS. Senator Inhofe, an excellent question, because it is at the heart of our readiness. Our training facilities and our training ranges are absolutely essential to staying ready to discharge the missions that this country wants us to perform, and encroachment is a problem. It has been a problem for a long, long time.

What I would like to say is that the Department has in the last year really focused on this issue and is trying to work it with, again, a unity of effort, led by the Office of the Secretary of Defense (OSD) staff, and with the support of the individual Services, and the Joint Staff. I think that is going to help mitigate the effects we are having right now. I think this will be something we will have to deal with for an awfully long time to come.

As we develop new weapons systems, as they require more space, or different support facilities, as we try to pursue that, we are going to have to try to find that right balance between our readiness and the environment and the people that we have an impact on. Technology can play a part in that, and I think we are taking steps to ensure that it does.

I would just like to leave you with the thought that the Department of Defense (DOD) is very focused on this particular issue right now, and I think we will be successful.

Senator INHOFE. I know that is right, and one of the dilemmas—let us just take one of the Southeastern ground bases like Camp LeJeune or Fort Bragg, where their training areas are interrupted by the habitat of the red-cockaded woodpecker and the better job they do, the more that expected habitat is expanded, so they are being punished for the job they are doing. This is something that I think you need to look at, because it is happening throughout the southeast part of the United States

General MYERS. We will, Senator.

Senator INHOFE. The general readiness question is the deficiencies that were discussed by the CINCs when they were in this very room. I do not remember the exact cost, but the spare parts, lack of ammunition, shortage of flying hours, all of these, these are just general readiness issues.

It is one of these situations where it is all bleeding, it is all hemorrhaging, and I know you are probably putting yourself in a situation where you are going to have to try to make some priorities, but do you have any thoughts about what you can do on these general problems of readiness out there?

General MYERS. Yes, sir, Senator Inhofe. Having just marked up the President's 2002 budget, a majority of the increase in that budget was for just those things, for flying hours, for driving time for the Army, for steaming time for the Navy, for the spare parts to keep the whole military machine healthy, and to try to do so in a way that it will not require us coming back to Congress for a supplemental, so I think the efforts over the last several years, some of which are again just starting to pay dividends because of lead time, and certainly with the 2001 supplemental and the 2002 budget, I think we have taken steps to ameliorate some of those shortfalls.

Senator INHOFE. I was going to mention one other thing. I know my time is running out, but one last question having to do with modernization. I was pleased when General Jumper made a statement sometime ago, about a year ago, I guess now it was. It gave us an opportunity to have some credibility when we talked about the fact that we have slipped a lot in our modernization programs.

Most Americans may disagree with the causes of wars, or with some of the problems we have, but they all have been laboring under, I think, this misconception that we have the very best of everything out there. We do not have the very best any more. When we look at our best air-to-air vehicle, the F-15 air-to-ground vehicle, the F-16 in many ways, the SU series that is on the open market, manufactured by the Russians is better than that we have, so I am sure that is one of your top priorities.

Do you have any comments to make about your ideas on modernization, maybe specifically on the F-22?

General MYERS. Senator Inhofe, modernization is a huge issue when it comes to tactical air. The dilemma we are in, and I think this is true for the Air Force for sure, for the Navy to a little lesser degree, for the Marine Corps for sure, and it is just degrees here, is that these procurements go in cycles over time, and for most of this decade we have not bought a lot of tactical air. So our tactical air assets have just continued to age, and I would agree with your comments, we are not always flying the best fighters in the world any more.

In terms of the F-22, I think it is absolutely essential. The Secretary of Defense has authorized entry into low-rate production, and that decision should be made here very, very quickly. I can go into more detail if you like.

Senator INHOFE. That is fine, General. My time has expired, but I also want you to look at other Services, for example, our artillery capability, our rapid-fire ranges. The Palladin we are using now is

not as good as almost any country that could be a potential adversary.

General MYERS. Senator, I absolutely agree, and though I sit here in front of you in the blue uniform of the United States Air Force, my whole focus is going to be on what the contribution is of systems to the joint warfighting equation, so that naturally takes me into every Service's modernization programs, and for that matter, other concepts they may have and doctrinal changes. That is all important.

Senator INHOFE. Thank you.

Chairman LEVIN. Thank you, Senator Inhofe.

Senator Akaka.

Senator AKAKA. Thank you very much, Mr. Chairman. We have heard many good statements on General Myers. I would like to express my welcome and support for the nomination of Gen. Richard B. Myers to serve as the Chairman of the Joint Chiefs of Staff. I also want to welcome Mrs. Myers to this hearing as well.

I had the pleasure of first meeting General Myers when he served as Commander of the Pacific Air Forces from 1997 to 1998 at Hickam AFB in Hawaii. While he was there, he made a big difference in the Pacific.

I also wanted to thank General Myers for taking the time to visit with me last week to discuss a number of issues. Some of the questions I would have asked here, we discussed during your visit, and so I will ask you other questions. I just want to say, Mr. Chairman, I have the full confidence in General Myers' ability to serve in this critical position, and I look forward to working with you, General Myers.

General MYERS. Thank you, Senator.

Senator AKAKA. Of course, I am very interested in what would be happening to Hawaii, and what changes may come. My question is about Asian theater threats. How will U.S. forces be altered to focus on potential Asian theater threats, as identified by Secretary Rumsfeld, and how might this affect force posturing in Hawaii?

General MYERS. Senator Akaka, that is the subject of two things. One is the QDR, which is ongoing, and the Defense Planning Guidance (DPG), which asks the Services to look at several posture options around the world, to include the Pacific region. Some of those do-outs will not come back until next spring, when the Services will come back with some of their ideas on perhaps a more efficient posture for their forces, and some of it will come out of the review, of course, as well, so it is a little bit premature because we have not finished those reviews.

Again, it is going to be trying to balance our obligations around the globe, and the missions we are given. Clearly, the emphasis on Asia Pacific is the one the Secretary has set for us, and the one that we embrace, and we are looking at exactly those questions. I just think it is a little early to give you specifics on that, sir.

Senator AKAKA. General, and this will be my final question, I want to be brief. What, in your opinion, are the first measures that need to be taken for military transformation?

General MYERS. Well, we could talk a long time about transformation. Let me just talk about one aspect of it that I think gets to your question, and it goes back to ensuring that inside the De-

partment of Defense we have unity of effort for transforming and, for that matter, modernizing our forces. Part of that includes guidance from the Office of the Secretary of Defense and the staff. Part of that includes work that the Services will do.

Part of that includes development of joint operational concepts and architectures that must lead development of materiel, items that might enhance our joint transformation, and of course there is a major part that resides at Joint Forces Command down in Norfolk, because they have the role of experimentation which you would think would lead our transformation efforts, and it is trying to focus those efforts between all those pieces, the acquisition community, the requirements community, and the programming and budgeting process. We have to bring all that together to encourage and to help our transformation.

The Secretary of Defense has very rightly, I think, focused in on our programming and budgeting system as being a product of the cold war, and is looking to make changes in it to make it more responsive to our transformation needs, so if I were to talk about it, I would talk about the process first, and products later.

Senator AKAKA. Thank you very much for your responses. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Akaka.  
Senator Smith.

Senator SMITH. Thank you, Mr. Chairman. Mr. Chairman, is it your intention to go one round?

Chairman LEVIN. It depends on how long the round takes. There also may be a delay on the executive session. Senator Warner and I need to go down to meet with the leadership at 4:30, and that could affect that. We may have to have an interim period of some kind, which would hopefully last no more than 15 or 20 minutes, so there is a little bit of uncertainty now about when that will begin, I have just been informed.

However, I would say we hope to do it in one round, but perhaps if there are some questions which we just simply need to ask, we would have a very short second round, would be my hope.

Senator SMITH. Thank you.

General Myers, congratulations on the honor of being selected as Chairman. It is amazing, really, to think that what normally is just a perfunctory service, if you will, of nominees coming before the committee, whether it is the Chairman or other positions on the Joint Chiefs, has traditionally involved a few questions and answers and then moving forward with the nomination. Now it takes on huge implications, and I just want you to know, speaking for myself, and I know I speak for others, we have great confidence in you and the job you are going to have to face. I just want to let you know we are with you, and look forward to doing the Nation's business.

General MYERS. Thank you, Senator.

Senator SMITH. It is hard to stay out of what happened, and I do have a couple of questions I want to ask in classified session, but I want to ask you one that received some publicity and to see if you can answer here. If you cannot, then fine, say so, and we will do it in executive, classified session. There were some reports that

there were some international flights headed here during this episode.

It is not unreasonable to think that international flights might be coming here, but I mean, that may have been turned around, and abruptly after things developed. Is there any truth to the accusation that there may have been some international flights involved with this activity? Do we have any information on that?

General MYERS. I do not have complete information, because of the time it happened. I can give you—there was one flight inbound to the U.S. that had turned on its transponder and indicated a code that it was being hijacked before it got to Alaska. We had fighter aircraft on it. It eventually landed in a remote base in Canada, and they were safe, and I do not know the results of that, whether it was a mistaken switch-setting, or what it was. I cannot tell you that. We can find that answer for you, Senator.

[The information follows:]

The Department of Defense has no indication that any international flights were involved in the September 11, 2001, hijacking incidents.

Senator SMITH. The plane was not hijacked, or we do not know?

General MYERS. I had better say, I do not know. We had other things to do at that time. Once it was safely on the ground, and the passengers were safe, we went on to the next order of business. That was in the middle of all of this.

We had reports of other aircraft, one other aircraft that I am aware of, and the reports were somewhat mixed, and I do not think were true, because it was turned around by the operating company and went back to Europe on its own, and was fine, so the only one I know of that even comes close is the one I mentioned, and I do not know if that was a hijack attempt or some other kind of duress that the airplane was under.

Senator SMITH. Do you know the country of origin?

General MYERS. Not for sure.

Senator SMITH. Mr. Chairman, I have some—

General MYERS. I can tell you in closed session what I do know.

Senator SMITH. I have some other questions, Mr. Chairman, but I am going to submit those for the record, because they do not relate to the current environment, and I will yield back the remainder of my time.

Chairman LEVIN. Thank you, Senator Smith, very much.

Senator CARNAHAN.

Senator CARNAHAN. Thank you, Mr. Chairman.

General Myers, I understand that you have had extensive experience in planning for combatting cyber attacks. I was wondering if you would describe your work in this emerging field, and elaborate on your plans to build off of these experiences.

General MYERS. I first ran into this responsibility when I was at U.S. Space Command. About a month after I arrived, after I was confirmed by the committee and I arrived for duty, the President and the Secretary of Defense decided the responsibility for defense of the DOD networks would fall to U.S. Space Command, and then a year later that U.S. Space Command would have the responsibility for attack. By the way, I did not get a vote in this. This was a responsibility that was issued. We had to learn very quickly how to go about these responsibilities.

Since then, we have come a very, very long way, and General Eberhart, who now serves at U.S. Space Command, has really taken this to the next level. Here in Washington, DC, we now have a joint task force for computer network operations. It does its job through coordination with all the services, of course, and other agencies. There is great cooperation with our civilian telecom folks, and there is also great cooperation with the FBI and other civil authorities who have a role in all of this.

The thing I would like to leave you with is, it is not unlike the earlier question about homeland defense or homeland security. Certainly, when you are under attack in a cyber way, fairly quickly you have to determine is this an attack on the United States by another Nation, or another group that wants to do you harm, is it a prankster? Is it a civil matter, or is this a national defense or national security matter? We have mechanisms for deciding that, but I think that is another area along with the whole homeland defense issue that needs a lot more thought.

I would just end by saying that the mechanism set up for cyber security for the Department of Defense has been very effective, and the recent viruses that have spread throughout the country have had essentially no impact on our operation.

Senator CARNAHAN. The Emerging Threats and Capabilities Subcommittee has been involved in examining the National Guard's role in managing the after-effects of a nuclear or chemical or biological attack.

For example, we are continuing to help develop the weapons of mass destruction civil support teams, and these teams, some of them are being trained in army facilities around the country, including Fort Leonard Wood in Missouri, and they are being trained to work with some of the emergency first responders to decontaminate areas and to help with medical aid.

I was wondering if you would describe what you feel the importance of these are, and detail your commitment to honing our abilities to respond to such attacks.

General MYERS. Senator Carnahan, I think they are extremely important. This is an area where I think the National Guard can play a key role. I think they are ideally suited for this type of mission, because it is one they have been trained for and God forbid we will ever have to use it, but if we do, they will be ready. They will be trained.

I think those missions are perhaps more natural for the National Guard than some of the current missions, so that is one of the things we have to look at as we look at the overall issue of homeland defense, the role of the Reserve component primarily in the National Guard, and how they would play in this. I think it is extremely important. I think the National Guard's role is only going to increase.

Senator CARNAHAN. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you very much, Senator Carnahan.

Let me apologize to my colleagues. I had the wrong list in front of me in terms of the order of calling on Senators. As a result, there were people called out of order on both sides already. Now, I have the alleged correct order. Let me now read it, because there has been some confusion on this.

The next Senator on the Democratic side would be the Senator who I should have called on first, Senator Cleland. I apologize to you. Then I would go to Senator Roberts, back to Senator Reed, back to Senator Allard.

Senator Akaka, who I was not supposed to call on until way later, got called early, so I would then go back to Senator Nelson, then to Senator Collins, and then to Senator Lieberman, who is no longer here, but Senator Carnahan, apparently you got called early. I do not know how that can happen when you introduced our nominee, but nonetheless, if I have not totally confused you by now, that is the new order of calling on Senators. I apologize.

Senator BUNNING. What about the rest of us?

Chairman LEVIN. Let me finish the list. After Senator Lieberman on this side will be Senator Bunning, then Senator Ben Nelson, Senator McCain, Senator Landrieu, Senator Hutchinson, Senator Dayton, and Senator Sessions.

Senator SESSIONS. That will be about midnight. [Laughter.]

Chairman LEVIN. We are going to try to do that. Multiply it six times, about 15, and you have it. We just did Senator Carnahan. Now we go to Senator Roberts.

Senator ROBERTS. I thank the chairman. In August, General, General Shelton sent an action memo requesting permission for—I am quoting—transfer of antiterrorism force protection, the acronym—everything has to be an acronym—AT/FP functions to the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict. He stated in that action memo that AT/FP is not a statutory function of the JCS and is more appropriately the shared responsibility of OSD, the CINCs, and the Services.

I was prepared to address this issue before the 11 September 2001 tragedy, but I must tell you that I am not—not supportive of the JCS not being involved in antiterrorism or force protection.

I do agree that OSD and the CINCs and the services must be involved as well, it is their responsibility, but so must the JCS. This is too big of an issue not to have the leadership I think your office can bring. Would you give your views on General Shelton's request, and can you shed some light on this decision?

General MYERS. Senator Roberts, to my knowledge that was a recommendation to the Secretary of Defense. I do not believe we have a decision on it yet. General Shelton's thought behind this was basically unity of effort. The Services and unified commanders are the ones that are responsible for force protection. The role that this office and the Joint Staff played, and the role of the Office of the Secretary of Defense, are staff functions to disseminate policy, work the resources, and so forth.

The idea was, if you are looking for redundancy, maybe this is a place you could look. From a staff function, not from any other shirking of responsibility, who should have that responsibility. That was the Chairman's thought at the time. It was to eliminate some redundancies, is what he was thinking.

Senator ROBERTS. We are going to have to talk about that later. I will not go into it right now, but I have another question, which may be somewhat redundant, in regards to a question that was asked previously. Last November, the GAO reported the Services were not integrating their chemical and biological defense into unit

exercises, and that the training, if done, was not always realistic in terms of how units would operate in war.

Similarly, the DOD reported last year the Army's combat training centers continued to see units at all levels unable to perform all chemical and biological defense tasks to standard. The DOD report, like the recent GAO report, noted that less than satisfactory performance of the units is directly attributable to the lack of chemical and biological training at the unit's home installations. What is your assessment of that?

Let me say, however, that if you would ask me and Senator Mary Landrieu, the distinguished Chairman of the Emerging Threats and Capabilities Subcommittee, what we would have expected on 11 September if, in fact, we knew there was going to be an attack, we would have probably said a biological weaponry of some kind, perhaps chemical, perhaps a cyber attack.

I do not think any of us would have come up with the top 10 saying that terrorists would hijack four airplanes, kill the crew and endanger and kill the passengers, and then attack American icon infrastructures. Having said that, there is a very realistic possibility in regards to chemical and biological defense, and I am worried about it. What comments do you have?

General MYERS. Senator Roberts, I am worried about it as well, and I agree with your threat assessment. I think we know that is a real threat to our forces deployed around the world, and perhaps from terrorism in the United States, so we have to be ready.

Now, this is interesting, because when I got to the Pacific in the early nineties we decided this was not a big threat. We started to tear down some of our infrastructure that supported it. I know it is true in the United States Air Force, because I had an Air Force hat on at that time.

Then we were told no as we looked at the threat, this is the wrong direction, so we tried to get that ship turned a different direction. I think we are in that process, and we have to be just as ready for that kind of threat as we are for the more conventional threats. So, I agree with your comments, and it is one of the things that, if I am confirmed, I will take a hard look at.

Senator ROBERTS. Are the deployed units falling short of standards for chemical-bio defense capability set by joint doctrine?

General MYERS. Sir, I will have to get back to you on that. That is not one of the things that have come up in the readiness reporting that I review monthly.

[The information referred to follows:]

Before units or individuals are deployed, there are a number of assessments and preparatory actions that take place. One area addressed, both in intelligence assessments and gaining combatant command guidance, is the requirement for chemical-biological (chem-bio) protection. I am confident that units, including our specialized nuclear, biological, and chemical (NBC) defense units, deploying to high-threat areas requiring chem-bio equipment and training, meet current standards in both regards. However, while the deployed and first-to-fight units are robust, there are readiness shortfalls in the later-deploying and nondeployed forces.

In addition, it is important to note that even before September 11, we saw the need to look at chem-bio requirements, standards, and readiness above the unit level. Specifically, there are many levels between the unit and theater-of-operations level, and the Department of Defense is actively working to improve or develop doctrine, concepts of operations, and equipment/training requirements for the strategic, operational, and tactical levels of war. Efforts are focused on theater-wide NBC warning and reporting development of detect-to-warn vice detect-to-treat biological

detection capabilities, and validated guidance to address decontamination standards for ports, airfields, and strategic lift assets. These efforts will likely drive new requirements down to the unit level. The fruit of this labor will be a more robust, theater-wide approach to countering weapons of mass destruction (WMD), new equipment and joint training requirements, quantifiable standards for forces operating in NBC conditions, meaningful readiness assessments, and most importantly, a more effective fighting force capable of operating in the most stressful environments.

To summarize, our units deploying today are properly equipped and trained for chem-bio operations using current standards. In the future, chem-bio operations will benefit from a more holistic, theater-wide approach, and additional or refined standards and requirements will be the future benchmark of chem-bio readiness.

Senator ROBERTS. I have no further questions, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Roberts.

Senator Cleland.

Senator CLELAND. Thank you, Mr. Chairman. I want to thank Senator Roberts and Senator Landrieu for over the last couple of years making this Senator more and more painfully aware of the unconventional threats to our country which manifested themselves on Tuesday.

General, as I look back at that morning that you and I were meeting, it is a good thing we are meeting here, and not us meeting in the Pentagon. About the time you and I were having our visit, discussing the need to boost our conventional forces, to look at the question of terrorism and attacks on the United States, just about that very moment the Pentagon was being hit. So, it is good to see you.

General MYERS. It is good to see you, Senator.

Senator CLELAND. I am glad to be here with you.

In thinking of this moment in American history, I think no new Chairman of the Joint Chiefs of Staff has ever taken over in such a perilous time. Maybe with the exception of some officers who took over in December 1941, when we did not have a Joint Chiefs of Staff, you take over in a perilous, historic moment, but one filled with opportunity.

Our wonderful chaplain, Dr. Ogilvie, says sometimes life can be awfully simple, or simply awful. Tuesday, it was simply awful, as we all know. It seems to me, though, that some of the things came out of that are awfully simple: (1) we need to boost our intelligence capability; (2) we need to make sure that more of our assets are put forward toward counterterrorism activity; and (3) that the United States of America and the military has to be an integral part of this, and that cyber terrorism is a part of this in the future.

These are findings that have been brought before the Subcommittee on Emerging Threats and Capabilities and before this committee in the last couple of years that we needed to be more prepared in these areas, and so with Tuesday's events for me it is awfully simple, that this is where we have to beef up.

It is amazing that we spend well over \$300 billion a year on defense, and yet Tuesday we seemed very much defenseless, so I just wondered what lessons over the last 72 hours you have quickly learned that are awfully simple to you, that you can share with this committee.

General MYERS. Well, I think you have hit on some of them. As I mentioned earlier, one of the first things we need to do, and this will take some thought because it is not without differing views on the issue, to determine what is the Department of Defense's role

in this type of activity inside the United States? Overseas, it is a little easier to envision. Inside this great country, it is a little more difficult. So, what is our role, what is our mission and so forth? That is the homeland defense issue, and we need to get about that business of coming to grips with that, and how all the agencies of this Government collaborate and cooperate to bring focus to the problem.

I would also, on the intelligence side, say that obviously that is a lesson learned. Senator Cleland, there is a major review of our intelligence apparatus going on right now. I think it goes without saying that our intelligence operations are structured as they were during the Cold War, and they are looking at that. My guess is they will have substantial changes in the way we are perhaps organized, and for sure equipped, to deal with the 21st century. You will see some of that in the supplemental that is coming this way.

Another issue that came to my mind that maybe others have not thought of is the absolute essential nature of our communications. They worked fine in this crisis, but you could envision other scenarios, other asymmetric attacks on the United States, where maybe our communications would not work so well. We spend a lot of money for secure, survivable communications, and we have a program to do that over time.

It has some funding problems right now, but if it drove something home to me, it is the need to fund that properly, and to make sure—and I am not saying this incident would trigger something like that, but you could have incidents you could think where you might not have the comms you need to have with the country's leadership to make the kind of decisions you need to make, so I would add that one to your list.

Senator CLELAND. One of the other things that seems awfully simple to me is that Senator Roberts and I took the floor to a relatively empty Senate last year. Five to six different times talked about the role of America in the wake of the Cold War being over, and in many ways we were overextended, our forces were spread thin. I personally, like you and others in this body here, have been to see where we have spent \$300 million in defending Kosovo. We are all throughout the continent of Europe.

Last August, I was up on the DMZ where we have 37,000 troops in Korea, for this hyperextension of American power all around the globe. It does seem ironic to me that we cannot defend New York and Washington.

So some things were simply awful on Tuesday, but I think out of that come some things that to me are awfully simple, in that these are the priorities we ought to focus on.

Thank you very much for your service, and God bless you.

General MYERS. Thank you, Senator.

Chairman LEVIN. Thank you, Senator Cleland.

Senator Allard.

Senator ALLARD. Thank you, Mr. Chairman. I would like to join my colleagues in congratulating you, General Myers, on a very successful career, part of which was in the State of Colorado as USCINCSpace. I felt like we had a great working relationship there, and I want to ask you some questions on missile defense and

then maybe a question or two on the Space Commission Report, if I have time.

On missile defense, in your advanced questions to the committee you thought that it would be reasonable to employ a ballistic missile defense if it met four criteria relating to deployment and threat, cost-effectiveness, and operational capability. You also stated in your answers you believe that deploying a ballistic missile defense to defend the United States from a limited attack is in the national security interest, and so I have four questions related to that.

Have you concluded that the ballistic missile threat warrants such a deployment?

General MYERS. Sir, my conclusion is that it has, and if I could expand just a minute, we have had for quite some time now the threat of the shorter-range missiles against our troops, and we saw that starkly in Desert Storm, when the so-called SCUD missile went into Dhara and killed over 20 of our U.S. personnel.

Since that time, the proliferation of missile technology, of course, has spread to many other countries, so from the short-range missiles to the long-range missiles I think we can now say that absolutely there is, at least there is a capability out there, and this could be a threat to the United States.

Senator ALLARD. Have you concluded that affordable cost-effective ballistic missile defenses can be developed and deployed?

General MYERS. I think that part remains to be determined. I think we are well on the way to that, but I think for the shorter-range missiles the answer is absolutely yes. In fact, this is the debut month for the first unit equipped for the new Patriot 3 system, which is—that is the response, and it has taken us 10 years, but we have a response now for the shorter-range missiles that are much more effective than the missile defenses we had during Desert Storm. As I said, the first unit will be equipped this month, and then follow-on units, of course. So, I think for the short range missiles the answer is yes.

For the threats against the United States, I think the honest answer to that is, we have to wait and see. My gut tells me that yes, we will be able to develop this in a way that is affordable and effective. I think that is what General Kadish has testified before this committee, but we need to watch that.

Senator ALLARD. Have you concluded that such systems will be operationally effective?

General MYERS. I have not concluded that yet. Again, on the short-range systems I think we can say Patriot 3 has been through extensive testing. I think we can say it is effective. We are going to have to look at the rest of them as they come on board.

The so-called Theater High Altitude Area Defense (THAAD), the potential Navy systems, airborne laser, many of those are in developmental stages. I think it is too early to say that at this moment they are effective, but I think the vector for all of them is actually positive. We are just going to have to evaluate them as we do all systems, as they come online through appropriate testing.

Senator ALLARD. Have you concluded such systems will increase U.S. security?

General MYERS. If they meet those criteria we talked about earlier, Senator Allard, I would say they do, and I would go back to Patriot 3 again. I think it does increase our security, and we will just have to see, as the systems come on board.

If they develop as the requirements call for them to develop, then I think we will be able to say yes to that, but for some of those systems it is probably too early.

Senator ALLARD. I would like to turn to the Space Commission report. The Commission recommended the United States, and I quote, "develop, deploy, and maintain the means to deter attack and to defend vulnerable space capabilities, including defense in space," and then they go on, quote, "power projection in and from and through space."

What new investments should the Department of Defense make to develop, deploy, and maintain the capabilities described in the Space Commission report?

General MYERS. Some of those we can probably talk about in open session, and some of those we are probably going to have to talk about in a closed session, or separately. Two that immediately comes to mind that I think we can talk about are space control, which is guaranteed access to space for our use, and denying it when appropriate, to adversaries, and space surveillance, our ability to know what is going on in space.

We have a system today that is made up of many different elements, some of which are quite old, and it needs to be refurbished. The goals have been set in the Defense Planning Guidance to do exactly that, so that is one that I think we can talk about.

We can talk about the absolute fundamental nature of space control to everything else we want to do in space. It all starts with knowing what is going on up there, so space surveillance is the one that I would highlight.

Senator ALLARD. I would like to go to space-based radar. This has been a controversial program between the House and the Senate, and it came out in the Conference last year and previous years. We have had quite a bit of discussion on it. What is your feeling about space-based radar as far as, can you relate to this committee whether the Air Force and OSD have decided to deploy space-based radar?

General MYERS. The whole issue about space-based radar, if we take it up to the next level, is what we are talking about here is persistence. We are talking about the difference between reconnaissance, which looked at things in elements of time, to something that surveils, that looks at something all the time.

We are pretty much in the reconnaissance mode today. My personal view is, in intelligence we need to go to the surveillance mode for this kind of capability. So, when the technology is ready and affordable, my vote would be that we need to pursue this initiative.

This is something that is also captured, I think, in our Defense Planning Guidance. There is emphasis there. This will not be—my time at USSPACECOM taught me, since I delved into this at length—something that we will be quickly able to put on orbit. There is a lot of technological work yet to do.

Having said that, my own view is that this is achievable over time, and when we have an affordable system, one we can put up, we ought to pursue that.

Senator ALLARD. Thank you. My time has expired.

Chairman LEVIN. Thank you, Senator Allard.

Senator Reed.

Senator REED. Thank you very much, Mr. Chairman, and welcome, General Myers. Let me thank you and Mrs. Myers for a lifetime of selfless service to the Air Force and to the United States. Knowing you are a graduate of the Army War College, I know you are prepared for the duties you will soon assume.

Let me also take up the issue of National Missile Defense (NMD). Given the answers to your previous questions, and with respect to NMD against long-range intercontinental missiles, would you recommend deployment of such a system this fiscal year that is coming up?

General MYERS. A deployment of the system in this fiscal year? My understanding is that we are not ready for deployment in fiscal year 2003.

Senator REED. Would you recommend acquiring additional missiles, some of which have not been tested for a contingency deployment, in the upcoming fiscal year?

General MYERS. I think whatever system we deploy, we have to have high confidence in its ability to do the job that we require it to do.

Senator REED. Could you estimate, given your knowledge today, when you would have that high confidence, the next fiscal year, or the following fiscal year?

General MYERS. Senator Reed, I cannot give you the details on that. I would rely on General Kadish and his folks to provide that assessment.

Senator REED. Thank you. In terms of the security of the United States with the deployment of such a system, what criteria would you look to?

General MYERS. The one that Senator Allard talked about before, in that we have to know that we have the technical capability that meets the operational requirement, and that it is affordable.

Senator REED. Specifically, for example, there is a discussion in the press that China is proposing to increase its long-range missile fleet, and there is some suggestion that the administration has not actively discouraged them, because such a fleet could nearly overwhelm any NMD we would deploy, and therefore the Chinese would take confidence that we would deploy the system not as a threat to them. But that increase of missiles, would that be a more stable world, in your view, or a more complicated world?

General MYERS. Let me attack your question from the other side. I think one of the fundamental things we have to do is be able to protect our troops overseas, and our U.S. citizens. We have talked about the threat, and I think there is a threat on both sides. We know we have a short-range threat. We have had that for sometime now. There is a longer-range threat that has been acknowledged. So whatever steps we can take to handle that threat, to defeat that threat are appropriate. Our troops and our allies and, I think, our U.S. citizens would want us to do that.

Senator REED. Let me just say that I think there is a strong sense of support, obviously, for increased research in all these areas, also for deployment, because it seems to be capable. As you mentioned, the PAC 3 is ready for deployment of theater missile defense systems, and with that I think we are all in agreement.

Let me ask you another question. This is one that touches upon the whole issue of strategic posture in the United States. If a foreign power launched a missile against the United States, even if that missile were intercepted, would you recommend to the President we retaliate against that act of war?

General MYERS. That is a hypothetical situation, but I can put my old hat on back at North American Space Defense Command, because that was exactly the responsibility that fell on me, and the situation you have posed. If there was a missile launch and we intercepted it, would I advocate a response, and in that narrow scenario, absolutely not.

In fact, as we sat there in Cheyenne Mountain, and taking people through the mountain, we played the simulation of what an attack on the United States might look like. The frustrating part was, we do a pretty good job of telling folks we are under attack with very high assurance, but there is nothing you could do about it. It would be wonderful if we had that capability, and would give the National Command Authorities time then to refine a response, and it might not be to retaliate, which might help stabilize the situation.

Senator REED. General, again I think your experience and your service is extraordinary. It gives me confidence because you are going to be confronting these very difficult issues, some of which at this point are mercifully hypothetical, but your judgment and your experience is truly valuable.

If I have additional time, I would like to turn to a more procedural issue, and that is, with the damage to the Pentagon, when do you anticipate the QDR might be publicly released?

General MYERS. An excellent question, sir. I can tell you, sir, we have been meeting for the last 48 hours or so, and our sole focus has been on the issue at hand. The QDR word has not come up once, and I regret that I do not have a good answer for you. I think, since that is the Secretary of Defense's product; I know he has been totally consumed by the current situation, we can get an answer for the record for you. I am sure he is thinking about that probably about now as well, but I do not have an answer for you.

[The information referred to follows:]

The Quadrennial Defense Review Report was publicly released September 30, 2001.

Senator REED. Just a final question, which goes back to the events of last Tuesday. This was a national tragedy of historical proportions. It seems to me in a very narrow point of force projection that, in terms of the Pentagon, a major military facility, you had absolutely no advance warning that such an attack was being contemplated, or planned, or executed, is that correct?

General MYERS. There was no strategic warning that this was contemplated or planned, to the best of my knowledge.

Senator REED. I presume, based on your discussion with Senator Cleland, that this has been a source of almost immediate examina-

tion and review by the Department of Defense as to what could be done in the future to avoid this situation.

General MYERS. Absolutely, and not just the Department of Defense, but all the civil agencies as well that have intel apparatus, given that they may have knowledge as well.

Senator REED. Thank you very much.

Chairman LEVIN. Thank you, Senator Reed.

Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman. General Myers, let me join my colleagues in congratulating you on your appointment, but I also want to express my sorrow and sympathy to you. I realize all of you who work in the Pentagon have friends and coworkers and associates that are missing, and it must be a very difficult time for all of you, and I just want to extend my sympathy and condolences to you.

General MYERS. Thank you, Senator.

Senator COLLINS. In the priorities that you have submitted to the committee in response to an advance question, you said we should better define the military's role in homeland security, and obviously, given the events of this week, we are very happy to see that you have included that as a priority under the 1986 Goldwater-Nichols law.

Most of the world has been divided up into geographic areas, each assigned to a specific regional commander in chief, the CINCs, who in time of crisis serve as the military's top crisis manager or warfighter in that area. It is my understanding, however, that the United States territory itself is not thought of in those same terms. If we are going to increase our focus on homeland defense, does that mean that we should consider the possibility of treating our own country to some extent as a military operational command, the way we have divided the rest of the world?

General MYERS. Senator Collins, I think the best way to answer is that in a sense we have already done that. We have the command United States Joint Forces Command (USJFC), which is located in Norfolk. There is some exception with naval forces and marine forces on the West Coast, but for the most part the forces in the United States, the components of the Army, Navy, Air Force, and Marines report to the Joint Forces Command.

In addition, we have within the last year-and-a-half stood up a Joint Task Force (JTF) for civil support at USJFC which has the responsibility of handling incidents of weapons of mass destruction in these United States. On top of that, we have the USSPACECOM, which has sovereignty over Canada and the United States. I think what we need to do beyond that is, what I think you are suggesting is, to determine if there is a larger role for the DOD in handling potential incidents in the future, and exactly what that role will be, and that is one that, as I have indicated, I think will take a lot of debate.

If you remember the first time this was brought up to my knowledge, and the debate was made public, there was a lot of concern about the DOD getting into areas that were traditionally those areas of civil responsibility. This is a huge question. What do you want your United States military to do for this country? We have been tip-toeing around that issue for quite sometime.

My view is, this tragedy is going to help crystallize our thoughts, and we will have some thoughtful debate and find a way forward.

Senator COLLINS. It is a difficult issue, about the military's appropriate role in our society, and I am struck by the fact that the attacks we experienced this week are being treated more as a matter of law enforcement. That the Department of Justice, for example, is the lead agency, rather than as an act of war, where the Department of Defense would be, I would assume, the lead agency. Do you have any comments on how we better define the role of the Department of Defense?

General MYERS. Well, as I indicated earlier, it was on the question of cyber warfare as well. It is the same issue as this. Is it a civil law enforcement issue, or national security? However you decide that question will decide who has primary responsibility. This is the same issue. I think the debate needs to occur, and we need to define our roles and responsibilities probably in ways that we have not yet today.

I will tell you, though, that the cooperation among all the departments and agencies of this Government has been absolutely superb. Yes, this was a terrorist act, and the FBI and the Department of Justice are working the evidentiary piece of this, and that is appropriate. There are pieces being worked, of course, by the Department of Defense and the United States military, that are appropriate as well, and the cooperation between all of these agencies and departments is very, very good.

Senator COLLINS. General, I recall that after the terrorist attack on the U.S.S. *Cole*, there was discussion that the military's force protection planning, while quite comprehensive and effective, had neglected part of the picture, that we had been prepared for asymmetric threats from ashore when a vessel was in a foreign port, but that we had not been properly prepared for an attack from small harbor vessels, and in some ways this came to mind when I thought about the attack on the Pentagon.

It strikes me that a great deal of our force protection efforts have focused upon ensuring the security of facilities and military personnel overseas. Does what occurred this week at the Pentagon suggest that the Department needs to refocus its planning on force protection issues here in the United States itself?

General MYERS. Well, I think the answer to that is yes, and I think some of that has already begun. I think the force protection here in the United States has always been front and center.

I know when I was at Peterson Field, Colorado, that was an issue for us. We conducted exercises throughout all the bases that were under our purview on just that very issue, and I know those Services are doing the same. I think the United States has just recently taken steps to start closing bases that were formerly open to the public, and closing them in the sense that you have go through an entrance procedure at a gate to meter the flow in and the flow out. So I think there are steps being taken.

To other comments, what the *Cole* showed us, as you correctly described, Senator, is that there were some seams we had not thought about. But, it goes to the larger issue of how we deal with this in the first place. I will just tell you that what will keep me awake at night in this job are those things that we have not

thought about. I mean, we have been surprised before. We were certainly surprised on Tuesday.

There are probably more surprises out there, and my job, and the job of the Armed Forces and everybody that supports us, is to try to be as creative in our thinking as we can to try to plug these seams and these gaps.

Having said that, we are deployed worldwide to do this Nation's bidding is we know that we will never be 100 percent effective, but what we ought to answer to is, have we thought about everything we can think about, are we doing all we can possibly do, have we asked for the resources to do that, and if I cannot say yes to that, then I am not doing my job.

Senator COLLINS. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Collins.

Before I call on Senator Bill Nelson, let me just make an announcement for the information of members of the committee. There will be a bus at the corner of 1st and C Streets at 6:30 this evening to take Members over to the Pentagon and to bring them back, and please let the committee's Chief Clerk know if you want to go.

Senator Bill Nelson.

Senator BILL NELSON. Thank you, Mr. Chairman. General Myers, Mrs. Myers, last week I moved into an apartment overlooking the Pentagon. Tuesday morning, I was here in the Capitol in a meeting with Senator Daschle, but my wife was at our apartment and she witnessed the whole thing, and each evening, as I have been home since then, I have witnessed the very heroic efforts of a lot of people out there as I get up periodically through the night, fitfully sleeping. My congratulations to you.

Now, that leads to my question, to follow-up Senator Collins' line of questioning. The second World Trade Tower was hit shortly after 9:00, and the Pentagon was hit approximately 40 minutes later. That is approximately—you would know specifically what the time line was. The crash that occurred in Pennsylvania, after the Newark westbound flight was turned around 180 degrees and started heading back to Washington, was approximately an hour after the World Trade Center second explosion.

You said earlier in your testimony that we had not scrambled any military aircraft until after the Pentagon was hit, and so my question would be, why?

General MYERS. I think I had that right, that it was not until then. I would have to go back and review the exact time lines.

Senator BILL NELSON. Perhaps we want to do this in executive session, but my question is an obvious one for not only this committee, but for the executive branch and the military establishment. If we knew that there was a general threat of terrorist activity, which we did, and we suddenly have two Trade Towers in New York being obviously hit by terrorist activity, of commercial airliners taken off-course from Boston to Los Angeles, then what happened to the response of the defense establishment, once we saw the diversion of the aircraft headed west from Dulles turning around 180 degrees, and likewise, in the aircraft taking off from Newark, and in flight turning 180 degrees, that is the question.

I leave it to you as to how you would like to answer it, but we would like an answer.

General MYERS. After the second tower was hit, I spoke to the commander of NORAD, General Eberhart, and at that point I think the decision was to start launching aircraft.

One of the things you have to understand, Senator, is that in our posture right now, we have many fewer aircraft on alert than we did during the height of the Cold War, so we have just a few bases around the perimeter of the United States, and so it is not just a question of launching aircraft, it is launching to do what? You have to have a specific threat. We are pretty good if the threat is coming from outside. We are not so good if the threat is coming from inside.

In this case, I will have to get back to you for the record. My memory said that we had launched on the one that eventually crashed in Pennsylvania. We had gotten somebody close to it, as I recall. I will have to check that out.

[The information referred to follows:]

At 0846 EDT, American Airlines Flight 11 impacts the North Tower of the World Trade Center (WTC). At 0852 EDT, two F-15 aircraft from Otis AFB, MA, launched and were directed to establish a Combat Air Patrol (CAP) over New York City. At 0902 EDT, United Airlines Flight 175 impacted the South Tower of the WTC. At this time, the two F-15 aircraft were 71 miles away. At 0930, two F-16 aircraft launched from Langley AFB, VA, and were directed to establish a CAP over Washington, DC. At 0937 EDT, American Airlines Flight 77 crashed into the Pentagon. At this time the F-16s were 120 miles away. The F-16s established a defensive CAP over Washington, DC, at approximately 0950 EDT. At 1010 EDT, United Airlines Flight 93 crashed in Somerset, PA.

General MYERS. I do not recall if that was the case for the one that had taken off from Dulles, but part of it is just where we are positioned around this country to do that kind of work, because that was never—and it goes back to Senator Collins' issue. This is one of the things that we are worried about. What is next? But our posture today is not one of the many sites, and the many tens of aircraft on alert. We just have a handful today.

Senator BILL NELSON. That is one that we need to talk about together as we get prepared for the future.

General MYERS. Yes, sir.

Senator BILL NELSON. Because we know of a new kind of threat now, unfortunately.

My second question is this. You were talking about—particularly from your experience, which I greatly value, having been the Space Command—our surveillance assets, and the necessity of having those assets there and working, and being able to get those assets to orbit.

We have a risk factor of catastrophe on such launch vehicles like the Titan down to about 1 in 20. In the old days, when we first started launching, it was 1 in 5, but it is 1 in 20, and that may necessitate the only other access to space that we have, which is the manned vehicle.

I bring this up to you because just last week I was invited to have, as a member of the Science, Space and Technology Subcommittee of the Commerce Committee, a hearing on space shuttle safety. The essence of the hearing, and the unanimity of the five witnesses, was that the NASA budget has been starved sufficiently

over the years and presently, such that space shuttle safety will be severely compromised in the future, not today, but in the future, and so I wanted you to know the conclusion of that hearing because in your new capacity as Chairman, it is clearly in your interest that you have reliable access to space when you need it, and although your payloads are configured for expendable booster rockets, should that access to space ever go down, you would need that backup, even though there would be some considerable time delay because of reconfiguration of the payloads, and so I would certainly commend you to have your folks start checking into this.

I think, because of the actions of the tragedy of this week, that we are going to be able to now turn around that budget and start getting the shuttle upgrades over the course of the next 5 years in place in order to give the United States that reliable access to space that we have in the space transportation system.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Nelson.

General Myers, just a very brief request. When I asked you what time it was that the FAA or the FBI notified the Defense Department after the two crashes into the World Trade Center, and you did not know the time, could you ask someone on your staff to try to get us that time so that we will have that either for this session here, or for the executive session?

General MYERS. Mr. Chairman, I just did that.

Senator BILL NELSON. Mr. Chairman, may I just for the record, commenting from CNN on the timeline, 9:03 is the correct time that the United Airlines flight crashed into the South Tower of the World Trade Center, 9:43 is the time that American Airlines Flight 77 crashed into the Pentagon, and 10:10 a.m. is the time that United Airlines Flight 93 crashed in Somerset County, Pennsylvania, so that was 40 minutes between the second tower being hit and the Pentagon crash, and it is an hour and 7 minutes until the crash occurred in Pennsylvania.

Chairman LEVIN. The time that we do not have is when the Pentagon was notified, if they were, by the FAA, or the FBI, or any other agency, relative to any potential threat, or any planes having changed direction, or anything like that, and that is the time that you will give us.

General MYERS. I can answer that. At the time of the first impact on the World Trade Center, we stood up our crisis action team. That was done immediately, and so we stood it up, and we started talking to the Federal agencies. The time I do not know is when NORAD responded with the fighter aircraft. I do not know what time.

Chairman LEVIN. Or the time that I asked you for, which is whether the FAA or FBI notified you that other planes had turned direction from their scheduled path, and were returning or aiming towards Washington, whether there was any notice from any of them, because that is such an obvious shortfall if there was not.

In any event, more important, if you could get us that information.

General MYERS. I was not in the Pentagon at that time, so that part of it is a little hazy. After that, we started getting regular notifications through NORAD, FAA to NORAD on other flights that

we were worried about, and knew about the one that crashed in Pennsylvania. I do not know, again, whether we had fighters scrambled on it.

Chairman LEVIN. Senator Bunning is next.

Senator BUNNING. Thank you, Mr. Chairman. I join with my colleagues in thanking you and your wife for your service to our country.

Tuesday's tragic events have again reminded us of the importance of a continuous vigilance in the defense of this Nation. You will have a very large job ahead of you to protect this great Nation from this and other threats. I look forward to working with you and your colleagues to fulfill our constitutional responsibility to protect our country.

I want to get on to some other things that have not been discussed. Many air power advocates believe air power alone can accomplish our defense goals. They believe that ground and sea power should be minimalized at best. General Billy Mitchell subscribed to this kind of thinking, yet in every bombing campaign we have engaged in, our initial bombing asset assessments were more optimistic than when it was actually accomplished.

No one here denies we should be the supreme commanders of the air. However, air power is just one component of the combat power. To be able to respond to all threats, we must have a balanced and combined armed forces. We must assert sea and land power as well as air power. The administration has heavily pushed air and space power. This is fine, because we need to continue improving our capabilities, but I am a bit concerned there are some who believe we can simply fight battles and wars with cruise missiles and laser-guided bombs.

General Myers, how do you view the role of air power and all the other components that make up our Armed Services?

General MYERS. Senator, the United States needs the capability that all our Services bring to our Armed Forces, and I will just simply say that we cannot do without—

Senator BUNNING. Do you subscribe to the fact that we can bring people to submission just with air power?

General MYERS. I think it is going to take a balance of all our capabilities. One particular scenario may lend itself more to ground power than to air power. One scenario might be more air power dominant than ground power or naval power. That does not mean you do not need all those elements, so the President can have the flexibility to do what the objectives of the mission call for. So, I do not subscribe to just one element of our service power as adequate.

Chairman LEVIN. Senator Bunning, would you withhold just for one moment? My estimate of when our executive session will start is now 5:00, because there are six Senators here who have at least the first round, so that is my best estimate as to when we will initiate that executive session, and Senator Ben Nelson, I have asked if he will now chair, so excuse the interruption, Senator Bunning.

Senator BUNNING. Tuesday's tragic events highlighted to us the threat posed by terrorism. For some time there has been a debate in academic circles and among the counterterrorism community as to whether the proper response to acts of terrorism should be a legal one, or threatening them as crimes, or military, treating them

as acts of war. Which do you believe is the proper way to respond to acts of terrorism, whether abroad or here in our country?

General MYERS. Senator, this is an issue a little bit outside the military's lane, in the sense it is a policy and a political decision.

Senator BUNNING. Do you mean the military is not political, General? Is that what you are telling me?

General MYERS. Senator, I hope we are not political. What we need to do is provide the President the best military advice that we can.

Senator BUNNING. What I am getting at is, we do not want the end result of a terrorist attack on the United States to be handled in court, because we believe it is an act of war. Now, if it is an act of war, the military should be involved in determining how the punishment should be dealt out through the administration's use of the military. We surely do not want any terrorist you could think of to use a court system rather than a military solution to an act of terrorism, whether it be against U.S.S. *Cole*, or whether it be against the Pentagon.

General MYERS. I think the President has said it exactly right. We will essentially use all elements of national power to thwart this aggression, and that includes the use of the United States military.

Senator BUNNING. Would you call this an act of war, then, or not?

General MYERS. Again, I do not want to get into the semantics of whether it is an act of war. I mean, we can get wrapped around a legal—

Senator BUNNING. That is what I am afraid of.

General MYERS. I am not for doing that. I am for responding exactly as our national command authorities want us to respond, and if they make a decision that it is appropriate to use U.S. military force, I absolutely support that.

Senator BUNNING. The horrific acts against us on Tuesday will obviously require a reassessment of our defense priorities. If confirmed, what action would you take to ensure the security of our Nation, of our Armed Forces from terrorist attacks?

General MYERS. Senator, some of the ones we have already talked about, but I think we need to look really closely at our intelligence capabilities, our ability to analyze the information we get. We get a lot of information. It is the ability to analyze it, I think, and disseminate it in a timely manner that makes the difference.

I think we need to look at our communications as well, and again I go back to the other issue of homeland security, homeland defense. There are a lot of unanswered questions in this area that we just have to wrestle to the ground. We cannot keep putting this off or we will not be prepared in the future.

Senator BUNNING. Thank you. My time has expired.

Senator BEN NELSON. According to the chairman, who has departed, I am next in line, and so it may serve a useful purpose to call upon myself. But first, I would ask unanimous consent that the written statement of Senator Thurmond be included in the record.

[The prepared statement of Senator Thurmond follows:]

## PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman:

Mr. Chairman, I want to extend my deepest sympathy to the grieving families throughout the United States on their tragic losses from the heinous attack on the United States by a group of terrorists. Life in our great Nation will never be the same. However, I am confident that this tragedy will make us stronger and more resolute to defend our democracy and life style.

Mr. Chairman, I applaud your decision to hold this hearing. It reflects the resolve that is found throughout our Nation to carry on the functions of government, the economy, and life and not succumb to the terrorist. It is especially important that we act on General Myers' nomination to ensure our Armed Services to have the continuity of leadership to carry the fight to the home bases of the terrorist wherever they may be.

General Myers, despite the tragic event of Tuesday, I want to extend my congratulations on your nomination to be the next Chairman of the Joint Chiefs of Staff. The challenges ahead of you will be immense, however, I am confident you are prepared to meet them. I pledge you my support and wish you success.

Senator BEN NELSON. General Myers and Mrs. Myers, I certainly appreciate very much your public service and your commitment to the United States and to our country and to our citizens. I welcome you in advance of your confirmation to this very important position that you will occupy.

I was looking very carefully at your biography to determine whether or not you had been stationed at Offutt to claim you as a Nebraskan. Somewhere along the line you may have escaped Offutt, but I am sure you visited there on occasion, and that is close enough.

General MYERS. Absolutely, Senator, many times.

Senator BEN NELSON. The acts of Tuesday have probably in the most indelible way framed the issue for us for the future, and that is that national security requires that we be prepared both internationally and internally.

There are those who would suggest that, as Senator Collins and Senator Bunning and others have said, we make certain that we not treat the acts of this week as some sort of a legal or criminal matter alone, that they must, in fact, be dealt with as a military matter with a military response to this situation.

I am one of those. I believe we need to. I think it is important that we do the forensic work to establish the particulars of what happened here, and I commend those who are doing that. As a matter of fact, it leads me into the area of cooperation internally that I think may set, if you will, the protocol, if not the framework for internal national security.

Before I do that, I note with some irony that it is important to document all of the time frames by using our most able informant, CNN, about the time frame and other particulars, but as we look at how we can bring together the intelligence community, as well as the military establishment and our law enforcement agencies, the FBI, the Justice Department, it is important to point out that the FBI is recognized and has stated four separate situations where the military is most likely to be called upon to assist in the domestic law enforcement situation, which involves: either a threat or an act of terrorism, including weapons of mass destruction terrorism, one to provide technical support and assistance to law enforcement and other crisis response personnel—obviously, I think that is being undertaken—interdicting an event and apprehending

those responsible, restoring law and order following an incident, and then finally, abating the consequences of a terrorist act.

I hope that I am learning from you today not only your reaction to the events of this week, not only your determination and commitment, but perhaps some idea of what you would take, what you would bring to the table to bring about the kind of protection that we are looking for today to preserve our security for internal national defense as well as for international, national defense.

Is there anything you have not said about that, that you might say to help us come to terms with the importance of it, and perhaps some general thoughts about what can be done?

General MYERS. Obviously, the importance of it is very high, and I think I would just go back to defining DOD's role inside the United States. That is one that legitimately requires very serious debate.

I think the one thing we must do is continue to enhance our intelligence capabilities, not just inside the military, but in the civil agencies as well.

Senator BEN NELSON. If it is not predictable, it is not protectable.

General MYERS. In some cases, that is true. In some cases, probably in many cases, that is true. So, that is again where I would focus our efforts. I think this review we have ongoing, on the whole intelligence community, is appropriate, and I think they will pick up on this and probably come out with some really good recommendations on how we can do a better job of coordinating and cooperating.

The human side of our intelligence collection has been bolstered in recent years but could probably be bolstered some more. We just have to look at this whole spectrum of, when we gather all this information, how we can quickly analyze it and get it to people that need to know it. My personal view is, we are not as good as we need to be? Not because of this recent incident, but previous things that I have seen that indicate that we really need to work on that issue as well. So, that would primarily be where I would focus my efforts.

Senator BEN NELSON. I have confidence in your ability to do this, particularly in the military setting, because whether it is true or not, I think the general public perception is, the military knows how to cooperate without stepping all over itself. At least you have given us that impression. I hope the reality is the same, even in spite of some exceptions, but it would seem that if there is any hope for it to occur, that you will be able to bring it about.

General MYERS. Senator Nelson, I think we can do that.

Senator BEN NELSON. I thank you. Senator Hutchinson is next.

Senator HUTCHINSON. Thank you, Senator Nelson.

General Myers, congratulations. I am very pleased to support your nomination, and we have listened to Kansas, Missouri, Colorado, Nebraska, and Oklahoma all try to claim you. If Arkansas could, we would. I cannot, but I am very pleased to support your nomination. I know you will do a wonderful job, and thank you for your service to our Nation.

I know some of my colleagues are going out to the Pentagon later today. I went out earlier today, and I join those who have been out there and those who have seen the work that is going on in com-

mending those brave responders and those who are risking their lives. It is still an unstable situation, and I do not have reservations about the FBI being the lead on this and the Department of Justice, because I, like Senator Nelson, believe that we have to have the forensic, we have to have the evidentiary base in order for the military to take an action, for the commander in chief to order action, and I am convinced that when we have that, indeed, there will be a military response to the attack upon our Nation.

I want to present a little scenario to you. What happened at the twin towers, while unprecedented in magnitude, is not unprecedented in the type of attack. As a Nation, we have had Oklahoma City, we have had attacks upon towers, the twin towers, we have had experience in plane crashes, and so while this is a national tragedy of unprecedented proportions, it is not unprecedented in the type of situation that we are dealing with, excavating and trying to uncover bodies. With the understanding that there is an ongoing debate as to the proper role of the military in protecting from domestic terrorist attack, if this attack had been, instead of airliners, flying bombs piercing the Pentagon, and piercing these towers, if the attack had been—and I think the estimate is it could be up to 50 people who were coconspirators or participants in this.

If there had been 50 people going into 50 U.S. cities carrying briefcases with biological pathogens, biological weapons, what would have been the consequences, and how vulnerable are we, and how prepared are we in your considered opinion?

General MYERS. Well, again, this is a hypothetical, but in the scenario you painted I think we are vulnerable, and I think the consequences could be great.

Senator HUTCHINSON. Indeed, I agree. We are talking tens of thousands, which is absolutely unimaginable tragedy for our Nation. Our vulnerability to a biological or chemical attack could result in millions of victims, or to put it in military terms, had it been a private jet, a general aviation aircraft loaded with biological weapons, flying into the Pentagon, are we prepared, would we have had protection in that situation?

General MYERS. Limited protection, but obviously, there are a lot of folks around the Pentagon.

Senator HUTCHINSON. I was very pleased, in the advance questions, by your response to the issue of vaccine production. You said, I support establishing a long-term reliable national vaccine production capability. The Department of Defense has a long-term need for reliable sources of FDA-approved vaccines for any biological health threat that may impact our soldiers, sailors, airmen, and marines now and in the future. I appreciate that, and I think that commitment is absolutely essential.

You said earlier in your comments—you speak to anthrax, but you also expand that to recognizing that there are a lot of biological threats to force protection that confront us. What concerns me is that while we have a terrible shortage in vaccines now, we are not able to protect our men and women in uniform, that the estimates, if we go with the Government Owned Contractor Operated (GOCO) if the determination is that is the best way for us to address this, we are still talking years.

I think we have to do better. I think we have to place a higher priority on that. We have to protect against this threat, and the added benefit of that kind of production capability will be to, I think, also provide protection to the American people, who are equally vulnerable, so I thank you for your commitment to that. I want to urge that it be given a priority under your leadership, and that we expedite it to the extent possible.

We spend hours, and we did during defense authorization, on missile defense. I do not object to that, but we need to debate it. That is a serious issue that there is a lot of pros and cons we spend relatively little time talking about what we ought to be doing in the National commitment on vaccine production, and the cost, compared to missile defense, is minuscule.

Any response or comment?

General MYERS. Senator Hutchinson, the only response is that this particular issue has been highlighted, again, in the DPG and in the QDR. I think it is a recognized shortfall, speaking largely now about the inability to confront weapons of mass destruction, including chemical and biological, that will get attention and increased resources. That is the intention at this point.

Senator HUTCHINSON. Thank you, General.

Senator BEN NELSON. Senator Dayton.

Senator DAYTON. Thank you, Mr. Chairman. General Myers, I share the admiration of my colleagues for your many years of very, very distinguished service to our Nation, and I also want to express my admiration for your candor and directness in your replies here today.

In the 8 months I have been a Senator, in all the meetings I have sat through, your candor and directness stands out first among them all in marked contrast to some of the difficulties in getting candid and direct answers from others in the last 48 or 60 hours, I would say, particularly, so thank you very much. I think that bodes very well for the working relationship you will have with the members of this body.

In response to one of Senator Carnahan's questions, you brought up the role of the National Guard, which Minnesota has both the components of. We have Reserves as well, among other things, who certainly stand ready and willing to serve their country and have done so admirably, but who have expressed to me some concerns about their future assignments, which are now extending to as much as 5 months or so. Could you just outline—and I realize we have limited time to cover that whole terrain, but with the appropriate roles, as you alluded to, of those respective components?

General MYERS. I think we can state today that for the Armed Forces of the United States to carry out their missions around the world we cannot do it without the Reserve component, both the Reserve Forces and the National Guard forces. We just cannot do it.

I will also say that I think each Service has worked very hard to mitigate the impact on the lives of our Reserve component individuals so they can contribute. So, it does not destroy their job and their lives that they were leading.

We probably have not done that perfectly, and that will continually need to be evaluated, but they are absolutely essential to our conduct of our missions today.

Senator DAYTON. Thank you. I was intrigued by your answer on page 20 of your response about, you believe it is in the national security interest of the United States that all land-based ICBMs be de-MIRVed. You said there are no significant military advantages to the elimination of MIRVed land-based ICBMs, which has particular relevance given President Putin's comments that that might be a Soviet response to us pulling out of the ABM Treaty. Can you elaborate on that, sir?

General MYERS. As I recall that question, I think I was talking about the significance of U.S. missiles. We have de-MIRVed some under previous agreements, and we still have some that are MIRVed.

Senator DAYTON. Maybe I am misinterpreting. Is this because the question that preceded that said, referred to the Russians, that they may not de-Multiple Independently-Targetable Reentry Vehicle (MIRV), and you pointed out that that START II Treaty is not in force, so they are not required to do so, so maybe I misunderstood.

Let me just rephrase it, then, and say, would that be of strategic and security concern to the United States, if Russia took the position that it would not de-MIRV its nuclear warheads in response to something such as withdrawing from the ABM Treaty?

General MYERS. I do not think the issue of whether they are MIRVed or de-MIRVed is really the issue. The issue to me would be, first of all, what is our strategic relationship with Russia. Today, I think it is quite different than what it was, obviously, during the Cold War. The second point would be that it would be the overall levels of warheads that would be of concern.

The missile defense system is conceived as one of limited defense. So, whether they are MIRVed or de-MIRVed there is not really an issue about overwhelming defenses, because it will probably never be the case that we will have a defense against a large attack. I would be more concerned with the total number of warheads that are on delivery vehicles in accordance with presidential guidance, trying to take that to the lowest level possible consistent with our national security needs.

Senator DAYTON. Finally, I was very impressed with your statement about the lessons you learned in your previous positions. You said first the Armed Forces are not made up of people, rather that the people are the Armed Forces. Sometimes we lose that focus. I thought that was very well-stated, and very appropriately so.

This committee in my brief time here has focused itself on meeting some of the needs that have not been sufficiently addressed in support of the men and women who make up our Armed Forces. I know that the authorization bill we are going to be acting on next week will take a further step forward. What else can we do, or must we do, to provide the kind of support they deserve?

General MYERS. I think, Senator, I absolutely agree with you. We have made great strides, and this committee has led the charge. In fact, Congress has led the charge in making sure that we have appropriate pay. We have worked some housing issues. We have worked medical benefits. These are issues, though, that if you do not keep working them they are going backwards. So, pay comparability is an issue we need to continue to work, and you saw the

fiscal year 2002, the bill you have just all worked very hard on. That was the big issue.

The housing issue is not only the adequacy of the housing that we provide, but the housing pay to our folks to make sure there are not exorbitant out-of-pocket expenses for the housing needs. Then I would say access to medical care continues to be an issue. As we try to find that right balance between what we do in-service and what we do with managed care, I am sure your constituents have probably told you there are issues of access there that we need to continue to work.

Senator DAYTON. Thank you very much. I am assured that you will help us to make sure we do not go backward, but also that we can move forward, and also to apply that consideration to the Reserves as well, and the National Guard, the men and women who make those up.

General MYERS. Any time I talk about our Armed Forces I am talking about the total team, which includes, by the way, those civilians, those Department of Defense civilians, some of whom were tragically killed in the recent attack on the Pentagon. We are one team.

Senator DAYTON. Well-stated. Thank you. Thank you, Mr. Chairman.

Senator BEN NELSON. Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman. Congratulations, General Myers. It is a great honor to be given this high post, and I know that you will give your very best to it. I also congratulate your wife, and both of you for your great career together. Everybody wants to claim a piece of your background. I certainly will. I note that you attended Maxwell Air War College in Montgomery, Alabama, and earned your master's degree from America's great university, Auburn University, so we are delighted to see you receive this great and high honor.

I was at the Pentagon yesterday and during the course of that had the opportunity to talk to a lieutenant colonel who was in his office when the plane hit on that very side. He said he was blown across the room, up against the wall. He went outside and realized just how bad it was, and he and a sergeant broke out a window and went back in. He described one person coming out all in flames that they had to put down and put the fire out.

That gentleman was saying over and over again, there are others in there, please go back and help those who are in there, and they went back repeatedly until the fire marshall told them not to go back in. This is the kind of courage, commitment, and dedication to unity and to one another that I think is characteristic of our Armed Forces, and I do believe we have the greatest Armed Forces in the world, and I know that you are very honored to be able to lead that.

General MYERS. Definitely, Senator.

Senator SESSIONS. I thought I would just ask you a few questions that are real fundamental, and will go to your challenges in your job, not unlike what you and I discussed when you came by for a visit, and that is basically about our budget.

President Bush this year is proposing, and will achieve, I believe, a \$38 billion increase in our defense budget from \$290-something

last year to nearly \$330 billion this year with a supplemental in between, and so it is a major increase. However, we have committed to do more for our men and women in uniform, their pay and benefits, and much more needs to be addressed.

It is distressing to me, and I will ask you if you will agree, that even with this largest increase we have had in over a decade, we still are not able to do as much as we need to be doing to recapitalize our aircraft, our ships, and our Army and Marine equipment.

General MYERS. Senator Sessions, that is absolutely the case. The account, the modernization account, if you will, has for a lot of this past decade been used to ensure current readiness and current operations. So, we borrowed from that account to make sure that we were ready to do what we have to do today.

We are reaching the point now where our shipbuilding accounts, our aircraft modernization accounts, our Army transformation accounts are short, and the average age of our aircraft continues to go up. Things are just getting older. The consequences of that are that it costs more to maintain them, and that they are not always as ready as we want them to be when we have to call upon them.

That is a major challenge, how to balance our modernization and transformation needs with our current readiness needs and our personnel needs, the three major elements of our budget. So I agree with you, that is the challenge. That is one of the things that I feel I have to focus on, and have to provide advice to the Secretary as required to do so.

Senator SESSIONS. As Chairman of the Joint Chiefs, I would suggest long-term service to the Department of Defense. That would be your greatest challenge, would you agree, how to handle our transformation and recapitalization?

General MYERS. Yes, Senator, it has to be right up there. I would mention one other, and that is to make sure that the national security strategy, the national military strategy, and our defense strategy are in balance with the force structure that we have to do the job. It kind of goes hand-in-hand with what you are talking about, but those are probably the biggest challenges.

Senator SESSIONS. Well, I think that is well said, so let us look at this. I have heard several talking heads in the last several days say this terrorist attack is what we are going to see in the future. It is the 21st century war. I believe Secretary Rumsfeld has said something like that.

We know that does not mean there will not be any other kind of war, so we have to be prepared for others, but it certainly I think has an element of the truth to it, that we are in an asymmetric threat situation that presents new and unique challenges different from the time when we faced the Russians on the plains of Europe.

Question: do you think the leaders of the services fully understand that we do need to make a transformation? Do they also understand that there will not be as much money as we would like to have to hold onto everything that we may like to do, and is there enough commitment within the uniformed services to make the transformations that will be painful at times to get us ready to handle the threats we will be seeing in the future?

General MYERS. Senator Sessions, you know as well as I do, the Service Chiefs, members of the Joint Chiefs of Staff that I have been with, here, for the last year and a half, are the best this country has to offer. They are very smart men, and they understand very well the challenges of the future. They understand the need to modernize. They understand the need to transform their capabilities to be responsive to the asymmetric threats that we have faced and that we will face, and I think they are absolutely the right ones to do that.

The question is always, this is a tough balance between today's problem and tomorrow's challenge, and it is one—I mean, we wrestle with every day, but they are absolutely the right people to do it, and they are committed to do it.

Senator SESSIONS. I think you are going to have to lead that, and at times some are going to have to give up the cherished dreams for their service. Some of us in Congress may have to find some more money than we actually have been able to find so far, and even with this large increase, it is still not enough, so I think it is going to take a combination of change, refitting for the future.

I believe Secretary Rumsfeld is doing the right thing. I think he has to challenge the old-established thinking. I hope you will help him in that.

General MYERS. Sir, I will. I am committed to that as well.

Senator SESSIONS. Thank you.

Chairman LEVIN. Thank you, Senator Sessions. OK, it is 5:00. We are going to move to Hart 219, which is out that door, and we will ask those Senators who are within the sound of my voice to come there. Secretary Wolfowitz is I believe within earshot, and we will notify him.

One other important announcement which is going to affect the length of this executive session. There is going to be a 5:20 roll call vote on the Harkin amendment on the Commerce, State, Justice Appropriations Bill, which means we are going to have perhaps a half-hour for our executive session, so we are going to begin immediately.

[Whereupon, at 5:04 p.m. the committee adjourned.]

[Prepared questions submitted to Gen. Richard B. Myers, USAF, by Chairman Levin prior to the hearing with answers supplied follow:]

THE VICE CHAIRMAN OF  
THE JOINT CHIEFS OF STAFF,  
*Washington, DC, Sept. 10, 2001.*

The Hon. CARL LEVIN, *Chairman,*  
*Senate Armed Services Committee,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: I am greatly honored by the President's confidence in nominating me as the Chairman of the Joint Chiefs of Staff. I pledge my full support to our Nation, the President, Congress, the Secretary of Defense, and the men and women of our Armed Forces.

My responses to the questions of your 5 September 2001 letter are attached.

Sincerely,

RICHARD B. MYERS,  
*General, USAF.*

Attachment:  
Question Responses.

cc: Senator John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms. You have previously answered the committee's policy questions on this subject in connection with your nominations to be Commander in Chief, U.S. Space Command and Vice Chairman of the Joint Chiefs of Staff.

Has your view of the importance, implementation, and practice of these reforms changed since you testified on October 27, 1999?

*Answer.* No. My views have not changed. I still believe that the defense reforms initiated by Goldwater-Nichols were the appropriate antidote. Today, the reforms have strengthened the warfighting capabilities of our combatant commands by facilitating our evolution into a truly joint force.

*Question.* Do you foresee the need for additional modifications of Goldwater-Nichols in light of the changing environment and possible revisions to the national security strategy? If so, what areas do you believe it might be appropriate to address in these modifications?

*Answer.* I believe Goldwater-Nichols has provided the necessary flexibility to allow us to conduct business the way we should—jointly. There are some necessary mechanical issues related to joint officer management and joint professional military education that must be addressed.

*Question.* Based upon your experience as Commander in Chief, U.S. Space Command and Vice Chairman of the Joint Chiefs of Staff, do you believe that the roles of the combatant commanders and the Chairman of the Joint Chiefs of Staff under the Goldwater-Nichols legislation are appropriate and that the policies and procedures in existence allow those roles to be fulfilled?

*Answer.* Yes.

DUTIES

*Question.* What is your understanding of the duties and functions of the Chairman of the Joint Chiefs of Staff?

*Answer.* The Chairman is the principal military advisor to the National Command Authorities (NCA) and National Security Council (NSC), as established by Title 10. The Chairman is just that—the principal military advisor—and not, according to the law, in the chain of command that runs from the NCA directly to each combatant commander. The law allows the President to direct that communications between the NCA and the Combatant commanders be transmitted through the Chairman. The current Unified Command Plan (UCP) directs this method of communication, as have all the UCPs since Goldwater-Nichols was enacted. This method of transmission of information ensures that the Chairman is fully involved so that he can provide the NCA with his best military advice.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* The United States military has fully prepared me for this position through myriad duty assignments working with the greatest soldiers, sailors, airmen, marines, and coastguardsmen in the world. During my career, I have commanded at the squadron, weapons school, wing, numbered air force, major, subunified, and unified command levels. I served as the Assistant to the Chairman of the Joint Chiefs of Staff where I gained an even greater understanding of Washington's interagency processes. Of course, during the last year and a half I have served as the Vice Chairman of the Joint Chiefs of Staff, working under the superb leadership and guidance of Hugh Shelton, and dealing with the full spectrum of issues and crises I can expect to face should I be confirmed as the Chairman.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Chairman of the Joint Chiefs of Staff?

*Answer.* No.

*Question.* Do you expect the President to continue to direct that communications to the combatant commanders be transmitted through you, if you are confirmed as Chairman of the Joint Chiefs of Staff?

*Answer.* This time-tested method of communication is critical to the Chairman's ability to fulfill his statutory role and responsibilities as principal military advisor to the NCA and NSC. The Chairman must be kept informed and this is the most

effective way to do it. This communications process is equally critical to the Chairman's ability to perform other NCA-assigned responsibilities such as assisting the NCA in the performance of their command functions, overseeing the activities of the combatant commands, and serving as spokesman for the combatant commanders especially on the operational requirements of their commands.

*Question.* Do you expect the Secretary of Defense to continue to assign responsibilities for overseeing the activities of the combatant commands to you, if you are confirmed as Chairman of the Joint Chiefs of Staff?

*Answer.* This is a critical role and is provided for in current DOD directives.

#### RELATIONSHIPS

*Question.* Section 151(b) of title 10, United States Code, provides that the Chairman of the Joint Chiefs of Staff is the principal military adviser to the President, the National Security Council, and the Secretary of Defense. Other sections of law and traditional practice, however, establish important relationships.

Please describe your understanding of the relationship of the Chairman of the Joint Chiefs of Staff to the following officials:

a. The Deputy Secretary of Defense.

*Answer.* Under existing directives, the Deputy Secretary of Defense has been delegated full power and authority to act for the Secretary of Defense on any matters which the Secretary is authorized to act. As such, the relationship of the Chairman to the Deputy Secretary is similar to that with the Secretary.

*Question.* b. The Under Secretaries of Defense.

*Answer.* Title 10, United States Code, and current DOD directives establish the Under Secretaries of Defense as the principal staff assistants and advisors to the Secretary regarding matters related to their functional areas. Within their areas, Under Secretaries exercise policy and oversight functions. In discharging their responsibilities, the Under Secretaries may issue instructions and directive memoranda that implement policy approved by the Secretary. These instructions and directives are applicable to all DOD components. They may also obtain reports and information necessary to carry out their functions. As with other communications between the NCA and combatant commanders, communications between the Under Secretaries and combatant commanders should be transmitted through the Chairman of the Joint Chiefs of Staff.

*Question.* c. The Assistant Secretaries of Defense.

*Answer.* With the exception of the Assistant Secretaries of Defense for C<sup>3</sup>I, Public Affairs, Legislative Affairs, and Intelligence Oversight, all Assistant Secretaries of Defense are subordinate to one of the Under Secretaries of Defense. This means any relationship with an Assistant Secretary of Defense would be through the Under Secretary of Defense for Policy, the Under Secretary of Defense for Personnel and Readiness, the Under Secretary of Defense for Acquisition, Technology and Under Secretary of Defense (Comptroller/Chief Financial Officer). Since the Assistant Secretaries of Defense for C<sup>3</sup>I, Public Affairs and Legislative Affairs are the Secretary's principal staff assistants and advisors for matters within their functional areas, relations between the Chairman and ASD(C<sup>3</sup>I), ASD(PA) and ASD(LA) would be conducted along the same lines as those discussed above regarding relations with the various Under Secretaries of Defense.

*Question.* d. The Vice Chairman of the Joint Chiefs of Staff.

*Answer.* Title 10, United States Code, section 154(c) states that the Vice Chairman performs the duties prescribed for him as a member of the Joint Chiefs of Staff as well as those duties prescribed by the Chairman, with the approval of the Secretary of Defense. If confirmed, I do not foresee making significant changes to the duties currently carried out by the Vice Chairman. In addition to the duties as a member of the Joint Chiefs of Staff, the Vice Chairman serves on the Chairman's behalf as the Chairman of the Joint Requirements Oversight Council (JROC) and is his representative to the National Security Council Deputies Committee. Further, the Vice Chairman has the responsibility to stay abreast of ongoing operations and policy deliberations, so that he is able to provide appropriate military advice to the President, the Secretary of Defense, and the NSC and also act as Chairman in the Chairman's absence.

*Question.* e. The Secretaries of the Military Departments.

*Answer.* Title 10, United States Code, section 165 provides that, subject to the authority, direction and control of the Secretary of Defense, and subject to the authority of the combatant commanders, the Secretaries of the Military Departments are responsible for the administration and support of the forces they have assigned to combatant commands. The Chairman, or the Vice Chairman when directed or when acting as the Chairman, advises the Secretary of Defense on the extent to which

program recommendations and budget proposals of the Military Departments conform with priorities in strategic plans and with the priorities established for requirements of the combatant commands.

*Question. f. The Chiefs of Staff of the Services.*

Answer. As a result of the Goldwater-Nichols Act, the Service Chiefs are no longer involved in the operational chain of command. They now have two significant roles. First and foremost, they are responsible for the organization, training, and equipping of their respective Service. With the full support and cooperation of the Service Chiefs, the Combatant commanders can ensure the preparedness of assigned forces for missions directed by the NCA. Next, as members of the Joint Chiefs of Staff, the Service Chiefs have a legal obligation to provide military advice. Individually and collectively, the Joint Chiefs are a source of experience and judgment for the Chairman, the combatant commanders and the NCA. If confirmed, I will continue to work closely and meet routinely with the Service Chiefs as we work together to fulfill the warfighters' requirements.

*Question. g. The Combatant Commanders.*

Answer. The combatant commanders are the warfighters. By law and to the extent directed by the Secretary of Defense, the Chairman serves as spokesman for the combatant commanders and is charged with overseeing their activities. He provides a vital linkage between the combatant commanders and other elements of the Department of Defense. If confirmed, I will have frequent dialogue with the CINCs and serve as their advocate and spokesman.

#### TRANSFORMATION

*Question. If confirmed, you will be assuming your duties as the Chairman of the Joint Chiefs of Staff at a time of great expectations for the transformation of our armed forces to meet new and emerging threats.*

Please explain what the term "transformation" means to you and the role that technology and experimentation, including joint experimentation, should play in transforming our armed forces?

Answer. Transformation is an on-going process for conceptualizing, developing and fielding new combinations of operational concepts, capabilities, organizational arrangements and training regimens that provide U.S. joint forces with advantages that fundamentally change our own, or render less effective others, ways of waging war. It is usually evolutionary but can be revolutionary. Technology and material-based solutions are only one element of transformation. True transformation can only occur through a co-evolution of change recommendations within all the critical joint force considerations of doctrine, organization, training, material, leadership and education, personnel and facilities (DOTMLPF). A comprehensive DOTMLPF approach is necessary to field and employ future capabilities that fundamentally change and improve our operational and warfighting effectiveness.

A key feature for the achieving joint transformation will be the clear identification and delineation of the roles and responsibilities of the Office of the Secretary of Defense, the Combatant Commands, the Services, JFCOM and the Joint Staff to ensure unity of effort under the Secretary of Defense.

Joint transformation also requires changes within the three supporting processes of requirements generation, acquisition, and the planning, programming, and budgeting system processes. Over the past year, the military has made significant strides in the improvement of the requirements generation process through the evolving strategic integration role of the Joint Requirements Oversight Council (JROC). The Requirements Generation System (RGS) process was shifted from a threat-based system to a joint operational concept and capabilities-based system. Additionally, the process was adapted to enable the introduction and consideration of transformation initiatives from a variety of sources, to include Joint and Service experimentation. The Secretary of Defense is working hard to streamline the acquisition and PPBS systems to facilitate transformation. Further, modernization is a key part in the transformation equation.

*Question. Are you confident that the defense review process, now concluding, will outline a clear vision for transformation within the Department and understandable mechanisms for measuring progress toward accomplishing stated transformation goals?*

Answer. The Secretary of Defense has received a comprehensive overview of current transformation efforts and processes underway within the Office of the Secretary of Defense, Combatant Commands, JROC, JFCOM and the Services as a frame of reference. Significant process reform has already been accomplished and the mechanisms to nurture develop and eventually field new joint operational concepts and capabilities are in place.

The defense review process does provide a solid foundation for pursuing and achieving the joint and Service transformation desires of the administration, Congress and the military Services. One of the many challenges is the development of a comprehensive DOD strategy for the transformation of the Defense Agencies and the military Services. Unity of effort is essential with clear delineation of the roles and responsibilities within all the Office of the Secretary of Defense, Service, Combatant Command, Joint Staff and JFCOM initiatives to insure the development of a more integrated and highly effective joint force.

Transformation is a long-term effort within an organizing construct that defines the joint operational concepts, capabilities and process metrics that will focus our efforts and enable us to measure progress.

#### JOINT FORCE

*Question.* Retired Air Force General James McCarthy, who headed a study on Defense Transformation for Secretary Rumsfeld, recently stated that, "Today we do not have a truly joint force" and, "The problem is we have not identified a way to organize, train and equip joint forces."

How would you respond to those statements?

*Answer.* We have come a long way since 1985, but we still are not where we need to be. The Services need to field truly 'plug and play' forces while JFCOM develops a functional, standardized joint force headquarters so we all can work as a true joint team. Equipment needs to be interoperable so we can share information and act decisively on that information as a true joint team. We need to better integrate Service specific training and joint command and control so we can train as a true joint team like we fight. Of course, the military view of jointness is not the absence of Service uniqueness. Instead the approach to jointness within the U.S. military emphasizes the following key elements:

- it leverages service core competencies to produce a comprehensive joint capability;
- it relies on the integration of the Active and Reserve components for a total joint force;
- it is focused at the strategic and operational levels of war;
- it retains necessary redundancy with minimal duplication of capability in Service provided forces; and
- it effectively operates within the interagency and multinational environments.

The current law and force planning development system uses the military Services to organize, train, equip and provide joint-capable forces to combatant commanders. The core competencies of each Service reflect their unique capabilities and ensure continuation of both the ethos and the means for future operational and warfighting success. As we seek to transform the armed forces, we do not want to lose the characteristics that have produced the world's premier warfighting Services in their operational dimension. Our challenge is to develop a future joint force with joint core competencies that enable, integrate and employ Service, interagency and multinational core competencies for the achievement of desired effects and outcomes.

The development of complementary joint and Service core competencies will provide a basis for fielding a more capable, effective and integrated future joint force from Service force providers. In that effort we are also addressing joint processes and standards across the critical joint force development considerations of doctrine, organizations, training, material, leadership and education, personnel, and facilities.

#### ANTHRAX VACCINATION

*Question.* DOD officials have testified that anthrax is the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA-approved vaccine.

Do you continue to support the policy of vaccinating our service men and women to immunize them against the use of weaponized anthrax?

*Answer.* I strongly support any policy protecting our service members against anything that puts them at risk. As you stated in the question, and as was recently re-confirmed with our warfighting commanders, anthrax is the agent of highest concern in biological warfare. The pre-exposure vaccination program is the safest and most effective countermeasure in existence today and is the medical cornerstone of our integrated defense strategy to counter this very real threat.

*Question.* If confirmed, will you support full implementation of the Anthrax Vaccine Immunization Program if sufficient supplies of FDA-approved anthrax vaccine become available?

Answer. Yes. The protection of our soldiers, sailors, airmen, and marines is a top priority. The vaccine is a safe and effective medical pre-exposure countermeasure to anthrax. It's the right thing to do.

*Question.* The difficulty the Department has experienced in procuring a reliable source of FDA-approved anthrax vaccine has resulted in the Department examining alternative sources of the vaccine, including the establishment of a government-owned, contractor-operated production facility; a contractor-owned, contractor-operated production facility; and other options.

If confirmed, would you support establishment of an additional dedicated vaccine production facility (whether a GOCO or private industry source)?

Answer. I support establishing a long-term, reliable national vaccine production capability. The Department of Defense has a long term need for reliable sources of FDA-approved vaccines for any biological health threat that may impact our soldiers, sailors, airmen, and marines now and in the future. How it is done is a policy decision.

#### PARADIGM SHIFT

*Question.* During Deputy Secretary Wolfowitz's August 8 and August 16 press conferences in which you participated, he referred to a consensus on a "very significant paradigm shift," which appears to relate to changes in strategy, risk assessment, and warfighting requirements.

Would you describe the elements of this "very significant paradigm shift" and indicate the areas, such as force structure, that could be impacted by it?

Answer. In the past, DOD focused on building a force capable of defeating the threat posed by two, nearly simultaneous major theater wars while also handling smaller scale contingencies. We essentially sized our force to fight two very distant foes, Iraq and North Korea. This approach has been overshadowed by the uncertainties of the changing strategic landscape, and contributed to an imbalance between our previous strategy and the force structure to execute that strategy. The world continues to grow more dangerous and more complex, limiting our ability to forecast who might be possible adversaries. This set of circumstances requires the "paradigm shift" that the Deputy Secretary of Defense referred to in his remarks. The Department will, I believe, be recommending a new, broader strategy to address not only the need to fight and decisively win major theater war, but also the growing need to defend our territory. It will also account for myriad other tasks, including small-scale contingencies, we have asked our forces to do. These small-scale contingencies have been driving up the tempo of our people and equipment. This also drives us to transition from a near term, threat-based approach to a *capabilities-based* approach required to execute a wider range of possible missions in the mid- and long-term. This paradigm shift requires we address not only the warfighting requirements for today, but simultaneously set the stage for building a force that can deal with possible future scenarios that are not in our current planning set. We must then carefully balance between modernizing our current fleets of aging weapons systems and selectively transforming the Department in ways that will allow us to successfully address an entirely new set of threats in the future.

#### SCIENCE AND TECHNOLOGY

*Question.* The fiscal year 2002 budget request remains short of the Department's stated 3 percent goal for defense science and technology.

Do you believe that the request of \$8.8 billion is adequate to meet the military's need for innovative technologies?

Answer. To meet the 3 percent objective in fiscal year 2002 would have required a total of \$9.9 billion. The current program of \$8.8 billion represents 2.7 percent of the total DOD budget. It reflects the priorities established in the President's Blueprint Budget by providing emphasis on rotorcraft technologies; unmanned underwater vehicle (UUV) research; unmanned combat air vehicle (UCAV) development; exploration of technologies in support of the Next Generation Bomber (NGB) for the Air Force and the Future Combat System (FCS) for the Army; development of foliage penetration radar; support of an accelerated Joint Experimentation schedule; chem-bio defense modeling and standoff detection; and high speed sealift development.

## USE OF MILITARY FORCE

*Question.* If confirmed, you will be responsible for providing military advice on the use of military force and the other instruments of U.S. power.

What factors do you believe should be considered when contemplating the use of force?

*Answer.* The National Command Authorities (NCA) will decide when U.S. Armed Forces are employed in a given situation. In consultation with the Service Chiefs and combatant commanders, and based on a clear definition of the mission and interagency and multinational resources available, I expect to advise the NCA in a number of areas. Among them are the effectiveness of the military instrument to achieve the desired national security objectives, employment options and expected costs, and the potential impact on the force's ability to respond to other requirements. I would also provide an assessment of any long-term effects on operations and personnel tempo.

## SPACE

*Question.* What are your views on weapons in space?

*Answer.* U.S. Space Command has a "Force Application" mission that requires them to plan for and conduct research and development of space-based systems as insurance should the nature of threats and opportunities significantly change. I believe this is a sound approach.

*Question.* Do you support placing offensive weapons in space?

*Answer.* Placing weapons in space is a policy decision of the NCA. Consistent with national laws, policy and international treaty commitments, I support research and development into weapons options, should we 1 day be directed to deploy such capabilities.

*Question.* Under what circumstances and for what purposes would you place offensive weapons in space?

*Answer.* It's difficult to say under what specific circumstances and for what purposes we would do that. However, if it were determined that offensive weapons in space were the appropriate means to protect our national security interests then the NCA should consider them.

*Question.* Describe your understanding of the current U.S. military space doctrine as it pertains to the deployment of weapons in space.

*Answer.* The placement of nuclear weapons or other weapons of mass destruction in orbit around the earth, and use of the moon or other celestial bodies for military purposes are clearly prohibited. Space Doctrine, Joint Publication 3-14, addresses space control and generally addresses force application; however, no such weapons exist. Therefore, the specific deployment of weapons in space is not addressed.

*Question.* Do you support current U.S. space doctrine as it relates to space control?

*Answer.* Yes. Our space control doctrine is consistent with our long-standing air and sea doctrines—to ensure freedom of action for ourselves and our allies, and to deny it, where appropriate, to potential adversaries.

*Question.* Do you believe that achieving control of space will require deploying offensive weapons in space?

*Answer.* Not necessarily. The easiest way to ensure space control is to interdict satellite ground stations or their communications links.

*Question.* Describe your understanding of other methods and weapons systems that might be used to achieve space control objectives.

*Answer.* We use four primary methods for space control: surveillance, protection, prevention, and negation. Tactics vary from attacks with conventional munitions on ground sites or electronic warfare attacks on their links, to encryption, to fielding redundancy in our systems, to our ground-based space surveillance systems. Any weapons system that can be used in these tactics are appropriate to achieve space control objectives.

*Question.* Do you support increased funding and focus on improving space situational awareness? How would you increase situational awareness?

*Answer.* Situational awareness is key to operating effectively in any medium. Modernization of our space surveillance capabilities is key to increasing our situational awareness.

*Question.* Is such an increased awareness a prerequisite to placing offensive weapons in space?

*Answer.* Space situational awareness is much more than an enabler for offensive weapons in space. The foundation of all space missions is space control.

*Question.* Do you believe that threats to our space assets are increasing?

Answer. Yes, just like any other technological advancement throughout history, we can expect an increasing challenge for what to us is a key warfighting capability.

*Question.* Do you agree with the Space Commission assessment that the United States is “an attractive candidate for a ‘space Pearl Harbor’”?

Answer. I think the Space Commission did the nation a service by bringing such a possibility into the national debate about the future of space. The lesson we learned from Pearl Harbor is that the only way we can avoid repeating that experience is if we anticipate its possibility again, and are ready for the challenge.

*Question.* Do you believe that improved space surveillance and space situational awareness can reduce the vulnerability of our space assets?

Answer. Yes.

*Question.* Do you believe that there is a need to establish an international framework that would be intended to ensure continued access to space for peaceful purposes?

Answer. The Outer Space Treaty of 1967 provides such a framework. It has been the bedrock of the peaceful use of space. I do not currently see the need for any new treaty or international agreement that would address military uses of space.

*Question.* What are your views on legislative implementation of the recommendations of the Space Commission?

Answer. The Secretary of Defense is currently reviewing S.1368, dealing with the recommendations of the Space Commission. It would be inappropriate for me to comment on it until this review is complete.

#### NUCLEAR FORCE STRUCTURE

*Question.* Do you believe that the Strategic Triad should be maintained, or that we should consider eliminating any portion of the triad?

Answer. The Nuclear Posture Review (NPR) is examining the role of the TRIAD and will make recommendations on its composition. The TRIAD has been the foundation of our nuclear deterrent force posture for over 30 years. The inherent capabilities of a robust TRIAD ensure against a catastrophic failure of any one leg of our forces, thereby assuring that the U.S. is always capable of responding to any potential threat. The NPR is examining the unique contributions of each leg.

*Question.* Do you believe that the United States can make reductions in nuclear weapons below those levels included in START II and still meet current nuclear deterrence guidance?

Answer. Nuclear weapons levels as outlined in the START II Treaty were agreed to in the context of bilateral arms control with the former Soviet Union. The START II Treaty has not entered into force due to conditions added by them during their ratification (April 2000). The ongoing Nuclear Posture Review mandated by Congress is currently examining the strategy and scope of potential reductions. Therefore, it is premature to state at this time what level of reductions can be made.

*Question.* Can the targeting requirements derived from current nuclear deterrence guidance be met at a level of 2,000–2,500 warheads?

Answer. It is prudent to complete the examination of our national strategy and nuclear deterrent posture prior to committing to a specific warhead band. This is currently being examined in the Nuclear Posture Review.

*Question.* Do reductions below the level of 2,000–2,500 warheads require revisions to current nuclear deterrence guidance?

Answer. The President has committed to “achieving a credible deterrent with the lowest possible numbers of nuclear weapons consistent with our national security needs including our obligations to our allies.” The congressionally mandated Nuclear Posture Review that the Secretary of Defense has undertaken is examining U.S. deterrence strategy to achieve the President’s objective.

*Question.* Do you support revisions to current nuclear deterrence guidance that would allow reductions below the level of 2,000–2,500 warheads?

Answer. I support the President’s call for a reduction of nuclear forces to the lowest possible numbers of nuclear weapons consistent with our national security needs. I also support revisions to U.S. strategy which accurately reflect the challenges and opportunities of the new international strategic environment. Deterrence will continue to be the primary role of our nuclear forces particularly against potential adversaries that may consider the use, or threat of use, of nuclear weapons or other WMD. This question is a critical component of the ongoing Congressionally mandated Nuclear Posture Review; therefore, it is premature to comment while the review is still in progress.

*Question.* Do you support dismantlement of retired nuclear warheads?

Answer. Today the United States no longer has the ability to manufacture some key nuclear weapons components. We have placed in storage a number of weapons

components from previously retired weapons that can be used to assemble weapons in times of emergency. We can only address dismantlement on a case-by-case basis until we restore our ability to manufacture new weapons.

*Question.* In your view, what should be the minimum number of strategic nuclear warhead designs included in the inactive and active inventories of U.S. nuclear weapons?

*Answer.* Currently, the United States retains the ability to design and assemble new warheads if the required components are available. While no minimum number of designs can be specified, a sufficient amount must be retained as a hedge against weapons failures and emergency weapons re-manufacturing requirements. The question is currently being examined in the ongoing Congressionally mandated Nuclear Posture Review.

*Question.* Would you support a return to nuclear weapons testing in the absence of a significant stockpile related problem?

*Answer.* Today, we can certify the safety and reliability of our nuclear weapons stockpile without testing. The Stockpile Stewardship Program continues to improve our understanding of complex weapons performance issues. Our future capability to certify our stockpile is uncertain. The requirement for testing is evaluated annually and reported to the President. However, we need to retain our ability to conduct nuclear testing in case of unforeseen technical issues.

*Question.* Under what conditions would you support a resumption of nuclear weapons testing?

*Answer.* Currently, there is no need for a resumption of underground nuclear weapons testing as science-based tools and an aggressive surveillance program have proven effective thus far in maintaining a safe and reliable stockpile. However, if unforeseen problems arise with weapons in our stockpile, we may need to recommend that nuclear testing be resumed to reestablish confidence in our nuclear arsenal.

*Question.* If DOD eventually requires a new nuclear weapon design, will the existing science-based Stockpile Stewardship Program allow us to develop a new, safe, and reliable nuclear weapon without testing?

*Answer.* I must defer to the experts at DOE for this answer.

*Question.* Do you support development of new low yield nuclear weapons? If so, what requirement would such a weapon meet? Under what circumstances would you support using such a weapon? Does such a weapon have any deterrent value?

*Answer.* This area is currently being examined in the Nuclear Posture Review. Moreover, we already have a number of low-yield weapons in the current stockpile. It would be premature to speculate on the need for a new weapon.

*Question.* Do you support the development of a new weapon design in an effort to make sure our experienced weapon designers are maintaining their skills and transferring their expertise to the new generation of designers?

*Answer.* We currently have no military requirements for a new weapon design, but we support DOE's efforts to sustain the skills and expertise as they see fit.

*Question.* Do you believe that the Stockpile Stewardship Program can maintain the necessary skills to maintain the nuclear weapons stockpile?

*Answer.* The skill sets in question reside in DOE. I must defer to their experts for the answer.

*Question.* If a new design requirement were forthcoming, are you confident our weapon designers could develop the new weapon design, especially if they are not allowed to test such a weapon?

*Answer.* I must again defer to the DOE experts for the answer. I would rely on their judgement.

*Question.* Would your confidence remain the same if the new weapon design was primarily developed by designers who never had the opportunity to test a nuclear weapon?

*Answer.* I understand NNSA is expending significant resources to ensure this new generation benefits from the experience of our current scientists and engineers before they retire. I would defer to NNSA on this issue.

*Question.* As our experienced nuclear weapons designers continue to reach retirement age, are you concerned that without the development of a new weapon design, their skills, experience, and expertise may be lost forever?

*Answer.* NNSA is aggressively pursuing programs to ensure that this will not happen, but I would defer to them on this issue.

*Question.* Is there any requirement for any new nuclear weapon, and under what circumstances would you support development of a new nuclear weapon?

*Answer.* No, there is currently no military requirement for a new nuclear weapon, but this issue is also being examined as part of the congressionally mandated Nuclear Posture Review.

## NUCLEAR TESTING

*Question.* Former Secretary of Defense and Energy James Schlesinger stated that the United States will have to retain the option of testing nuclear devices on an as-needed basis. He further stated that limitations on testing have already changed the way weapons planners go about their business and that we have had to forego development of new nuclear systems, such as those designed to attack hardened or dispersed targets, to live within the bounds of the self-imposed testing moratorium.

Do you agree with his assessment, and, if not, why not?

*Answer.* Again, there is currently no military requirement for a new design nuclear weapon. As part of the Stockpile Stewardship Program, however, DOE has retained an ability to resume underground nuclear testing in 2 to 3 years if required.

## COOPERATIVE THREAT REDUCTION PROGRAMS

*Question.* Do you support the Cooperative Threat Reduction (CTR) Program?

*Answer.* Yes. Cooperative Threat Reduction (CTR) helps the Former Soviet Union eliminate strategic offensive arms consistent with their treaty obligations; prevent the proliferation of weapons of mass destruction and associated delivery systems, materials and expertise; and pursue military reductions and reform. All of this serves to enhance U.S. security. Given their fiscal austerity, it is not at all clear that countries such as Russia, Ukraine, Kazakhstan and Uzbekistan would eliminate their strategic arms and be able to comply with their treaty obligations without the CTR program of assistance. Moreover, leaving those systems in place makes them vulnerable to theft or sale to other state or transnational groups.

*Question.* In your view, does the CTR program support national security through its strategic forces dismantlement and other efforts and should it continue to be a DOD program?

*Answer.* Yes. Cooperative Threat Reduction (CTR) does support national security. What's important is not where the program resides as long as we continue to execute it effectively and reap the benefits of fewer weapons of mass destruction.

## BALLISTIC MISSILE DEFENSE

*Question.* The Clinton administration established four criteria for determining whether to deploy ballistic missile defense systems to defend the United States against limited ballistic missile attacks:

- 1) The threat should warrant deployment;
- 2) The system should be cost-effective and affordable;
- 3) The system should be operationally effective; and
- 4) Deployment should make us more rather than less secure.

Do you believe these criteria should continue to be used for considering whether to deploy missile defenses against limited long-range missile attacks? Please indicate the reasons for your answer.

*Answer.* Militarily, these criteria make sense for any weapons system under consideration. Missile defense is an essential component for deterring the emerging ballistic missile threat. It is part of a broader security approach that encompasses non-proliferation and counter-proliferation.

*Question.* The Bush administration has proposed a large missile defense research and development program for fiscal year 2002, including efforts in boost-phase, mid-course and terminal defenses for land-based, sea-based, air-based and space-based systems.

How do you believe we should determine the proper level of effort and resource allocation to ballistic missile defense relative to other defense needs?

*Answer.* We balance program needs through the Department's programming and budget review process. The Department initiated several major reviews at the outset of the new administration and the defense strategy review is still in progress. Any major defense program changes will await the outcome of that review.

*Question.* Today, our forward deployed military forces face current and growing threats from short-range and medium-range theater ballistic missiles.

How high a priority do you believe that fielding operationally effective theater missile defense systems should be for our military?

*Answer.* The President has stated we will deploy defenses capable of defending the U.S., our allies, and friends. The Department has already signaled its intention to stop differentiating between "national" and "theater" missile defense systems. We are pursuing a layered defensive system, capable of intercepting missiles of any range at every stage of flight—boost, mid-course, and terminal. Since the Gulf War and the casualties we suffered due to a missile attack, protecting our troops against such a missile attack is a top priority.

## MULTIPLE INDEPENDENT RE-ENTRY VEHICLES (MIRV)

*Question.* Certain Russian officials have indicated that if the U.S. withdraws from the ABM Treaty, Russia may not de-MIRV its land-based ICBMs as required by treaty and may re-MIRV or newly MIRV other land-based systems.

*Answer.* The START II Treaty is not in force. It is the only treaty requiring elimination of MIRVed ICBMs. The START I Treaty is in force and allows for retention of MIRVed ICBMs by both Russia and the U.S.

*Question.* Do you believe that it is in the U.S. national security interest that all land-based ICBMs be de-MIRVed?

*Answer.* There are no significant military advantages to the elimination of MIRVed land-based ICBMs. From the U.S. perspective, the recent budget submission reflects future retirement of all U.S. Peacekeeper MIRVed ICBMs, and the U.S. is downloading one of three wings of MIRVed Minuteman III ICBMs to a single re-entry vehicle. These actions reflect the military conclusion that these MIRVed systems are no longer required for national security.

*Question.* Do you believe that it is in the U.S. national security interest to deploy a ballistic missile defense system to defend the United States against limited ballistic missile attack and to defend U.S. troops deployed abroad and U.S. allies from such attack?

*Answer.* Yes. We should take all measures possible to defend U.S. and allied interests.

## MILITARY-TO-MILITARY CONTACTS

*Question.* This committee has been a strong supporter of military-to-military contacts and comparable activities that are designed to encourage a democratic orientation of the defense establishments and military forces of other countries.

What is your view of the value of military-to-military contacts?

*Answer.* They are absolutely essential to the execution of our National Military Strategy. They are fundamental to our ability to enhance the national security of the United States, and our interoperability with allies in securing theirs. Military-to-military contacts range from senior officer visits, counterpart visits, ship port visits, bilateral and multilateral staff talks, personnel exchange programs, unit exchange programs, formal military contacts programs, and State Partnership for Peace activities. They are essential for enhancing the U.S. military's ability to operate with coalition and partner nations through interactions with foreign military personnel, equipment, and culture. The experiences and relationships developed by military-to-military contact significantly enhance the operational flexibility and cohesiveness of future coalition operations at the tactical, operational and strategic levels. The trust, goodwill, and influence our military gains with those of other nations are invaluable. By promoting democratic ideals among militaries worldwide provides, we also enhance regional security, ensure U.S. access, and increase coalition interoperability.

## NATIONAL MILITARY STRATEGY

*Question.* The last National Military Strategy document was issued in September 1997, shortly after the completion of the last Quadrennial Defense Review (QDR).

Although there is no statutory requirement for such a document, if confirmed, would you prepare and issue a National Military Strategy in the aftermath of the completion of the 2001 QDR?

*Answer.* The National Military Strategy (NMS) and Joint Vision are key documents used by the Chairman of the Joint Chiefs of Staff to fulfill his Title 10 responsibility of assisting the President and Secretary of Defense in providing for the strategic direction of the Armed Forces. If confirmed, I intend to issue a new NMS. It will be developed in consultation with the Joint Chiefs of Staff and combatant commanders, and convey my advice in implementing the Secretary of Defense's Quadrennial Defense Review, and any additional guidance contained in the President's National Security Strategy.

## COLOMBIA

*Question.* U.S. military personnel have been involved in the training and equipping of Colombian military forces involved in counter-drug operations. U.S. military personnel, however, do not participate in or accompany Colombian counter-drug or counter-insurgency forces on field operations in Colombia.

Do you favor continuation of this limited role for U.S. military personnel in Colombia?

Answer. Yes, in accordance with current law and Secretary of Defense directives. Any proposed increase in role or scope of military actions in Colombia is a matter of policy.

#### QUADRENNIAL DEFENSE REVIEW

*Question.* Section 118(e) of title 10, United States Code, provides for the Chairman of the Joint Chiefs of Staff to prepare and submit to the Secretary of Defense the Chairman's assessment of the QDR, including the Chairman's assessment of risk. The Secretary, in turn, is required to submit the Chairman's assessment, with the Secretary's comments, in the report in its entirety, when the report is submitted to the Committees on Armed Services of the Senate and House of Representatives. If the QDR is not complete by the end of the current Chairman's term, the preparation and submission of the Chairman's assessment of the QDR, including the Chairman's assessment of risk, will be the responsibility of the next Chairman of the Joint Chiefs of Staff.

If confirmed, are you committed to making a comprehensive and straightforward assessment of the report, including an assessment of risk, even if that assessment differs from the view of the Secretary of Defense?

Answer. Yes.

#### PRIORITIES

*Question.* General Shelton has established asymmetrical warfare, joint readiness, information operations and force protection as priorities and readiness, modernization and core compensation elements as enduring priorities.

If confirmed, what would be your priorities?

Answer. I agree with General Shelton. I think they're all enduring priorities, and will continue to demand our attention for quite some time. If confirmed, my initial priorities will be closely related to them. First, joint warfighting is fundamental. The Armed Forces must continue to enhance our joint warfighting capabilities. Second we must find the proper balance between, and find resources for modernization and transformation. Third, we need to continue our efforts to make the JROC more strategically focused. Fourth, we should better define the military's role in homeland security. Fifth, we must find ways to enhance Joint Forces Command's role in experimentation and transformation. Sustaining our quality force and taking care of our people first are, of course, the ultimate means of accomplishing all of this.

#### LESSONS LEARNED

*Question.* What are the most important lessons that you have learned as Commander in Chief, U.S. Space Command and Vice Chairman of the Joint Chiefs of Staff?

Answer. Those experiences were invaluable. The lessons I took from them only confirmed what I have learned throughout the 36 years of my uniformed service to the nation.

First, the armed forces aren't made up of people, rather that the people are the armed forces. Sometimes we lose that focus. The issue isn't the Services or the gadgets they bring to the fight, but rather that the people who, regardless of the tools they use or the uniform they wear, are the key to achieving our national security objectives. They're the real source of our Armed Forces power.

Second, all efforts of those in our Armed Forces must be geared toward one thing—warfighting. Every effort made, from the smallest field detachment to the loftiest offices in the Pentagon should be focused on that one idea.

Third, there must be unity of effort with DOD as we work through our modernization and transformation activities.

Finally, Service competition can often be a good thing as competition breeds excellence. But in the end, all efforts must be focused on the contribution to the joint fight.

#### JOINT REQUIREMENTS OVERSIGHT COUNCIL

*Question.* During your tenure as the Chairman of the Joint Requirements Oversight Council (JROC), there has been a shift in the JROC's focus to a more strategic level and an initiative to better integrate Joint Forces Command's joint experimentation efforts into the JROC and other DOD decision-making processes.

Would you describe the reasoning behind and the impact of these changes?

Answer. In April 2000, I appeared before the Emerging Threats and Capabilities Subcommittee to discuss the Joint Requirements Oversight Council (JROC) and its evolving role in supporting our Armed Forces. My concern was centered on improv-

ing the JROC's ability to provide the strategic guidance necessary to advance future joint warfighting. The JROC needed to provide the up-front guidance necessary for requirements integration and joint interoperability.

A critical key to achieving joint interoperability rests in establishing a framework from which to assess increasingly complex systems. This framework consists of joint operational concepts and joint operational architectures that drive development of materiel and non-materiel solutions. We view this as a crucial component of DOD-wide transformation. Operational architectures are the key to system interoperability because they establish the interoperability requirements that give us the ability to make the necessary system and technical architecture decisions.

The impact of these changes has been significant. It is my view that the JROC has been working to establish a process that supports institutional transformation. First, the JROC is leading the ongoing development of joint operational concepts and architectures, which it will use to provide discrete standards that ensure systems are "born" joint interoperable. Second, the JROC is now integrating joint doctrine, organizations, training, leadership, personnel and facilities (DOTLPF), with the materiel (system) solutions. Third, the JROC is continuing to work very closely with Joint Forces Command (JFCOM) to integrate its experimentation efforts in support of operational concept and architecture development.

Finally, I would like to comment on three specific initiatives the JROC is working. First is our standup of the Joint Interoperability and Integration (JI&I) organization at JFCOM. This organization's function is to act as the transformation engine for joint interoperability requirements of future and legacy systems and provide operationally prioritized recommendations regarding joint doctrine, organization, training, material, leadership, personnel and facilities. Second, is our Single Integrated Air Picture (SIAP) System Engineer effort, which is focused on recommending system level fixes to the JROC for existing Joint Distributive Network deficiencies with the goal of delivering fused, near-real-time and real-time data from multiple sensors to produce a common, continuous and unambiguous air picture. Third, our commitment to develop a Family of Interoperable Operational Pictures (FIOP) will provide an all-source picture of the battle space containing actionable, decision-quality information to the warfighter through a fusion of existing databases. I would solicit your continued support for all of these important initiatives.

*Question.* If confirmed, would you intend to make any other changes in the JROC's role or process?

*Answer.* I am confident we're on the right track. We need to continue our current efforts to develop operational concepts and architectures that will drive future system development. In fact, I am looking at ways to accelerate these efforts. I am also committed to continuing our work with Joint Forces Command to fully integrate its joint experimentation efforts. It's going to take us some time to work our way through the development of these joint operational concepts and architectures that will form the basis of future JROC guidance and requirement integration.

#### EXCESS INFRASTRUCTURE

*Question.* How high a priority would you place on the closure of excess Department of Defense installations and why?

*Answer.* I share the Secretary's view. According to the April 1998 DOD BRAC report, we currently have 23 percent excess infrastructure capacity, a situation that directly impacts the ability of the Service Chiefs to provide, train, maintain, and equip today's force. By removing excess capacity, we could save significant resources in the long-term—money needed to fix infrastructure in remaining bases. We also need a sustained period of increased funding for infrastructure to develop and properly maintain what's needed to support the next generation of weapon systems. The Services should be relieved of the burden of maintaining sites with limited military use.

#### ENCROACHMENT

*Question.* On November 27, 2000, the Senior Readiness Oversight Council identified several "encroachment" problems confronting the Department of Defense including protection of endangered species, unexploded ordnance and other constituents, commercial demand for bandwidth and frequency, sustainability of the maritime environment, demand for use of airspace, protection of air quality, abatement of airborne noise, and growth of urban areas. At a March 20, 2001, hearing before the Readiness and Management Support Subcommittee, representatives of the military services expressed concern that this encroachment was hindering their Title 10 responsibility to train the forces.

If confirmed, what actions would you take to address these problems?

Based on the testimony provided by the services at the Readiness Subcommittee hearing on March 20, 2001, it appears that the time is ripe for the development and implementation of a comprehensive strategy that addresses both the individual and the cumulative effects of environmental encroachment issues.

If confirmed, how would you propose to facilitate the development and implementation of a comprehensive strategy intended to address readiness concerns related to these encroachment issues?

Answer. Training is critical to the readiness of combat forces and encroachment is a serious issue with national security implications. The training of the Armed Forces is a Service responsibility, and the Services are working hard not only to maintain their training facilities, but to improve their stewardship of the environment, while strengthening their relationships with local communities.

There is a collaborative Departmental effort to address encroachment issues. We have draft action plans for the various aspects of encroachment. We are working a community outreach program to minimize the impact of encroachment by fostering a dialogue with local leadership, discussing work-around initiatives, and developing potential technology solutions to provide a similar level of training.

This is a solid and prudent approach for resolving the encroachment issues. If confirmed, I'll continue to support these efforts.

#### READINESS REPORTING SYSTEM

*Question.* The systems that the military services use to measure their readiness have been criticized as outdated and inappropriate for a military of the 21st century. Some of the specific criticisms raised have been that they measure past readiness rather than future readiness, and they measure the readiness of the forces to perform a major theater war mission rather than the mission to which they are currently assigned.

Do you agree with these criticisms and, if confirmed, what actions would you take to change the systems?

Answer. As Vice Chairman I have been involved in the readiness of the force, the assessment process, and in identifying solutions to our shortfalls. The Joint Staff hosts annual CINC/Service conferences on readiness, and based on the CINC/Service's feedback, I believe our focus on joint warfighting is the proper emphasis, and is also in accordance with Title 10, U. S. Code, Section 117. Units are designed-manned, armed, equipped, and trained-to conduct wartime missions. But I also recognize the necessity to assess our readiness for missions other than war. Less than 2 years ago we created a reporting mechanism within the Global Status of Resources and Training System to do this. While this was a good first effort, expansion and/or refinement of this reporting mechanism needs to be explored. As set forth in the DPG, the Services and Chairman must recommend to the Secretary of Defense a comprehensive readiness reporting system. If confirmed I will continue to further enhance the timeliness, accuracy, and usefulness of the readiness reporting system.

#### CINC-IDENTIFIED READINESS DEFICIENCIES

*Question.* Over the last several years the Quarterly Readiness Reports that the Department prepares for Congress have outlined a number of CINC-identified readiness related deficiencies. Many of these are listed as Category I deficiencies which entail significant warfighting risk to execution of the National Military Strategy. Although these deficiencies have been reported for the past several years, they have not as yet been effectively addressed. This has raised concerns that the requirements of the warfighting CINCs are not being incorporated into the military services budgets and the Department's acquisition process.

If confirmed, what actions will you take to ensure that these requirements are understood and funded within the Department's budget?

Answer. If confirmed, I will continue to report the combatant commanders' identified readiness deficiencies. I will also make assessments and recommendations to the Secretary of Defense regarding the effectiveness of the Services' budgets and the acquisition process to solve these deficiencies.

#### COMMERCIAL VS MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* The Federal Government is trying to identify a band of frequencies that can be used for the operation of 3rd Generation Wireless Communications devices. As a part of this overall effort, the Department of Defense conducted a study to determine the cost and operational impact that would result if the military services were to surrender the use of the 1755—1850 MHZ band of frequencies upon which they currently operate their equipment. That study found that it would take at least

\$4.3 billion and 17 years to vacate the band if a suitable band of alternative frequencies were identified for the Department's use. The Secretary of Defense and General Shelton recently signed a letter to Members of Congress that outlined the importance of spectrum availability, and this band in particular, for the Department's operations.

What is your view of this assessment?

Answer. I fully support the position of the Secretary of Defense and General Shelton. Spectrum access is vital to combat operations and training. Guaranteed access to spectrum is a cornerstone of information superiority and our warfighting abilities. Without this access, the ability of the Department to use current and planned weapon systems, employ new technologies, and effectively command and control conventional and nuclear forces is seriously compromised. The 1755–1850 MHz frequency band supports over a \$100 billion investment in key satellite, air combat training, precision weapons guidance and battlefield communications systems. These systems provide commanders and their forces real-time intelligence, voice, data, and video information and precision strike ability necessary for a leaner, more agile and more flexible force to meet global mission requirements. Competition for spectrum, nationally and internationally, is increasing and the Department's growth and need for spectrum parallels commercial industry's needs. We must ensure any spectrum decision carefully considers national security, the needs of commercial interests, and other important national interests.

I agree with the conclusions of the Department's report on the 1755–1850 MHz band. We simply cannot afford to lose the capabilities the systems in this band provide the warfighters. The report concluded we cannot share the band with 3rd generation systems and vacating the band cannot occur prior to 2017 without potentially compromising critical capabilities and support. Also, spectrum that is comparable in terms of technical characteristics and regulatory protections in which to relocate our systems must be identified, DOD must receive full and timely reimbursement of any relocation costs, and we require adequate time to transition to new spectrum. We are working with the White House, Department of Commerce, and the Federal Communications Commission to explore different scenarios for 3rd generation systems.

We are fully committed to cooperating with Congress and the Federal Communications Commission and within the administration in finding solutions for 3rd generation implementation that meets commercial needs while protecting essential national security capabilities.

#### COMBATING TERRORISM

*Question.* Chairman Shelton recently recommended to the Secretary of Defense that the Antiterrorism/Force Protection functions of the Joint Staff be transferred to the Assistant Secretary of Defense for Special Operations and Low-Intensity Conflict.

What are your views on this recommendation?

Answer. I agree with General Shelton's recommendation and rationale to transfer the Antiterrorism/Force Protection (AT/FP) functions of the Joint Staff to the Assistant Secretary of Defense for Special Operations/Low Intensity Conflict (ASD(SO/LIC)).

ASD(SO/LIC) and J-34 perform many overlapping functions. Therefore, to eliminate redundancies, it is appropriate to consolidate AT/FP functions under ASD(SO/LIC) and return the J-34 military billets to the Services and return the two civilian billets to the Washington Headquarters Service.

#### AFRICA

*Question.* The Defense Department is currently involved in a number of initiatives in Africa to help certain nations be better prepared to provide their own regional peacekeeping forces and humanitarian missions.

In your view, is it in our national security interest to continue such programs as the African Crisis Response Initiative, which are aimed at helping African nations to be better prepared to respond to a regional crisis?

Answer. The U.S. has a number of important interests in Sub-Saharan Africa to include:

- Deterrence/response to transnational threats (terrorism, weapons proliferation, organized crime, narcotics trafficking, and diseases (HIV))
- Secure strategic lines of communication
- Prevention/response to humanitarian crisis
- Conflict resolution
- Access to bases/facilities for U.S. operations

- Support for U.S. allies
- Protection of U.S. citizens.

In the previous decade the majority of our material resources have been utilized to support our allies, both European and African in responding to conflicts and humanitarian crises. U.S. personnel have seen service all over the continent in the conduct of Non-Combatant Evacuations (NEO) and humanitarian relief operations. Current initiatives, including ACRI are designed to not only enable African nations and institutions to address these issues on their own but also to prevent such occurrences. ACRI has provided a base of knowledge on peacekeeping, humanitarian crisis response, multi-national military operations and protection of human rights. Specifically, ACRI and our other engagement efforts, such as African Center for Strategic Studies (ACSS) and IMET seek to encourage shaping of African militaries to:

- Develop the proper size, budget, and capability for legitimate security requirements
- Support initiatives to encourage regional approaches to African problems
- Support structuring of militaries to emphasize defensive capabilities, peacekeeping and humanitarian response
- Support efforts to foster a regional conflict prevention and resolution capability
- Support democratic principles and respect the rules of law and promotion of human rights.

#### COMMAND AND CONTROL

*Question.* Despite significant investment in military service, national and combatant commander command and control systems, more than one of the recently convened defense review panels concluded that U.S. forces do not have a deployable, joint command and control system that can immediately be placed into operation to coordinate the efforts of U.S. and coalition forces.

If confirmed, what actions would you take to ensure the rapid development of such an important capability?

*Answer.* This is an absolutely critical capability and we do have deficiencies in addressing the full command and control interoperability required by a Joint Task Force (JTF) headquarters. The current DPG calls for plans to establish standing JTF headquarters and recommends improvements to operating procedures and capabilities, to include addressing rapidly deployable interoperable command and control. This will be a major part of the experimentation in JFCOM's Millennium Challenge 2002 exercise. Additionally, Joint Forces Command will take the lead to identify and fix current mission critical JTF C2 legacy interoperability issues. Further, I fully support the criticality of development and fielding of rapidly deployable, interoperable, command and control systems. If confirmed, I will ensure the Vice Chairman, in his delegated role as Chairman of the Joint Requirements Oversight Council along with the Service Vice Chiefs, provide the necessary senior military perspective to achieve an interoperable joint command and control capability.

#### INFORMATION OPERATIONS

*Question.* Joint Vision 2020 and various defense reviews have highlighted the importance of information operations in future warfare.

What role and what obstacles do you see for information operations as an integral part of U.S. joint military operations?

*Answer.* Information operations are a means to ensuring decision superiority—the key to successful military operations in the future. But we're faced with three challenges: planning and executing these activities the same way we would any wartime campaign; integrating the military's efforts with those of other U.S. Government agencies; identifying and removing unintended effects while keeping up with rapidly changing information technologies. We can meet these challenges.

*Question.* Are you satisfied that there is unity of effort within the Department of Defense in the development of information operations capabilities?

*Answer.* Emerging computer network attack and defense capabilities represent an important aspect of information operations. We have been working hard to enhance the security of DOD computer networks and to defend those networks from unauthorized activity (e.g., exploitation of data or attack). Recognizing that the threat to our networked systems is real and increasing, we established the Joint Task Force—Computer Network Defense in December 1998, and assigned responsibility for that mission to U.S. Space Command in 1999. We have incorporated intrusion detection software in many of our networks, erected firewalls, and increased awareness training for our personnel through our information assurance program.

In October 2000, we designated the Commander in Chief, U.S. Space Command, as the military lead for computer network attack as well, and charged U.S. Space Command with overseeing the development of capabilities and procedures for this aspect of offensive information operations. In April 2001, U.S. Space Command redesignated the Joint Task Force—Computer Network Defense as the Joint Task Force—Computer Network Operations to reflect this new mission. The Services also cooperate with other Defense and Intelligence Community agencies in efforts to defend the networks that are vital to our national security.

As you have indicated, the Services, Defense Agencies, and combatant commanders are all devoting a great deal of effort to this area. I believe we have the structures and procedures in place to keep duplication of effort to a minimum and ensure the broadest diffusion of advances in information operations capabilities across the Department.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the next Chairman of the Joint Chiefs of Staff?

*Answer.* If I am confirmed, my first priority will be to ensure our soldiers, sailors, airmen, marines, and coastguardsmen are ready to meet the near-term challenges of executing the tasks that support our defense strategy. We have to make sure they are organized, trained, equipped, and supported with the tools required to protect our nation's security interests—at home and abroad. Second, we must have the proper force structure to exercise our military strategy. Third, we must make the investment to modernize, recapitalize, and transform our forces to meet the challenges of the 21st century. Finally, we must adopt knowledge and decision based warfare to enable us to win in the joint battlespace of the future.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I'll work with the Secretary of Defense, Combatant Commanders, and Service Chiefs to ensure we focus on readiness issues for the near-term challenges while implementing programs in concert with the Secretary's Defense Planning Guidance to transform and modernize the force.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Chairman of the Joint Chiefs of Staff?

*Answer.* The most important function of the Chairman is to provide military advice to the President, the National Security Council, and the Secretary of Defense. Currently there are no major problems in performing this function. But, recent exercises demonstrate the need to enhance the Chairman's ability to communicate with military organizations around the globe on a real time basis.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, my first priority would be to better equip our staffs to enable swift, accurate information flow. Our information and decision capabilities are critical to providing accurate and timely advice to the NCA. We must ensure that these systems are state of the art and interoperable. We must further ensure that our transformation efforts enhance joint command and control throughout DOD. Initiatives such as the Standing Joint Task Force Headquarters will ensure these efforts provide timely and accurate information in warfighting headquarters as well as other higher headquarters.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Chairman of the Joint Chiefs of Staff?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR BILL NELSON

AIRCRAFT CARRIERS

1. Senator BILL NELSON. What, in your view, is the operational risk of having all but one of the Navy's east coast aircraft carriers stationed at Naval Station Norfolk?

General MYERS. With five of the six east coast carriers stationed in Norfolk, operational risks are increased somewhat by the number of carriers in port at any given time. This number averages between two and three, with one in shipyard maintenance and one or two pier-side. These operational risks are mitigated by a robust force protection plan (on both the ship and Naval Station), training, and situational awareness. The disadvantages are also balanced by the ability to consolidate protection forces in one place.

Although the channel leading from sea to the Naval Station is deep enough to accommodate the carriers, it is also narrow. Any restriction of the channel could affect the movement of carriers out of the harbor. This risk is mitigated as well by a robust force protection plan, which includes the Coast Guard and local and state law enforcement.

2. Senator BILL NELSON. What, in your view, is the operational value of having an aircraft carrier stationed at Naval Station Mayport, Florida? What, in your view, would be the operational risk if we do not have an aircraft carrier stationed at Naval Station Mayport?

General MYERS. Maintaining a carrier homeported in Mayport provides operational flexibility for the Navy by keeping that facility active and fully operational as an alternative east coast facility. As Mayport Naval Station can service two carriers simultaneously, it provides an operational value to the Navy. There is no specific risk associated with not having a carrier based at the Mayport Naval Station other than the reduced flexibility should the Norfolk facility become untenable.

QUESTIONS SUBMITTED BY SENATOR JOHN MCCAIN

AIRCRAFT CARRIER AND AMPHIBIOUS BATTLE GROUPS

3. Senator MCCAIN. Later this month, the Pentagon will forward the Quadrennial Defense Review (QDR) to Congress. There have been some disturbing press reports regarding cuts in our military's power projection capability, including cuts in the number of aircraft carriers battle groups and amphibious readiness groups. Based on recent events, the history of aircraft carrier battle groups and amphibious battle groups have been called upon in times of crises by JCS over 80 times in the past 25 years, and the self-sustaining nature and flexibility of the CVBG, do you believe that we can afford to further reduce the number of aircraft carrier and amphibious battle groups? Would you please elaborate on your answer?

General MYERS. The short answer is the Quadrennial Defense Review (QDR) did not recommend further reductions in the number of aircraft carrier battle groups (CVBGs), amphibious ready groups (ARGs), or the wide range of aircraft they support. As recent events make all too clear, the availability of CVBG strike and fighter aircraft has been and will continue to be an essential element in the maintenance of global security and stability.

B-1 FORCE STRUCTURE

4. Senator MCCAIN. General Myers, you seem qualified to answer my next questions based on your background-especially your distinguished military record of over 600 hours of combat flying in the F-4 Phantom in Vietnam.

Do you support the force structure cuts of 33 B-1B Lancer bomber aircraft announced earlier this year by the Secretary of the Air Force and the Secretary of Defense? Please explain.

General MYERS. I support the Department's decisions on current Force Structure levels. The fiscal year 2002 DOD budget reflects the Departments commitment to

sound stewardship by reshaping and modernizing the B-1 Lancer fleet. The consolidation of the B-1 force—from 93 to 60 aircraft, to be based at two major facilities—is part of an overall approach to maximize the strategic and operational effectiveness of America's long-range strike aircraft fleet for the 21st century. The savings that will result from this plan—estimated at upwards of \$1.5 billion over the next 5 years—will be reinvested directly to enhance the lethality, survivability, readiness, and sustainability of the B-1 force.

5. Senator MCCAIN. Is the delay in the B-1B force restructuring worth the \$100 to \$165 million that it will cost the taxpayer and would you describe higher priority programs where this critical funding could be better used based on what you understand from the Services' "Fiscal Year 2002 Unfunded Priority Lists?"

General MYERS. Until we complete the Fiscal Year 2003 Budget Review later this fall, I will be unable to confirm whether \$100-165 million is the right cost to the taxpayer. Based on an earlier assessment we realized the current B-1 force structure was neither cost-effective nor efficiently deployed for future combat operations. By reshaping the size and posture of the B-1 fleet, the Department could save hundreds of millions of dollars annually that could be invested in overdue defensive systems upgrades and weapons modernization efforts to make the remaining fleet "whole." At the same time, by basing the remaining B-1's at two large, active duty Air Force bases, the new Lancer fleet would be more capable, efficient and affordable. Under this consolidation plan, no bases will close, and the new arrangement will free up hundreds of airmen who can be employed in critical and emerging missions, ranging from current mobility and surveillance systems to next generation strike and unmanned vehicles.

6. Senator MCCAIN. Do you find it necessary, as this committee has done, to prohibit the cuts in the B-1B bomber force before the following reports have been submitted to Congress: the National Security Strategy Review, the Quadrennial Defense Review, the Nuclear Posture Review, Secretary of Defense Report on the B-1B Bomber, Bomber Force Structure Report, and Comptroller General Report on the B-1B Bomber.

General MYERS. There will be a window of opportunity to readdress bomber force structure in the coming months. While the Air Force has announced plans to reduce B-1B from 93-60 Aircraft, the future bomber force structure is not final pending results of the fiscal year 2003-2007 Program and Budget Review currently in progress. These reviews will allow the Secretary of Defense to evaluate how the Air Force intends to integrate guidelines established by Quadrennial Defense Review, Nuclear Posture Review, and relevant bomber studies. A final decision on B-1 force structure will be reflected in the fiscal year 2003 President's Budget Submission in February 2002.

7. Senator MCCAIN. As you understand Defense Secretary Rumsfeld's proposal called the "Freedom to Manage Act," does the Senate Armed Services Committees' prohibition with respect to the B-1B appear to be in conflict with the Secretary's legislative proposal—as you understand it? Please explain your answer.

General MYERS. Until the legislative proposal is finalized, I am not in a position to comment on it.

#### IRAQ

8. Senator MCCAIN. Given the clear and present danger of both terrorism and weapons of mass destruction—and Iraq's aggressive development of such weapons, as extensively documented by Gary Milhollin and other proliferation experts—would you agree that we need to undertake a more assertive policy against Saddam Hussein that relies not on simply patrolling Iraq's skies, but that instead seeks to liberate Iraqi territory and undercut his rule?

General MYERS. There is clear and indisputable evidence that Saddam Hussein has demonstrated the will to use WMD as a terror weapon. He has employed chemical weapons against his people and his neighbors. Absent on-site inspections of suspected Iraqi WMD facilities, we must monitor Iraq's actions related to its WMD capability from a distance. We should do everything possible to keep WMD from falling into the hands of terrorists and we can not rule out the possibility that Saddam would provide WMD to terrorist organizations that are hostile to the United States.

## HOMELAND DEFENSE

9. Senator McCAIN. Homeland defense now takes on immediate urgency in the wake of Tuesday's horrors, although its details remain controversial. Do you support the creation of a Department of Homeland Defense, as called for by the Hart-Rudman Commission on U.S. National Security in the 21st century? What other steps do you envision implementing to improve our defenses here at home?

General MYERS. I fully support the President's creation of an Office of Homeland Security and the Homeland Security Council and believe that this initiative should meet the overall goals of the Hart-Rudman Commission's report. In regard to what other steps are required to improve our defenses here at home, the SECDEF and I are reviewing the current unified command structures. To ensure that the DOD is properly organized we should structure ourselves to take on the challenges outlined in the QDR to meet not only the risks to our home but also maintain the global campaign against terrorism. Additionally, the U.S. Armed Forces will continue to provide military support to civil authorities wherever military capabilities are required by the President or Secretary of Defense, or in the case of the National Guard, State Governors.

10. Senator McCAIN. Are you satisfied that the expressions of political and diplomatic support we have received from friends and allies across the globe will be matched by their provision of any military support necessary to conduct retaliatory actions in staging areas for U.S. forces and/or joint military operations?

General MYERS. One of the most gratifying parts of this campaign is the support we have received from our friends and allies around the world. Support for this effort has come in many different forms and includes elements from all the instruments of national and international power. Our friends and allies are contributing in different ways according to their own capabilities, geographical location, and interests. Examples range from political leverage to economic measures to information sharing to military forces for support or combat operations. A broad range of military support has already been offered and accepted in this multinational and multifaceted effort. The U.S. has received overflight authorizations for aircraft, landing rights, basing and logistical support, intelligence sharing, military equipment and air, land, and sea forces. More specifically, 45 countries have offered military forces and capabilities including combat and support forces. These contributions provide the capability to conduct and support joint and combined missions such as surveillance and reconnaissance, combat search and rescue, special operations, and direct offensive actions.

## QUESTIONS SUBMITTED BY SENATOR BOB SMITH

## SPACE PLANE

11. Senator SMITH. Last week, I received notice from General Ryan that the Air Force was terminating its work on a military space plane/reusable launch vehicle with NASA's X-33 and X-37. With Al Smith bowing out as AF Undersecretary—whom I know from his days at Sanders/Lockheed in New Hampshire—I'm concerned there may be a vacuum in Air Force thinking about space at the highest levels. Some people believe we won't be able to test and demonstrate any capability in Bush's first term. I've heard you support a military space plane. Do you agree that a space plane could address our long-range bomber needs? How does the Air Force plan to support reusable launch capability?

General MYERS. We believe reusable launch vehicles (RLVs) will play a key role in our Nation's ability to leverage the space medium. The Air Force is presently working with NASA to develop a roadmap that will identify the way ahead for RLVs. This roadmap, which includes a military space plane concept, will better define DOD and NASA requirements, build on previous NASA efforts (including the X-33 and X-37), and harness current technology initiatives.

From an Air Force perspective, the Air Force/NASA team is exploring the potential military utility of space planes as future long-range bombers, as well as for precision strike and maneuver against hardened targets, deployment of responsive satellite sensors, and the refuel and repair of on-orbit systems. We will have a better understanding of the art of the possible when the roadmap is complete in the spring of 2002.

## AIR FORCE WAR PLANNING

12. Senator SMITH. There has been criticism of Air Force war planning as drifting towards the improbable. Specifically, that the U.S. has been steadily losing access to foreign bases, and buying short-range fighters, while its long-range bombers are shrinking in number. Second, that although Air Force war planning contends that enemy defenses will be quickly destroyed, the Air Force retired electronic-warfare planes capable of hiding non-stealthy planes from enemy radar. How do you respond to this criticism?

General MYERS. Although we have closed some overseas bases for budgetary reasons as we drew down the force over the last 10 years, we continue to have access to foreign airfields when we need them. Regarding the fighter/bomber mix, as well as the retirement of the Air Forces EF-111s, these decisions are two good examples of how we must balance our capabilities as we modernize our force. It is crucial that we balance range, lethality, responsiveness, cost, survivability, and a number of other factors, within budgetary constraints and global realities, to meet our Defense Strategy. I am confident the Air Force will continue to work toward the best possible force structure mix to meet our Nations needs.

Retiring the EF-111 allowed us to consolidate our electronic warfare capability into one platform, the Navy and Marine Corps EA-6B. The savings from deactivation of the F-111 and its support structure could then be used to meet other high priority requirements. To ensure that our electronic warfare requirements will continue to be met, the EA-6B will be receiving further capability enhancements, including an improved avionics package. An additional EA-6B squadron is slated to become operational in fiscal year 2003, bringing the total number of Navy and Marine Corps EA-6B squadrons to 20. Five of the Navy squadrons will be earmarked for land-based expeditionary deployments. Given the planned retirement of the EA-6B force beginning in 2010-2015, the Department has initiated a joint effort to determine the capabilities that should be developed for a successor system or systems.

All force structure decisions are critically reviewed during the Quadrennial Defense Review and each year during the budget review cycle and development of the Defense Planning Guidance. Constructive criticism is welcomed as a healthy input to these reviews. We will, of course, continue to review current plans in light of the events on 11 September 2001.

## SPACE

13. Senator SMITH. Today we cannot afford to build enough ships to sustain our Navy, enough tankers and long-range bombers to give us the dominant global force we need without relying on overseas bases; and enough lift capability to get our current heavy ground forces quickly into theater. We must consider the possibility that spacepower systems can meet some of our future needs in a cost-effective way. We need advocates for space systems. When I think of GLOBAL force projection, I don't think of flying 18 hours from point A to point B to deliver ordnance, only to fly 18 hours home. I don't think of months of preparation time to bring forces into theater. I don't think of sensitive negotiations with allies for basing rights. I think of space—24 hour per day global presence. Yet space has, so far, been relegated a support role—providing information superiority for our land, sea, and air forces. Do you think space should have a force projection role? What space systems other than spaceplane, should we develop for force projection?

General MYERS. Our ability to address emerging threats may well require the use of space in a force application role. For the time being, however, the U.S. has not fielded operational space weapon systems. U.S. Space Command's third mission, Force Application, requires them to plan for and conduct research and development of space-based systems as insurance should the nature of threats and opportunities significantly change. Some of this R&D is focusing on concepts such as the spaceplane, exo-atmospheric common aero vehicles, and space-lased lasers. I would anticipate that developing these capabilities would serve as a deterrent to potential adversaries, and may be appropriate should the policy decision be made to field them.

## UNMANNED AERIAL VEHICLES

14. Senator SMITH. Do you think our global force projection aircraft need to be manned (given our low tolerance for casualties and breakthroughs in automation and remote operations)? Should aircraft like Global Hawk be delivering ordnance? General Ryan recently promoted spiral development for Global Hawk—and said our

U2s are attriting—is Global Hawk or other unmanned aerial vehicles more or less vulnerable than U2s—esp. in light of recent losses in our UAVS over Iraq? Is reopening the U2 line a cost-effective option?

General MYERS. Advances in automation and remote technologies have created opportunities for us to expand the use of unmanned aerial vehicles (UAVs) in numerous military operations (e.g., Nobel Anvil, Southern Watch, Enduring Freedom). As UAV programs continue to mature and meet operational requirements, we will increasingly depend upon unmanned vehicles to carry out missions which place manned vehicles in unnecessary risk.

The GLOBAL HAWK program was initiated with the goal of alleviating shortfalls in Intelligence, Surveillance and Reconnaissance (ISR) capabilities. There exists the possibility that during spiral development of GLOBAL HAWK, the capability to deliver ordnance may be added. However, it could possibly delay achieving the required ISR mission if an attempt to add the capability to deliver ordnance is made at this juncture, as reengineering of the current system would likely be required. In addition, other programs such as the Unmanned Combat Air Vehicle (UCAV) are already being developed to address the capability to deliver ordnance.

The current plan for spiral development of GLOBAL HAWK is necessary in order to both achieve the fastest possible introduction of high altitude, long endurance unmanned ISR support while simultaneously allowing the program to keep pace with the rapidly improving technologies associated with these systems.

While we have experienced the loss of several PREDATOR air vehicles over Iraq, GLOBAL HAWK was designed to fly at higher altitude (65,000 feet vice 25,000 feet). This has the added benefit of defeating many anti-air capabilities. Due to its high altitude capability, GLOBAL HAWK has proven to be less vulnerable than the PREDATOR.

The U2, while tremendously capable, is nearing the end of its service life and represents aging airframe technology. To reopen the U2 production line would be costly. The current plan is for GLOBAL HAWK to replace the U2 when it demonstrates the ability to provide comparable capabilities. Prior to that occurring, it would be premature to make any force structure decisions.

#### AIR FORCE SPACE PROGRAMS

15. Senator SMITH. It was encouraging to see a space program, "Space Lift," as the Air Force's number one priority. Unfortunately, it is an unfunded priority. While more space programs are on this year's list than ever before, space programs still constitute a disproportional small percentage of Air Force unfunded priorities—are space programs properly funded or is there a continuing aircraft bias in the Air Force that tends just to support expensive fighter upgrades?

General MYERS. I agree that correctly funding space is a concern. Accordingly, I have made Joint Warfighting and Transformation two of my highest priorities. Within this context, we will attempt to balance space programs against more traditional programs to provide optimum capabilities to the Joint Warfighter. I believe funding decisions will be based upon operational requirements and that space programs will be properly represented as opposed to any institutional bias favoring aircraft.

#### QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

##### PRECISION GUIDED MUNITIONS

16. Senator SANTORUM. In 1998, President Clinton ordered Tomahawk cruise missile attacks on Afghanistan and Sudan in response to the terrorist attacks on U.S. embassies in Kenya and Tanzania. Later, the U.S. led an air-dominated attack on the Yugoslav forces of Slobodan Milosevic, relying on large quantities of stand-off munitions to halt the aggression of these military and police forces. In a classified briefing I received, I learned of the approximate number of precision guided munitions (PGMs) or preferred munitions that were in the inventory of the U.S. military at the time. Can you tell me if the U.S. has enough PGMs to enforce a robust military operation against the parties responsible for carrying out the terrorist attacks of September 11, 2001 in New York City and Arlington, Virginia? Are there sufficient PGMs to support an attack on the perpetrators of these terrorist attacks and yet still provide a necessary reserve for other possible military engagements? Lastly, do you support the competitive procurement of laser guided bombs?

General MYERS. Considering our worldwide standing ordnance stockpiles, which contain a wide array of cruise missiles, precision guided munitions and more con-

ventional ordnance, and industry's ability to flex production, we are confident that we have sufficient capacity to carry out our global war on terrorism, while still retaining an adequate, but reduced, Reserve for future military engagements. However, over the entire course of Operation Enduring Freedom, our expenditure rates for select PGMs, such as Joint Direct Attack Munitions (JDAM), exceeded current production rates. We have received supplemental funding to increase munitions production rates and enhance industry's long term production capacity for both JDAM and the family of laser guided bombs. We also would support competitive procurement of laser guided bombs.

#### CYBER-TERRORISM

17. Senator SANTORUM. One of the main concerns of this committee has been the threat posed by cyber-terrorists or by those who carry out malicious/criminal attacks on our economy and/or government. In your opinion, what are the things that we are doing well with respect to cyberthreats?

General MYERS. We are doing well in identifying cyber threats in a timely manner and reacting with sufficient speed to guard against what I would consider a loss of our command, control, and communications capability. Making this possible are several interrelated things. The Commander Joint Task Force, Computer Network Operations watches the cyber environment for threats as well as managing the Information Assurance Vulnerability Alerts (IAVA) program. IAVA provides DOD critical information to resolve a recognized information vulnerabilities that if exploited could cause grave damage to our C<sup>4</sup> networks.

We also have instituted an Information Condition program that outlines certain procedures and actions that must be taken to guard against a cyber threat. USSPACECOM is assigned responsibility to manage worldwide the military Information Condition program.

18. Senator SANTORUM. Conversely, what are those areas that require additional effort?

General MYERS. Two primary areas: People and allied/coalition interoperability.

People are our primary resource in protecting our digital environment. That means a training continuum to meet the ever-growing sophistication of the cyber threat. System administrators are the foot soldiers of the cyber battlefield. They must not only know the basic skills necessary to keep the networks up and functioning, but must be able to detect, defend, react, and restore those networks when a cyber threat impacts performance. One thing we are doing is pursuing a standard skill set for our system administrators that cross service boundaries and provide known & expected level of skill expectations.

Future warfare means working with coalitions and allies. We need to improve our C<sup>4</sup> interoperability and we are working to accomplish this. Coalition Wide Area Networks (COWANs) are proving themselves tactically valuable. We are working to establish doctrine and policy to govern setup, operations, security certification & accreditation, and developing training opportunities to refine all of the above.

19. Senator SANTORUM. Can you tell me the types of actions or policy directives you will consider implementing to guard against cyberthreats as Chairman of the Joint Chiefs?

General MYERS. Future warfare on the cyber battlefield requires an interagency approach that cross DOD and non-DOD governmental lines. We need to improve an already growing interaction to further develop an effective information assurance umbrella that protects both military networks and critical civilian infrastructures. This will support Homeland Defense and National Defense objectives.

20. Senator SANTORUM. Do you believe that the cyber security scholarships authorized by this committee will be useful in helping to address the shortage of skilled personnel to address cyberthreats?

General MYERS. I am strongly in favor of this scholarship action by the committee. We hope to see more colleges become accredited to support this scholarship action and we ask the committee's continued support for a most welcomed initiative. Young men and women who take advantage of this scholarship program will focus on cyber security/information assurance. The cyberthreat will grow as information technology advances. People skilled in the field of information assurance/cyber security will play the most important role in our government in protecting our critical infrastructures from the cyberthreat. This scholarship program also generates opportunities for us to employ some of the Nation's brightest men and women in gov-

ernment service. Once they have experienced the challenges that face us in information assurance/cyber security many of them will remain for a career.

THE ABM TREATY

21. Senator SANTORUM. In your opinion, do you believe that the provisions specifying that the President of the United States must secure additional congressional approval before spending money that conflicts with the ABM Treaty strengthens or weakens the President's hand in consultations with the Russian government?

General MYERS. As you are aware, after my September 13, 2001, testimony, the provisions of the Fiscal Year 2002 Defense Authorization Bill mentioned in your question were withdrawn from the bill. The United States provided formal notification of its withdrawal from the ABM Treaty, effective 6 months from 13 December 2001, due to new national security threats and the imperative of defending against them. Although President Putin said the U.S. decision to withdraw from the ABM Treaty is a "mistake," he also said that U.S. missile defense is no threat to the security of the Russian Federation and both countries should create, as soon as possible, a "new framework of our strategic relationship." We are currently engaged in intensive consultations with the Russian government intended to move beyond the Cold War mentality enshrined in the ABM Treaty. To give these consultations every chance for success, I believe it is essential that we maintain maximum flexibility as we proceed through the coming months.

NATIONAL GUARD AND RESERVES

22. Senator SANTORUM. What do you think is the appropriate role of the National Guard and Reserves as to the mission of homeland defense?

General MYERS. As the requirements of Homeland Security evolves, we will find many mission areas for the National Guard and Reserves. Homeland security is a vital mission for the Reserve component forces, however it clearly is not, nor should it be their only mission. Reserve component forces must also continue to fulfill their other vital peacetime and wartime missions, to include force generation, wartime augmentation, and as a strategic Reserve.

A vital aspect of homeland security is the dual roles performed by the National Guard, in which they serve both their individual states and our Nation as a whole. Most Guardsmen presently safeguarding our airports nationwide, are mobilized in a Title 32 state active duty status. Only through existing Federal wartime missions, and the subsequent equipping and training initiatives, is the National Guard able to successfully perform their multiple missions. The suitable role of the National Guard and Reserves in fulfilling a homeland security mission is to perform a variety of mutually protective homeland security missions-providing safety of our land, airspace, and coastal waterways-defending the U.S. populace and protecting its critical infrastructures.

[Deleted].

23. Senator SANTORUM. What are the missions or tasks that you believe the National Guard and Reserves are ideally suited for in the area of homeland defense?

General MYERS. In addition to fulfilling the tasks as described in the previous question, Reserve component members are ideally suited for sustaining homeland security missions by fulfilling a variety of operational and support tasks, to include: security, logistics, transportation, intelligence, command & control, administrative, and training base support functions.

The National Guard and Reserves are capable of performing a wide range of homeland security missions and tasks. In essence, Reserve component forces serve as one of the military's most visible institutional links to the American society-for Guardsmen and reservists are directly representative of the many communities from which they are from and which they are protecting.

The missions and tasks that Guardsmen and reservists are ideally suited for are those, which leverage both their prior service and civilian acquired skills. Specifically, members working in civilian life in such specialized fields as emergency management, security & law enforcement, aviation, hazardous material management, medicine, computer technology, civil assistance, and human services are able to apply their professional expertise by serving in units performing similar tasks for homeland security.

24. Senator SANTORUM. Do you believe that National Guard and Reserves end strength ought to be on the table during the Quadrennial Defense Review and the Administration's Strategic Review?

General MYERS. Yes. We are a total force. It is important that we not separate our forces into segments, especially when making adjustments that will potentially affect the entire force and our overall warfighting ability.

25. Senator SANTORUM. If so, how might end strength level reductions impact our ability to carry out the homeland defense mission?

General MYERS. Before we can decide whether force structure changes may be necessary, we must first determine the appropriate homeland defense role for the Department of Defense (DOD). At the present time, the DOD homeland defense role is still emerging. Once this role is determined, mission requirements will follow. We can then assign and apportion the proper force structure—Active, Guard, and Reserve—to meet the mission requirements.

As noted earlier, homeland security mission is only one of our significant missions. Sufficient Reserve component forces must also be readied to fulfill other wartime missions, to include: force generation (training & preparing units for deployment), augmentation of Active-Duty Forces (to support war plans and contingency missions), and to serve a strategic Reserve (to exploit operational opportunities and to avert tactical disasters). These issues must also be considered during force structure discussions.

#### OBJECTIVE FORCE

26. Senator SANTORUM. I am concerned that the Army is not receiving the resources necessary to maintain its legacy systems, support a new interim force and transition to an effective objective force. It appears that the Army has been expected to transform itself without an increase in its budget. That is, the Army has been expected to transform by taking funds "out of hide." Regrettably, the Army lacks the resources needed to transform and sustain current modernization requirements. What actions can you take to ensure the viability of the U.S. Army and its ability to transform to meet 21st century threats? Will you be a vocal supporter of additional resources to help address the Army's modernization needs? Lastly, will you strongly support robust increases in science and technology funds to support the Army's transformation initiative?

General MYERS. The Army has worked hard to maintain its current readiness and warfighting capabilities while transforming for tomorrow. I will work with the SecDef to ensure that future budget submissions provide funding for the Army's Interim and Objective Force, while ensuring the Army priority is to be ready for war today.

---

[The nomination reference of Gen. Richard B. Myers, USAF, follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 4, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

The following named officer for appointment as the Chairman of the Joint Chiefs of Staff and appointment to the grade indicated while assigned to a position of importance and responsibility under Title 10, United States Code, Sections 601 and 152:

*To be General*

Gen. Richard B. Myers, 7092.

---

[The biographical sketch of Gen. Richard B. Myers, USAF, which was transmitted to the committee at the time the nomination was referred, follows:]

## BIOGRAPHICAL SKETCH OF GEN. RICHARD B. MYERS

General Richard B. Myers is the Vice Chairman of the Joint Chiefs of Staff. In this capacity, he is a member of the Joint Chiefs of Staff and the Nation's second highest ranking military officer. General Myers is the fifth officer to hold the position.

General Myers was born in Kansas City, Missouri. He is a 1965 graduate of Kansas State University, and holds a Masters Degree in Business Administration from Auburn University. The General has attended the Air Command and Staff College at Maxwell Air Force Base, Alabama; the U.S. Army War College at Carlisle Barracks, Pennsylvania; and the John F. Kennedy School of Government at Harvard University.

General Myers entered the Air Force in 1965 through the Reserve Officer Training Corps program. His career includes operational command and leadership positions in a variety of Air Force and Joint assignments. General Myers is a command pilot with more than 4,000 flying hours in the T-33, C-21, F-4, F-15 and F-16 including 600 combat hours in the F-4.

From August 1998 to February 2000, General Myers was the commander in chief, North American Aerospace Defense Command and U.S. Space Command; commander, Air Force Space Command; and Department of Defense manager, space transportation system contingency support at Peterson Air Force Base, Colorado, responsible for defending America through space and intercontinental ballistic missile operations. Prior to assuming that position, he was the commander, Pacific Air Forces, Hickam Air Force Base, Hawaii, from July 1997 to July 1998. From July 1996 to July 1997 he served as the assistant to the chairman of the Joint Chiefs of Staff, the Pentagon; and from November 1993 to June 1996 General Myers was the commander of U.S. Forces Japan and 5th Air Force at Yokota Air Base, Japan.

As the Vice Chairman, General Myers serves as the Chairman of the Joint Requirements Oversight Council, Vice Chairman of the Defense Acquisition Board, and as a member of the National Security Council Deputies Committee and the Nuclear Weapons Council. In addition, he acts for the Chairman in all aspects of the Planning, Programming and Budgeting System to include participating in meetings of the Defense Resources Board.

General Myers is married and has three children, two daughters and a son.

[The Committee on Armed Services requires certain senior military officers nominated by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Gen. Richard B. Myers, USAF, in connection with his nomination follows:]

## UNITED STATES SENATE

## COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

## PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Richard Bowman Myers.
2. **Position to which nominated:**  
Chairman of the Joint Chiefs of Staff.
3. **Date of nomination:**  
September 4, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
1 March 1942; Kansas City, Missouri.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Mary Jo Myers (Rupp).
7. **Names and ages of children:**  
Nicole M. Little, 30; Erin L. Voto, 28; Richard B. Myers, Jr., 22.
8. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
None.
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational or other institution.  
Vice President, Myers Brothers of Kansas City (Non-active position with family-owned business).
10. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable and other organizations.  
Air Force Association, Kansas State University Alumni Association, U.S. Army War College Alumni Association, Sigma Alpha Epsilon (Fraternal), The Retired Officers Association, Vietnam Veterans of America.
11. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.  
Ira Eaker Fellow, Air Force Association; 1991 Alumni Fellow Award, College of Engineering, Kansas State University; Kansas State University, Engineering Hall of Fame; General Thomas D. White Space Award; General James V. Hartinger Space Award; Canadian Meritorious Service Cross; American Academy of Achievement Award.
12. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?  
Yes.
13. **Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?  
Yes.

---

[The nominee responded to the questions in Parts B–E of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–E are contained in the committee's executive files.]

**TUESDAY, SEPTEMBER 25, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 10:19 a.m., in room SH-216, Hart Senate Office Building, Senator Max Cleland, presiding.

Committee members present: Senators Cleland, Landrieu, Reed, Akaka, Bill Nelson, E. Benjamin Nelson, Warner, Roberts, Hutchinson, and Collins.

Committee staff members present: David S. Lyles, staff director.

Majority staff members present: Richard D. DeBobes, counsel; and Terence P. Szuplat, professional staff member.

Minority staff members present: L. David Cherington, minority counsel; Suzanne K.L. Ross, research assistant; and Richard F. Walsh, minority counsel.

Professional staff members present: Charles W. Alsup, Brian R. Green, Gary M. Hall, Carolyn M. Hanna, and Thomas L. MacKenzie.

Staff assistants present: Dara R. Alpert, Daniel K. Goldsmith, and Thomas C. Moore.

Committee members' assistants present: Barry Gene (B.G.) Wright, assistant to Senator Byrd; Andrew Vanlandingham, assistant to Senator Cleland; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; Eric Pierce,

assistant to Senator Ben Nelson; J. Mark Powers, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; James P. Dohoney, Jr., assistant to Senator Hutchinson; Kristine Fauser, assistant to Senator Collins; and Derek Maurer, assistant to Senator Bunning.

#### OPENING STATEMENT OF SENATOR MAX CLELAND

Senator CLELAND. The hearing will come to order.

As might be obvious to the audience, you can see the terribly low state of our readiness with Senator Roberts and myself chairing the hearing. [Laughter.]

We need you fine men to fill the holes out there and do the great job for our country that we want you to do.

I would like to thank all of you for your attendance at the hearing today. The Senate is considering the National Defense Authorization Act for Fiscal Year 2002, and Chairman Levin has asked that I begin this important hearing while he manages the bill on the Senate floor.

This morning we will recognize the nominations of three individuals to senior leadership positions in the United States Armed Forces: Gen. Peter Pace, United States Marine Corps, to be Vice Chairman of the Joint Chiefs of Staff; Gen. John Handy, United States Air Force, to be Commander in Chief, United States Transportation Command (USTRANSCOM), and Commander, Air Mobility Command (AMC); and Adm. James O. Ellis, Jr., United States Navy, to be Commander in Chief, U.S. Strategic Command (STRATCOM). We will need your strategic guidance as the days move forward.

On behalf of the Armed Services Committee, I would like to welcome you and your families. I apologize that my schedule and recent events prevented me from meeting with each of you. However, having read your biographies, I have tremendous confidence in the ability of each of you to carry out your new positions. You certainly have my support.

We have a tradition of asking nominees to introduce family members who are present. General Pace.

General PACE. Mr. Chairman, thank you very much. Several members of my family are present today; first is my wife Lynne, who has held my hand for 34 years and been my wife for 30; our daughter, Tiffany Marie, who is a year 2000 graduate of the University of New Hampshire, is currently working with a law firm here in Washington, DC as a research assistant; my brother Sim, a 1965 graduate of the United States Naval Academy, United States Marine, 6 years active duty, twice wounded in combat in Vietnam; his wife of 33 years Mary; and one of their three sons, Bradley, who works with Worldcom in the Washington, DC area. That is my family present today, sir. My son, who is not here, is a First Lieutenant in the United States Marine Corps. He just returned to Camp Pendleton, California, from a 6-month deployment. I regret that he cannot be here, but I am proud he is serving his country.

Senator CLELAND. Hoorah.

General PACE. Thank you, sir.

Senator CLELAND. General Pace, we are honored to have you and your family here today. I now see that part of the secret of your success is the great support you have had from your family. We are honored to have you and your family members here, especially those who have served the country.

I would like to thank you for all your help over the past 2 years. General Handy, why don't you introduce your family.

General HANDY. Yes, sir. I am pleased to introduce my wife of 33 years, Mickey; my sister, Margaret McLaurin; her husband, Bill, who came from Kernersville, North Carolina, to be with me this morning; my secretary, Eleanor Bain, is also in the cheering section, and I am proud because she is an extraordinary member of my family, too.

Senator CLELAND. Thank you very much, General Handy. Ladies and gentlemen, we are glad to be with all of you.

Admiral Ellis, do you have family members with you today?

Admiral ELLIS. Thank you, Senator Cleland. Present with me today is my wife, Polly, my bride and partner over these 31 years of an incredible journey. My son cannot be with us today. He is a Captain in the United States Army serving with the 2nd Ranger Battalion in Fort Lewis, Washington, and is currently deployed to Germany. I have a daughter who lives in California and also cannot be with us, but she presented us with a new granddaughter last month. Thank you very much.

Senator CLELAND. Thank you very much. You are very kind to mention those distinguished members of your family.

General Handy, I would like to thank you for all your help over the last 2 years in formulating the Air Forces' plan to invest in the C-130J aircraft. As an airlifter, General Handy, you understand the importance of investing in this next generation of aircraft, and I personally appreciate your vision and work on this program.

I think that your experience and background make you more than qualified to command the United States Transportation Command and Air Mobility Command. No matter what form of action the President takes in responding to the recent terrorist attacks on our Nation, your position will be vital in getting the mission started, sustaining the mission, and bringing our troops home.

General Pace has led marines in Vietnam, Korea, Japan, and Somalia. For the last year as Commander in Chief, U.S. Southern Command, he has guided our military relations with 32 nations in Central America, South America, and the Caribbean. If confirmed for the position of Vice Chairman of the Joint Chiefs of Staff, General Pace will be the first marine to be the Vice Chairman of the Joint Chiefs of Staff.

Admiral Ellis, as Commander in Chief, U.S. Strategic Command you will help shape and implement the ongoing review of this Nation's long-range nuclear force structure. That is a vital mission.

Again, I welcome you all. You are going to play a pivotal role in our military in the days to come.

I will recognize my colleague here, Senator Roberts, for any comments he might want to make.

**STATEMENT OF SENATOR PAT ROBERTS**

Senator ROBERTS. Mr. Chairman, it is a pleasure to serve with you as chairman during this important confirmation hearing. We have been riding either stagecoach or sidesaddle, or whatever the term should be, for some time. It is a real privilege to be here with you.

I have a very short statement, some of which will be repetitive. But it bears repeating, especially because of the quality of the witnesses and their families.

Welcome to General Pace, Admiral Ellis, and General Handy, and congratulations on your nominations.

I would like to say the world has changed dramatically since you were nominated by the President for these high positions. The importance of these key positions and the grave responsibilities of the individuals placed in these commands have only intensified since the infamous day of September 11. If you are confirmed, as I fully expect, we will look to you for innovative leadership in the difficult, challenging years ahead.

On September 13, only 2 days after the terrorist attacks on the World Trade Center and the Pentagon, we conducted the nomination hearing for General Myers. The Senate quickly confirmed him as the next Chairman of the Joint Chiefs. It was imperative then, and it remains so today, that we demonstrate our resolve and our commitment to meet the new challenges we face by trying to expedite and facilitate these nominations and provide the Secretary of Defense the strong and determined military leaders he needs to fight the war on terrorism. I thank the chairman for scheduling this hearing so promptly.

General Pace is no stranger to this committee. If confirmed, he will be the first marine to serve in the capacity of Vice Chairman, a milestone this marine and all marines, past and present, can certainly be proud of. In his present capacity as Commander in Chief, United States Southern Command, General Pace has confronted firsthand the very corrosive effects of terrorism. There are numerous, difficult challenges facing the United States and our friends and allies in the Southern Command region. I commend General Pace on his service in that area of operations. His many leadership accomplishments in numerous joint billets worldwide with combat marines will serve him well as the Vice Chairman of the Joint Chiefs of Staff.

Admiral Ellis is also well known to this committee. He has had a most distinguished career as a naval aviator. He performed superbly as the NATO Joint Force Commander for Operation Allied Force, exercising operational command of U.S. and allied forces involved in Kosovo combat and humanitarian operations. He also served admirably as the Deputy Chief of Naval Operations for Plans and Policies. He is a nuclear-trained officer with extensive command experience.

General Handy, as Vice Chief of Staff for the Air Force, has played a key senior leadership role in directing the air staff, serving on the Joint Requirements Oversight Council. He has had extensive experience in the United States Transportation Command, serving as Director of Operations and Logistics. He is a command

pilot with more than 4,800 flying hours, primarily in airlift aircraft, as indicated by our distinguished chairman.

General Handy and all of our witnesses are eminently well qualified for the positions to which they have been nominated. Gentlemen, you have my support. I applaud your willingness to serve and I look forward to working with you.

Thank you, Mr. Chairman.

Senator CLELAND. Thank you, Senator Roberts.

Senator Hutchinson, do you have any comments to make about our panelists?

#### **STATEMENT OF SENATOR TIM HUTCHINSON**

Senator HUTCHINSON. I have had the opportunity to visit with all of the nominees today, and they are, as Senator Roberts said, very qualified.

I also commend the chairman and the committee for the determination to move quickly on these confirmations. We cannot choose the times in which we live, and these times are difficult. They are trying, challenging, and dangerous. While we grieve the loss and suffer the pain of the tragedy of recent days, it is also an opportunity for good men and qualified leaders to serve and serve well. While I do not relish the task that you have ahead of you, I am assured that we have the right people for the times in which we live. I look forward to supporting your nominations.

Senator CLELAND. Thank you very much, Senator Hutchinson.

Now we have a special introduction by Senator Bill Nelson, who has a word to say about one of our nominees.

#### **STATEMENT OF SENATOR BILL NELSON**

Senator BILL NELSON. Mr. Chairman, I could, of course, speak for all the nominees, but I particularly want to speak on behalf of General Pace, a resident of my State. He is particularly suited for this time in this position because of his extraordinarily honed skills as a diplomat.

I had the privilege of observing him in action earlier this year with our chairman, Senator Levin, and several other members of the committee because we went to southern Colombia and into the jungles. We were accompanied by General Pace. It soon became apparent that this was a military officer extraordinaire, not only skilled in matters of military, but skilled in matters of diplomacy as well.

I was intrigued, for example, when he was extolling the fact that the location of the Southern Command, once we had to leave the Republic of Panama, was put in a crucial area where the traffic was the highest for the diplomats and governmental officials from all of the Central and South American countries. The Southern Command is in Miami, which is a focal point for so many of these governmental officials who travel in and out of the country. He explained how that gave him the additional opportunity to interact and build a personal relationship with the leaders and diplomats of foreign governments. That is modernized thinking about how we are going to conduct our military affairs. Indeed, as we now are responding to the tragedy of September 11, we see that not only is

a military response necessary, but that a diplomatic response is required for the best possible, most successful response.

It is interesting how Gen. Pete Pace was nominated before the September 11 tragedy to be Vice Chairman, and how the value of that nomination has been underscored since.

I am happy to be here. Of course, I could say other things, but I do not want to get the other services all up tight about the fact that General Pace is going to be the first marine in this position. It is an exceptionally good choice, and I am glad that I can be here.

I apologize for not being present earlier, but we just had a crucial vote on the National Defense Authorization Act for Fiscal Year 2002 and the chairman had asked me to stay and help him.

I am glad to be here to highly recommend Gen. Pete Pace.

Senator CLELAND. Thank you very much, Senator Nelson. We appreciate those glowing remarks. General Pace, you have a lot to live up to there. [Laughter.]

At this point, I would like to submit the statements of Senators Thurmond and Allard.

[The prepared statements of Senators Thurmond and Allard follow:]

PREPARED STATEMENT BY SENATOR STROM THURMOND

Thank you, Mr. Chairman, I want to join Chairman Levin and Senator Warner in welcoming General Pace, General Handy, and Admiral Ellis. Although each of these officers has had a long and distinguished career, the fact that Admiral Ellis is a native of Spartanburg, South Carolina, makes him stand out in my eyes.

To each nominee, I want to extend my congratulations. The challenges ahead have always been enormous, but after the tragic events of September 11, they will be greater yet. I believe I can speak for every member of the committee when I say that you should not hesitate to call on us if you need support as you carry out the national security role of your command.

I wish you success and expect the Senate to act swiftly to confirm your promotions and appointments.

Thank you, Mr. Chairman.

PREPARED STATEMENT BY SENATOR WAYNE ALLARD

Thank you Mr. Chairman, I want to thank the three of you for coming here today. Your areas of responsibility are of vital interest and of strategic importance to the United States. You are accepting an immense amount of responsibility at a most important and challenging time in our country. I want to thank you in advance for your efforts, your dedication to duty, and your overwhelming commitment to the soldiers, sailors, airmen, and marines in your charge.

Your areas of responsibility are of much political and economic interest to the United States. There are areas of conflict, but of opportunity as well. I have the utmost confidence in your ability to handle them.

So gentlemen, I thank you for your service, and I look forward to working with you.

Senator CLELAND. The nominees have responded to the committee's prehearing policy questions and our standard questionnaire.

It is now time for opening statements. Why do we not go General Handy, General Pace, and Admiral Ellis? General Handy.

**STATEMENT OF GEN. JOHN W. HANDY, USAF, FOR REAPPOINTMENT IN THE GRADE OF GENERAL AND FOR APPOINTMENT AS COMMANDER IN CHIEF, UNITED STATES TRANSPORTATION COMMAND, AND COMMANDER, AIR MOBILITY COMMAND**

General HANDY. Senator, thank you very much for the kind remarks from all of you this morning. It is with a great deal of humility that I appear before you today. You have our statements submitted for the record, and I look forward to any questions that we might engage in throughout this morning. Thank you very much.

Senator CLELAND. Thank you very much, General.  
General Pace.

**STATEMENT OF GEN. PETER PACE, USMC, FOR REAPPOINTMENT IN THE GRADE OF GENERAL AND FOR APPOINTMENT AS THE VICE CHAIRMAN OF THE JOINT CHIEFS OF STAFF**

General PACE. Sir, I would like to thank you and the committee for the opportunity to appear before you this morning. It is indeed a great honor to be nominated to be the Vice Chairman of the Joint Chiefs of Staff. I pledge to you and the members of the committee that, if confirmed, I will do everything in my power to ensure that the magnificent men and women in our Armed Forces receive all the support that they so richly deserve.

I would also like to thank the members of this committee for your strong bipartisan support of all of us in uniform. It makes a difference. Although Senator Nelson has had to leave, I would like to thank him publicly for adopting me today, for saying things about me that my father would be scratching his head about and my mother would be saying, that is exactly right. [Laughter.]

But I deeply appreciate him taking time to do that.

I look forward to your questions, sir.

Senator CLELAND. Thank you very much, sir.  
Admiral Ellis.

**STATEMENT OF ADM. JAMES O. ELLIS, JR., USN, FOR REAPPOINTMENT IN THE GRADE OF ADMIRAL AND FOR APPOINTMENT AS COMMANDER IN CHIEF, UNITED STATES STRATEGIC COMMAND**

Admiral ELLIS. Thank you, Mr. Chairman. It is a personal and professional pleasure to appear before you today as the nominee for the position of Commander in Chief, United States Strategic Command. As you have noted, in this time of unprecedented challenge and change for our Armed Forces and our Nation, I too am humbled by the prospect of continued service in this post alongside the incredibly talented men and women in both the Strategic Command and in its service components. If confirmed, I will add all my energies to theirs in sustaining and enhancing the unique and essential contributions that STRATCOM makes to our national security.

I thank you and the members of the committee for the speed with which you are moving on this with the pace of other events which make demands on your time. As with the other nominees, I look forward to your questions.

Senator CLELAND. Thank you very much, sir.

The nominees have responded to the committee's prehearing policy questions and to our standard questionnaire. Without objection, these responses will be made a part of the record.

The committee also has received the required paperwork on the nominees, and we will be reviewing that paperwork to make sure that it is in accordance with the committee's requirements.

There are several standard questions that we ask nominees who come before the committee. I would like to ask all of you the same question, and you can answer all at once.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress and to give your personal views, even if those views differ from the administration in power?

General HANDY. Yes, sir.

General PACE. Yes, sir.

Admiral ELLIS. Yes, sir.

Senator CLELAND. Thank you.

Have you adhered to the applicable laws and regulations governing conflict of interest?

General HANDY. Yes, sir, I have.

General PACE. Yes, sir, I have.

Admiral ELLIS. Yes, sir, I have.

Senator CLELAND. Thank you.

Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

General HANDY. No, sir, I have not.

General PACE. No, sir, I have not.

Admiral ELLIS. No, sir, I have not.

Senator CLELAND. Will you ensure that the joint staff complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings?

General HANDY. Yes, sir.

General PACE. Yes, sir.

Admiral ELLIS. Yes, sir.

Senator CLELAND. Thank you.

Will you cooperate in providing witnesses and briefers in response to congressional requests?

General HANDY. Yes, sir, I will.

General PACE. Yes, sir, I will.

Admiral ELLIS. Yes, sir, I will.

Senator CLELAND. Will those witnesses be protected from reprisal for their testimony?

General HANDY. Yes, sir, they will be.

General PACE. Yes, sir, they will be.

Admiral ELLIS. Yes, sir, they will be.

Senator CLELAND. Thank you.

We will proceed with the first round of questions limited to 6 minutes for each Senator on the basis of the early bird rule. I will let my distinguished colleague, Senator Roberts, go ahead with questions.

Senator ROBERTS. I thank the distinguished chairman.

General Pace, in the Senate version of the National Defense Authorization Act for Fiscal Year 2002 we worked hard to put a provi-

sion establishing a central transfer account for all of DOD's combatting terrorism programs. I know that it is hard to define what is and what is not terrorism. But we had some objections from the administration at that time in the House conference. They did not want to go down that road. The provision was not included in the final bill.

However, the DOD, as directed by Congress, has now consolidated all of its combatting terrorism programs under the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict. Having taken that step, do you believe that establishing a central transfer account for all of the Department's combatting terrorism programs is a next logical step?

General PACE. Senator, thank you. I do not have the specifics in my head yet of the mechanisms that function here in Washington, as far as funding. My approach to answer that question would be to determine the most efficient and effective way to support our service members in the field, and if a centralized account would, in fact, provide the best protections for the young men and women in uniform, then I would support that, sir. But sitting here before you today, I do not understand the mechanism well enough to define it.

Senator ROBERTS. We can have a good conversation about that. We were trying to determine from a funding standpoint and an authorizing standpoint exactly where we were in combatting terrorism and force protection within the DOD. It sounds easier than it is.

General PACE. Yes, sir.

Senator ROBERTS. We will be happy to visit with you about that.

President Bush recently announced the establishment of a cabinet level homeland security agency led by Governor Ridge. How will the establishment of this agency, in your view, impact the Department's current supporting role in combatting domestic terrorism?

My specific question is, will this agency have ultimate authority over DOD's combatting terrorism budget, including force protection? There is a school of thought by many commissions that the distinguished chairman and I have worked with on how you approach terrorism, that says in the new position or homeland security agency somebody has to have the horsepower and the budget authority. How is that going to match up with what some of us feel is a pretty important pasture that we are in charge of? Can we work that out? How do you feel about that?

General PACE. Senator, I think we can work that out, and I think that the position itself will help focus the government debate on the proper way ahead. Clearly, the Department of Defense has many things that we can do to assist in homeland defense. There are also some lines which, as a citizen, I would not want to cross as a person in uniform as we work together to find out how our intelligence network, Reserve Forces, and National Guard Forces, which in a very real measure are forward deployed today inside the United States, can assist with homeland defense. Just like how our Active Forces are forward deployed overseas and Reserves support them, in a very real way the Reserve and Guard Forces are forward deployed in the communities around the Nation, and they

have tremendous capabilities that they can bring to bear. As we work together to determine how best and most efficiently to use the resources involved, I think that having the new cabinet level position is going to assist us all in focusing the debate in making the right decisions.

Senator ROBERTS. One of the things I have been interested in with regard to your predecessor in the Southern Command, General Wilhelm, who I think is an outstanding general, outstanding marine, is there has been a lot of debate in regard to our country's role in Colombia. Some insist we should provide only counternarcotics support to the Colombian Government. Others believe that the counternarcotics assistance is inseparable from the war against the revolutionary armed forces of Colombia. Some would call those terrorists. I would. Can you give me your views on this issue, particularly in light of the recent events?

General PACE. Sir, I can. Thank you. I agree with your estimate of General Wilhelm. He is a great man and a great patriot, and I thank you for bringing him up in this hearing, sir.

I believe that our current support to Colombia has been exactly and properly focused to support President Pastrana in Plan Colombia. Senator, Plan Colombia has 10 parts, one of which is the military; the others address health and judicial reform, schools, roads, and alternative development. None of those other parts of Plan Colombia can grow until there is security throughout the Nation.

Today, the combination of the Colombian police and the Colombian military is not sufficient to provide security throughout the Nation. Our assistance to their counternarcotics brigade, the provision by this Congress through our State Department of helicopters, has, in fact, strengthened Joint Task Force South under Brigadier General Montoya in the Putamayo Province and allowed him to do a fantastic job. They began operations last December. In less than a year, they have eradicated almost 30,000 hectares. They have wiped out some 300 labs. They are providing security where they are. But the fact of the matter is, if they were to move from the Putamayo Province to somewhere else, then the stability of that province would be undermined.

I believe the proper way ahead in the current support for Plan Colombia is to assist the Colombian Government in building additional counternarcotics brigades that can do what Joint Task Force South has done; first, take on the counternarcotics problem; second, move more into a homeland security type organization that can provide stability so that Plan Colombia can ultimately be successful.

The Revolutionary Armed Forces of Columbia (FARC) are terrorists. The National Liberation Army (ELN) are terrorists. The Autodefensas in Colombia (AUC) are terrorists. The amount of money in the drug trade, hundreds of millions of dollars, is awash throughout the world, and within at least that specific category, there are very healthy targets for our worldwide campaign against terrorism, sir.

Senator ROBERTS. Basically, you are saying that when you are awash in money from the drug cartels, regardless of the region, that that money is fungible, which is precisely the subject that the President and others are addressing even as we speak.

My time is expired, Mr. Chairman. Thank you.

Senator CLELAND. I would like to ask a couple basic questions. I would like to ask each of you, bringing your military experience to this issue, what have you learned in the wake of the September 11 terrorist attack's on the country? Can you also comment across the board about anything you have learned?

How will the September 11 terrorist attacks affect your new role? What are some of the challenges you face?

General Handy.

General HANDY. Thank you, Senator.

Clearly, the events of September 11 struck a deeply personal blow to each of us as Americans. It has caused us all to have a great deal of personal reflection as individuals. Also, as a man with almost 35 years in the military, I have some deep and lingering thoughts from a professional perspective about what the future may portend.

The sanctity of this Nation and the protection of its citizens has always been something that we hold very sacred, and a challenge such as this from terrorists outside this great Nation should cause us all to pause.

As I look in the future, if I am confirmed as the Commander in Chief of United States Transportation Command, I see the potential for a worldwide aggressive approach to suppressing terrorism and eradicating these horrendous individuals, the stresses and strains on the U.S. transportation system, our airlift, seairlift, and in great measure, even our internal road and rail networks. They have become quite a challenge. On the long distance support of troops abroad, our airlift resources come into potentially very stressful situations as we are today moving in that direction. General Pace mentioned our issues in Southern Command. There is no doubt we need to exercise our authorities continually in that region, as well as others around the world. So, as I approach this job, I will remain concerned and very anxious to try to work with this committee to highlight and solve those stressing problems in this business of ours.

Senator CLELAND. Thank you very much.

General Pace. What have you learned?

General PACE. Senator, as we all have known for the past decade, the United States' conventional forces are, quite simply, un-touchable, and we would, if attacked, be attacked asymmetrically. We obviously have not been able to understand the type of attack that would occur, like it did, nor to be properly positioned to defeat it. But, now that it has occurred and we have begun to focus our attention on how to prevent it in the future and how to disassemble the terrorist organizations that spurn this, I think we have several things we need to do.

We must increase our intelligence capability, whether it be for a combatant commander in the field like myself right now, or in support of organizations like the FBI and other law enforcement. We must have the eyes and ears both forward deployed and at home, to understand the environment in which we are working and to understand the networks against which we are going to proceed.

We are also going to need an interagency approach to execution of the decisions made by our President. I think our system of Dep-

uty Committees' meetings, Principals Committees' meetings, National Security Council meetings are very good at teeing up for the President the decisions that he makes.

The execution side sometimes devolves back to stovepipe approaches so that what comes to the State Department to do, they do, what comes to the Department of Defense, we do, without enough coordination at the top to ensure that all of our energies are being expended wisely and in synergy. I believe that what we are going to need to do, and if confirmed, what I will strive to do as Vice Chairman, is to bring together the interagency here in Washington in a way that allows us to focus all the energies of this Nation.

There is some part of this that is going to be kinetic. There will be bombs dropped. There will be things that happen in a purely military way. But there are enormous strengths of this government that will be brought to bear that are outside the realm of DOD. In DOD, we must understand how we can support a mechanism to make all the work smoothly and efficiently, sir. It is going to be needed.

Senator CLELAND. Senator Roberts has a comment.

Senator ROBERTS. It is more of a question, and I apologize to Senator Hutchinson and Senator Collins and Senator Nelson.

When something happens, we have been having hearings, what I call the "oh, my God" hearings, in the Intelligence Committee and on this committee as well. I am terribly concerned about what I consider to be, I do not know if I want to call it a massive failure, but certainly an unintentional failure of preventive analytical ability in terms of our intelligence capabilities. We have the technology. We have an amazing amount of resources. We have good people. We have plused up accounts on Signals Intelligence (SIGINT), on Human Resources Intelligence (HUMINT), and on attracting people to our intelligence agencies.

But I must tell you that after Khobar Towers, after the U.S.S. *Cole*, after the Khartoum chemical plant bombing where we made a mistake and ended up in world court, after the failure of the intelligence community to detect the India nuclear test, and we can go on and on, something is dreadfully wrong. We are still continuing hearings on the *Cole* to get the preventive intelligence available, in your case, sir, to the warfighter.

When Tommy Franks was in charge of the Central Command, it seemed to us on the Intelligence Committee, upon investigation, that there were enough red flags. As you take a look at what we are into now, we are at war, perhaps a warning notice could have been sent. Now, that is very difficult to do. It is very easy to criticize with 20/20 hindsight.

But we have to do better in regards to our analytical ability, and I think we have too many folks there who are into risk aversion, who do not think out of the box, do not think improbably. If we are going to detect so that we can deter the next attack—because the same people that planned the bombing in regards to Khobar Towers are the same kind of people that did it with the *Cole*, the same kind of people that did it in Washington and New York, and the same kind of people that are doing it right now—and I must say that I am terribly concerned and frustrated.

Every time we have hearings, we have people who sit in front of us and say, "Here is what we reported, here is what we reported, here is what we reported." It is very difficult. It takes weeks and months to do. We have "leap-ahead" technology now to help us out in that respect. I am very concerned about it. If we do not do that, much of what we talk about here is just not going to be possible.

I am being a little argumentative, and I apologize to my colleagues for making a speech.

Do you have any comment about this in regards to force protection and what you are going to be about? You say that you are going to be the person that tries to develop a better joint approach to this so that all of these stovepipes and the cultures we have can say, "Whoa, wait a minute." We have to step back from this, understand we are at war, and come up with a better plan.

General PACE. Senator, you clearly have articulated it better than I could. I would simply add, based on my recent experience in SOUTHCOM, that human intelligence is where I see our biggest failing. For example, the vast majority of the large successes that we have had in the counternarcotics operations have been because we received information that something was going to happen at a certain time, and received it from a person who had knowledge from another person. It is that kind of information that we do not have enough of, and that is an area that I would recommend we focus on as we look to shore up our intelligence apparatus.

Senator ROBERTS. Would either of the other two gentlemen, Admiral, General, have any comments about this, other than to say, "yes, I agree?"

General HANDY. Certainly, that is an imperative. General Pace is absolutely right about the human intelligence problem today.

But, Senator, what you point out is also the over-arching issue that we all face, and that is integration of all of the intelligence that we receive. Certainly, our intense focus must be on breaking down those stovepipes and continuing to pull this together with the technology that we know is within our reach. The technology is a potential solution. From an Air Force perspective, with my Vice Chief of Staff hat on, our endeavors certainly bring us some relief, potentially in the near term, as well as in the long term. Sharing integrated intelligence, especially human intelligence, is a huge leap in the right direction. We have certainly almost dispatched that capability, and we need to resurrect it and give some strength to it as well.

Senator ROBERTS. Admiral Ellis.

Admiral ELLIS. Yes, sir. I would only add that while an improvement in the intelligence architecture and the automated tools can clearly bring us what you and my colleagues have described, speedier analytical capability is essential. But Pete is right on the mark when he talks about the critical utility and role of human intelligence.

I would only add, based on my experience overseas, that we also have the ability to draw human intelligence from allies and coalition partners. They are increasingly forthcoming in those types of dealings, based on my experience with our Balkan operations, and this certainly is the case in the tremendous outpouring of support that we have received overseas from our allies since the tragic

events of September 11. I would only add that as we think HUMINT, in addition to those capabilities which we need to generate ourselves, perhaps there are ways in which we could expand and draw more completely on those capabilities that already exist on the part of our allies and partners.

Senator ROBERTS. Mr. Chairman, in the interest of my colleagues and their valuable time, please consider that my second 6 minutes, and I will cease and desist.

Senator CLELAND. Thank you very much, Senator.

Admiral Ellis, any further lessons learned about September 11?

Admiral ELLIS. Certainly, sir; I share the lessons that everyone has brought home so tragically on September 11 in the unexpected scope of this terrorist threat, which we know has been confronting us for over a decade. Clearly, we have been looking outward and we have worked very hard, as we have already articulated, to ensure the safety of our deployed forces and for those forces that go in harm's way. We have redefined the nature of that threat clearly in one single, heinous act on the 11th of September.

As I mentioned earlier and alluded to in my previous remarks, the support that we have received from our allies has been absolutely tremendous, and it is right down to the tactical level. I have received calls from the heads of the Armed Forces of virtually all of the NATO allies, telegrams of support, offers of sympathy, and more importantly, they have translated that into real offers of security. Heretofore, issues that had been perhaps pushed back a bit by them, in the interest of sovereignty concerns, all of those obstacles have been removed and they certainly have been forthcoming.

If confirmed as Commander of the United States Strategic Command, the future of what we now define as deterrence has to include a larger number of elements in that concept as we look at new threat environments and, indeed, in a real sense, new strategic environments in which that deterrent policy must serve us.

In the meantime, based on my understanding, Strategic Command continues to support the Commander in Chief's (CINCs) worldwide in terms of intelligence information. I believe that the organization also would stand ready to support, in whatever construct is deemed appropriate, the issues that are emerging in terms of homeland defense. Clearly, all of us, as you have properly noted, are going to see a much different situation than we would have anticipated when initially nominated for these posts a few short months ago.

Senator CLELAND. Thank you all very much.

Senator Nelson.

Senator BEN NELSON. Thank you, Mr. Chairman.

It is a pleasure to see you again, General Pace. As the other Senator Nelson said, we journeyed together to Colombia. I appreciated very much your insight, as well as your support there for that mission.

It is good to see Admiral Ellis, soon to become a Cornhusker. We are looking forward to having you come to Nebraska. I saw Admiral Mies socially on Saturday evening and he is very much looking forward to you succeeding him as the CINC at Strategic Command.

General Handy, I look forward to working with you in the months and years ahead, certainly to deal with the logistics of mov-

ing troops quickly and safely. You have a significant role and a tremendous job ahead of you, as we look forward to the months, possibly years ahead, to deal with challenges as we battle against terrorism.

My question to you all today comes from an opinion in the *Atlanta Journal Constitution* written by the former chairman of this committee, former Senator Sam Nunn. He tells about the time that the communist empire broke apart. The former Soviet Union left as a legacy some 30,000 nuclear warheads, more than 1,000 tons of highly enriched uranium, 150 tons of plutonium, 40,000 tons of chemical weapons, 4,500 tons of anthrax, and tens of thousands of scientists who know how to make weapons and missiles, but obviously do not even know how to feed their families.

The fear continues to be that the former Soviet Union and the republics, even working the United States, have been unsuccessful in assuring the security of these weapons of mass destruction. Do we have and can we put together a plan that, in the midst of a war against terrorism, focuses on objects that could be used against the United States, against the world for that matter, in this battle against terrorism?

I guess I would start with you, General Pace.

General PACE. Senator, thank you.

The answer to can we put together that type of an organization—

Senator BEN NELSON. Or have we? I think the suggestion is that we have not been able to do it to date. If that is the case, then the question obviously becomes can we.

General PACE. Sir, if I may constrain my answer in this public forum?

Senator BEN NELSON. Yes. I think we have to keep it secure.

General PACE. In a very general overview way, I would address your question by saying that there have been efforts in the past which are being reinforced as we speak. I believe we can have a proper mechanism for cooperating and sharing as much information as available. My personal opinion is that we probably can never have a foolproof system of knowing everything about every possible type weapon that has been transferred from legitimate government hands to illegitimate hands.

If I may stop there in this forum, sir, I would like to.

Senator BEN NELSON. That would be fine.

Admiral Ellis, I know that you are going to be taking charge of the offensive portion of our nuclear force, and perhaps you have some thoughts as well.

Admiral ELLIS. Yes, sir, Senator, I would be pleased to share those.

Certainly, as we discussed in the office the other day, those types of concerns that you have just articulated and that Senator Nunn articulated in the op-ed piece are shared by all of us. Indeed, there have been programs, as you are well aware that have attempted to address this in the past and have done a great deal in terms of addressing some of the specifics of that.

How we need to reshape and reevaluate the magnitude and the level of those programs, in light of current situations, is certainly an appropriate question. The Nunn-Lugar program has contributed

over \$2.7 billion to an effort to provide technical advice to the Russians specifically on how to dismantle and enhance the security of their nuclear and strategic systems.

There is, and there has been, a focus on the security element, the counterproliferation element, and the denuclearization of the former Soviet states, as you are well aware. How we need to re-address that in the light of the current strategic environment is certainly an appropriate issue.

Senator BEN NELSON. Thank you.

My question involves you, General Handy, as you move troops.

General HANDY. Senator, thank you very much.

Recognizing the constraints that General Pace has mentioned, I have perhaps another thought, that it is not just the Defense Department that has these concerns. There are several other agencies of our Government that are actively engaged. Together, we ought to continue working the problem.

The other point would be that I think it is well known to everybody that it is not just a former Soviet Republic problem. We must be diligent around the world for weapons of mass destruction and be on our guard in more than just that sector. Nunn-Lugar has certainly pointed us in the right direction, but there are other issues too that we ought to be very careful about.

Senator BEN NELSON. This is not so much a question as it is a comment of optimism. It is encouraging that there is a recognition that we have to think outside the box, as we protect for homeland security and for our force protection, that we are willing to think of new ideas.

I hope it does not get to the point, either in protecting against the use of these weapons against ourselves or in the protection of other areas, that we are unwilling to listen to people such as Tom Clancy, who make their living thinking outside the box, entertaining and thrilling us with their novel ideas. I hope that we, in our intelligence efforts, are willing to listen and bring people in who will challenge our thinking about security rather than simply go with the old ways. If you always do what you have always done, you will always get what you have always got. We have to move beyond that. I am encouraged to hear you suggesting things of this sort, and I appreciate it.

My time is expired. I, too, have to return to the Senate floor because I have an amendment. Thank you.

Senator CLELAND. Senator Nelson, would you consider entering Senator Nunn's op-ed piece into our hearing record?

Senator BEN NELSON. If there is no objection, I certainly would. Thank you.

[The article of Senator Nunn follows:]

The Atlanta Journal-Constitution

## Living in a New Era of Insecurity

September 16, 2001

OPINION

By SAM NUNN

The bitter events of last week will never pass from the American memory. But whether they are remembered as an isolated, unrepeatable horror or the first nightmare in a new era of insecurity may well depend on what we do now.

The terrorists who planned and carried out the attacks of Sept. 11 showed there is no limit to the number of innocent lives they are willing to take. Their capacity for killing was restricted only by the power of their weapons.

As we strengthen airport and airplane security, we must not automatically assume that the next attack against America will be like the one we just experienced.

Though we may not yet know with certainty which group sponsored these attacks, we do know that Osama bin Laden declared in 1998 that acquiring weapons of mass destruction is "a religious duty." This statement should not be taken lightly. We have had a look at the face of terrorist warfare in the 21st century, and it gives us little hope that if these groups gained control of nuclear, biological and chemical weapons they would hesitate to use them.

As America prepares a response, we must build a new framework for national security that protects us from the full range of new dangers we face.

Ten years ago a communist empire broke apart. Its legacy: 30,000 nuclear warheads; more than 1,000 tons of highly enriched uranium; 150 tons of plutonium; 40,000 tons of chemical weapons; 4,500 tons of anthrax and tens of thousands of scientists who know how to make weapons and missiles but don't know how to feed their families. Russia's dysfunctional economy and eroded security systems have undercut controls on these weapons, materials and know-how and increased the risk that they may flow to hostile forces.

Our nation understands from heart-shattering experience that America is targeted

for terrorist attack. But we do not fully grasp how Russia's loose controls over weapons, materials and know-how dramatically increase our vulnerability to an attack with nuclear, biological and chemical weapons. In 1998, an employee at Russia's premier nuclear weapons laboratory was arrested for trying to sell documents on weapons design to agents of Iraq and Afghanistan. Just this year, a former bin Laden associate admitted to a federal grand jury his role in a plot to purchase uranium.

Threats of terrorism and threats of weapons of mass destruction are not separate, but interrelated and reinforcing. The world's security now depends in great part on who is faster and smarter - those trying to get weapons, materials and know-how, or those trying to stop them.

To reduce these threats to our own security, we have - for the past 10 years - helped the Russians secure weapons and weapons materials to prevent theft, convert nuclear weapons facilities to civilian purposes and employ their weapons scientists in peaceful pursuits. But we need to do much more.

Russia itself has experienced terrible terrorist attacks in recent years, and its outpouring of support in the past few days indicates there may be a real opportunity for enhanced U.S.-Russia cooperation.

Early this year, a distinguished bipartisan task force declared loose weapons, materials and know-how in Russia "the most urgent unmet national security threat to the United States," and called for a fourfold funding increase to reduce these threats. We need to reflect this sound advice in our budget priorities. Keeping weapons of mass destruction out of terrorists' hands is either a priority or an afterthought. If it is an afterthought, after what?

The tragic events of this week have given us a rare opportunity to lead a world coalition against terrorism. NATO, for the first time in 52 years, has formally declared that the alliance has been attacked, and 19 democracies are now committed to join America in hitting back. We also have other partners in Europe, Asia, the Middle East, Latin America, and Africa.

To carry out the Bush administration's declaration of war against terrorism, we must:

- Prevent terrorist groups from getting nuclear, biological or chemical weapons, weapons materials and know-how.
- Eliminate terrorist cells wherever they are, including in the United States.
- Enlist the support of our coalition partners to destroy the infrastructure and cut off the funding of terrorist groups wherever they are.
- Make no distinction between the terrorists who committed these acts and those who knowingly harbor them, as President Bush has said.
- Take every feasible and reasonable step in our military planning to avoid inflicting large numbers of civilian casualties that will only sow the seeds for the next generation of fanatical, suicidal terrorists.
- Make it clear by our words and actions that our war is against terrorism, not a war against Islam at home or abroad.
- Continue to address the underlying conflicts and conditions around the world that breed fanatical hatred and terrorism - probably our most difficult challenge.
- Promote and enhance the diplomacy, intelligence gathering and cooperation that are our first line of defense.

In implementing this strategy, we must make sure that we don't undercut the international cooperation we need to protect ourselves against a wide range of

dangers.

The United States cannot identify and eliminate terrorist groups, destroy their funding and support, apply pressure to rogue regimes, secure dangerous materials, limit the spread of weapons of mass destruction and gather intelligence without the support and active cooperation of allies and former adversaries. While we must be prepared to act alone if necessary, if we are going to go after terrorists before they come to our shores, we must have partners abroad.

We must develop a comprehensive defense against the full range of threats, based on relative risk and supported by strong alliances so that the pain of today will not be known by the children of tomorrow.

*Former U.S. Sen. Sam Nunn (D-Ga.) is co-chairman of the Nuclear Threat Initiative, an organization working to reduce the threat from nuclear, biological and chemical weapons. He was chairman of the Senate Armed Services Committee.*

Senator CLELAND. Thank you very much.

Senator HUTCHINSON.

Senator HUTCHINSON. Thank you, Mr. Chairman.

If I might pick up on Senator Nelson's comments regarding our force protection and homeland security. For quite a while, I have expressed serious concerns about our military vaccination program, which has been in disarray for a number of years. General Pace, if I could just ask you, are the troops that are being deployed to the Middle East in your opinion receiving adequate protection against biological weapons?

General PACE. Sir, to my knowledge, not all the troops we are deploying have had the opportunity to receive the vaccination because of the lack of vaccine. I do not know the specifics. I can get you who has and who has not, but I would be surprised if all the forces that are deploying have had the opportunity because it has not been available recently.

Senator HUTCHINSON. Right. Of course, that is the only answer we can give. We know that the vaccines have not been available because of a disastrous program over the last several years.

As I listened to Senator Roberts talk about the hearings on the failures of the intelligence services and how we rue our failure to either provide the resources or to provide the guidance or to make the adjustments to have properly alerted us to what we were facing, I fear that we are going to, in the years ahead, look back at the failure that we have had on our vaccine production program or lack thereof, and we are going to rue that day. We are going to rue the fact that we have not taken adequate steps, that we have not taken that issue seriously enough, and that we have not moved quickly and expeditiously enough. I think the implications are not just for force protection, but for homeland security and the threat of biological, terrorist attack upon the United States. Frankly, as I remarked to General Myers, the tragedy of New York City would pale in comparison to a biological weapon attack on the homeland or upon our forces who are inadequately protected.

I hope that we will now begin to take this issue very seriously, and move toward a vaccine production facility that will have the backing of the United States Government and the assurance that

those vaccines are going to be available not only for our military but for our public.

General Pace, you mentioned in response to Senator Roberts' questions about homeland security and the role of the military in homeland security that there are certain lines that you would not feel comfortable crossing as a citizen. Can you expand upon that? Where is that line?

General PACE. Sir, I think if it is properly the role of law enforcement agencies in this country, it should remain role of the law enforcement agencies in this country. If we are going to expand military capabilities in particular areas, I think we should also look to what law enforcement capabilities need shoring up in this country and exert or apply the proper resources to that.

I would think one area that the military could assist in, for example, would be chemical decontamination. It would be very useful for our Reserve and National Guard Forces to have a chemical decontamination capability. That would be very useful inside the U.S. military structure, but would also possibly be very useful to support civil authorities in the homeland.

I would not want to see U.S. troops given the authority to arrest citizens, for example, just to use two examples of the kinds of things that I think are valuable to do and things that would be, in my mind, threats to the Bill of Rights.

Senator HUTCHINSON. Good. Thank you.

General Pace, when do you anticipate the Quadrennial Defense Review (QDR) will be submitted to Congress, and will it take into account the new strategic realities since September 11?

General PACE. Sir, what I have been told in the building is that the Secretary of Defense intends to meet his obligation of sending the QDR to this building by the 30th of September. I have no reason to believe that is untrue.

We all had the opportunity, as combatant commanders, to participate in the development of the QDR. If anything, the recent events have validated many of the concepts that were being put into the QDR. I think in a very real sense, the QDR already embodies the lessons that we would reinforce, sir.

Senator HUTCHINSON. General Handy, let me join Chairman Cleland in thanking you for your support of the C-130 program. Does the active duty Air Force currently have any of the C-130Js?

General HANDY. Not yet, Senator.

Senator HUTCHINSON. It was a leading question. Go ahead.

General HANDY. As we have discussed many times, our current plan for the C-130J beddown started with the hurricane hunters at Keesler, Mississippi and has continued to respond to some of the oldest aircraft that the Air National Guard has. We currently have plans to introduce the "J" appropriately through active duty units by targeting the schoolhouse for the C-130, as well as the oldest aircraft in our fleet at Pope and Ramstein. Those plans are on target, and with your tremendous support on this committee, we look forward to executing it.

Senator HUTCHINSON. Thank you for that. It has come to my attention that the active duty C-130 fleet is significantly older than the Reserve and National Guard.

General HANDY. Absolutely. Just anecdotally, several of the aircraft I flew in my checkout and initial program in 1968, I still fly. Aircraft I flew in 1970 in Vietnam that supported me well then as a pilot, we are still flying at Pope and Ramstein. So, that is a vote for an incredible airplane. It also says, no sort of dagger at my own personal age in the cockpit, but these are old airplanes, Senator, and we certainly, as you well appreciate, need to replace them.

Senator HUTCHINSON. Thank you, General Handy. My time is up. Thank you, Mr. Chairman.

Senator AKAKA [presiding]. Thank you very much.

At this time I would like to call on Senator Collins.

Senator WARNER. I wonder if the Senator would be kind enough to yield to me because I am on the floor managing the bill, and I have a very strong need to get back right away.

Senator COLLINS. I would be happy to.

Senator WARNER. Would that be agreeable?

Senator AKAKA. Senator Warner.

Senator WARNER. I will not take but a minute.

General Pace, as one who wore marine green with great humility many years ago, I cannot tell you the pride that I take in seeing our President recognize you first as an individual and then, of course, as the first marine in the history of the United States to serve in this high a position. It is a great recognition of your own career.

As I remarked to you yesterday when we spoke together in my office, General Jones undoubtedly laid the path to this appointment and you recognize that. He was under serious consideration himself for the top slot, and then at his own initiative he withdrew because of his loyalty and the longstanding tradition of commandants of the Marine Corps: when they get their assignment by the Commander in Chief they serve out their terms.

The combination of these factors led to your appointment, and you are eminently qualified to take on this heavy responsibility at this very critical time in the history of our Nation. I thank you and I thank your family for also volunteering to stand by your side in the years to come.

General PACE. Thank you, sir.

Senator WARNER. Admiral Ellis, you and I have known each other for many years, and again the President has recognized excellence within the ranks to take on this responsibility. As you and I visited yesterday, we shared our views on the need for you to review the work done by your predecessor, particularly his ability to, from time to time, communicate to Congress, both in hearings and in private sessions with Members of Congress, the complexity of our strategic posture and the need for the utmost care as the President arrives at decisions predicated on the recommendations of people in your position, as well as the Chairman of the Joint Staff, and others.

I wish you well in this task because it will be an integral part of our future relationships primarily with Russia. You and I know full well of the need to move forward in this area for both nations. I wish you luck, together with your family.

Admiral ELLIS. Thank you very much, Senator.

Senator WARNER. General, when we visited yesterday you said you have some of the oldest inventory and some of the newest inventory, and somehow you have to bridge the gap between the old and the new aircraft and press on with future acquisition of the C-17, as well as the J model of the C-130. You also have to keep up the morale of your brave aviators, as they fly some of those machines which are older than they are in some instances. Am I not correct on that?

General HANDY. Yes.

Senator WARNER. But the B-52 fellows laid down that tradition and established it well, and I am sure your pilots and air crew will do the same.

I am interested, though, in this program by which there could be private sector participation in another acquisition of C-17s. Would you basically outline the program that we discussed yesterday, and address the procedural aspects as the Department of the Air Force looks at that program?

General HANDY. Thank you, Senator.

Senator WARNER. It is the one that General Cassidy, one of your predecessors, has worked on for some period of time.

General HANDY. We currently have a proposal. There is a Request for Proposal (RFP) out to industry now to approach, primarily, the potentially large or even small package carriers to acquire the C-17, up to 10, to introduce as a commercial variant of the C-17 that, in times of crisis or need, could be put in service of the United States Air Force and the Services who need that lift capability.

Senator WARNER. In other words, recalled from the private sector and taken into the active Air Force rolls. Is that correct?

General HANDY. That is correct. The advantage, of course, is that the Air Force gets the lift that they produce without the cost of having acquired the entire airframe, and it is a combination of an underwritten purchase agreement. Those bidders for that business, supported by the United States Air Force, but primarily by their own dollars out of their pockets.

As we develop this proposal, as we communicate with industry, we are excited about that. It is something that currently the Air Mobility Command and the United States Transportation Command and the Air Force are watching very carefully. It will take as we discussed yesterday, the strong, continued support of this committee as we march forward.

Senator WARNER. It is sort of a first cousin to the Civil Reserve Air Fleet (CRAF) program, which we have had for many years whereby the private sector incorporates in the construction of certain of their passenger aircraft features which then, in the event those aircraft are required for military use, are there in the airframes. This is somewhat different, but the concept is the same, bringing aircraft from the private sector back into active duty, somewhat like a Reserves and National Guard call-up.

The issue that I think requires very careful scrutiny is the private sector undertaking this heavy lift capacity offer at a time when the projected business is not as firm as we would like to see it. Consequently, they would require, I think, some backup by the Federal Government should there come a time they need it after

an honest effort to make this program work. I am not suggesting it will not work. But any financial planner has to be cautious, particularly the private sector that has to protect their stockholders and lenders. Then, if it does not work, there is a system by which these planes can be brought into the Department of the Air Force and that Congress can authorize and appropriate the necessary funds to acquire them from the private sector.

That is an area which I understand you are looking at now, and eventually some proposal, hopefully, will come before Congress. Am I correct?

General HANDY. Yes, sir. The current analysis clearly demonstrates that this is a viable option for industry, so it is very appealing to a wide range of potential bidders out there today. But as you point out very accurately, we are concerned about the long-term impact honestly brought on by the September 11 terrorist attacks. There are some insurance concerns, some liability concerns, that complicate this relationship. We will have to play out in time and be very careful about where we proceed.

Senator WARNER. I intend to work with you and other colleagues here in the Senate, and hopefully we can make it happen.

I thank the chairman. I thank my colleagues.

I shall support each of you. My welcome to your family too, General Handy. I would like to submit my opening statement for the record.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Welcome, General Pace, Admiral Ellis, and General Handy, and congratulations on your nominations.

The world has changed dramatically since you were nominated by the President for these high positions. The importance of these key positions and the grave responsibilities of the individuals placed in these commands have only intensified since September 11. If you are confirmed, as I fully expect, we will look to you for innovative leadership in the difficult and challenging years ahead.

On September 13, only 2 days after the terrorist attacks on the World Trade Center and the Pentagon, we conducted the nomination hearing for General Myers, and the Senate quickly confirmed him as the next Chairman of the Joint chiefs. It was imperative then—and it remains so today—that we demonstrate our resolve and our commitment to meet the new challenges we face by facilitating these nominations in order to provide the Secretary of Defense the strong, determined military leaders he needs to fight this war on terrorism. I thank the Chairman for scheduling this hearing so promptly.

General Pace is no stranger to this committee. If confirmed, he will be the first marine to serve in the capacity of Vice Chairman, a milestone all marines, past and present, can be proud of. In his present capacity, as Commander in Chief, United States Southern Command, General Pace has confronted firsthand the corrosive effects of terrorism. There are numerous, difficult challenges facing our friends and allies in the United States Southern Command region, and I commend General Pace on his service in that area of operations. His many leadership accomplishments, in numerous joint billets worldwide and with combat marines, will serve him well as the Vice Chairman of the Joint Chiefs of Staff.

Admiral Ellis is also well known to this committee. He has had a most distinguished career as a naval aviator. He performed superbly as NATO Joint Force Commander for Operation Allied Force, exercising operational command of U.S. and allied forces involved in Kosovo combat and humanitarian operations. He served admirably as Deputy Chief of Naval Operations for Plans and Policy. He is nuclear-trained officer with extensive command experience.

General Handy, as Vice Chief of Staff for the Air Force, has played a key senior leadership role, directing the Air Staff and serving on the Joint Requirements Oversight Council. He has had extensive experience in the U.S. Transportation Command, serving as director of operations and logistics. He is a command pilot with

more than 4,800 flying hours, primarily in airlift aircraft. He, and all our witnesses, are eminently well-qualified for the positions to which they have been nominated.

Gentlemen, you have my support. I applaud your willingness to serve, and I look forward to working with you.

Senator AKAKA. Thank you very much, Senator Warner.

Senator Collins.

Senator COLLINS. Thank you, Mr. Chairman. Gentlemen, I want to congratulate you on your appointments and thank you for your service to our great Nation. I look forward to supporting each of your confirmations.

General Handy, at my request the General Accounting Office (GAO) has been working for many months with my staff at the Permanent Subcommittee on Investigations of the Senate Governmental Affairs Committee on a project relating to the security of a certain type of facility that falls under the authority of the Transportation Command.

Now, in light of recent events, TRANSCOM has deemed it necessary to classify what were previously unclassified results of the investigation. In fact, we had been scheduled to release the two reports with the GAO on September 13. Due to the classification of the reports, I cannot discuss the details now, but I will say that we found some very serious security problems with these facilities. The problems would make these facilities dangerously vulnerable to terrorists. In short, the sites that we examined are terribly insecure and vulnerable to unauthorized access by criminals or by terrorists.

After we discovered the problems, I immediately telephoned Deputy Secretary Wolfowitz, this was back in May, to alert him to the problems and to urge the Department to move quickly to correct these very serious deficiencies. As a result of my call and his intervention, some steps have, indeed, been taken to improve security at the facilities in question. In my view, however, and in the judgment of the GAO, much more needs to be done, especially in light of the terrorist threat that we face.

My first question to you is, are you familiar, and I realize I am talking sort of in code here, with the findings and the recommendations of my subcommittee's investigation with the GAO? If you are not, I would request that my staff brief you very soon about what we found.

Second, can I count on your commitment to take these very serious security lapses seriously and to resolve completely all the problems that we identified?

General HANDY. Thank you very much, Senator.

Let me assure you that I am familiar with the report and have read it. I agree entirely with every word that you have said. I know that our folks that are out in TRANSCOM, as well as the commander himself, are aggressively pursuing solutions to those problems. I assure you that I will be very eager to work with you and your staff, if I am confirmed in this position, to eliminate every potential problem that we have seen articulated in that report. I will be very anxious to talk with you about it.

Senator COLLINS. Thank you. I look forward to working with you very soon, to make sure that all the steps that need to be taken, are. Thank you for that commitment.

General Pace, last week when I was in Maine, I discussed the role of the National Guard with General Tinkham, who is the head of the Maine National Guard. We talked about expanding the role of the National Guard and our Reservists in homeland security. Could you comment on the critical role of our National Guard and Reserve Forces in the defense of our homeland, and in particular, do you see them playing an expanding role in combatting asymmetric attacks on our Nation, such as we experienced on September 11?

General PACE. Yes, Senator. Thank you. I specifically endorse the concept that our Reserves and our National Guard have a great deal to offer our Nation for homeland security and support to civil authority in that endeavor, everything from the heavy lift capability that they have, to the ability to provide security, communications, and intelligence. There are many ways in which the U.S. military in the form of the National Guard and the Reserves can, in fact, play a key and essential support role to the lead law enforcement agency or lead agency of the Federal Government. I would look for them to expand that opportunity.

Senator COLLINS. As General Tinkham pointed out to me, they are already forward deployed, which is a major advantage to their being able to assist in beefing up our homeland defenses.

General PACE. Yes, ma'am. Just before you were able to join the committee today, we had a previous discussion on that, and, in fact, that exact point was brought out.

Senator COLLINS. Thank you very much. Thank you, Mr. Chairman, and I want to thank my colleague from Louisiana as well.

Senator AKAKA. Thank you very much, Senator Collins.

Senator Landrieu.

Senator LANDRIEU. Thank you, Mr. Chairman. I apologize. I had another committee meeting and had responsibilities on the floor. I know that there have been some excellent statements submitted for the record and excellent questions asked. My staff has been able to brief me on those in a shorthanded way.

Let me say I have a statement for the record that I would like to submit. I would also like to make a few statements and then I ask one or two questions.

I guess it goes without saying, gentlemen, that our military is in a state of transition and transformation. With the tragic events of last week, these transitions hopefully will become more dynamic, and the urgency in which we address them will be more clear. I want to say what you already know, that our traditional notions of warfighting are being, and must be, reconsidered, that our Armed Services must have the vision and wherewithal to adapt to a new paradigm of warfighting. I chair the Emerging Threats and Capabilities Subcommittee, and unfortunately, these threats have emerged and are emerging and developing before our eyes, and they will continue to pose great obstacles to peace and freedom throughout the world. No longer is it a time to be anchored to the way things used to be done.

As I have reviewed each of your backgrounds in preparation for this hearing, I am confident that each one of you has the ability, the intelligence, background, experience, and vision to lead us at an extraordinary time like this. You will have my full support and

my vote in your confirmations, and I look forward to working with all of you as we overcome the tremendous challenges of this new century.

I know you are aware of this, but 260 million-plus Americans count on your good work every day, and the quality of life of millions if not billions of people around the world, will be dependent on the decisions you will make in the months and years to come. You most certainly have my support.

Mr. Chairman, without objection, I would like the rest of my statement submitted for the record.

Senator AKAKA. Without objection, it will be included in the record.

[The prepared statement of Senator Landrieu follows:]

PREPARED STATEMENT BY SENATOR MARY L. LANDRIEU

Thank you, Mr. Chairman, it goes without saying that our military is in a state of transition and transformation. The tragic events of September 11 will, unfortunately, but necessarily so, speed up the transformation. Our traditional notions of warfighting must be reconsidered, and our armed services must have the vision and where with all to adapt to a new paradigm of warfighting. Emerging threats have emerged, and they will only continue to pose an obstacle to peace and freedom around the world. No longer is it a time to be anchored to the way things used to be done. I am confident that you gentleman before us today have the vision to use your new roles of leadership to innovate and create an armed forces that can successfully overcome the new challenges of the 21st century. Two hundred and eighty-five million Americans and millions of people around the world depend on you.

General Pace, it certainly has taken too long for a marine to rise to such prominence on the Joint Chiefs of Staff. As we enter this new era in military strategy and war fighting, I am hopeful that the hard nosed marine work ethic and the innate ability for marines to think intelligently and react quickly will positively affect the hearts and minds of all those on the Joint Chiefs of Staff. I am also excited that you have an M.B.A. The Pentagon is not run like a business. Rather, all too often, the deliberation of procurement, research and development, and readiness issues move through the department of defense at a snail's pace. I am hopeful you can use your business acumen as Vice Chairman to improve the efficiency along your chain of command.

Admiral Ellis, your track record is impeccable. You have served as both a ship captain and fighter pilot. Your background in nuclear engineering can only serve as an asset as Commander in Chief of the U.S. Strategic Command. Deterrence is a critical issue in the 21st century. Moreover, I am confident you will capably oversee the nuclear triad and its deterrence capabilities while working with the Russians to reduce their nuclear stockpiles. The reduction of Russia's nuclear stockpiles is an issue of great importance to me, and I look forward to talking with you today and at a later date on this matter.

I also look forward to working with you both in my role Chair of the Emerging Threats Subcommittee and as a Senator from Louisiana, home to Barksdale Air Force Base and the B-52s that are so crucial to STRATCOM.

What I truly want to know is how a Navy man with such a distinguished career and so many tours at sea will get used to defending the shores of Nebraska?

General Handy, you have performed admirably as an airlift pilot during times of war, and you have served the Air Force well during your time as Vice Chief of Staff. Nevertheless, the importance of Transportation Command today is as great or greater than it has ever been.

TRANSCOM's importance will only continue to grow in the coming years. As you have stated, TRANSCOM is tasked to (a) get our warfighters to the fight, (b) sustain the warfighter during the fight, and (c) bring the warfighter home after the fight. TRANSCOM is displaying its reason for being as we speak, as it delivers service men and women to desolate far reaches across the globe. Under your guidance, I am confident TRANSCOM will accomplish its three objectives.

As Chairwoman of the Subcommittee on Emerging Threats and Capabilities, I look forward to working with all of you as we address new challenges and work to overcome them. Thank you.

Senator LANDRIEU. Thank you.

I just have three questions at this time. General Pace, the North American Aerospace Defense Command is conducting the operation designed to keep hijacked aircraft from being used as terrorist missiles currently in the United States. Meanwhile, Joint Force Command has the responsibility through the Joint Task Force-Civil Support to provide military assistance to civil authorities for the consequence management of weapons of mass destruction.

Does that mean that the defense of the U.S. homeland is assigned to several commands, or are some aspects of homeland defense not assigned at all? This is one of the issues that Congress is grappling with with the administration to try to stand up the kind of operations that we need to. Could you just comment specifically on the record about that and share any thoughts you might have with us?

General PACE. Yes, Senator. Right now, the defense of the United States is shared amongst commands. North American Aerospace Defense Command (NORAD) certainly has the defense responsibilities that you have already mentioned, and Joint Forces Command in Norfolk, Virginia, with their Joint Task Force-Civil Support, has the response to chemical, biological, radiological, and high explosive events to support civil authorities.

It was a part of the Quadrennial Defense Review plan for the way ahead was to determine how best to provide for the security of the United States. That, of course, now has been put on a significantly reduced time line, but that is an item of interest and importance to those in the leadership right now.

I am aware of the need to do that. I am aware of my fellow combatant commanders saying we should do that. I have not yet had any briefings on where we might be, because I currently have my responsibility for SOUTHCOM. But I do know that is a proper and important function to have efficiently conducted for the United States.

Again, I would simply state that one of my concerns would be, as we provide what the U.S. military can provide for the defense of the United States, that we do so with absolute respect for the Bill of Rights.

Senator LANDRIEU. Thank you.

Let me just follow up with your role in SOUTHCOM. I understand that Senator Roberts, the ranking member on Emerging Threats and Capabilities Subcommittee, had asked you this question, but Plan Colombia has been of interest to us both, particularly in light of this new emerged threat. I know that you have gone on record explaining or giving your views about the situation, but could you just take this moment to either add to those thoughts for the record, thoughts that you did not get out on that particular question? Basically should we be aware of something more in light of what has happened? What are our plans of intercepting planes right now, given the pulling of assets to other areas?

General PACE. If I may take those in inverse order, Senator. The Colombian military, the embassy led by Ambassador Ann Patterson, and myself, all are prepared for and support resumption of providing the Colombian military the intelligence support they need so that they can vector to their own aircraft to intercept airplanes.

There are several parts of the two investigations that were done by our own State Department folks and there are a couple of checks that still need to be put in the block, but we have a U.S. military/U.S. State Department agreement and we are prepared to resume that data flow. There is much that we can do through our radar system without having the additional input of some of the airframes that we would like to have, but they are not absolutely critical to the information flow.

To answer your second question, with regard to the money, the hundreds of millions of dollars that are available to the terrorist organizations, the FARC, the ELN, and the AUC, all of those organizations, although not directly linked, that we know of, to Al-Qaeda and the attacks of September 11, the enormous amount of money awash in the international terrorist community needs to be addressed. My recommendation would be that we find a way to suck that money out of the international arena. It would help us both in what we are trying to do for global terrorism and in what we are trying to do to support President Pastrana in Plan Colombia.

Senator LANDRIEU. I hear what you are saying, but the difficulty of actually accomplishing that is quite complicated. Even today, the President is announcing the suggestion of freezing 37 specific accounts. That number might have gone up since this morning. While freezing assets is an important deterrent, it gets to be quite difficult in the way this money is moving through the system.

I thank you for going on record because I think you have made an excellent point.

My time has expired, Mr. Chairman, and I have another committee hearing to attend. I thank you very much. Gentlemen, you have my full support.

Senator AKAKA. Thank you very much, Senator Landrieu.

I want to welcome you even at this late time to this meeting and especially welcome your families who are here and who have supported you. As my wife says, she made me what I am, and I am sure your families have done the same. We welcome you here and know that you made a big difference in the rise of those who have been nominated. I want to also congratulate you for being nominated to the positions to be confirmed.

You know that you come at a time when our Nation is under a huge burden of continuing to keep, not only our country, but also the rest of the world, secure. You, and all of us, have a tough job to do that. With that, you are up for confirmation, and I want to wish you well.

I have read the answers to the advance policy questions and was pleased to see that all of you placed emphasis on the necessity of working together or bringing about a cohesive team to accomplish your mission not only within the military, but with other agencies, as well as with communities that support the military's activities.

I would like to ask General Handy just one question. I am interested in your assessment of the Full Service Moving Project (FSMP) pilot program. You indicated in your advance answers that the military services decided to cease participation in the FSMP at the end of fiscal year 2001 and that USTRANSCOM is going to make an assessment between the FSMP pilot program, the Navy

sailor arranged move pilot program, and the Military Traffic Management Command's (MTMC) pilot program.

Understanding that the FSMP pilot began in January 2001, is there going to be enough data for a fair assessment of this program?

General HANDY. Senator, thank you very much. I can directly answer from an Air Force perspective as the Vice Chief that it is in fact true, as indicated in my advanced remarks. All the services will cease their funding for the full service movement program as it currently exists in test at the end of this month.

One reason for that was the exponential rise in cost within the program lacking a commensurate rise in quality of service to the families involved in those moves. It became very clear that we, in fact, do have a considerable amount of data to support that conclusion.

We will then take the good portions of the data, the good feedback, and develop programs over the near term to try to ensure that when we move family members and the military person as well, that we are doing that with the care and concern that we owe them. This particular project was just not returning quality on the investment.

Senator AKAKA. Thank you very much.

Admiral Ellis, I am pleased to see your support for the National Nuclear Security Administration and its plan to modernize many aspects of the nuclear weapons manufacturing complex. If confirmed, what actions will you take to ensure that the U.S. nuclear stockpile remains safe, secure, and reliable?

Admiral ELLIS. Thank you, Senator.

As you know from the answers to the questions that I submitted, that is certainly my top priority both in my role as CINCSTRAT, if confirmed to that position, and in support of General Gordon in his efforts in the National Nuclear Security Administration.

Clearly, the proper resourcing of NNSA in its roles is essential, and I thank you, other members of this committee, and our Congress for that support. It is critical that we continue to resource them at the level that is appropriate so that they can then deliver on the commitment that they have to the Nation to certify the continued reliability of that strategic stockpile.

My personal commitments are to be involved personally in meeting with General Gordon to familiarize myself, if confirmed, with all of the agencies that have direct oversight on this critical responsibility; to personally visit the laboratories and the infrastructure facilities that are such an important element of this so that I more fully understand the challenges that are confronting NNSA in their august responsibilities; and to appropriately exercise the roles that have been established for CINCSTRAT in assessing the continued safety and reliability of our nuclear stockpile.

Senator AKAKA. Thank you for those responses.

General Pace, with respect to the training range located in Vieques, are you aware of any suitable alternatives that would satisfy the current training capability for the Navy and Marine Corps?

General PACE. Senator, I participated in a long analysis of alternate training sites. Admiral Fox Fallon and I were not able to find another location in the Atlantic or in the Gulf of Mexico that pro-

vided the air, land, and sea space to conduct the full range of operations that we are able to do in Vieques. My short answer to your question is, no, sir.

Senator AKAKA. Given the Secretary of Navy's announcement that training on Vieques will cease in fiscal year 2003 and the fact that there is no suitable alternative training range, as you have mentioned, do you have any thoughts regarding appropriate actions to take to maintain the readiness of the Navy and Marine Corps units which utilize the training range at Vieques?

General PACE. Sir, my recommendation to the Navy and the Marine leadership will be that they continue to use the other facilities that are available to them to hone the skills as best they can. If I can use a football analogy, they will still be able to block, they will still be able to tackle, they will still be able to throw passes and catch them at various ranges; they will be able to perfect those skills. But without Vieques, they will not be able to scrimmage and they will not be able to pull all of the elements together at one time, sir.

Senator AKAKA. I thank you for that. We will be discussing this, or we are doing it right now on the floor of the Senate. I thank you very much for your responses.

I have no further questions, and there are no other Senators to ask questions here. Again, I want to thank you so much for your responses to all of our questions. I want to congratulate you for your nomination and wish you well in your confirmation. To your families, I want to wish them well as they support you.

There being no further questions, this meeting stands adjourned.  
[Whereupon, at 11:45 a.m., the committee was adjourned.]

[Prepared questions submitted to Gen. Peter Pace, USMC, by Chairman Levin prior to the hearing with answers supplied follow:]

DEPARTMENT OF DEFENSE,  
UNITED STATES SOUTHERN COMMAND,  
OFFICE OF THE COMMANDER IN CHIEF,  
*Miami, FL, September 21, 2001.*

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN: As requested, my responses to the questions of your 12 September 2001 letter are attached.

It is my distinct honor to receive the President's nomination to be Vice Chairman of the Joint Chiefs of Staff. I am humbled by the opportunity to continue to serve our Nation, and the magnificent men and women of our Armed Forces.

Sincerely,

PETER PACE,  
*General, U.S. Marine Corps.*

Enclosure.  
cc: Senator John Warner.  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Has your view of the importance, implementation, and practice of these reforms changed since you last testified on this matter?

Answer. No.

*Question.* Do you foresee the need for additional modifications of Goldwater-Nichols in light of the changing environment and possible revisions to the national security strategy? If so, what areas do you believe it might be appropriate to address in these possible modifications?

Answer. I do not see the need for any additional modifications at this time.

*Question.* Based upon your experience as Commander in Chief, U.S. Southern Command and Director for Operations (J-3) of the Joint Staff, do you believe that the roles of the combatant commanders and the Vice Chairman of the Joint Chiefs of Staff under the Goldwater-Nichols legislation are appropriate and that the policies and procedures in existence allow those roles to be fulfilled?

Answer. Yes. In addition to strengthening civilian control over the Armed Forces, it also gives the various unified combatant commanders clear responsibility and authority for accomplishing their respective missions. Command and control of joint forces from the National Command Authorities through the combatant commander has eliminated much of the confusion and competing command and service influences that existed in the pre-Goldwater-Nichols era.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Vice Chairman of the Joint Chiefs of Staff?

Answer. Section 154(c), Title 10, U.S. Code, states that the Vice Chairman performs the duties prescribed for him as a member of the Joint Chiefs of Staff, as well as those duties prescribed by the Chairman, with the approval of the Secretary of Defense.

Currently, in addition to the duties as a member of the Joint Chiefs of Staff, the Chairman has assigned the Vice Chairman to act as the Chairman of the Joint Requirements Oversight Council (JROC), and as his representative to the National Security Council Deputies Committee. Further, the Vice Chairman has been charged with responsibility to stay abreast of on-going operations and policy deliberations, so that he is able to provide appropriate military advice to the President, the Secretary of Defense, and the National Security Council in the Chairman's absence. Although it will be within the Chairman's judgement as to which of these duties I will exercise as Vice Chairman, if I am confirmed, I have no reason to anticipate significant changes.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. From my first command as a platoon leader in Vietnam to my current position as Commander in Chief, United States Southern Command, I have served in command and staff duties that have given me a global perspective and understanding on how our own government functions and a keen appreciation of how fortunate we are to be citizens of the United States. These insights and practical experience will serve me well if confirmed as the Vice Chairman.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of Vice Chairman of the Joint Chiefs of Staff?

Answer. My background and experience have prepared me to assume the Vice Chairmanship of the Joint Chiefs of Staff. That said, it will be important for me to listen to the advice of those around me and to do my homework on each issue and challenge I will face.

#### RELATIONSHIPS

*Question.* Section 162(b) of Title 10, United States Code, provides that the chain of command runs from the President to the Secretary of Defense and from the Secretary of Defense to the combatant commands. Other sections of law and traditional practice, however, establish important relationships outside the chain of command.

Please describe your understanding of the relationship of the Vice Chairman of the Joint Chiefs of Staff to the following officials:

The Secretary of Defense.

Answer. As a member of the Joint Chiefs of Staff, the Vice Chairman performs the duties prescribed for him and other such duties as may be prescribed by the Chairman with the approval of the Secretary of Defense.

Additionally, in the absence or disability of the Chairman, the Vice Chairman acts as the Chairman and performs the duties of the Chairman until a successor is appointed or until the absence or disability ceases. These duties include serving as the principal military adviser to the NCA.

As a member of the Joint Chiefs of Staff, the Vice Chairman may submit advice or opinions to the Chairman in disagreement with, or in addition to, the advice presented by the Chairman to the President, the National Security Council or the Secretary of Defense. The Chairman submits such opinion or advice at the same time he delivers his own, to the President, the National Security Council, or the Secretary of Defense.

The Vice Chairman, as a member of the Joint Chiefs of Staff, may also individually or collectively, in his capacity as a military adviser, provide the Secretary of Defense advice upon the Secretary's request.

*Question.* The Deputy Secretary of Defense.

*Answer.* Under existing directives, the Deputy Secretary of Defense is delegated full power and authority to act for the Secretary of Defense on any matters concerning which the Secretary is authorized to act. As such, the relationship of the Vice Chairman with the Deputy Secretary is similar to that with the Secretary.

*Question.* The Under Secretaries of Defense.

*Answer.* Title 10, United States Code, and current DOD directives establish the Under Secretaries of Defense as the principal staff assistants and advisors to the Secretary regarding matters related to their functional areas. Within their areas, Under Secretaries exercise policy and oversight functions. In discharging their responsibilities, the Under Secretaries may issue instructions and directive-type memoranda that implement policy approved by the Secretary. These instructions and directives are applicable to all DOD components. They may also obtain reports and information necessary to carry out all their functions. In carrying out their responsibilities, communications from the Under Secretaries are transmitted through the Chairman of the Joint Chiefs of Staff.

*Question.* The Assistant Secretaries of Defense.

*Answer.* With the exception of the Assistant Secretaries of Defense for C<sup>3</sup>I, Public Affairs, Legislative Affairs, and Intelligence Oversight, all Assistant Secretaries of Defense are subordinate to one of the Under Secretaries of Defense. In carrying out their responsibilities, as with Under Secretaries, communications from the Assistant Secretaries are transmitted through the Chairman of the Joint Chiefs of Staff.

*Question.* The Chairman of the Joint Chiefs of Staff.

*Answer.* The Vice Chairman performs the duties prescribed for him as a member of the Joint Chiefs of Staff and such other duties as may be prescribed by the Chairman with the approval of the Secretary of Defense. When there is a vacancy in the office of Chairman or in the absence or disability of the Chairman, the Vice Chairman acts as Chairman and performs the duties of the Chairman until a successor is appointed or the absence or disability ceases.

*Question.* The Secretaries of the Military Departments.

*Answer.* Title 10, United States Code, Section 165 provides that, subject to the authority, direction and control of the Secretary of Defense, and subject to the authority of the combatant commanders, the Secretaries of Military Departments are responsible for administration and support of forces that are assigned to unified and specified commands. The Chairman or Vice Chairman when directed or when acting as the Chairman, advises the Secretary of Defense on the extent to which program recommendations and budget proposals of the Military Departments conform with priorities in strategic plans and with the priorities established for requirements of the combatant commands.

*Question.* The Chiefs of Staff of the Services.

*Answer.* As a result of the Goldwater-Nichols Act, the Service Chiefs are no longer involved in the operational chain of command. They have two significant roles. First and foremost, they are responsible for the organization, training, and equipping of their respective Service. Without the full support and cooperation of the Service Chiefs, no CINC can ensure the preparedness of his assigned forces for missions directed by the NCA. As advisors to the Chairman and the NCA and as the senior uniformed leaders of their respective Services, the Service Chiefs play a critically important role in shaping and transforming their Services' force structure and capabilities. If confirmed, I will work closely with the Service Chiefs and their Vice Chiefs to fulfill warfighting requirements.

*Question.* The Combatant Commanders.

*Answer.* The combatant commanders are the warfighters. By law and to the extent directed by the Secretary of Defense, the Chairman serves as spokesman for the Combatant commanders and is charged with overseeing their activities. He provides a vital linkage between the Combatant commanders and other elements of the Department of Defense. When the Vice Chairman is performing the Chairman's duties in the latter's absence, Combatant Commanders' relationships are as if the Vice were the Chairman.

## JOINT REQUIREMENTS OVERSIGHT COUNCIL (JROC)

*Question.* As a combatant commander, you have been the user of the equipment, systems and systems of systems that have been provided by the Services to the operating forces. Over the years, there have been a number of after-action reports that have documented the lack of interoperability and jointness of equipment and systems. In the past year, the JROC has shifted its focus to a more strategic level so as to make sure that the systems coming along are, as General Myers put it in his testimony before the committee, "born joint." If confirmed, you will be the Chairman of the JROC.

*Question.* Based on your operational experience, particularly as Commander in Chief, U.S. Southern Command, do you support this shift in focus?

*Answer.* Yes.

*Question.* What role, if any, do you see for the combatant commanders in the JROC process?

*Answer.* The fundamental changes made to the JROC process, starting 16 months ago, have as their central focus and goal to advance joint warfighting and give future joint force commanders the capabilities they will need to decisively defeat future threats. To this end, the JROC embarked on developing future operational concepts and corresponding architectures that will drive future weapon system requirements as well as crucial changes to doctrine, organization, personnel and other non-material solutions.

In chartering the Joint Warfighting Capability Assessment (JWCA) teams to lead the development of these operational concepts and architectures, the JROC is ensuring that our combatant commanders have an active and visible role in developing and validating those concepts. The JROC has clearly recognized that the involvement of the combatant commanders in developing future requirements is central to delivering the interoperable joint systems and overall capability our warfighters need and deserve. The same holds true for the ability of the combatant commanders to influence and gain the JROC's support to deal with more immediate priorities as they continue to work closely with the JROC during the Planning, Programming, and Budgeting System (PPBS) decision cycles.

*Question.* What is your vision for both the role and relevancy of the JROC?

*Answer.* Since the Defense Reorganization Act of 1986, the JROC has fulfilled a multifaceted role which includes overseeing military requirements generation, defense acquisition programs, and formulating the Chairman's programmatic advice and alternative program recommendations. Early in 2000, the Chairman initiated efforts to strengthen the JROC's strategic focus. These efforts represent a fundamental shift in how the JROC does business, and are anchored on: enhancing the JROC's influence of requirements integration through the development of operational concepts and architectures; integrating US Joint Forces Command joint experimentation efforts into the JROC process; and shifting the JROC's focus to future joint warfighting requirements while still addressing current CINC priorities.

Key to the JROC's strategic focus is the development of operational concepts and architectures that establish up-front interoperability and integration standards. This represents the cornerstone of the JROC's crucial role in transforming the future joint force. In his recent report to Congress on the status of the JROC evolution, General Shelton outlined numerous examples and actions that demonstrate the JROC's progress in accomplishing each of these goals.

*Question.* What changes in its organization, if any, would you recommend?

*Answer.* I would not recommend any further organizational changes at this time.

## ROLE OF U.S. JOINT FORCES COMMAND

*Question.* U.S. Joint Forces Command (USJFCOM) has been assigned the complementary missions of being the chief advocate for jointness and interoperability, being the DOD executive agent for joint concept development and experimentation, and playing a role in the joint requirements process. Those are similar to the functions given to the Chairman/Vice Chairman of the Joint Chiefs of Staff by law and regulation.

If confirmed, how would you envision working with the Commander in Chief, USJFCOM, and what role would you expect that individual to play in the JROC process?

*Answer.* For the last 18 months, the Chairman, Vice Chairman, Services, the USJFCOM CINC, and elements of the Joint Staff have been working to formalize JFCOM's role. JFCOM supports the joint process by evaluating operational concepts chartered by the Chairman and JROC, and must focus its experimentation efforts to support the development of these concepts and architectures. Also, because joint doctrine, organization, training, materiel, leadership/education, personnel and facili-

ties (DOTMLPF) has the potential to be as crucial as materiel, the agreed JROC process will now evaluate those key elements.

If confirmed as Vice Chairman, I will push for continued cooperation between the JROC and JFCOM to enable early review, oversight, and endorsement of critical JFCOM interoperability recommendations.

## VIEQUES

*Question.* Over the past 2 years Naval forces deploying from the East Coast of the U.S. have been unable to conduct live-fire training on the Navy's training range on Vieques, Puerto Rico, which has degraded the readiness of these forces to execute their wartime missions.

Based on your previous experience in looking at potential replacements for Vieques, do you believe a replacement site can be found that satisfies the Navy's goal of providing equivalent training capability for our Navy and Marine Corps units?

*Answer.* No. The Navy and Marine Corps have conducted a number of very thorough examinations of various sites in a search for potential training locations. No other single location in the Atlantic Ocean or Gulf of Mexico provides the air, land, sea space, and support facilities that exist at the Vieques range complex.

*Question.* If so, do you believe this can be accomplished with a single replacement site?

*Answer.* No.

*Question.* Do you believe a replacement for Vieques can be identified and made available for training purposes by May 2003?

*Answer.* No.

*Question.* Do you believe we should cease training on Vieques by a certain date or only when a replacement for Vieques has become operational?

*Answer.* The Secretary of the Navy has made that decision and it is a service call his decision to make.

*Question.* Do you believe the referendum on the future of live-fire training on Vieques currently scheduled for November 6, 2001, should be canceled?

*Answer.* The planning and execution of the referendum on Vieques is an issue addressed by both the current and previous administrations and this Congress. I intend to follow the direction of the President and the laws of the land.

## COLOMBIA

*Question.* As Commander in Chief, U.S. Southern Command, you have played a major role in dealing with the Colombian civilian, military and law enforcement authorities and in overseeing the U.S. military's training of the Colombian military's counter-narcotics forces and the provision of other assistance. Some commentators have criticized U.S. assistance on the basis that some members of the Colombian military have allegedly violated the human rights of its citizens and have cooperated with the paramilitaries; others believe that U.S. assistance should not be limited to fighting drug traffickers and should be expanded to include counter-insurgency so as to preserve Colombia's democratic form of government; and finally, others fear that any U.S. assistance might eventually result in U.S. military involvement in the conflict in Colombia.

Would you provide your views on the appropriate role of U.S. assistance to Colombia?

*Answer.* Our role should be one of continued training of the Colombian security forces because today the combined capabilities of both the Colombian National Police and military are insufficient to provide security throughout the country. Without countrywide security for both citizens and infrastructure, Plan Colombia will not succeed nor will the Government of Colombia be capable of providing law and order.

We can provide the needed training within the current personnel limits and without U.S. military involvement in the conflict. Properly trained counter-narcotics forces will ultimately transform from an exclusive counter-narcotics role to one of providing sustained security.

## MILITARY-TO-MILITARY ENGAGEMENT

*Question.* U.S. Southern Command uses military-to-military engagement, including combined operations, exercises, training and education, security assistance, and humanitarian assistance programs, with host nations' forces to engender regional security.

Do you believe that Southern Command's military-to-military engagement has been successful and is cost effective?

Answer. Yes. Through our investment in military-to-military engagement, we are making a positive difference in helping to strengthen democracy, promote prosperity, and foster regional security in Latin America and the Caribbean. The resources invested in appropriate, focused engagement have helped shape a security environment characterized by increased regional cooperation and improved regional security.

We deploy small preventive forces today to avoid large scale, conflict resolution deployments later.

*Question.* Based upon your assignments elsewhere, do you believe that military-to-military engagement is a valuable tool for other regions of the world?

Answer. Yes.

#### ANTHRAX VACCINATION

*Question.* DOD officials have testified that anthrax is the greatest biological weapon threat to our military force because it is highly lethal, easy to produce in large quantities, and remains viable over long periods of time. The anthrax vaccination program has been curtailed because of limited quantities of FDA approved vaccine.

Do you continue to support the policy of vaccinating our service men and women to immunize them against the use of weaponized anthrax?

Answer. Yes. This is a force protection issue. We must do everything possible as a nation, to protect our soldiers, sailors, airmen and marines from the threats they face in an uncertain environment.

*Question.* If confirmed, will you support full implementation of the Anthrax Vaccine Immunization Program if sufficient supplies of FDA approved anthrax vaccine become available?

Answer. Yes.

#### LESSONS LEARNED

*Question.* What are the most important lessons that you have learned as Commander in Chief, U.S. Southern Command.

Answer. I have gained an appreciation of the strategic importance of the U.S. Southern Command's Area of Responsibility (AOR) to U.S. national security interests. Thirty nine percent of U.S. trade is conducted in this hemisphere. Nearly 35 percent of our oil imports come from Latin America and the Caribbean, which is more than all of the Middle East countries combined. Of every dollar spent by countries in the AOR, 49 cents are on U.S. goods and services. Hispanics are the largest and fastest growing minority in the U.S. due mainly to immigration from Latin America. Although Colombia and counterdrug activities are important, U.S. Southern Command should not become Colombia or counterdrug centric. The strategic importance of the region is far too great to neglect our other partners and issues in the theater. We must strike a balance between our immediate priorities and our long-term interests.

Given the dominant role that military forces traditionally play in Latin America, U.S. Southern Command's comprehensive and multifaceted engagement strategy has, and will continue to positively influence governments in the region. We must allocate sufficient resources to leverage these engagement opportunities and thereby continue to enjoy the benefits of a stable southern flank.

I have also found that most regional problems and issues in the U.S. Southern Command's AOR require an interagency approach to be fully successful. Coordination and cooperation with the interagency has significantly improved our engagement with Partner Nations, counterdrug operations, and effectiveness in responding to regional crises.

Finally, I must state my admiration for the truly outstanding soldiers, sailors, marines, airmen, coastguardsmen and civilians that serve at U.S. Southern Command. They are dedicated professionals and I am proud to serve with them and their families.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Vice Chairman of the Joint Chiefs of Staff?

Answer. If I am confirmed, my first priority will be to ensure our soldiers, sailors, airmen, marines, and coastguardsmen are ready to meet the near-term challenges of executing the tasks that support our National Military Strategy. We must ensure they are organized, trained, equipped, and supported with the tools required to protect our Nation's security interests—both at home and abroad. Second, we must have the proper force structure to implement this strategy. Third, we must make

the investment to modernize, recapitalize, and transform our forces to meet the challenges of the 21st century.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I'll assist the Chairman in working with the Secretary of Defense, the Service Chiefs, and the combatant commanders to ensure we focus on readiness issues for the near-term challenges while implementing programs in concert with the Secretary's Defense Planning Guidance to transform and modernize the force.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Vice Chairman of the Joint Chiefs of Staff?

*Answer.* The most important function of the Vice Chairman is to assist the Chairman in his duties to provide military advice to the Secretary of Defense, the President, and the National Security Council. Currently, there are no major problems in performing this function.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, one of my top priorities would be to assist the Chairman in his efforts to better equip our staffs to enable swift, accurate information flow. Our information and decision capabilities are critical to providing accurate and timely advice to the National Command Authority (NCA). We must ensure that these systems are state of the art and interoperable. Furthermore, we must ensure that our transformation efforts enhance joint command and control throughout DOD.

#### COMBATTTING TERRORISM

*Question.* The Joint Task Force-Civil Support (JTF-CS) located within Joint Forces Command is a relatively new task force that is expected to be a key player should the Department of Defense be called upon to play a supporting role in the U.S. Government's response to a domestic weapons of mass destruction (WMD) event.

What steps do you think should be taken to ensure that the JTF-CS is fully prepared to fulfill its responsibilities in the event of a domestic WMD event?

*Answer.* Joint Forces Command was directed to create a full-time, standing Joint Task Force Headquarters for Civil Support capable of responding to a Lead Federal Agency (e.g., the Federal Emergency Management Agency) request for assistance during an event involving Chemical, Biological, Radiological, Nuclear, or High Explosive (CBRNE). Though JTF-CS has no standing forces assigned, forces may be assigned, attached, or placed under the operational control of JTF-CS on a situational basis.

Important steps associated with developing the capabilities of JTF-CS have already taken place, to include mission analysis, (including possible expansion) and then developing internal and external plans and exercises with the interagency. In light of recent events, it is clear that the capabilities of this trained Joint Task Force Headquarters are more critical than ever if DOD should be needed to respond for Consequence Management (CM) support to CBRNE incidents. Continued interagency liaison and training exercises are critical to the continued refinement of tactics, techniques and procedures to ensure a rapid and efficient DOD response.

#### ENCROACHMENT

*Question.* On November 27, 2000, the Senior Readiness Oversight Council identified several "encroachment" problems confronting the Department of Defense including protection of endangered species, unexploded ordnance and other constituents, commercial demand for bandwidth and frequency, sustainability of the maritime environment, demand for use of airspace, protection of air quality, abatement of airborne noise, and growth of urban areas. At a March 20, 2001, hearing before the Readiness and Management Support Subcommittee, representatives of the military services expressed concern that this encroachment was hindering their Title 10 responsibility to train the forces.

If confirmed, what actions would you take to address these problems?

*Answer.* Training is critical to the readiness of combat forces and encroachment is a serious issue with national security implications. Under Title 10, U.S. Code, training of the Armed Forces is a Service responsibility, and the Services are working hard not only to maintain their training facilities, but to improve their stewardship of the environment, while strengthening their relationships with local communities.

There is a collaborative effort within the Department of Defense to address encroachment issues. We have draft action plans for the various aspects of encroachment. We are working a community outreach program to minimize the impact of encroachment by fostering a dialogue with local leadership, discussing work-around initiatives, and developing potential technology solutions to provide a similar level of training.

This is a solid and prudent approach for resolving the encroachment issues. If confirmed, I'll continue to support these efforts.

#### READINESS REPORTING SYSTEM

*Question.* The systems that the military services use to measure their readiness have been criticized as outdated and inappropriate for a military of the 21st century. Some of the specific criticisms raised have been that the systems measure past readiness rather than future readiness, and measure the readiness of the forces to perform a major theater war mission rather than the mission to which they are currently assigned.

Do you agree with these criticisms and, if confirmed, what actions would you take to change the readiness reporting system?

*Answer.* I agree in part. As Vice Chairman, I will be involved in the readiness of the force, in the assessment process, and in identifying solutions to our shortfalls. The Joint Staff hosts annual CINC/Service conferences on readiness, and based on the CINC/Service's feedback, the focus on joint warfighting is the proper emphasis, and is also in accordance with Section 117, Title 10, U.S. Code. Units are designed-manned, armed, equipped, and trained to conduct wartime missions. But I also recognize the necessity to assess our readiness for missions other than war. Less than 2 years ago, the Joint Staff created a reporting mechanism within the Global Status of Resources and Training System to do this. While this was a good first effort, we need to explore the expansion and/or refinement of this reporting mechanism. As set forth in the DPG, the Services and Chairman must recommend to the Secretary of Defense a comprehensive readiness reporting system. If confirmed, I will assist the Chairman to further enhance the timeliness, accuracy, and usefulness of the readiness reporting system.

#### CINC-IDENTIFIED READINESS DEFICIENCIES

*Question.* Over the last several years, the Quarterly Readiness Reports that the Department prepares for Congress have outlined a number of CINC identified readiness related deficiencies. Many of these are listed as Category I deficiencies which entail significant warfighting risk to execution of the National Military Strategy. Although these deficiencies have been reported for the past several years, they have not as yet been effectively addressed. This has raised concerns that the requirements of the warfighting CINCs are not being incorporated into the military services budgets and the Department's acquisition process.

If confirmed, what actions would you take to ensure that these requirements are understood and funded within the Department's budget?

*Answer.* If confirmed, I will assist the Chairman to report the combatant commanders' identified readiness deficiencies. I will also assist the Chairman to make assessments and recommendations to the Secretary of Defense regarding the reporting system, the effectiveness of the Services' budgets, and the acquisition process to solve these deficiencies.

#### COMMERCIAL VS MILITARY REQUIREMENTS FOR FREQUENCY SPECTRUM

*Question.* The Federal Government is trying to identify a band of frequencies that can be used for the operation of 3rd Generation Wireless Communications devices. As a part of this overall effort, the Department of Defense conducted a study to determine the cost and operational impact that would result if the military services were to surrender the use of the 1755–1850 MHz band of frequencies on which they currently operate their equipment. That study found that it would take at least \$4.3 billion and 17 years to vacate the band if a suitable band of alternative frequencies were identified for the Department's use. The Secretary of Defense and General Shelton recently signed a letter to Members of Congress that outlined the importance of spectrum availability, and this band in particular, for the Department's operations.

What is your view of that assessment?

*Answer.* I fully support the position of the Secretary of Defense and General Shelton. Spectrum access is vital to combat operations and training. Guaranteed access to spectrum is a cornerstone of information superiority and our warfighting abilities. Without this access, the ability of the Department to use current and

planned weapon systems, to employ new technologies, and to effectively command and control conventional and nuclear forces is seriously compromised. The 1755–1850 MHz frequency band supports over a \$100 billion investment in key satellite, air combat training, precision weapons guidance, and battlefield communications systems. These systems provide commanders and their forces real-time intelligence, voice, data, and video information and precision strike ability necessary for a leaner, more agile and more flexible force to meet global mission requirements. Competition for spectrum, both nationally and internationally, is increasing and the Department's growth and need for spectrum parallels commercial industry's needs. We must ensure any spectrum decision carefully considers national security, the needs of commercial interests, and other important national interests.

We are fully committed to cooperating with Congress and the Federal Communications Commission and within the administration in finding solutions for 3rd generation implementation that meet commercial needs while protecting essential national security capabilities.

#### ROLE OF CINC'S

*Question.* Based on your service as the Commander in Chief, U.S. Southern Command, do you have any recommendation on ways to improve the effectiveness and capabilities of the regional combatant commanders?

*Answer.* Sound management of PERSTEMPO, equipment modernization, and investment in infrastructure will lead to more capable and efficient forces. One area in need of greater interagency synergy is the implementation of policy decisions. We need a mechanism at the national level to track and coordinate the efforts of individual departments.

#### QUALITY OF LIFE, U.S. SOUTHERN COMMAND HEADQUARTERS

*Question.* Since the establishment of U.S. Southern Command Headquarters in Miami, there have been consistent concerns over the quality of life of our military personnel assigned to the Command.

What, if any, improvements should be taken to improve the quality of life for these dedicated personnel?

*Answer.* Concern for quality of life issues is a critical element of leadership, one which properly reflects commitment to our personnel and helps create an environment supportive of recruitment, retention, and readiness. Regarding SOUTHCOM headquarters in Miami, I applaud the efforts of the Army, in particular, and of other organizations such as the Defense Commissary Agency, as they develop new and creative means to support quality of life requirements for SOUTHCOM personnel. The key element is providing predictability—a reasonable degree of consistency in the programs, policies, and services offered from one assignment to another, from one location to another.

The current SOUTHCOM headquarters location is strategically important for executing the mission of the command but it is in no way traditional; there is not an active installation from which to draw support. However, this does provide the opportunity to develop new and creative methods to meet requirements. Partnering with the local community and local businesses has been a key to development and continued improvement of support and services that are comparable to those found on a typical military installation. Childcare requirements, for example, are addressed by contracting for available space at nationally accredited childcare centers so that the service member pays rates comparable to those at any military installation. Junior enlisted housing is another example, we lease apartments from the existing capacity in the local community to provide for our junior personnel—and currently no one is on a waiting list. These are just two examples of progress.

Still, there are shortcomings. We have not yet established a partnership within the local community to approximate typical commissary savings for service members. However, we have received great support and flexibility from the Defense Commissary Agency to bring commissary benefits and savings to military personnel residing in Miami through a "Tent Sale" every 4 months. This is only an occasional relief, but it makes a positive impact and takes us a step closer to predictability. Another concern is with medical support. There is a small medical clinic and dispensing pharmacy at the headquarters that adequately serves as the primary care manager for SOUTHCOM active duty personnel and their family members. Additional requirements for specialized treatment, laboratory work, or dental care are met through the network of providers in the greater Miami area that participate with Tricare. The turnover of doctors participating in Tricare has been frustrating. Implementing changes or procedures that decrease the turnover in doctors will greatly improve continuity of care and satisfaction. Further, problems with adminis-

trative and billing processes have caused difficulty in the past. Though some progress has occurred in this area, systemic improvements are needed. In addition, full implementation of the basic allowance for housing entitlement increases—eliminating the “out-of-pocket” burden for our personnel—is especially important. Finally, we will continue to seek a cost-of-living allowance (COLA) to offset the high cost in Miami.

#### COMMAND AND CONTROL

*Question.* Despite significant investment in military service, national and combatant commander command and control systems, more than one of the recently-convened defense review panels concluded that U.S. forces do not have a deployable, joint command and control system that can immediately be placed into operation to coordinate the efforts of U.S. and coalition forces.

What actions do you think are necessary to ensure the rapid development of such an important capability?

*Answer.* This is an absolutely critical capability and we do have deficiencies in addressing the full command and control interoperability required by a Joint Task Force (JTF) headquarters. The current DPG calls for plans to establish standing JTF headquarters and recommends improvements to operating procedures and capabilities, to include addressing rapidly deployable interoperable command and control. This will be a major part of the experimentation in JFCOM's Millennium Challenge 2002 exercise. Additionally, JFCOM will take the lead to identify and fix current mission critical JTF C2 legacy interoperability issues. Further, I fully support the criticality of development and fielding of rapidly deployable, interoperable, command and control systems. If confirmed, I will, in my delegated role as Chairman of the Joint Requirements Oversight Council along with the Service Vice Chiefs, provide the necessary senior military perspective to achieve an interoperable joint command and control capability.

#### INFORMATION OPERATIONS

*Question.* Joint Vision 2020 and various defense reviews have highlighted the importance of information operations in future warfare.

What role and what obstacles do you see for information operations as an integral part of US joint military operations?

*Answer.* Information operations are a means to ensure decision superiority—the key to successful military operations in the future. IO provides non-kinetic options, with promising effects to defeat adversaries, at low-risk to military forces. But we're faced with three challenges: planning and executing these activities the same way we would any wartime campaign; integrating the military's efforts with those of other U.S. Government agencies; identifying and removing unintended effects while keeping up with rapidly changing information technologies. We can meet these challenges.

*Question.* Are you satisfied that there is unity of effort within the Department of Defense in the development of information operations capabilities?

*Answer.* Emerging computer network attack and defense capabilities represent an important aspect of information operations. We have been working hard to enhance the security of DOD computer networks and to defend those networks from unauthorized activity (e.g., exploitation of data or attack). Recognizing that the threat to our networked systems is real and increasing, we established the Joint Task Force—Computer Network Defense in December 1998, and assigned responsibility for that mission to U.S. Space Command in 1999. We have incorporated intrusion detection software in many of our networks, erected firewalls, and increased awareness training for our personnel through our information assurance program.

In October 2000, the Commander in Chief, U.S. Space Command (USSPACECOM), assumed responsibility as the military lead for computer network attack as well, and charged USSPACECOM with overseeing the development of capabilities and procedures for this aspect of offensive information operations. In April 2001, U.S. Space Command redesignated the Joint Task Force—Computer Network Defense as the Joint Task Force—Computer Network Operations to reflect this new mission. The Services also cooperate with other Defense and Intelligence Community agencies in efforts to defend the networks that are vital to our national security.

As you have indicated, the Services, Defense Agencies, and combatant commanders are all devoting a great deal of effort to this area. I believe we have the structures and procedures in place to keep duplication of effort to a minimum and ensure advances in information operations capabilities across the Department.

## TRANSFORMATION/REVOLUTION IN MILITARY AFFAIRS

*Question.* The President and the Secretary of Defense have called for a significant transformation of at least a portion of our Armed Forces to counter emerging 21st century threats.

In your opinion, what will constitute transformation of our Armed Forces?

*Answer.* Transformation is an on-going process for conceptualizing, developing and fielding new combinations of operational concepts, capabilities, organizational arrangements and training regimens that provide U.S. joint forces with advantages that fundamentally change our own, or render less effective potential adversaries', ways of waging war. It is usually evolutionary in nature, but may be revolutionary. Modernization of our weapons systems, information technology, and other defense materiel equipment is a key part, but only one of many elements in the transformation equation.

True transformation can only occur through evolution within all the critical joint force considerations of doctrine, organization, training, material, leadership and education, personnel and facilities (DOTMLPF). A comprehensive DOTMLPF approach is necessary to field and employ future capabilities that fundamentally change and improve our operational and warfighting effectiveness.

Joint Transformation also requires changes within the three supporting processes of requirements generation, acquisition, and the Planning, Programming, and Budgeting System (PPBS) processes. Over the past year, the military has made significant strides in the improvement of the requirements generation process through the evolving strategic integration role of the Joint Requirements Oversight Council (JROC). The Requirements Generation System (RGS) process was shifted from a threat-based system to a joint operational concept and capabilities-based system. Additionally, the process was adapted to enable the introduction and consideration of transformation initiatives from a variety of sources, to include Joint and Service experimentation. The Secretary of Defense is working hard to streamline the acquisition and PPBS processes to facilitate transformation.

*Question.* Are you confident that the defense review process/QDR now concluding will outline a clear vision for transformation within the Department?

*Answer.* The senior civilian and military leadership within DOD have reached consensus on an approach to transformation—one that focuses clearly on six critical operational challenges: (1) homeland defense; (2) projecting forces in anti-access environments; (3) engaging mobile targets at long range; (4) information operations; (5) space operations; and (6) developing a common operational picture. The QDR has identified the need for strengthening joint organizations and operations through the development of standing joint task force headquarters. It calls for increasing joint experimentation and concept development. It places emphasis on exploiting U.S. advantages in intelligence. Finally, it charts a course for transforming U.S. military capabilities over time to address key operational challenges.

## QUADRENNIAL DEFENSE REVIEW

*Question.* If confirmed, you will take office on or about the day the Quadrennial Defense Review (QDR) is forwarded to Congress.

Not having had a formal role in the review process, how do you perceive your role and responsibilities in implementing the recommendations of the QDR?

*Answer.* I did have a role in the process for this QDR. My fellow unified commanders and I had meetings with Secretary of Defense Rumsfeld to discuss this and we were encouraged to participate. I am familiar with the process and direction of the review. If confirmed as the Vice Chairman, my role will be to support the Chairman in implementing the actions directed by the Secretary of Defense.

*Question.* As a combatant commander, were you satisfied that warfighting CINCs had ample access to the review process?

*Answer.* I was satisfied that I had as much time as was available in the review process. There was insufficient time given that a new administration had recently taken office and was populating the defense establishment and establishing its own strategies and priorities.

## JOINT STANDING TASK FORCES

*Question.* At least two of the strategic review panels made recommendations concerning the need for permanent, operations-oriented, joint headquarters to better and more quickly integrate joint forces and conduct complex joint operations. Recent reporting indicates the Department of Defense may recommend the establishment of these standing joint headquarters at each of the combatant commands.

As a combatant commander, did you perceive a need for such a standing operations headquarters in your area of responsibility?

Answer. Yes. In fact, U.S. Southern Command has had its own standing joint task force with JTF-Bravo in Soto Cano, Honduras. JTF-Bravo has served Southern Command's mission and our Nation well both in cooperative engagement and disaster response.

*Question.* In your opinion, are such elements needed at every combatant command?

Answer. This question has been thoroughly debated within the Department of Defense over the past few months. There is a general consensus that some form of standing joint headquarters structure for each geographic combatant command will improve the performance of our joint forces.

The department is considering standing headquarters alternatives, including a model developed within JFCOM's joint experimentation program that will be tested next August during the Millennium Challenge experiment. Any alternative must help build habitual pre-established relationships, provide continuity of planning and operations, and provide baseline Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C<sup>4</sup>ISR), and Standing Operating Procedures.

However, there are many significant issues, including manning, infrastructure, and cost, which we must consider before implementation. Also, each geographic combatant command has different requirements that may drive a different standing JTF headquarters structure. DOD is currently working toward final decision in Fall 2002, following the completion of Millennium Challenge.

*Question.* Should any or all of these headquarters have specifically assigned joint forces that regularly train and operate together?

Answer. The Secretary of Defense tasked the Chairman to examine the issue and submit plans for establishing standing Joint Task Forces (JTFs) in spring 2002. If we successfully implement our standing joint headquarters concept, we can tailor each JTF as required by the situation, leaving forces available for other important uses in peacetime. One of the beauties of a JTF is its flexibility in organization to meet the requirements of each mission. Through effective joint training and aggressive joint experimentation, we can improve joint interoperability and effectiveness without incurring the disadvantages of assigning forces habitually to the standing JTF headquarters.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Vice Chairman of the Joint Chiefs of Staff?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR MARY L. LANDRIEU

##### PLAN COLOMBIA

1. Senator LANDRIEU. General Pace, Secretary of State Colin Powell was scheduled to meet with President Andreas Pastrana of Colombia to discuss Plan Colombia on September 11. What are your views on Plan Colombia as it currently operates? What could be done to improve the efficacy of Plan Colombia? In light of the events of September 11, should the U.S. resume intercepting planes that trigger red flags

out of Colombia because there is a chance such planes could reach U.S. airspace with a weapon of mass destruction?

General PACE. Our current support to Colombia has been properly focused to support President Pastrana in Plan Colombia. Plan Colombia has ten parts, one of those parts is military. Our assistance to the Colombian Counternarcotics Brigade and the provision of the helicopters by the U.S. Congress, through the Department of State, has strengthened Colombia's Joint Task Force South. Since they began operations last December, they have eradicated almost 30,000 hectares and have wiped out some 300 labs. They provide security where they are in Putumayo Province. But the fact of the matter is, if they were to move from that province to somewhere else, then the stability of that province would be undermined.

The other parts of Plan Colombia include things like health, judicial reform, schools, roads, and alternative development. None of these can grow until there is security throughout the Nation. Although Colombian Military and Colombian Police have been strengthened since the beginning of Plan Colombia, the Colombian Military and Police combined is insufficient to provide security throughout the Nation. The proper way ahead in the current support for Plan Colombia is to assist the Colombian Government in building additional counternarcotics brigades. These brigades could take on first the counternarcotics problem and then second transition more into a homeland security type organization that can provide stability—to improve the efficacy of Plan Colombia—so that Plan Colombia can be ultimately successful.

The Colombian military, the American Embassy led by Ambassador Patterson, and myself, all are prepared and support the resumption of providing to the Colombian military the intelligence support they need so that they can vector their own aircraft to intercept airplanes. There is much that we can do through our radar system without having the additional input of some of the airframes that we would like to have but that are not absolutely critical to the information flow. Our capability and procedures that are in place are sufficient to intercept an aircraft, which has triggered a red flag and may be carrying a weapon of mass destruction, approaching U.S. airspace, regardless of its point of origin outside North America.

#### HOMELAND DEFENSE

2. Senator LANDRIEU. General Pace, the North American Aerospace Defense Command is constructing the operation designed to keep hijacked aircraft from being used as terrorist missiles in the United States. Meanwhile, Joint Forces Command has the responsibility, through its Joint Task Force-Civil Support, to provide military assistance to civil authorities for the consequence management of weapons of mass destruction incidents within the United States. Does that mean that defense of the U.S. homeland is assigned to several commands, or, perhaps, some aspects of homeland defense are not assigned at all?

General PACE. An Execute Order was signed 16 October by the Secretary of Defense that delineated the Joint Operations Area, responsibilities, and relationships among the combatant commanders for Homeland Security. The responsibilities and relationships provided in the Execute Order are an extension of guidance already provided for in the Unified Command Plan and other DOD directives.

All aspects of Homeland Defense are assigned to the combatant commanders and the Services. The events of 11 September have illustrated possible areas where seams can be eliminated or mitigated. We are currently reviewing the Unified Command Plan and will make necessary organizational changes for Homeland Security while ensuring we retain the ability to fight and win our Nation's wars.

---

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### ROLE OF JOINT STAFF IN BASE CLOSURE PROCESS

3. Senator THURMOND. General Pace, the Senate is currently considering our defense authorization bill. The bill authorizes an additional base closure round in 2003. The intent of the legislation is not only to eliminate excess infrastructure, but also to reshape the infrastructure with the force structure. What role does the Joint Staff have in the base closure process?

General PACE. The Chairman of the Joint Chiefs of Staff is required to advise the National Security Council, and Congress of the United States concerning all matters of military capability and readiness. Installations contribute to overall force readiness by providing the infrastructure to project and sustain military force to any area of the world where U.S. national interests are threatened. Excess infrastructure de-

tracts from military readiness by diverting limited resources from personnel, training, and equipment modernization programs. During all previous BRAC actions, the Chairman and the Joint Staff conducted analytical reviews in order to develop comments and provide recommendations on operational issues generated from proposed realignments and closures. That analysis is critical to assure continued support to the combatant commands and overall national security.

4. Senator THURMOND. General Pace, what prevents the Department from reshaping the infrastructure based on force structure requirements?

General PACE. In the absence of legislated BRAC authority, there are no existing measures to effectively realign and/or dispose of infrastructure that is not required. Prior to 1977, the Department had much greater authority in the area of closing excess military installations. However, since the enactment of the BRAC law (codified in Title 10, U.S. Code, section 2687) in 1977, there have been no substantial base closures outside of the BRAC rounds specifically authorized by Congress. Section 2687 is extremely restrictive in its terms. Additionally, compliance with the National Environmental Policy Act further restrains the Department's ability to facilitate the closure, disposal, and economic redevelopment of installation properties.

#### INNOVATIVE TECHNOLOGY

5. Senator THURMOND. General Pace, as the Vice Chairman, you will serve as the Chairman of the Joint Requirements Oversight Council, and will have a key role ensuring that our forces have the latest technology and weapons systems to carry out their national security role. Although I believe the JROC has had a positive impact on the types of systems the Services develop, I am concerned that in this era of rapidly changing technology it may slow down or hinder getting that technology into the hands of our warfighters. What are your views on this matter?

General PACE. I agree the U.S. technology base is clearly a national asset, and as JROC Chairman, I am absolutely committed to ensuring our forces are equipped with systems and capabilities that take advantage of the breakthroughs generated by the research and development community in a timely manner. Currently, there are a number of avenues we're already using to incorporate new technology into the system development process such as spiral development, planned "block upgrades," and advanced concept technology demonstrations (ACTDs). We're also reviewing developmental and operational testing plans for opportunities to employ emerging systems in real-world conditions.

Additionally, the combatant commanders' message from the field has remained consistent: they not only want the latest technology, but it's crucial the systems they take to the fight are interoperable. That's where the JROC is adding the most value. I am convinced our current plan to get the JROC involved at the beginning of the requirements process will better integrate complex requirement and architectural issues, more fully incorporate the substantial Joint Experimentation efforts in work at Joint Forces Command, and ultimately drive future weapon systems that are born joint.

Finally, I see JROC reviews as "surgical" in nature, occurring at key points prior to major acquisition milestone decisions. Specifically, the amount of time new systems or requirements require oversight and guidance from the JROC is literally measured in days. So rather than hindering the transition of technology from laboratory to warfighter, the JROC process is designed to ensure requirements are calibrated against the constantly changing threat environment, performance parameters are on-track, and systems are ready to transition from development to production.

In summary, while we continue to look at procedures to improve the responsiveness of our process to technological innovation, the JROC is a vital component in the effort to link the development of material and non-material solutions with a shared view of required operational capabilities to achieve true DOD-wide transformation.

#### RELIANCE ON RESERVES

6. Senator THURMOND. General Pace, the call-up of Reserve Forces to support the war against the terrorists proves the important role the reservists have in support of our national security. Despite the willingness of the reservists to respond to the call of duty, I am concerned that the emerging threats will require increased call-ups of our reservist, which potentially will have an impact on their employment. Since the call-up of reservists reflect a shortage of certain skills in the active ranks,

is it time to adjust the type and number of skills we maintain in the Active Forces so the Nation is better prepared to meet the new threats?

General PACE. As an integral part of the Total Force, we continue to rely on our Reserve components across a wide range of missions. They are essential to current war plans and the homeland defense mission as detailed in the 30 September 2001 Quadrennial Defense Review (QDR) Report and confirmed by the recent call-up for Operations Noble Eagle and Enduring Freedom. The QDR Report also outlines the Department of Defense's transformation strategy for U.S. military forces, which will draw on the strengths and capabilities of the Reserve and National Guard. Some of the most significant issues to deal with in the coming months are the size, composition, and missions of our defense forces. The QDR Report stipulates the Department of Defense will initiate a thorough review of the active and Reserve mix to ensure the appropriate use of the Reserve component. The review will build on recent assessments of Reserve component issues that highlighted emerging roles for the Reserve components in homeland defense, in smaller-scale contingencies, and in major combat operations.

JOINT STAFF

7. Senator THURMOND. General Pace, we frequently hear that the Joint Staff has become too large and is encroaching into areas that have historically been the sole domain of the military departments. What is your perspective on these issues?

General PACE. I disagree with any assertion that the Joint Staff is too large and is encroaching into areas that have historically been the domain of the Military Departments. First, in recent years, the actual number of personnel assigned to the Joint Staff has steadily declined, in spite of the fact that we have had more duties—in addition to our statutory ones—levied upon us. In 1987, the Joint Staff's authorized personnel strength was 1,627. Today, it's 1,242. In keeping with the 15 percent management headquarters cuts directed in the Fiscal Year 2000 National Defense Authorization Act, the Joint Staff is girding for yet another round of cuts that will translate into 195 people. Second, the DOD Reorganization Act of 1986 (also known as the Goldwater-Nichols Act) added considerable definition and clarity to the roles and responsibilities of the Chairman, the Joint Chiefs of Staff, the combatant commanders, and the Services. The roles and responsibilities of the Chairman and his Joint Staff are those spelled out in Title 10, as well as those duties assigned by the National Command Authorities.

QUESTION SUBMITTED BY SENATOR RICK SANTORUM

AFGHANISTAN

8. Senator SANTORUM. General Pace, in 1993, elite United States forces attempted to capture General Mohamed Farrah Aidid, the dominant political leader in Somalia, one of the world's poorest countries. The decision would result in a bloody firefight as Rangers and men of the Delta Force made their seventh attempt to grab Aidid. Eighteen American soldiers died, and 77 were wounded. An estimated 300 Somalis were killed and another 700 wounded, a third of the casualties women and children. General Aidid was not captured and the U.S. withdrew from Somalia.

General, you served as Deputy Commander, Marine Forces, Somalia from December 1992 to February 1993, and as Deputy Commander, Joint Task Force-Somalia from October 1993 to March 1994. Based on your experiences in Somalia, can you share with me your insights on the challenges facing U.S. military forces in Afghanistan? Are there parallels between the U.S. seeking to capture Osama bin Laden and U.S. attempts to capture Somalian warlord Aidid?

General PACE. Since Afghanistan is a landlocked country located a great distance from the United States, we must rely heavily on our forward-deployed forces in order to conduct military operations in that region of the world. Afghanistan is a country of extremely inhospitable terrain with rugged, mountainous regions and numerous choke points. The Taliban know their countryside well and understand the best locations from which to defend and the best routes along which to attack. The weather there is also extreme. Winter is approaching quickly and could impact military operations. I want to reassure you however, that our forces train on a regular basis under varying harsh conditions and stand ready today to answer our Nation's call to arms in this new war on terrorism. I am confident that the American military will prevail.

Both men are leaders of their respective factions, command extreme respect and obedience from their followers, are surrounded by loyal and irregular combatants,

and rely heavily on graft and money to retain power. There are however, stark differences between the two scenarios. Osama bin Laden is widely recognized in the international community as a criminal and a murderer. As such, there exists widespread support to eliminate him and his terrorist organization. Also, Somalia was a limited, small-scale operation compared to the current operation being conducted in Afghanistan. We have committed the full range of military might of the U.S. Armed Forces to this operation. We fully support the President and his vision to root out the terrorists and those who harbor and support them.

---

[The nomination reference of Gen. Peter Pace follows:]

NOMINATION REFERENCE

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 4, 2001.*

*Ordered,* That the following nomination be referred to the Committee on Armed Services:

The following named officer for appointment as the Vice Chairman of the Joint Chief of Staff and appointment to the grade indicated while assigned to a position of importance and responsibility under Title 10, United States Code, Section 601 and 152:

*To be General*

Peter Pace, 7426.

---

RÉSUMÉ OF PETER PACE, GENERAL, U.S. SOUTHERN COMMAND

General Peter Pace is currently serving as the Commander in Chief, U.S. Southern Command, Miami, Florida.

General Pace was born in Brooklyn, NY, and raised in Teaneck, NJ. He received his commission in June 1967, following graduation from the United States Naval Academy. He also holds a masters degree in Business Administration from George Washington University (1972). Upon completion of The Basic School, Quantico, VA, in 1968, he was assigned to the 2d Battalion, 5th Marines, 1st Marine Division in the Republic of Vietnam, serving first as a rifle platoon leader and subsequently as assistant operations officer.

Returning from overseas in March 1969, he reported to Marine Barracks, Washington, DC. During this tour, he served as Head, Infantry Writer Unit, Marine Corps Institute; Platoon Leader, Guard Company; Security Detachment Commander, Camp David; White House Social Aide; and Platoon Leader, Special Ceremonial Platoon. He was promoted to captain in April 1971. In September 1971, General Pace attended the Infantry Officers' Advanced Course at Fort Benning, Ga. Returning overseas in October 1972, he was assigned to the Security Element, Marine Aircraft Group 15, 1st Marine Aircraft Wing, Nam Phong, Thailand, where he served as Operations Officer and then Executive Officer.

In October 1973, he was assigned to Headquarters Marine Corps, Washington, DC, for duty as the Assistant Majors' Monitor.

During October 1976, he reported to the 1st Marine Division, Camp Pendleton, Calif., where he served as Operations Officer, 2d Battalion, 5th Marines; Executive Officer, 3d Battalion, 5th Marines; and Division Staff Secretary. He was promoted to Major in November 1977. In August 1979, he reported to the Marine Corps Command and Staff College as a student.

Upon completion of school in June 1980, he was assigned duty as Commanding Officer, Marine Corps Recruiting Station, Buffalo, NY. While in this assignment, he was promoted to Lieutenant Colonel in October 1982. Reassigned to the 1st Marine Division, Camp Pendleton, General Pace served from June 1983, until June 1985, as Commanding Officer, 2d Battalion, 1st Marines.

In June 1985, he was selected to attend the National War College, in Washington, DC.

After graduation the following June, he was assigned to the Combined/Joint Staff in Seoul, Korea. He served as Chief, Ground Forces Branch until April 1987, when he became Executive Officer to the Assistant Chief of Staff, C/J/G3, United Nations Command/Combined Forces Command/United States Forces Korea/Eighth United States Army.

General Pace returned to Marine Barracks in Washington, DC, in August 1988, for duty as Commanding Officer. He was promoted to Colonel in October 1988. In August 1991, he was assigned duty as Chief of Staff, 2d Marine Division, Camp Lejeune. During February 1992, he was assigned duty as Assistant Division Commander. He was advanced to Brigadier General on April 6, 1992, and was assigned duty as the President, Marine Corps University/Commanding General, Marine Corps Schools, Marine Corps Combat Development Command, Quantico, VA, on July 13, 1992. While serving in this capacity, he also served as Deputy Commander, Marine Forces, Somalia from December 1992–February 1993, and as the Deputy Commander, Joint Task Force—Somalia from October 1993–March 1994. General Pace was advanced to Major General on June 21, 1994, and was assigned as the Deputy Commander/Chief of Staff, U.S. Forces, Japan. He was promoted to Lieutenant General and assigned as the Director for Operations (J-3), Joint Staff, Washington, DC, on August 5, 1996. On November 26, 1997 he assumed duties as Commander, U.S. Marine Corps Forces Atlantic/Europe/South with Headquarters in Norfolk, Virginia; Stuttgart, Germany; and Miami, Florida. He was advanced to his current grade and assumed duties as Commander in Chief, U.S. Southern Command on September 8, 2000.

General Pace attended Harvard University in the program for Senior Executives in National and International Security.

General Pace's personal decorations include: Defense Distinguished Service Medal; Defense Superior Service Medal; the Legion of Merit; Bronze Star Medal with Combat "V"; the Defense Meritorious Service Medal; Meritorious Service Medal with gold star; Navy Commendation Medal with Combat "V"; Navy Achievement Medal with gold star; and the Combat Action Ribbon.

[The Committee on Armed Services requires certain senior military officers nominated by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Gen. Peter Pace, USMC, in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Peter Pace.
2. **Position to which nominated:**  
Vice Chairman of the Joint Chiefs of Staff.
3. **Date of nomination:**  
September 4, 2001.
4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

5 November 1945; Brooklyn, New York.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to former Lynne Anne Holden.

**7. Names and ages of children:**

Peter Pace, Jr., 25, 26 Oct. 76.

Tiffany Pace, 23, 21 Aug. 78.

**8. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed in the service record extract provided to the committee by the Executive Branch.

None.

**9. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, firm, partnership, or other business enterprise, educational, or other institution.

None.

**10. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Member, Marine Corps Association.

Member, The Retired Officers' Association.

Member, Honorable Order of Kentucky Colonels.

Member, Naval Academy Alumni Association.

Member, National War College Alumni Association.

Member, Board of Directors, Marine Corps—Law Enforcement Foundation—non-compensatory.

**11. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, and any other special recognitions for outstanding service or achievements other than those listed on the service record extract provided to the committee by the Executive Branch.

None.

**12. Commitment to testify before Senate committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

I do so agree.

**13. Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?

I do so agree.

---

[The nominee responded to the questions in Parts B–E of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–E are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement of Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

PETER PACE.

This 18th day of September, 2001.

[The nomination of Gen. Peter Pace was reported to the Senate by Chairman Levin on September 26, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on September 26, 2001.]

---

[Prepared questions submitted to Gen. John W. Handy, USAF, by Chairman Levin prior to the hearing with answers supplied follow:]

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Absolutely. The Goldwater-Nichols Act was a much needed and very timely piece of transition legislation for our military. The issues articulated in the act were real. Pre-Goldwater-Nichols, insufficient JCS review, oversight of contingency planning, unclear chains of command, and inadequate attention to both the quality and training of officers assigned to joint duty hampered the efficient employment of our Armed Forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* Since 1986, the Joint Staff, the Unified Commands, and the Services have vigorously pursued the intent of the Goldwater-Nichols Act. Today, the corporate advice provided by the Chairman of the Joint Chiefs of Staff is detailed, meaningful, timely, and extremely influential. Our civilian leadership trusts that our Armed Forces can and will carry out our assigned missions in the most effective and cost efficient manner possible. The strategic planning, contingency planning, theater engagement planning, crisis response activities, programs and budgets of the Unified Commands and the services are in sync with the National Security Strategy and are based upon realistic combat and support force projections. Lastly, there has been an exponential leap in the quality and education of the personnel assigned to the various joint staffs. The Services now realize that joint experience is an absolute necessity in the career progression of its best and brightest officers and are resolutely filling their joint billet allocations with the same.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspect of these defense reforms has been the demonstrated improvement in the joint warfighting capabilities of the United States Armed Forces. Over the past 15 years, the Goldwater-Nichols Act has given us a focus on joint doctrine, joint professional military education, and coordinated military planning. Chains of command have been clarified from the National Command Authority all the way down to individual on-scene commanders. Today, Combatant Commanders clearly understand their planning, training and execution responsibilities. Equally important, they understand that their ability to articulate their equipment resource needs and priorities weighs heavily in the services' POM inputs and the overall Department of Defense fiscal planning effort.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Do you foresee the need for additional modifications of Goldwater-Nichols in light of the changing environment and possible revisions to the national security strategy? If so, what areas do you believe it would be appropriate to address in these modifications?

*Answer.* The military now has 15 years' experience operating under Goldwater-Nichols it has significantly changed the way the Department of Defense operates. By and large, the changes have enhanced the way our Nation employs its military forces. There may be some areas that could benefit from legislative changes; however, I would like to reserve judgment on this until after I've studied any specific proposals. If confirmed, I would be pleased to share my thoughts with the committee as appropriate.

*Question.* Based upon your experience as Vice Chief of Staff for the Air Force, do you believe that the role of the combatant commanders under the Goldwater-Nichols legislation is appropriate and that the policies and procedures in existence allow that role to be fulfilled?

*Answer.* Based upon my experience as Vice Chief of Staff of the Air Force, the role of the combatant commanders under the Goldwater-Nichols Act seems appropriate to me. Existing policies and procedures appear to allow that role to be fulfilled. If confirmed, I'll carefully monitor my roles and responsibilities under Goldwater-Nichols and share any future observations with the committee as appropriate.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Commander in Chief, U.S. Transportation Command?

*Answer.* The mission of the Commander in Chief, United States Transportation Command is to provide air, land, and sea transportation for the Department of Defense (DOD), both in time of peace and time of war. To accomplish this mission, for day-to-day execution, the Commander in Chief, U.S. Transportation Command relies on U.S. Transportation Command's Component Commands: the Air Force's Air Mobility Command (AMC); the Navy's Military Sealift Command (MSC); and the Army's Military Traffic Management Command (MTMC). To accomplish this mission requires leadership of a blend of active and Reserve Forces, civilian employees, and partnership with commercial industry to provide mobility forces and assets in a force structure continuum designed to make a seamless transition from peace to war.

That said, the number one mission of the Commander in Chief, United States Transportation Command is to provide strategic mobility support to the regional CINCs during crises. Simply put, the U.S. Transportation Command wartime mission has three objectives:

1. Get the warfighter to the fight.
2. Sustain the warfighter during the fight.
3. Bring the warfighter home after the fight is done.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* Since my commissioning as an Air Force officer in 1967, I have been blessed with a host of opportunities and experiences, as well as with some of the finest commanders, bosses, teachers, mentors, role models and friends that the Services have ever produced. From July 1997 to October 1998, I commanded half of AMC's airlift and tanker aircraft, supporting global mobility operations worldwide. Prior to that assignment I had served 2 years as the commander of Headquarters Military Airlift Command's Airlift Control Center and later as commander, Headquarters Air Mobility Command's Tanker Airlift Control Center. This assignment was followed by almost 2 years as the U.S. Transportation Command director of operations and logistics. Additionally, I have twice served as a wing commander for an airlift wing, and as director of programs and evaluations and deputy chief of staff for installations and logistics at Headquarters U.S. Air Force. As the Vice Chief of Staff of the Air Force, I had direct, personal and frequent contact with the SECDEF, CJCS, all the CINCs and the Service Chiefs on many major issues, operations, and planning matters confronting all the CINCs, including USCINCTRANS. Throughout these past 34 years I have watched our military grow and evolve into a force that today is recognized as the best equipped, trained, and educated in the world—perhaps the finest team of military professionals the world has ever known. If confirmed, I will be honored to lead one of the most critical components of that team. I am a true believer in the Total Force Concept that leverages active, guard, and Reserve component forces of all services to meet our national security challenge. The command experiences, field training and education I've been fortunate to have thus far have prepared me for the tasks ahead. I look forward to the opportunity to serve our country and the great men and women of the United States Transportation Command.

*Question.* What are the most important lessons that you have learned as the Vice Chief of Staff for the Air Force?

*Answer.* In my role as Vice Chief of Staff of the Air Force, I've learned the true value and critical importance of building a cohesive team not only within the Air Force, but also with the other Services and organizations within the interagency process, as well as the many civilian communities that support our Nation's military. If confirmed, I will continue to nurture and build the great team at U.S. Transportation Command, ensuring our Nation continues to have trained and ready mobility capabilities to support the Nation's interests anytime, anywhere.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Commander in Chief, U.S. Transportation Command?

*Answer.* A complete understanding of current Defense Department and national transportation issues is essential to my ability to discharge these important duties. If confirmed, I will do everything within my power to insure I remain ready for this critical duty.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense and the Chairman of the Joint Chiefs of Staff would prescribe for you?

*Answer.* I would anticipate the Secretary and the Chairman to direct me to prepare U.S. Transportation Command to meet the supported CINC requirements for any contingency. I also believe they would direct me to provide the most effective and efficient transportation services available in peace or war. All the normal duties and functions of command would be directed toward those ends. That said, I stand ready to follow any duties or functions assigned.

#### RELATIONSHIPS

*Question.* Please describe your understanding of the relationship of the Commander in Chief, U.S. Transportation Command to the following officials:

The Secretary of Defense.

*Answer.* An objective of the Goldwater-Nichols Act of 1986 was to clarify the command line to combatant commanders and to preserve civilian control of the military. That act stated that the operational chain of command runs from the President to the Secretary of Defense to the combatant commanders. As such, the Commander in Chief, U.S. Transportation Command is directly responsible to the National Command Authorities, President and Secretary of Defense, for the performance of the defense transportation mission and the preparedness of the command.

*Question.* The Deputy Secretary of Defense.

*Answer.* The Deputy Secretary of Defense is delegated full power and authority to act for the Secretary of Defense and exercise the powers of the Secretary on any and all matters for which the Secretary is authorized to act according to law. As such, the Commander in Chief, U.S. Transportation Command will normally report through the Secretary, but will report to and through the Deputy Secretary the same as he would the Secretary when the Deputy Secretary is representing the Secretary.

The Under Secretaries of Defense.

*Answer.* Under current DOD Directives, Under Secretaries of Defense coordinate and exchange information with DOD components, including combatant commands, having collateral or related functions. In process and in practice, this coordination and exchange is normally communicated through the Chairman of the Joint Chiefs of Staff. If confirmed as a combatant commander, I will respond and reciprocate accordingly.

*Question.* The Assistant Secretaries of Defense.

*Answer.* With the exception of the Assistant Secretaries of Defense for C<sup>3</sup>I, Public Affairs and Legislative Affairs, all Assistant Secretaries are subordinate to one of the Under Secretaries of Defense. This means that any relationship U.S. Transportation Command would require with any Assistant Secretary of Defense would be through the Under Secretary of Defense for Policy, the Under Secretary for Personnel and Readiness, or the Under Secretary of Defense for Acquisition and Technology. Since the Assistant Secretaries of Defense for C<sup>3</sup>I, Public Affairs and Legislative Affairs are SECDEF's principal deputies for overall supervision of C<sup>3</sup>I, Public Affairs and Legislative matters respectively, any relations required between U.S. Transportation Command and ASD(C<sup>3</sup>I) and ASD(LA) would be conducted along the same lines as those discussed above regarding relations with the various Under Secretaries of Defense.

The Chairman of the Joint Chiefs of Staff.

*Answer.* The Chairman is clearly established by Title 10 as the principal military advisor to the National Command Authorities (NCA). However, he serves as an advisor and is not, according to the law, in the chain of command that runs from the NCA directly to each combatant commander. The law does allow the President to direct that communications between him or the Secretary of Defense and the combatant commanders be transmitted through the Chairman and former President Clinton directed this to happen through the Unified Command Plan. This action keeps the Chairman fully involved so that he can execute his other legal responsibilities. Certainly a key responsibility is his role as spokesman for the CINCs, especially on the operational requirements of their respective commands. While the legal

duties of the Chairman are many and they require either his representation or personal participation in a wide range of issues, if confirmed as a CINC, I will have an obligation to keep both the Chairman and the Secretary of Defense promptly informed on matters for which they may hold me personally accountable.

The Secretaries of the Military Departments.

*Answer.* The Secretaries of Military Departments are responsible under Title 10, for the administration and support of the forces they have assigned to combatant commands. The authority exercised by a combatant commander over Service components assigned to his command is quite clear, but requires a close coordination with each Secretary to ensure there is no infringement upon those lawful responsibilities a Service Secretary alone may discharge.

The Chiefs of Staff of the Services.

*Answer.* The Chiefs of Staff of the Services have two significant roles. First and foremost, they are responsible for the organization, training, and equipping of their respective Service. Without the full support and cooperation of the Service Chiefs, no CINC can hope to ensure the preparedness of his assigned forces for whatever missions the NCA directs. Next, as members of the Joint Chiefs of Staff, the Service Chiefs have a lawful obligation to provide military advice. Individually and collectively, the Joint Chiefs are a source of experience and judgment that every CINC can call upon. If confirmed as Commander in Chief, U.S. Transportation Command, I intend to pursue a full and continuing dialogue with the Chiefs of all four Services, as well as with the Commandant of the U.S. Coast Guard.

*Question.* The Combatant Commanders.

*Answer.* If confirmed, my relationship with the other combatant commanders will be one of mutual support, continued dialogue on key issues, and frequent face-to-face interaction. In today's security environment, an atmosphere of teamwork and complete trust is critical to the successful execution of U.S. national policy.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Commander in Chief, U.S. Transportation Command? Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* In my view, in order to provide world-class support for the warfighting CINCs as well as meet the DOD's peacetime transportation needs, we must have robust capability and readiness—now and in the future. While our current National Military Strategy demands we be able to provide strategic deployment and sustainment support for two near simultaneous major theater wars, we must also prepare ourselves for the future. The United States Transportation Command team plays a critical role in fulfilling the four operational concepts espoused in the Chairman's Joint Vision 2020: dominant maneuver, precision engagement, full dimensional protection, and focused logistics. The challenges I see on the horizon for the Defense Transportation System (DTS) are:

*People.* There are no more precious resources in the DTS than our people. Our soldiers, sailors, marines and airmen must enjoy a quality of life that allows them to focus on their military tasks without distraction. We are obliged to keep faith with these self-sacrificing individuals and families by providing an adequate standard of living, quality medical care, inflation adjusted retirement benefits, quality household goods moving services, respectable housing accommodations, and caring family support programs. I salute our Congress for its continued support in all these areas and I ask for your continued assistance in championing initiatives that reassure our troops that they are indeed our number one priority.

*Readiness.* While overall military end strength numbers continue to drop, the requirements and demands of today's contemporary international security environment remain very high. The pace of activity in the DTS in the post Desert Shield/Desert Storm era, in support of mobility operations worldwide, continues at an almost wartime level of effort. We must curb the impacts of this high OPTEMPO by improving our efficiency and carefully monitoring the day-to-day demands and requirements placed on the DTS. Specifically, ensuring the command remains ready will require continued focus on the readiness of air mobility, sealift, forward presence, partnerships with industry, and Antiterrorism and Force Protection (AT/FP).

*Modernization.* U.S. Transportation Command's modernization efforts are focused on being able to fully meet America's strategic mobility requirements, across the spectrum of operations, while simultaneously reducing risk, ensuring future readiness, and providing a framework for meeting future MRS-05 requirements. Continued acquisition of the C-17, upgrade of our C-5 and KC-135 fleets, standardization and modernization of our C-130 fleet, completion of existing sealift programs, improvements to the network of bases which comprise our global transportation infra-

structure, and upgrades to the tremendous capability enhancers inherent in our transportation information systems capability, are all key pillars of this comprehensive modernization program. Additionally, the command is looking well ahead to identify, develop, and program projects for the inevitable future recapitalization of aging air mobility and sealift systems, as well as our global transportation infrastructure.

*Process Improvements.* U.S. Transportation Command processes, the collection of rules and procedures which govern day-to-day business practices, are under constant revision as the command seeks to improve the speed and reliability of customer service. The goal is a set of “most effective and efficient” processes that are applicable across the entire spectrum of our activities, from interaction with our commercial transportation providers to our “warfighter CINC” customers. Whether the issue is information technology, supply-chain management, doctrine or training, U.S. Transportation Command is constantly searching for the best business practices available today. These efforts must be continued to ensure the future viability of the DTS.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Commander in Chief, U.S. Transportation Command? If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* The most serious problem facing us in the mobility business is the daily challenge of meeting the readiness needs of our theater CINCs. While we have done a superb job of meeting these needs on a daily basis over the years since Operations Desert Shield and Desert Storm, our capability to continue meeting this challenge, at the levels we are sustaining, is very fragile. We must be ever vigilant in our struggle to keep our forces the best organized, trained, and equipped in the world. The challenges are many: maintenance of an adequate quality of life, modernization of our equipment and facilities, and controlling an escalating OPTEMPO in the face of level funding and personnel fielding. I believe we can meet these challenges, and if confirmed, I look forward to working with the members of this committee to do just that. As far as a time line goes, I can only say that I see this as a continuing challenge which, with your approval, I will formally pick up—with enthusiasm—on day one.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Commander in Chief, U.S. Transportation Command?

*Answer.* Like my predecessor, I believe U.S. Transportation Command’s approach to posturing (and improving) itself to be able to meet DOD’s transportation mission today and tomorrow requires flexibility and initiative, and must be guided by the following four basic themes:

- *Theme one:* Maintaining *readiness* to perform our global mobility mission;
- *Theme two:* Continuing *modernization* and upgrade of aging equipment and infrastructure;
- *Theme three:* Improving *key processes* in the DTS; and
- *Theme four:* Investing in the care and quality of U.S. Transportation Command’s most valuable resource—its *people*.

#### LIFT REQUIREMENTS

*Question.* One of the principal shortfalls faced by the United States military is the ability of our lift assets to support two major theater wars. While we have made great efforts to eliminate the deficiency in lift assets, this shortfall continues to emerge as one of the greatest threats to our ability to successfully execute the National Military Strategy.

If confirmed, what actions will you take to ensure that we have sufficient lift assets to support the combat forces’ execution of the National Military Strategy?

*Answer.* USTRANSCOM is sized as a 1 MTW mobility force. As long as the command executes current programs, sealift is in acceptable condition, although there is a need for specialty ships such as heavy lift sealift. Airlift is the most pressing challenge. As MRS-05 validated, an increase is needed to the capability of our airlift fleet (54.5 MTMs) through additional C-17s and modernization of our C-5s. Initial review of the new strategy, coupled with Service transformation efforts, leads to conclusions that strategic mobility will be more demanding not less. Therefore, the MRS-05 conclusions are the minimum improvements needed.

As USCINCTRANS, I will continue advocating for additional C-17s and a robust C-5 RERP program. I will also continue to pursue the possibility of commercial BC-

17s augmenting our organic fleet. The time is now to make a commitment to a new 60 aircraft Multi-Year Procurement (MYP) in order to get these additional C-17s at the best possible price.

#### THREAT

*Question.* Do you believe that projected changes in the threat and in overseas bases should affect the mix of U.S. Transportation Command's strategic mobility triad of prepositioned ships, airlift, and sealift?

If so, how should the current mix be changed?

*Answer.* Although the Mobility Requirements Study 2005 (MRS-05) assumed accomplishment of all overseas infrastructure projects that are currently programmed, air and sea port availability and capability still remain a concern. Past and present demands have strained the overseas air mobility infrastructure facilities and raised questions about their sufficiency to meet the National Military Strategy. USTRANSCOM has focused its most important current infrastructure efforts on recapitalization of runways, ramps, and fuel systems at en route airfields. In keeping with the findings of USTRANSCOM's en route Studies, the command has worked with USEUCOM, USPACOM, and DLA to develop recapitalization plans. For example, DLA has allocated approximately 85 percent of its fuels MILCON fiscal year 1999-2004 POM to en route projects.

September 11 drove home to all Americans that we face a changing threat. Be assured that USTRANSCOM is ready to respond to the call to deploy forces in response to those atrocities. To that end, I'm confident that the command's prepositioned ships, airlift, and sealift assets are properly configured and prepared to support Operations Noble Eagle and Infinite Justice. USTRANSCOM continues efforts to counter the threat from weapons of mass destruction, such as chemical and biological weapons, at our aerial and seaports. Such weapons can severely hinder strategic mobility industrial infrastructure and particularly threaten the civilian partners in the CRAF and VISA programs. Consequently, USTRANSCOM has become one of DOD's strongest proponents for improved detection, protection, and decontamination capability. The command is actively engaged in several joint projects intended to address the WMD threat, including the development of national standards for decontamination. Additionally, USTRANSCOM's Critical Infrastructure Protection (CIP) program is underway, stemming from Presidential Decision Directive 63. The CIP program, in coordination with other DOD agencies, Joint Staff, Services, geographic CINCs, and Department of Transportation (including MARAD and U.S. Coast Guard), is actively identifying assets critical to the Defense Transportation System (which includes those assets of our commercial partners). Vulnerability assessments will then be conducted at critical transportation locations, with necessary follow-on actions taken to ensure that those critical assets are protected.

#### PORT AND AIRFIELD AVAILABILITY

*Question.* In your opinion, are sufficient port and airfield on-load and off-load assets available in CONUS and in the most likely conflict areas to rapidly move the equipment and supplies that might be required over the full spectrum of conflict?

If not, what steps do you believe should be taken to improve this situation?

In your opinion, are the conditions of these facilities adequate to support the strategic deployments of our forces? What is the condition of the en route system and their ability to refuel and support the airlift mission?

*Answer.* Assessments of the sufficiency of CONUS and overseas ports and airfields to support strategic mobility are highly "scenario dependent." Overseas, whether mobility supports a small-scale contingency (SSC) or a Major Theater War (MTW), our forces require access to host nation ports and airfields. In some cases, particularly for the air mobility en route system, our forces require friendly nation airfield resources at locations that may or may not be directly involved in the contingency. For example, any U.S. response in Southwest Asia will require air mobility en route basing in Europe and will usually require access to peripheral Gulf State airfields as well; any U.S. response in the Pacific Rim becomes problematic without Mainland Japan and Okinawa support. If the SSC occurs in areas accessible from our established Airlift en route systems, our ability to respond effectively is reasonably assured with host nation concurrence. If the SSC occurs in areas not in line with our Airlift en route system, response time would be difficult (Africa, South America, areas of Southeast Asia). USTRANSCOM should continue to work with the geographic CINCs to ensure the Strategic Mobility requirements for overseas ports and airfields are met in planning for the total range of conflict. The en route system is aging but it is currently funded for upgrades to meet the future de-

mands that are outlined in MRS-05. USTRANSCOM should also continue to support the Army and Navy in the development of a Joint Logistics Over-the-Shore capability for those scenarios where fixed port facilities are degraded or denied by enemy forces.

In CONUS, if the Services fund the MRS-05 shortfalls identified, (to include depot shortfalls), I believe throughput constraints and availability of ports and airfields for the most demanding Major War requirements will be addressed. The Army Power Projection Program should improve key installations, ammunition depots and ports. This program provides for rail, airfield, and staging area improvements, completion of key projects at the West Coast containerized ammunition port (Concord), and other installation-specific projects. Acceleration of many of these projects is needed. Interfaces between the Services must be improved for power projection of one service from another service's installation. Funding of Container Handling Equipment (CHE) is also necessary for movement of containerized cargo at installations and ammunition depots. Also, the National Port Readiness Council is functioning and working closely in planning with DOT and the Nation's commercial port industry to ensure wartime requirements can be met in order to minimize our permanent presence at commercial ports.

The present inventory of aircraft loaders, called Material Handling Equipment (MHE), used at aerial ports for onloading and offloading U.S. military and Civil Reserve Airlift Fleet aircraft is still very old and unreliable. That said, I believe the new Air Force 60K loader and Next Generation Small Loader (NGSL) programs will provide the equipment needed to meet future MHE requirements. An additional piece of critical equipment is the 463L All-Terrain 10K forklift. Their numbers are high, and they too require an aggressive replacement program. This piece of equipment is critical to deployed operations in rough or unimproved environments.

We continue to work closely with geographic CINCs on Host Nation Support issues to support onward movement of equipment and supplies from theater ports to the final destination.

#### TANKER CREWS

*Question.* During the Kosovo operation, we found that we had sufficient tanker assets available to support the air campaign, but that, at times, there were limitations in having sufficient crews available for these tankers to support operations due to a number of considerations, including crew rest requirements.

What steps do you intend to take to ensure that there will be sufficient tanker crews available to support air campaigns in future conflicts?

*Answer.* USTRANSCOM and AMC recognize that the KC-135 crew ratio of 1.36 for the AMC force and 1.27 for all others was based on a Cold War scenario and is not adequate for today's increased mission demands. This was proven during the Gulf War when we operated with a 1.5 crew ratio and again in Kosovo when we operated at a 1.8 crew ratio. Only the limited nature of these conflicts kept us from experiencing shortages in crews. To further quantify the requirement for tankers and crews AMC conducted a thorough Tanker Requirements Study. In an attempt to rectify the shortfall in crews and maintenance identified by these events and study, a fiscal year 2002 POM initiative was submitted for additional maintenance personnel and for 75 additional aircrews. Unfortunately, the positions were either not funded or were only approved without an increase in overall military end-strength. We have continued to voice our concern by raising the issue through the Joint Requirements Oversight Council and the Joint Warfighting Capabilities Assessment.

As USCINTRANS, I will continue to advocate for additional KC-135 maintenance personnel and a crew ratio increase. As we all work through the details of the new strategy laid out in the QDR and DPG, we will determine if tanker crew ratio will need to be increased even more. I realize the competition for scarce dollars will always be keen and I, along with all national leaders, will be forced to choose between myriad critical programs. That being said, my goal will be full funding of additional tanker personnel, to include the commensurate end-strength increase.

#### READY RESERVE FORCE

*Question.* U.S. military strategy depends on having sufficient civilian merchant mariners available in a conflict to operate the ships in the Ready Reserve Force (RRF). There are continuing concerns that the combination of the reduction in numbers of U.S.-flag merchant ships and the smaller sizes of crews on these ships could leave the United States with an inadequate pool of trained manpower upon which to draw in wartime.

Do you believe that this is a real problem?

Answer. Yes. However, it is a problem that USTRANSCOM is aware of and is actively working with the Maritime Administration, the U.S. Coast Guard, the sealift industry, maritime unions, and DOD. The decline in the number of U.S. Flag ships has definite consequences for our national security capabilities. Today, we can meet manning requirements for the Ready Reserve Fleet. We will continue to support ongoing efforts to ensure our manning capability for the future. The assignment of partial crews to the highest priority vessels (ROS-4, ROS-5) has improved the manning of RRF vessels, as well as the material readiness of the fleet. Now, two thirds of the ships in the RRF are partially crewed. I also support the Maritime Security Program which I view as essential to maintaining a nucleus of U.S. flag ships that will continue to employ American crews. Other programs such as the Jones Act (domestic trade) and cargo preference help keep ships under the U.S. flag (with American crews) and are key to maintaining the pool of highly trained mariners.

*Question.* What steps would you propose to take to solve any shortages that you might identify in manning the RRF?

Answer. I will continue to foster the strong partnership USTRANSCOM has with the U.S. maritime industry and using this partnership as a spring board to keep moving this difficult mariner issue forward. As recently as last week, USTRANSCOM held a Video Teleconference with VISA carriers to discuss current events (Operations Noble Eagle, Infinite Justice) and exchange ideas about supporting potential future operations. We continue to work the mariner issue hard with MARAD, the U.S. Coast Guard, the carriers and the maritime unions. A key issue is identifying active merchant mariners and licensed/certified mariners that are no longer sailing; the goal is a consolidated database identifying available and qualified mariners to crew organic sealift. We also encourage all licensed and documented mariners to maintain their licenses and/or documentation. This partnership is healthy and is an absolute necessity in these uncertain times.

#### PREPOSITIONED SHIPS

*Question.* If confirmed, what actions would you take to ensure U.S. Transportation Command's support of the Army and Marine Corps' strategies for afloat prepositioned ships?

Answer. In my view, the use of equipment and supplies strategically positioned afloat near potential hot spots is a critical component of the new strategy that requires the elements of speed and flexibility. The services must continue to identify their specific prepositioning requirements including special purpose shipping (Float-on/Float-off, Heavy Lift), and we must ensure we have the proper mechanisms (e.g., acquisition, contracting) to provide the right types of vessels and crews, that enable them to meet their mission. In view of recent events, we will place more emphasis on the force protection aspects of this relationship.

#### C-5 MODERNIZATION

*Question.* Over the past several months, significant problems have arisen with the readiness of the C-5 aircraft. These problems have reduced the availability of this airframe which has a direct impact upon the ability of our strategic airlift assets to support the National Military Strategy.

The Air Force has been pursuing a two-pronged approach of upgrading avionics for all C-5s, while, for the time being, only re-engining the newer C-5B aircraft. General Robertson testified to the committee earlier this year that he believed that we needed to upgrade and re-engine all C-5 aircraft, and buy more C-17s in order to meet the lift requirements USTRANSCOM faces.

What is your assessment of the requirements for additional airlift, and the programs needed to meet those requirements?

Answer. I wholeheartedly agree with General Robertson's assessment. MRS-05 clearly validated 54.5 MTM/D as the absolute minimum strategic airlift requirement. That is an increase of almost 5 MTM/D from the MRS-BURU requirement and an increase of 10 MTM/D over what AMC is actually capable of today, recognizing that current capability is reduced due to poor C-5 reliability. This leads to that two-pronged approach that is so vital to meeting critical airlift needs. The C-17 and C-5 are essentially the only two airlifters capable of carrying oversize and outsize cargo.

First let me discuss the C-5. As I mentioned earlier and the committee is very much aware, we have been experiencing serious degradation in the C-5 mission capable (MC) rate. The Air Force has been pursuing the C-5 Reliability Enhancement and Re-Engining Program (RERP) to increase the C-5 MC rate from below 60 percent to at least 75 percent. Due to the affordability of C-5 RERP, coupled with the extensive structural service life remaining on the airframe, we feel strongly about

pursuing the RERP program. The best way to approach the C-5 RERP program is to RERP the C-5Bs first and then tackle the C-5As. The 50 C-5Bs are only 12 years old, they are the ones that are equipped with air defensive systems, and they fly the most on a day-to-day basis. Once we see the success of the RERP program on the C-5Bs, then we can make a decision on modifying the 76 35-year old C-5As.

The second thing we absolutely must do to meet the 54.5 MTM/D minimum requirement is purchase additional C-17s. While some may wonder if the commercial sector can provide part of the 5 MTM/D increase via the CRAF program, that is not possible. This is an over and outsized requirement that can only be met by organic airlift; that leads us to additional C-17s being the practical choice. Our analysis tells us that we need an additional 50-60 organic C-17s, depending on what decisions we make on the C-5 RERP. The most bang for the buck is a 60 aircraft multi-year procurement (MYP) and the time to strike on making a firm commitment to this new MYP is now. Boeing's supply line will begin to close 1 Oct. 2001 without a follow-on decision by DOD. If we delay beyond October 1, our cost per aircraft will grow significantly due to the need to restart sub-contractor production lines that are scheduled to shut down soon. Additionally, if the commercial sector finds there is a niche market for the BC-17, we expect that small fleet will augment our organic fleet.

In summary, an integrated solution that fixes the C-5 and acquires additional C-17s via a new MYP is essential to meeting the Nation's strategic airlift needs.

#### MOVEMENT OF HOUSEHOLD GOODS

*Question.* The committee is aware that the Department has launched a Full Service Moving Project (FSMP) test program for handling the transportation of household goods for permanent changes of station.

Do you believe there is sufficient funding in the budget request to implement this program?

*Answer.* No. Due to funding constraints the Military Services unanimously have decided to cease participation in the Full Service Moving Project (FSMP) effective September 30, 2001. Initial estimates are the program could be as much as 70-80 percent higher than the current program. Historically, DOD has spent approximately \$1.7 billion annually on the current program.

*Question.* When will the Department have sufficient information upon which to base a decision about whether to seek wider implementation of this program?

*Answer.* USTRANSCOM is tasked with the independent evaluation of three pilot programs (the FSMP pilot, the Navy Sailor Arranged Move (SAM) pilot and the Military Traffic Management Command (MTMC) pilot). Data collection is complete for the MTMC and SAM pilots, FSMP is ongoing. The Military Services agreed to continue participation in the pilot through the peak season (Jun-Jul 2001) pick-ups and deliveries. After data collection and analysis is complete (Dec 2001), USTRANSCOM will provide a recommendation to the Office of the Secretary of Defense for a new personal property program, which could be adoption of one of the pilots, but most likely will be a combination of features from each. Our recommendation is scheduled to be complete in Jan 2002.

*Question.* In your opinion, how does this program compare to the other pilot programs for improving the movement of household goods?

*Answer.* We have not had a chance to collect and analyze sufficient data to draw any conclusions on the FSMP pilot program at this time. We expect to complete our recommendation in Jan 2002.

#### SELECTION OF OFFICERS FOR ASSIGNMENT AS COMMANDER IN CHIEF, U.S. TRANSPORTATION COMMAND

*Question.* In S. 1416, the committee included a provision that, if enacted, would express the sense of Congress that when deciding on officers to be nominated to the position of Commander in Chief, U.S. Transportation Command, the Secretary of Defense shall consider nominating highly-qualified officers from the ranks of the Army and Marine Corps. The rationale for this provision is that USTRANSCOM and its component commands could benefit from the appointment of an officer selected from the two branches of the Armed Forces that are the primary users of their transportation resources.

What is your view of this provision?

*Answer.* The Commanders of the Unified and Specified Combatant Commands are responsible to the President and the Secretary of Defense for accomplishing the military missions assigned to them and exercise command authority over the forces assigned as directed by the Secretary of Defense. Based upon the requirement of the particular command, the Secretary of Defense should nominate the best qualified of-

ficer for command, regardless of service. In today's joint environment all services must work together for mission accomplishment and it is imperative that each command has the most highly qualified officers in leadership positions.

#### THEATER ACCESS

*Question.* One of the principal concerns when preparing for future operational deployments is the prospect of access denial, i.e., denial of access to ports and airfields in the theater of operations. This could pose a significant challenge to USTRANSCOM's ability to support the deployment and replenishment of forces in a major theater war.

What actions would you propose to better prepare the U.S. military for the prospect of fighting in a theater of operations where access to critical ports and airfields is denied?

*Answer.* Access denial is already the toughest challenge we face today. Conducting reception, staging, onward movement and integration (RSO&I) of forces into a theater is tough business in countries with modern facilities, let alone when access is denied.

First, USTRANSCOM will continue to work with geographic CINCs to identify alternative basing opportunities within their AORs should we be denied access to current en route basing. Working with our allies in peacetime to ensure access is our first line of defense.

Second, USTRANSCOM must continue to develop Joint Logistics Over-the-Shore (JLOTS) capability to provide the ability to operate in degraded ports or conduct in-stream operations. These operations include Army and Navy lighterage, Auxiliary Crane Ships (T-ACS) from the Ready Reserve Fleet, our Offshore Petroleum Discharge Systems (OPDS), and the trained units to execute these difficult operations.

Third, USTRANSCOM will work with the Navy on the Heavy Sealift Study to ensure the specialized strategic lift to move Army watercraft, Navy Mine Countermeasure vessels, and USCG patrol craft. These assets are essential for opening ports and force protection during normal or port denial operations.

#### COMBATING TERRORISM

*Question.* Ensuring that the various Federal response teams arrive at a domestic WMD incident in a timely fashion is of critical importance.

In your view, does USTRANSCOM have sufficient lift assets to ensure appropriate DOD support in a timely fashion?

*Answer.* First it is important to recognize that USTRANSCOM is sized as a 1 MTW mobility force. So under normal peacetime operations, the command will generally have sufficient lift assets to meet this mission. The challenge is when other events are occurring around the world, such as major wars and small-scale contingencies (SSCs). Airlift is the most pressing challenge because of the early demands placed on the fleet during any crisis. Our initial review of the new strategy leads to the conclusion that strategic mobility requirements will be even more demanding than MRS-05, in part due to the likelihood of a homeland defense response occurring concurrently with major wars overseas. We will have to rely on other transportation modes (rail, truck) to free up critical airlift.

*Question.* If confirmed, how would you ensure that DOD has sufficient lift assets to rapidly deploy its own various response units in the event of a domestic WMD event?

*Answer.* Let me reiterate that I will ensure the homeland defense options are integrated into future plans. We do not know the requirements for this option today. Ensuring DOD has the appropriate lift assets will require close inter-Departmental planning and coordination with FEMA, FBI and other agencies that respond to such events.

#### MOBILITY REQUIREMENTS STUDY FOR FISCAL YEAR 2005

*Question.* The Mobility Requirements Study for Fiscal Year 2005 (MRS-05), which was delivered to Congress this year, indicates the major weakness in strategic lift assets is in the area of strategic airlift. One of the studies that was used in the development of this finding was the Oversize-Outsize Cargo Requirements Study, which has yet to be delivered to Congress.

If confirmed, will you ensure that this study is delivered to Congress?

*Answer.* As General Robertson reported to the Senate Armed Services Committee, Seapower Subcommittee on 26 Apr 2001, the study is done. At that time he also shared the results with you; I will be willing to do the same. As the strategic review (QDR) is wrapped up and integrated in OSD, I would then expect that the O&O AoA would be released.

*Question.* Since MRS-05 did not take into account the transformation efforts of the services, particularly that of the U.S. Army, nor any changes to the National Military Strategy, do you think that the identified shortfall in strategic airlift is still valid?

*Answer.* MRS-05 did not include current service transformation efforts nor the impact of the emerging National Military Strategy (NMS). However, it does provide a moderate risk single MTW strategic lift capability that can cycle to a second MTW while concurrently supporting the warfighting CINC's intra-theater requirements, NCA directed special operations missions, missile support to allies, and some support to CINCs not engaged in warfighting. Therefore, I would characterize the MRS-05 moderate risk solution (54.5 MTM/D) supported by the Chairman, Service Chiefs and CINCS as a valid building block for the future until we work out all the details of the new NMS. I should also note here that as we shift from the current threat based strategy to the new capability based construct, we are not only changing the shape of forces, but the response times are faster (Service Transformation). Additionally, the emerging strategy has new overlapping requirement for homeland defense, deterrence in four critical regions, the need to win decisively, defeat efforts in another theater, and support SSCs (non-critical areas). Bottom line, I see the mobility requirements for the new strategy as being at least as demanding as the current strategy.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes. Our Nation was founded on the principal of civilian control of the military. I am honored to have the opportunity to serve in this challenging position, and I look forward to periodically appearing before this committee to keep you personally apprised of the readiness status and mission related requirements of the United States Transportation Command.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?*Answer.* Yes. In 1967, I raised my right hand and swore then to "support and defend the Constitution of the United States"; my commitment to that ideal has only grown stronger over the past 34 years. I am keenly aware of the responsibility I have to provide candid, honest information to my superiors, regardless of the pressures or politics surrounding the situation.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Commander in Chief, U.S. Transportation Command?

*Answer.* Yes. If confirmed, I look forward to appearing and testifying before this committee at both annual posture hearings and on any other specific issues you may require. I view frequent and open interaction with this committee and the committee's staff as vital to the successful resolution of United States Transportation Command's issues—now and into the future.

Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes. If confirmed, I will ensure that this committee and other oversight committees are provided with required and requested information in as accurate and as timely a manner as possible.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### EN ROUTE STRUCTURE

1. Senator THURMOND. General Handy, a key factor in the deployment of our forces, and I assume a major concern to you, as the soon to be CINC TRANSCOM, is the en route infrastructure. This infrastructure provides the essential fueling, repair and crew rest facilities that are essential to any deployment.

What is the condition of the bases that make up our en route infrastructure? Does the United States have sufficient access to foreign bases to facilitate our deployments?

General HANDY. The condition of the bases that make up our en route infrastructure is currently less than adequate. Although great effort has been applied to improve our bases, they will not be adequate any earlier than fiscal year 2006. After years of neglect, the United States Transportation Command (USTRANSCOM), in conjunction with the United States European Command (USEUCOM) and the United States Pacific Command (USPACOM), began drawing attention to and focusing resources toward our en route bases in 1997. Our efforts are just now beginning to pay off as both the Services and the Defense Logistics Agency have made the repair of the en route bases a top priority. Repeated mobility requirements studies sponsored by the Joint Staff have validated the need for a robust en route system. To meet those validated requirements, we currently have repair or enhancement projects underway or programmed at all 13 of our designated en route locations. These projects total over \$1 billion. As these projects progress, we will steadily rebuild our aged en route infrastructure and more closely approach the goals stated in the mobility requirements studies. While the overall health of the en route system is improving, we should keep in mind that the en route system we are building today is focused on the old two major theater war concept. Thus, we are successfully building up our en route infrastructure to deploy forces to Northeast Asia and Southwest Asia, but we have yet to design a system that successfully blankets the globe. As our current conflict shows, our en route system forms a solid base from which to begin our deployment, but we still need to augment our designated 13 bases to facilitate our global efforts. Wherever we choose to deploy forces outside the Continental United States, we will find we are short of sovereign United States territory.

Our current situation illustrates our dependence upon access to foreign bases. In today's war effort, many of our allies have stepped forward to offer their bases for our use. Many are taking great pains to support us by waiving normal peacetime restrictions on operating hours and relaxing notification requirements for access and overflight clearances. We have not always been this fortunate, nor can we plan on this being the case for future engagements. The condition of our en route bases is improving, but we are a long way from the finish line.

#### JOINT USE BASES

2. Senator THURMOND. General Handy, as the Department of Defense focuses ever more on force protection and strengthens the security at our military bases, what concerns do you have regarding our joint use bases, such as Charleston Air Force Base?

General HANDY. The September 11 attacks and the ongoing threat situation within the United States have changed our whole mind-set regarding "business as usual." I'm confident we have already moved in the right direction to bolster the security posture at these and all of our facilities. I'm equally confident that we can and will continue to improve that posture through close coordination with our civilian counterparts. The unfortunate reality is, however, that despite our best efforts to make ourselves a hard target, we can not guarantee that we will be able to prevent or thwart a well-planned terrorist attack. We must re-evaluate all of our security practices, and require higher standards and closer oversight to ensure the security of our joint use bases, where controlling access to our operations is inherently more challenging. Our wing commanders must be fully engaged with their counterparts to ensure a closely coordinated relationship and security plan. Much of our focus will be on the personnel providing force protection oversight on the civilian side, in terms of selection criteria, background checks, training, and equipment carried to perform duties. I can share a few generalities about the current situation at the United States Transportation Command's four joint use bases. Commercial airports throughout the U.S. are in the process of strengthening their security posture. This is the case at both Charleston International Airport and Mid-America Airport, which are joint use with Charleston Air Force Base and Scott Air Force Base respectively. The situation at McConnell Air Force Base in Kansas is slightly different, where the base shares access with Boeing and Cessna Aircraft Corporations. These companies have contracts with other nations, so complete confidence in their security program and our ability to integrate it will be our goal. Lastly, at Dover Air Force Base, we have the luxury of directly influencing use of the Civil Air Terminal, which allows very restricted use by commercial aviation assets. Cur-

rent agreements allow for closure of the terminal during necessary situations. This closure has been implemented as part of the current Force Protection Condition.

#### DEPLOYMENT FACILITIES

3. Senator THURMOND. General Handy, the military departments, especially the Army, have made significant strides in improving their deployment facilities at the military installations. However, we depend heavily on commercial ports and railroads to deploy our logistic and heavy forces.

What is the capability of our commercial ports and railroads to support the deployment of our forces and are they keeping pace with modernization?

General HANDY. I am confident our partners in the rail and maritime industries can provide the transportation support we need to meet deployment requirements. We actively engage both industries to communicate our requirements and stay abreast of changes that may affect our deployment capabilities.

The United States Transportation Command (USTRANSCOM) is a member of the National Port Readiness Network (NPRN) and the Interagency Committee on the Marine Transportation System (ICMTS). Both of those national-level forums include Department of Transportation (DOT) participants such as the Maritime Administration (MARAD) and the United States Coast Guard. They address issues of interest to both the Department of Defense (DOD) and industry. Current issues under discussion are increased traffic and the resultant demand on existing infrastructure, the need to modernize and expand capability to meet future cargo flows, and security to counter threats such as natural disasters, crime, and terrorist acts. We will continue our active participation to ensure DOD's deployment requirements will continue to be met in the future.

Military Traffic Management Command's Transportation Engineering Agency (MTMC TEA) effectively manages the Ports for National Defense (PND) and Railroads for National Defense (RND) programs. The PND addresses the ability of our commercial strategic seaports to support deployments and the RND similarly examines the rail system. The RND includes the Strategic Rail Corridor Network (STRACNET) and its connectors that provide access to our military installations. The RND program entails close coordination between MTMC TEA and the Federal Railroad Administration, the American Association of Railroads, and specific rail operators. We also maintain close liaison with our commercial rail partners through the National Defense Transportation Association Surface Committee. Combined, those organizations continue efforts to ensure that as railroads modernize, the capability that DOD requires will be there when we need it.

#### CHANGE IN OUR STRATEGIC FOCUS

4. Senator THURMOND. General Handy, earlier this year, the Department of Defense (DOD) suggested that the focus of our defense strategy would shift from Europe to Asia. Because of our historic focus on Europe, we have in place facilities to support deployments into that region.

What are our capabilities to deploy and stage forces to support our focus on Asia?

General HANDY. If we were called upon today to deploy forces in support of a Northwest Asia contingency, I am confident we would be able to answer the call. If called upon to support a Major Theater War effort to a different location in Asia, we would be challenged to do so given the geography of the Asian continent. Efforts are currently underway to identify additional key areas and possible scenarios in the Pacific. As those efforts mature we will perform detailed analysis to determine our infrastructure requirements to support the desired mobility throughput.

To support deployments to Asia—which historically has meant supporting a major theater war in Korea—we have relied on our system of en route military air bases, some civilian airfields, and a few key naval installations and seaports. Our en route air bases are located in Alaska, Hawaii, Guam, and Japan. We group the airfields into a North-Pac route through Alaska and Japan, and a Mid-Pac route through Hawaii, Guam, and Okinawa, Japan. The civilian airfields are in the Continental United States and Japan. Outside Japan, we frequently stage airplanes and naval ships through Singapore and Thailand. Both countries have been most gracious partners and Singapore has even built a pier large enough to accommodate ships up to and including aircraft carriers.

The critical seaports for deployment and sustainment support to Asia are our West Coast ammunition ports at Concord, CA and Indian Island, WA. Many of our east and Gulf coast commercial ports, (such as Savannah, GA; Beaumont, TX; Corpus Christi, TX; and Jacksonville, FL) would play a key role in supporting early de-

ployment of combat units. Pearl Harbor, HI, and our commercial ports in Tacoma, WA, San Diego, CA, Long Beach, CA, and Oakland, CA, would also play a major role in early deployments and would continue to support later deployments and sustainment.

USTRANSCOM aggressively works Pacific infrastructure issues in concert with the Pacific Command and the Defense Logistics Agency (DLA) through the Pacific en route Infrastructure Steering Committee (PERISC). The PERISC's charter requires it to ensure we have adequate infrastructure in the Pacific to support requirements levied by both the mobility requirements studies sponsored by the Office of the Secretary of Defense, as well as those specified by the supported Commander in Chief through his approved operation plan. To meet those requirements, the Pacific Command, in conjunction with United States Transportation Command and DLA's Defense Energy Support Center, has embarked upon an aggressive program to repair its aged infrastructure; the bulk of these projects involve strategic airplane parking ramps, fuel hydrants, and fuel storage facilities. Improvements in these critical areas will increase the number of airplanes that can transit our few bases and decrease the amount of time they spend waiting on the ground to refuel. The repair projects already underway or programmed will ensure our fragile en route system does not fail when we need to surge in support of a contingency. One area of growing concern is movement of munitions outside the Continental United States, primarily in the Pacific. We are becoming increasingly constrained in where we can transload or transship ammunition. The issue with air delivered munitions is a shortage of hot pads and the Navy issue centers around a shortage of staging areas to convert containerized ammunition to breakbulk. Our PERISC is currently working this issue.

---

QUESTION SUBMITTED BY SENATOR RICK SANTORUM

ADEQUATE STRATEGIC LIFT

5. Senator SANTORUM. General Handy, Gen. Eric Shinseki, Chief of Staff, United States Army, has led the effort to transform the Army into a force better able to meet 21st century threats. To meet these goals, the Army will need to be quicker on the field of battle and quicker to get to the fight. Part of the Chief's vision entails an Interim Force of platforms that are C-130 deployable and are able to be rapidly transported to the theater of conflict. While the Army has embarked on a new platform to meet this vision (a LAV-III variant), it is unclear that there is an adequate strategic lift necessary to get the Interim Force to the conflict. Do you believe that the United States Transportation Command (USTRANSCOM) and/or Air Mobility Command has the lift assets necessary to get the Army to the conflict in the deployment periods defined by General Shinseki?

General HANDY. Currently, the United States Transportation Command (USTRANSCOM) lacks the airlift assets necessary to meet the Army's goal of deploying the Interim Brigade Combat Team (IBCT) in 96 hours. While the C-130 might be desirable for movement of the deployable force within the theater, C-17s and C-5s are the only aircraft capable of inter-theater deployment and movement of outsized loads. Even when we obtain the recommended airlift increases identified in the Mobility Requirements Study 2005 (MRS-05), we will still be challenged to meet the 96-hour timeline. The Army transformation will result in a smaller, more lethal, and deployable unit. However, the decrease in unit size that we are seeing with the IBCT is offset by the more demanding 96-hour deployment timeline, actually increasing the airlift requirement. Airlift assets are only one of the issues impacting faster deployment of the Army's IBCT. Today we are teaming with the Army to identify and fix a number of challenges to include infrastructure improvements, interoperability issues, future equipment design, and the automated tools needed to attain the aggressive goal of 96 hours. Needless to say, USTRANSCOM will continue working closely with the Army to assess the deployment aspects of the IBCT and assist in developing solutions to rectify shortfalls.

---

[The nomination reference of Gen. John W. Handy follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
September 14, 2001.

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

The following named officer for appointment in the United States Air Force to the grade of indicated while assigned to a position of importance and responsibility under title 10, U.S.C., section 601:

*To be General*

John W. Handy, 5379.

[The résumé of service career of Gen. John W. Handy, USAF, which was transmitted to the committee at the time the nomination was referred, follows:]

JOHN WILLIAM HANDY, GENERAL, RegAF, 241-68-5379

**DATE AND PLACE OF BIRTH:** 29 April 1944, Raleigh, North Carolina  
**YEARS OF ACTIVE SERVICE:** Over 34 years as of 4 January 01  
**SCHOOLS ATTENDED AND DEGREES:** Methodist College NC, BA, 1966; Univ of Southern California, MAS, 1979; Squadron Officer School, 1972; National War College, 1984; John F. Kennedy School of Gov't, Harvard University, 1993  
**JOINT SPECIALTY OFFICER:** Yes  
**AERONAUTICAL RATING:** Command Pilot

[The Committee on Armed Services requires certain senior military officers nominated by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Gen. John W. Handy, USAF, in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228  
Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
John William Handy.
2. **Position to which nominated:**

Commander in Chief, United States Transportation Command and Commander, Air Mobility Command.

**3. Date of nomination:**

September 14, 2001.

**4. Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

**5. Date and place of birth:**

29 April 1944; Raleigh, North Carolina.

**6. Marital Status:** (Include maiden name of wife or husband's name.)

Married to Mary L. Handy (Fagan).

**7. Names and ages of children:**

Mary K. Handy; Age: 27.

**8. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed in the service record extract provided to the committee by the Executive Branch..

None.

**9. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, firm, partnership, or other business enterprise, educational, or other institution.

None.

**10. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Daedalian Lifetime Member.

Air Force Association Lifetime Member.

Airlift/Tanker Association Lifetime Member.

Logistics Officer Association.

**11. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, and any other special recognitions for outstanding service or achievements other than those listed on the service record extract provided to the committee by the Executive Branch.

None.

**12. Commitment to testify before Senate committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

Yes.

**13. Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?

Yes.

---

[The nominee responded to the questions in Parts B–E of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–E are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement of Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JOHN W. HANDY.

This 23th day of July, 2001.

[The nomination of Gen. John W. Handy was reported to the Senate by Chairman Levin on September 26, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on September 26, 2001.]

---

[Prepared questions submitted to Adm. James O. Ellis, Jr., USN, by Chairman Levin prior to the hearing with answers supplied follow:]

DEPARTMENT OF THE NAVY,  
COMMANDER IN CHIEF,  
*U.S. Naval Forces, Europe.*

The Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN, I am greatly honored by the President's confidence in nominating me for assignment as Commander in Chief, U.S. Strategic Command. I pledge my full support to our Nation, the President, Congress, the Secretary of Defense, and the men and women of our Armed Forces.

As requested in your letter of 17 September 2001, I have attached my responses to your questions.

Sincerely,

J.O. ELLIS,  
*Admiral, U.S. Navy.*

Attachment:

cc: Senator John Warner  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I strongly support the Defense Reorganization Act of 1986 and the Special Operations reforms. They have definitely strengthened our Armed Forces and the effectiveness of our combatant commanders.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe the Department of Defense has vigorously and successfully pursued implementation of these important reforms.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most positive aspect is the overall improvement in our military operations. The Goldwater-Nichols Act has resulted in much needed improvements in joint doctrine, joint professional military education, and joint strategic planning. Another important element is clarity in the chain of command from the National Command Authorities to the combatant commanders and unambiguous responsibility placed upon each CINC for execution of mission and preparedness of assigned forces.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes. The law gives combatant commanders sufficient authority they need to carry out their assigned missions. This has been well demonstrated through the many complex joint operations conducted since the legislation was enacted, including the strategic deterrence mission of USSTRATCOM.

*Question.* Do you foresee the need for additional modifications of Goldwater-Nichols in light of the changing environment and possible revisions to the National Security Strategy? If so, what areas do you believe it might be appropriate to address in these modifications?

Answer. It is clear that the Goldwater-Nichols Act has profoundly improved the performance and capabilities of the American military establishment. We have significantly improved our ability to conduct combat operations, manage defense resources, streamline management practices, and address organizational issues within the Department of Defense. The Goldwater-Nichols Act remains an important and effective piece of legislation; as a result, I do not believe any major revisions are required at this time.

*Question.* Based upon your experience as Commander, U.S. Naval Forces, Europe and Commander in Chief, Allied Forces, Southern Europe, do you believe that the role of the combatant commanders under the Goldwater-Nichols legislation is appropriate and that the policies and procedures in existence allow that role to be fulfilled?

Answer. Yes. Unity of command, input into resource allocation, and most importantly, the imperative of combatant commanders to plan and fight in a joint environment are all provided for while empowering the Department of the Navy in its role of organizing, training, and equipping naval forces.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Commander in Chief, U.S. Strategic Command?

Answer. The Commander in Chief, United States Strategic Command (CINCSTRAT) has responsibility and control for all strategic forces in support of the National Security Objective of strategic deterrence. CINCSTRAT also exercises combatant command (COCOM) over the organization and operation of all assigned forces and headquarters in accordance with public law and the policies established by the Secretary of Defense. Additionally, he is a primary advisor to the Secretary of Defense on strategic issues.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. Thirty-two years of service in the United States military have fully prepared me for this position through Navy and Joint Assignments, in peace, crisis and conflict, alongside the finest soldiers, sailors, airmen, marines and coast guardsmen in the world. I have commanded an aviation squadron, a deep draft flagship, a nuclear aircraft carrier, a carrier battle group, U.S. Naval Forces in Europe and Allied Forces Southern Europe in the NATO Alliance. I have been privileged to serve on six occasions in Joint Task Forces (JTF's) around the world and have been assigned overseas in the Middle East, Asia and, now, Europe. I have been privileged to fill several Washington staff positions including the Deputy Chief of Naval Operations for Plans, Policy and Operations and in the Navy's Office of Legislative Affairs. My career has included qualification as a fighter pilot, test pilot, nuclear weapon delivery pilot, and ship's captain, as well as graduate-level education in both aerospace and nuclear engineering.

*Question.* What are the most important lessons that you have learned as Commander, U.S. Naval Forces, Europe and Commander in Chief, Allied Forces, Southern Europe?

Answer. This assignment has reaffirmed for me the importance of the current readiness of our military forces and the important role of their presence around the world. I have seen the unique capabilities of our joint forces used both in support of national interests and in concert with our allies. Finally, in addition to inter-service cooperation, I have learned the value of an innovative, integrated, cross-sector, interagency and interdisciplinary approach to our National Security Challenges.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Commander in Chief, U.S. Strategic Command?

Answer. I certainly have much to learn. Not only are we in a period of strategic transition, but I have not worked regularly with the many organizations that contribute to the success of USSTRATCOM (Congress, National Security Council, Nuclear Weapons Council, Defense Threat Reduction Agency, Department of Energy, and others). If confirmed, I will make it a priority to become more familiar with these organizations and the contributions they make to the success of our missions.

#### RELATIONSHIPS

*Question.* Please describe your understanding of the relationship of the Commander in Chief, U.S. Strategic Command, to the following officials:

The Secretary of Defense.

Answer. In accordance with Title 10, United States Code, section 164, the Commander of U.S. Strategic Command (CINCSTRAT) performs his duties under the authority, direction, and control of the Secretary of Defense. He is directly respon-

sible to the Secretary of Defense for the preparedness of the command and the ability to carry out missions assigned to the command.

*Question.* The Deputy Secretary of Defense.

*Answer.* In accordance with Title 10, United States Code, section 132, the Deputy Secretary of Defense will perform duties and exercise powers as prescribed by the Secretary of Defense, and in the absence of the Secretary of Defense, perform his duties. If confirmed, I intend to work closely with the Deputy Secretary on all strategic matters.

*Question.* The Under Secretaries of Defense.

*Answer.* Title 10, United States Code, and current DOD directives establish the Under Secretaries of Defense as the principal staff assistants and advisors to the Secretary regarding matters related to their functional areas. Within their areas, Under Secretaries exercise policy and oversight functions. In discharging their responsibilities, the Under Secretaries may issue instructions and directive-type memoranda that implement policy approved by the Secretary. These instructions and directives are applicable to all DOD components. They may also obtain reports and information necessary to carry out their functions. As with other communications between the NCA and combatant commanders, communications between the Under Secretaries and combatant commanders are transmitted through the Chairman of the Joint Chiefs of Staff.

*Question.* The Assistant Secretaries of Defense.

*Answer.* With the exception of the Assistant Secretaries of Defense for C<sup>3</sup>I, Legislative Affairs, and Public Affairs, all Assistant Secretaries are subordinate to one of the Under Secretaries of Defense. This means any relationship USSTRATCOM would require with any Assistant Secretary of Defense would be through the appropriate Under Secretary of Defense. Since the Assistant Secretaries of Defense for C<sup>3</sup>I, Legislative Affairs, and Public Affairs are the Secretary of Defense's principal deputies for overall supervision of C<sup>3</sup>I, legislative matters, and public affairs, respectively, any relations required between USSTRATCOM and ASD (C<sup>3</sup>I), ASD (LA), or ASD (PA) would be conducted along the same lines as those discussed above regarding relations with the various Under Secretaries of Defense.

*Question.* The Chairman of the Joint Chiefs of Staff.

*Answer.* The Chairman is clearly established by Title 10, United States Code, as the principal military advisor to the President, National Security Council, and Secretary of Defense. He serves as an advisor and is not in the chain of command that runs from the National Command Authorities (NCA) directly to each combatant commander. The law does allow the President to direct that communications between the NCA and the combatant commanders be transmitted through the Chairman. This action keeps the Chairman fully involved so that he can execute his other responsibilities. By law and to the extent directed by the Secretary of Defense, the Chairman serves as spokesman for the combatant commanders and is charged with overseeing their activities. He provides a vital linkage between the combatant commanders and other elements of the Department of Defense. While the legal duties of the Chairman are many and they require either his representation or personal participation in a wide range of issues, if confirmed, I will also have an obligation in accordance with Title 10, United States Code, to keep the Secretary of Defense promptly informed on matters for which he may hold me personally accountable. If confirmed, I will work with and through the Chairman in the execution of my duties.

*Question.* The Secretaries of the Military Departments.

*Answer.* Title 10, United States Code, section 165, provides that, subject to the authority, direction, and control of the Secretary of Defense and subject to the authority of combatant commanders, the Secretaries of Military Departments are responsible for the administration and support of the forces they have assigned to combatant commands. The authority exercised by a combatant commander over Service components is quite clear, but requires close coordination with each Secretary to ensure there is no infringement upon those lawful responsibilities a Service Secretary alone may discharge.

*Question.* The Chiefs of Staff of the Services.

*Answer.* As a result of the Goldwater-Nichols Act, the Service Chiefs are no longer involved in the operational chain of command. They now have two significant roles. Their primary function is to provide organized, trained, and equipped forces to perform a role—to be employed by the combatant commander in the accomplishment of a mission. Additionally, as members of the Joint Chiefs of Staff, the Service Chiefs have a lawful obligation to provide military advice. Individually and collectively, the Service Chiefs are a source of experience and judgment every combatant commander can and should call upon. If confirmed, I would work closely and confer regularly with the Service Chiefs.

*Question.* The Combatant Commanders.

*Answer.* CINCSTRAT fully supports other combatant commanders as directed in the Unified Command Plan. USSTRATCOM provides theater nuclear and counterproliferation support to combatant commanders to assist them in developing tailored annexes designed to counter weapons of mass destruction (WMD). USSTRATCOM also provides specialized planning and consequence analysis, when requested by other combatant commanders. Additionally, CINCSTRAT works closely with other combatant commanders to initiate crisis action procedures contained in the Nuclear Supplement to the Joint Strategic Capabilities Plan. In crisis situations, when assigned as a supporting CINC, CINCSTRAT supports planning and execution of military operations for the combatant commander.

*Question.* The Administrator of the National Nuclear Security Administration.

*Answer.* In accordance with title 32, section 3212, of the National Nuclear Security Act of 1999, the Administrator is responsible to the Secretary of Energy for all Department of Energy programs and activities involving the production, safety, and security of nuclear energy and nuclear weapons—including the stockpile stewardship program. Though the Administrator is outside the DOD chain of command, these issues are of concern to CINCSTRAT as well, and if confirmed, I will work closely and confer regularly with the Administrator.

*Question.* The Deputy Administrator for Defense Programs, National Nuclear Security Administration.

*Answer.* The Deputy Administrator is responsible to the Administrator to oversee programs and efforts to prevent the spread of materials, technology, and expertise relating to weapons of mass destruction (WMD); detect the proliferation of WMD; eliminate inventories of surplus fissile materials; provide for international nuclear safety. These are strategic issues of concern to USSTRATCOM as well, and if confirmed, my staff and I will work closely and confer regularly with the Deputy Administrator on these issues.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Commander in Chief, U.S. Strategic Command?

*Answer.* I believe there are four major challenges:

- Maintaining effective, credible, and secure strategic deterrent forces.
- Shaping a solid and stable environment and foundation for any future arms reductions and promoting the nonproliferation of weapons of mass destruction.
- Ensuring a safe and reliable nuclear weapons stockpile.
- Taking care of our people.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed:

- I will ensure our strategic force reductions are managed in a way that maintains a viable deterrent for the Nation and enhances strategic stability.
- I would also continue to build on the work of Admiral Mies and his predecessors in ensuring we strike the right balance in our resource allocation and force sizing efforts and in fostering productive military-to-military contacts which further our threat reduction and confidence-building activities.
- In parallel with responsible management of our relationship with Russia, I will work to strengthen our capabilities to adapt to strategic challenges in South Asia or elsewhere.
- I will build on the cooperation which USSTRATCOM already enjoys with other combatant CINCs to promote improved planning, intelligence, exercises, resource management, information security, force protection, and command and control so that the Nation is better prepared to respond appropriately to a variety of potential contingencies.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Commander in Chief, U.S. Strategic Command?

*Answer.* USSTRATCOM's challenge is to continue to ensure a viable deterrent for the Nation and enhance strategic stability while working towards the President's goal of a force structure at the lowest levels consistent with the Nation's security needs. There are no new weapons or platforms in development and the ones we have are well beyond their initial design lives and need to be sustained. Critical to this sustainment effort is our industrial base and retention of our people with critical skills.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. If confirmed, I would promptly:

- Meet with each of the USSTRATCOM Task Force Commanders, and the Service Chiefs of the Air Force and Navy, and the Strategic Advisory Group to ensure I am completely familiar with the status of our strategic deterrent forces and their command and control.
- Visit the Department of Energy, each of the nuclear laboratories, the Strategic Advisory Group, and other agencies associated with USSTRATCOM to ensure our plans and policies affecting stockpile stewardship, threat reduction, and confidence building measures are closely aligned.
- Verify our military-to-military contact program aggressively supports our national policy and enhances the stability of our strategic relationships.
- Work closely with the Office of the Secretary of Defense to implement requirements resulting from the ongoing Nuclear Posture Review.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Commander in Chief, U.S. Strategic Command?

Answer. In the wake of recent events, my first priority will be the protection of facilities and forces, at home or deployed. Second, I will examine the implications of the soon-to-be-completed Nuclear Posture Review. Third, since there are no new weapons in development, we must continue to examine sustainment of our current forces. Of course, taking care of our people, both military and civilian, will be key to accomplishing all these tasks.

#### DETERRENCE AND MISSILE DEFENSE

*Question.* Do you believe that a national missile defense system deployed by the United States would jeopardize or enhance strategic stability?

Answer. The missile defense system that is proposed is designed as a limited system to defend against rogue states with ballistic missile technology. Such a system should have limited impact on overall strategic stability.

*Question.* Do you believe that a national missile defense system deployed by the United States would jeopardize existing strategic arms control agreements or enhance the prospects for future strategic arms reductions? Please explain.

Answer. The U.S. is currently engaged in dialogue with Russia about missile defense and its affect on the Anti-Ballistic Missile Treaty. The outcome of these talks will give us a better idea of our future prospects in this regard.

*Question.* What are your views on the relationship between national missile defense—defenses against long-range ballistic missiles—and nuclear deterrence?

Answer. At the height of the Cold War offensive based strategic deterrence worked well. This deterrent, which was used in a bi-polar environment, may need to adapt to a multi-polar environment. A more comprehensive framework, including missile defense, can integrate additional elements of military strategy to complement offensive nuclear forces to assure sustainment of a deterrent capability.

*Question.* In your view, is there a connection between the number of U.S. strategic delivery platforms and strategic warheads on the one hand and the type of missile defense systems on the other? If so, what is your view of that relationship?

Answer. Yes. The mix of offensive and defensive forces should be combined to form a defensive capability coupled with a timely offensive response posture that provides defense against small attacks from ballistic missiles and a guaranteed retaliatory capability against larger attacks, the result of and combination of which remains totally unacceptable to any aggressor. The challenge is to develop a well defined relationship between the offensive and defensive force.

*Question.* Do you believe that the effectiveness of Russian or Chinese deterrent forces would be diminished in any meaningful way by United States deployment of a limited defense against long-range missiles?

Answer. The overall effectiveness of Russian deterrent forces would not be significantly diminished by U.S. deployment of a limited missile defense. A limited U.S. missile defense system would affect the deterrent value of China's current strategic ballistic missile force. However, that impact will lessen if, as expected, China increases strategic nuclear arms over the next decade.

*Question.* Do you believe that the effectiveness of Russian or Chinese deterrent forces would be diminished in any meaningful way by United States deployment of a layered defense capable of intercepting long-range missiles from land, sea, air and space-based platforms in the boost, midcourse and terminal phases of their flight?

Answer. Without the benefit of classified analysis and modeling against a specific layered system, it's hard to say. Generally, however, the more effective a U.S. missile defense system is in diminishing retaliatory capability of Russian and Chinese deterrent forces the greater the incentive for expansion of these forces to maintain their perceived deterrent effect. The more a U.S. missile defense is capable of dealing with significant numbers of sophisticated ballistic missiles, the greater the perceived U.S. capability to conduct a pre-emptive attack on strategic deterrent forces and defend against the residual retaliatory strike.

#### RUSSIAN STRATEGIC DOCTRINE

*Question.* In your view, what is the current Russian approach to strategic nuclear weapons, and if Russia has a launch on warning doctrine, what challenge does this pose for USSTRATCOM?

Answer. Russia has increasingly relied on its strategic nuclear forces to maintain its great power status and to protect itself from potential military aggression worldwide. [Deleted].

*Question.* In your view, how do the Russian nuclear doctrines for strategic and tactical nuclear weapons relate to U.S. force structure size and the number of nuclear weapons in the U.S. arsenal?

Answer. While demonstrating an increased reliance on its nuclear arsenal, Russian leaders have openly discussed their intent to reduce nuclear stockpiles. Russian policies and stockpile size, however, are not the sole factors for determining U.S. force structure needs. U.S. strategic force structure and policies must consider, among other things, a more uncertain post-Cold War strategic environment and the emergence of new, promising strategic offensive and defensive capabilities. Again, this is an issue that the NPR is carefully considering.

#### DE-ALERTING STRATEGIC FORCES

*Question.* What is your view of the comparative safety and security of U.S. and Russian strategic forces?

Answer. U.S.: The level of safety and security of U.S. strategic forces is at a high level. The Nuclear Command and Control System End to End Review led by (Retired) General Scowcroft has identified areas where we can continue to evaluate our already significant safety and security posture for strategic forces. Continuous evaluation of these areas, and implementation of enhancements as recommended by the End To End study groups will maintain the safety and security of our strategic forces for the foreseeable future.

Russian: [Deleted].

*Question.* In your view, what is the likelihood of either an accidental or unauthorized launch of either a Russian or U.S. ICBM or SLBM?

Answer. United States nuclear forces are subject to numerous procedural and technical safeguards to guard against accidental or inadvertent launch.

Russian: [Deleted].

*Question.* In your view, do U.S. ICBMs or SLBMs maintain a "hair trigger alert?"

Answer. No, they do not. "Hair trigger" is an inaccurate assessment. Multiple stringent procedural and technical safeguards have been in place and will remain in place to guard against accidental or inadvertent launch. These safeguards exist to ensure the highest level of nuclear weapons safety, security, reliability, and command and control. We can not launch without Presidential direction.

*Question.* How do you define "hair trigger alert?"

Answer. It is any alert status that would allow the launching of nuclear weapons in a less than deliberate manner—without the stringent procedural and technical safeguards.

*Question.* In your view, should the U.S. reduce the alert status of its ICBMs or SLBMs?

Answer. Reducing the alert status of our forces, in isolation, can diminish the credibility and survivability of our deterrent forces. However, if a de-alerting initiative does not degrade/curtail our strategic capability/mission I would consider supporting it. In general, de-alerting initiatives should not be adopted unless they are reciprocal, verifiable, and, most importantly, stabilizing.

*Question.* Do you support reducing the alert status or deactivating ICBMs and SLBMs other than in the context of implementing the protocol to the START II Treaty that extends the deadline for destruction of strategic nuclear delivery vehicles?

Answer. I do not support reducing the alert status of ICBMs and SLBMs unless the actions are reciprocal, verifiable, and most importantly stabilizing. As for deactivating ICBMs and SLBMs outside of the START II framework, the ongoing NPR

analysis will determine if any systems should be deactivated and removed from strategic service, and if other reductions are possible. I am committed to following the President's guidance to reduce our nuclear forces to the lowest level commensurate with national security requirements.

#### STRATEGIC MODERNIZATION

*Question.* In your view, are the modernization and life extension initiatives for ICBMs and SLBMs sufficient to retain their reliability and effectiveness in the Strategic Triad?

*Answer.* As our Nation comes to rely on a smaller strategic force, the imperative for modernizing and sustaining that force becomes even more critical to ensure a continued viable deterrent.

In order to continue the reliability and effectiveness of our ICBM force, we have commenced a decade-long effort to extend the Minuteman III service life for another 20 years. Strong Congressional support of these ongoing efforts is essential to the success of these programs and the future viability of our ICBM leg of the Triad.

In the SLBM arena, we have commenced the conversion of our strategic submarine force, with Congressional approval, from an 18 SSBN force composed of both Trident I (C-4) and Trident II (D-5) missiles to a 14 boat Trident II only force.

Continued Congressional support for the Trident II missile conversion program remains essential to ensure a reliable sea-based deterrent well into the 21st century.

*Question.* Do you believe that the current Air Force bomber roadmap is an adequate plan to sustain the bomber force as an effective part of the Strategic Triad?

*Answer.* The bomber roadmap details many of the programs required to maintain the bomber force as an effective part of the Strategic Triad. To that end, we fully support current Air Force programs designed to meet critical sustainment and modernization shortfalls. Continued Congressional support for our strategic bomber and nuclear cruise missile initiatives remains critical to the future viability of our bomber force.

#### U.S. STRATEGIC FORCE POSTURE BEYOND START II

*Question.* During the Helsinki Summit meeting of March 1997, the United States agreed to begin negotiations on START III once START II enters into force. The START III framework would have limited the sides to between 2,000 and 2,500 deployed strategic warheads.

If the United States and Russia reduce deployed strategic warheads to between 2,000 and 2,500, how would you recommend that the U.S. strategic force posture be adjusted?

*Answer.* The on-going Nuclear Posture Review is examining this question in great detail; as such it would be premature to postulate specific force posture adjustments.

*Question.* Currently, the U.S. Navy is planning to backfit four older Trident submarines with D-5 missiles in order to support a START II force of 14 Trident submarines equipped with the D-5 missile.

Do you believe that a 14 Trident submarine fleet will still be required if the United States reduces to 2,000 to 2,500 strategic warheads?

*Answer.* Yes. Trident submarines will continue to carry the largest portion of our strategic nuclear warheads under any 2,000 to 2,500 strategic warhead force structure. Our SSBN force is the most survivable leg of the Triad. Thus, the U.S. must preserve a large enough SSBN force to enable two-ocean operations with sufficient assets at sea to ensure a survivable, responsive retaliatory force capable of dissuading any potential adversary.

*Question.* In your view, is there a scenario where the U.S. would not need 14 Trident submarines if the U.S. reduced below 2,000 strategic warheads?

*Answer.* Possible reductions below 2,000 may create a situation where 14 SSBNs are no longer numerically required. I would seek to maximize combat capability by maintaining sufficient platforms to maintain maximum operational flexibility. The need for survivable submarines at sea will be necessary under any scenario. Fourteen Trident submarines allow a credible, two-ocean, strategic deterrent presence with our projected maintenance cycle and operating environment.

*Question.* What kind of warhead loading would be required to remain within a 2,000 to 2,500 strategic warhead level?

*Answer.* Based on preliminary analysis, warhead downloading is a possible option, although it is premature to speculate on the force composition until the NPR is complete. The issues and variables are complex; but, if confirmed, I would explore options that make fiscal sense and do not reduce the credibility of our strategic deterrent.

*Question.* What changes to the ICBM and bomber forces would you have to make in order to remain within a 2,000 to 2,500 strategic warhead level?

*Answer.* Based on preliminary analysis, a reduction in ICBM and bomber force structure is possible, although it is premature to speculate on the force composition until the NPR is complete. If confirmed, I would support only those options that would continue to maximize our operational flexibility and stability.

*Question.* Do you favor reductions in strategic nuclear delivery systems beyond the 2,000 to 2,500 strategic warhead level?

*Answer.* The NPR is examining the appropriate force structure/warhead level and the SecDef will provide a formal report to Congress on the force structure. Stability is the most important criterion as we proceed down the glide path to lower numbers of nuclear weapons. Control of the glide path is critical—the journey is just as or even more important than the destination. Any reductions must allow a hedge capability by avoiding the elimination of platforms while preserving nuclear infrastructure and technical skills.

*Question.* Do you believe that there is a minimum number of nuclear weapons or delivery systems that the United States should maintain under any scenario?

*Answer.* No, I do not believe there is a “hard and fast” minimum number. The manner in which reductions are contemplated and carried out is critical. The most important criterion in assessing prospective arms control measures or unilateral reductions is stability. As we reduce our strategic delivery systems to lower numbers, issues such as disparity in non-strategic nuclear forces, transparency, irreversibility, production capacity, aggregate warhead inventories, and verifiability become more complex and sensitive.

*Question.* Do you believe that the U.S. will need to retain a Strategic Triad under any future agreements or unilateral reductions?

*Answer.* I support maintaining a Triad. Each component provides unique attributes that enhance deterrence and reduce risk; submarines provide survivability, bombers provide flexibility, and intercontinental ballistic missiles provide prompt response. Together, they provide a stable deterrent and complicate an adversary’s offensive and defensive planning.

*Question.* In your view, what is the minimum number of strategic nuclear warheads that should be deployed in the inactive and active inventories of U.S. nuclear weapons? On what strategy are these numbers based?

*Answer.* The ongoing Nuclear Posture Review (NPR) is studying this topic and as such it is somewhat premature to postulate an active and inactive inventory level. The NPR is developing the strategy for the current/future strategic environment. This will then support appropriate force structure numbers and active/inactive inventory levels.

*Question.* In your view, what should be the minimum number of strategic nuclear warhead designs included in the inactive and active inventories of U.S. nuclear weapons? On what strategy are these numbers based?

*Answer.* Again, the ongoing NPR will provide the details to these answers. With the exception of the one type of warhead currently slated for retirement, I believe we should retain all current designs in the active and inactive stockpile. These designs provide a ready hedge for an uncertain future strategic environment.

*Question.* In computing this force structure, do you assume ratification of START II?

*Answer.* No. The NPR process is reviewing our strategy and policy to ascertain the force structure requirements that are consistent with our national security needs. In this context, we assume the U.S. will comply with the START I Treaty requirements and START II is not ratified.

#### STRATEGIC FORCE INDUSTRIAL BASE

*Question.* From your perspective, are there key sectors of the U.S. industrial base that must be protected in order to sustain U.S. strategic forces for the foreseeable future?

*Answer.* It is my personal conviction that the support and sustainment of our strategic systems are absolutely essential to ensure a continued, viable deterrent. Our Nation has in hand, or is near the end of production of, all of its major strategic systems. Since there are no follow-on systems in development, the existing systems must be maintained for an unforeseeable length of time. Therefore, it is crucial for us to ensure continued support for key strategic components and systems unique to our strategic forces. The Strategic Advisory Group that advises CINCSTRAT has studied the industrial base and continues to assess areas of concern. Some of the key ballistic missile sectors they have identified that must be protected to sustain our ICBM/SLBM forces include ballistic missile propulsion production capability, re-

entry vehicle technology, guidance systems, and component vulnerability to electromagnetic pulse. If confirmed, I will continue to support efforts to sustain our industrial base.

*Question.* In your view, are the ongoing efforts in this area adequate?

*Answer.* It is my understanding that USSTRATCOM, in coordination with the Office of the Secretary of Defense and the Services, is pursuing industrial capability sustainment initiatives which support space-based communication and sensor systems, strategic missile guidance technology, propellant technology, and reentry vehicle design capability. The Radiation Hardened Micro-Electronics Oversight Council, under the auspices of the Under Secretary of Defense (Acquisition, Technology, and Logistics) is an example of how present concerns are being addressed. Additionally, the Strategic Advisory Group's Industrial Base Special Study Group is studying future industrial base concerns. Supporting crucial technologies and systems is key to keeping our strategic forces robust, reliable, and modern/credible.

#### NUCLEAR WEAPONS COMPLEX

*Question.* In your view, are there opportunities to downsize and modernize the nuclear weapons manufacturing complex?

*Answer.* The nuclear weapons manufacturing complex has no redundancy built into the system. Each piece of the complex is unique and irreplaceable. I don't feel there is room for further downsizing of the manufacturing complex especially with the number of refurbishments that will be scheduled to maintain the enduring stockpile over the next 20 years. The complex is old and there are many areas where modernization would significantly enhance capabilities and throughput for the manufacturing complex.

*Question.* If confirmed, would you support modernization of the manufacturing complex?

*Answer.* Yes, if confirmed I would fully support modernization efforts. The National Nuclear Security Administration has a plan and is implementing the plan to modernize many aspects of the manufacturing complex. I fully agree with their efforts and hope the funding will be maintained to ensure the modernization programs are fully implemented.

*Question.* Does downsizing provide cost savings that could help defray the cost of modernizing the manufacturing complex?

*Answer.* No. With the demanding refurbishment schedule planned for the various warheads in the enduring stockpile, I don't believe there would be any savings in downsizing and that it could adversely affect the maintenance of the enduring stockpile.

#### NUCLEAR POSTURE REVIEW

*Question.* What is your understanding of your role, if confirmed, in the Nuclear Posture Review?

*Answer.* While OSD and the Joint Staff are co-leads for the NPR, USSTRATCOM has remained an integral player in all aspects of the NPR. USSTRATCOM brings unique capabilities that should be integrated within the NPR process.

#### ROLE OF STRATEGIC COMMAND

*Question.* Please describe the role you intend to play, if confirmed, in assessing and participating in the Department of Energy's science-based stockpile stewardship and management program.

*Answer.* USSTRATCOM is an active participant in the development of the overall strategy and plan. The U.S. must ensure its nuclear stockpile remains safe, secure, and reliable. I recognize CINCSTRAT has specific responsibility in that regard. The Stockpile Assessment Team is now holding an annual stockpile stewardship conference and reports the results to CINCSTRAT. If confirmed, I intend to continue to carefully monitor DOE progress in developing a viable stockpile stewardship and management program.

*Question.* What is your view as to the role USSTRATCOM should play with respect to tactical nuclear weapons?

*Answer.* USSTRATCOM has a unique planning capability for tactical weapons that we can and do provide to theater CINCs. We should continue, and expand this role, when appropriate.

*Question.* Should tactical nuclear weapons be brought under the auspices of USSTRATCOM?

*Answer.* Currently, theater CINCs maintain responsibility, authority, and operational control. Any change to this arrangement would have to be carefully studied and evaluated for impact on our strategies, forces, and international relationships.

## WARHEAD CERTIFICATION

*Question.* Are you confident in our ability to identify and fix potential problems in all weapons expected to be included in the enduring stockpile?

*Answer.* My confidence in the ability to identify problems rests on the projected success of the science-based Stockpile Stewardship Program. This will depend on fully supporting the NNSA program, and how successful we are in the years ahead in developing the complex technological tools and maintaining the necessary expertise in our people. It is imperative as we move forward that we develop the tools necessary to predict problems in the stockpile before they jeopardize safety or reliability.

*Question.* What do you believe to be our biggest challenges in maintaining the nuclear weapons expected to be in the enduring stockpile?

*Answer.* Two critical challenges are aging and the certification of modifications to weapons. The answer depends on the success of the Stockpile Stewardship Program. NNSA is required to certify the reliability and safety of the Nation's nuclear stockpile. CINCSSTRAT is charged with reporting on his confidence in the safety and reliability as part of an annual assessment process. The certification process is more difficult without nuclear testing, and the national laboratory experts report there are issues that cannot be addressed with current tools, although none currently are severe enough to warrant an underground test. Funding levels must be maintained so that new tools can be delivered on schedule.

## ANNUAL WARHEAD CERTIFICATION PROCESS

*Question.* The administrative process for certifying the safety and reliability of the nuclear stockpile requires the Commander in Chief of the Strategic Command and the three nuclear weapons laboratory directors to report annually to the Secretaries of Defense and Energy who in turn certify to the President the continued safety and reliability of the nuclear weapons stockpile.

If confirmed, would you provide Congress a copy of your annual certification?

*Answer.* CINCSSTRAT does not certify the stockpile. NNSA is responsible for certifying the safety and reliability of the stockpile. CINCSSTRAT is charged with providing an assessment of the safety and reliability of the stockpile as part of an annual certification process directed by the President. The Secretaries of Defense and Energy co-sign the annual certification and are responsible for the control of the certification document. If confirmed, and if requested, I would provide my views to Congress.

## LIMITED LIFE COMPONENTS

*Question.* How confident are you in the Department of Energy's ability to manufacture limited life components for the enduring stockpile?

*Answer.* I am confident the Department of Energy will meet DOD needs in maintaining the required stockpile levels. If confirmed, I will closely monitor the process. Given the importance of the issue and the uncertainties about the future, their plans must stay on track.

## PIT MANUFACTURING CAPABILITY

*Question.* In your view, what is the annual requirement for pit production, by weapons type, for which DOE should size a pit production facility? Would this number change if the U.S. reduced the number of warheads to a level of 2,000 to 2,500 or below?

*Answer.* The number depends on several factors including pit lifetime and the size and composition of the enduring stockpile. NNSA is currently studying the effects of aging on special nuclear materials. The results of this effort will help establish functional pit lifetimes.

## MAINTAINING NUCLEAR WEAPONS EXPERTISE IN THE MILITARY

*Question.* If confirmed, what actions would you propose to take as CINCSSTRAT to ensure that nuclear-related jobs are not viewed as career limited and that nuclear programs continue to attract top quality officers and enlisted personnel?

*Answer.* I fully support Service programs that are vital to ensure we have the highest quality of men and women needed for our nuclear forces. This includes initiatives to identify and track those personnel with nuclear experience. If confirmed as CINCSSTRAT and the lead spokesman for our strategic forces, I will ensure the word gets out on our successes. Officer and enlisted personnel are being promoted at the highest rate since the stand up of USSTRATCOM and members completing duties are receiving assignments that enhance their professional development. I be-

lieve it is critical that we continue to communicate the challenging opportunities and the successes of the men and women assigned to our strategic nuclear forces.

COMPREHENSIVE NUCLEAR TEST BAN TREATY

*Question.* Do you believe that the U.S. can maintain a safe and reliable nuclear weapons stockpile under the Comprehensive Nuclear Test Ban Treaty?

*Answer.* If the Science Based Stockpile Stewardship and management Program proceeds as designed it should be possible to maintain a safe reliable stockpile. This requires full program funding and the successful development of new technology. I am greatly concerned between the widening gap between stockpile program requirements and available resources. The delays in many high-priority stockpile stewardship programs because of aging infrastructure and inadequate funding must be addressed with greater urgency. The planned tools are designed to give us a degree of confidence in the stockpile that would not otherwise be possible without nuclear testing. Until those tools are operational, some degradation in the reliability of the stockpile is possible, but I cannot judge its significance at this time. Within the Comprehensive Test Ban Treaty (CTBT), Safeguard F provides that the U.S. may resume testing if it is in the supreme national interest of the Nation. In that regard, CINCSTRAT is charged with reporting on his confidence in the safety and reliability of the stockpile as part of an annual certification process directed by the President. For the past 6 years, USSTRATCOM has conducted an examination of each strategic nuclear weapon type in the stockpile. In conducting that assessment, no issues were found which would warrant the resumption of nuclear testing. While no-one can guarantee that the SSP will allow us to certify the safety, security, and reliability of the stockpile indefinitely in the absence of testing, a judgment that testing is required would not necessarily mean that SSP had failed.

*Question.* Do you support the Comprehensive Nuclear Test Ban Treaty as currently drafted? If not, what specific changes would be needed to gain your support?

*Answer.* I support the philosophy of CTBT as component of an overall arms control and stability framework. While there are genuine concerns with the treaty and verification requirements, the philosophy is consistent with the Non-Proliferation Treaty.

*Question.* Do you believe that the CTBT is verifiable, as currently drafted?

*Answer.* According to GEN Shalikhvili's recommendations to Congress on CTBT, the treaty will give the U.S. access to the international monitoring system. "The IMS primary seismic system will provide three-station 90 percent detection thresholds below 500 tons and below 200 tons for all historic test sites in the Northern Hemisphere." It should be noted that is not possible to verify a true zero-yield test ban without additional measures that are not currently provided for in the CTBT. However, even a true zero-yield test ban would allow experiments that provide useful information for weapon designers.

*Question.* In your view, will the planned science-based Stockpile Stewardship Program, as it is currently being developed, allow us to continue to certify our nuclear weapons stockpile as safe and reliable indefinitely without testing?

*Answer.* The Stockpile Stewardship Program (SSP) must be fully funded in order to have all the needed tools delivered on schedule. Ultimately, the SSP may uncover unanticipated problems in the stockpile. Since we don't know what we don't know, SSP does not guarantee a test will never be required. In fact, an important obligation of SSP is to ensure that we maintain the ability to test.

*Question.* In your view, will the planned science-based Stockpile Stewardship Program, as it is currently being developed, allow us to continue to meet the DOD's requirements for our nuclear weapons stockpile without future testing?

*Answer.* Our current stockpile was developed for the Cold War. We need to be able to adapt our current arsenal to add or improve capabilities in order to meet emerging threats. As these new capabilities are added, it will be up to NNSA and the National Labs to certify the weapons. The adaptations currently envisioned appear possible to accomplish without underground testing.

*Question.* If the DOD eventually requires a new nuclear weapon design, will the planned science-based Stockpile Stewardship Program allow us to develop a new, safe, and reliable nuclear weapon without testing?

*Answer.* NNSA and the National Labs are required to certify any new designs developed. They will have to determine if an underground test is required for any new weapon design.

NUCLEAR WEAPONS COUNCIL

*Question.* If confirmed, what will be your relationship with the DOE, and with the Nuclear Weapons Council?

Answer. A close, cooperative relationship with both the Department of Energy and the Nuclear Weapons Council, as well as other organizations such as the Defense Threat Reduction Agency, is vital to address the challenges of ensuring a safe and reliable nuclear weapons stockpile, building a stable foundation for the implementation of arms control agreements, and helping shape the international environment to promote the non-proliferation of weapons of mass destruction. If confirmed, I will continue to foster a strong partnership with each of these organizations and frequently seek their counsel to address those challenges.

*Question.* Do you support an active Nuclear Weapons Council, to include regularly scheduled meetings?

Answer. Yes. With the many actions taking place within the nuclear weapons complex and the many ongoing refurbishment programs or soon to be going on, an active Nuclear Weapons Council is imperative. Their guidance will be necessary to ensure programs continue on track and any issues are resolved in a timely manner to preclude unnecessary delays in programs.

#### TRIDENT SUBMARINE CONVERSIONS AND START ACCOUNTING

*Question.* If the Navy continues on a path to convert either two or four of the Trident submarines to be decommissioned to an SSGN configuration that is treaty accountable, at what point would "phantom" warheads ascribed to these boats limit USSTRATCOM's ability to maintain sufficient warheads to execute the National Military Strategy?

Answer. Under START I Accountability Rules and Limits, converting four Trident submarines to SSGNs presents no "phantom warhead" counting issues. If we move to lower limits within a treaty framework and the accounting rules are not modified we cannot afford the numbers lost to phantom warheads.

#### COOPERATIVE THREAT REDUCTION PROGRAM

*Question.* Do you support the Cooperative Threat Reduction program?

Answer. I strongly support Cooperative Threat Reduction. It has proven itself to be an invaluable part of a broadened definition of deterrence, as a cost-effective means to aid in the "denuclearization" of former Soviet states, to continue to promote stockpile safety and security in Russia, and help stem the proliferation of weapons.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes. If confirmed, it is my duty to keep you, the representatives of the people, informed of the status of our strategic deterrent forces.

*Question.* Do you agree, when asked, to give your personal views, even if those views differ from the administration in power?

Answer. Yes. It is my responsibility to provide the best military advice regardless of the administration's views.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Commander in Chief, U.S. Strategic Command?

Answer. Yes. If confirmed, I will make myself available to this committee or designated members whenever requested.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes. I will be forthcoming with all information requested.

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### REQUIREMENTS

1. Senator THURMOND. Admiral Ellis, modernization of our forces is the key to maintaining their effectiveness to meet the future challenges of this new threat en-

vironment. In your judgment, what is the most critical modernization requirement of the Strategic Command?

Admiral ELLIS. For United States Strategic Command to maintain a credible strategic deterrence through the 21st century, the modernization and sustainment of all three legs of the Triad, (the bomber, intercontinental ballistic missile and sea launched ballistic missile) must occur. In addition, the fourth leg of the strategic "quadrad," the survivable, assured, and enduring command, control, communication, and computer intelligence, surveillance, and reconnaissance (C<sup>4</sup>ISR) network, must be vigorously supported for modernization. These include our airborne platforms, E-4 and E-6, survivable satellite communications, fixed and mobile command centers, and the network that supports them with planning and ISR information. As recent events have shown, the vulnerability of national assets necessitates increased vigilance in sustaining the security of our nuclear forces and stockpiles.

#### BALKANS

2. Senator THURMOND. Admiral Ellis, the tragic events of September 11 have virtually taken the situation in the Balkans off the television and the front page of our newspapers. As the Commander of forces in that region, please give me your views on how the effort to eliminate terrorism will influence our commitment to that troubled region?

Admiral ELLIS. As the Commander of the North Atlantic Treaty Organization's (NATO) Southern Region, I can assure you that the tragic events of September 11 have touched all of us, whether American, ally, partner or friend. The global effort to counter the scourge of terrorism has in no way weakened the resolve or the ability of all involved in helping to bring peace to the Balkans. Indeed, in both Bosnia and Kosovo, our NATO forces have expanded their vital security efforts and have already made significant gains in identifying and exploiting potential members of the global terrorist web. Those being successfully pursued may be attempting to use the Balkan crisis as a cover for the support of extremist activities worldwide. With our NATO allies, we will continue this important effort, in addition to continuing our shared support of the stabilization efforts in Bosnia, Kosovo, and Macedonia.

#### STATUS OF NUCLEAR STOCKPILE

3. Senator THURMOND. Admiral Ellis, although the Department of Energy has the responsibility for ensuring the reliability and safety of our nuclear weapons, as CINC STRATCOM you have a vital interest in these issues. What if any concerns do you have regarding the age reliability and safety of our nuclear stockpile?

Admiral ELLIS. As the stockpile ages, and as our diagnostic tools and methods continue to improve, it is likely we will find more problems with the stockpile that require fixing. Our ability to respond to unforeseen problems is limited. I agree with the United States Strategic Command Stockpile Assessment Team's (SAT) determination that the weapons complex is fragile in many areas. The complex is challenged to maintain the current workload of Stockpile Life Extension Programs (SLEPs). Additional workloads could leave identified problems deferred for an unacceptable length of time, or cause delays in scheduled SLEPs. I support the recommendations of the SAT and the Foster Panel for infrastructure improvements and reduction of maintenance backlogs throughout the weapons complex. Additionally, I support a robust Stockpile Stewardship Program, which should continue to develop the tools necessary to allow us to be more predictive and less reactive in dealing with aging, reliability, and safety issues.

#### QUESTION SUBMITTED BY SENATOR RICK SANTORUM

##### REPLACEMENT PLATFORM FOR THE B-52

4. Senator SANTORUM. Admiral Ellis, the B-52 joined the Air Force fleet in 1960. According to the Bomber Road Map recently provided to Congress, the B-52 is going to continue performing its mission for another 40 or 45 years. In light of the age of the B-52 fleet, do you believe that the Department of Defense ought to begin considering a replacement platform for the B-52? Do you support efforts to explore unmanned combat air vehicles (UCAVs) as a potential replacement to the B-52 or other bomber platforms?

Admiral ELLIS. I support Air Combat Command's Bomber Roadmap, which includes beginning bomber replacement analysis no later than 2010. Absolutely critical to this plan, is the full funding and timely fielding of the B-52 sustainment and

modernization programs requested by the Bomber Roadmap. To that end, procurement of a survivable, secure, two-way communication system remains critical to the success of my mission. In addition, I request your continued support for ongoing Air Force programs to upgrade B-52 avionics, situational awareness and self-protection capabilities. Taken together, these modernization and sustainment programs should keep the bomber force viable until the scheduled replacement is fielded. I would support and encourage investigation of all options for a follow-on bomber platform and look forward to reviewing the findings from a future analysis of alternatives.

---

[The nomination reference of Adm. James O. Ellis, USN, follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 14, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

The following named officer for appointment in the United States Navy to the grade indicated while assigned to a position of importance and responsibility under Title 10, U.S.C., section 601:

*To be Admiral*

James O. Ellis Jr., 4995.

---

[The résumé of service career of Adm. James O. Ellis, USN, which was transmitted to the committee at the time the nomination was referred, follows:]

[The Committee on Armed Services requires certain senior military officers nominated by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Adm. James O. Ellis, USN, in connection with his nomination follows:]

1526

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
James O. Ellis, Jr., U.S. Navy.
2. **Position to which nominated:**  
Commander in Chief, U.S. Strategic Command.
3. **Date of nomination:**  
September 14, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
20 July 1947; Spartanburg, SC.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Paula Dene Matthews Ellis on 20 June 1970; Atlanta, GA.
7. **Names and ages of children:**  
CPT Patrick James Ellis, USA; Age: 29.  
Mrs. Lauren Elizabeth Ellis Brandy; Age: 27.
8. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed in the service record extract provided to the committee by the Executive Branch.  
None.
9. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, firm, partnership, or other business enterprise, educational, or other institution.  
None.
10. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
U.S. Naval Institute (Life Member).  
Naval Historical Foundation.  
The American Legion.  
Naval Academy Alumni Association.
11. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, and any other special recognitions for outstanding service or achievements other than those listed on the service record extract provided to the committee by the Executive Branch.  
Guggenheim Fellowship in Aerospace Engineering, Georgia.  
Institute of Technology (1969).  
Grand Order of Merit of the Italian Republic (2001).

12. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

Yes.

13. **Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?

Yes.

---

[The nominee responded to the questions in Parts B–E of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–E are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement of Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JAMES O. ELLIS.

This 19th day of July, 2001.

[The nomination of Adm. James O. Ellis, Jr. was reported to the Senate by Chairman Levin on September 26, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on September 26, 2001.]

**NOMINATIONS OF LINTON F. BROOKS TO BE DEPUTY ADMINISTRATOR FOR DEFENSE NUCLEAR NONPROLIFERATION, NATIONAL NUCLEAR SECURITY ADMINISTRATION; DR. MARVIN R. SAMBUR TO BE ASSISTANT SECRETARY OF THE AIR FORCE FOR ACQUISITION; DR. WILLIAM WINKENWERDER, JR., TO BE ASSISTANT SECRETARY OF DEFENSE FOR HEALTH AFFAIRS; EVERET BECKNER TO BE DEPUTY ADMINISTRATOR FOR DEFENSE PROGRAMS, NATIONAL NUCLEAR SECURITY ADMINISTRATION; AND MARY L. WALKER TO BE GENERAL COUNSEL OF THE AIR FORCE**

---

**THURSDAY, OCTOBER 11, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 2:40 p.m., in room SH-216, Hart Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Kennedy, Landrieu, Warner, and Allard.

Other Senators present: Senator Pete Domenici.

Committee staff members present: David S. Lyles, staff director; and Christine E. Cowart, chief clerk.

Majority staff members present: Madelyn R. Creedon, counsel; Gerald J. Leeling, counsel; Peter K. Levine, general counsel; and Arun A. Seraphin, professional staff member.

Minority staff members present: Romie L. Brownlee, republican staff director; Judith A. Ansley, deputy staff director for the minority; L. David Cherington, minority counsel; Gary M. Hall, professional staff member; Carolyn M. Hanna, professional staff member; Mary Alice A. Hayward, professional staff member; George W. Lauffer, professional staff member; Patricia L. Lewis, professional staff member; Thomas L. MacKenzie, professional staff member; Suzanne K.L. Ross, research assistant; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Dara R. Alpert, Thomas C. Moore, Jennifer L. Naccari, and Nicholas W. West.

Committee members' assistants present: Jeffrey S. Wiener, assistant to Senator Landrieu; Robert Alan McCurry, assistant to Senator Roberts; and Arch Galloway II, assistant to Senator Sessions.

#### **OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. The committee meets today to consider the nominations of five individuals to senior positions in the Department of Defense and the National Nuclear Security Administration: Dr. Everet Beckner to be Deputy Administrator for Defense Programs at the National Nuclear Security Administration, Ambassador Linton Brooks to be Deputy Administrator for Defense Nuclear Nonproliferation at the National Nuclear Security Administration; Dr. William Winkenwerder, Jr. to be Assistant Secretary of Defense for Health Affairs; Dr. Marvin Sambur to be the Assistant Secretary of the Air Force for Acquisition, Research, and Development; and Ms. Mary Walker to be General Counsel of the Air Force.

On behalf of the committee, let me welcome each of you and your families. We have a tradition of asking nominees to introduce family members who are present, and I think I will hold off on that so we can let our two colleagues make introductions, if they are ready to do that, because they, I know, have incredibly hectic schedules. Are you ready, Senator Kennedy?

Senator KENNEDY. Yes.

Chairman LEVIN. We would start with you to make your introduction. Then we will go to Senator Domenici so that you are able to get on with your schedules.

#### **STATEMENT OF SENATOR EDWARD M. KENNEDY**

Senator KENNEDY. Thank you very much, Mr. Chairman.

The President has a great number of nominations to make on a wide variety of positions. There are many positions of extraordinary importance in any administration. We know that. In this particular situation, in selecting William Winkenwerder, Jr., as the Assistant Secretary of Defense for Health Affairs, he has made one of his very best. I am delighted and honored to be able to say a word on his behalf, although his record of achievement and accomplishment really speaks for itself.

I know that he will introduce his wife, Mary Pride, who is here, and their 9-year-old son, Will, who is with him today.

Listen to this list of achievements and accomplishments.

He had an extraordinary record at the University of North Carolina in the medical school and then went on to a great career as a primary care physician. He has currently been working in Blue Cross/Blue Shield in the office of the CEO as the vice chairman, and from all sides in Massachusetts, he has just received rave reviews.

He has had experience in health finance, in the Health Care Financing Administration (HCFA), which is enormously significant, and he knows his way through that agency.

He was also an associate vice president of health affairs at Emory University, and on top of that, he has a masters in business administration from Wharton School.

In each and every one of these positions, he has been associated with excellence, and he brings all of that experience to this position. I think all of us want the very best in terms of health care for the members of the Armed Forces. I think this nominee brings an extraordinary experience in managerial skills, with an incredibly deep commitment to quality health care. Those elements can reassure the members of the Armed Forces and their families that they are really getting the best in this particular position.

I think we are extremely fortunate to have this nominee and look forward to supporting him and working with him in the years ahead. I congratulate him.

Chairman LEVIN. Thank you, Senator Kennedy. I know our nominee feels fortunate in having an introduction such as that.

Senator Domenici.

**STATEMENT OF SENATOR PETE V. DOMENICI, U.S. SENATOR  
FROM NEW MEXICO**

Senator DOMENICI. Thank you very much, Mr. Chairman.

I am delighted to yield to Senator Kennedy since he is so much my elder. [Laughter.]

I am here because I have a New Mexican, Dr. Everet Beckner, that was born in a little town of Clayton, New Mexico, hardly a town anybody would know anything about, near the border of Oklahoma and Texas. But having been born in a rather small, kind of hidden community, his scientific prowess has not been hidden. He was a 28-year veteran expert at Sandia National Laboratories.

Frankly, you are aware that a couple of years ago, we created the National Nuclear Security Administration (NNSA), kind of an outcropping of the DOE to take care of all matters nuclear in terms of weaponry and also nonproliferation. General Gordon has apparently achieved a high degree of satisfactory performance even from those who were not too sure that that approach was going to work. I think the distinguished chairman is one of those who is now admiring the work of the good general.

He really needs some help, and this is a very fortunate and good day for the NNSA because you are confirming two people. I am only introducing Dr. Beckner, but you also have the Ambassador of whom you spoke, Ambassador Linton Brooks. The two of them are going to add vastly to the capacity of General Gordon to do his very difficult job.

All I can say, with reference to Everet Beckner, is he was 4 years the Principal Deputy Assistant Secretary for Defense Programs as the whole concept of stockpile stewardship began. There was a scientist in the military named Vic Reis who started science-based stockpile stewardship as a concept which would make it such that we would not have to do underground testing, if it worked. It is still a growing and a major science effort to see if we can prove the efficacy of our nuclear weapons without testing, and this nominee has been active in that since its inception.

Now he goes to the new group within the Department to become the first Deputy Administrator. I cannot tell you how pleased I am,

having been the one who came up with the idea that we should form the nuclear organization that's an outcropping of DOE, and having run it through on a very controversial set of debates. I think everyone thinks it deserves a chance. It cannot do that without people like this. So, I hope you will expedite both of them. They are both very competent.

I thank you very much, Mr. Chairman. I thank both of them for taking this job. It is a very hard department that is just beginning to get developed, very competitive with other aspects of the defense establishment. They need your support. They need ours from the Appropriations Committee and we will get them that, and we hope you will continue to do that. Thank you very much.

Chairman LEVIN. Thank you very much, Senator Domenici.

Let us now turn to our nominees and first ask each of them if they would introduce family members who are present. Family members are essential, to have their support for these nominees and for all of our officials to carry out their duties and responsibilities. So, why do we not start with you, Dr. Beckner.

Dr. BECKNER. My wife Caroline is here.

Chairman LEVIN. I wonder if she would stand up. Welcome. Thank you.

Ambassador Brooks.

Ambassador BROOKS. My wife Barbara is unable to be with us today, Senator. I'm sorry.

Chairman LEVIN. That's fine. Thank you.

Dr. WINKENWERDER. In addition to my wife, Mary Pride, and my son Will, a family friend, Marilyn Murdock, is here.

Chairman LEVIN. I wonder if they would stand. Is that your son Will?

Dr. WINKENWERDER. That is my son Will.

Chairman LEVIN. How old are you, Will?

Mr. WINKENWERDER. 9.

Chairman LEVIN. 9? Well, you are allowed to do a little squirming here today, if you are 9. [Laughter.]

Not because the questions will be too tough for your dad, just because you are 9 years old. It is nice of you to come and support your dad. I know how much it means to him. To have my children with me would be very important, and I know it is important to your pop to have you around.

Dr. Sambur.

Dr. SAMBUR. I have my wife Arlene and my daughter Beth here with me.

Chairman LEVIN. I wonder if they might stand. Welcome to both of you.

Ms. Walker.

Ms. WALKER. Yes, Mr. Chairman. My son was unable to be here today, but I have two close friends from California, Catherine Robertson and Anne Durning. I also have three colleagues from my former days at the Department of Energy, Mike Farrell, Ray Berube, and Kerrie Sullivan.

Chairman LEVIN. Well, we welcome them all. I wonder if they might stand and be recognized. Thank you for coming and showing your support.

Dr. Beckner served for nearly 30 years in a variety of positions at Sandia National Labs and as Principal Deputy Assistant Secretary for Defense Programs at the Department of Energy. He is currently the Deputy Chief Executive of Lockheed Martin's Atomic Weapons Establishment.

Ambassador Brooks, a Navy veteran with 30 years of service, previously served as Chief Strategic Arms Reduction Negotiator during the START I Treaty negotiations and as Assistant Director for Strategic and Nuclear Affairs at the United States Arms Control and Disarmament Agency. He is currently Vice President and Director of Policy, Strategy, and Forces Division at the Center for Naval Analyses.

Dr. Winkenwerder, a specialist in internal medicine, previously served in senior management positions at several health care providers, including Prudential Health Care, Emory Health Care, and as Vice President of Blue Cross/Blue Shield of Massachusetts and is currently a health care consultant.

Dr. Sambur has had a 25-year career at ITT Industries serving in a variety of senior management positions, including President of ITT Aerospace and Communications and President of ITT Defense. Since leaving ITT earlier this year, he has served as a consultant to the company.

Ms. Walker is a lawyer who previously served in Government as Principal Deputy Assistant Attorney General for Land and Natural Resources, Deputy Solicitor at the Department of the Interior, and as Assistant Secretary for Environment, Safety and Health at the Department of Energy.

I would now normally call upon Senator Warner, who is not yet able to be here, but I wonder if Senator Allard had a comment at this point. We would welcome it. If not, we would ask some questions of our nominees.

#### **STATEMENT OF SENATOR WAYNE ALLARD**

Senator ALLARD. Mr. Chairman, I just want to thank you for holding the hearing and also compliment them on being willing to make the sacrifices that I am sure you are making now to serve in your various positions. I think it goes without saying that you accept immense responsibility at a most important and challenging time in our country's history. I want to thank you in advance for your efforts, for your dedication to duty, and for your overwhelming commitment to the members of our military service and to the security of the Nation. I am confident that all of you will serve the Nation well.

Mr. Chairman, that is just a brief comment that I have, and I would ask that Senator Thurmond's statement be inserted for the record.

[The prepared statement of Senator Thurmond follows:]

#### **PREPARED STATEMENT BY SENATOR STROM THURMOND**

Thank you, Mr. Chairman.

Mr. Chairman, I join you and Senator Warner in welcoming our distinguished group of nominees. The fact that we are holding this hearing while we are joined in negotiations with the House on the Defense Authorization Bill is significant. It demonstrates this committee's bipartisan effort to ensure the Department of De-

fense and the National Nuclear Security Administration have quality people in place to carry out their duties to provide for our Nation's security.

Mr. Chairman, I believe each nominee will bring to the position for which they have been nominated unique and professional experience. They are highly qualified and most importantly dedicated to serving our Nation.

To each of our nominees I want to express my support and that of this committee. I wish you success, and hope that you will consider the committee a partner in your efforts to improve the security of our Nation.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you very much.

Today's nominees have all responded to the committee's prehearing policy questions and our standard questionnaire. These responses will be made part of the record.

The committee has also received the required paperwork on each of the nominees and will be reviewing that paperwork to make sure that it is in accordance with the committee's requirements.

Now, there are several standard questions that we ask every nominee who comes before the committee. First, we would note that in your response to advance policy questions, you agreed to appear as a witness before congressional committees when called and to ensure that briefings, testimony, and other communications are provided to Congress.

So, the first question that I would ask each of you is, have you adhered to applicable laws and regulations governing conflict of interest? First, Dr. Beckner.

Dr. BECKNER. Yes, sir, I have.

Chairman LEVIN. Ambassador.

Ambassador BROOKS. Yes, sir.

Chairman LEVIN. Doctor.

Dr. WINKENWERDER. Yes.

Dr. SAMBUR. Yes.

Ms. WALKER. Yes, sir.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process? Dr. Beckner?

Dr. BECKNER. No, I have not.

Ambassador BROOKS. No, sir.

Dr. WINKENWERDER. No.

Dr. SAMBUR. No, Mr. Chairman.

Ms. WALKER. No, sir.

Chairman LEVIN. Will you ensure that the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record and hearings?

Dr. BECKNER. Yes, sir.

Ambassador BROOKS. Yes, sir.

Dr. WINKENWERDER. Yes, Mr. Chairman.

Dr. SAMBUR. Yes.

Ms. WALKER. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

Dr. BECKNER. Yes, sir.

Ambassador BROOKS. Yes, sir.

Dr. WINKENWERDER. Yes, sir.

Dr. SAMBUR. Yes, sir.

Ms. WALKER. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Dr. BECKNER. Yes.

Ambassador BROOKS. Yes, sir.

Dr. WINKENWERDER. Yes, sir.

Dr. SAMBUR. Yes, sir.

Ms. WALKER. Yes, sir.

Chairman LEVIN. At this point I would like to recognize each of our witnesses for any opening remarks that they would like to make, and I would begin with Dr. Beckner.

**STATEMENT OF EVERET BECKNER, PH.D., TO BE DEPUTY ADMINISTRATOR FOR DEFENSE PROGRAMS, NATIONAL NUCLEAR SECURITY ADMINISTRATION**

Dr. BECKNER. Thank you, Mr. Chairman, members of the committee. Thank you for the opportunity to come before you to discuss my qualifications to become Deputy Administrator for Defense Programs for the National Nuclear Security Administration.

Mr. Chairman, I thank you for moving expeditiously in arranging this hearing.

I also want to thank Senator Domenici for his kind introduction. I am very grateful for his support of my candidacy and for the leadership and support he gives this entire endeavor.

I am also grateful to the President, to Secretary Abraham, and to Administrator Gordon for their confidence and the opportunity to be considered for this position.

I promised several people that I would be brief with my statement and I will. I have been either deeply or peripherally involved in this important national security program for more than 35 years. Although only 7 of those years have been in Washington assignments, some people would say that is a good ratio of work to anguish, and I would tend to agree with that view. Washington exposure is obviously important in order to know how the Government works and why it is often difficult to move things forward.

I remember early in my first Washington assignment under Secretary Watkins during the Bush administration, his Under Secretary John Tuck frequently inquired at the end of a typical day—did we advance the ball today? I am sure I do not have to tell you that is a good description of a typical day in Washington.

I think this job does take a lot of perseverance and determination. Being just two generations removed from grandparents who moved from east Texas to homestead on the plains of northeastern New Mexico early in the 20th Century, in order to get title to just 80 acres of barren farmland, probably provides me with the right genetic base for this job. They did not expect it, but they also had to deal with the drought and the Depression of the 1930s—again, this was probably pretty good experience for me to reflect on.

Let me now return to the present and to the future, which I anticipate, if confirmed. The job of Deputy Administrator for Defense Programs in the new National Nuclear Security Administration is a work in progress. Administrator Gordon has had both the enviable and the unenviable task of setting up NNSA and organizing it to do the job which Congress mandated.

For those of you who are students of history—and I am sure a number of you are—you will know that the birth of nuclear weapons in 1945 led to the agonizing necessity to set up the original Atomic Energy Commission, the AEC. I actually worked for the AEC for the first 10 years of my career at Sandia which, on truly rare occasions, required that I go to AEC headquarters in Germantown and find the place in the woods of rural Maryland. There were not many people in Germantown back then, and most of them worried about either the nuclear weapons production program or the birthing problems of getting the Nation's civilian nuclear reactor program on its feet.

The 1970s brought the Energy Research and Development Administration (ERDA) as the replacement for the AEC, to broaden the mission of the agency, to reflect the newly recognized importance of energy. Several years later, Congress decided an even larger agency, the Department of Energy, was required to concentrate the Federal energy programs in a single organization.

Now with many other changes having occurred in the world, not the least being the collapse of the Soviet Union, the end of the Cold War, and the START agreements, Congress has responded with this semi-autonomous agency, NNSA. As I see it, my job, if confirmed, is to ensure to the President that this country's enduring nuclear weapons stockpile remains safe, secure, and reliable, and to make this NNSA program responsive to the evolving requirements of the Federal Government in a world of today and the decades to come, for as long as the Nation requires a nuclear deterrent.

I sense that Congress wants less bureaucracy and more output with fewer problems along the way. You want program output which enhances security, which maintains and enhances the safety, reliability, and performance of the nuclear stockpile, and which bolsters U.S. leadership in science and technology. I believe President Bush and General Gordon want these same results, and if confirmed, it is certainly what I will be striving to accomplish in the next few years.

However, I know enough about doing business in this town to know that, though entirely reasonable and laudable, these objectives will be hard to meet, not because they are controversial or even debatable, but because we must make a large course correction in a battleship running at full throttle. If confirmed, I will need the dedicated and deliberate support of this committee, the Senate, the House of Representatives, the administration, indeed the entire Federal support structure attached to this program in order to reach those goals.

The ingredient which I often find missing in endeavors of this magnitude is that of trust. To simplify the way we do work in NNSA requires that we place more trust in the Federal workforce and the contractors who actually do that work, that we check everything we do to be sure that it works, but that we do not "check the checkers" and on and on. We must also have a system in place that does not tolerate waste, fraud, or abuse. All this, and still our highest requirement is to do the nuclear weapons job right, with no possibility of failing to provide the country with the nuclear deterrent that it requires.

The infamous events of September 11 serve as a reminder that we cannot take our security for granted. Since the weapons complex lacks the redundancy it once had during the Cold War, I have been advised that enhanced security measures are in place and that additional measures are under consideration. If confirmed, one of my top priorities will be to review practices and procedures to ensure that the uniquely skilled men and women of the weapons complex can carry out their national security responsibilities.

Let me say just a few more words about my qualifications.

Over and above the obvious technical and management credentials and experience base, I think it is important that the committee be comfortable with my personal commitment and dedication to this job. It is the culmination of a lifetime of work for me, starting as a research scientist at what was then a 10-year-old Sandia Laboratory and evolving into senior management responsibilities have included both the United States and the United Kingdom nuclear weapons programs. I do not like to say that I am an old hand at this work because in this job no one ever knows enough to rely comfortably only on experience. What counts most, I believe, is that I know when to ask for help, whether it is from the laboratories, or from the production plants, or Congress.

Next, though, I believe you will want me to make the hard decisions to move the program forward. That is where experience does count. We have urgent program needs in both research and production. We have urgent needs in facilities to upgrade the complex. We have urgent needs to develop new technical capabilities so that we recruit and retain the best and the brightest people to assure our capabilities for the future. That is where I think I will earn my paycheck. I believe in systems analysis and using the best information available to find the right solutions not by intuition or accommodation, but by hard-headed analysis. If confirmed, that is what you will get from me. I hope that is what you want.

Mr. Chairman, I do not underestimate the difficulty of the task. However, if confirmed, I know it will be the best job I have ever had because it offers the most opportunity for continuing success in a truly important program. I like that way of living.

I would be pleased to answer questions, Mr. Chairman. Thank you.

Chairman LEVIN. Thank you, Dr. Beckner.  
Ambassador Brooks.

**STATEMENT OF AMBASSADOR LINTON F. BROOKS, TO BE DEPUTY ADMINISTRATOR FOR DEFENSE NUCLEAR NON-PROLIFERATION, NATIONAL NUCLEAR SECURITY ADMINISTRATION**

Ambassador BROOKS. Mr. Chairman, I do not have a prepared statement since I had the opportunity to make most of the policy points I would have wanted to make in response to the committee's questions. I would like to make four quick points.

First, I am deeply honored by the President's, Secretary Abraham's, and General Gordon's willingness to entrust me with this responsibility.

Second, I am grateful for the committee's willingness to review my qualifications and, even more, for the committee's strong sup-

port of the programs I hope to be responsible for in the past and, I hope, in the future.

Third, I am immensely sobered by the events of the 11th of September. What they show me is a degree of sophistication and complexity that I had not previously recognized on the part of terrorism. They seem to me to make the jobs of securing nuclear weapons and nuclear materials even more urgent and even more important than they were.

Finally, like my colleague, I have spent my whole life working in the national security business, and I look forward, if the committee and the Senate choose to confirm me, to the opportunity to continue that over the next few years in this position.

Thank you, sir.

Chairman LEVIN. Thank you, Ambassador. Dr. Winkenwerder.

**STATEMENT OF WILLIAM WINKENWERDER, JR., M.D., TO BE ASSISTANT SECRETARY OF DEFENSE FOR HEALTH AFFAIRS**

Dr. WINKENWERDER. Mr. Chairman, rather than a statement for the record, I would like to just make brief opening remarks.

First of all, I would very much like to thank Senator Kennedy for his kind and very generous remarks. I appreciate that very much.

Mr. Chairman and members of the committee, it is indeed a great honor and a privilege for me to appear before you today as the nominee to be the next Assistant Secretary of Defense for Health Affairs. I am especially grateful to the President and to the Secretary of Defense for their confidence in me by nominating me for this position of significant responsibility.

The events of September 11th blasted, I think for all of us, a resounding warning that we must be prepared. I take that warning personally in that, if confirmed, I will be responsible for overseeing the health, fitness, casualty prevention, and care of the men and women we ask to defend this country. If confirmed, my foremost priority will be to ensure that our military services have the capabilities and the support to carry out our medical readiness missions and our preparedness in all scenarios.

Also important are many challenges facing the military health care system in this country today, many of which carry implications for the military health care system and the TRICARE health care program. Concerns for the quality of care, patient safety and patient rights, the implementation of the Health Insurance Portability and Accountability Act (HIPAA) legislation, advances in medical practice, and the ever-increasing rise in the cost of health care delivery are just a sampling of the issues that need to be tackled.

Should I be confirmed, I will promise to work very closely with this committee and with other Federal agencies with the Surgeons General of the services and with the leadership of the Defense Department to address these challenges such that military beneficiaries continue to enjoy the well-deserved health benefits that they receive.

The responsibilities of the position for which I have been nominated are formidable. If confirmed, I look forward to working with Congress to ensure that military medicine is prepared to meet the

health needs of our Armed Forces and that the military health system continues to provide world-class care, which I know is a goal of Secretary Rumsfeld, for all of its beneficiaries.

Finally, let me just say embarking on a career in public service brings many challenges as well. In that regard, I want to sincerely thank my family for their understanding and support in this new endeavor. It means a lot to me.

Thank you, Mr. Chairman and members of the committee. I look forward to any questions you might have.

Chairman LEVIN. Thank you.

Dr. Sambur.

**STATEMENT OF MARVIN R. SAMBUR, PH.D., TO BE ASSISTANT  
SECRETARY OF THE AIR FORCE FOR ACQUISITION**

Dr. SAMBUR. Thank you, Mr. Chairman and other distinguished members of the committee. I am honored to appear before you this afternoon as President Bush's nominee to serve as the Assistant Secretary of the Air Force for Acquisition.

I would like to thank the President, the Secretary of Defense, and the Secretary of the Air Force for their support and confidence in me by recommending me for this position.

I thank you, Mr. Chairman and members of the committee, for taking time from your busy schedule, particularly during this very trying time, to conduct this hearing.

To those who have spent the hours preparing me for the moment and for the continuing support and constant love from my family, my wife Arlene, my daughter Beth, and my son Ian, I again say thank you.

If confirmed, now more than ever, in the wake of the September 11th attack on our Nation, I look forward to the opportunity to serve my country and especially to serve the men and women of the United States Air Force. Mr. Chairman, I cannot think of any finer job directly impacting the lives of Air Force personnel than the position for which I have been nominated. If confirmed to this high honor, I pledge my full support and energies to making Air Force Acquisition the absolute role model for the entire Federal Government in integrity and excellence.

In closing, if confirmed, I look forward to an active relationship with you, Mr. Chairman, and the members of this committee as we work together to keep our Air Force the best in the world.

Thank you.

Chairman LEVIN. Thank you, Dr. Sambur.

Ms. Walker.

**STATEMENT OF MARY L. WALKER, TO BE GENERAL COUNSEL  
OF THE AIR FORCE**

Ms. WALKER. Thank you. Thank you, Mr. Chairman and members of the committee. I am honored to be here as well.

I only intend to make brief remarks and would ask that the balance of my statement be made a part of the record.

Chairman LEVIN. It will be.

Ms. WALKER. I want to thank the President, Secretary Rumsfeld, and Secretary Roche for the confidence they have expressed in me

in considering me for the position of General Counsel for the Air Force.

The Department of the Air Force is a magnificent organization with a great team of dedicated and talented people performing a crucial mission. Secretary Roche is a man of great vision and talent, and I would look forward to working with him and other senior members of the Department with the goal of making a lasting contribution to the security of our Nation.

Every day the brave men and women of the Air Force, including the excellent lawyers at the General Counsel's office, have the satisfaction, when they go to work, of knowing that their efforts are serving the national defense and helping to preserve freedom around the world. If you honor me with confirmation, at least for a brief period, I will be able to join them in this important effort. It would be my sincere privilege to do so. I can think of no more important place to serve my country at this time.

I am happy to answer any questions you might have. Thank you.  
[The prepared statement of Ms. Walker follows:]

PREPARED STATEMENT BY MARY L. WALKER

Mr. Chairman, Senator Warner, and members of the committee, I am honored to be considered as the President's nominee for General Counsel of the Department of the Air Force. At this critical time in our Nation's history, I can think of no better place to serve our Nation, and I am deeply grateful to the President, Secretary Rumsfeld and Secretary Roche for this opportunity.

I have practiced law for more than 20 years, specializing in land use and natural resources law, but also handling many other matters, including labor and contract issues and business litigation. While most of my career has been spent in California, I have also previously served the Federal Government in Washington, DC, and I am pleased to now reside in the great Commonwealth of Virginia.

I began my career as counsel to Southern Pacific Company in San Francisco in the early 1970s, representing the railroad, pipeline, trucking and land subsidiaries in eight western states. It was a formative time in the development of environmental and natural resources law, and I was involved in helping Southern Pacific comply with the Clean Air Act and the Federal Water Pollution Control Act from the early days of those landmark laws. Together with the U.S. Coast Guard, and several state governments, I taught seminars to the company's mid-level managers systemwide on the new Federal statutes. Since then, I've worked on many other environmental and land use issues, representing local governments, private landowners, and companies. I have been both the lawyer advising the decision-maker as well as the decision-maker.

In my various roles, I have sought to understand the concerns of competing interests in working with environmental and public interest groups. I found the key is often establishing open communication and retaining a willingness to hear each other's perspectives, while working toward common goals. For example, as a U.S. Commissioner serving on the Inter American Tropical Tuna Commission, from the late 1980s to the mid 1990s, I worked with environmental and public interest groups, the fishing industry, the Commission's technical staff and the State Department to reduce dolphin mortality in the tuna catch to biological insignificance, while at the same time, maintaining a healthy fishery that now feeds many nations. This was not an easy task. It took the combined will of many people over many years, but in the end, we achieved a great result. I was pleased to testify in favor of Senator Ted Stevens' legislation in 1996 that recognized and built upon this effort.

In the early 1980s, I had the privilege of serving the Federal Government as Deputy Assistant Attorney General in the Land & Natural Resources Division of the Justice Department, enforcing the Nation's environmental and natural resource laws. I worked with career Justice Department lawyers to build a foundation of judicial opinions supporting the Federal Government's new Superfund law. We also created the Environmental Crimes Unit and helped train the first investigators supporting the Federal Government's criminal enforcement effort. These included successful undercover operations to stem the tide of illegal international trade in endangered species.

As the Deputy Solicitor for the Department of the Interior in the mid 1980s, I experienced first hand the challenges faced by a department with many diverse missions. Among other tasks, I worked with the Pacific Northwest Indian tribes on the team that negotiated the Pacific Salmon Treaty with Canada; I helped defend the offshore oil leasing cases; I supervised the team that drafted the first natural resources damage regulations; and I was on the team that negotiated the Bering Strait boundary with the USSR.

As Assistant Secretary of the Department of Energy for Environment, Safety & Health in the late 1980s, I worked with talented career staff in both headquarters and the field offices to assure that environmental compliance of the nuclear weapons program was properly undertaken at the Department's facilities. We worked in cooperation with Congress, other Federal agencies, and the states, often in areas where regulatory jurisdiction was unclear, in order to better address the legacy of environmental issues at the Department's facilities and to effect full compliance. I also worked closely with the Defense Department concerning nuclear safety standards involving the nuclear Navy. It was during my tenure at DOE that the Chernobyl incident occurred at Kiev, and we were very involved in analyzing and presenting to Congress the causes of that event.

In the private sector these past few years, I have represented a diverse range of clients, ranging from high tech and biotechnology companies to shipyards, the seafood industry and other, more traditional industries. I have served my community in several pro bono board relationships, including the San Diego Biocommerce Association ("BIOCOM"), Floresta, Inc., the Professional Women's Fellowship, and the Endowment for Community Leadership. I have also worked closely with the Navy's lawyers in San Diego on regulatory issues under the Federal Water Pollution Control Act.

If confirmed, I would look forward to using my background and experience to serve the Air Force and to advise the Air Force Secretary and the Assistant Secretaries in their efforts to renew and rebuild the force structure. I would also look forward to working with this committee and assisting you in whatever way I can. This is a crucial time in our country's history and it would be a privilege to serve in this role at this time.

I would be pleased to answer any questions you might have for me.

Chairman LEVIN. Thank you very much.

I think we will have rounds of 8 minutes. First, Dr. Beckner.

Dr. Beckner, to your knowledge, is there any reason associated with the safety, security, and reliability of the current stockpile to conduct nuclear weapons tests at this time?

Dr. BECKNER. No.

Chairman LEVIN. The Stockpile Stewardship program has made significant progress since you were last there in 1995. In certain instances, the new Stockpile Stewardship tools have enabled resolution of problems that in the past would have required an underground nuclear test. These tools have also allowed a greater understanding of the weapons.

Do you feel that the tools that are underway as part of the Stockpile Stewardship program will be successful in addressing the long-term needs of the stockpile?

Dr. BECKNER. Yes, I do, but it will be a long and arduous course that we will have to stay. It is a very difficult task and one which, in the final analysis, means we rely on the confidence of the people who do the work at the laboratories and in the plants. The feature that I think we will have to work hardest to protect is the confidence of the people, the people who are in the trenches as it were. That will be my major concern.

Chairman LEVIN. Thank you.

My last question for you is the following: The Department of Energy and the National Nuclear Security Administration have struggled to adequately plan and to execute projects, and to address this problem, an office of project management was created. Will you

continue to fully support and fund this effort to avoid the problems of persistent cost and schedule overruns?

Dr. BECKNER. The basic answer is yes. But let me say a little more than that, and I have said this previously in answer to some of the questions which were provided to me earlier by the committee. I believe it is important that we weigh all of our problems at any given time when we make our decisions. We cannot make decisions in isolation from other parts of the program. I want to be sure that we do the proper analysis so that we know that we are working on the most important problems, that we are funding the most important problems, that we are seeking funds for the most important problems, so that we do the right thing.

Within that context, there is no question in my mind we have serious a problem in the complex with infrastructure. I think we are moving in the right direction, and I support that.

Chairman LEVIN. Thank you.

Ambassador Brooks, given the recent terrorist attacks highlighting where the major threats are to this Nation, do you believe that the Department of Energy should increase its efforts to secure nuclear materials and nuclear weapons usable materials in Russia?

Ambassador BROOKS. Yes, sir, I do, but I need to qualify that "increase its efforts" may or may not translate into more money. It also translates into more urgency. In some areas in Russia, the limiting factor is not funding but access, and I believe that both we and the Russian Federation, in recognizing the changed environment reflected by 11 September, need to move more quickly to resolve these issues. There is no question that securing nuclear materials and weapons in Russia is one of the most important responsibilities that I will have, if confirmed.

Chairman LEVIN. Are you familiar with the task force report that Senator Baker and former White House Counsel Cutler produced?

Ambassador BROOKS. Yes, sir.

Chairman LEVIN. You are familiar with the conclusions that they reached about the major threats to this country?

Ambassador BROOKS. Yes, sir, I am, and I think that those conclusions are sound and responsible. I found that report very helpful in preparing for my new responsibilities.

As I said in my answer to the committee's questions, they were not asked to balance funding requirements against other priorities, so I think it would be dishonest to suggest that I am going to achieve the tripling of funding that they would call for. But if I had that tripling of funding, I could do good things for the country with it.

Chairman LEVIN. The Department of Energy nonproliferation programs are engaging thousands of scientists and engineers in Russia and other countries of the former Soviet Union, but have provided relatively few permanent full-time jobs. It is important to provide work for scientists and engineers who continue to be employees at their own institutes so that they can remain in Russia. But it is also important to begin to work to establish permanent full-time jobs outside of those institutes where necessary. It is particularly true because many are losing their jobs as Russia downsizes their nuclear weapons complex.

Would you agree that it is important to provide that kind of employment for those scientists?

Ambassador BROOKS. Absolutely, and to do that, we have to help transform that weapons complex into something that is more appropriate for the modern world.

Chairman LEVIN. Do you know offhand how many scientists and engineers are in permanent, full-time jobs as a result of the DOE's efforts?

Ambassador BROOKS. Only a few hundred are in permanent, full-time jobs. There have been tens of thousands who have been employed in part-time jobs, about 10,000 through the Initiatives for Proliferation Prevention, another 35,000 through the State Department's comparable program on science and technology.

We are looking this year, as I understand it, at having several hundred employed as part of this new kidney dialysis facility at Avangard. We are looking at several hundred more employed in coal mining and oil drilling radar systems, and there are some other projects of comparable numbers. But the permanent employment thus far is measured in hundreds rather than thousands.

Chairman LEVIN. Thank you.

Dr. Winkenwerder, our committee expects that you will, if confirmed, exert a strong influence on the future of the military health system, and the next generation of managed care support contracts is a major feature of that future. The President has nominated you for many reasons, but one is surely your strong experience in the delivery of health care in the commercial world. Your background and experience are going to be invaluable as the Department makes changes to move the military health system forward.

We understand the Department is going to conduct an industry forum at the end of the month to discuss fundamental changes in contracting for health care administration and services. I am wondering, are you going to be involved in the design of the next generation of managed care support contracts? Have you been briefed on the recommendations of the TRICARE management activity for the next generation of those contracts? Are the proposals and recommendations, if you are familiar with them, consistent with what you believe is an appropriate approach for the Department to take?

Dr. WINKENWERDER. Thank you, Senator, for that question. A very important matter to the future of the TRICARE program is the whole contracting structure or infrastructure for the program. The quick answer to your question is that yes, I definitely intend to be intimately involved with that. To date, I have been briefed in a very general way about this upcoming symposium or session that is to be held and about the concepts of business that we are thinking about.

It would be my intention, if confirmed, to review those concepts and to review all that has currently been proposed and, frankly, to hopefully take advantage of my experience in the private sector to bring forward ideas and thoughts about how we can best do that contracting because it really is fundamentally important to how the program works since so much of the care is outside of the military treatment facilities but in the "private sector."

Chairman LEVIN. This is my last question for this round. Some of us have recently seen a presentation called Dark Winter, which

is an idea of what biological terrorism could produce with smallpox in this country. Are you familiar with the issues of biological terrorism? How would you act to make sure that our Department is fully prepared in conjunction with the Public Health Service and all the other facilities at the local, State, and Federal level to respond to a terrorist attack using a biological agent?

Dr. WINKENWERDER. Senator, I have not seen the report of the Dark Winter planning or preparation scenario, but I would hope to get briefed on that and a whole manner of other matters relating to bioterrorism and efforts that we have in place and that we might put into place in the near future to further prevent or minimize any harm from any attack in the way of bioterrorism.

I could just tell you this, that if confirmed, the central principle underlying all of my efforts to lead the military health system would be simply this: Be prepared. Even though the risks of certain events might be relatively small, if the outcomes associated with those events are devastating or large, I think our best approach is to be prepared. There are all manner of ways that we can be prepared, and part of my task, I think, is going to be to prioritize those risks and to do those things that would have the most benefit for the dollars spent.

Chairman LEVIN. Thank you very much, Doctor.

I'm going to call on Senator Warner next. I think he takes precedence.

Chairman WARNER. Mr. Chairman, I am going to yield to Senator Landrieu and Senator Allard and ask that my statement be submitted for the record. I believe Senator Landrieu has an understandable need to depart, and why does she not take a question here?

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in extending a warm welcome to our nominees and their families. Thank you for your willingness to serve at this challenging and demanding time in our Nation's history.

Ambassador Brooks has had a distinguished career of government service. During the previous Bush administration, he served as the Assistant Director for Strategic and Nuclear Affairs at the United States Arms Control and Disarmament Agency, and, also, in the State Department as Head of the United States Delegation on Nuclear and Space Talks and Chief Strategic Arms Reductions (START) negotiator. He was instrumental in the final preparation of the START I and START II Treaties. Prior to that, he served as Director of Arms Control on the staff of the National Security Council after completing a distinguished 30-year Navy career as a nuclear qualified officer.

Dr. Sambur has had a distinguished career in the private sector as a senior executive of ITT Industries. As President of ITT Defense and ITT Aerospace and Communications, Dr. Sambur has overseen multi-million dollar programs involving military tactical communications, production of space borne navigation and meteorological satellites, and a wide array of Defense-related programs.

Dr. William Winkenwerder has compiled an impressive career in medicine, academia, business, and government. He is a board-certified physician who served in the Health Care Financing Administration of the U.S. Department of Health and Human Services from 1987 to 1988 as a Special Assistant to the Administrator responsible for policy coordination and development of payment issues in Medicare and Medicaid. He was a member of Emory University's faculty from 1996 to 1998 serving as Associate Vice President for Health Affairs. Dr. Winkenwerder has extensive executive experience on the business side of health care as Vice Chairman in the Office of the CEO of Blue Cross and Blue Shield of Massachusetts and Vice

President and Chief Medical Officer for Southern Operations with Prudential Health Care. Thank you for your willingness to return to government service.

Dr. Everet Beckner, if confirmed, will also be resuming his already exceptional career of government service. From 1962 through 1990, he was employed at Sandia National Laboratories in Albuquerque, New Mexico, rising from Staff Member to Vice President of Defense and Energy Programs. From 1991 to 1995, Dr. Beckner as the Principal Deputy Assistant Secretary of Energy for Defense Programs. With his subsequent experience in the private sector, he is highly qualified for this vitally important position in the Department of Energy.

Ms. Walker also has a record of public service and achievements in law. In the 1980's she served the Federal Government in several positions: as Assistant Secretary for Environment, Safety and Health with the Department of Energy; as Deputy Solicitor of the Department of Interior; and as Principal Deputy Assistant Attorney General of the Land & Natural Resources Division of the Department of Justice. She subsequently engaged in a diverse legal practice representing a variety of private and municipal government clients. I welcome all of you.

Senator LANDRIEU. Thank you, Senator Warner. I sure appreciate that. If I could just have one moment because, unfortunately, I do have to get to another meeting. But I wanted to come and congratulate all of you on your nominations and just to say I am going to submit my statement for the record, if there is no objection, Mr. Chairman.

The subject areas for which two of the nominees will have responsibility if confirmed fall within the jurisdiction of the Emerging Threats and Capabilities Subcommittee. These are the Assistant Secretary of the Air Force for Acquisition and the Deputy Administrator for Defense Nuclear Nonproliferation. Thank you, Mr. Sambur, for your commitment to excellence and efficiency in purchasing. We look forward to working with you on this, because at every time, but particularly at this time, we have to be very careful and strategic about our investments. I want also to call to everyone's attention and to thank you for your comments about serving our Nation at this time.

Senator Sam Nunn, who has done wonderful work in this area of nonproliferation, Ambassador Brooks, wrote a beautiful editorial a couple of weeks ago that said the terrorists' capacity for killing was restricted only by the power of their weapons that they had at hand. We all have great responsibility in this area, and many of you we will be working with directly.

I look forward to working with you all on the great challenges ahead. I thank you for your willingness to serve because our country needs you. Thank you.

[The prepared statement of Senator Landrieu follows:]

PREPARED STATEMENT BY SENATOR MARY L. LANDRIEU

Thank you, Mr. Chairman, one of the greatest powers entrusted to Congress is the power to confirm executive appointments. Today, these appointments and confirmations are even more important as we engage in a long war with those terrorists and their supporters who threatened our way of life on September 11. This war will have traditional aspects, but it will also be a new and silent type of war. From my vantage point, as Chairwoman of the Subcommittee on Emerging Threats and Capabilities, a key player on behalf of those who favor liberty and democracy in this silent war will be the National Nuclear Security Administration. From the protection and safety of our nuclear stockpiles—to the carrying out of the Nunn-Lugar programs to ensure nuclear materials are reduced and kept out of the hands of those to whom they do not belong—the NNSA's mission has never been so critical.

As Pope John Paul said in 1981 on a visit to Hiroshima, "From now on, it is only through a conscious choice and through a deliberate policy that humanity can survive." Those words rang true at the height of the Cold War. The Cold War is now

over, but the Pope's words are still prophetic and appropriate as we enter this silent war.

America must secure its own backyard. Our nuclear inventory must remain both workable, if the unfortunate need for nuclear weaponry should arise, and the inventory must remain safely in the hands of the American military. Efforts must be undertaken to gird our nuclear arsenal from those wishing to abscond with nuclear weapons or perpetrate a terrorist attack on our nuclear stockpiles.

Moreover, we must also look abroad to ensure that those nations, especially Russia and the independent states formerly in the Soviet Union, with nuclear weapons do not allow them to fall into the hands of terrorists and rogue nations. As Chairwoman of the Emerging Threats and Capabilities Subcommittee, we must take all actions necessary to strengthen our partnerships with Russia on non-proliferation and weapons reduction programs.

I am encouraged that the administration has chosen two gentlemen with keen awareness of these concerns to serve as Deputies at NNSA. Ambassador Brooks, I enjoyed our conversation and visit a couple of weeks ago. Please know we share a common vision on our Russian partnership.

Furthermore, General Gordon, Director at NNSA, has also expressed his faith in your nomination. Dr. Beckner, we have not met, but your credentials are worthy, and hope we can meet soon. I look forward to working with both of you closely in the future upon your confirmation.

Chairman LEVIN. Thank you.

Senator Allard.

Senator ALLARD. Thank you, Mr. Chairman, and thank you, Senator Warner.

I want to direct my first question to Ms. Walker. Due to the recent events that have transpired, there's a necessity of all the Federal agencies to work closer together, particularly the Defense Department and military affairs. Do you see any legal or regulatory issues out there that would make it difficult for the Department of Defense to work with other Federal agencies during this time period?

Ms. WALKER. Thank you, Senator, for that question.

I know that coordination with other agencies is going to be very important and military affairs is, of course, one specific area of the General Counsel's office that is very important to its mission.

I know of no impediments to working with other agencies at this time. However, we will be looking at all the necessary coordination that needs to take place and we will be doing our very best to do that. I am very glad that I have had prior Government service, which I understand other General Counsels before me, if I am confirmed in that position, have not had, because I think it really helps facilitate those relationships where they are going to need to be made for the mission. So, I appreciate your concern and would be looking at that if I was confirmed.

Senator ALLARD. If you run into those kind of problems, I hope you will keep us informed of something that needs to be done.

Ms. WALKER. Absolutely. I will. Thank you.

Senator ALLARD. Also, the next question I would like to direct to Dr. Winkenwerder. As you know, I am a veterinarian, so I take a particular interest in animal diseases such as anthrax. In light of the recent events down in Florida, it highlights the issue. What do you believe the risks are to military personnel, and what action should we be taking to mitigate these risks? We have had a number of hearings on the vaccination for anthrax. I would be glad to hear your comments on that.

Dr. WINKENWERDER. Senator, I cannot speak as an expert with respect to the level of risks that would possibly be directly applica-

ble to the men and women who are in active duty or even on bases here in the United States. But the events of September 11 I think raise the specter that our adversaries would use any means they could put into their hands to inflict harm on us and on our military.

We have an active anthrax vaccine program. A significant number of the military have been either fully or partly immunized. There are issues with respect to the adequate manufacture and production of anthrax vaccine. It would be among, if not the highest priority, as I step into this position if confirmed, to do everything in my power working not only with leadership in the Department of Defense, but also with the people in Health and Human Services and Homeland Security, to the extent that they are also involved, to expedite the production and manufacture of an anthrax vaccine that is safe and effective and to ensure that on a long-term basis we have a stable source, a stable manufacturer, that is well positioned to provide as much of the vaccine as not only the military needs but the rest of the country may need.

Senator ALLARD. It seems to me that there is an opportunity in your area to have some joint efforts that would provide some efficiencies and probably cost savings to the taxpayer. Are there any barriers that you see right now where it would prevent you from working in a joint environment? For example, the Veterans Administration. It seems like there could be some savings there, for example, on pharmaceutical items. Would you comment on that?

Dr. WINKENWERDER. It is my view that we need to do a better job communicating, coordinating, and avoiding not only duplication of effort but making things more seamless between the Veterans Administration and the Department of Defense Health Affairs operations. I would be very committed to working with those that are already working on this problem.

We have a committee that meets on a bimonthly basis to look at opportunities for better coordination. As you know, there is a presidential task force that was recently commissioned on that very issue. I look forward to working with the task force members and the leadership of the task force to try to implement the recommendations that they may come forward with.

Senator ALLARD. Dr. Sambur, your position in working with transition technology requires a significant bit of communication between you and the ultimate users of your technology. You have this transition occurring and then the areas that you are trying to develop. What do you plan to do to enhance communication between yourself and the ultimate users of the technologies that you will be acquiring?

Dr. SAMBUR. Thank you for that question.

I think, if I am confirmed, the first action would be to increase communication and put an emphasis on that transition process. I believe where the failures occur are usually associated with the lack of emphasis and the lack of willingness to communicate and make sure that there is a process involved with that transition.

Senator ALLARD. So, you think getting out and getting the job done and showing a willingness to communicate is the answer?

Dr. SAMBUR. Basically emphasizing that you need to make it happen.

Senator ALLARD. Dr. Beckner, I have one specific area that I am particularly interested in and that is the accelerated strategic computing initiative. That is where we are talking about basically increasing our computer capacity to 100 tera-ops, which is 100 trillion mathematical operations per second, which would make that the fastest computer in the world. In your opinion, will our software be sophisticated enough and will there be sufficient demand by the weapons laboratory in 2005 to justify this size of operating computing system?

Dr. BECKNER. What we have to go on at this time is the dramatic increase in computing power over the past 5 years within the program structure to the point where it is today, in the vicinity of 10 tera-ops as opposed to 100. 100 tera-ops is coming in another few years.

To date, we have found that we have moved smoothly upward in capability, as the machines have been available. Software has been written and very successful, and the computers are absolutely loaded to the maximum capacity by the users. So, I would predict, since things have gone up so much over the last few years, that 100 tera-ops is a very reasonable goal and will be fully utilized.

Senator ALLARD. I think a lot of individuals in this country assume that we have the capability to build a nuclear warhead from scratch, which we no longer have with the closure of Rocky Flats in Colorado. What is being done to move us toward some kind of conceptual design for a pit production facility? Can you share that with us without getting into the top secret category?

Dr. BECKNER. Yes. On the one hand, I am not yet fully informed. I have not been briefed in-depth, but I do know at least the basic structure of the path forward. The path forward relies, in the short term, on increasing the capability of the facilities at Los Alamos. Beyond that, however, it would appear to be necessary to build a new pit fabrication facility with the timing and the location to be worked out. The other thing that plays into this is really the question of the stockpile and the reviews that are presently ongoing as to the future size and composition of that stockpile which will tell us what size plant you need and what its capabilities need to be.

It is not yet imperative that we have all the answers, but it will be soon. Over the next few years, it will be an important element of the job I have to do, to bring forward to Congress the requirements for that facility and to see if we can get you to support it.

Senator ALLARD. My understanding is if we reach that point, we could require some testing. Is that correct?

Dr. BECKNER. I would not be prepared to say that at this time. I think I will have to know a lot more before I would answer in the affirmative.

Senator ALLARD. Very good. Thank you.

Mr. Chairman, thank you.

Chairman LEVIN. Thank you, Senator Allard.

Senator Warner.

Senator WARNER. Thank you.

I apologize for being late, but the leadership and those Senators from the States that were struck by the terrorist attacks held a ceremony on the Capitol grounds this morning, and I was participating when this hearing started.

Dr. Winkenwerder and others, having spent some time in that building myself, it is always nice to see all of you out here in a very friendly spirit at this time. But once, hopefully, you are confirmed by the Senate and you are back, you have got to become fighters and infighters for your own budget. Believe me, that is a rough arena. They built the Pentagon not unlike a boxing ring, if you ever stop to think about it. It has five instead of four sides, but you are going to have to get in there and struggle to get your budgets.

Much of the budget before this committee and work on DOD authorization is predicated on events that preceded the 11th of September.

That brings me to the question in your case, Dr. Winkenwerder, the reality now that this country could be faced with another cataclysmic problem as it relates to biological, or chemical or other terrorism. The Department has to think through how they can work with local communities to handle totally unanticipated numbers of casualties. I am sure you have given some thought to that, recognizing that you would be here today for a hearing and in all likelihood that you will assume this post. That's going to take some money. Are you going to be able to fight vigorously for that?

Dr. WINKENWERDER. Senator, I am fully prepared to fight for whatever resources we would deem at the Department would be important and necessary to have for bioterrorism protection.

I think to your point earlier about local and civilian efforts, obviously our focal point has to be on protecting the men and women in the armed services, and we stand ready to help the civilian sector but it is not our primary and principal focus.

That said, speaking outside the realm, for a moment, of my role at the Department of Defense, if confirmed, I can just tell you that I think—things that have already been stated, in terms of the local health departments, the State health departments are very fundamentally important to protection of the public health.

What I would want to do, if confirmed, is to make sure that we are working very closely with the Centers for Disease Control at the Federal level, the Food and Drug Administration, other agencies at the Federal level, as well having good contacts and communication with the State and local levels to support where appropriate.

Senator WARNER. One of the great things in the aftermath of the 11th has been the unity of this Nation. The President has, I think, courageously struck the theme—we are all in it together. If a community had the misfortune of being hit and they needed 1,000 beds in 24 hours, my guess is the Department of Defense, unless FEMA has them tucked away somewhere, is going to be there on the spot. So, yes, your primary responsibility is for the uniformed personnel and their families. Always remember that phrase, I caution each of you, “and their families.”

Now, Ambassador Brooks, we are fortunate as a country. You have a lot of experience in the area which you are undertaking. Given now the events of the 11th, I think you have to go back with your Secretary and reexamine that budget to see whether or not there are some domestic needs that would require some diversion of your budget for a period of time to take some precautionary steps. Are you willing to do that?

Ambassador BROOKS. Yes, sir. I think what is most attractive in that area is research and development. A number of the research and development efforts of the Department are directly related to protecting against chemical and biological as well as nuclear terrorism.

Senator WARNER. Well, true, but also nuclear waste. Now, that is an area for which everybody, from those of us sitting here in the Senate to your agency, has identified as a very high priority. Without spelling out the details here, you know that we have to direct our attention to that subject right away.

Ambassador BROOKS. Yes, sir.

Senator WARNER. You are aware of the reasons for that.

Ambassador BROOKS. Yes, sir.

Senator WARNER. Ms. Walker, I am going to read something to you, and I think you best just say you are going to answer it for the record.

Ms. WALKER. Yes, sir. [Laughter.]

Senator WARNER. I have known Secretary Rumsfeld since his days in the Nixon administration. We were both young men operating in that arena, so we have been personal friends for a long time. But I love to read some of his pronouncements. Listen to this one.

In a speech last month, Secretary Rumsfeld announced a new initiative aimed at redundant Pentagon bureaucracy. He called for a transformation of the way the Department works and streamlining wherever possible. That is the introduction. As an example of redundancy, Secretary Rumsfeld noted that there are dozens of offices of General Counsel in the Department and that there is another General Counsel's office whose only job is to coordinate all the other General Counsel's offices.

Now, you will answer that for the record, will you not? [Laughter.]

Ms. WALKER. I sure will, sir.

[The information referred to follows:]

I am familiar with Secretary Rumsfeld's Assistant SECAF for Space September 10th speech "Bureaucracy to Battlefield." The Secretary identified the Pentagon bureaucracy as an enemy of sorts and discussed the need for transformation. One area he discussed was DOD's legal support structure, stating ". . . maybe we need many of them. But I have a strong suspicion we need fewer than we have. We're going to take a hard look to find out."

I certainly support efforts to maximize efficiency, encourage cooperation, and eliminate duplication. If confirmed, I would work to increase efficiencies and seek ways to eliminate needless bureaucratic obstructions.

The Air Force exists to defend our country and fight our Nation's wars. As such, all organizations within the Department must carefully consider how we contribute to that overall, defining mission. I am convinced that the Office of the Air Force General Counsel has a specific role in advancing the interests of the Department of the Air Force across a broad spectrum of responsibilities directly contributing to national defense. If confirmed, I will take great care to ensure the manning and resources of the Office of the Air Force General Counsel are appropriate to ensure the quality of legal support necessary to support the Department.

Chairman LEVIN. You cannot get a better advisor than Senator Warner, I will tell you that right now. [Laughter.]

Senator WARNER. You may be in that arena pretty quickly.

But having again served in the Department, I have the highest regard for the lawyers for the service Secretaries. This President and this Secretary of Defense have chosen three extraordinary individuals to serve in those posts. The lawyer is a very needed asset.

So, do the best you can to show that you are going to be consistent in trying to reduce redundancy, but keep that staff that the Secretary and you feel is necessary.

Ms. WALKER. Yes, sir.

Senator WARNER. Mr. Chairman, I know that we have another hearing, and I am going to ask that some of my questions to these nominees be submitted for the record because both of us have responsibilities elsewhere. Do you have one or two and then I will follow up with just one?

Chairman LEVIN. I do have some additional questions.

Senator WARNER. Why do you not go ahead with one or two of them.

Chairman LEVIN. Well, maybe a few more than that.

Back to Dr. Winkenwerder. Are you familiar with the Department's anthrax vaccine immunization program?

Dr. WINKENWERDER. Yes, sir.

Chairman LEVIN. Do you support it?

Dr. WINKENWERDER. Yes, sir.

Chairman LEVIN. There has been a delay in FDA approval of vaccine and the processing of that vaccine and the approval of the only current producer of the vaccine. It is expected later this year, but FDA in this way is incredibly slow at times in acting. I am wondering whether or not you would take some action to facilitate and speed up the FDA approval if you are confirmed.

Dr. WINKENWERDER. Yes, sir, I sure would. I am told at this point that action has been taken to try to expedite that review and approval. It would be my plan, if confirmed, to review that plan and to ask the question, is there any way that we can further expedite that approval? Certainly we cannot ask the FDA not to do what it needs to do, but that said, I would like it if things could be done exceptionally quickly.

Chairman LEVIN. There have been too many instances where they have said that some of their actions are going to be on a fast track where they have not put them on a fast track. I agree with you, you cannot take shortcuts in those processes, but it is taking them much longer than they have committed to in a whole host of areas, and I cannot think of anything much more important than this anthrax immunization program. So, your voice will hopefully speed up that process.

We have a provision in our bill that relates to claims processing procedures. In the DOD and outside of the DOD, there is an incredible amount of paperwork when it comes to health care claims and health payment claims. I think you are probably familiar with how much of our health care dollar goes just purely into administration. The private sector is beginning to try to do something about the high cost of claims processing.

We have a provision in our bill which instructs the Department to examine their current processes and procedures relating to processing, to reduce the high cost of claims processing, to improve the timeliness of payment of claims and explanation of benefits, simplify information provided to beneficiaries relating to such claims through more automated processing is flexible and understandable. Will you pay some attention to that, assuming that that stays in the final bill?

Dr. WINKENWERDER. Yes, sir. If confirmed, I would absolutely want to look at that.

Chairman LEVIN. I have been involved for a long time in trying to increase the amount of organ donors. A number of our colleagues have been involved in that effort, by the way. I have focused on the Defense Department and our hospitals inside the Defense Department because of the jurisdiction of this committee. We have a program to inform the beneficiaries that use the military health system of the value of the program, to encourage them to sign up for the program, and to inform loved ones of those who pass away of what is at stake if they are able to utilize the organs of that loved one to keep life sustained for somebody else. The Department is now looking into noting organ donors on military IDs.

I am wondering whether or not you are a supporter of organ donor programs in general and whether you will give some support to that program inside the Department.

Dr. WINKENWERDER. The quick answer, sir, is absolutely. Organ donation and organ transplantation save lives. One of the keys to making those programs work is awareness of the public or, in this case, the military personnel and their families. We need to do all that we can to get their participation levels at the highest.

Chairman LEVIN. Well, thank you for that. I hope that you would take a look at some of the statistics that have been produced inside the Department. They are a little encouraging but not nearly as much as they should be. So, take a look at what the hospitals have been able to do.

Dr. Sambur, let me ask you just a couple quick questions. The Air Force has cut its science and technology investments by about 50 percent since the Cold War was over. How do you protect investments in research given the need for a lot of short-term items?

Dr. SAMBUR. Well, that is obviously a very fine balancing act, but I think the issue here is basically to make sure people understand that the seeds of our future security rest with the science and technology programs we are doing now. If you don't have an emphasis on science and technology, if it is not brought up to the importance level it deserves, then you are really risking our security.

If confirmed, I would like to work very closely with you and the committee to make sure that the proper attention is given to the science and technology programs.

Chairman LEVIN. Thank you.

In a recent report on Air Force research and development (R&D) programs, the National Academy of Sciences noted that the broad scope of responsibilities of the Assistant Secretary of the Air Force for Acquisition can prevent effective advocacy for Air Force scientific and technical (S&T) at the corporate policy and decision making level of the Air Force. Do you agree with that assessment and how are you going to balance your responsibilities for large acquisition programs with the need to protect smaller but very important, as you have just pointed out, R&D programs?

Dr. SAMBUR. Well, as I said, Mr. Chairman, this is a very fine balancing act. You need to make sure that you are in constant communications with everybody to make this happen, and at the end of the day, you have to give emphasis to these science and tech-

nology programs, otherwise things will happen in the future that you will be sorry for.

Chairman LEVIN. Are you familiar with that National Academy of Sciences report?

Dr. SAMBUR. No, I am not.

Chairman LEVIN. Well, perhaps then after you are confirmed, you would take a look at it.

Dr. SAMBUR. I will certainly do that, if confirmed.

Chairman LEVIN. Congress has worked with the Department to waive regulations and create new hiring and promotion authorities so that the Department can become a more attractive work place for highly trained technical workers. Congress and the National Academy of Sciences have been disappointed with the degree to which the Department has utilized those new authorities, and I am wondering how you would have the Air Force address the issue of attracting and retaining the finest technical work force possible.

Dr. SAMBUR. I am not familiar, as I said before, with that report, but obviously the success of any endeavor in science and technology depends upon the quality of the people. So, at the end of the day, you have to find the solution to that, and if confirmed, I will certainly make that a priority.

Chairman LEVIN. Take a look at some of those provisions that we have put in place to give you some authority especially for that purpose, to address the lack of adequate utilization of those authorities. Please put that on your list of things to do if you are confirmed.

Dr. SAMBUR. I will certainly do that.

Chairman LEVIN. Ms. Walker, last Friday the President issued a directive that purported to limit congressional access to classified information. The President has modified that since, perhaps not technically in written form, but nonetheless has sent very clear signals that there is no intent that he had to restrict access to classified information by this committee and other committees who have a need to have that information. We cannot operate without classified information. We cannot make the assessments that we have to make as to what weapons systems work, which ones do not work, where our shortfalls are in the inventory, and a hundred other things without classified information.

Do we have your assurance that you will do everything within your authority to ensure that information needed in our activities as an authorizer and in our oversight role will be provided to this committee in a timely manner?

Ms. WALKER. Yes, Mr. Chairman, you do. I agree that Congress and particularly this committee must have access to information in order to perform essential functions. If confirmed, I would commit to work within the procedures established between Congress and the executive in order to make that classified information available to you.

Chairman LEVIN. The last question I have is the following, Ms. Walker. Congress relies on accurate and timely information to carry out those oversight responsibilities. The information usually runs through official channels, but sometimes it comes from whistleblowers. In the past, we have seen on occasion retaliatory action taken against whistleblowers who have come to Members of Con-

gress with classified information, revealing waste, fraud, or abuse in the Department of Defense activities.

My question of you is this: do you believe that such whistleblowers, those who bring classified information to Members of Congress, should be protected from retaliation?

Ms. WALKER. Well, that is an interesting question, Mr. Chairman. I have not considered any specific cases, obviously, or what was involved in any of that. Obviously, whistleblowers—and I know that is a category that is somewhat charged—perform an essential function many times. I was aware, as Assistant Secretary of Energy, that there were times when whistleblowers brought information to us in the environment, safety and health area that was essential. They should be protected from any retaliation for that.

When you are dealing with classified information, I am not prepared today to speak to specific cases and what might be involved in that. But I do agree with you. If you are suggesting that whistleblowers often perform a valuable service and should not be retaliated against, in general I would agree. If they are violating specific laws or policies against revealing classified information and under what circumstances they bring that information forward, I cannot speak to those cases. There may be times when those need to be reviewed on an individual basis. But in general, when it comes to whistleblowers, I do believe there is a service often performed there.

Chairman LEVIN. Now, Members of Congress have clearance to receive classified information. So, what would be the problem with a whistleblower giving us classified information if we are authorized to receive classified information?

Ms. WALKER. Well, I understand—and again, my understanding is not perfect—that not every Member of Congress receives the same degree of classified information nor at the same level. So, what I was speaking to was really without assuming that the member to which that information was given was an appropriate receiver of that information. If you are suggesting that it is a member of this committee receiving information that is appropriately given, then I would agree with you. In that circumstance, it would seem retaliation would be obviously something that is not warranted.

What I was suggesting is there may be circumstances where certain levels of classified information might be revealed to those who would not otherwise receive it based on the level of the classification, and in those instances, I could not prejudge what might be appropriate action taken by the Department. That is all I am saying. But in general I would agree with you about protecting whistleblowers.

Chairman LEVIN. Thank you.

Senator Warner.

Senator WARNER. For Dr. Sambur. This committee has taken initiatives in the past few years and again this year in legislation—and we are very proactive on this—to encourage the military departments to move ahead with research and development of unmanned combat systems. Are you familiar with those initiatives by the committee?

Dr. SAMBUR. I am not totally familiar with it. I am somewhat familiar with the unmanned.

Senator WARNER. Well, the military departments have made considerable progress, including the Department of the Air Force. It would be our hope that you likewise will see the wisdom in moving ahead on those fronts and, in that budget fight, get a little money for it.

Dr. SAMBUR. Well, I certainly share your view.

Senator WARNER. Do you concur in the desirability of having these systems?

Dr. SAMBUR. Absolutely. I think that has to be part of our future. Again, if we are not doing things that make us safe for the future, we are really not doing our job.

Chairman LEVIN. If I can just interrupt. Senator Warner is being modest on this. When he was chairman of this committee, he was and still is the leader in the so-called UAVs, and this committee has followed that lead very strongly.

Dr. SAMBUR. I am aware of his leadership.

Chairman LEVIN. This is a big chunk of the future, and there is a real shortfall.

Dr. SAMBUR. I agree with you totally.

Chairman LEVIN. So, I just wanted to let you know that he speaks for the committee in this regard.

Senator WARNER. I thank my chairman, but you were a full partner in getting it done.

Now, here is an area where you and I have had some differences.

Chairman LEVIN. Whoops. I think time is up here. [Laughter.]

Senator WARNER. Dr. Beckner, the United States, I think wisely, has decided that the safety and reliability of our nuclear weapons stockpile shall be maintained without the need for testing and, to a certain extent, without the need for development of a new weapon, if that would be necessary.

I personally believe that the Stockpile Stewardship program is a laudable goal, but this committee received extensive testimony last year in conjunction with the treaty, with which you are familiar, and came to the conclusion that that stockpile stewardship program, frankly, through no negligence, no oversight, no lack of effort, but just through the ability to break through in this new area of technology, was way behind schedule. As a consequence, the Senate ultimately decided not to ratify the treaty.

Now, I am not going to probe you too strongly for your views, but I would hope that you could indicate to the committee that you are of an open mind on this issue. At the same time, you know better than I, there is an aging process in all of those weapons and we have an obligation to handlers and others, indeed the communities in our country where they are housed, shipped, and the aircraft which from time to time carry them. We have a tremendous responsibility to assure that these weapons can function and function within the parameters designed and that they are safe to handle.

Now, a concomitant situation is that a nation who, for whatever reason might wish to challenge us in such a way that the President and others would have to consider—the Lord forbid—the use of them, we have to know that they would be effective. Now, those are awesome responsibilities that fall on your shoulders.

I am concerned about this stewardship program and its ability to meet the goals, albeit laudatory, that were laid down in years past. So, give it some thought.

Do you have an open mind? That is the most I am going to ask you to say at this moment.

Dr. BECKNER. No question about it. I have an open mind, Senator. I have followed this program for a long time, and realistically we are only in the early stages of it. We are talking about maintaining a stockpile for decades without further testing, if we can.

Senator WARNER. That is correct.

Dr. BECKNER. But we also, I think, all understand that if the day comes when we cannot certify the performance, the safety that stockpile, we will have to return to the President and to Congress and seek relief.

Senator WARNER. If we have to do that, better earlier than too late because this is a dangerous world out there. We know that so well. Things that we never could envision can happen now, and that is a doctrine we are going to have to follow.

Give it some thought. This is one Senator who is going to carefully monitor that, and in due course when you come before this committee, you can expect questions which I will not press now, but at that time, as to your judgment as to the stockpile program and whether or not the stewardship is on target, on schedule, and can coincide in such a way as to alleviate any problems we have with aging.

I thank you, sir. I thank this panel.

Thank you, Mr. Chairman. It has been a very good hearing. So that you and I can go to other matters, I will put my questions in for the record.

Chairman LEVIN. I will put the rest of my questions in for the record.

I want to let you know, Dr. Beckner, just to put my oar in a bit on this last question, there is no statutory relief that you would need. If the administration decides to test, there is no prohibition on it other than President Bush's moratorium. If we ever ratified the treaty, which I hope we will some day, under the safeguards provisions, any country can withdraw and test if it is in the national interest to do. That was one of the reasons I was able to support that ratification, is that we could test under the treaty's provisions if it was in our national interest to do so.

We do not have as big a difference as might have been indicated here because I think we both agree that if testing became essential to assure the safety and the security of our stockpile, that we would test. Hopefully it will not be necessary. Hopefully that program that we have now going will continue to give us all the assurance we need about safety and reliability. So, I do not think we have a major difference.

By the way, I want to compliment Senator Warner again because he really played a very critical role. He made a huge effort to actually delay the confirmation vote on that treaty, as I remember, and he was, as always, a very constructive and bipartisan voice so that we could have delayed that vote to a time when we could have had perhaps more information and had a longer debate.

Senator WARNER. This committee held a series of hearings, and I will have to tell you, it is your peer group out there, the directors of those labs, not the politicians, that came forward.

Dr. BECKNER. I know them all.

Senator WARNER. They sat in those chairs and just said to the Members of Congress, we are working as hard as we can, night and day. No shortage of money is my recollection. No shortage of scientists, but we are still struggling to achieve the goals of that stewardship program. That was the reason that the Senate, in my judgment, made its decision.

Thank you again, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Warner. We thank you all. We stand adjourned.

[Whereupon, at 4:00 p.m., the committee was adjourned.]

[Prepared questions submitted to Linton F. Brooks by Chairman Levin prior to the hearing with answers supplied follow:]

*August 31, 2001.*

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN: I am pleased to submit my responses to a number of questions which you requested in connection with my nomination to be Deputy Administrator for Defense Nuclear Nonproliferation, National Nuclear Security Administration. In accordance with your letter of August 3, 2001, I have provided 75 copies and a computer disk.

I appreciate the opportunity to provide you my views. I look forward to discussing these important issues with the committee and, if confirmed, to working with you and the committee to advance the United States' nonproliferation agenda. Thank you for your consideration.

Very respectfully,

LINTON F. BROOKS.

Enclosure.

---

#### QUESTIONS AND RESPONSES

##### DUTIES

*Question.* What is your understanding of the duties and functions of the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* The fundamental responsibility of the Deputy Administrator for Defense Nuclear Nonproliferation is to enhance U.S. national security by promoting nuclear nonproliferation, reducing global danger from weapons of mass destruction, advancing international nuclear safeguards and eliminating inventories of surplus fissile materials usable for nuclear weapons.

If confirmed, my most significant functions will be: to develop DOE/NNSA policies regarding arms control and nonproliferation; to direct research and development for treaty monitoring and for reducing the threats from nuclear, chemical, and biological weapons; to implement a cooperative international program to promote worldwide nuclear safety; to lead international materials and weapons protection programs, including those involving the Russian Federation; and to coordinate the development of policy regarding surplus fissile materials and manage the U.S. and Russian programs for disposition of excess weapons plutonium.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I have a broad understanding of national security policy, especially arms control and nonproliferation policy, from my service in the State Department, Arms Control and Disarmament Agency, Office of the Secretary of Defense, and National Security Council Staff. My service as START negotiator and as supervisor of cooperative programs with Russia at the Center for Naval Analyses (CNA) has made me familiar with security issues and current political conditions in the Russian Federation. My NSC and OSD assignments and my recent service on advisory panels have

made me familiar with the culture and capabilities of the national laboratories. Finally, from running a bureau at ACDA and a division at CNA, as well as from my Navy service, I am used to leading national security professionals and shaping a comprehensive, mission-oriented vision for a national security organization.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* Yes. I need to deepen my knowledge of the details of the programs for which I will be responsible if I am confirmed. I also need to build collegial working relationships with my counterparts in other agencies. I have already begun both actions in preparing for confirmation.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Administrator of the National Nuclear Security Administration would prescribe for you?

*Answer.* In addition to the duties associated with my position, the Administrator will expect me to work with the other Deputy and Associate Administrators through his newly established Management Council to help with corporate functions and to help him make the NNSA a coherent, effective, efficient and respected organization.

*Question.* If confirmed, how would you work with the following:

Other Deputies in the NNSA.

*Answer.* I expect to establish a close working relationship with my colleagues. Formally, this will be through the Administrator's recently-established Management Council. Informally, I will work with both Deputy and Associate Administrators in NNSA as a routine part of my day-to-day duties.

*Question.* The Assistant Secretary for Environmental Management.

*Answer.* Because responsibility for facilities will not, in general, be part of my portfolio, I anticipate that my interactions with the Assistant Secretary for Environmental Management will be relatively limited. The one exception concerns plutonium disposition, where I expect to work closely with the Assistant Secretary for Environmental Management in creating the necessary infrastructure at Savannah River.

*Question.* Other Assistant Secretaries of the Department of Energy.

*Answer.* Because of the semi-autonomous nature of the National Nuclear Security Administration, I anticipate much of my interaction with other Assistant Secretaries will be via NNSA. Where appropriate, I will work to establish collegial relations with other parts of the Department of Energy.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* The major substantive challenge I will confront if confirmed will be ensuring that the many nonproliferation programs for which I will be responsible are consistent and coherent, both within the Office of Defense Nuclear Nonproliferation and with other U.S. government programs. An important near term task will be helping devise a program for plutonium disposition that meets our nonproliferation goals and that can be supported both politically and fiscally.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will work with my colleagues to ensure that I provide the necessary strategic direction to ensure a coherent nonproliferation program. In addition, I will devote considerable personal attention to the recently initiated review of plutonium disposition.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* The three most serious management problems I expect to face are: (1) maintaining an adequate and responsible budget for the various programs under my cognizance; (2) improving coordination with other agencies of the U.S. Government and with the national laboratories; and (3) retaining high-performing, experienced staff while attracting bright young professionals into government service.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* I will support the NNSA Administrator in his attempts to establish a formal Planning, Programming, and Budgeting System within NNSA. Such a system will aid in managing the long-term funding needs that are inherent in many of the programs for which I will be responsible. In addition, I will devote personal atten-

tion to building on recent efforts to improve coordination and working relationships. I have not yet identified specific actions I will take on recruiting and retention.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* Should I be confirmed, my broad priorities will be working to ensure that the many nonproliferation programs for which I will be responsible are consistent and coherent, especially with respect to Russia, and working to improve coordination and working relations within my office, with other agencies of the U.S. Government, and with the national laboratories.

#### BAKER-CUTLER REPORT

*Question.* The Baker-Cutler Task Force of the Secretary of Energy's Advisory Board described the tasks of the Deputy Administrator for Nonproliferation as key to meeting the largest unmet national security threat currently facing the United States.

What is your view of the findings and recommendations of the Baker-Cutler report?

*Answer.* I believe the Baker-Cutler report is generally correct, especially in its conclusion that the problem of securing Russian weapons and material is urgent and requires both adequate funding and a long-term vision. If confirmed I will work toward such a vision as a vehicle for securing adequate funding. At the same time, the Baker-Cutler Task Force was not asked to assess overall administration fiscal priorities. Thus I believe the recommendations for massive budget increases should be taken as an indication of the importance of the problem, but not as a realistic guide to budget preparation.

#### NUCLEAR CITIES

*Question.* The Nuclear Cities Initiative (NCI) program has been criticized for being ineffective, lacking clear and measurable milestones, having weak management and changing program goals.

Do you agree with this view? If so, how would you improve the program?

*Answer.* My initial review of the program suggests that some criticisms are valid, while some are not. Rather than focus on the past, if confirmed I plan to work to restructure the program so that it will command support consistent with the importance of its goal of reducing the Russian weapons complex.

*Question.* Do you have a view as to how you would focus the Nuclear Cities program and the goals that you would establish for the program to achieve?

*Answer.* A management review is now in progress within the administration to determine how to restructure and refocus the Nuclear Cities program to respond to past criticisms while retaining the program's unique focus on transforming the former Soviet weapons complex. If confirmed, I intend to devote immediate, personal attention to that review. Pending its completion, I have not yet come to any firm conclusions about how the program should be transformed.

*Question.* Do you support implementation of the NCI project at Avangard?

*Answer.* Yes, provided the Department of Energy is able to satisfy current Congressional concerns. As I understand it, the current DOE/NNSA plan is to focus its efforts on the city of Sarov and the conversion of the Avangard weapons plant. This appears to me to be a sound strategy and I plan to support it if confirmed.

*Question.* What do you see as the distinguishing factors between the NCI program and the Initiatives for Proliferation Prevention and, if confirmed, how would you work to improve the coordination between the two programs?

*Answer.* The Initiatives for Proliferation Prevention program focuses on individual scientists, engineers, and technicians, while the NCI program focuses on conversion of the nuclear weapons complex itself. In my view a sound program requires both components. If confirmed, I will give immediate attention to a management review now under way to devise an approach to ensuring effective coordination while preserving the good features of both programs.

*Question.* According to a May 2001 GAO report, 70 percent of the funds expended for the Nuclear Cities Initiative were expended in the United States, with the bulk of the costs utilized by the U.S. national laboratories to implement the program. The GAO report further states that "officials from the Ministry of Atomic Energy told [GAO] that they are dissatisfied with the amount of program funds that have been spent in Russia and that if the Department [of Energy] is serious about creating jobs for Russian weapons scientists, more funds must be spent in Russia."

If confirmed, how would you address the issues raised in the GAO report?

Answer. I understand that management controls have already been put in place to ensure that at least 51 percent of program funds for fiscal year 2001 and 60 percent of program funds for fiscal year 2002 are spent in Russia. If confirmed I will monitor the progress of these improvements and take additional corrective action if the DOE is failing to meet its goal.

*Question.* According to the May 2001 GAO report, the NCI and IPP programs are “very similar programs in Russia’s nuclear cities” that have “caused duplication of effort.” Consequently, GAO recommends that the “Department evaluate all of the NCI projects, particularly community development activities, and eliminate those that do not meet the program’s basic objectives of creating jobs and assisting with the downsizing of Russia’s nuclear weapons complex.” The GAO report goes further by recommending, “that the Department determine whether the NCI and IPP should be consolidated into one effort in order to achieve potential cost savings and other efficiencies.”

If confirmed, would you support these GAO recommendations, including the re-evaluation of NCI projects to ensure that these projects met the program’s basic objectives?

If you do not support consolidation, how would you work to coordinate the programs, if confirmed?

Answer. A management review is now in progress within the Administration to determine how to restructure and refocus the Nuclear Cities program to respond to past criticisms and to improve synergy with the Initiatives for Proliferation Prevention program, while retaining a focus on transforming the former Soviet weapons complex. If confirmed, I intend to devote immediate, personal attention to that review. Pending completion of the review, I have not yet come to any firm conclusions about how the program’s management should be transformed.

#### RESEARCH AND ENGINEERING FUNDING

*Question.* The NNSA nonproliferation research and engineering budget request for fiscal year 2002 is \$40 million lower than the fiscal year 2001 appropriated amount and may be lower than what is required to meet current requirements and to sustain key unique research capabilities.

If confirmed, how would you propose to address this issue?

Answer. I strongly support nonproliferation research and engineering and believe additional funds are needed to address an increasing number of technical and global proliferation challenges. I share the committee’s concern that reduced funding will result in some technologies becoming operational later than originally scheduled and some technology development being slowed. If confirmed I intend to give significant attention to this area. At the same time, I recognize that I will be required to balance these requirements against other important programs within a constrained budget environment.

#### FORMER BIOLOGICAL WEAPONS SCIENTISTS

*Question.* The Department of Defense and the Department of State (DOS) each work with former biological weapons scientists through the Cooperative Threat Reduction (CTR) program and the International Security and Training Center (ISTC). The Department of Energy also conducts similar work that is coordinated with the Departments of Defense and State through the Interagency Working Group.

In your view, what role, if any, should DOE have in the future with respect to scientists that were involved in the former Soviet Union biological weapons programs?

If the NNSA were to participate in this work, would you recommend working through existing programs in the DOD and DOS to leverage existing programmatic management structures and to ensure the greatest level of cooperation?

Answer. Curbing the spread of knowledge concerning biological weapons is an important—though very difficult—U.S. policy objective. As I understand it, the NNSA/DOE efforts in the Initiatives for Proliferation Prevention program already include efforts to redirect former Soviet biological weapons scientists to civilian pursuits. I understand current DOE efforts are carefully coordinated with State and DOD; if confirmed, I would insist that this be true for future efforts as well. I am not yet in a position to make specific recommendations with respect to an expanded DOE role or on specific aspects of program management.

## EXPANDED COOPERATION

*Question.* In your view, is there an opportunity to expand the cooperative programs between NNSA and the States of the Former Soviet Union, other than Russia, such as Kazakhstan and Ukraine?

*Answer.* Almost certainly the answer is yes, subject to budget constraints. There may be steps we can take to reduce the proliferation threat from diversion of highly-enriched uranium, for example, or to expand use of the Initiatives for Proliferation Prevention program to help scientists in Ukraine or Kazakhstan redirect their efforts to civilian pursuits. I have not, however, reached the stage of having specific proposals to offer.

*Question.* If so, what threat reduction goals should such expanded cooperative programs have?

*Answer.* The goals should be the same as existing programs: to ensure the security of nuclear material against possible diversion and to shift technical workers and scientists away from weapons work and toward civilian pursuits.

## NEED FOR MANAGEMENT IMPROVEMENTS

*Question.* If confirmed, what management initiatives would you propose?

*Answer.* I have no specific initiatives to propose at this time. I believe my most important near-term management task will be to help ensure the smooth implementation of the October 1 NNSA reorganization.

## FISSILE MATERIALS DISPOSITION

*Question.* The fiscal year 2002 budget request and the administration's review of the nonproliferation programs have raised concerns about the fissile materials disposition program. The near term issue is whether the DOE will be able to transport plutonium and plutonium residues from Rocky Flats to Savannah River.

Do you believe that there is an adequate plan in place for disposing of plutonium and plutonium residues after they reach the Savannah River site?

*Answer.* I believe the current plans are technically adequate assuming they are properly funded. The current program has not, however, gained the necessary policy and political support within and outside the administration.

*Question.* Will you commit to give this program your full and immediate attention if confirmed?

*Answer.* I am committed to ensuring a thorough review is undertaken in order to ensure a program that will garner the necessary support. As noted above, I plan to devote immediate, personal attention to this area if confirmed.

## EXPORT CONTROLS

*Question.* According to the CIA's Unclassified Report to Congress on the Acquisition of Technology Relating to Weapons of Mass Destruction and Advanced Conventional Munition, "increasingly rigorous and effective export controls and cooperation among supplier countries have led other foreign WMD programs to look elsewhere for many controlled dual-use goods."

If confirmed, would you examine the role that the Office of Defense Nuclear Nonproliferation's Export Control Program has in cooperating with supplier states on developing rigorous export controls and examine additional opportunities for greater cooperation with these supplier states?

*Answer.* Yes.

## RUSSIAN COST SHARE

*Question.* According to a recent National Security Council staff review of U.S.-Russian nonproliferation programs, Russia may be capable of assuming more of the costs of implementing these programs.

In your view, what DOE nonproliferation programs do you believe should require greater Russian cost share?

Do you believe these programs would be more or less effective with greater Russian cost sharing?

*Answer.* I believe we should constantly review all cooperative programs to ensure adequate Russian support, both to provide wise use of U.S. resources and to give Russia a greater stake in sustaining these programs. I have not reached any conclusions on specific programs. I believe it is important to recall that the United States engages in nonproliferation efforts with Russia because it is in the U.S. interest, not as a favor to the Russian Federation.

## RUSSIA AND IRAN

*Question.* In December 2000, Secretary Cohen met with then-Russian Defense Minister Igor Sergeev to discuss U.S. concern over Moscow's continued arms sales and proliferation activities with Iran. While this meeting and subsequent State Department meetings were considered upbeat, the United States did not receive concrete assurances from Russia that these proliferation activities would cease.

What is your view of the current level of Russian arms sales and nuclear technology efforts with Iran?

*Answer.* Based on the briefings I have received to date, I believe that there is an unacceptably high level of cooperation between Russia and Iran in nuclear issues and that international stability and U.S. security would be improved by reducing that cooperation.

*Question.* As Deputy Administrator for Defense Nuclear Nonproliferation, what policy options would you propose to address proliferation activities of Russia with Iran?

In your view, are there any DOE nonproliferation programs with Russia that could or should be used to leverage a desired policy outcome with respect to curbing or eliminating Russian secondary proliferation activities?

*Answer.* I believe the U.S. approach to Iran must be a coordinated one that goes beyond the responsibilities of a single department. If confirmed, I will work with colleagues throughout government to devise such an approach. At the same time, our programs with Russia are not conducted as a "favor" to the Russia Federation, but because they are in U.S. interest. Thus using these programs to provide policy leverage should only be done after very careful consideration of the potential cost to our nonproliferation objectives.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Administrator for Defense Nuclear Nonproliferation?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees in a timely manner?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR JEFF BINGAMAN

## NONPROLIFERATION POLICIES AND PROGRAMS PERTAINING TO SOUTH ASIA

1. Senator BINGAMAN. Ambassador Brooks, what capabilities does your organization have regarding management and implementation of nonproliferation policies and programs pertaining to South Asia?

Ambassador BROOKS. The Office of Defense Nuclear Nonproliferation (NA-20) has a regional security program that focuses on nonproliferation challenges in several parts of the world. The Middle East and South Asia are two of the most critical of these regions. By hindering proliferation and addressing security in unstable regions, the program also contributes to the U.S. effort to combat terrorism. NA-20 actively participates in interagency deliberations on policy toward such regions; NA-20 also plays a significant role in implementing U.S. policy. For example, we play a role in various international negotiations, informal dialogue with South Asian countries, and international collaboration on the application of technical solutions to regional security problems. In fulfilling this mission, NNSA draws on the considerable technical and analytical skills of the National Laboratories, particularly Sandia National Laboratories' Cooperative Monitoring Center.

## ESTABLISHMENT OF A SEPARATE REGIONAL DIRECTORATE

2. Senator BINGAMAN. Ambassador Brooks, should your organization establish a separate regional directorate in which nonproliferation issues regarding South Asia and other regions of concern are addressed and funded?

Ambassador BROOKS. Not at this time. The current organization allows consideration of policy issues in the context of the overall U.S. approach to nonproliferation. If, in the future, active programs were established in South Asia, then appropriate organizational changes could be considered.

## ADDITIONAL FUNDING

3. Senator BINGAMAN. Ambassador Brooks, has your organization sought additional funding for nonproliferation programs as part of the President's initiative requesting \$40 billion for counterterrorism?

Has the Department of Energy reviewed your proposal and made recommendations to the President for additional funding?

Please provide specific information for budget requests for individual nonproliferation programs that were submitted to the President?

Ambassador BROOKS. The Office of Defense Nuclear Nonproliferation reviewed all its programs for possible acceleration. As you are aware, the Administration was forced to select among many potential augmentations and chose to focus on those with an immediate, rather than a long-term, focus. I believe it is inappropriate to provide details of internal Administration budget deliberations.

## ESTABLISHMENT OF A SEPARATE REGIONAL DIRECTORATE

4. Senator BINGAMAN. Ambassador Brooks, in the wake of September 11, President Putin has expressed greater willingness to cooperate with the United States than in recent years. Has that willingness manifested itself in any specific ways with respect to the cooperative threat reduction nonproliferation programs managed by DOE?

Ambassador BROOKS. Yes, I believe President Putin's willingness to increase cooperation with the United States following the September 11 events has manifested itself in both a greater spirit of cooperation and also in a tangible number of new nonproliferation proposals. Specifically, Secretary of Energy Abraham and Minister of Atomic Energy Romyantsev met in Vienna following the September 11 tragedy and have had several phone conversations since then that reflect this new spirit of cooperation. Minister Romyantsev himself described their late September meeting as "very constructive and productive." Romyantsev followed that meeting with an invitation for the Secretary to meet with him in Moscow. In addition, this new spirit of cooperation was demonstrated by Minister Romyantsev's offer to U.S. Ambassador Vershbow for him to visit first-hand the ten MinAtom closed cities to directly observe the tangible results of U.S.-Russian nonproliferation cooperation.

MinAtom has also focused its attention on developing a number of new technical proposals to further expand U.S.-Russian cooperation. In early October, Sandia National Laboratories received 45 new proposals from MinAtom institutes under the U.S.-Russian Warhead Safety and Security Program. If implemented these projects will significantly increase the safety and security of Russian nuclear warheads and fissile material. I also received a letter from the Vice President of the Kurchatov Institute containing a number of new proposals specifically designed to combat terrorism.

## POTENTIAL DIRECTIONS FOR IMPROVED COOPERATION WITH RUSSIA

5. Senator BINGAMAN. Ambassador Brooks, will you undertake to explore potential directions for improved cooperation with the Russian government?

Ambassador BROOKS. Yes. Certainly, this will be a topic that is discussed when Secretary Abraham and Minister Romyantsev meet in Moscow.

## COUNTRY CLEARANCE

6. Senator BINGAMAN. Ambassador Brooks, employees of the Department of Energy and the National Laboratories have often experienced significant difficulties in getting country clearance from the State Department needed to conduct business in conjunction with DOE's nonproliferation programs. I requested that DOE and the Department of State initiate a high-level working group to resolve country-clearance

related problems. Has such a group been established? Has progress been made resolving this matter?

Ambassador BROOKS. The high level working group has not been established because improvements in the process worked out by the acting Deputy Administrator for Defense Nuclear Nonproliferation and the relevant offices in the Department of State made such a group unnecessary. I recognize the importance of an effective country clearance process and will be alert to recommend appropriate action, including the establishment of a high level working group, should problems arise in the future.

#### REVIEW OF OPERATIONS OF DOE MOSCOW OFFICE

7. Senator BINGAMAN. Ambassador Brooks, DOE recently completed a review of operations of the DOE office in Moscow. Would you please summarize the findings of that review?

Ambassador BROOKS. Former U.S. Ambassador to Russia, Jim Collins, and Gen. John Gordon, Under Secretary and Administrator for Nuclear Security, co-sponsored the review, which included interviews in both Moscow and Washington DC of 30 key United States Government personnel familiar with the DOE Moscow Office. The key findings of the review were that DOE Moscow Office has competent leadership, management and staff and that the Office performs valuable functions for DOE, the Department of State, and the U.S. Embassy in supporting nonproliferation and non-nuclear (oil/gas) programs in Russia. The primary challenge identified during the strategic review was to improve the working relationship between DOE and the Department of State in Washington.

To address this challenge, the strategic review also included a near-term action plan with 18 specific actions to further increase the effectiveness of DOE Moscow Office and to improve cooperation/coordination between DOE and State. To date, approximately 70 percent of these actions have already been implemented which has led to a significant improvement in coordination and cooperation between DOE and State.

---

#### QUESTION SUBMITTED BY SENATOR JOHN WARNER

##### U.S.-RUSSIA PLUTONIUM DISPOSITION PROGRAM IN DOE/NNSA

8. Senator WARNER. Ambassador Brooks, in your answer to the advanced policy questions, you indicated that you expect to work closely with the Assistant Secretary for Environmental Management in creating the necessary infrastructure at Savannah River. Specifically, what infrastructure do you have in mind and how will this support the implementation of the U.S.-Russia Plutonium Disposition Program?

Ambassador BROOKS. The Department's current plutonium disposition strategy involves the construction and operation of three key facilities at the Savannah River Site, i.e., Mixed Oxide (MOX) Fuel Fabrication Facility, Pit Disassembly and Conversion Facility and an Immobilization Facility. These facilities will depend on interim storage at the K Area Material Storage (KAMS), supply of vitrified high level radioactive waste for immobilization from the Defense Waste Processing Facility (DWPF), and possible Canyon use for plutonium polishing—all under the purview of the Assistant Secretary for Environmental Management. Additionally, the plutonium disposition program will rely on Savannah River Site to provide security, utilities, roads, analytical laboratory capabilities, etc. All of these elements are essential to implement the existing U.S.-Russia Plutonium Management and Disposition Agreement.

---

#### QUESTION SUBMITTED BY SENATOR STROM THURMOND

##### BILATERAL PLUTONIUM MANAGEMENT AND DISPOSITION AGREEMENT

9. Senator THURMOND. Ambassador Brooks, Russian Atomic Energy Agency First Deputy Valentin Ivanov recently indicated that without the Mixed Oxide Fuel component of the Bilateral Plutonium Management and Disposition Agreement the plan to eliminate plutonium in the United States and, more importantly, Russia would collapse. Do you agree with this assessment?

Ambassador BROOKS. Yes. The Russians have said repeatedly over the past 6 years they would not proceed with a bilateral plutonium disposition agreement with the United States unless it was based primarily on irradiating mixed oxide (MOX) fuel in nuclear reactors. The Russians feel immobilization does not degrade the

isotopics of the weapon-grade plutonium making it relatively easy for a sophisticated Nuclear Weapons State to reuse this material in weapons. Further, the Russians have expressed an interest in recovering the energy value from the plutonium they worked so hard to produce. We have been informed that this position is not only held by Ministry of Atomic Energy but also by the Ministry of Defense, the Ministry of Foreign Affairs and is strongly concurred in by the Office of the Prime Minister.

---

[The nomination reference of Linton F. Brooks follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 4, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Linton F. Brooks, of Virginia, to be Deputy Administrator for Defense Nuclear Nonproliferation, National Nuclear Security Administration. (New position)

---

[The biographical sketch of Linton F. Brooks, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF AMBASSADOR LINTON F. BROOKS

Ambassador Linton F. Brooks is Vice President and Assistant to the President for Policy Analysis at the Center for Naval Analyses (CNA), a federally funded research and development center located in Alexandria, Virginia. As such, he is responsible for broad policy analyses of issues of national importance.

Prior to joining CNA, Ambassador Brooks had an extensive career in government service. During the Bush administration, he served as Assistant Director for Strategic and Nuclear Affairs at the United States Arms Control and Disarmament Agency, and in the State Department as Head of the United States Delegation on Nuclear and Space Talks and Chief Strategic Arms Reductions (START) Negotiator. In this latter capacity, he was responsible for final preparation of the START I Treaty; which was signed by Presidents Bush and Gorbachev in Moscow on July 31, 1991. In December 1992, he performed a similar function during the final preparation of the January 3, 1993, START II Treaty. Thereafter, he served as a consultant on START II ratification to the Clinton administration.

Before becoming Head of the United States Delegation to the Nuclear and Space Talks in April 1991, Ambassador Brooks served for 2 years as Deputy Head of the Delegation, holding the rank of ambassador. He joined the delegation after spending over 3 years as Director of Arms Control on the staff of the National Security Council, where he was responsible, among other things, for all aspects of United States strategic arms reductions policy and nuclear testing policy during the final third of the Reagan administration.

Ambassador Brooks' National Security Council service culminated a 30-year military career. Prior to his retirement as a Navy captain, Ambassador Brooks served at sea in destroyers, ballistic-missile submarines, and attack submarines; commanded the nuclear-powered attack submarine U.S.S. *Whale* (SSN 638); and served in a variety of Washington assignments relating to nuclear policy, military strategy, and arms control.

Ambassador Brooks holds a BS in physics from Duke University, where he was elected to Phi Beta Kappa, and an MA in government and politics from the University of Maryland. He is a Distinguished Graduate of the U.S. Navy War College and has published a number of prize-winning articles on naval and nuclear strategy.

The son of a career Army officer, Ambassador Brooks was born in Boston, Massachusetts, on August 15, 1938. He now resides in Vienna, Virginia, with his wife, the former Barbara Julius of Lancaster, Pennsylvania. The couple has two grown daughters, Julie and Kathryn.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the

advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Linton F. Brooks in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Linton Forrestall Brooks.  
Nickname "Lint" used 1959 to date.
2. **Position to which nominated:**  
Deputy Administrator for Defense Nuclear Nonproliferation, National Nuclear Security Administration.
3. **Date of nomination:**  
September 4, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
August 15, 1938; Boston, MA.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married since 24 October 1964 to Barbara Sue (Julius) Brooks.
7. **Names and ages of children:**  
Julie K. Brooks—32.  
Katheryn L. Brooks—28.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Rils Hoyre Skol—Oslo Norway—1952-4.  
Columbia High School—Columbia, SC—1954-5 (Diploma 1955).  
Duke University—Durham, NC—1955-9 (BS, Physics, 1959).  
University of Maryland—College Park, MD—1970-72.  
(MA, Government and Politics, 1972).  
U.S. Navy War College—Newport, RI—1978-9 (Certificate, 1979).
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
June 1989—Aug 1992—U.S. Department of State—Head of Delegation on Nuclear and Space Talks and Chief START Negotiator.  
Aug 1992—Jan 1993—U.S. Arms Control and Disarmament Agency—Assistant Director for Strategic and Nuclear Affairs.  
Jan 1993—Sept 1996—U.S. Arms Control and Disarmament Agency—Consultant on START II ratification (part time).

Jan 1993—June 1994—The CNA Corporation (Center for Naval Analyses)—Distinguished Fellow (part time).

Jun 1994—Date—The CNA Corporation (Center of Naval Analyses)—Vice President.

All employment has been in the Washington area.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

U.S. Strategic Command Strategic Advisory Group Policy Panel (2000–date).

As part of my duties for the Center for Naval Analyses, I regularly advise the Navy staff in Washington.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Vice President, The CNA Corporation, Alexandria, VA (will resign upon confirmation).

I serve as a consultant to TRW for the sole purpose of serving as a member of the Sandia National Laboratories National Security Advisory Panel. I will resign upon confirmation.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Life member—United States Naval Institute.

Life member—Navy Submarine League.

Chase Hill Civic Association.

Executive Committee, United States Committee for the National Laboratories (NOTE: This is a recently formed educational and advocacy organization to support the Department of Energy's national laboratories; I will resign upon confirmation).

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Angier B. Duke Scholar, Duke University, 1955–59.

Phi Beta Kappa and various other college honor societies.

Colbert Memorial Prize for Professional Essay, Navy War College, 1979.

Arleigh Burke Prize (professional writing) U.S. Naval Institute.

State Department Distinguished Honor Award (2).

U.S. Arms Control and Disarmament Agency Distinguished Honor Award.

Defense Distinguished Service Medal, Legion of Merit (3), Defense Superior Service Medal, Navy Commendation Medal.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

“The Strategic Arms Reduction Treaty: Reducing the Risk of War,” *NATO Review*, Volume 39, Number 5 (October 1991).

“START: An End and a Beginning,” *Disarmament*, Volume XV, Number 2 (1992).

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

No speeches given relating to nonproliferation.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

LINTON F. BROOKS.

Undated.

[The nomination of Linton F. Brooks was reported to the Senate by Chairman Levin on October 15, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on October 16, 2001.]

[Prepared questions submitted to Marvin R. Sambur by Chairman Levin prior to the hearing with answers supplied follow:]

*September 18, 2001.*

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

MARVIN R. SAMBUR.

Enclosure.

cc: Senator John Warner,  
*Ranking Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support full implementation of the Goldwater-Nichols Act.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I believe that the reforms outlined in the Goldwater-Nichols Act are now part of the day-to-day business of the Department. We have seen how the Goldwater-Nichols Act significantly enhanced the Department's joint warfighting effectiveness. From a management standpoint, the Goldwater-Nichols Act was an important milestone in furthering the reform mindset within the Department, which led to today's pursuit of acquisition excellence.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I believe the most important aspect of the Goldwater-Nichols Act is the improved joint warfighting capabilities. The Department's quick, unified response to the recent heinous terrorist attacks shows the strength of the joint force team. Today's acquisition excellence mindset, which had its genesis in the Goldwater-Nichols Act, will enable the acquisition community to efficiently deliver the combat capabilities the joint warfighters need to successfully accomplish the full range of military missions that will be required as we wage the war of the 21st century against terrorism.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles that indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. Over the past several years, I have seen the Air Force make dramatic improvements in the way it acquires and sustains weapon systems, and much of this progress was due to Congress passing historic reform legislation. As a nominee for this prestigious position, I am not aware of any current legislative efforts. If confirmed, I would look forward to working closely with Congress and the Department to identify the best way ahead.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Air Force for Acquisition?

Answer. It is my understanding that the Assistant Secretary of the Air Force for Acquisition serves as the Service Acquisition Executive for the Air Force. It is my understanding that, if confirmed, I would have the authority, responsibility, and accountability for acquisition functions and programs within the Air Force. Further, it is my understanding that the Air Force is in the process of implementing the Space Commission's recommendations regarding the acquisition of space systems. If confirmed, I would look forward to working closely with all involved to ensure an orderly transition.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. As President and Chief Executive Officer of ITT Defense, my business career centered around the acquisition, management, and engineering of high technology programs. I believe my experience leading a cutting edge technology firm provides me with a strong foundation for leading the Air Force's acquisition team.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Air Force for Acquisition?

Answer. I believe that, if I have the honor of being confirmed for this prestigious position, I am professionally and technically prepared to assume the duties of the Assistant Secretary of the Air Force for Acquisition. If confirmed, I would look forward to being aided in my duties by the strong leadership team that currently exists within the Department, the Air Force, and the Acquisition staffs. If confirmed, I would look forward to seeking advice and counsel from those who have preceded me and other experts, and I would look forward to the challenge of the job.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Air Force would prescribe for you?

Answer. If confirmed, I would look forward to having a close working relationship with the Secretary and the Under Secretary of the Air Force. It is my understanding that the Under Secretary of Defense for Acquisition, Logistics, and Technology has revised the Defense Acquisition Board process. If confirmed, I would look forward to being part of that important body. Furthermore, if confirmed, I would look forward to continuing the acquisition community's close working relationship with the operational side of the Air Force team, including the Chief of Staff of the Air Force and commanders of the major commands. By working together as a leadership team, we would understand each other's problems and concerns and ultimately provide airmen with needed combat capabilities that are effective, reliable, and affordable.

*Question.* If confirmed, how would you work with the following officials:

The Under Secretary of Defense for Acquisition, Technology and Logistics and the Deputy Under Secretary of Defense for Acquisition and Technology.

Answer. If confirmed, I would look forward to having a close working relationship with the Under Secretary of Defense for Acquisition, Logistics, and Technology and his deputies. It is my understanding that, if confirmed, I would be charged with representing the Air Force on all matters relating to Air Force acquisition policy and programs.

*Question.* The Secretary of the Air Force.

Answer. If confirmed, I would look forward to having a close working relationship with the Secretary and the Under Secretary of the Air Force. It is my understanding that the Secretary of the Air Force has made the Assistant Secretary of the Air Force for Acquisition responsible for all research, development, and acquisition of weapon systems within the service. Additionally, it is my understanding that, if con-

firmed, I would serve as the Service Acquisition Executive and Senior Procurement Official.

*Question.* The other Assistant Secretaries of the Air Force.

*Answer.* It is my understanding that the other Assistant Secretaries have responsibilities for their respective areas: Manpower and Reserve Affairs, Installations and Environment, Financial Management and Comptroller, General Counsel, and Supervisor of Space Matters. If confirmed, I would look forward to working with them on crosscutting issues affecting our respective areas of responsibility, and would provide the assistance of the acquisition team on matters affecting their particular responsibilities as appropriate.

*Question.* The assistant secretaries for acquisition in the other military services.

*Answer.* If confirmed, I would look forward to developing a sound working relationship with the Acquisition Executives in the other Military Departments to ensure each of us can successfully carry out the statutory responsibilities assigned to us.

*Question.* The Commander in Chief, U.S. Space Command and the commanders in chief of the space commands in the military services.

*Answer.* It is my understanding that the Space Commission provided recommendations regarding acquisition of space systems. If confirmed, I would look forward to cooperating fully with the Commander in Chief U.S. SPACE Command and the commanders of the space commands in the military services to ensure continued efficient administration of matters related to acquisition of space systems for the joint warfighting team.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Air Force for Acquisition?

*Answer.* I believe the most important challenge facing the Air Force is ensuring our Nation's aerospace force can successfully accomplish the myriad of missions airmen must perform within a fiscally constrained environment. If confirmed as the Assistant Secretary of the Air Force for Acquisition, I believe that my challenge would be to integrate research, development, and acquisition functions in the context of this complex equation. I believe my challenge would be to promote an environment that encourages the acquisition team to continue to refine Air Force processes and Air Force bureaucracies and find even more efficient and effective ways to deliver affordable combat capabilities to our warfighters in support of the joint team.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* I believe that these are interrelated challenges and cannot be resolved individually. They must be addressed in the context of improving the way the acquisition community and the government conducts business. I know this Administration is committed to achieving significant reform. It is my understanding that the Secretary of Defense and the Service Secretaries have established the Senior Executive Council and Business Initiatives Council, both of which are reviewing the Department's processes and working hard to implement a wide range of "best practices." If confirmed, I would look forward to reviewing current progress, and ensuring any plans that I implement would complement the initiatives already underway.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Air Force for Acquisition?

*Answer.* At this time as the prospective Assistant Secretary of the Air Force for Acquisition, I am not aware of any systemic problems in the office. If confirmed and problems were to arise, I would look forward to working closely with Congress and the Department to identify the best way ahead.

*Question.* If confirmed, what management actions and timelines would you establish to address these problems?

*Answer.* At this time as the prospective Assistant Secretary of the Air Force for Acquisition, I am not aware of any systemic problems in the office. However, if confirmed and problems were to arise, I would do my best to solve them as expeditiously as possible to maintain the integrity of the acquisition process.

#### PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of the Air Force for Acquisition?

*Answer.* I believe that the set of priorities stated by the Secretary of Defense present an excellent framework for the service. If confirmed, I would work diligently

to address these priorities as part of the Air Force's acquisition process. Broadly speaking, I believe this includes:

- Supporting transformation—by leveraging new technology, the acquisition team can enable the Air Force to posture itself to face the challenges of an uncertain future.
- Improving readiness—providing the warfighter with sustainable combat capability is a crucial responsibility of the acquisition team.
- Increasing retention—the acquisition team can only be successful if they have a skilled and motivated team supporting them.
- Supporting recapitalization—the acquisition team is the linchpin for enabling the Air Force to provide the tools our airmen need to fly, fight, and win.

#### TESTING

*Question.* What is your view of the role that realistic testing should play in the acquisition process prior to any decision to enter into high rate production?

*Answer.* Realistic testing ensures that we know the capabilities, effectiveness, and suitability of the weapon system, and have the opportunity to correct any deficiencies, prior to making the long-term commitment of funds and staking the Nation's and warfighter's future on it. If confirmed, I would seek to ensure that proper test and evaluation continues to be an integral part of the planning for all acquisition programs.

*Question.* Is there potential for saving both time and money in the pre-production testing of major weapons systems by:

- (1) Making greater use of simulation?
- (2) Combining simulation with low-rate production and testing in the field?

*Answer.* The synergy obtained through the use of validated models and simulations, ground testing, and in-flight testing enables the acquisition team to identify deficiencies and make changes to a system early in its development. It's easier from a technical standpoint, and more cost effective from a financial standpoint. Therefore, the more we can learn about a system early in its development, the better we can guide the acquisition process. If confirmed, I would seek to ensure plans of weapon acquisition programs continue to utilize the proper balance of using validated modeling and simulation, ground testing, and in-flight testing to reduce cycle times while providing the best combat capabilities to the warfighter.

#### STREAMLINING THE ACQUISITION PROCESS

*Question.* Both Secretary Rumsfeld and Under Secretary Aldridge have indicated that they believe that there is a compelling need to streamline the acquisition process to reduce the fielding times for new weapons systems and capabilities. Some would point to the testing process as an overall area that should be scrutinized in this effort to reduce these cycle times.

However, the increasing complexity and interaction of complex systems would tend to argue for achieving higher confidence during testing that these systems will work as advertised.

If you are confirmed as the Assistant Secretary of the Air Force for Acquisition, how would you propose to achieve the appropriate balance between the desire to reduce acquisition cycle times and the need to perform adequate operational testing?

*Answer.* I believe that the Secretaries are correct. There is definitely a need to reduce the time it takes to get combat capability to the warfighter. If confirmed, I would look forward to working with the acquisition and test communities to determine how greater use of modeling and simulation can help the Air Force in evaluating weapon systems. If confirmed, I would work diligently to ensure the acquisition community continues to take advantage of all the tools available to provide the best combat capabilities to the warfighters in the shortest time possible.

*Question.* Do you anticipate the need for changes in legislative or regulatory authority to achieve this balance?

*Answer.* Over the past several years, I have seen the Air Force make dramatic improvements in the way it acquires and tests weapon systems, and much of this progress was due to Congress passing historic reform legislation. As the nominee for this prestigious position, I am not aware of any current legislative efforts. If confirmed, I would look forward to working closely with Congress and the Department to identify the best way ahead.

## AEROSPACE INDUSTRIAL BASE

*Question.* The Department has decided to make a winner-take-all selection for moving to the engineering and manufacturing development phase of the Joint Strike Fighter program. This raises questions about the future viability of the aircraft industrial base.

To what extent, if any, do you see a connection between maintaining a healthy aerospace production base and maintaining superior warfighting capabilities?

*Answer.* I believe that our national security needs require a strong industrial base to provide technologically superior and affordable weapon systems to the nation's warfighters. A healthy aerospace industrial base is vital for maintaining superior combat capabilities for our airmen now and in the future. Key to this is a competitive defense marketplace with financially sound companies that are able to attract outstanding technical and managerial talent, as well as investment capital.

*Question.* Do you believe a change or modification to the Joint Strike Fighter acquisition strategy will be necessary, after the upcoming source selection, to preserve the U.S. industrial bases' ability to design, develop, and produce tactical aircraft?

*Answer.* I am aware that the Joint Strike Fighter program is currently in a source selection. However, as a nominee for this prestigious position, I have not received any briefings on this program and thus am not aware of the specifics of the program's plans. If confirmed, I would seek to ensure that directors of all weapon system acquisition programs continue to consider the effect their plans have on the defense industrial base while providing the best combat capabilities to the warfighter.

## DEPOTS VS. CONTRACT MAINTENANCE

*Question.* Many defense contractors have argued that it is a waste of money to have government depots duplicate their production capacity in order to maintain systems after initial production. They argue that a cradle-to-grave approach, where the production facility becomes the maintenance facility over the life of a system, would save time and money in weapons acquisition. Others argue that there are certain capabilities that must be maintained in government-owned facilities to ensure that the Services will have ready access to this capability during a national emergency, and that the cradle-to-grave approach would subject the Department to a potentially more costly sole-source maintenance contract.

How do you believe that the government should decide on the appropriate balance between these competing views of the maintenance strategy?

*Answer.* I am not immersed in the particulars of this subject. However, I believe the acquisition community must provide reliable, sustainable combat capabilities to the warfighter. If confirmed, I would look forward to working closely with the Air Force's logistics team to ensure weapon system acquisition program plans continue to consider the importance of sustainability to the warfighter.

*Question.* Should the Department maintain a core weapon systems maintenance capability?

*Answer.* I am not immersed in the particulars of this subject. However, I believe that all available options must be considered to ensure the highest state of readiness for our airmen. If confirmed, I would look forward to working closely with the Air Force's logistics team to ensure weapon system acquisition program plans continue to consider the importance of sustainability to the warfighter.

## ACQUISITION WORKFORCE

*Question.* The Department has been reducing the size of the acquisition workforce for a number of years. Since these reductions have taken place primarily through attrition and reductions in hiring new employees, the average age of the workforce has been increasing. Some have estimated that a significant percentage of the workforce may retire in the next few years, creating a situation that could complicate our efforts to recapitalize or transform the Department's forces.

What are your plans to achieve the correct size in the acquisition workforce and to support that force as potentially large numbers of older workers retire in the next few years?

*Answer.* I had limited insight into the acquisition workforce issues as President and Chief Executive Officer of ITT Defense. The acquisition team is the linchpin for enabling the Air Force to provide the tools our airmen need to fly, fight, and win. If confirmed, I would look forward to working closely with the experts from the manpower and personnel areas to determine the best way ahead on this issue.

## F-22 PROGRAM

*Question.* Over the past several years, the F-22 program has been operating under a legislated production cost cap. This cap was based on the Air Force's assessment of what would be required to complete the buy of 339 aircraft. At the time, it was understood that there were other offices, including the Congressional Budget Office (CBO) and the Cost Analysis Improvement Group or CAIG that had higher estimates of F-22 production costs.

Over the past couple of years, the Air Force has assured the committee that various cost estimates for F-22 production were beginning to converge, giving the committee reason to believe that F-22 production would fit within the cost gap.

This year, the Air Force estimate of production costs for the F-22 is up by roughly \$2 billion. In such a circumstance, we should have expected that this increase would have indicated some further convergence of the cost estimates. Press reports, however, indicate that the independent cost estimates have begun to diverge from the Air Force estimate.

In your opinion, why are these cost estimates diverging?

*Answer.* I am aware that a Defense Acquisition Board was conducted on the F-22, and the Board authorized the Air Force to proceed with Low Rate Initial Production. I believe that this was a good decision for the country in light of the combat capability the F-22 will bring to the joint warfighting team when it becomes operational. However, as a nominee for this prestigious position, I have not received any briefings on this program and thus am not aware of the specifics of the program's plans. If confirmed, I would look forward to working closely with the Secretary of the Air Force to ensure all weapon acquisition program plans, to include the F-22, continue to consider the importance of affordability. If confirmed, I would take advantage of all available management tools to maintain oversight of weapon system costs.

*Question.* What steps should the Air Force take to ensure that it will be able to produce enough aircraft to meet the requirements for the program within the cost cap?

*Answer.* As a nominee for this prestigious position, I have not received any briefings on this program and thus am not aware of the specifics of the program's plans. If confirmed, I would look forward to working closely with the Secretary of the Air Force to ensure all weapon acquisition program plans, to include the F-22, continue to consider the importance of affordability of the weapon systems. If confirmed, I would take advantage of all available management tools to maintain oversight of weapon system costs.

## F-22 EVENT-BASED DECISION MAKING

*Question.* The Air Force is required to manage the F-22 program on the basis of achieving certain milestones, rather than "graduating" when certain time on the calendar has elapsed. There have been delays in the testing program that will delay the start of operational testing by up to one year from the previously planned date. Nevertheless, there is still some risk that developmental testing may not be able to support operational testing even on this delayed schedule.

Can you assure the committee that the Air Force will not proceed to operational testing before the program has completed sufficient developmental testing?

*Answer.* If confirmed, I would be firmly committed to ensuring the safety and effectiveness of all weapon systems the acquisition team provides to the warfighters. Realistic development and operational testing ensures that we identify and fix safety and effectiveness concerns, prior to making the long-term commitment of funds and staking the Nation's and warfighters' future on it. If confirmed, I would look forward to working with the acquisition and test communities to ensure proper test and evaluation continues to be an integral part of the planning for all acquisition programs.

## UNMANNED AIR VEHICLES

*Question.* The Air Force has demonstrated a capability on the Predator Unmanned Air Vehicle (UAV) to fire Hellfire missiles at fixed targets, and will soon be expanding this capability to include mobile targets. The Unmanned Combat Air Vehicle (UCAV) is scheduled for first flight within a year. The Global Hawk High Altitude Endurance UAV is entering production and will be collocated with the U-2 fleet at Beale Air Force Base in California.

What is your vision for the future of UAVs and UCAVs in the Air Force?

*Answer.* It is my understanding that the warfighters' determine required combat capabilities. It is my understanding that the acquisition team is then charged to de-

liver that combat capability when needed at an affordable cost. If confirmed, I would continue the acquisition community's close working relationship with the operational side of the Air Force team, including the Chief of Staff of the Air Force and commanders of the major commands. By working together as a leadership team, we would understand each other's problems and concerns and ultimately provide our airmen with needed combat capabilities that are effective, reliable, and affordable.

*Question.* In the Fiscal Year 2001 Floyd D. Spence National Defense Authorization Act, Congress set a goal that within 10 years one-third of U.S. military operational deep strike capability would be unmanned. In addition, Congress invested an additional \$50 million above the President's budget request in the Air Force Unmanned Combat Air Vehicle.

Do you support the 10-year goal of one-third of U.S. military operational deep strike aircraft being unmanned?

*Answer.* I am aware of the public law that outlined this important goal, and am aware that there are programs within the Department geared to attaining this objective. As a nominee for this prestigious position, I am not aware of the specifics of the program plans. However, if confirmed, I would look forward to working with Department and Air Force officials to ensure the Air Force continues to support the Department's demonstration program that is integral to achieving that goal.

*Question.* In your view, is the current level of investment, the Fiscal Year 2002 President's budget request of \$60 million, sufficient to realize this goal?

*Answer.* As a nominee for this prestigious position, I am not aware of the specifics of this issue. If confirmed, I would look forward to working with the acquisition team to ensure they continue to identify the level of investment needed to efficiently provide needed combat capabilities to the warfighters. I would look forward to working closely with the Department and Congress to determine the best way to provide the necessary resources.

#### ACQUISITION PROCESS PROBLEMS

*Question.* The committee has been concerned about schedule and cost problems in a number of Defense Department acquisition programs. Perhaps more troubling is that the Department seems to have been surprised by some of these problems. Various Department officials have testified that the implementation of earned value management systems and integrated product teams should have provided greater visibility into cost and schedule, but there would appear to have been some shortcomings in that regard.

Do you believe that structural changes or policy changes are appropriate to help avoid similar problems on current or future programs? If so, what changes would you recommend?

*Answer.* As a nominee for this prestigious position, I am not aware of any systemic problems in the office. If confirmed, I would work diligently to ensure directors of all Air Force weapon system acquisition programs continue to take advantage of the tools available to manage cost, schedule, and technical performance and to provide the best combat capability to the warfighter when needed at an affordable cost. If confirmed and problems were to arise, I would do my best to solve them as expeditiously as possible to maintain the integrity of the acquisition process.

#### OVERSIGHT OF SPACE-RELATED PROGRAMS

*Question.* Secretary Rumsfeld has announced that he intends to vest oversight of space programs in the Under Secretary of the Air Force.

Do you believe that programs such as GPS receivers and satellite communications ground terminals appropriately fit within the "space" portfolio of the Under Secretary?

*Answer.* It is my understanding that the Space Commission provided recommendations regarding acquisition of space systems. However, as a nominee for this prestigious position, I am not aware of the specifics of the report of the implementation plan. If confirmed, I would look forward to cooperating fully with the Commander in Chief, U.S. Space Command, and the commanders of the space commands in the military services to ensure continued efficient administration of all matters related to acquisition of space systems for the joint warfighting team.

*Question.* Do you know exactly what space-related responsibilities you will handle, if you are confirmed, and what responsibilities will be handled by the Under Secretary?

*Answer.* It is my understanding that the Space Commission provided recommendations regarding acquisition of space systems. However, as a nominee for this prestigious position, I am not aware of the specifics of the report or the implementation plan. If confirmed, I would look forward to having a close working rela-

tionship with the Under Secretary of the Air Force, and other Department leaders, in the space realm. If confirmed, I would look forward to cooperating fully with them to ensure continued efficient administration of all matters related to acquisition of space systems for the joint warfighting team.

*Question.* If the Air Force becomes the executive agent for the DOD for Space, how will this impact your duties?

*Answer.* It is my understanding that the Space Commission provided recommendations regarding acquisition of space systems. However, as a nominee for this prestigious position, I am not aware of the specifics of the report or the implementation plan. If confirmed, I would look forward to having a close working relationship with the Under Secretary of the Air Force, and other Department leaders in the space realm. If confirmed, I would look forward to cooperating fully with them to ensure continued efficient administration of all matters related to acquisition of space systems for the joint warfighting team.

*Question.* If the Air Force is the executive agent for DOD for Space, how will this affect your relationship with the service acquisition assistant secretaries and Under Secretary of Defense Aldridge?

*Answer.* It is my understanding that the Space Commission provided recommendations regarding acquisition of space systems. However, as a nominee for this prestigious position, I am not aware of the specifics of the report or the implementation plan. If confirmed, I would look forward to developing a sound working relationship with Under Secretary of Defense Aldridge and the Acquisition Executives in the other Military Departments to ensure each of us can successfully carry out the statutory responsibilities assigned to us. If confirmed, I would look forward to cooperating fully with them to ensure continued efficient administration of all matters related to acquisition of space systems for the joint warfighting team.

#### SCIENCE AND TECHNOLOGY INVESTMENT

*Question.* In his June 28, 2001 testimony before this committee, Secretary Rumsfeld stated that he has set a goal of 3 percent of the total defense budget for the Defense Science and Technology Program.

If confirmed, would you support a similar goal for the Air Force Science and Technology portfolio, as a percentage of the entire Air Force budget?

*Answer.* I believe that a strong science and technology program is crucial to providing future generations of airmen the combat capabilities they will need in the future. Science and technology is certainly an area I am most interested in. If confirmed, I would work diligently to ensure that the acquisition community enables the Air Force to continue to maintain its technological dominance over any potential adversary. If confirmed, I would look forward to working with the leadership of the Air Force, the Department, and Congress to ensure the Air Force continues to provide an appropriate level of resources in the Science and Technology arena.

*Question.* In your view, does the current Air Force Science and Technology portfolio adequately support the warfighter of today and the future?

*Answer.* As a nominee for this prestigious position, I am not aware of the specific technologies within the Air Force's Science and Technology portfolio. I am certainly most interested in this arena. If confirmed, I would work diligently to ensure that the acquisition community enables the Air Force to continue to maintain its technological dominance over any potential adversary. If confirmed, I would look forward to working with the leadership of the Air Force, the Department, and Congress to ensure the Air Force continues to provide an appropriate level of resources in the Science and Technology arena.

*Question.* If confirmed, how do you intend to facilitate communication between the science and technology community and the warfighter?

*Answer.* If confirmed, I would look forward to continuing the close working relationship the acquisition community has with the operational side of the Air Force team, including the Chief of Staff of the Air Force and commanders of the major commands. By working together as a leadership team, we would understand each other's problems and concerns and ultimately provide the airmen with needed combat capabilities that are effective, reliable, and affordable. If confirmed, I would work diligently to use this understanding to ensure the Air Force Science and Technology portfolio continues to invest in research that will provide the needed capabilities in the future.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Air Force for Acquisition?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTION SUBMITTED BY SENATOR STROM THURMOND

AIR FORCE MODERNIZATION

1. Senator THURMOND. Dr. Sambur, The Air Force has developed a time-phased approach that seeks to modernize without sacrificing readiness. Among its priorities are procuring the C-17, increasing C-5 reliability, upgrading conventional bombers and precision-guided munitions (PGMs), and modernizing fighter and tanker fleets.

Considering the current threat environment, do you agree with this priority for modernization?

Dr. SAMBUR. Certainly, the current threat environment is placing enormous requirements on all our assets. I am confident that current Air Force planning, programming, and procurement efforts are working hard to correctly prioritize these requirements to support the National Military Strategy. If confirmed, I look forward to participating in this process.

---

[The nomination reference of Dr. Marvin R. Sambur follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 4, 2001.*

*Ordered,* that the following nomination be referred to the Committee on Armed Services:

Dr. Marvin R. Sambur, of Indiana, to be an Assistant Secretary of the Air Force, vice Lawrence J. Delaney.

---

[The biographical sketch of Dr. Marvin R. Sambur, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. MARVIN R. SAMBUR

Marvin R. Sambur has been with ITT for nearly 25 years, where he served in several capacities. These positions included President and CEO of ITT Defense, President and General Manager of ITT Aerospace and Communications, and President and General Manager of ITT Electron Technology.

As President of ITT Defense, Dr. Sambur was responsible for the total management of ITT's \$1.5 billion Defense sector. The defense sector included six divisions with 10,000 employees that supplied advanced wireless communications systems, sophisticated satellite payloads, air traffic control systems, night vision goggles, electronic warfare systems, and advanced services to the U.S. and foreign governments.

As President of ITT Aerospace and Communications, Dr. Sambur was instrumental in making the division into the world leader in the manufacture and supply of tactical radios used by the U.S. military and allied forces, as well as the world leader in the design and production of space borne navigation and metrological satellite payloads.

Prior to joining ITT, Dr. Sambur was with Bell Laboratories, where he was a member of the technical staff of the Digital Signal Processing Research Department.

He holds a Bachelor of Science degree in Electrical Engineering from City College of New York and a Master of Science degree and a Ph.D. in Electrical Engineering from the Massachusetts Institute of Technology.

Dr. Sambur has published numerous papers in the areas of voice processing and digital signal processing and has been granted several patents. In 1984, he was given the prestigious IEEE Centennial Award for engineering management. He is a senior member of IEEE, the Acoustical Society of America, Eta Kappa Nu, Tau Beta Pi, and Sigma Xi.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. Marvin R. Sambur in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Marvin Robert Sambur.
2. **Position to which nominated:**  
Assistant Secretary of the Air Force for Acquisition.
3. **Date of nomination:**  
September 4, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
March 31, 1946; Brooklyn, NY.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to the former Arlene Carol Bossowick.
7. **Names and ages of children:**  
Beth Yvonne Sambur (24 years); Ian Matthew Sambur (20 years).
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Brooklyn Technical HS (9/59-6/63); CCNY (9/63-6/68) received BEE; MIT (9/68-6/72) received MSEE and PhD.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

President ITT Aerospace Technology Division (6/91–10/98 and 8/2000–3/2001); President ITT Defense (10/98–8/2001); presently Consultant for ITT (4/2001–present).

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Member IEEE.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Paul Helmke (\$100) running for U.S. Senate in Indiana.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

IEEE centennial award for outstanding Engineering Management; elected Senior member of IEEE.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. MARVIN R. SAMBUR.

This 1st day of August, 2001.

[The nomination of Dr. Marvin R. Sambur was reported to the Senate by Chairman Levin on November 8, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on November 8, 2001.]

[Prepared questions submitted to Dr. William Winkenwerder, Jr. by Chairman Levin prior to the hearing with answers supplied follow:]

October 5, 2001.

Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours truly,

DR. WILLIAM WINKENWERDER, JR.

cc: Hon. John Warner,  
Ranking Member.

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. Significant progress has been made, and I believe the Department has embraced the spirit of the act.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. Reaffirmation and clarification of civilian control, and strengthening the role of the Commanders in Chief of the Unified Commands.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am not familiar with any proposed amendments to Goldwater-Nichols. I have not formed an opinion on the potential appropriateness of any changes to the Goldwater-Nichols Act.

DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of Defense for Health Affairs?

Answer. If confirmed, I would serve as the principal staff assistant to the Under Secretary of Defense for Personnel & Readiness (USD(P&R)) and to the Secretary of Defense for the full range of health policies and programs. My primary duty would be to execute the Department's medical mission—to provide, and maintain readiness to provide, medical services to members of the Armed Forces, ensuring their fitness for duty and deployment. I would also be responsible for the provision of health care to the family members of the Armed Forces, retirees and their eligible family members, and others eligible for DOD health benefits.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. If confirmed, I would bring a number of skills to this important position. I am a board-certified physician with several years of experience in clinical practice. My clinical experience has been complemented with fourteen years of health care management experience that includes both private sector and public service. These positions include experience in health care delivery, health plan management, and with the health insurance industry. I will call on my experiences in each of these settings if I am confirmed as Assistant Secretary of Defense for Health Affairs.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of Defense for Health Affairs?

Answer. The Secretary of Defense and the Under Secretary for Personnel and Readiness have outlined their expectations for this position, and expressed their confidence in my ability to perform this job within the authorities already provided.

If confirmed, the most important actions that I would undertake, early in my tenure, would be to draw on the existing pool of talented military and civilian health care professionals in the Department of Defense and the external military support organizations and beneficiary groups for ideas and to clearly communicate to these organizations and individuals the expectations that the Secretary and Under Secretary have for them. I would also seek to strengthen relationships with government and non-government agencies outside of the Department of Defense, to include the Department of Health and Human Services, the Centers for Medicare and Medicaid Services, the Centers for Disease Control, the Food and Drug Administration, the Agency for Health Care Policy and Research, the Department of Veterans Affairs, and the health care industry.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense would prescribe for you?

*Answer.* Clearly, the primary mission of ensuring the health and fitness of our Active-Duty Forces remains preeminent. If I am confirmed, I anticipate that the coming months will be very focused on force health protection activities, our medical readiness responsibilities, and medical support to potential deployments. The Secretary of Defense expects a world-class health system for the men and women who serve or have served our country that is defined by superior performance, accountability and financial integrity.

*Question.* In carrying out your duties, how will you work with the following:

The Under Secretary for Personnel and Readiness.

The TRICARE Management Agency.

The Surgeons General of each of the Services.

The TRICARE Lead Agents.

The TRICARE Support Contractors.

The Designated Providers' Chief Executive Officers (i.e., Uniformed Services Treatment Facility CEOs).

Beneficiary Groups.

*Answer.* An overarching theme that will define my relationships with each of these important individuals or groups is close collaboration. Continued success in defense health care will be largely defined by our ability to work together as a team—the civilian leadership in DOD, the Military Departments, both line and medical, TRICARE regional offices, private sector contractors, and the beneficiary or constituent associations which represent the people the Department of Defense serves. I do believe that success is also achieved through the establishment of performance expectations, supported by clear lines of authority and accountability for these expectations.

The lines of authority and accountability between the Under Secretary of Defense for Personnel and Readiness, the Assistant Secretary of Defense for Health Affairs, and the TRICARE Management Activity are clear and direct. If confirmed, I look forward to working with Dr. Chu and with the health care professionals within Health Affairs and TMA. The TMA is a subordinate field activity under the Assistant Secretary of Defense for Health Affairs, and responsibility for its performance rests with this office. The buck stops here.

I would also look forward to working closely and collaboratively with the Service Surgeons General. I would include them in our strategic planning process, and I am looking forward to soliciting their ideas on sustaining and improving our military medical readiness posture. The Surgeons General and their line leadership direct the activities of our military medical treatment facilities, where more than half of all our medical care is delivered. Our close working relationship will be vital to communicating and implementing a coordinated strategy for medical readiness activities as well as health care delivery to our other beneficiaries.

Coming from the private sector, I am also confident in the ability of private health care contractors to complement the military health care delivery system with high quality services. The relationship between government and private contractors should be based on a true partnership. Honest, open and frequent communications is the key to a healthy working relationship with all of our contractors, TRICARE or Designated Providers. Together with a clear definition of performance expectations and measures, I believe that these contractual relationships can and should grow into long-term relationships mutually benefiting both the government and contractor.

Finally, if confirmed, I am dedicated to continuing the close working relationship that has developed with the beneficiary associations over the past year. I plan to communicate frequently with these organizations, and to solicit their ideas on how we can improve our performance. If I am confirmed, I plan to meet with the leaders of The Military Coalition and National Military Veterans Alliance early in my tenure and at regular, frequent intervals throughout my tenure.

## MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of Defense for Health Affairs?

*Answer.* I believe that medical readiness and force health protection requirements represent the primary challenges for the Assistant Secretary of Defense. Parallel challenges include the need to improve the predictability of health care costs; manage the TRICARE benefit and the long-term costs of the program; ensure high quality care; and institute continuous improvement of business practices through improved contracting and performance outcomes measurement.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I would quickly establish 6–12 month work plans for making achievable and measurable progress on each of the high priority issues. I believe that the establishment of clearly defined goals combined with the empowerment of individuals to achieve those goals is essential to making rapid improvements in the health care system.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of Defense for Health Affairs?

*Answer.* In the past several weeks, I have been fortunate to observe activities within Health Affairs and to have spent some time with the acting Assistant Secretary of Defense for Health Affairs, Dr. Jarrett Clinton. Despite staff shortages that occurred during the transition period, he and his staff superbly implemented the new TRICARE benefits, and provided expert advice to the Under Secretary and Secretary of Defense on a range of force health protection and medical readiness matters—both before and after September 11. In that regard, I want to commend Dr. Clinton and his staff for their performance over the past year. If confirmed, I hope to build upon these successes, increase outreach to other government agencies and institute smart business practices to manage the TRICARE benefits that are now in place.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* The pace of activity in the medical readiness arena is clearly accelerated since September 11, 2001. Actions and timelines in many areas will likely be defined by days and weeks, not months and years. If confirmed, I will determine or review each required action and set the deadline for implementation. In the TRICARE arena, I would immediately undertake actions to establish time lines to monitor performance, establish performance improvement goals where appropriate and strengthen management controls. The contracting cycle for activities this large require fairly significant lead times for issuance of requests for proposals (RFPs), reviews of bidder submissions, secondary reviews, award of contracts, and transitions from outgoing to incoming contractors.

## PRIORITIES

*Question.* If confirmed, what broad priorities will you establish in terms of issues which must be addressed by the Assistant Secretary of Defense for Health Affairs?

*Answer.* If confirmed, the challenges I identified above would become the priorities for action. First, ensuring our Active-Duty Forces are healthy and prepared to deploy at any time. Second, ensuring our military medical forces are prepared to provide quality services to our forces anywhere in the world. Third, introducing business practices that will ensure we deliver a world-class health care system that serves the beneficiary by improving their health while controlling costs for both the beneficiary and the taxpayer.

## TRICARE

*Question.* TRICARE has been a managed care program in the making in the Department of Defense for over a decade. The Department is currently developing options for the next generation of contracts for care provided by civilian providers.

If confirmed, what will be your commitment to the TRICARE program?

*Answer.* I wholeheartedly support TRICARE. In the past few years, TRICARE has improved significantly—particularly in the areas of claims processing and customer satisfaction. If confirmed, I will seek further improvements in the program, and I will seek to increase accountability, strengthen our business practices and our partnership relationships with the private sector.

*Question.* Do you have any views on how a new generation of contracts could be structured?

*Answer.* It is my understanding that the TRICARE Management Activity is actively engaged in shaping the next generation of TRICARE contracts. Most of this activity is procurement sensitive, and I have not yet participated in detailed discussions. If confirmed, I plan to quickly engage in the specific details and our objectives. In general, however, I believe that contracts should be developed in a manner that invites the greatest level of competition, and that emphasizes outcomes rather than prescribing the processes for achieving those outcomes.

*Question.* Based on your experience in the private sector, what contracting mechanisms or modifications should be considered?

*Answer.* In the private sector, we emphasize quality, service and cost-effectiveness measures in our contracts, and incentives to achieve high levels of performance.

*Question.* If confirmed, what will be your short-term and long-term goals for TRICARE?

*Answer.* If confirmed, my short-term goals would be to implement and monitor the new benefits introduced in fiscal year 2002. In the longer term, I plan to pursue the Secretary's imperative for a world-class health system that continues to improve beneficiary satisfaction, protect our military families from excessive out-of-pocket costs and procure new TRICARE contracts in a manner that best supports military medical readiness and serves the interests of our beneficiaries and the taxpayers.

*Question.* If confirmed, how will you capture the essence of the partnering arrangement between the Government and the TRICARE Support Contractors that is necessary for the successful delivery of health care within the TRICARE Program?

*Answer.* If confirmed, I would further the partnering relationships with contractors. The relationship between government and private contractors should be based on a true partnership. Honest, open and frequent communications, and a shared understanding of mutual accountability are the key elements to a healthy working relationship with all of our contractors.

*Question.* As members and staff of the committee visit installations and military units around the world, it has become apparent that TRICARE is not understood by many service members and their families. Many senior leaders do not understand TRICARE well enough to assist their subordinates. Some concerns about the effectiveness of the TRICARE program are the result of misunderstandings about the program.

If confirmed, what will you do to help beneficiaries understand their TRICARE benefits?

*Answer.* If confirmed, I will rely on both TMA and TRICARE contractors to ensure beneficiaries reach ever-higher levels of understanding of their TRICARE benefits. I would seek to use every available means of communication—the internet, direct mail, call centers, face-to-face briefings, media, and coordination with beneficiary association organizations to ensure the widest possible outreach efforts. My experience in the private sector has taught me that beneficiaries use all of these sources for their information, and that repetitive communications are required to fully reach the entire population.

*Question.* In your opinion, what is the role of the operational chain of command in ensuring that service members thoroughly understand the options within TRICARE available to their families?

*Answer.* I support the role that the chain of command assumes for their subordinates' welfare, to include education on the range of benefits available to their soldiers, sailors, airmen and marines. Fortunately, senior personnel are also TRICARE beneficiaries. In my opinion, the most important piece of information is to know where to direct people in order to get informed answers.

*Question.* If confirmed, how will you ensure the operational chain of command fulfills that role?

*Answer.* If confirmed, I plan to meet early and often with senior leaders—both officer and enlisted—and get their views on how best to educate our active duty personnel. I am certain that this will be a two-way street—providing Health Affairs and TMA with good ideas, and providing the line leadership with information to take back to their people.

*Question.* There continues to be concern expressed by TRICARE beneficiaries about the adequacy and availability of health care providers in some areas of the country. While managed care support contracts have access standards and timeliness requirements to ensure beneficiaries have access to appropriate providers within a reasonable period of time, this does not always happen.

What ideas do you have about improving the number and adequacy of providers under the TRICARE program?

*Answer.* I believe that having access to quality health care providers is an essential element of a world-class health care system. In addressing this problem, if confirmed, I would want to first understand what the problem is. Is it: (1) a general

lack of health care providers (primary care or specialists) in a certain geographic area, or (2) an adequate number of health care providers, but a reluctance to participate in TRICARE? I anticipate that the answer might vary depending on the geographic location. Similarly, the solution would have to vary and be appropriate for the local circumstances. I want to ensure that the quality of the health care is not compromised to increase provider participation. Based on information I have reviewed, I do believe that the Department of Defense has been provided with appropriate flexibility in determining reimbursement rates and encouraging TRICARE participation.

#### COMMITMENT TO MILITARY RETIREES

*Question.* In your opinion, what, if any, is the commitment on behalf of the Department of Defense and the military departments to provide health care through the Military Health Care System to those who have retired from the uniformed services?

*Answer.* In my brief review of the implementation of TRICARE for Life, I have been impressed that the Administration has demonstrated a clear commitment to funding and implementing this benefit. The Department is wholly committed to providing excellent health care to all our beneficiaries, including military retirees. Military facility health care is finite. The entitlement to payment for civilian health care services under TRICARE, now available to retirees over 65 as well as under 65, provides assurance of comprehensive coverage for our retirees even when military providers are not available.

#### RESOURCING

*Question.* Adequate financing of the Defense Health Program has long been an issue. In a hearing earlier this year, Secretary Rumsfeld acknowledged that the funding planned for fiscal year 2002 for the Defense Health Program reflected the Department's best estimate, but he could not be more precise.

What ideas do you have for more accurately projecting the cost of, and appropriately resourcing, the Defense Health Program?

*Answer.* If confirmed, I would focus on analyzing the process by which we develop our budget requirements and seek to understand our total requirements. The costs of the major components of the health care dollar are growing at different rates. We must understand these dynamics, be able to predict them, and take actions to manage them. This process should be helpful in improving both budget predictability and improving our resource allocation in future years. My civilian sector experience has focused on productivity, coordinated care programs, and using metrics for performance improvement. I think this focus will be very valuable in support of TRICARE.

I am pleased that the President and Secretary of Defense have set the Department on a course to much greater stability by funding the Defense Health Program in fiscal year 2002 at a level in which we do not anticipate any need for a supplemental appropriation for health.

If confirmed, I will closely monitor execution during the fiscal year not only of the Defense Health Program requirements but also monitor the overall healthcare trends in the civilian sector and make use of healthcare actuary experts to more accurately project cost requirements in the future.

#### MILITARY HEALTH PROFESSIONAL RECRUITING AND RETENTION

*Question.* The Department of Defense relies on a combination of bonuses and incentives to recruit and retain health care professionals to provide care to military members and their families. The last legislative revision to applicable bonus amounts occurred approximately ten years ago. Given the inherent reduction in buying power of those programs over time, Congress, in last year's Authorization Act, directed the Department of Defense to conduct a review and report on the adequacy of special pays and bonuses for medical corps officers and other health care professionals.

What are your views on the adequacy of existing bonus and pay incentive programs?

*Answer.* I am still becoming familiar with the complex issues surrounding military bonus and specialty pay. If confirmed, I look forward to reviewing the draft reports being prepared for you that will review the existing programs and offer suggestions for improvement. I am committed to an overarching strategy to recruit and retain the best-qualified health care professionals for a career in the military. It is important to properly manage recruiting, pay, and retention programs to ensure appropriate balance for Department missions and beneficiary needs.

*Question.* If confirmed, will you undertake a close examination and development of recommendations regarding pay incentives?

Answer. Yes, I will.

#### HEALTH CARE FOR VETERANS

*Question.* On May 28, 2001, the President issued an executive order establishing a Presidential Task Force to Improve Health Care Delivery for Our Nation's Veterans. The 15-member Task Force is comprised of health care experts, officials familiar with Department of Veterans Affairs and Department of Defense health care systems, and representatives from veteran and military service organizations. The mission of the commission is to identify ways to improve benefits and services to those eligible for services through both agencies and to create greater collaboration in the delivery of health care between the two agencies.

How do you envision the Department of Defense playing a role in this process and what opportunities do you foresee to work jointly with the Veterans Administration?

Answer. If confirmed, I look forward to working in a supportive manner with the Presidential Task Force and with the Department of Veterans Affairs to further identify and expand joint opportunities. The Department of Veterans Affairs has an important mission in serving our Nation's veterans. I would work aggressively with the Department of Veterans Affairs to ensure opportunities for sharing resources and better business processes are not missed when both Departments and the taxpayer stand to benefit from improved coordination of Federal resources.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of Defense for Health Affairs?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

#### QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

##### TRICARE CONTRACTING

1. Senator WARNER. Dr. Winkenwerder, the Department of Defense is moving toward new contracting approaches for purchasing health care services to augment our military treatment facility capabilities through the TRICARE program. What is your view of separating out particular functions, such as pharmacy services or claims processing, from major contracts and would you advocate a single nationwide contract for such services?

Dr. WINKENWERDER. While I believe there have been significant improvements over the past 5 years positively impacting the health care benefit, populations served, and contracts with private health care firms who assist in delivering health benefits to DOD beneficiaries, I do believe as health care delivery and financing continue to evolve and improve, there will always be ways to improve service and satisfaction, while reducing administrative complexity and reducing costs. With that said, in reviewing the TRICARE contracts, I believe DOD should be guided by these principles: improve those things that are in need of repair, retain those things that are working well, and do everything possible to avoid disruptive services to beneficiaries. This approach would retain many of the most essential elements of the existing TRICARE contracts—geographically based, risk-shared contracts, in which the prime contractor serves as the integrator for health care delivery in a region. At the same time, the benefits of competition in new contracts would further im-

prove beneficiary satisfaction, sustain quality care, and increase the efficient management of the health program.

Carving out of pharmacy services is consistent with industry practice. It is a practice I would support for TRICARE. I have doubts that a single worldwide contract for claims processing would be effective for the Department of Defense, but I would further examine the concept before making a final decision.

2. Senator WARNER. Dr. Winkenwerder, are there other areas that you feel would lend themselves to a separate procurement action?

Dr. WINKENWERDER. A further possibility could be to consider a separate marketing contractor to design and produce all TRICARE marketing materials. This would present a "one face" approach, thus eliminating program description discrepancies that are possible with a multi-contracted system.

#### TRICARE CONSOLIDATED PHARMACY BENEFIT

3. Senator WARNER. Dr. Winkenwerder, Congress has had a long standing interest in the efficiency of the DOD pharmacy programs and in fact directed the Secretary of Defense to develop and implement a plan that would redesign the pharmacy programs and would incorporate best business practices of the private sector.

Do you believe that the current concept of operations for the consolidated pharmacy benefit is consistent with the direction Congress has provided on this matter?

Dr. WINKENWERDER. While I have not been briefed in detail on the program, yet, it is my view that consolidating the pharmacy benefit is critical to providing the management structure and contracted services needed to fully achieve these goals. I would continue to solicit industry input and to review best business practices for incorporation into DOD programs where applicable and when consistent with congressional and executive direction.

4. Senator WARNER. Dr. Winkenwerder, how would you improve the consolidated pharmacy benefit to ensure that it conforms to the stated objectives of both the Secretary of Defense and Congress?

Dr. WINKENWERDER. I recognize the importance of this program to the Department of Defense and its beneficiaries. I would seek to continuously improve the program and to ensure that it represents both best practices in industry and meets the needs of all Department of Defense beneficiaries. I would want the program to be efficient and effective while being a model for the Nation.

---

#### QUESTION SUBMITTED BY SENATOR STROM THURMOND

##### ROLE IN DOMESTIC CBRN INCIDENTS

5. Senator THURMOND. Dr. Winkenwerder, Department of Defense personnel have had extensive training on the treatment of chemical, biological, radiological or nuclear injuries. However, these resources have to focus on the needs of the Armed Forces.

What role do you anticipate military medical personnel will have in responding to a domestic chemical, biological, or nuclear incident?

Dr. WINKENWERDER. I understand the DOD medical community has extensive knowledge, training, and research experience with chemical, biological, and nuclear threats. I believe DOD would provide that expertise to support the responsible civil authorities in a domestic incident, as long as it did not compromise the primary military mission.

---

[The nomination reference of Dr. William Winkenwerder, Jr. follows:]

#### NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 21, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Dr. William Winkenwerder, Jr., of Massachusetts, to be an Assistant Secretary of Defense, vice Sue Bailey.

[The biographical sketch of Dr. William Winkenwerder, Jr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. WILLIAM WINKENWERDER, JR.

Since October 1998, Dr. William Winkenwerder, Jr., has been with Blue Cross and Blue Shield of Massachusetts, first as Executive Vice President for Health Care Services, and most recently, as Vice Chairman in the Office of the CEO. In these positions, he has been responsible for all business and clinical operations and activities for health providers (hospitals, physicians, pharmaceuticals, labs, etc.) and an annual medical expense budget of more than \$3.0 billion.

Prior to joining Blue Cross and Blue Shield, he was with Emory University from May 1996 to September 1998, first as Vice President for Emory Health Care then as Associate Vice President for Health Affairs. With Emory University, Dr. Winkenwerder was responsible for managing and developing a group practice of over 100 physicians affiliated with the university at the Robert Woodruff Health Sciences Center. From April 1992 to December 1995, he was Vice President and Chief Medical Officer for Southern Operations with Prudential Healthcare, responsible for health care management supporting 15 local managed care plans and affiliated medical group practices, providing care for 1.5 million employees in five southeastern states.

From August 1988 to March 1992, Dr. Winkenwerder was Director of Quality Assurance and Associate Medical Director for the Southeast Permanente Medical Group of Kaiser Permanente. As a member of the senior management team, he was responsible for quality assurance, credentialing, utilization, cost management, and clinical information systems in a start-up HMO. From April 1987 to August 1998, he was with the Health Care Financing Administration of the U.S. Department of Health and Human Services as Special Assistant to the Administrator, responsible for policy coordination and development of medical payment issues in Medicare and Medicaid.

Dr. Winkenwerder is a 1976 graduate of Davidson College. He received his MD from the University of North Carolina School of Medicine in 1981, and an MBA from the Wharton School at the University of Pennsylvania in 1986. He is currently on the Board of Directors for the American Association of Health Plans and the Federal Employees Program of the Blue Cross Blue Shield Association. He is a member of a number of professional associations, including the American Medical Association, the American College of Physicians—American Society of Internal Medicine, and the American College of Physician Executives. Dr. Winkenwerder has published writings on health policy in the *New England Journal of Medicine* and the *Journal of the American Medical Association*.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Dr. William Winkenwerder, Jr., in connection with his nomination follows:]

1591

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

William Winkenwerder, Jr., M.D.

2. **Position to which nominated:**

Assistant Secretary of Defense for Health Affairs.

3. **Date of nomination:**

September 21, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

April 27, 1954; Asheville, NC.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Mary Pride Winkenwerder; Mary Pride Schuler (maiden name).

7. **Names and ages of children:**

William (Will) Winkenwerder III—9 years old.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Davidson College (1972-1976), B.S. 1976.

University of North Carolina School of Medicine (1977-1981), M.D. 1981.

University of Pennsylvania The Wharton School (1984-1986), M.B.A. 1986.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Blue Cross/Blue Shield of Massachusetts, Inc., Boston, MA. Executive Vice President, Health Care Services Vice Chairman, Office of CEO—1998-2001.

Emory University, Atlanta, GA. Associate Vice President for Health Affairs and Vice President, Emory Health Care—1996-1998.

Prudential Healthcare, Atlanta, GA. Vice President, Chief Medical Officer for Southern Operations—1992-1995.

Kaiser Permanente, Atlanta, GA. Associate Medical Director—1988-1992.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Employee—Health Care Financing Administration, U.S. Department of Health and Human Services, Special Assistant to the Administrator—1987-1988.

Member—State of Florida Commission on Autologous Bone Marrow Transplantation—1993.

Consultant Advisor—State of Georgia Governor's Task Force on Health Care Reform—1993.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corpora-

tion, company, firm, partnership, or other business enterprise, educational, or other institution.

Care Science, Inc., Member, Board of Directors—1997 to present.

Blue Cross/Blue Shield of Massachusetts, Officer—Senior Vice President—2000 to 2001.

American Association of Health Plans, Member, Board of Directors—1999 to 2001.

Center for Studying Health System Change, Member, Board of Advisors—1999 to present.

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

- American Medical Association (1984-Present)
- American College of Physicians (1984-1990); American Society of Internal Medicine (1994-Present)
- American College of Physician Executives (1989-Present)
- Medical Association of Atlanta/ Medical Association of Georgia (1990-1998)
- American Association of Health Plans (1993-95; 1998-2001)  
Board of Directors (2000-2001)
- United Way of Massachusetts Bay (1999-2001)  
Leadership Cabinet (2000)
- Davidson College Alumni Association (1976-Present)
- Wharton Healthcare Alumni Association (1987-Present)  
Board of Directors (1998-2001)
- University of North Carolina (UNC) School of Medicine, Alumni Association (1981-Present)
- The Health Care Forum- Physician Leadership Network (1992-1999)
- All Saints Episcopal Church (1987-1992), Atlanta, Georgia
- Peachtree Presbyterian Church (1992-1998) Atlanta, Georgia
- Wellesley Hills Congregational Church (1999-Present), Wellesley, Massachusetts
- The International Club, corporate membership, (1999-2000) Bolton, Massachusetts
- The Buckhead Club, corporate membership, (1996-1998), Atlanta Georgia

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

National Republican Party—Member.

Georgia Republican Party—Member.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Republican National Committee, March 1998—\$35.

Republican National Committee, April 2000—\$50.

North Carolina Republican Party Victory 2000, October 2000—\$1,000.

Republican National Committee, July 2001—\$50.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Athletic Scholarship (football), Davidson College—1972–1976.

Foreign Fellowship Award, UNC School of Medicine—1981.

Henry Wise Fellow Finalist—1983.

Wharton Washington Fellowship, University of Pennsylvania—1986.

Henry J. Kaiser Family Foundation Fellowship, University of Pennsylvania—1984–1986.

Administrator's Citation, Health Care Financing Administration—1988.

White House Fellows Finalist—1991.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

**Publications (Peer reviewed)**

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

Two presentations, one was an actual speech from March 1999, while the second from May 2001 was a slide presentation.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B-F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. WILLIAM WINKENWERDER, JR.

This 9th day of July, 2001.

[The nomination of Dr. William Winkenwerder, Jr. was reported to the Senate by Chairman Levin on October 15, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on October 16, 2001.]

[Prepared questions submitted to Dr. Everet H. Beckner by Chairman Levin prior to the hearing with answers supplied follow:]

QUESTIONS AND RESPONSES

DUTIES

*Question.* What is your understanding of the duties and functions of the Deputy Administrator for Defense Programs?

*Answer.* The fundamental responsibility of the Deputy Administrator for Defense Programs (DADP) is to enhance the U.S. national security by assuring the safety, security and reliability of the existing nuclear stockpile and by maintaining the capability to design, develop, analyze, produce and test (if required) nuclear weapons now and in the future. In the broadest sense, the DADP must work with the administration and Congress to maintain and strengthen the nuclear weapons complex, consisting of its labs, plants and, most importantly, its people. He/she also must maintain successful interfaces and working relations with two especially important customers, the military end users and the regulators.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* My scientific training is as a nuclear physicist. My career has advanced from research, to management of research, to management of development and manufacturing programs in an orderly fashion over the past 35 years. I have now been directly associated with the nuclear weapons program for over 20 years, with the last 15 years spent in senior management positions in both the U.S. and U.K. nuclear weapons programs. In that regard, I was Vice President for Weapons at Sandia National Laboratories in the late 1980's during the development of several of the weapons systems which are now mainstays of the stockpile. I was then Principal Deputy Assistant Secretary for Defense Programs at the Department of Energy from 1990 through 1995, the period when the Stockpile Stewardship concept had to be turned into a workable program to replace underground testing. More recently, I have been Deputy Chief Executive at the U.K. Atomic Weapons Establishment, which has the responsibility for design, development, production and maintenance of the U.K. nuclear weapons program.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Deputy Administrator for Defense Programs?

*Answer.* Yes. I need to build strong relationships with my counterparts in other agencies, particularly the DOD and the Defense Nuclear Facilities Safety Board, as well as with Members of Congress and key staffers who I will need to work with effectively to assure the success of this element of the NNSA program.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Administrator of the National Nuclear Security Administration would prescribe for you?

*Answer.* In addition to the duties associated with my position, the Administrator will expect me to work with the other Deputy and Associate Administrators through his newly established Management Council to enhance the efficiency and respect of the organization.

*Question.* If confirmed, how would you work with the following:

Other deputies in the NNSA.

*Answer.* If confirmed, I see several important interactions requiring my attention with the Deputy Administrator for Nuclear Nonproliferation and the Assistant Administrators. In the case of the Deputy Administrator for Nuclear Nonproliferation, there are important synergies between the Nuclear Weapons programs and those of Nuclear Nonproliferation which we need to cause to occur more effectively and efficiently, to the benefit of both programs. Much of DP and NN work is common to the three principal DP laboratories, Los Alamos, Lawrence Livermore and Sandia National Laboratories and effective coordination of programs at Headquarters level can make for smoother operations at the labs, in terms of both manpower and facilities utilization. Technical ideas and innovation can also be shared between the pro-

grams so that we do not develop things twice for slightly different reasons. In the case of the interactions with the Assistant Administrators (AA), the interactions with the AA for Facilities and Operations will be crucial to the NNSA thrust for more efficiency in operations, for reductions in layers of oversight, and for proper stewardship of the critical facilities at both the labs and the plants.

*Question.* The Assistant Secretary for Environmental Management.

*Answer.* If confirmed, interactions with the Assistant Secretary for Environmental Management will be primarily in assuring a smooth transition of old and unused buildings and land at DP sites to an agreed, funded plan for decommissioning, decontamination and restoration of land.

*Question.* Other Assistant Secretaries of the Department of Energy.

*Answer.* If confirmed, interactions with other Assistant Secretaries will certainly occur on technical matters involving utilization of special facilities and capabilities at other DOE laboratories, in peer reviews of DP programs, in sharing of special capabilities at NNSA laboratories, and in development of DP staff through assignments (both short-term and long-term) into other areas of relevant DOE work as a part of their career development programs.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Deputy Administrator for Defense Programs?

*Answer.* The major challenges that will confront the Deputy Administrator for Defense Programs will be in the installation of the new management strategies of NNSA, and in maintaining program focus so that planned goals and milestones are the right ones and are achieved on time and on budget. There is a general view that NNSA presently has too many overlapping functions and assigned personnel at the Headquarters and Field levels, leading to reduced efficiency in the labs and plants. The Administrator has committed to Congress to establish clear roles and responsibilities in all the NNSA activities, and, if confirmed, there will be a major role for me in making the new operational strategy work. The program planning and management tasks are critically tied to knowing what to do, when to do it, and to making clear assignments for the work. That planning function will be centered at Headquarters, with execution in the Field. There appears to be a major challenge in clarifying roles and responsibilities for both the planning function and the execution function, with far too much overlap in responsibilities (either assigned or assumed) at the present.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will review the planning activity to establish the validity and priority of present program plans, and to search for better ways for the research programs to address stockpile problems and find the most cost-effective solutions. In some cases, that will be to do nothing, if our collective judgement assures us that leaving a weapon system alone is better and safer than embarking on a modification and remanufacture program. Another payoff from a thorough planning activity is to optimize task loading of both the plants and the labs. It appears that DP is presently confronted with plans which will stretch or exceed several of the plant capacities unless better overall solutions are found. In some cases, DP will need support from the DOD and the services, to help deal with the reality that every weapon system cannot be the top priority. Finally, through proper planning, DP must bring some order and control to the requirements for future R&D and production construction projects.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Deputy Administrator for Defense Programs?

*Answer.* The most serious management problems in the performance of the functions of the Deputy Administrator for Defense Programs are those of establishing a better understanding of roles and responsibilities between Headquarters and Field and getting them to work together. This originates from a program plan which is too detailed at Headquarters level and which encourages the labs and plants to spend too much time staking out program territory and too little time accepting responsibility for producing results which they know to be the right thing to do.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will lead the planning effort and the effort to establish proper roles and responsibilities such that within the first year we will have substantive results in the form of a new program planning strategy, probably some changes in the top-level program plan, and a new working relationship between the Headquarters, Field Offices, labs and plants, in terms of roles and responsibilities

for program planning and execution. In its simplest form, the Headquarters will be responsible for the master plan, reconciled with the budget, and the field offices will be responsible for contracting for the execution of that plan and for oversight of the execution of work in the labs and plants.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues which must be addressed by the Deputy Administrator for Defense Programs?

*Answer.* If confirmed, the priorities which I would establish in terms of issues which must be addressed would center around planning and program execution against customer expectations. This means that DP must work with its customers first to establish the proper expectations, and then with the Administration and Congress to obtain funding to deliver against those expectations. The critical next step is to establish program plans and work authorizations to deliver those program requirements, with the final step being oversight and tracking of progress against program goals in the work conducted by the labs and plants.

#### RELATIONSHIPS

*Question.* Please describe your understanding of the relationship of the Deputy Administrator for Defense Programs with the following Officials:

The Administrator of the National Nuclear Security Administration.

The Secretary of Energy.

The Under Secretary of Defense for Acquisition and Technology.

The Assistant to the Secretary of Defense for Nuclear Chemical and Biological Matters.

The Commander in Chief of the Strategic Command.

The Deputy Administrator for Nonproliferation.

Associate Administrator for Facilities and Operations.

Associate Administrator for Management and Administration.

*Answer.* My understanding of the relationship of the Deputy Administrator for Defense Programs with other Officials is as follows:

The Administrator. I report directly to the Administrator, assisting him in developing overall NNSA policy and plans, and in assuring that the DP labs and plants deliver against the agreed plans.

The Secretary of Energy. I also report to the Secretary, through the NNSA Administrator.

The Under Secretary of Defense Acquisition and Technology. In addition to his other duties within the Department of Defense, the Under Secretary is also the Chairman of the Nuclear Weapons Council (NWC). The NWC was established by Congress as the joint DOD/DOE organization responsible for the safety, security, reliability, and control of the U.S. nuclear stockpile. The Administrator of the National Nuclear Security Administration is the DOE member of the NWC. My role as Deputy Administrator for Defense Programs will be to support the Council and ensure that important issues requiring NWC attention are brought to the Council through our representative.

The Assistant Secretary of Defense for Nuclear Chemical and Biological Matters. In addition to his other duties within the Department of Defense, the Assistant Secretary for Nuclear, Chemical and Biological Matters acts as the Executive Secretariat for the Nuclear Weapons Council and Chairs the subordinate committee to the NWC, known as the Standing and Safety Committee. This committee reviews issues and makes recommendations to the Nuclear Weapons Council. I expect to work closely with this committee to ensure important issues and sound recommendations are brought to the attention of the NWC.

The Commander in Chief of the Strategic Command. This is the central customer at the DOD for the work of the National Nuclear Security Administration. The CINCSTRATCOM is also charged with rendering his judgment annually on the certification of the U.S. stockpile along with the Nuclear Weapons Council, and the Directors of the three Nuclear Weapons Laboratories. I expect that there will be numerous interactions with the CINCSTRATCOM regarding military requirements, and other discussions to address issues that may arise in our nuclear weapons stockpile.

The Deputy Administrator for Nonproliferation. This was answered in question A on page 2.

Associate Administrator for Facilities and Operations. This is the office which will be the steward for the Administrator of all NNSA facilities, in terms of operational readiness, compliance oversight of regulatory matters, and establishing priorities to satisfy future requirements. It will be important that the DADP and the AA for Fa-

ILITIES and Operations work smoothly together to optimize operational efficiency and readiness, to assure compliance of operations, and to acquire future facilities to upgrade the complex in a timely and cost-effective manner.

The Associate Administrator for Management and Administration (M&A). This is the NNSA office with responsibility for future years planning and for budget control in the current year. The Planning Programming Budgeting and Evaluation (PPBE) Process is being installed by the AA for M&A, and Defense Programs will be using that system in its planning activities, as well as in its current year budget control activities.

*Question.* The National Nuclear Security Administration (NNSA) has proposed legislation regarding the contractor National Laboratory Directors and contractor Weapons Plant managers and to whom they report. This legislation, if enacted, would eliminate the hierarchical reporting requirement of these officials to the Deputy Administrator for Defense Program and instead allow these same officials to report directly to the Administrator of the NNSA.

If this legislation is enacted in the Fiscal Year 2002 National Defense Authorization Bill, will the National Laboratory Directors and Weapons Plant Managers have any residual reporting requirements to the Deputy Administrator for Defense Programs?

*Answer.* This question and the one which follows are central to the Administrator's plan to clarify roles and responsibilities in the NNSA. If the reference legislation is enacted, the contractual connection between the labs and the plants will be directly through the contracting officers to the Administrator. At the same time, progress in program activities will flow upwards from the labs and plants through the field offices and into the Headquarters of Defense Programs. These relationships will be different depending on the time frame under consideration. The primary DP Headquarters concerns will be with formulation and specification of planning and budget requirements, and for that the labs and plants (in some cases the lab directors and plant managers themselves) will provide both technical and financial input. Similarly, when DP is working with Congress on budget and program input, information for this will often be provided by the DP labs and plants. For ongoing work at the labs and plants, only on extraordinary occasions would it be necessary to have direct communication from the lab directors or plant managers. So, you might say that, while the lab directors and plant managers report directly to the Administrator, the programs from their institutions normally report into DP Headquarters.

*Question.* If this legislation is enacted, what steps would you anticipate the NNSA would take to ensure there is no confusion about to whom NNSA officials, National Laboratory Directors, Weapons Plant Managers, and other relevant officials and contractors would report?

*Answer.* The steps taken by NNSA to ensure there is no confusion about the reporting chain for NNSA officials, lab directors, plant managers and other relevant officials and contractors will be a high priority management task for all of NNSA in the coming year. The most important tool for guiding all DP elements in developing these new processes and driving the necessary change will be the DP planning processes, both long term and short term, and the PPBE process that requires the output from these plans. This will establish the reporting processes within the program planning and execution structure.

#### STOCKPILE STEWARDSHIP PROGRAM

*Question.* One of the purposes of the Stockpile Stewardship Program is to identify potential problems with nuclear weapons, fix the item before it rises to a problem, and then ensure that the fix is adequate and has not introduced a new problem. As a result, the weapons are being scrutinized more closely than in the past and with better science-based capabilities. In addition, greater scrutiny is being given to matters that were not well understood in the past. What to do with this new level of knowledge is also presenting a challenge.

In your view, how do you balance newly discovered issues that have existed from manufacture and changes that have occurred since manufacture?

*Answer.* The criteria for balancing newly discovered issues from those that have occurred since manufacture is more properly a matter of deciding the priority of all stockpile issues. A starting premise for nuclear weapons is, indeed, that generally the best thing to do is leave them in their "as built" condition until there is clear evidence that something needs to be fixed.

*Question.* Should life extension programs improve systems or maintain them?

*Answer.* As to the question of whether life extension programs should improve systems or maintain them, it is again important first to assess the contemplated action within the context of the entire stockpile and the present-day military require-

ments. Only then can we expect to make decisions as to what needs to be improved and what needs only to be maintained.

*Question.* With budget challenges, what is the best way for determining how to make these tradeoffs?

*Answer.* As to the relationship of budget challenges to these aforementioned considerations, the answer is clear. The decisions must be based on cost-benefit criteria in every case.

#### PLUTONIUM PITS

*Question.* One of the most significant challenges facing the Office of Defense Programs is regaining the capability to manufacture and certify a pit.

Have you had an opportunity to review the current plan to certify a pit?

If so, do you believe that the approach is correct?

If you have not had the opportunity to review the current plan, would you please do so and inform the committee as soon as possible after your confirmation, if confirmed, of your view on the plan and report your findings to the committee?

*Answer.* I have not had an opportunity to receive a detailed review of the current LANL plan to certify a pit. If confirmed, I will inform the committee of my views as soon as possible after my confirmation, given the importance of reestablishing this important national security capability.

*Question.* The Foster Panel Report, also known as the *Fiscal Year 2000 Report to Congress of the Panel to Assess the Reliability, Safety, and Security of the United States Nuclear Stockpile*, found that it could take 15 years from the point of developing a conceptual design for a pit production facility until the final construction of the facility is completed. If it is determined through the science-based Stockpile Stewardship Program that one or more of our existing pit designs is no longer reliable, and therefore is not certifiable, our nuclear stockpile would, in effect, be unilaterally downsized below a level which could maintain a strong nuclear deterrence.

What progress has NNSA made towards a conceptual design for a pit production facility?

How confident are you that NNSA will be able to successfully deliver a new pit production facility, if required, within the next 10 to 15 years?

What is the requirement, both in production capacity and schedule, that a new facility would meet?

*Answer.* While I have not been briefed in detail on a modern pit facility, there are several issues that must be addressed before proceeding with this costly, new facility. First, the Administration must complete the Nuclear Posture Review, which will tell us the size of the stockpile that we will need to support in the future. Second, studies on pit life need to be completed. Third, contingency requirements need better definition. With these facts in hand, we will be able to properly size and design a modern pit facility to meet the needs of the stockpile into the 21st century.

#### NUCLEAR TESTING

*Question.* In your view, will the United States need to resume underground nuclear testing in the foreseeable future in order to ensure the reliability, safety, and security of the United States strategic nuclear forces?

*Answer.* I believe the President has recently reported on this subject to Congress. At this time, I know of no reason to change the views expressed in that report.

*Question.* The Foster Panel Report also reported DOE's view that it would take 24–36 months to conduct an underground nuclear test, if so directed by the President.

Do you agree with the Foster Panel that it would take 24–36 months to conduct a test?

In your view, should NNSA reduce the time it would take to perform an underground nuclear test to less than 24 months?

What type of test would be required that would have to be conducted in less than 24 months?

*Answer.* These questions on the report of the Foster Panel are similar to those on the Pit Production Facility. Given the importance of this issue, I need to be extensively briefed by the DP staff before I would be comfortable providing an answer.

I will say this, however, that neither testing nor any other element of the DP weapons programs should be analyzed in isolation. In each and every case, since availability of resources is always central to the question of what gets done and what does not, a thorough cost-benefit analysis must be done of all the program priorities in order to make such decisions. I recognize that such analyses are always fraught with uncertainties, but decisions based on the best available information will always be my preferred approach.

## MAINTENANCE OF THE STOCKPILE

*Question.* Are you confident in our ability to identify and fix potential problems in all weapons expected to be included in the enduring stockpile?

Answer. I am confident that with the continued support of the Administration and Congress the highly skilled men and women of the weapons complex will be able to ensure the continued safety, security and reliability of the U.S. nuclear deterrent.

*Question.* What do you believe to be our biggest challenges in maintaining the nuclear weapons expected to be in the enduring stockpile?

Answer. The biggest challenges in maintaining the nuclear weapons expected to be in the enduring stockpile will be one of confidence in the answers, in the absence of full scale test data. In the final analysis, when confidence is low, it will be necessary to take immediate action, either in the form of manufacturing a more predictable solution, if possible, withdrawing the weapon from the stockpile, or recommending a return to testing to solve the problem.

*Question.* What specific criteria should the NNSA apply to the new facilities and infrastructure initiative to ensure the maintenance and repair backlogs are eliminated using the most efficient and least expensive plan?

Answer. The criteria for NNSA to apply to the new facilities and infrastructure initiative is that which I have put forward previously the most cost-effective solution, in light of an analysis of the entire set of problems requiring attention. The "cost" part of the analysis can generally be made using "more or less" standard engineering techniques. The "effective" part of the analysis requires participation by both NNSA and its customers, since there will be priorities to be weighed which are outside the decision-making space of NNSA.

*Question.* How can the NNSA avoid these types of maintenance and repair backlogs in the future?

Answer. NNSA can avoid these types of maintenance and repair backlogs in the future by maintaining a thorough long-range program plan which Congress can support, by getting input from its customers on their priorities so that not everything has to be done immediately, and by making hard choices which almost certainly will not please all the people all the time.

*Question.* Is the NNSA taking such action to avoid backlogs?

Answer. Under the NNSA Administrator's reorganization, the responsibility for facilities and infrastructure has been assigned to the Assistant Administrator for Facilities and Operations (AAFO). If confirmed as Deputy Administrator for Defense Programs, my deputies and I will work with the AAFO to ensure the existing backlog is worked off and that plans are in place to avoid future backlogs.

## LIMITED LIFE COMPONENTS

*Question.* How confident are you in the Department of Energy's ability to manufacture limited life components for the enduring stockpile?

Answer. My confidence in the NNSA's ability to manufacture limited life components for the enduring stockpile is quite high, with the exception of the requirements for radiation hardness which are in place for certain components. To date, I believe such problems have been solved to the satisfaction of the labs and the services. However, trade-offs may have to be made in the future in which the hardness specifications of existing military requirements have to be weighed against the cost of obtaining high-confidence solutions.

## PROJECT AND CONSTRUCTION MANAGEMENT

*Question.* DOE and the NNSA have made significant efforts to improve their construction and project management. One element of these improvements is strict oversight and formalized reviews of the various programs.

If you are confirmed, will you keep these activities in place?

Answer. Yes, although I will want to be comfortable with the details of the oversight and reviews.

*Question.* NASA faces significant challenges to modernize its facilities and reduce the overall square footage of the facilities, and reduce its maintenance expenses.

Will you maintain the requirement that any new construction must have as part of the project the funds to tear down the old facilities that are being replaced or otherwise ensure a reduction in the size of facilities at a particular site?

Answer. I am not at this time familiar with the requirement that any new construction must have funds to tear down the old facilities or otherwise ensure reduction in the size of the facilities. It sounds reasonable, but I would want to understand the full scope of that requirement before committing to it.

## ADVANCED SUPERCOMPUTING INITIATIVE

*Question.* Do you support moving to a 100 teraops computer as the next computer purchased or would you advocate an interim computer or computers? If you support the interim approach, what capacity should these interim machines have in your view and when would you see a need for 100 teraops or beyond?

*Answer.* I understand that the laboratories currently have 3 Teraop machines at Sandia and LANL and a 12 Teraop machine at Lawrence. I further understand that a 30 Teraop machine is scheduled for installation at Los Alamos. The ASCI program, as it is currently structured, is scheduled to accept a 100 Teraops machine in 2005. I have not been briefed in detail by the program office on the sequence of steps to achieve 100 Teraops.

## NATIONAL IGNITION FACILITY

*Question.* The funds for the National Ignition Facility (NIF) were budgeted to accommodate annual budget projections and developed to finish the project as quickly and as cheaply as possible.

Would you support restructuring the NIF budget to reduce the overall cost of the project and complete the project sooner than the current schedule would allow?

*Answer.* I have not yet received detailed briefings which would allow me to answer this question with confidence. My personal view is that the answer is no, based on a personal philosophy that to do something right is generally preferable to doing it quickest.

*Question.* In your view, will the scientific information sought from the NIF have enough value to justify its cost as part of the Stockpile Stewardship Program if the NIF does not reach ignition?

*Answer.* I believe that decision has already been made. It is my understanding that the project is well past the point where such analyses and decisions should be made. On the assumption that the project will be even moderately successful, my personal views are that stopping the project at this late date would be imprudent if not downright foolish. Obviously, ignition is an important goal of the project. Based on my present understanding of the physics of the processes and the program expectations, I know of no evidence to suggest that ignition is unachievable on NIF. That said, I am fully aware that this goal has been before us for a long, long time, and that a community of nay-sayers is crowding around the arena just waiting for the first evidence of trouble.

*Question.* In your view, if the NIF fails to reach ignition, does that preclude us from being able to certify a nuclear weapon, without underground testing in the distant future?

*Answer.* At this time, I know of no weapon certification problem which is uniquely dependent on "ignition conditions in NIF for solution. The ignition environment in NIF is indisputably an important environment for obtaining understanding will assist us in continuing to certify weapons, in the absence of full scale testing. The further we look into the future, the more important this capability becomes, for a variety of reasons.

*Question.* In your opinion, could the National Ignition Facility meet its goal of ignition with a reduced number of lasers below the 192-laser design?

*Answer.* I am not adequately informed at this time to provide an opinion on the importance of 192 laser beams in meeting the ignition goal. I do believe that the more power and energy available, the higher the probability of success.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Deputy Administrator for Defense Programs?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees in a timely manner?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

PIT PRODUCTION COMPLEX

1. Senator THURMOND. Dr. Beckner, earlier this year, the Panel to Assess the Reliability, Safety, and Security of the United States Nuclear Stockpile issued its report and testified before this committee. The principle recommendation this year, as it was last year, is to restore missing pit production capabilities and refurbish the pit production complex.

Do you agree with this assessment and would you support the beginning immediately to start conceptual planning and design of a large pit production facility?

Dr. BECKNER. As long as the United States retains a nuclear deterrent, we must have the capability to produce all the components of a nuclear weapon. The Los Alamos National Laboratory (LANL) is working diligently to restore a limited pit manufacturing capability for the United States. To date, LANL has produced 11 developmental pits and is on schedule to have a certifiable pit by 2003. The NNSA and LANL are also working diligently to reduce the time needed to deliver a certified pit to the stockpile from 2009.

Before committing tax dollars for construction of a new and costly modern plutonium manufacturing facility several issues must be addressed. First, the administration must complete the Nuclear Posture Review, which will determine the size and composition of the nuclear weapons stockpile that we will be responsible for supporting. Second, results from ongoing studies of pit life times must be considered. Third, contingency requirements on production capacity needs better definition.

While the aforementioned studies are ongoing, the NNSA has taken steps, consistent with Congressional direction, to prepare the analysis needed to support a decision on a modern pit facility. Defense Programs plans to request Critical Decision Zero (CD-0) from Administrator Gordon and the Deputy Secretary of Energy in the second quarter of fiscal year 2002 which will formally initiate conceptual design and the National Environmental Policy Act (NEPA) compliance process. The fiscal year 2002 Energy and Water Development Appropriations bill will allow the NNSA to begin the NEPA work, technology development, and facility conceptual design activities.

2. Senator THURMOND. Dr. Beckner, this committee has long been concerned with the massive quantities of weapons grade nuclear materials left over in the former Soviet Union after the Cold War. In 1993 the committee created the Office of Fissile Materials Disposition at the Department of Energy and we were also deeply engaged in the 18 months of arduous negotiations that resulted in the Plutonium Management and Disposition Agreement of September 2000. Unfortunately, there are some officials in the administration who opposed the program as it is currently structured.

Do you support the Plutonium Management and Disposition Agreement of September 2000?

Dr. BECKNER. Yes. I am committed to implementing the Plutonium Management and Disposition Agreement signed by the United States and Russia in September 2000. This agreement provides for the disposition of 68 metric tons of weapon-grade plutonium-34 metric tons in each country.

3. Senator THURMOND. Dr. Beckner, what actions should we take to get this important national security program back on track?

Dr. BECKNER. The administration is reviewing United States' nonproliferation assistance to Russia including the Department of Energy's plutonium disposition program. As part of this effort, the Department is leading an interagency review of options to make the current plutonium disposition program more cost effective and sustainable. We will complete this review as soon as possible and make a final decision in time for the fiscal year 2003 budget submission to Congress.

---

[The nomination reference of Dr. Everet H. Beckner follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 25, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Dr. Everet H. Beckner, of New Mexico, to be Deputy Administrator for Defense Programs, National Nuclear Security Administration, vice Madelyn R. Creedon, resigned.

---

[The biographical sketch of Dr. Everet H. Beckner, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. EVERET H. BECKNER

## EVERET H. BECKNER

Education:

- Baylor University, Waco, Texas  
B.S. Physics, 1956 (Cum Laude)
- Rice University, Houston, Texas  
M.A. Physics, 1959
- Rice University, Houston, TX  
Ph.D. Physics, 1961

Employment History:

- 1996 – Present: Lockheed Martin Corporation, Bethesda, Maryland  
- 1996-99: Vice President, Tech Ops  
- 2000-Present: Vice President and Deputy Chief Executive,  
AWE, plc, Aldermaston, U.K.
- 1991-1995: U.S. Department of Energy, Washington, D.C.  
Principal Deputy Assistant Secretary for Defense Programs
- 1962-1990: Sandia National Laboratories, Albuquerque, New Mexico
- 1986-90: Vice President, Defense Programs
  - 1983-86: Vice President, Energy Programs
  - 1980-83: Director, Energy Programs
  - 1976-80: Director, Waste Management Programs
  - 1973-80: Director, Physical Research
  - 1970-73: Dept. Manager, Laser Programs
  - 1968-70: Dept. Manager, Intense Beam-Physics Programs
  - 1966-68: Division Supervisor, Device Research
  - 1962-66: Staff Member, Plasma Physics Research

Recognition Awards:

- Fellow, American Physical Society
- Member, New Mexico Governor's Task Force on Economic Development
- Performance Award: Lockheed Martin Corporation
- Performance Award: U.S. Department of Energy

Family History:

Born Clayton, New Mexico, February 24, 1935

## Three children:

Dr. Gregory Beckner, Houston, Texas  
Lee Elizabeth Beckner Strouse, deceased  
Matthew Beckner, Superior, Colorado

Married to Mary Caroline Allen Beckner

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee.

The form executed by Dr. Everet Beckner in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228  
Washington, DC 20510-6050  
(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM  
BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Everet Hess Beckner.
2. **Position to which nominated:**  
Deputy Administrator, Defense Programs.
3. **Date of nomination:**  
September 25, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
February 24, 1935; Clayton, New Mexico.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Mary Caroline Allen Beckner.
7. **Names and ages of children:**  
Gregory Mitchell Beckner, 42.  
Lee Elizabeth Beckner Strouse, deceased.  
Matthew Hess Beckner, 30.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
Clayton, NM High School, 1948-52.  
Baylor University, 1952-56, B.S. 1956.  
Rice University, 1957-61, M.A. 1959, Ph.D. 1961.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
Sandia National Laboratories, Albuquerque, NM—Vice President, Defense Programs, 1986-1990.  
U.S. Department of Energy, Washington, D.C.—Principal Deputy Assistant Secretary for Defense Programs, 1991-1995.  
Lockheed Martin Corporation, Bethesda, MD and Aldermaston, U.K., Vice President: Tech Ops: 1996-2000. Vice President and Deputy Chief Executive, U.K. Atomic Weapons Establishment: 2000-2001.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
New Mexico Governor's Advisory Group on Economic Development.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Director, AWE plc. I resigned this position on August 31, 2001.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Fellow: American Physical Society.

Member: American Institute for the Advancement of Science.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member—Republican Party.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Republican Party—\$100.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Fellow—American Physical Society.

Performance Award—USDOE.

Performance Award—Lockheed Martin.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

All are more than 15 years ago. Physics research articles on plasma physics, nuclear physics, intense electronic beam physics: approximately 50.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

EVERET H. BECKNER.

This 1st day of October, 2001.

[The nomination of Dr. Everet Beckner was reported to the Senate by Chairman Levin on December 18, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on January 25, 2002.]

---

[Prepared questions submitted to Mary L. Walker by Chairman Levin prior to the hearing with answers supplied follow:]

October 5, 2001.

Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

MARY WALKER.

Enclosure.  
 cc: Senator John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. I am unaware of any specific provisions of the act that have not been implemented. If confirmed, I will take all steps necessary to assist the Department of the Air Force in continued implementation and compliance.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. The legislation clarified the roles and relationships among the combatant commanders, the services, the Chairman of the Joint Chiefs of Staff, and the National Command Authorities. As such, the reforms have enhanced joint operational planning and execution, enhanced effective civilian control, and increased efficiencies within the services.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in Section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control, improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles, which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposal to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am not currently aware of any Department of Defense sponsored legislative proposals to amend the Goldwater-Nichols Act. If confirmed, I will be in a better position to carefully review and evaluate possible changes in light of the overall objectives of the act.

DUTIES

*Question.* What is your understanding of the duties and functions of the General Counsel of the Department of the Air Force?

Answer. The General Counsel is the chief legal officer of the Department of the Air Force. As such, the legal opinions issued by the General Counsel are the controlling legal opinions within the Department. The General Counsel provides legal advice and guidance to the Secretary, the Under Secretary, the Assistant Secretaries, their staffs, and other offices within the Office of the Secretary, as well as to the Chief of Staff and the rest of the Air Staff. The General Counsel also provides legal services throughout the entire Department in a variety of disciplines including fiscal law, ethics, contract law, environmental law, international law, intellectual property

law, real property law, personnel law, labor law, and litigation. The General Counsel also serves as the Designated Agency Ethics Official, the Suspending and Debarbing Official for the Department of the Air Force, and exercises oversight of intelligence and other sensitive activities and investigations.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I have practiced law for more than 20 years specializing in environmental and land use law and litigation, including interpretation and negotiation of government regulations. I have also worked on other matters, including business litigation, real estate, mergers and acquisitions and labor (Title VII) matters.

In the course of serving the Reagan Administration at the Departments of Justice and Interior, I supervised in excess of 100 government lawyers and worked closely with Defense Department lawyers on major cases affecting government lands. I am comfortable advising and briefing senior officials on legal issues and enjoy working as a part of a team, cultivating the talents in the career staff who serve so faithfully. I have also served on several international delegations and on an international commission. As Assistant Secretary for Environment, Safety & Health of the Department of Energy, I was responsible for the safety oversight of the nuclear weapons program, and in this capacity, worked closely with the nuclear Navy on radiation standards applicable to the Navy Department.

In private practice, I have advised CEOs, businesses and local governments of their obligations under law and the options they have in order to creatively accomplish their goals. I understand the tough decisions that must sometimes be made when competing interests are involved. I believe this experience has equipped me to serve the Department of the Air Force and my country in this role.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the General Counsel of the Department of the Air Force?

*Answer.* I believe I have the necessary legal training, experience and leadership abilities to be the General Counsel. If confirmed, I will benefit from the extraordinary talent, expertise and experience of the civilian and military lawyers in the Department as I broaden my understanding of the issues the Air Force faces every day.

*Question.* Assuming you are confirmed, what duties and functions do you expect that Secretary Roche would prescribe for you?

*Answer.* If confirmed, I anticipate Secretary Roche will expect me to provide timely, accurate, and candid legal advice and counsel, ensuring compliance with the law and the protection of the legal prerogatives of the Department. I expect the duties and functions of the office will cover the wide range of legal issues and responsibilities prescribed under the appropriate Secretary of the Air Force Orders. Additionally, I anticipate the Secretary would expect me to manage the General Counsel's Office efficiently and effectively, to foster an atmosphere of professionalism and responsiveness regarding all legal matters and services, and to continue the close and highly effective professional relationship between the Office of the General Counsel and the Judge Advocate General and his staff as well as the legal staffs of other government agencies with whom we work.

*Question.* In carrying out your duties, how will you work with the Judge Advocate General of the Air Force?

*Answer.* If confirmed, I will maintain a close professional relationship between the Office of the General Counsel and the Judge Advocate General Department. Full consultation and coordination of matters of mutual import and interest would characterize that relationship. It is imperative that the two offices work well together to provide the highest quality of legal support to the Department of the Air Force.

*Question.* How are the legal responsibilities of the Department of the Air Force allocated between the General Counsel and the Judge Advocate General?

*Answer.* Secretarial Orders delineate the responsibilities of the General Counsel and the Judge Advocate General. Those Orders reflect the extensive coordination between lawyers serving in those offices. The Judge Advocate General is the senior uniformed legal officer of the Department of the Air Force. Among his responsibilities is the administration of military justice throughout the Air Force and ensuring effective field legal support to commanders as well as to the Chief of Staff and the Secretary of the Air Force consistent with the Secretarial Orders.

As the Chief Legal Officer of the Department, the General Counsel is responsible for oversight and direction of legal matters within the Air Force, for furnishing legal advice and assistance to the Office of the Secretary of the Air Force, for providing legal advice and assistance to the Air Staff consistent with the Secretarial Orders, and for performing other such functions as the Secretary may direct. The Office of the Air Force General Counsel and the Judge Advocate General Department have

maintained a close and effective working relationship, which I will strive to maintain if confirmed.

*Question.* In carrying out your duties, how will you work with the General Counsel of the Department of Defense?

*Answer.* The General Counsel of the Department of Defense is the Chief Legal Officer and final legal authority for the Department of Defense, including the Department of the Air Force. If confirmed, I expect to interact with Mr. Haynes' office on matters of mutual interest or concern. Should our interpretation of the law differ, I will defer to the DOD General Counsel's opinion after advising him of my independent professional opinion. I anticipate frequent interaction with the DOD General Counsel. I believe a professional relationship based on information exchange and consultation will benefit the entire Department.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the General Counsel of the Department of the Air Force?

*Answer.* While it is difficult to anticipate specific legal questions, I think it is crucial that the legal prerogatives of the Department of the Air Force be protected as the Nation evaluates and builds the most appropriate air and space strategy for a changing and complex national security environment. Legal issues are certain to be involved in that process. Additionally, legal guidance will be necessary as the Air Force addresses retention issues. Third, the General Counsel must be prepared to assist in efforts to improve acquisition processes and organizational structures in order to enhance innovation and effectiveness.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I plan on working closely with the Secretary, with the Chief of Staff, and with the talented and dedicated attorneys of the Department to candidly evaluate the challenges and to ensure responsive and accurate legal services to address these challenges.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the General Counsel of the Department of the Air Force?

*Answer.* I am not aware of any serious problems.

*Question.* What management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will make sure that any problems identified in the performance of the General Counsel functions will be addressed as expeditiously as possible and through appropriate channels.

*Question.* Do you believe the Department of the Air Force has the legal resources necessary to carry out the missions that may be required of it in wartime? If not, what is needed?

*Answer.* I believe legal "readiness" is a vital component of mission readiness. The Department of the Air Force requires the highest quality of legal support. I am currently unaware of any deficiencies in legal resources that would prevent the Air Force from carrying out its wartime missions. Having said that, legal readiness, like mission readiness, requires constant vigilance. Recruiting, training, and retaining motivated professionals must always be a priority.

#### PRIORITIES

*Question.* What broad priorities will you establish in terms of issues, which must be addressed by the General Counsel of the Department of the Air Force?

*Answer.* If confirmed, my foremost priority will be to provide the Department timely, accurate, and candid legal advice, ensuring compliance with the law and the protection of the legal prerogatives of the United States Air Force. It is imperative that the Air Force has the legal support necessary to build the very best air and space strategy and forces possible.

#### RECRUITING AND RETENTION ISSUES

*Question.* How do you assess your ability to hire and retain top quality civilian attorneys and provide sufficient opportunity for advancement?

*Answer.* I am hopeful that the Air Force will maintain the ability in the future to obtain and retain the highest quality civilian attorneys both in the General Counsel's Office and the Judge Advocate General's Department. If confirmed, I want to make service as a civilian attorney in the Air Force as attractive and professionally rewarding as I possibly can.

*Question.* In your view, does the Department of the Air Force have a sufficient number of Air Force judge advocates on active duty to perform the missions assigned to the Judge Advocate General's Corps?

*Answer.* I believe that the Department of the Air Force must have sufficient military lawyers to meet the needs of the Air Force. If confirmed, I will work closely with the Judge Advocate General of the Air Force to ensure that there are a sufficient number of judge advocates to perform the missions assigned to the Judge Advocate General.

*Question.* In your view, what incentives to successful recruiting and retention of judge advocates need to be implemented or established?

*Answer.* If confirmed, I will work with the Judge Advocate General of the Air Force to ensure that there are sufficient incentives to assure successful recruiting and retention of judge advocates. Some of those incentives that I would expect to examine would include student loan deferral for military service and continuation pay, as well as other competitive pay and benefit issues.

#### MILITARY JUSTICE MATTERS

*Question.* Since Article 6 of the Uniform Code of Military Justice gives primary jurisdiction over military justice to the Judge Advocates General, how do you see your functions in this area with regard to the Judge Advocate General of the Air Force?

*Answer.* Article 6 of the Uniform Code of Military Justice states "the Judge Advocate General or senior members of his staff shall make frequent inspection in the field in supervision of the administration of military justice." I recognize that the Judge Advocate General has special expertise in the area of military justice and statutory duties regarding its administration. As the Chief Legal Official in the Department of the Air Force, I would provide the Secretary legal advice in this area as he desires and I would consult closely with the Judge Advocate General on military justice matters of mutual interest if confirmed.

*Question.* In your view, how should the General Counsel approach military justice matters—both in terms of specific cases and general policy issues to provide useful advice without generating problems of unlawful command influence?

*Answer.* I believe the General Counsel has an obligation to help safeguard the fairness, independence, and credibility of the Department's disciplinary procedures. That duty includes the responsibility to advance policies necessary for the maintenance of good order and discipline. In doing so, the General Counsel must avoid any action that may inappropriately affect or appear to inappropriately affect the outcome of any particular case. The General Counsel must help ensure the military justice system, its judicial officers, commanders and convening authorities ultimately responsible for disciplinary action are free to exercise their personal discretion within the bounds of the law.

*Question.* In recent years, there have been a number of cases in which military members have been accused of adultery. Concerns have been raised about the consistency with which these cases have been handled.

What do you see as the role of the General Counsel of the Department of the Air Force in ensuring the Uniform Code of Military Justice is enforced in a fair and consistent manner?

*Answer.* I view the role of the General Counsel in this area as working closely with the Judge Advocate General, and I will commit to do so in order to appropriately ensure consistency, fairness and credibility of the military justice system.

*Question.* Do you see a need for any changes in either the law or its implementation in this area?

*Answer.* I am not aware of the need for any changes at this time. If confirmed, I would consult fully with the Judge Advocate General on this matter and carefully consider recommendations from the Joint Services Committee on Military Justice as well as the General Counsels of other Departments.

*Question.* It has been suggested that the twin legal staffs of the military departments—uniformed personnel, headed by the Judge Advocates General, and civilian personnel, headed by the General Counsels—need to be unified or rationalized in the interests of economy and clarity.

What are your views on this matter?

*Answer.* I am not aware of any suggestions to fundamentally change the organization of, or relationship between, the General Counsel's office and the Judge Advocate Generals Department. Under Title 10 of the United States Code, the General Counsel is the Chief Legal Officer of the Department and provides oversight, guidance and direction for legal matters throughout the Air Force. The Judge Advocate General is the senior uniformed lawyer in the Air Force and, in addition to some

specific responsibilities with regard to the Uniform Code of Military Justice, performs duties as prescribed by the Secretary, as does the General Counsel. The duties and responsibilities of the respective offices, which I understand to be complimentary rather than duplicative, are set out in Secretary of the Air Force Orders.

The staffs of the Office of the General Counsel and the Judge Advocate General's Department are not exclusively civilian and exclusively military. Civilian and military lawyers work for the General Counsel. Likewise, civilian and military lawyers work in the Judge Advocate General's Department. If confirmed, I look forward to working with the Judge Advocate General to develop further efficiencies in providing the highest quality legal advice and services throughout the Air Force.

*Question.* The complexity of criminal prosecutions involving espionage, national security violations, and other crimes in which capital punishment may be awarded has raised questions about the experience and qualifications of military attorneys to prosecute and defend such cases.

If confirmed, will you assure the committee that you will examine the capabilities of the Air Force to competently litigate such cases and ensure that the Department of the Air Force is fully prepared to investigate and prosecute national security and capital punishment cases in an appropriate manner?

Answer. Yes.

#### ROLE IN MILITARY PERSONNEL POLICY MATTERS

*Question.* What role, if any, should the General Counsel play in military personnel policy and individual cases, including cases before the service boards for the correction of military records?

Answer. I believe the General Counsel's appropriate role in this area is to assist the Secretary of the Air Force, the Assistant Secretary of the Air Force (Manpower and Reserve Affairs) and other senior Department of the Air Force leaders to ensure that the Department's military personnel policies are formulated and applied uniformly, fairly, and in accordance with applicable laws and regulations. If I become aware of individual cases in which military personnel policies were not fairly and lawfully applied, I will take appropriate action to ensure that the case is properly resolved. If confirmed, I will coordinate with the Assistant Secretary of the Air Force (Manpower and Reserve Affairs), who exercises overall supervision for the Department of the Air Force Military Review Boards Agency, to ensure that the Air Force Board for Correction of Military Records receives the Air Force legal community's full support. I understand that the Office of the General Counsel provides legal advice for the resolution of cases considered by the Secretary and his designees. I am also informed the Office of the General Counsel participates in the resolution of significant legal issues affecting the Air Force Board for the Correction of Military Records. If confirmed, I would expect to continue this involvement.

#### WHISTLEBLOWER PROTECTION

*Question.* Section 1034, Title 10, United States Code, prohibits taking retaliatory personnel action against a member of the Armed Forces as reprisal for making a protected communication. By definition, protected communications include communications to certain individuals and organizations outside of the chain of command. We continue to see a lack of understanding in the senior military leadership of the policy that it is appropriate and necessary to protect service members who report misconduct to appropriate authorities outside of the chain of command.

Do you support prohibiting retaliatory personnel actions for making protected communications?

Answer. Yes.

*Question.* If confirmed, what actions will you take to ensure that senior military leaders understand the need to protect service members who report misconduct to appropriate authorities within or outside the chain of command?

Answer. I believe that the military member's right to report perceived misconduct is sacrosanct. If confirmed, I will review the steps the Department has taken and is taking to inform Air Force members of their rights and responsibilities under the act. If additional measures are required, I will work with the Judge Advocate General to implement appropriate training and reporting procedures.

#### LEGAL ETHICS

*Question.* In your opinion, who is the client of the General Counsel of the Department of the Air Force?

Answer. The client of the General Counsel is the Department of the Air Force. While the Department acts through its authorized officials, if a conflict arises be-

tween the interest of the Department and the interests of an official, the General Counsel's duty is to the Department.

*Question.* What is your understanding of the action a Department of Defense attorney should take if the attorney becomes aware of improper activities by a Department of Defense official who has sought the attorney's legal advice and the official is unwilling to follow the attorney's advice?

*Answer.* The attorney should immediately bring the matter to the attention of the attorney's supervisor and, if not satisfactorily resolved, to higher level supervisory lawyers or authorities in the chain of supervision or command.

*Question.* In your view, do the laws, regulations and guidelines that establish the rules of professional responsibility for attorneys in the Department of Defense provide adequate guidance?

*Answer.* Yes. I am informed all DOD lawyers are members of a Bar and are therefore subject to the rules of professional responsibility of their particular jurisdiction. Lawyers engaged in litigation must also comply with the rules of the court in which they appear. All military and civilian lawyers in the Judge Advocate General's Department of the Air Force must comply with the Air Force Rules of Professional Responsibility and the Air Force Standards for the Administration of Criminal Justice. Additionally, I'm informed JAG Department attorneys may request an ethics opinion from the office of The Judge Advocate General's Ethics (Professional Responsibility) Advisor in the Legal Assistance Division.

#### ROLE IN THE OFFICER PROMOTION AND CONFIRMATION PROCESS

*Question.* In your view, what is the role of the General Counsel of the Department of the Air Force in ensuring the integrity of the officer promotion process?

*Answer.* I am informed that the General Counsel's Office provides legal advice on officer promotion procedures and the processing of selection board reports. This includes review of the Secretary's Memorandum of Instructions to each selection board and of each selection board report. In addition, the General Counsel, acting for the Secretary, reviews reports of substantiated unfavorable information concerning senior officers to determine whether that information should be made available to selection boards. The Air Force Office of the General Counsel takes an active role to ensure that promotions are made in full compliance with law and Department of Defense guidance. If confirmed, it would be my intention, subject to the Secretary's direction, to continue this level of legal oversight of the officer promotion process, in close cooperation and coordination with the uniformed Air Force legal and personnel communities.

*Question.* What is the role of the General Counsel of the Department of the Air Force in reviewing and providing potentially adverse information pertaining to a nomination to the Senate Armed Services Committee?

*Answer.* The current Air Force practice, which I would expect to continue if confirmed, is for the General Counsel to review each selection board report, and each Departmental communication to the committee, the President, or the Secretary of Defense, concerning nominations, for consistency and compliance with law and regulation. This review is particularly important in cases of nominees against whom there have been findings of misconduct or improprieties, to ensure that the Air Force meets its obligations of full and meaningful disclosure. In addition, if confirmed, I would expect to continue the present practice of the General Counsel reviewing each Lieutenant General and General nominees' financial disclosure reports and related financial information to ensure there are no conflicts of interest.

#### LITIGATION INVOLVING THE DEPARTMENT OF DEFENSE

*Question.* What is your understanding of the appropriate role of the Article III courts in the review of military activities?

*Answer.* I understand both the Constitution and the Supreme Court provide that the principle authority to control the military rests with Congress and the President. I also understand a long line of court cases have held that many internal military decisions are not subject to judicial review, and that Article III courts are generally ill-suited for defining or limiting the power of the executive and legislative branches as to military matters. In those categories of cases in which judicial review of military activities is appropriate, the courts should give substantial deference to the decisions of Congress and the President.

*Question.* In your opinion, what is the relationship between the Department of Defense and the Department of Justice with respect to litigation involving the Department of Defense?

*Answer.* According to Title 28, United States Code, section 516, the Justice Department has the responsibility to represent the Air Force in all litigation matters

other than courts martial. Consistent with the statute, Department of Air Force lawyers work with Justice Department attorneys performing key roles to help advance the Department's legal interests. For example Air Force attorneys review pleadings, participate in discovery, assist in developing litigation strategy, and in some cases become a part of the trial team. As a former Justice Department attorney, I look forward to sustaining a superb relationship between the two Departments, if confirmed.

*Question.* Is the present arrangement satisfactory, or does the Department need more independence to conduct its own litigation?

*Answer.* I am not currently aware of any problems in the present arrangement, or of the need for greater independence for the Department. If confirmed, I will make inquiry on this issue and take steps to ensure the Department exercises appropriate independence.

#### COURT OF APPEALS DECISION

*Question.* On January 4, 2000, the United States Court of Appeals for the District of Columbia Circuit decided the case of *National Center for Manufacturing Sciences v. Department of Defense*, 199 F. 3d 507 (D.C. Cir. 2000). The court concluded that "Because of the existence of 10 U.S.C. Section 114, it is clear that any monies appropriated for NCMS by Congress for research must be authorized before they can be appropriated and distributed"; and "Because 10 U.S.C. Section 114(a)(2) requires authorization of these funds before they become available, appropriation alone is insufficient."

What is your view of the court's decision in this case and its implications regarding the obligation of funds that are appropriated, but not authorized?

*Answer.* As I understand it, the case did not squarely address the issue of whether Department of Defense appropriations must be authorized before they can be obligated or expended. The court and the parties both viewed the funds at issue as authorized by Congress, and so this was merely a collateral matter in a case that concerned whether funds earmarked for NCMS in fiscal year 1994 had been effectively rescinded by a later act of Congress. If confirmed, I will work closely with the Defense Committees if similar issues arise.

#### ENVIRONMENTAL ISSUES

*Question.* The military departments have endeavored to resolve environmental encroachment issues while fulfilling essential readiness requirements, however, these efforts have often resulted in diminished, less realistic training. Based on testimony provided by the services at the Readiness Subcommittee hearing on March 20, 2001, it appears that the time is ripe for the development and implementation of a comprehensive strategy that addresses the individual and the cumulative effects of environmental encroachment. In the current threat environment, it is critical that such a strategy ensure the preservation of quality military training. Such efforts will require sound legal advice and recommendations.

If confirmed as the Air Force General Counsel, how would you propose to facilitate and contribute to the development and implementation of a comprehensive strategy intended to address readiness concerns related to environmental encroachment issues?

*Answer.* National defense is our primary mission, and that mission can accommodate wise natural resource stewardship. Maintaining continued access to ranges and airspace is absolutely critical to readiness. If confirmed, I will have the opportunity to apply over 20 years of experience in the environmental law field to this important national issue. I will assist the Department in balancing test and training requirements with responsible stewardship. Strong relationships with the U.S. Department of Interior, its state counterparts and other interested parties are of great importance. Effective communication will serve to both provide access to critical airspace and ranges and ensure that others understand that realistic training is necessary for our Nation's security.

#### CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate

and necessary security protection, with respect to your responsibilities as the General Counsel of the Department of the Air Force?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

QUESTION SUBMITTED BY SENATOR STROM THURMOND

ATTRACTING QUALITY PEOPLE

1. Senator THURMOND. Ms. Walker, a key issue facing the Department of Defense is recruiting and retaining quality people to manage and carry out the functions of the Department.

What will be your approach to ensuring that the Office of the Air Force General Counsel has the quality people to ensure the Secretary and the Department has the best and brightest lawyers and employees?

Ms. WALKER. If confirmed, I will work diligently to ensure continued successful recruiting and retention of outstanding attorneys, paraprofessionals and support personnel for the Office of the Air Force General Counsel. Further, I would work to ensure we have the right number of people and depth of expertise to provide the high quality legal support the Department requires. I support the use of intern programs as a way of developing entry-level candidates. Additionally, while we may never expect to compete with private sector salaries, it is essential that we fund and utilize fully the authorities we have currently to repay student loans, offer recruiting and retention incentives, and enhance training opportunities. If confirmed, I want to make service as a civilian attorney in the Air Force as attractive and professionally rewarding as I possibly can. I would seek to assure that our attorneys and support personnel have many opportunities to participate in career development activities, including but not limited to formal Continuing Legal Education (CLE) programs, job skill seminars, and conferences. I am informed some steps have already been taken to initiate a formal career-broadening program to enhance the attorneys' experience and better prepare them for promotion, including exchanges with other offices. These are the types of initiatives I would support as we look for ways to secure and retain the "best and the brightest" for the Department.

---

[The nomination reference of Mary L. Walker follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*September 25, 2001.*

*Ordered,* that the following nomination be referred to the Committee on Armed Services:

Mary L. Walker, of California, to be General Counsel of the Department of the Air Force, vice Jeh Charles Johnson.

---

[The biographical sketch of Mary L. Walker, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF MARY L. WALKER

Mary Walker is a lawyer from California and former partner with Brobeck, Phleger & Harrison LLP, a national law firm based in San Francisco. She specializes in land use and environmental law and litigation and has represented a diverse range of clients including those in oil, shipbuilding, transportation, manufacturing, high technology, biotechnology, fisheries, food, land development, and municipal government.

She has served on the boards of several nonprofit organizations, including BIOCUM/San Diego, Floresta, Inc., Global Involvement Through Education, and the

Endowment for Community Leadership. She is a frequent author of opinion pieces on environmental regulation, energy policy, and nuclear power and waste.

In the 1980s, Ms. Walker served the Federal Government in several positions, including Assistant Secretary for Environment, Safety & Health of the Department of Energy, Deputy Solicitor of the Department of Interior, Principal Deputy Assistant Attorney General of the Land & Natural Resources Division of the Department of Justice, and U.S. Commissioner for the Inter American Tropical Tuna Commission.

Ms. Walker has an undergraduate degree in Biological Sciences/Ecology from the University of California at Berkeley, and a law degree from Boston University Law School.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial and other information of the nominee. The form executed by Mary Walker in connection with her nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Mary L. Walker.  
Mary Walker Lilly (1988/1989).

2. **Position to which nominated:**

General Counsel, U.S. Air Force.

3. **Date of nomination:**

September 25, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

December 1, 1948; Dayton, OH.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Single.

7. **Names and ages of children:**

Winston Samuel Walker, age 12.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Glendale High School, Diploma 6/66.

UC Irvine, 9/66-6/68.

UC Berkeley, B.S. Biology/Ecology 6/70.  
 Boston University Law School 9/70–6/72, JD 6/73.  
 UCLA Law School (Visiting third year student) 9/72-6/73.

**9. Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

1991–1994—PARTNER

Luce, Forward, Hamilton & Scripps LLP San Diego, CA.  
 Specialized in environmental and land use law and litigation for diverse clients including landowners, manufacturers, biotechnology and other businesses.

Defended Federal and state enforcement actions, counseled clients on compliance with laws and regulations, performed due diligence in mergers and acquisitions, designed and supervised environmental audits, and brought cost recovery actions under Federal and state Superfund laws for clean up of contaminated sites.

1994–7/2001—PARTNER

Brobeck, Phleger & Harrison LLP San Diego, CA.  
 Specialized in environmental law and litigation for diverse clients including oil, shipyards, fisheries, high technology, biotechnology, pharmaceuticals and small businesses. This has included litigation (both defense and plaintiff work) and counseling concerning air, water, waste, natural resource and consumer warning laws and regulations, as well as due diligence, negotiations and drafting of merger and acquisition agreements. Representation of biotechnology industry has included advocacy in favor of changes to laws and regulations at the state and local level.

**10. Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

FEDERAL GOVERNMENT

1988–1995—U.S. Commissioner, Inter American Tropical Tuna Commission (IATTC).

1985–1988—Assistant Secretary, Environment, Safety & Health U.S. Department of Energy.

1984–1985—Deputy Solicitor, U.S. Department of Interior.

1982–1984—Principal Deputy Assistant Attorney General, Land & Natural Resources Division.

LOCAL GOVERNMENT

2000–3/2001—Board Member, Public Facilities Financing Authority City of San Diego (Mayoral appointment).

1989–7/2001—Special Environmental Counsel for various southern California municipal. In recent years, this has been limited to Federal Superfund related actions.

**11. Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

As a partner: Brobeck, Phleger & Harrison LLP.

As a director/officer: BIOCOM San Diego (Director and Co-Chair, Environmental Committee). Endowment for Community Leadership (Director). Professional Women's Fellowship (Director and Past President).

As an advisor: Floresta (Advisory Board). Global Involvement Through Education (advisory Board). UCSD Environmental Management Board (has not met in recent years).

**12. Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

California Bar Association.

San Diego Bar Association.

The Federalist Society.

Lawyers for Bush Cheney.

The Heritage Foundation.

BIOCOM San Diego (Board member, Co-Chair Environmental Committee).

Industrial Environmental Association.

Professional Women's Fellowship of San Diego (past President).

Solana Beach Presbyterian Church.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member, Lawyers for Bush/Cheney.

Volunteer, San Diego County Republican Party (volunteer assistance to Bush/Cheney campaign).

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

FIGURES APPROXIMATE

\$1,000.00 George W. Bush.

\$500.00 Republican Congressional Caucus.

\$500.00 Congressman Duke Cunningham.

\$500.00 Congressman Brian Bilbray.

\$150.00 Mayor Susan Golding.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

College/Law School Scholarships.

Secretary's Gold Medal, U.S. Department of Energy, 1987.

Outstanding Young Women of America, 1984.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have moderated panels on biotechnology environmental issues for the Industrial Environmental Association's annual conference for the past several years. I had no formal remarks. In addition, I have moderated other panels at environmental seminars. When I speak on environmental regulatory topics, such as the Clean Water Act, California's Proposition 65, emergency planning, environmental audits, Federal Environmental enforcement, the Federal and State hazardous waste laws, and an overview of Federal environmental laws, I typically speak from handwritten notes or overhead slides and have no prepared text. The only time I have worked from prepared texts was when I was in full time positions with the Federal Government (1982-1988).

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B-F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

MARY WALKER.

This 28th day of September, 2001.

[The nomination of Mary L. Walker was reported to the Senate by Chairman Levin on November 8, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on November 8, 2001.]

---

**TUESDAY, OCTOBER 23, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 3:32 p.m. in room SC-5, The Capitol, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Lieberman, Reed, Carnahan, Warner, Allard, and Sessions.

Committee staff members present: David L. Lyles, staff director; and Christine E. Cowart, chief clerk.

Majority staff members present: Peter K. Levine, General Counsel; and Michael J. McCord, Professional Staff Member.

Minority staff members present: Romie L. Brownlee, Republican staff director; Judith A. Ansley, deputy staff director for the minority; Ambrose R. Hock, professional staff member; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Gabriella Eisen and Thomas C. Moore.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; Erik Raven, assistant to Senator Byrd; Frederick M. Downey, assistant to Senator Lieberman; Andrew Vanlandingham, assistant to Senator Cleland; Elizabeth King, assistant to Senator Reed; William K. Sutey, assistant to Senator Bill Nelson; Eric Pierce, assistant to Senator Ben Nelson; Neal Orringer, assistant to Senator Carnahan; Margaret Hemenway, assistant to Senator Smith; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Douglas Flanders, assistant to Senator Allard; James P. Dohoney, Jr., assistant to Senator Hutchinson; Arch Galloway II, assistant to Senator Sessions; and Derek Maurer, assistant to Senator Bunning.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. The committee meets today to consider the nominations of two individuals to senior positions in the Department of Defense, Joseph Schmitz to be Inspector General for the

Department, and Sandra Pack to be Assistant Secretary of the Army for Financial Management and Comptroller.

I would like to welcome you both and your families to the Armed Services Committee. In a moment, I am going to ask you to introduce those family members that might be with you. Before I do that, though, let me make a statement about our schedule for the rest of the week. On Thursday morning at 10 a.m. we hope to have a conference meeting with the House, and that meeting will involve the General Provisions Panel which Senator Warner and I chair. We do not have a room for that meeting yet, so keep in touch with your staffs about that.

Also on Thursday morning, the Emerging Threats and Capabilities Subcommittee is planning a hearing with Senator Sam Nunn and former Deputy Secretary of Defense John Hamre on the recent Dark Winter exercise involving a simulated bioterrorist event. That hearing is currently scheduled for 10 a.m. in Russell 222. That assumes, of course, that the Russell Building is open on Thursday afternoon.

At 2:30 p.m., the full committee will hold a hearing with DOD officials on the Department's role in homeland security. We are currently scheduled to hold this hearing in Hart 216, which we may have to change. In fact, I think we should get a backup just in case we do have to change.

On Friday morning at 10 a.m. we hope to have a meeting of the full conference with the House outside conferees. We do not have a room for that meeting yet, either. Scheduling is obviously a huge challenge under the current circumstances, and we will make every effort to keep all members of the committee informed about the committee schedule as promptly as we can.

Senator WARNER. Mr. Chairman, on that point would you instruct the staff to disseminate the facts you have just given to all members as soon as possible?

Chairman LEVIN. We will. Thank you for that suggestion.

Mr. Schmitz is a graduate of the U.S. Naval Academy, a 27-year Navy veteran of the Active and Reserve Force. He served as a Special Assistant for Attorney General Edwin Meese. A lawyer and a captain in the Naval Reserves, he most recently served as Deputy Senior Inspector for the Naval Reserve Intelligence Program. If confirmed as the Inspector General, Mr. Schmitz will be responsible for conducting independent and objective audits and investigations of defense programs and impartial investigations of the allegations of misconduct by senior officers and civilian Department employees.

Ms. Pack is a certified public accountant who has served as a financial consultant to several presidential campaigns. Her private sector experience includes serving as Director for Planning and Operations for the digital technology firm of Spectrum Holobyte, and 12 years with Ernst & Young, including Director of Microcomputer Consulting and Accounting Services. If confirmed as the Assistant Secretary of the Army for Financial Management and Comptroller, Ms. Pack will be responsible for assuring the effective management, integrity, and accuracy of the Army's financial management systems.

Let me turn now to Senator Warner, and then I will ask the standard questions of our nominees and ask them to introduce their family members.

Senator Warner.

**STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Thank you, Mr. Chairman. I asked that you arrange this hearing this afternoon because I think it is very important for this committee to be as active as we have been, and we have been active during the course of these unpredictable and somewhat uncertain times here in the Senate. I thank you for making the arrangements to have the hearing this afternoon. These nominees are urgently needed by the Department. I have been contacted by a number of members of the Department on behalf of both of these distinguished nominees. You have covered their curriculum vitae.

I then would put in my statement for the record. My statement in every respect parallels the chairman's in endorsing these two candidates. I welcome you, and I thank you for your offer to serve the country, and that of your respective families, because families play a vital role in the lives of persons who undertake long hours and arduous challenges in the Department of Defense.

Thank you very much.

[The prepared statement of Senator Warner follows:]

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I also extend a warm welcome to the nominees and their families. These are vitally important positions to which Mr. Schmitz and Ms. Pack have been nominated. I compliment them both on their desire and willingness to serve in these extraordinarily challenging times.

Mr. Schmitz has an impressive record of accomplishment in military service, in the legal community, and in academia. After graduating from the U.S. Naval Academy in 1978, Mr. Schmitz forged a 27-year naval career in the Active and Reserve Forces, achieving the rank of captain. Since 1999, he served as Deputy Senior Inspector for the Naval Reserve Intelligence Program with responsibility for command inspections and audits, investigation, and intelligence oversight in this key area. He has also been a highly successful private practitioner in Washington, DC, specializing in administrative and constitutional law and international trade. In addition, he has served as an Adjunct Professor of Law at the Georgetown University Law Center.

Ms. Pack is a certified public accountant with a distinguished record of achievement in the private sector. She worked for the firm of Ernst & Young for 12 years providing consulting and accounting services to small businesses in a broad range of industries. In recent years, she has served in financial management capacities in connection with the election campaigns of President Bush and Senator Bob Dole.

I support the nominations of both individuals and look forward to their testimony this morning.

Chairman LEVIN. Thank you, Senator Warner.

Today's nominees have both responded to the committee's pre-hearing policy questions and to our standard questionnaire. Without objection, responses will be made a part of the record.

The committee has also received the required paperwork on each of the nominees, and we will be reviewing their paperwork to make sure it is in accordance with the committee's requirements. There are several standard questions that we ask every nominee who comes before this committee. In your response to advance policy questions, you agree to appear as a witness before congressional

committees when called, and to ensure that briefings, testimony, and other communications are provided to Congress. You have already done that. Now my questions: Have you adhered to applicable laws and regulations governing conflict of interest? Mr. Schmitz.

Mr. SCHMITZ. Yes, I have.

Chairman LEVIN. Ms. Pack.

Ms. PACK. Yes, sir, I have.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process? Ms. Pack.

Ms. PACK. No, sir.

Chairman LEVIN. Mr. Schmitz.

Mr. SCHMITZ. No, sir.

Chairman LEVIN. Will you ensure the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings? Mr. Schmitz.

Mr. SCHMITZ. Yes, I will.

Chairman LEVIN. Ms. Pack.

Ms. PACK. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests? Ms. Pack.

Ms. PACK. Yes.

Mr. SCHMITZ. Yes, I will.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Mr. SCHMITZ. Yes, they will.

Ms. PACK. Yes, sir.

Chairman LEVIN. Let me now ask both of you for any opening remarks that you have, hopefully brief, but before you do that, would you introduce your families to us? Mr. Schmitz.

Mr. SCHMITZ. Thank you, Mr. Chairman. My wife, Mollie, is here with me today; my mother, Mary Schmitz, is here; and six of my eight children could make it here today, Patrick, Thomas, Corporal Nicholas Schmitz, USMC, Katherine, Miss Mollie, and Matthias; my sister, Elizabeth, is there with three of her children; and then my cousin, Jennifer, who works for the Judiciary Committee, is here.

Chairman LEVIN. We welcome them all. Are the two missing kids AWOL?

Mr. SCHMITZ. The oldest is a senior at Maryland, and he has a midterm at 3:30 p.m. today—he would have been here this morning—and the number two son is a year abroad in Europe.

Chairman LEVIN. Well, tell them we miss them.

Senator WARNER. Mr. Schmitz, don't you have a brother also in Government service who has had a distinguished career?

Mr. SCHMITZ. My older brother John was George Bush's Deputy Counsel at the White House for 7 years. He is also in Europe on business.

Senator WARNER. I have met him in years past, a very distinguished gentleman.

Chairman LEVIN. Ms. Pack, you are a little bit overwhelmed, probably, numerically.

Ms. PACK. That is quite all right. I would like to introduce my husband, Randall.

Chairman LEVIN. We very much welcome all of you, and thank you for your willingness to be supportive of the spouses who are called to public service. Those of us who serve on this committee understand the important role of spouses, and we very much appreciate and cherish that. It is absolutely essential to the well-being of this country that we have families, not just spouses but families as well as spouses, who will join their father or mother, brother, sister, what-have-you, to serve this country.

Now, we will have brief opening statements, and we will put your full statement, if you have a longer one, in the record.

Mr. Schmitz.

**STATEMENT OF JOSEPH E. SCHMITZ, NOMINEE TO BE  
INSPECTOR GENERAL, DEPARTMENT OF DEFENSE**

Mr. SCHMITZ. Thank you, Mr. Chairman. I have no statement for the record, but with your permission I would like to make a few brief remarks.

Chairman Levin, Senator Warner, members of the committee, it is an honor to appear this afternoon before you as President Bush's nominee to be the Inspector General of the Department of Defense. I would like to thank President Bush for nominating me, and I would like to thank Secretary Rumsfeld for his continuing confidence and support.

I would also like to thank this committee for all it has done over the years, especially over the last 6 weeks, for the men and women of the Armed Forces. If confirmed, I look forward to working very closely with this committee to meet the many and recently exacerbated challenges we face as a Nation.

As stated in my written responses to your advance policy questions, if I am confirmed, I hope to address the following three broad priorities within the Office of Inspector General, Department of Defense: first and foremost, integrity; second, efficiency; and third, an enthusiastic commitment to the core principles underlying our Constitution, including the rule of law, the various checks and balances, and the ultimate accountability of all public officials to the people of the United States.

Finally, I would like to thank Almighty God for the multitude of blessings he continues to bestow upon this Nation, and upon me personally. Speaking of which I would like to thank publicly my wife of 23 years, Mollie, who you just met, and my eight children for their enduring love and inspiration, and now for their willingness to support me as I undertake this new challenge. Of course I would like to thank my other many family members and friends who have supported me along the way.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you.

Ms. Pack.

**STATEMENT OF SANDRA L. PACK, NOMINEE TO BE ASSISTANT  
SECRETARY OF THE ARMY FOR FINANCIAL MANAGEMENT  
AND COMPTROLLER**

Ms. PACK. Thank you, Mr. Chairman, distinguished members of the committee. It is a great privilege to appear before this committee as the nominee for Assistant Secretary of the Army for Financial Management and Comptroller. I am profoundly grateful to the President, the Secretary of Defense, and the Secretary of the Army for the trust and confidence that they have placed in me.

I pledge that, should I be confirmed, I will dedicate myself to ensuring that their trust and your trust will not be misplaced. I pledge to be a faithful steward to the citizens of this great Nation, that I will discharge my duties to the best of my ability.

I am a certified public accountant. I have worked my entire professional career in the private sector, 12 of those years in public accounting. I believe strongly in the principles of sound financial management. I understand the need for the principles and practices espoused by my profession, such as strong internal controls, segregation of duties, planning, budgeting, and reliable accounting and financial reporting systems. These principles enable sound management and resource decisions.

While I will be serving in a new environment with the U.S. Army, I believe that my technical training and my previous work experience will provide the foundation needed for this challenge. I look forward to learning about the Army and determining how the principles with which I am familiar may be applied.

Mr. Chairman, should I be confirmed, I look forward to a strong working relationship with you and with this committee. I will be pleased to answer any questions at this time. Thank you.

Chairman LEVIN. Thank you very much, Ms. Pack. We will have a 6-minute round, and we will follow the early bird rule, alternating between sides.

Mr. Schmitz, I know that you are aware of the fact that the letter that you wrote to the *Washington Times* in 1992, during the presidential campaigns, has been something which has troubled me a great deal. That letter was captioned, "Security Risk in the White House?" This was printed in the *Times*: "Bill Clinton practically confessed to being a security risk during the Vietnam War in his December 3, 1969, letter to Colonel Eugene Holmes. Since then, he has never recanted, notwithstanding a direct invitation to do so in the final presidential debate. Colonel Holmes has released an affidavit stating, among other things, that the December 3, 1969 letter alone would have restricted Bill Clinton from ever qualifying to be an officer in the United States military." Then you wrote: "Now the same Bill Clinton wants to be commander in chief, but he won't even talk about his organizing antiwar activities in England and then traveling to Moscow at the height of the Vietnam War. The KGB apparently knows more about the shady side of Bill Clinton than the American people ever will. The American people deserve better."

Now, that was signed with your rank in the Reserves, which is the issue here. It is not the views, whatever one thinks of those, but the fact that you signed it as a Lieutenant Commander in the U.S. Navy Reserve.

First of all, did you believe that he was a security risk when you wrote that?

Mr. SCHMITZ. No, sir.

Chairman LEVIN. Do you believe that it was appropriate to sign the letter as Lieutenant Commander in the Naval Reserve?

Mr. SCHMITZ. I just want to clarify one thing, the way that I signed it and the way that it was published are different, and the distinction is that the way I actually signed it followed the letter of the law. I certainly acknowledge that the way it looks raises issues, and I would like to address those to clarify why I did what I did, and how I did it.

First of all, that was 9 years ago, Mr. Chairman. I was a young associate in a law firm and a Lieutenant Commander in the Naval Reserves. I have done a lot of professional growing since then, and I would not write the same letter today.

Second, I would like to say the letter was merely a venting exercise. It was not a reflection of my judgment at the time, and it is certainly not a reflection of my judgment today.

I had watched the nationally televised debate during which Candidate Clinton had been asked about his activities in Moscow during the height of the Vietnam War. I was hoping that the candidate would have answered the questions, but he did not. I decided to vent my frustration in a letter to the editor, a writing activity which my law firm generally encouraged, so I wrote a letter on private stationery and faxed it to the newspaper editor from my law firm. It was clearly my own opinion, and it was not intended to be a reflection on the Naval Reserves.

Finally, one of the most important leadership lessons I have learned over the years has been that leaders need to be able to admit when they have made a mistake, especially when they are under public scrutiny. In the case of this one letter to the editor, Mr. Chairman, 9 years ago, I should not have used my Naval Reserve rank, even though I followed the rules to the T.

The way the newspaper published my letter and highlighted my military rank obviously raises issues. I regretted it at the time, and I regret it today. I learned a very good lesson, for which I am now a better man, and more importantly I will be a much better Inspector General for having learned that lesson, if I am confirmed.

Chairman LEVIN. Were you with the same law firm then as you are now?

Mr. SCHMITZ. No, sir.

Chairman LEVIN. Was it the firm you were with then that encouraged you to write the letter?

Mr. SCHMITZ. Paul, Hastings, Jonofsky, and Walker, and if you look at the cover sheet, it was the code that they give to associates to encourage them to spend time writing letters like this.

Chairman LEVIN. Was there anyone else that encouraged you to write this, other than the law firm?

Mr. SCHMITZ. The law firm did not encourage me to write this specific letter. Let me just clarify that. This was a weekend venting exercise. That is all it was.

Chairman LEVIN. But in general they encouraged people to write letters?

Mr. SCHMITZ. Yes, sir.

Chairman LEVIN. Was there anyone else who encouraged you to write either letters in general, or this letter, other than the law firm?

Mr. SCHMITZ. My mentor in the law firm, basically all of my supervisors.

Chairman LEVIN. I said, other than the law firm, was there anyone else that encouraged you to write letters, or this letter?

Mr. SCHMITZ. Not that I recall.

Chairman LEVIN. In your response to the committee's questionnaire, you indicated your desire to remain a member of the board of U.S. English, Inc., which is an advocacy group that seeks to ensure that the official business of the United States and the 50 States is conducted only in English. Even for positions that do not require the independence and objectivity of the Inspector General, the committee insists that nominees resign from outside positions. That I think you now understand, and you are going to resign from that board, but my question is a little different than that.

This is an organization that believes that no Government business should be done in any language other than English, which presumably means they do not believe that ballots should be in any other language, or referenda on ballots should be in Spanish, or that driver's license applications should be in Spanish. Many States have such applications and ballots.

Why would you think it would be appropriate for you, as Inspector General, to remain on the board of an advocacy group that obviously takes positions which would be very much anathema to at least some members of the military, who would very much support a ballot being in Spanish, for instance, or a driver's license application being in Spanish?

We have a lot of military members, for instance, who speak Spanish. I am not characterizing them, or generalizing. I am not saying that all people who speak Spanish believe that there ought to be driver's license applications or ballot referendum items that are bilingual. I am not suggesting that, but clearly there is a significant number of people that speak a foreign language that believe that. They are in the military, like anywhere else in this country, and yet you thought it would be appropriate for you to remain on that board.

Now, putting aside the fact that you cannot, under our rules, and that you are not going to be on that board, why would you think it would even be appropriate to stay on that board if we allowed you to do so?

Mr. SCHMITZ. That is a good question, Mr. Chairman. The first thing I would like to clarify is that the way you characterized the mission and purpose of the organization is a common misconception. There is a group that advocates English only. This is not the English-only group. This is the official English group. In fact, the founder of this group was a former U.S. Senator by the name of Sam Hayakawa, who himself was an immigrant. The current chairman of the group is an immigrant from South America whose native tongue is Spanish. There is nothing anti-Spanish or anti-immigrant about this group. It is often confused, however, with the English-only group, and that is what I would like to address right now.

In fact, when I went through the Army Inspector General's School I had the occasion of studying a lot of Army regulations, and I was not surprised, but I was pleased to find that in 1999 the U.S. Army promulgated its command policy in which it states that English is the operational language of the United States Army, and then it goes on and says that we all have to speak English to communicate, but commanders should not deny people the opportunity to speak their native tongues. That is essentially the position that U.S. English takes. It is the exact same position that the U.S. Army took in 1999 under its official command policy.

I have been working with U.S. English for 2 years. It is a tremendous challenge, frankly, to dispel the misconception and the misinformation that U.S. English is up against, and I requested to stay a member of that board, and I requested to stay a member of a couple of other boards that I thought would be appropriate. I am pleased to dispel the misperception about U.S. English here, and I have already agreed to withdraw from the board of U.S. English.

[The information referred to follows:]

ARMY COMMAND POLICY (PERSONNEL-GENERAL), ARMY REGULATION 600-20, 15 JULY 1999

#### SECTION 4-13. ARMY LANGUAGE POLICY

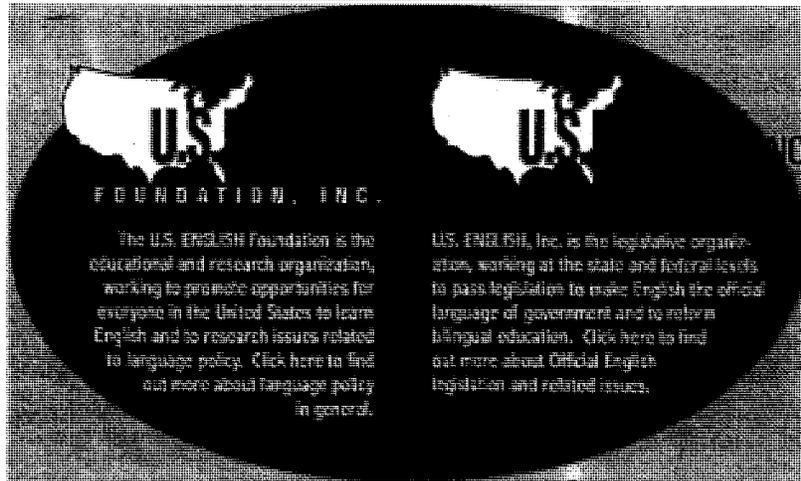

English is the operational language of the Army. Soldiers must maintain sufficient proficiency in English to perform their military duties. Their operational communications must be understood by everyone who has an official need to know their content, and therefore, must normally be English. However, commanders may not require soldiers to use English unless such use is clearly necessary and proper for the performance of military functions. Accordingly, commanders may not require the use of English for personal communications which are unrelated to military functions.

Chairman LEVIN. I am going to put in the record here the web site material that U.S. English, Inc. has on its web site, which shows driver's license exam languages in the States. Presumably the only reason they would put that on their web site is that they have a problem with it.

[The information referred to follows:]

## Welcome to U.S. English

U.S. ENGLISH consists of two separate organizations.

**U.S.**  
FOUNDATION, INC.

The U.S. ENGLISH Foundation is the educational and research organization, working to promote opportunities for everyone in the United States to learn English and to research issues related to language policy. [Click here to find out more about language policy in general.](#)

**U.S.**  
INC.

U.S. ENGLISH, Inc. is the legislative organization, working at the state and federal levels to pass legislation to make English the official language of government and to reform bilingual education. [Click here to find out more about Official English legislation and related issues.](#)

**Welcome to U.S. ENGLISH, Inc.**

**Making English the official language**

U.S. ENGLISH, Inc. is the nation's oldest, largest citizens' action group dedicated to preserving the unifying role of the English language in the United States. Founded in 1983 by the late Senator S.I. Hayakawa, an immigrant himself, U.S. English now has 1.5 million members nationwide.

Mauro E. Mujica, an architect and international businessman as well as an immigrant from Chile, has been the Chairman/CEO of U.S. ENGLISH Inc. since 1993 and prior to that, served on the Board of Directors beginning in 1992. Because of his commitment to keeping this nation unified through a common language and his own experience as an immigrant, Mr. Mujica has succeeded in making U.S. ENGLISH Inc. one of the fastest-growing interest groups in the country.

U.S. ENGLISH believes that the passage of English as the official language will help to expand opportunities for immigrants to learn and speak English, the single greatest empowering tool that immigrants must have to succeed.

Currently, U.S. ENGLISH is working with members of the House of Representatives and Senate to help pass official English legislation in the 107th Congress. In 1996 U.S. ENGLISH was instrumental in helping to pass "The Bill Emerson English Language Empowerment Act of 1996" in the House of Representatives. This bill passed the House of Representatives by a vote of 259-169, with 36 Democrats joining Republicans in this historic vote. Unfortunately, the Senate failed to act on the bill before the session was over.

On the state level, 26 states have English as their official language and several more are considering similar legislation. In the last four years, Alaska, Georgia, Montana, New Hampshire, South Dakota, Utah, Virginia, Wyoming and Missouri have enacted some form of official English legislation with the help of U.S. ENGLISH.

U.S. ENGLISH, Inc. is a separate organization from the U.S. ENGLISH Foundation, which promotes English education and public awareness of issues surrounding our common language.

**Breaking News**

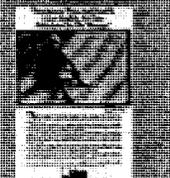

U.S. ENGLISH, Inc. has announced that it will be launching a new initiative to help immigrants learn and speak English. The initiative will provide free English classes to immigrants who are unable to pay for them. U.S. ENGLISH, Inc. is currently accepting applications for the program. For more information, please contact U.S. ENGLISH, Inc. at (800) 368-2722.

### Official English

#### About the Issue

Declaring English the official language means that official government business at all levels must be conducted solely in English. This includes all public documents, records, legislation and regulations, as well as hearings, official ceremonies and public meetings.

Official English legislation contains common-sense exceptions permitting the use of languages other than English for such things as public health and safety services, judicial proceedings (although actual trials would be conducted in English), foreign language instruction and the promotion of tourism.

In 1996, U.S.ENGLISH was instrumental in passing H.R. 123, "The Bill Emerson English Language Empowerment Act of 1996." That bill, making English the official language of the U.S. government, passed in the House of Representatives with a bipartisan vote of 259-169. Unfortunately, the Senate did not act on the bill before the end of the session. Currently, U.S.ENGLISH is working with Rep. Bob Barr of Georgia and Sen. Richard Shelby of Alabama to help pass official English bills in the 106<sup>th</sup> Congress.

Twenty-six states have some form of official English law. Most recently, Missouri and Alaska passed official English legislation in 1998. U.S.ENGLISH is currently working in several states to pass official English bills.

## Official English

### Why Is Official English Necessary?

Declaring English the official language is essential and beneficial for the U.S. government and its citizens. Official English unites Americans, who speak more than 329 languages (1990, U.S. Census), by providing a common means of communication; it encourages immigrants to learn English in order to use government services and participate in the democratic process; and it defines a much-needed common sense language policy.

**Official English promotes unity.** Our national motto is *E pluribus unum*—out of many, one. Immigrants of many nationalities built our nation, but the "melting pot" melded us into one people. This long tradition of assimilation has always included the adoption of English as the common means of communication. Unfortunately, the proliferation of multilingual government sends the opposite message to non-English speakers: it is not necessary to learn English because the government will accommodate them in other languages. A study published by the U.S. Department of Labor found that immigrants are slower to learn English when they receive a lot of native language support. (*Monthly Labor Review*, December 1992.) Thus, multilingual government services actually encourage the growth of linguistic enclaves. This division of the United States into separate language groups contributes to racial and ethnic conflicts. Designating English as the official language will help reverse this harmful process.

**Official English empowers immigrants.** Immigrants will benefit from the elevation of English to official status. Instead of the mixed message government sends by making it possible to file tax returns, vote, become U.S. citizens and receive a host of other services in a variety of languages, immigrants will understand that they must know English to fully participate in the process of government. Providing multi-lingual services creates dependence on "linguistic welfare." Life without English proficiency in the United States is a life of low-skilled, low-paying jobs. Studies of Census data show that an immigrant's income rises about 30% as a result of learning English. Knowledge of English leads to the realization of the American dream of increased economic opportunity and the ability to become a more productive member of society, which benefits everyone.

**Official English is common sense government.** The designation of official English will eliminate the needless duplication of government services in multiple languages. It is not the responsibility of the government to provide services in the 329 different languages spoken in the United States. It is the responsibility of each individual to either learn English or to find a friend or family member to translate. The money formerly spent on multi-lingual services can instead provide immigrants with the assistance they really need—classes to teach them English.

Official English legislation recognizes the need for common sense exceptions

permitting the use of other languages for emergency, safety and health services; judicial proceedings; foreign language instruction and tourism promotion. Of course, because official English is only a limitation on government, it does not affect the languages spoken in private businesses, religious services or private conversations.

## Official English

### Frequently Asked Questions

#### **Isn't English already our official language?**

No, despite the fact that most Americans speak English, it is not the official language of the United States. Contrary to popular myth, English did not win out over German by one vote to become our official language. The Founding Fathers never really discussed this issue because over 90 percent of the voting population was of British ancestry. It was not until the 1960s that the U.S. began its current multilingual policies and the need for English to be the official language became evident.

#### **Why is it necessary to declare English our official language?**

Official English promotes unity, and empowers immigrants by encouraging them to learn English, the language of opportunity in this country.

#### **What happens when English is declared the official language?**

All official documents, records, legislation and regulations, as well as hearings, ceremonies and public meetings are conducted solely in English, with some common sense exceptions.

#### **When are languages other than English permitted in government under official English legislation?**

Official English legislation allows a variety of common sense exceptions permitting the use of languages other than English: public health and safety, international relations and national security, judicial proceedings (although actual trials would be conducted in English), tourism, foreign language instruction, terms of art or phrases from other languages, etc.

#### **How does official English affect private businesses and private citizens' daily lives?**

Official English legislation only applies to government functions. Language policies in private business are not affected, and private citizens are still free to use any language they wish in their daily lives.

#### **Is there official English on the state level?**

Twenty-five states have official English laws and several more are considering similar legislation. Most recently, Alaska, Missouri, New Hampshire, Montana, South Dakota, and Wyoming have declared English their official language.

#### **Is there an official English bill pending on the federal level?**

With the support of U.S. ENGLISH, the House of Representatives passed H.R. 123 -- "The Bill Emerson English Language Empowerment Act of 1996," with a bipartisan vote of 259-169 in August 1996. Unfortunately, the Senate failed to act before the end of the session. Named in honor of the late Congressman Bill Emerson (R-MO), this bill would make English the official language of the U.S. government and has been reintroduced by Rep. Bob Barr (R-GA) in the 106<sup>th</sup> Congress. On the Senate side, Sen. Richard Shelby (R-AL) has a similar bill.

**Does official English legislation affect bilingual education or bilingual ballots?**

While bilingual education is not directly addressed by official English legislation, U.S.ENGLISH supports the reform of bilingual education to favor programs that are English-intensive, short-term and transitional.

**Does official English legislation imply that English is better than other languages or that there is anything wrong with speaking other languages?**

Official English legislation discourages multilingualism only at the government level. There is no question that being proficient in other languages in addition to English is extremely advantageous to an individual. Multilingualism in government, however, actually discourages immigrants from gaining proficiency English.

**Does official English legislation violate "freedom of speech" and has this ever been brought up in the courts?**

Because official English legislation is a limitation on government, not private individuals, it does not violate the principle of freedom of speech. The courts have usually held that the government is under no general obligation to provide services in a language other than English. The Arizona State Supreme Court did overturn Arizona's official English law on the basis that it was too broad. Other state official English laws are not affected because Arizona's law was unique.

**Is official English legislation anti-immigrant?**

Official English legislation is actually pro-immigrant. A study published by the U.S. Department of Labor found that immigrants learned English more quickly when there was less native language support around them. A "linguistic welfare" system that accommodates immigrants in their native languages lowers the incentive to learn English and restricts them to low-skilled, low-paying jobs. Official English legislation encourages immigrants to learn English so they can truly enjoy the economic opportunities available to them in this country.

**Misconceptions About Official English**

Let's clear up some misconceptions about Official English...

**Can other languages be used in our day-to-day private lives?**  
Of course!

**Can other languages be used by government officials in emergency situations or in the investigation of crimes?**  
Absolutely!

**Can other languages be taught and promoted in our society?**  
We encourage it!

**Can other languages be used by elected officials to communicate with constituents?**  
You bet!

**Can non-English terms of art, names, phrases or expressions be used?**  
Certainly!

**Can other languages be used for international trade, tourism and diplomacy?**  
Definitely!

**So what's the fuss all about?**  
We don't know.

Official English benefits every resident of this wonderful melting pot called America. The melting pot works—because we have a common language.

English is the key to opportunity in this country. It empowers immigrants and makes us truly united as a people. Common sense says that the government should teach people English rather than provide services in multiple languages. What would happen if our government had to provide services in all 329 languages spoken in the U.S.? Without a common language, how long would we remain the "United" States?

Follow these links to learn about whether German almost became our national language, how the Treaty of Guadalupe Hidalgo affects official English, and what our opponents say about official English.

DEPARTMENT OF THE TREASURY  
BUREAU OF ALCOHOL, TOBACCO AND FIREARMS  
**FIREARMS TRANSACTION RECORD PART I - INTRA-STATE**  
**OVER-THE-COUNTER (ENGLISH-SPANISH)**

NOTA: Llene solo el original. Escriba a máquina o en letra de molde con data. Filtre siempre con tinta.

SECCION A - EL COMPRADOR DEBERÁ LLENARLA PERSONALMENTE. SI ESTA TRANSACCION ES UNA VENTA, ESTA SECCION DEBERÁ LLENARLA EL COMPRADOR VERDADERO. (SERVASE LEER LOS AVISOS Y LAS INSTRUCCIONES AL DORSO, INCLUYENDO LA ADVERTENCIA SOBRE LAS COMPRAS ILEGALES "STRAW PURCHASES" EN EL PARRAFO 2).

1. NOMBRE DE COMPRADOR: (Apellido(s), Nombre(s)) (St., Sra.)  HOMBRE  MUJER

2. ESTATURA

3. PESO

4. RAZA

6. DIRECCION DOMICILIAR: (Numeral, calle, ciudad, estado, zona postal)

6. FECHA DE NACIMIENTO: MES, DIA, AÑO

7. LUGAR DE NACIMIENTO: CIUDAD, ESTADO O PAIS EXTRANJERO

2. CERTIFICACION DEL COMPRADOR. Una respuesta falsa puede dar lugar a que se someta al declarante a un procedimiento penal. Cada pregunta debe ser contestada "SI" o "No", en la casilla que se encuentra a la derecha de la pregunta.

a. ¿Hay pendiente ante algún tribunal una acusación formulada contra usted por el Sr. Jefe de la Policía o el Fiscal que conlleve una pena de encarcelamiento que exceda de un año?	c. ¿Es usted prófugo de la justicia?
b. ¿Ha sido usted hallado culpable de algún delito curable con un período de encarcelamiento que exceda de un año? Nota: La sentencia misma dictada por el juez no importa a los efectos de esta pregunta. Usted debe contestar: "SI" si el juez le hubiere podido fijar una condena de más de un año de cárcel. No es necesario que responda afirmativamente si lo ha pagado el delito, o si se ha conculcado o abrogado la condena, o si se han reintegrado sus derechos civiles y, de conformidad con las leyes del lugar donde se impuso la condena, no le sea prohibido recibir o poseer cualquier arma de fuego.	d. ¿Es usted legal de matrimonio o de una droga deprimente, estimulante o narcótica, o está usted adicto a alguna de ellas?
	e. ¿Lo han declarado a usted alguna vez incapaz mental, o lo han internado en algún manicomio para enfermos mentales?
	f. ¿Ha sido usted licenciado de las Fuerzas Armadas bajo condiciones deshonrosas?
	g. ¿Es usted un extranjero que se encuentra indocumentado en los Estados Unidos?
	h. ¿Es usted una persona que habiendo sido ciudadano de los Estados Unidos renunció a su ciudadanía?
	i. ¿Esta usted bajo una orden judicial que le prohíba acosar, espionar o amenazar a un compañero íntimo o alguno de los niños de ellos? Vea párrafo 4 y definición 4 al dorso.

Por la presente certifico que las respuestas anteriores son verdaderas y exactas. Si la transacción es una venta, también certifico que soy el comprador verdadero. Tengo entendido que cualquier que responda afirmativamente a alguna de las preguntas anteriores no podrá comprar o poseer un arma de fuego, salvo disposición al contrario de las leyes federales. Asimismo, tengo entendido que hacer una declaración falsa, ya sea oral o escrita, o presentar una identificación falsa con respecto a la transacción constituye un delito grave.

FIRMA DEL CESIONARIO (COMPRADOR): DEBE COMPLETARSE EN EL MOMENTO DE RECIBIR EL ARMA(S). FECHA

The preceding documents pertain to your property taxes and the time frame in which a property owner can appeal an incorrect assessed value. Only homeowners that are likely to receive a reduction in their property tax are mailed this form. The appeals period is the last opportunity for property owners to appeal their 1995-1996 assessed value. This is the final notice this office will mail to homeowners this year. Please be sure to either, act on your own, or return the enclosed Agency Authorization not later than August 30, 1995.

Los documentos precedentes se refieren a sus impuestos sobre los bienes y al plazo durante el cual el propietario de una vivienda puede presentar un recurso de apelación respecto a una tasación incorrecta. Se envía esta forma solamente a los propietarios de vivienda que tienen la posibilidad de recibir una reducción en sus impuestos sobre los bienes. El período estipulado para la apelación es la última oportunidad para que los propietarios de vivienda presenten un recurso de apelación con respecto a la tasación de 1995-1996. Este es el último aviso que esta oficina enviará a los propietarios de vivienda este año. Asegúrese de actuar por cuenta propia, o envíe la Autorización de la Agencia adjunta antes del 30 de agosto de 1995.

以上是有關您產業稅之文件以及業主對估價錯誤之房地產可上訴的期限。我們只將此表寄給有可能獲得減稅的屋主。所列出之上訴期限是房地產業主對他們1995至1996年的房地產估價最後上訴的機會。這是本處今年寄給屋主的最後一次通知。請務必自行採取行動或者在1995年8月30日以前將經手人授權書寄回。

Những văn kiện trước đây nói về thuế bất động sản và thời hạn mà sở hữu chủ bất động sản có thể khiếu nại về kết quả lượng giá sai. Chỉ những sở hữu chủ nhà có thể được giảm thuế bất động sản mới nhận được mẫu này qua bưu điện. Giai đoạn khiếu nại là cơ hội cuối cùng để các sở hữu chủ bất động sản khiếu nại về kết quả lượng giá sai của năm 1995-1996. Đây là thông cáo cuối cùng trong năm nay mà văn phòng sẽ gửi đến các sở hữu chủ nhà. Xin nhớ, hoặc tự qui vì khiếu nại, hoặc gửi trả lại Giấy Phép Cơ Quan định kèm chậm nhất là ngày 30 tháng 8 năm 1995.

先行する文書は、不動産税と不動産所有者が不正確な評価額に対して訴えを起こすための期限に関連したものです。この書式は、不動産税の減額を受ける可能性のある家屋所有者の方のみに郵送されます。その提訴期間が、不動産所有者が1995～1996年度の評価額について訴えることのできる最後のチャンスです。これは、弊事務所が家屋所有者に郵送する本年度最後の通知となります。1995年8月30日までに必ず、ご自分で訴えを起こされるか、あるいは同封の代理機関への許可書を返送してください。

Representatives are available to answer questions by telephone in English and Spanish only. Los representantes están disponibles para contestar preguntas por teléfono en inglés y español únicamente.

我們的代表只能以英語及西語從電話中回答您的問題。

Chỉ có các đại diện trả lời qua điện thoại các câu hỏi bằng tiếng Anh hay tiếng Tây Ban Nha. 電話でのご質問に対する御返事は、英語とスペイン語のみに限られます。

## Incapacidad Debido a la Adicción a Drogas o al Alcoholismo

Una nueva ley afecta la manera en que pagamos beneficios de Seguro Social y Seguridad de Ingreso Suplementario (SSI) a personas con una incapacidad causada por la adicción a drogas o al alcoholismo. La nueva ley entra en vigor en marzo 1995 para individuos que actualmente reciben beneficios o que se hicieron elegibles recientemente a beneficios porque la adicción a drogas o al alcoholismo les impide trabajar.

### Lo Que Requiere La Ley

Pagamos beneficios de incapacidad bajo dos programas: Seguro Social por Incapacidad, y Seguridad de Ingreso Suplementario (SSI). Ambos programas pagan beneficios mensuales a personas cuya incapacidad es tan severa que les impide hacer cualquier trabajo. Bajo la nueva ley, si su incapacidad es debido a una adicción a drogas o al alcoholismo:

- sus beneficios deben ser pagados a un "representante de beneficiario"; y
- usted debe recibir y progresar en un tratamiento apropiado para su adicción a drogas o al alcoholismo cuando esté disponible; y
- usted puede recibir beneficios por incapacidad basado en la adicción a drogas o al alcoholismo por no más de 36 meses.

### Requisito del Representante de Beneficiario

Le enviaremos sus beneficios a un representante de beneficiario, quien administrará el dinero por usted. Su representante puede ser una agencia no lucrativa de servicio social, una agencia gubernamental de servicio social o guardián público, otra organización o un familiar que aprobamos para actuar por su bienestar.

Las organizaciones que actúan como representante de beneficiario para cinco beneficiarios o más que son drogadictos o alcohólicos están permitidas por la ley para cobrar un honorario a cada individuo por sus servicios como representante. El honorario mensual permitido es el 10 por ciento del beneficio mensual o \$50, lo que sea menos.

### Tratamiento Requerido

Si recibe beneficios de Seguro Social o SSI por incapacidad por causa de una adicción a drogas o al alcoholismo, usted debe recibir tratamiento por su incapacidad. Le referiremos a una agencia que decidirá sobre el tratamiento apropiado para su adicción a drogas o al alcoholismo y determinará si el tratamiento está disponible. Esa agencia también nos informará si asiste al tratamiento disponible y si progresa.

Suspenderemos los beneficios si usted no participa y progresa en su tratamiento. Si eso ocurre, usted tendrá que regresar al tratamiento por un período determinado antes que podamos volver a pagarle otra vez.

Cada vez que usted deje de asistir al tratamiento y después regrese, sus beneficios serán suspendidos por un período más largo. Por ejemplo, la primera vez que deje el tratamiento y regrese, suspenderemos sus beneficios por dos meses adicionales. La segunda vez, se los suspenderemos por tres meses adicionales. La tercera vez y demás veces en que deje el tratamiento, le suspenderemos los beneficios por seis meses adicionales. Cada vez que usted deje el tratamiento, le avisaremos el mes antes de que decidamos suspender sus beneficios.

**ES SEGURO,  
CONVENIENTE Y NO  
NECESITA NINGUNA  
CUENTA BANCARIA, Y.**

- Después de los primeros 2 meses le cuesta apenas \$3 al mes.
- Usted tiene derecho a usar gratis la caja de pagos automáticos ATM por una vez y al uso limitado de su tarjeta en las tiendas participantes para pagar por sus compras y obtener dinero en efectivo.
- En lugar de tener que cobrar un cheque, su dinero queda automáticamente disponible en la fecha del pago.

**Tarjeta de Pago Directo

### U.S. ENGLISH CHAIRMAN CALLS PUERTO RICAN STATEHOOD VOTE "A RECIPE FOR DISASTER"

Mauro E. Mujica, Chairman/CEO of U.S. ENGLISH, Inc., called on Congress to act swiftly to correct a major deficiency in the controversial bill on Puerto Rican status that passed yesterday. By a margin of 209-208, the House passed a bill mandating that a plebiscite be held in Puerto Rico to force them to choose between the current commonwealth status and a permanent status—either statehood or independence.

"With very little debate, without consulting the American people, and at 10 o'clock at night, Congress took the first step toward forcing Puerto Rico to become our 51st state," Mujica said. "Swallowing up a Latin American nation is a recipe for disaster. Less than 25 percent of Puerto Rico's population speak English, and only 16 percent consider themselves American. This is after 100 years of association with the United States. In the rush to grant statehood, we could be creating our own Quebec.

Mujica also made a direct appeal to House Speaker Newt Gingrich. "I realize the Speaker has presidential ambitions, and is trying to reach out to Hispanics. But the only polls that suggest that this vote will appeal to Hispanics are those conducted by Frank Luntz. Let's not forget that he's a paid employee of the Puerto Rican statehood party." Luntz's questionable methods recently brought him an unprecedented censure from the American Association for Public Opinion Research.

Mujica also urged Gingrich to immediately schedule a vote to make English the nation's official language. "Will the federal government have to become completely bilingual to accommodate Puerto Rico? If so, how long will it be before every other language group demands equal treatment? With 329 languages spoken in the U.S., we must make English official. If Speaker Gingrich doesn't schedule this vote, he will be guilty of the worst kind of political opportunism."

U.S. ENGLISH is the nation's oldest, largest citizens' action group dedicated to making English the nation's official language. Founded in 1983 by the late Sen. S.I. Hayakawa, U.S. ENGLISH now has over 1.3 million members nationwide.

### Unblocking the Door to Opportunity

In 1997 President Clinton went to Little Rock, Arkansas, to honor the "Little Rock Nine"—nine black students who, forty years before, entered Central High School under the protection of the 101st Airborne Division of the U.S. Army. That incident marked the end for a system of public education that enforced the segregation of schoolchildren based on the color of their skin, condemning some of them to an inferior education and reducing their ability to compete for good jobs.

It took a thousand soldiers and a Supreme Court decision to strike down the policy of "separate but equal" (which in practice was always separate and never equal), but thanks to that effort, educational bureaucrats in this day and age do not have the power to separate students by race and ethnic origin.

Or do they?

Children who come from homes where a language other than English is spoken are often segregated from the rest of the student body into "bilingual" programs, which teach most subjects in a student's native language. *In theory*, such programs allow students to keep up with their English-speaking peers in subjects like math and history, while rapidly teaching them English so they could integrate into regular classes. *In practice*, bilingual education programs have not been achieving that objective.

With a fervor that would do the old-style Southern segregationists proud, the bilingual education lobby seems to shout, "Bilingual education now, bilingual education forever!" Many students do seem to be trapped in bilingual classes forever. In 1997 in California (where about forty percent of the nation's children with limited English proficiency live), only one out of every fifteen students in bilingual education learned enough English to transfer out. And while parents technically have the right to request that their children be moved into English-speaking classes, the bureaucrats block the doorway—seventy immigrant families were forced to boycott a Los Angeles school for two weeks before their children were allowed to take classes in English.

Parents know that the English language is the most important thing their child needs to learn in school. By blocking reform of bilingual education, the educational establishment is denying many children the key to future success: as the foreman on a ranch in Texas so eloquently put it, "My children learn Spanish in school so they can grow up to be busboys and waiters. I teach them English at home so they can grow up to be doctors and lawyers."

Because politicians in California were unwilling to reform bilingual education, the people of California took matters into their own hands. The "English for the

Dear Official English Supporter:

Legislation was introduced in the U.S. House of Representatives on May 24, 2001 which would declare English as the official language of the United States government. The legislation - "The English Language Unity Act of 2001" (H.R. 1984) - was introduced by a bipartisan group of Congressmen.

In order to make this legislation a reality, we need your help. U.S.ENGLISH is asking you to either write or call your Congressional representative and ask that he/she sign on as a cosponsor of H.R. 1984. If you would like to call, please dial the Capitol switchboard at 202/224-3121 and ask for your representative's office. If you would like to write your congressional representative, a sample letter is provided below for your use. (If you do not know who your Representative is, please visit our legislator lookup page and type in your address information.

Thank you in advance!

Sincerely,  
Mauro E. Mujica  
Chairman of the Board/CEO

**SAMPLE LETTER SUPPORTING H.R. 1984**

The Honorable (insert name)  
U.S. House of Representatives  
Washington, DC 20515

Re: H.R. 1984 - "The English Language Unity Act of 2001"

Dear Representative (insert name):

I am writing to ask that you join with several of your colleagues as a cosponsor of H.R. 1984 - "The English Language Unity Act of 2001."

As you know, H.R. 1984 would require nearly all Federal official government business to be conducted in English, and all documents to be printed in English, while protecting individual Constitutional rights. Of course, exceptions would include documents to protect public health and safety, law enforcement, court translations, and tourism.

Most importantly, H.R. 1984 would encourage immigrants and give them the incentive to learn English. It will help them participate fully in our economy, to use government services, and to understand our political process. It will also define a much-needed, common sense, properly focused language policy.

As one of your constituents, I strongly encourage you to sign on as a cosponsor of H.R. 1984 and to pass this important piece of legislation.

Thank you for your time.

Sincerely,  
(Your name)

Chairman LEVIN. Why else would they put driver's license exams on their web site unless they had a problem with them? For instance, California has many different languages for license exams. My home State of Michigan has 20 different languages for applications for driver's licenses, starting with Arabic and Spanish, Chinese and English, Finnish, and French. Why are all of those facts put on the web site if it is only what you say it is?

Mr. SCHMITZ. You could also find on the web site the fact that there are 350-plus references in the United States Code and in the Code of Federal Regulations requiring English language. It is just a practical issue. If you want to succeed in the United States, you ought to learn English. It does not say you should not keep your mother tongue.

The driver's license exam came up in a U.S. English trial in January, and it is often raised as an issue, as why shouldn't people be able to drive, and U.S. English's position is just a practical issue: we want to encourage people to learn English. That is the simple point. It is the same reason the U.S. Army has the policy, sir.

Chairman LEVIN. Thank you.  
Senator Warner.

Senator WARNER. Ms. Pack, traditionally financial managers have focused on looking at waste, fraud, and Government abuse operations. Recently greater emphasis has been placed on overseeing the financial aspects of regular operations of the military departments.

If confirmed, where do you anticipate you will focus your attention in overseeing the financial operations of the Department of the Army? What do you envision will be your greatest challenge in combatting the waste, fraud, and abuse that exists to some degree in all military departments, as it does throughout government and indeed the private sector? Every new administration, to their credit, initiates their own means to try and limit it. I think our distin-

gushed President and Secretary of Defense and his team are doing their very best, and you are going to join that team. I hope you will apply your efforts on this, because every dollar that is lost is a dollar that is deprived of the men and women in uniform in our Armed Forces.

Ms. PACK. Senator, I share your concern on that. I am not certain at this point where the challenges will lie, exactly, or what systems or approaches I might devise to correct this, but I am eager to do my part in this, and I will make this a priority, should I be confirmed.

Senator WARNER. In your previous distinguished record of achievements in the private sector I expect you have had some experience in trying to do that, have you not?

Ms. PACK. Absolutely, sir.

Senator WARNER. Based on that experience, hopefully you can bring it to bear on the problems that are extant in the Department of the Army.

Ms. PACK. I commit to bringing all of my experience to bear where needed, sir.

Senator WARNER. Thank you very much.

Mr. Schmitz, in the answers you provided to the committee to the advance policy questions you acknowledge confidence in the integrity of the Office of Inspector General. That office was shaken earlier this year by findings that falsified information had been included by DODIG employees in an agency peer review process of previously completed investigations. Are you familiar with that?

Mr. SCHMITZ. I am familiar with the allegations, yes, sir.

Senator WARNER. What steps will you take, if confirmed, to restore the integrity of the Office of Inspector General?

Mr. SCHMITZ. Senator Warner, I am not familiar with all of the facts underlying those allegations.

Senator WARNER. I would not expect you to be.

Mr. SCHMITZ. The first thing I would want to do, if confirmed, is to review exactly what has been done to ascertain what the facts are. I have read in the paper, and I understand that at least three of those individuals against whom the allegations were made have since resigned. I understand that there are another dozen or so that might have been implicated, so I would want to really do a thorough internal review to find out what the facts were, and then I would have to gauge how to move forward from there. I have indicated in my advance policy questions that would be a top priority, if I am confirmed, to get to the bottom of it.

Senator WARNER. I find that response very satisfactory, and I commend you for that approach, because I am concerned about it, and we on this committee are also.

Now, back to you, Ms. Pack. This is surprising, but it was brought out by a distinguished member of our committee in a hearing with the Secretary of Defense when he appeared before us sometime ago with regard to his qualifications to be Secretary of Defense, and his objectives. Our distinguished senior colleague, the President Pro Tempore of the Senate, Robert C. Byrd, asked a question about unaccounted funds that still have not been accounted for in the Department of Defense. Now, the Department of the Army, like various other DOD organizations, has been unable

to adequately account for financial expenditures and transactions in several key areas.

This is very troublesome to Congress as well as the public, and it is my hope that you will do your best to bring your expertise to address this issue. I wonder if you have had an opportunity to determine whether or not the problem of unaccounted funds expenditures can be attributed to obsolete or nonexistent financial accounting systems in the Department of the Army?

Ms. PACK. Senator, I have been receiving briefings from the Army, and my information is limited at this point, but it is my understanding that the underlying systems are a big factor in this problem. I am not prepared to express an opinion on this at this point, but this is something that definitely would be a priority, and something that definitely needs to be corrected. In addition, I would say that Secretary White has expressed to me his concern about this, and that this is a priority for him as well.

Senator WARNER. It is extremely important that you direct your immediate attention to trying to resolve that problem. My time is up. I will return for a second round.

Senator REED [presiding]. Thank you, Senator Warner.

Senator Lieberman.

Senator LIEBERMAN. Thank you, Mr. Chairman. Ms. Pack, Mr. Schmitz, thank you for your willingness to serve.

Let us pick up, Ms. Pack, on what Senator Warner was talking about. I was struck by the questions that Senator Byrd asked the Secretary as well, and it seems to me one of the main reasons that the Department has been unable to account for all funds. In fact, since the enactment of the Chief Financial Officer's Act which comes out of the Senate Governmental Affairs Committee, which I serve on and am privileged to chair, the Department has not produced a clean financial statement. As you would know from your prior experience, part of the problem is that the systems are antiquated and they do not talk to each other, and that problem is further compounded by the hundreds of so-called feeder systems within the Department which provide critical inputs. I appreciate your intention to focus in on this, and I hope you will feel free to return to us if you find that you do not have the necessary authority, particularly to address problems within those feeder systems that will affect your capacity to financially manage the Army so that it is up to the standards that I am sure you achieved in private practice.

I do have one question about a very different point. As you probably know, Congress and the administrations have always insisted on full funding of Department of Defense weapons systems, which means we put the full cost of a system in the budget at the time we decide to buy it, even though the costs are going to be incurred over a period of several years.

I wonder if you have had enough time to look at a matter like this to offer an opinion as to whether you think it might be feasible to go over to some sort of incremental system of funding procurement of new weapons systems.

Ms. PACK. Senator, there are various methods of budgeting, and there are tradeoffs with each of these, and I would say that this is something that is important, and that needs to be explored. How

it will be applied within this context I really could not say without more information, but it is something that I would certainly want to review, and I would definitely feel comfortable in reappearing or reporting back if I find that the resources are not adequate to do the job, should I be confirmed.

Senator LIEBERMAN. Fine. I hope you will feel that the lines of communication are open.

Interestingly the Inspectors General also come under my other committee, Mr. Schmitz, and so I have a real interest in them. I am proud of the work that they do, and I wanted to ask you generally for this Department, which is so large, what kinds of priorities would you bring to the position of Inspector General of the Department of Defense?

Mr. SCHMITZ. Senator Lieberman, I addressed the priorities in my response. I would be glad to elaborate.

Senator LIEBERMAN. Why don't you talk about it a little bit.

Mr. SCHMITZ. I would summarize real quickly. First and foremost, I believe we need to address generally the issue of integrity. In the scandal that Senator Warner mentioned, I sense there is a cloud over the office, and it goes to basic integrity. We need to address that, and we need to find out what caused this lapse, and we need to figure out how to avoid these types of lapses in the future.

The second is efficiency. The Inspector Generals are all about waste, fraud, and abuse. We want to try to avoid those inefficiencies.

Third is a priority that I have used in a leadership capacity over the years; it is reinforcing the facts that we take oaths to support the Constitution, we are officers of the Government, we are ultimately accountable to the people of the United States, and it is both a privilege and an obligation. I think it is useful to continuously remind our officials of that sacred obligation.

Senator LIEBERMAN. I appreciate your answer, obviously. I hope you will be relentless in pursuing your work. We are going to be faced with some real pressure to meet the needs of our military in the years ahead. To the extent you are able to advise us about efficiencies of achieving savings that we can apply more productively, we would welcome them.

My time is up, but I do want to note for the record my pleasure at seeing in your background that you once clerked for Hon. James L. Buckley, a distinguished citizen of the State of Connecticut, and a member of a great Connecticut family that had some small part to play in the fact that I am sitting in this seat. A brother of the judge's whose name I will not mention here formed a group called Buck PAC in my first election, which was composed by his own description. This was Bill Buckley, open for membership to anyone in Connecticut named Buckley. [Laughter.]

Thanks, Mr. Schmitz.

Senator REED. Thank you, Senator Lieberman.

Senator Allard.

Senator ALLARD. Mr. Chairman, thank you. First of all I want to compliment you and the chairman of the Armed Services Committee for moving ahead with both of these confirmations, because these are important positions. These are positions that will put together facts and information that we need to know if we are going

to be able to do our job, and so I am pleased you decided to move ahead.

It is these kinds of fundamental positions that I think we need to fill just as quickly as we possibly can, because it means we are going to have more accountability, and I would like to thank you, Mr. Schmitz and Ms. Pack, for being willing to serve in these positions. Because of their importance, I think to Congress at times they do get controversial, and I would ask you, Mr. Schmitz, have you ever heard of the Government Performance and Results Act?

Mr. SCHMITZ. Senator, I have not.

Senator ALLARD. This is one of the things that Congress has implemented and begun to apply to the agencies, and I would ask that you become familiar with it, because what we do is, we encourage the agencies to set measurable goals and objectives and to then report back to Congress. It seems to me that perhaps some of the issues you talked about in answering the questions here would help you in managing the Inspector General's Office. You are the eyes and ears of Congress, the U.S. House of Representatives as well as the Senate. We do depend a lot on information that you provide us, and many of us here feel that is an important management tool.

Then I would also ask Ms. Pack if she would share with us if she is familiar with the Government Performance and Results Act, and how she might apply that in her responsibilities.

Ms. PACK. Senator, I have been briefed on this a little bit, and it strikes me that this could be characterized as sound business practices, which is one of the priorities that Secretary White testified that he would be interested in achieving. I am not sure exactly how I would apply it here, but I can tell you that I do believe in establishing performance standards and then measuring performance against those standards.

Senator ALLARD. I would speak to both of you. What we are trying to do in the Government Performance and Results Act is put in measurable ways and your being an accountant, you know how to do that. There is the financial side and then there is the management side of how you do an audit and how you have accountability on that. The agencies have been rather reluctant to comply with this law, and there are very few that actually do. I think it is important as a Member of Congress, and I continue to push this. So you will probably hear from me from time to time to push these provisions because I think they are good common sense things.

Lots of business managers utilize them. Companies and the agencies just simply have been reluctant to try and apply it, and like you mentioned in your comment, just good, common business sense, and again I would hope that both of you take a good look at those provisions and do what you can to get it to apply to your agencies and encourage more widespread use of that throughout the military.

Again, there are really some special problems with that and how it applies. The military is going to require a lot of beyond-the-box thinking to get it to apply, but I think it can be made to apply, and I think for those of us who are strong supporters of the Defense Department and what your goals and objectives are, I would think it is one of the things that helps keep you out of trouble and makes

it easier for us to do our job on your behalf. I see my time has expired. Thank you.

Senator REED. Thank you very much, Senator Allard.

Senator CARNAHAN.

Senator CARNAHAN. Thank you, Mr. Chairman. I want to welcome our distinguished panel here today, and apologize somewhat for our temporary meeting space here, although there may be some benefit because the discomfort of the metal chairs may shorten the length of the questions.

The next Inspector General will assume this post at a very pivotal time in our history. He will have to assess the Pentagon during a time when we will be promoting a war on terrorism. What do you believe will be the most challenging issues that face the next Inspector General?

Mr. SCHMITZ. Senator, the Inspector General will have to face many of these same huge challenges the entire Department is facing in terms of transforming the United States Armed Forces into an organization that can combat enemies like terrorism, and that is a big transformation. That is not business as usual, and it requires thinking out-of-the-box, and it requires thoughtfulness and working together with this committee and with the leadership in the Pentagon to make sure we do it right.

Senator CARNAHAN. As the next Inspector General, you would be responsible for promoting economy and efficiency within the Department as far as programs and operations go. The Under Secretary of Defense for Acquisition, Technology, and Logistics greatly relies on the Inspector General's reports to make important acquisition decisions. Would you please describe your commitment to promoting acquisition reform, and what do you envision the Inspector General's role to be in supporting such initiatives?

Mr. SCHMITZ. Senator, I am aware of acquisition reform that is ongoing, and I have met with the Under Secretary. I frankly have not had a chance to get into the details of exactly what reform involves, but I certainly understand and am committed to the mission of the Inspector General's Office to promote efficiency in the Department, so I just have not had a chance to get into the interstices of the reform yet.

Senator CARNAHAN. One final question. In the event of an Inspector General investigation into alleged impropriety, I certainly believe that impartiality is very important. Would you discuss your commitment to such objectivity, especially in the cases that involve conflicting testimonies between victims and those that are accused of specific abuses?

Mr. SCHMITZ. I have been practicing law for 15 years, and I am used to dealing with conflicting testimony. I often have to gather facts, and I have to make my own judgments. That is part of what a practicing attorney does on a day-to-day basis. I have a lot of experience in that, and frankly the good attorneys are the ones that are best at making the judgments, of weighing the conflicting evidence and coming up with the best strategy and moving forward with a case.

I would anticipate utilizing my experience in that regard, and I am certainly committed to objectivity, and to what the Army likes to call the dogged pursuit of the truth.

Senator CARNAHAN. Very good. Thank you very much.

Senator REED. Thank you, Senator Carnahan.

Mr. Schmitz, when I was listening to your response to Senator Levin about the letter to the *Washington Times*, a question occurred to me. How did the *Washington Times* determine that you were a Lieutenant in the Navy Reserve?

Mr. SCHMITZ. Senator, I was a lieutenant commander at the time, and when I signed the letter I indicated underneath my typed name LCDR, USNR-R, and the R is what is required under the letter of the law to indicate that you are not on active duty. That is why I mentioned I was following the letter of the law. You are allowed to use your Reserve title. You just have to make it clear that you are not representing the opinion of the Naval Reserve.

Senator REED. You deliberately chose to identify yourself as a naval officer. You could have easily identified yourself as a lawyer, as a member of the firm, in a number of ways.

Mr. SCHMITZ. That is the lesson I learned, Senator.

Senator REED. What lesson?

Mr. SCHMITZ. Mea culpa. That is the lesson I learned. I would not use my title like that again. Even though I am permitted under the ethics regulations, I would not do it again.

Senator REED. So we can assume that if a lieutenant commander in the Naval Reserve wrote a letter disparaging President Bush, or an elected official of the United States, your conclusion would be that was inappropriate conduct for a naval officer, Reserve or active?

Mr. SCHMITZ. I would advise such a lieutenant commander not to do it, based on my own personal experience.

Senator REED. One of the difficult tasks of your proposed job, is, you have to do contradictory things. You have to have a rapport with the Secretary of Defense so that he trusts you as an advisor, but you also have to seek out information and investigate conditions which might be very embarrassing to the Department of Defense. I think you understand that, because you have experience. You have been trained.

You also have to have, as you suggested in your opening testimony, an image of integrity, commitment to the service not deflected by partisanship or personal motives, one that everyone in the Department of Defense, from the Secretary down to E-1, would feel confident to come and confide in you, and one of the aspects that Senator Levin talked about was your participation in this English only movement.

Now, I do not think we have to go over parsing what it does and what it does not represent, but it might suggest to many members in the military who are legitimately concerned about their status because their first language is not English, that you are not as sensitive to their concerns, or more sensitive to other concerns. That is something you are going to have to deal with as you go forward.

But once again, I think—and I am eliciting an affirmative response—that you see this tension of having the ear of the Secretary but also seeking out information is one that will challenge you a great deal. Can you comment on that?

Mr. SCHMITZ. Yes, Senator. I have been serving in the functional equivalent of an inspector general position for the last 2 years. Ac-

tually, my term just ended at the end of September. It is called the Deputy Senior Inspector only because in the Navy we do not have inspectors general going down that low, but on a number of occasions I have had to look into issues and report to the commander bad news. That comes with the territory. I am used to doing that. It is a difficult job to do sometimes, but that comes with the territory and I am prepared to do that.

Senator REED. Fine. Ms. Pack, you have an excellent financial and accounting management record extending over many years, but by your own admission, you know very little about the United States Army, which is an interesting world unto itself sometimes. What are you doing to rapidly get you up to speed to understand not only the jargon but the systems there?

Ms. PACK. Senator, thank you for asking that question. The Army has plans for getting me up to speed, and I have already been receiving briefings, and will continue to, should I be confirmed. That also includes taking trips to installations and visiting soldiers, and I assure you I will do everything I can to get myself educated as quickly as possible. It is important to me in doing any job to understand what the people are facing in performing their jobs and their duties, so this obviously will be a priority, and it will be something that I will continue throughout the job, should I be confirmed.

Senator REED. Thank you. Again, another point, I think, and it is obvious but I will make it anyway and that is, your experience of the last several years has been somewhat partisan in nature, with your involvement in active electoral politics, which is your right—in fact, one would argue, duty of a citizen.

You are going into a different world in which, particularly at this time where we are engaged in an all-out war against terrorists, where nonpartisan operation is the key, and I think you understand that.

Ms. PACK. Absolutely, Senator.

Senator REED. Thank you very much.

Senator WARNER.

Senator WARNER. Thank you, Mr. Chairman.

Mr. Schmitz, a question on the technicalities of this Reserve situation. Were you in a drill status, drawing pay at the time you wrote the letter, or an inactive status?

Mr. SCHMITZ. Inactive status.

Senator WARNER. I am quite familiar with that. I think that technical standpoint clarifies any question as to the legality of what you did.

Mr. SCHMITZ. It was not my drill weekend. I was on my free time.

Senator WARNER. You were not then, drawing drill pay intermittently, were you?

Mr. SCHMITZ. No. I was assigned to a unit at the time.

Senator WARNER. So you were drawing drill pay?

Mr. SCHMITZ. Yes, but I was not on my drill weekend.

Senator WARNER. But you were not in an inactive status. In other words, I served 12 years in the Reserves, many years ago. I was largely in an inactive status, subject to recall.

Mr. SCHMITZ. I was what they call Selected Reserves.

Senator WARNER. An interesting question by our colleague, Senator Lieberman. He is the chairman of the committee that has overall jurisdiction and oversight on the Inspectors General, and it is interesting, the statute establishing the Department of Defense Inspector General is unique in that it provides somewhat less independence to the Department of Defense Inspector General as compared to the statutory independence of other executive department Inspectors General.

I remember when this committee wrote the statute, some of the reasons for it, but in any event, in your opinion does the Department of Defense Inspector General possess the necessary statutory authority to carry out what is expected of an Inspector General, and would you like to take that question for the record? I would accept that response, because it is rather complicated.

Mr. SCHMITZ. It is a very complicated question, Senator, and I have been shown a binder about 4 inches thick about the debate over the distinction that you just mentioned.

Senator WARNER. I would ask that you commit to this committee that in the course of your duties, if you feel that the current statute is inadequate to fulfill the responsibilities of an Inspector General, that you would be forthcoming to the committee with a recommendation.

Mr. SCHMITZ. I can so commit.

[The information referred to follows:]

It would be premature for me to offer at this time any recommendations on statutory changes to the authorities of the Office of the Inspector General that might be necessary. If confirmed, I will commit to a thorough review of current statutes and will be forthcoming with this committee on any changes that I may recommend.

Senator WARNER. Now lastly, Mr. Schmitz, and I say this with a sense of humility, but I have been on this committee 23 years, and I spent 5 years in the Department, so that begins to add up to a little bit of experience, and I have been involved in hundreds of nomination proceedings while in the Department.

I have heard testimony from a great many nominees and have known the quality of each of them to serve in the Navy Department. I full well recognize, having lived the life myself for nearly three-quarters of a century, that as you go through life you have friends, enemies, family, and other persons with whom you have some degree of association whose conduct does not meet the standards that we in our society expect of people. There is in the public domain some information about persons with whom you have had some association.

I have examined that, and it is my conclusion that those particular cases have no relevance, in my judgment, to the nomination that comes before us in our advise and consent role. But we have a fiduciary duty not only to the members of the committee who may not be present here, but all 100 Senators. I would simply say that I am available to discuss with any Member of the United States Senate such questions as they may have about the material that is in the public domain, and that I will again express my opinion to them that it has no relevance to your nomination.

Mr. SCHMITZ. Thank you, Senator.

Senator WARNER. I just wanted to make that statement for the record.

By the way, I intend to support this nomination.

Senator REED. Thank you, Senator Warner.

Senator Sessions.

Senator SESSIONS. Thank you, Mr. Chairman.

Thank you for proceeding with this hearing, and I am sorry that unavoidable matters have kept me in another area of the Capitol. I would make a few remarks, and I suspect you are ready to conclude the hearing, to express my appreciation for both of these individuals, who are giving of themselves to serve their country.

I think it is exceedingly important, one of the hardest things we have to do around here is getting good information, good, honest data from which to make decisions. You would think it would be easy. I find it very difficult. People can misinterpret even good data, so it is a double problem there.

As a Federal prosecutor for a number of years, Mr. Schmitz, I would say to you that I hope you will remember and teach your agents that they serve the public, that they should feel no pressure or thought that they might embarrass the Department of Defense. If there is a problem it really ought to be aired. If somebody has done something illegal, it should be referred for prosecution, and I think sometimes that is not always done.

Most Inspectors General are really aggressive and try to do a good job, but sometimes matters that are criminal ought to be referred for criminal prosecution and not kept in-house. I know that is a delicate decision that you will have to make many times, whether the cases are worthy of prosecution, as opposed to just disciplinary action, or closing the books on them.

Mr. Chairman, I would say how much I appreciate your moving this. I believe it will be important to have these nominees confirmed and on board, and get the Defense Department humming, and I look forward to working with both of them.

Thank you.

Senator REED. Thank you, Senator Sessions.

There are no further questions. Thank you very much, Mr. Schmitz and Ms. Pack. The hearing is adjourned.

[Whereupon, at 4:28 p.m., the committee adjourned.]

[Prepared questions submitted to Joseph E. Schmitz by Chairman Levin prior to the hearing with answers supplied follow:]

*July 19, 2001.*

The Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

JOSEPH E. SCHMITZ.

cc:  
The Hon. John W. Warner,  
*Ranking Minority Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* More than a decade has passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I support the implementation of these reforms. It is my understanding that the focus on "jointness" outlined in the Defense Reorganization Act of 1986 has significantly enhanced the readiness and warfighting capabilities of the U.S. armed forces.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* It is my understanding that these reforms have fundamentally changed the way the Department of Defense works by strengthening civilian control of DOD, improving military advice given to the President and Secretary of Defense, and advancing the ability of the Department to carry out its fundamental mission—protecting America's security and furthering its vital interests.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of these defense reforms, as I understand them, are the clear responsibility and authority given the Combatant Commanders for mission accomplishment, and the increased attention to formulation of strategy and contingency planning.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility in the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I support the goals of Congress in enacting the Goldwater-Nichols legislation.

*Question.* Recently, there have been articles, which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I have not had the opportunity to review any proposed amendments to Goldwater-Nichols. I anticipate that the Department would consult closely with Congress, especially with this committee, before any modifications are suggested.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Inspector General of the Department of Defense?

*Answer.* The duties and functions of the Inspector General of the Department of Defense are specified in the Inspector General Act of 1978, as amended. It is my understanding that the Inspector General conducts and supervises audits and investigations of all aspects of Defense operations, and provides leadership, coordination, and policy for activities designed to promote sound management and combat fraud and abuse. I believe that the DOD Inspector General bears an obligation to keep both the Secretary of Defense and Congress fully and currently informed on significant problems in Defense programs, the need for corrective action, and the status of such action.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense would prescribe for you?

*Answer.* If I am confirmed, I expect that the Secretary of Defense will prescribe for me the full extent of the duties set forth in Section 8 of the Inspector General Act. In this regard, I look forward to the opportunity to serve as "the principal adviser to the Secretary of Defense for matters relating to the prevention and detection of waste, fraud, and abuse within the programs and operations of the Department."

*Question.* Section 2 of the Inspector General Act states that the purpose of that Act is to create “independent and objective units” to conduct and supervise audits and investigations, and for other purposes.

Are you committed to maintaining the independence of the Inspector General as set forth in the Inspector General statute?

*Answer.* I am fully committed to maintaining, if confirmed, the independence of the Inspector General as set forth in the Inspector General Act. I believe that individuals who conduct audits and investigations bear a heavy responsibility to maintain the highest standards of integrity, credibility, and fairness. To meet those standards, every audit and investigation must be independent, unbiased, and free from outside interference. Having relied on those principles throughout my careers as a naval officer and as an attorney, I am confident that, if confirmed, I will maintain the kind of independence called for by the statute.

*Question.* Section 3 of the Inspector General Act provides that the head of the agency (e.g., the Secretary of Defense) may not “prevent or prohibit the Inspector General from initiating, carrying out, or completing any audit or investigation, or from issuing any subpoena during the course of any audit or investigation,” subject to limited exceptions.

What is your view of the relationship between the Inspector General and the Secretary with regard to audits and investigations, in view of the independence provided by Section 3?

*Answer.* If confirmed, I would attempt to establish a strong and constructive working relationship with the Secretary and other senior officials without in any way compromising the independence and integrity of audits and investigations conducted by the Office of the Inspector General.

*Question.* Sections 4 and 8 of the Inspector General Act set forth a number of duties for the Inspector General, beyond the conduct of audits and investigations.

What is your view of the relationship between the Inspector General and the Secretary with regard to these issues?

*Answer.* If confirmed, I will strive to provide sound advice and assistance to management in improving departmental efficiency and performance and preventing fraud, waste, and abuse.

To be effective and productive, I believe that the relationship between the Inspector General and the Secretary must be based on respect, confidence, and trust. Obviously, those must be earned—in the case of the Inspector General, by a consistent track record of credibility, professionalism, and fairness in audits, inspections, and investigations. If confirmed, I would strive to maintain those standards in the Office of the Inspector General and to develop the kind of solid working relationship with the Department’s senior management that the statute envisions.

*Question.* Section 3 of the Inspector General Act provides for the Inspector General to have a demonstrated ability in accounting, financial analysis, law, management analysis, public administration, or investigations.

What background and experience do you possess that you believe qualifies you to perform the duties of the Inspector General?

*Answer.* The following information documents my qualifications and experience for this position:

(1) *Experience relevant to the position of Inspector General of the Department of Defense:*

(a) 27 years of naval service (4 years at Naval Academy, 5 years active duty as surface warfare officer, and 18 years as a reservist), most recently as Deputy Senior Inspector, a.k.a. “Inspector General,” for the Naval Reserve Intelligence Program (since October 1999), responsible for Command Inspections/Audits, Investigations, and Intelligence Oversight of more than 4,000 naval reservists nationwide:

- Acknowledged as one of only two Intelligence Oversight internet experts within the Department of Defense at the Secretary’s first-ever National Intelligence Oversight Conference in October 2000;
- Prepared a pocket edition of the Declaration of Independence and Constitution for the Naval Inspector General, with an introduction and excerpts from laws underlying the various constraints on governmental abuses of power within the Navy, especially those within the responsibility of the Inspector General: the laws against waste, fraud, abuse, Posse Comitatus Act, and Intelligence Oversight;
- Executive Officer of the Naval Criminal Investigative Service (NCIS) Headquarters Reserve Unit (October 1997–September 1999); Unit awarded the prestigious “O’Connell Award” for being the best overall large unit in the entire Naval Reserve Intelligence Program for fiscal year 1998;
- Executive Officer of Office of Naval Intelligence Counter-narcotic Reserve Unit (October 1995–September 1997); author of ONI’s first-ever comprehen-

sive analysis of legal and practical restrictions imposed by the Constitution, the Posse Comitatus Act, and Intelligence Oversight laws, on the utilization of naval reservist in support of local law enforcement efforts under the auspices of the High Intensity Drug Trafficking Area (HIDTA) program (work product still utilized as training “bible” for Department of Defense counter-narcotic reservists mobilizing to support local law enforcement efforts);

- Project supervisor and co-author of the Defense HUMINT Service’s “Intelligence Law Handbook” (DIA Doc. # CC-0000-181-95, September 1995), prepared by team of five reservist during annual active duty in DIA’s Office of the General Counsel (still cited as DIA’s authority on Intelligence Law);
- Joint Service Commendation Medal; Navy and Marine Corps Commendation Medal (twice); Joint Service Achievement Medal; Navy and Marine Corps Achievement Medal; Navy Expeditionary Medal; National Service Medal (twice); Military Outstanding Volunteer Service Medal; Naval Reserve Medal; Navy Expert Rifle Medal; Navy Expert Pistol Medal; Bundeswehrleistungsabzeichen (German Armed Forces Achievement Award); Deutsches Sportabzeichen (German Sport Award).

(b) Partner in major international law firm, with 14 years experience in complex litigation, including constitutional appellate litigation, whistleblower representation, and challenges to illegal actions by high-level government officials.

(c) Adjunct Professor of Law, Georgetown University Law Center (since 1995); developed and taught advanced Constitutional Law seminar—focusing on constraints on governmental abuses of power.

(d) Special Assistant to the Attorney General of United States, the Honorable Edwin Meese III (1987).

(e) Law Clerk to the Honorable James L. Buckley, Circuit Judge, United States Court of Appeals for the District of Columbia Circuit (1986–1987); analyzed and briefed complex cases for Federal judge.

(2) *Testimony/Publications Relevant to Duties of Inspector General of Department of Defense*:

(a) Testified as a constitutional expert before the:

- U.S. Senate Judiciary Committee at its Constitutional Subcommittee Hearing on a Proposed Constitutional Amendment to Prohibit Retroactive Taxation (August 4, 1994);
- U.S. Senate Governmental Affairs Committee at its Hearing on a Proposed Statutory Ban on Retroactive Taxation (December 7, 1995); and
- U.S. Senate Judiciary Committee at its Constitutional Subcommittee Hearing on a Proposed Constitutional Amendment to Prohibit Retroactive Taxation (April 15, 1996).

(b) Various published articles addressing issues of national security and accountability, including “Selling to Moscow Without Selling Out America,” *The Wall Street Journal* (Dec. 1989); and “Coping With the New Russian Nuclear Threat: A Legal Alternative to Environmental Extortion,” *Georgetown International Environmental Law Review* (1993).

*Question.* Do you believe that there are any steps that you need to take to enhance your expertise to perform these duties?

*Answer.* I believe that I have the requisite expertise to perform the duties of the Inspector General. If confirmed, I will of course undertake extensive briefings and reviews of ongoing Inspector General projects and activities.

*Question.* Based on your background and experience, are there any changes that you would recommend with respect to the organization or responsibilities of the Inspector General?

*Answer.* At this point it would be premature for me to recommend organizational changes without first having had the opportunity to become thoroughly familiar with the activities and operations of the Office of the Inspector General.

*Question.* Please describe your understanding of both the formal and informal relationships between the Inspector General and each of the following: the Comptroller General; the General Counsel for the Department of Defense; the Defense Contract Audit Agency; the Under Secretary of Defense for Acquisition, Technology, and Logistics; the Defense Acquisition Regulatory Council; the Director of Operational Test and Evaluation; the Inspectors General of the Military Departments; the Inspectors General of the Defense Agencies; the Criminal Investigative Organizations of the Military Departments; the General Counsels and Judge Advocates General of the Military Services; the Audit Agencies of the Military Departments; the General Counsels, and Judge Advocates General of the Military Services.

*Answer.* It is my belief that the Inspector General must work closely with the Comptroller General to ensure that Department of Defense audit activities are co-

ordinated with those of the General Accounting Office (GAO) to avoid unnecessary duplication of effort. Towards that end, the Inspector General and the Comptroller General exchange work plans, coordinate each new audit between the two organizations, provide audit results to each other, and share audit follow-up status information. It is my understanding that, under long-standing DOD procedures, the Inspector General is the central DOD focal point for processing all GAO project announcements and reports requiring DOD comments.

In addition, I understand that it is incumbent upon the DODIG, as specified in the Inspector General Act of 1978, to comply with standards established by the Comptroller General of the United States for audits of Federal establishments, organizations, programs, activities, and functions; that the DODIG must take appropriate steps to assure that any work performed by non-Federal auditors complies with the standards established by the Comptroller General; and that the DODIG must develop policy, evaluate program performance, and monitor actions taken by all components of the Department in response to contract audits, internal audits, internal review reports, and audits conducted by the Comptroller General of the United States.

It is my understanding that the Inspector General and General Counsel work closely together on matters related to proposed legislation and regulations, audit findings that raise legal issues, and departmental policies on subjects ranging from ethics to contracting procedures. I also understand that the Inspector General receives direct legal support from a Deputy General Counsel in the Office of the DOD General Counsel under the terms of a memorandum of understanding that is intended to safeguard the independence of the Deputy General Counsel. If confirmed, I will have an opportunity to observe whether any impediments to the Inspector General's independence actually exist and whether any changes to the current arrangement might be necessary.

It is my understanding that the Inspector General has the responsibility to provide policy direction and to conduct, supervise, and coordinate audits regarding departmental programs and operations. Given the scope of that authority, there is apparently frequent interaction between the Office of the Inspector General and the Defense Contract Audit Agency (DCAA), which is the largest DOD audit organization.

I also understand that, while DCAA reports to the Under Secretary of Defense (Comptroller), it operates under audit policies established by the Inspector General. As such, the Director of the DCAA, along with other Department Audit Chiefs, meets regularly with the Inspector General to discuss and coordinate audit activities. I understand that a significant portion of the Inspector General's audit oversight efforts is focused on the DCAA, and DCAA provides a significant amount of audit support to DOD Inspector General procurement fraud investigations.

It is my understanding that the Under Secretary of Defense for Acquisition, Technology, and Logistics is responsible for a very large segment of departmental operations and, as such, is a major recipient and user of services and reports provided by the Office of the Inspector General.

The Under Secretary's involvement would appear to be especially valuable to the Inspector General in audit planning efforts, particularly in the acquisition area. If confirmed, I will ensure that the Inspector General's audit and investigative coverage supports DOD acquisition and logistics reform efforts.

It is my understanding that the Defense Acquisition Regulatory Council formally requests comments from the Inspector General on all proposed rules. I also understand that the Inspector General has traditionally put considerable emphasis on review of those proposals. If confirmed, I would anticipate continuing that emphasis.

It is my understanding that the Director of Operational Test and Evaluation frequently requests audit coverage and is a principal user of many reports issued by the Office of the Inspector General. If confirmed, I would continue to support these cooperative efforts.

Pursuant to the Inspector General Act of 1978, as amended, the Inspector General of the Department of Defense has a duty to "give particular regard to the activities of the internal audit, inspection, and investigative units of the military departments with a view toward avoiding duplication and insuring effective coordination and cooperation," (§ 8(c)(9)), but the service secretaries retain operational control over all departmental audit and criminal investigative elements. Although it may seem that there would be extensively overlapping responsibilities between the Department of Defense Inspector General and the Military Department Inspectors General, I believe that there are distinct differences in their roles. The Military Department Inspectors General reportedly focus much more on force morale, welfare, and readiness issues. Their inspection programs are shaped by the priorities of their Services. It is my understanding that the Department of Defense Inspector General ex-

changes audit and inspection plans with the other Inspectors General to avoid duplication, and that the Department of Defense Inspector General occasionally leads joint reviews.

I also understand that Department of Defense directives governing other activities in which the Military Department Inspectors General participate also confer upon the DOD Inspector General both policy and oversight roles with respect to those activities. These include the Department of Defense Hotline, whistleblower reprisal investigations, and investigations against senior officials.

If confirmed, I plan to meet personally with the Military Department Inspectors General regularly to ensure that cooperation is optimized.

It is my understanding that the Inspectors General of the Defense Agencies report to their respective agency heads. However, in areas such as inspections, audits, and the operations of hotlines, they come under the policymaking authority of the Department of Defense Inspector General. I believe that their audit activities are more analogous to Defense Inspector General audits than to Military Department Inspector General inspections. Therefore there are more formal arrangements for joint audit planning, especially for the intelligence agencies. If confirmed, I will seek to provide leadership within this portion of the oversight community, too.

Statutorily, the Inspector General has the authority to initiate, conduct, and supervise criminal investigations relating to any and all programs and operations of the Department of Defense. Moreover, the Inspector General is statutorily authorized to develop policy, monitor and evaluate program performance, and provide guidance regarding all criminal investigative programs within the Department. In short, it is my understanding that the Inspector General directly interacts with the military criminal investigative organizations (MCIOs) in two broad areas: the conduct of criminal investigations in which there may be joint interest and the exercise of the Inspector General's policy and oversight role with regard to operations of the MCIOs. There appear to be many criminal investigations that impact primarily on the jurisdiction of a local commander and that are conducted by the appropriate MCIO or post military or security policy agency, while the Inspector General would be more heavily involved in investigations that affect major departmental programs or affect more than one military service. However, I believe that there are many criminal investigations, particularly in the fraud area, where there is joint interest and/or activity by both the Inspector General and the MCIOs and where close coordination of effort is required. If confirmed, I would work to maximize such cooperation.

Statutorily, the Inspector General has the responsibility to provide policy direction and to conduct, supervise, and coordinate audits relating to DOD programs and operations. Obviously, under that authority, the Inspector General would have occasion to work closely with the military audit agencies.

It is my understanding that the heads of the military audit organizations have been meeting at least quarterly with the DOD Deputy Inspector General to discuss ongoing issues, plans, and ways to better assist Department management. There are also several joint audit-planning groups that have been created to improve and coordinate planning. I believe that the auditors from the Office of the Inspector General and the military organizations frequently assist each other on specific projects, particularly those involving audits required by the Chief Financial Officers Act. If confirmed, I would continue the emphasis on close coordination and joint efforts. In addition, I would ensure that Defense audit policies provide a good foundation for top quality audit support to the Department.

It is my understanding that while there is no formal relationship between the Inspector General and the Military Department General Counsels and Judge Advocates General, on an informal level good working relationships have evolved on a case-by-case basis where there is some mutual interest. Moreover, I understand that attorneys assigned to the Office of the Inspector General occasionally seek assistance from these offices when an audit or investigation raises issues with which they may have some particular expertise.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Inspector General of the Department of Defense?

*Answer.* I believe that the new Inspector General of the Department of Defense will need to confront immediately a number of challenges. First and foremost, I am aware of the serious allegations that more than a dozen employees in the office of the Inspector General of the Department of Defense participated in or were aware of the destruction of internal work papers related to an audit and the preparation and backdating of a new set of work papers in an effort to improve the office's per-

formance in an external peer review. If confirmed, I will ensure that these allegations were fully investigated and will do whatever it takes as expeditiously as possible to restore full confidence in the integrity, reliability, and credibility of the Office of the Inspector General of the Department of Defense.

In addition, the Inspector General of the Department of Defense will need to confront the same major challenges facing both the Secretary of Defense and congressional leadership vis-a-vis transforming our Armed Forces to meet emerging 21st century threats, including recruitment and retention of the most qualified personnel, sound management of existing technical assets, and intelligent utilization of new technology. The entire Department of Defense is still transitioning into the post-Cold War era, where national security demands are different, information technology is driving management processes, and both the force structure and infrastructure need further adjustments. With hundreds of reform initiatives already under way and others likely, there is a compelling need for objective feedback to senior management on how well reforms are working and whether performance reporting is reliable. In addition, high risk areas like information system acquisition have received relatively little audit coverage during the 1990s, and there is a compelling need to strengthen protections against computer crime, health care fraud, and similar threats. I believe that the Inspector General must make very thoughtful allocations of limited resources among the many conflicting priorities, requirements, and requests that confront the office during this challenging period of transformation.

Finally, I feel that the Inspector General must be seen as both a guardian of enduring core values and an agent of reform, not a defender of overly complex and outmoded rules and processes.

Above all, I strongly believe that the Inspector General must be perceived as being completely independent, candid, and fair.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* Assuming I am confirmed, I would first endeavor to assess the extent and scope of the aforementioned allegations involving the external peer review. In this regard, I understand that another outside peer review has already been commissioned to identify deficiencies. I hope that this ongoing process will assist in the overall damage assessment. If confirmed, once I feel confident that any and all lingering problems have been accurately assessed, I will take whatever action is necessary to promptly remedy the deficiencies.

Regarding the broader challenges mentioned above, if confirmed, I anticipate working closely with both the Secretary of Defense and with the congressional leadership to ensure that the various policy recommendations that result from the ongoing Department of Defense reviews are implemented in a manner that is consistent with the letter and spirit of the policies and proscriptions underlying the Inspector General Act of 1978, as amended, including effective coordination and cooperation among the military departments.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Inspector General of the Department of Defense?

*Answer.* If confirmed, I will need carefully to review the functions and past performances of the Inspector General and the Office of the Inspector General in the Department of Defense. As noted above, I am aware of serious allegations regarding an external peer review. As mentioned above, if confirmed, I will ensure that these allegations were fully investigated.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* See my answer to question 3B above. Until I am able thoroughly to assess the problems, of course, I cannot establish a plan of action and time lines to address the problems. As mentioned above, if confirmed, once I feel confident that the problems have been thoroughly and accurately assessed, I will take whatever action is necessary promptly to remedy the deficiencies.

*Question.* What broad priorities will you establish in terms of issues, which must be addressed by the Inspector General?

*Answer.* If confirmed, I will endeavor to establish and address the following three broad priorities: (1) integrity; (2) efficiency; and (3) enthusiastic commitment to the core principles underlying our Constitution, foremost of which are the Rule of Law, various constraints on governmental abuses of power, including effective checks and balances, and ultimate accountability of public officials to "the People of the United States."

## SENIOR OFFICER INVESTIGATIONS

*Question.* The Office of Inspector General plays a key role in the investigation of allegations of misconduct by senior officers and civilian employees of the Department of Defense. The Senate Armed Services Committee has a particular interest in investigations concerning officers who are subject to Senate confirmation, and relies upon the Office of Inspector General to ensure that these investigations are accurate and complete.

If confirmed, what steps will you take to ensure that these investigations are conducted in a fair and impartial manner, and that complete and accurate information is provided to this committee in a timely manner?

*Answer.* If confirmed, I will continue to emphasize the Inspector General role of ensuring that allegations of misconduct involving senior DOD officials are properly addressed. Senior DOD officials are understandably held to the highest standards of conduct. Alleged violations of law or regulation must be investigated aggressively, competently, and impartially.

I believe that vigilant oversight of senior official investigations conducted by the Service Inspectors General, coupled with continual improvement in our own investigative capability, are the keys to maintaining excellence and credibility in this area. If confirmed, I will reemphasize the requirement that all allegations involving senior officials be reported to the DODIG within 5 days as required, and that a review of the nature of the allegations is conducted to ensure that the Service Inspector General possess the necessary independence to conduct an impartial inquiry. I will not hesitate to assume investigative jurisdiction where appropriate—particularly in cases where the subject of the allegations is a political appointee, where the subject outranks the Service Inspector General, or where allegations cross Service lines.

*Question.* If confirmed, what standard would you apply to allegations of misconduct against nominees for senior civilian and military positions requiring the advice and consent of the Senate in deciding whether and when to inform the committee of any such allegations?

*Answer.* If confirmed, I would anticipate continuing what I understand to be the current policy of reporting allegations of misconduct involving senior officials if those allegations are being addressed by an open investigation or inquiry. I would not anticipate reporting every allegation that the Office of the Inspector General of the Department of Defense might receive. I believe that the integrity of the nomination process and fairness to all concerned demands that we conduct a preliminary review of any incoming complaint against a nominated official to determine whether that complaint warrants investigation. Such a preliminary review would determine whether the allegation is credible, whether the alleged conduct violated an established standard, and whether the complaint provides sufficient information to enable a focused inquiry.

If confirmed, I will insist that such a preliminary review be completed expeditiously. If the preliminary review cannot be rapidly concluded, an investigation would be opened and the allegations would be reported to the committee.

My understanding is that the DODIG receives numerous allegations and complaints through a variety of sources, but that only a small percent of those allegations warrant investigation. I also understand that last year nearly 12,000 contacts were made with the DOD Hotline, but that only 2,000 of those contacts resulted in any type of investigative work.

*Question.* Do you believe that the current allocation of responsibilities between the Department of Defense Inspector General and the military departments is appropriate to ensure fair and impartial investigations?

*Answer.* I am unaware of any problems with the current allocation of responsibilities.

## AUTHORITIES OF THE INSPECTOR GENERAL'S OFFICE

*Question.* In recent years, the Office of Inspector General has sought increased authority to issue subpoenas, carry weapons, and make arrests.

Do you believe that the authorities of the Office of Inspector General are adequate in these areas, or would you recommend further changes in law?

*Answer.* It is my understanding that the current staff of the Office of the Inspector General considers the recently augmented authority to be adequate. I am not aware of any need for further changes in the law at this time. If confirmed, I will notify the Department and Congress if anything comes to my attention that would warrant legislative action.

## ACTIVITIES OF THE INSPECTOR GENERAL'S OFFICE

*Question.* In recent years, representatives of the Inspector General's Office have participated on integrated process teams and other cross-cutting groups established to address deficiencies and problem areas in the Department.

What role do you believe the Office of Inspector General should play in advising the Secretary and other officials in the Department on management issues such as acquisition policy and financial management policy?

*Answer.* I believe it makes good sense for the Department to avail itself of advice from the Office of the Inspector General throughout the cycle of devising policy, planning for implementation of that policy, deciding what performance measures will be used, analyzing feedback on implementation status, addressing impediments to implementation, evaluating results, and adjusting policies if necessary.

*Question.* Are you concerned that the participation of representatives of the Office of Inspector General in efforts of this kind could undermine the independence of the office?

*Answer.* It is my understanding that the Office of the Inspector General has participated in numerous task forces, IPTs, and similar groups without a significant question ever being raised concerning its role and independence. If confirmed, I would make sure that I was informed of these activities and that appropriate controls were in place.

*Question.* Do you believe that it would be appropriate for the Inspector General to conduct an audit or evaluation of a program which representatives of the Inspector General's office helped to design?

*Answer.* It is my understanding that the advice provided by representatives of the Inspector General generally relates to management controls and performance measures, both of which should be subject to periodic audit verification. As long as the Inspector General personnel do not have a vested interest in specific program outcomes, I see little reason for concern in their testing controls and validating performance reporting. As a practical matter, I further understand that it would be extremely rare for the same individuals to be involved in formulating controls and reporting procedures and then subsequently auditing them. If there were ever any appearance of a conflict of interest, however, I would ensure that different personnel were assigned to the audits.

*Question.* The performance of mandatory statutory duties, such as the performance of financial audits, has consumed a growing share of the resources of the Inspector General's office, crowding out other important audit priorities.

What is your view of the relative priority of financial audits, and the resources that should be devoted to such audits?

*Answer.* Under the Chief Financial Officers Act of 1990, the Inspector General of the Department of Defense has statutory responsibilities to audit the financial statements of the Department of Defense "in accordance with applicable generally accepted government auditing standards." 31 U.S.C. §3521(e). It is my understanding that, throughout the last decade, this requirement has resulted in about 30 percent of the Inspector General audit effort and a very large military department audit effort being devoted to a rather frustrating attempt to validate the Department's badly flawed year end statements. If confirmed, I will continuously review the priorities and resource allocation within the Defense audit program to maintain the best possible balance between the various competing requirements.

*Question.* Do you believe that resources currently directed to the audit of financial statements that are often described as unreliable would better be directed to other objectives?

*Answer.* It is my understanding that the Office of the Inspector General has been shifting resources from audits of financial statements to audits of the projects to improve the automated systems that compile financial reports. If confirmed, I would ensure that this trend continues.

*Question.* Do you see any need for legislative changes to give the Inspector General greater flexibility to target audit resources?

*Answer.* No. At the present time, I am unaware of any need for legislative changes on audit flexibility.

*Question.* Over the last 10 years, the Inspector General has gone from having one auditor for every \$500 million on contract by the Department of Defense to one auditor for every billion dollars on contract.

Do you believe that the Inspector General has resources it needs to conduct effective oversight over the Department's acquisition programs?

*Answer.* It is my understanding that the Office of the Inspector General has characterized internal audit coverage in the acquisition area as inadequate. If confirmed,

I would review the adequacy of auditing in acquisition and other management areas.

INTEGRITY OF THE INSPECTOR GENERAL'S OFFICE

*Question.* In the mid-1990s, the Office of Inspector General found it necessary to require the taping and transcribing of all interviews conducted during internal investigations by the Defense Criminal Investigative Service (DCIS) after a former DCIS official was shown to have falsified interviews in two separate investigations. Earlier this year, an internal review by the Office of Inspector General verified that more than a dozen employees in the office participated in or were aware of the destruction of internal work papers related to an audit and the preparation and back-dating of a new set of work papers in an effort to improve the office's performance in an external peer review.

Do you believe that these events have undermined confidence in the integrity of the Office of Inspector General?

Answer. See my answer to question #3 above.

*Question.* What steps would you take, if confirmed, to restore confidence in the integrity of the Office of Inspector General?

Answer. See my answer to question #3 above.

LEGAL ADVICE FOR THE DOD INSPECTOR GENERAL

*Question.* Under the DOD Inspector General's Organization and Functions Guide (Inspector General Guide 5105.1), the Deputy General Counsel (Inspector General) is a subordinate of the DOD General Counsel, but provides "independent and objective legal advice and counsel to the DOD Inspector General on all matters that relate to the programs, duties, functions, or responsibilities of the Inspector General."

What is your opinion about the DODIG's reliance on the DOD General Counsel for legal advice and counsel? Do you believe that it adversely affects independence of the Inspector General?

Answer. Please see my answer to question 2I regarding the relationships between the Inspector General and the DOD General Counsel.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Inspector General of the Department of Defense?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[The nomination reference of Joseph E. Schmitz follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
September 4, 2001.

*Ordered,* that the following nomination be referred sequentially to the Committee on Armed Services, and if and when reported, be further referred to the Committee on Governmental Affairs for not to exceed 20 days pursuant to an order of the Senate of January 5, 2001:

Joseph E. Schmitz, of Maryland, to be Inspector General, Department of Defense, vice Eleanor Hill.

[The biographical sketch of Joseph E. Schmitz, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF JOSEPH E. SCHMITZ

Joseph E. Schmitz is currently a partner with the firm of Patton Boggs LLP. Since 1987, he has been engaged in an aviation regulatory, international trade, legislative, administrative law, and constitutional appellate litigation practice. He has represented a wide array of clients located throughout the world, including commercial airlines and leasing companies, aircraft and automobile manufacturers and trade associations, shippers, and government entities.

Mr. Schmitz' law practice encompasses regulatory and enforcement matters in the Department of Transportation, the Federal Aviation Administration, and other federal regulatory arenas. He has also represented a variety of foreign and domestic entities involved in the emerging economies of Central and Eastern Europe, and individual claimants in federal agency personnel proceedings.

His 1989 article in the *Wall Street Journal*, "Selling to Moscow Without Selling Out America," reviewed regulatory hurdles associated with the first-ever licensing of commercially leased Boeing aircraft to a Warsaw Pact country. Mr. Schmitz has also published numerous articles, presented lectures, and testified as a constitutional expert before the U.S. Senate Judiciary Subcommittee on the Constitution, the U.S. Senate Governmental Affairs Committee, and the full U.S. Senate Judiciary Committee. He is an Adjunct Professor of Law at the Georgetown University Law Center, where he developed and has taught a seminar in advanced Constitutional Law.

Mr. Schmitz has had a long and distinguished 27-year career as both an active duty and reserve naval officer. During his active naval career, he served as an engineering division officer on board a gas turbine powered U.S. destroyer, as the Navigator of a German destroyer (as a participant in the Personnel Exchange Program), and as a Ship Superintendent in the Long Beach Naval Shipyard. Mr. Schmitz has also participated in exchange programs with the British Royal Navy and with the Japanese Maritime Self-Defense Force; and served as Liaison Officer with the Colombian and Mexican Navies during extended port calls. He still maintains German and limited Spanish language proficiency. Currently a Captain in the Naval Reserves, he is the Deputy Senior Inspector for the Naval Reserve Intelligence Program, responsible for Command Inspections/Audits, Investigations, and Intelligence Oversight of more than 4,000 Naval Reservists nationwide (a position he has held since October 1999).

He graduated with distinction from the U.S. Naval Academy in 1978, and received his J.D. degree from Stanford University in 1986. Mr. Schmitz serves on the Steering Committee of the Washington Lawyers Chapter of the Federalist Society for Law and Public Policy Studies, and is a Young Leader Alumnus of the American Council on Germany. In 1999, he was invested into the Sovereign Military Order of Malta.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Joseph E. Schmitz in connection with his nomination follows:]

1680

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Joseph E. Schmitz.

2. **Position to which nominated:**

Inspector General of the Department of Defense.

3. **Date of nomination:**

September 4, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

August 28, 1956; Milwaukee, Wisconsin.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Mollie Esther Davis of Tustin, California.

7. **Names and ages of children:**

Philip, 22; Joseph, 20; Nicholas, 18; Thomas, 17; Mollie, 13; Patrick, 11; Katherine, 9; and Matthias, 4.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

High School Diploma, Georgetown Preparatory School (1974); Bachelor of Science, with Distinction, United States Naval Academy (1978); Doctor of Jurisprudence, Stanford Law School (1986).

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Partner, PATTON BOGGS LLP (1996-present); Partner, BESOZZI, GAVIN, CRAVEN & SCHMITZ (1995-1996); Associate of Counsel, PAUL, HASTINGS, JANOFSKY & WALKER (1987-1995); Adjunct Professor of Law at Georgetown University Law Center (since 1995).

10. **Government experience:** List any advisory, consultative, honorary, or other part-time service or positions with Federal, State, or local governments, other than those listed above.

Special Assistant to the Attorney General of the United States, the Honorable Edwin Meese III (1987); Law Clerk to the Honorable James L. Buckley, Circuit Judge, U.S. Court of Appeals for the District of Columbia Circuit (1986-1987).

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

PATTON BOGGS LLP, partner; U.S. English, Inc., director; Global Security Net, Inc., director; Metrodream.com, Inc., director; Angelic Foundation, director and officer; Millennium Technology Group LLC, director.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

Member of the Bars of the District of Columbia (since 1989), Maryland (since 1995), and Pennsylvania (since 1988; currently inactive) (also admitted to practice law before: the Supreme Court of the United States; the United States Courts of Appeal for the District of Columbia, First, Third, Fifth, Sixth, Tenth, and Eleventh Circuits; the United States District Courts for the District of Columbia and Maryland; and the United States Court of International Trade); U.S. Naval Academy Alumni Association (1976–present); Federalist Society for Law and Public Policy Studies (1984 to present); Steering Committee of the Washington Lawyers Chapter (1987 to present); Knights of Columbus (1988–present); Church of the Little Flower Parish Council (1989–1994), Chairman (1993–1994); Kenwood Golf and Country Club (1993–present); Sovereign Military Order of the Temple of Jerusalem (1996–present); Sovereign Military Hospitaller Order of St. John of Jerusalem, of Rhodes, and of Malta (1999 to present); Reserve Officers Association (2000–present).

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Orrin Hatch Campaign (\$500; 2000); David McIntosh (\$500 est.); 1996 & 2000 (est.).

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Joint Service Commendation Medal; Navy and Marine Corps Commendation Medal (twice); Joint Service Achievement Medal; Navy and Marine Corps Achievement Medal; Navy Expeditionary Medal; National Service Medal (twice); Military Outstanding Volunteer Service Medal; Naval Reserve Medal; Navy Expert Rifle Medal; Navy Expert Pistol Medal; Bundeswehrleistungsabzeichen (German Armed Forces Achievement Award); Deutsches Sportabzeichen (German Sport Award).

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Legal Backgrounder, “Are Federal Consumption Tax Proposals Constitutional?” Washington Legal Foundation (“WLF”) (April 2, 1999); Article, “When the Commander in Chief Misleads, Who Follows? Or What Do We Tell the Troops Now, Commander?” *Congressional Record—Extension of Remarks* (October 9, 1998); Article, “The Forgotten Preamble: Introduction to the Bill of Rights Gives More Meaning to the Tenth Amendment,” FYI (American Legislative Exchange Council: April 1996); “Intelligence Law Handbook” (Defense HUMINT Service, September 1995); Presentation for Washington Legal Foundation Media Briefing—1994–1995 Supreme Court Term (June 27, 1995); Legal Opinion Letter, “States’ Power to Regulate Health Care Should Not Be Overlooked,” 4 WLF 5 (March 11, 1994); Op-Ed, “If Taxes Can Be Retroactive to 1993, Why Not to 1990?” *Los Angeles Times* (Feb. 28, 1994); Legal Backgrounder, “Quo Vadis (Wither Goest Thou) Taxation: In Futuro or Ex Post Facto?” 8 WLF 32 (Sept. 10, 1993); Article, “Coping With the New Russian Nuclear Threat: A Legal Alternative to Environmental Extortion,” *Georgetown International Environmental Law Review* (1993); Article, “Are Retroactive Tax Increases Constitutional?” 139 Cong. Rec. E1985 (daily ed. Aug. 4, 1993); Legal Backgrounder, “Federal Sin Tax Proposals: What’s the Federal Government Doing Regulating Health Care Anyway?” 8 WLF 25 (July 23, 1993); OP-ED, “Way to End Abortion Dilemma?: 10th Amendment Is Abortion Sleeper,” *National Law Journal* (March 15, 1993); Article, “East Meets West,” *Naval Institute Proceedings* (1992); Article, “Damn the Congressional Torpedoes: 1977 and 1978 Recapture the GI Bill,” *Shipmate* (October 1991); “Drive to Repeal Abortion Law Will Say Much About Our Societal Conscience,” *Catholic Standard* (April 25, 1991); Op-Ed, “Selling to Moscow Without Selling Out America,” *The Wall Street Journal* (December 1989); Special Supplement, “Federalism: Reconciling a ‘Human Life’ and ‘States’ Rights’ Approach to the Legal Protection of the Unborn,” *Human Life Review* (Spring 1989); *Mandate for Leadership* (Heritage Foundation 1988).

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

Testified as a constitutional expert before: the U.S. Senate Judiciary Committee at its Constitutional Subcommittee Hearing on a Proposed Constitutional Amendment to Prohibit Retroactive Taxation (August 4, 1994); the U.S. Senate Governmental Affairs Committee at its Hearing on a Proposed Statutory Ban on Retroactive Taxation (December 7, 1995); and the U.S. Senate Judiciary Committee at its Constitutional Subcommittee Hearing on a Proposed Constitutional Amendment to Prohibit Retroactive Taxation (April 15, 1996).

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee’s answers to Parts B–F are contained in the committee’s executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

JOSEPH E. SCHMITZ.

This 20th day of June, 2001.

[The nomination of Joseph E. Schmitz was reported to the Senate by Chairman Levin on December 20, 2001, with the recommendation that the nomination be confirmed. The nomination was then referred to the Committee on Governmental Affairs. The Committee on Governmental Affairs was discharged from further consideration of this nomination on February 11, 2002, and the nomination was placed on the Executive Calendar. The nomination was confirmed by the Senate on March 21, 2002.]

---

[Prepared questions submitted to Sandra L. Pack by Chairman Levin prior to the hearing with answers supplied follow:]

*October 18, 2001.*

The Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
United States Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: I enclose the answers to the advance questions asked of me by the Senate Armed Services Committee.

Sincerely,

SANDRA L. PACK.

cc:  
The Hon. John W. Warner,  
Ranking Minority Member.

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes, I fully support the enactment and objectives of the Goldwater-Nichols Act and Special Operations reforms.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. It appears that these reforms have resulted in significant improvements by defining the roles and responsibilities of the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, and the Service Secretaries. As a result, operational effectiveness has been improved. I do believe it is important to continue to evaluate and improve as we transform the Army.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. I believe that the key result was the strengthening of the effectiveness of military operations, which was accomplished by strengthening civilian control and better defining responsibilities.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes.

*Question.* Recently, there have been articles, which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. I am not aware of any current proposals to amend Goldwater-Nichols. It is too early for me to comment about any proposals without additional evaluation and insight.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Army for Financial Management?

Answer. If confirmed, I will be responsible for advising the Secretary of the Army on financial matters and directing all Comptroller and Financial Management functions and activities of the Department of the Army.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

Answer. I believe my background qualifies me to serve as Assistant Secretary of the Army (Financial Management and Comptroller). I have significant experience in financial management, to include certification as a public accountant, experience in private industry, and service as the Treasury Director of multiple presidential campaigns. If confirmed, I believe I would bring a solid foundation of experience and leadership and that I will be able to advise the Secretary of the Army and other Army leaders effectively on financial management matters.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Army for Financial Management?

Answer. Absolutely. Although I have a depth of knowledge in financial management and I am an experienced manager and leader, I am always looking to improve my skills and understanding. Once confirmed, I will need to gain a better understanding of many of the internal issues, structures, and processes of the Army and the Department of Defense. I look forward to learning about soldiers and how to acquire and manage resources to support them.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Army would prescribe for you?

Answer. If confirmed, I will be responsible to the Secretary of the Army for all financial management issues of the Department of the Army, in accordance with 10 U.S.C. §§ 3014(c) and 3016(b)(4).

*Question.* In carrying out your duties, how will you work with the Secretary of the Army, the Under Secretary of the Army, the Under Secretary of Defense (Comp-

troller), and the Assistant Secretaries of the Navy and the Air Force for Financial Management?

Answer. If confirmed, I would be part of a senior leadership and management team that works with a common direction and unity of purpose within the Army as well as across the Services and the Department of Defense.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant Secretary of the Army for Financial Management?

Answer. I am not fully aware of all the challenges. However, any Assistant Secretary of the Army for Financial Management will be challenged to improve financial management systems and processes, to include finance, accounting, budget, and feeder systems, to provide accurate, reliable, and timely financial information. We must develop consistent and executable budgets that support the priorities of the Secretary of Defense and the Secretary of the Army, under the guidance and direction of the President.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I will work closely with the Under Secretary of Defense (Comptroller) and our sister services, and the Army leadership team to achieve a unified approach to addressing challenges. I will make every effort to ensure that sufficient resources and financial management information are available to successfully address issues.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Army for Financial Management?

Answer. I am not aware of specific problems. However, I believe we need to provide reliable, accurate, and timely financial information to the Secretary of the Army and the Chief of Staff of the Army to enable them to allocate resources to properly train, man, and equip the Army.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. If confirmed, I will evaluate the specific issues and work with the Army Staff and Secretariat as well as DOD to establish timelines as appropriate.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues, which must be addressed by the Assistant Secretary of the Army for Financial Management?

Answer. If confirmed, I will work closely with Secretary White to define priorities, which I am sure will include improving the planning, programming, budgeting, and execution process. Another priority will be to modernize financial management systems and processes.

#### CIVILIAN AND MILITARY ROLES IN THE ARMY BUDGET PROCESS

*Question.* What is your understanding of the division of responsibility between the Assistant Secretary of the Army for Financial Management and the senior military officer responsible for budget matters in the Army's Financial Management and Comptroller office (the Deputy Assistant Secretary of the Army for Army Budget) in making program and budget decisions including the preparation of the Army Program Objective Memorandum, the annual budget submission, and the Future Years Defense Program?

Answer. My understanding stems from 10 U.S.C. §3014(c). As written, the Secretary of the Army has overall responsibility for financial management and comptroller functions. If confirmed as the Assistant Secretary of the Army (Financial Management and Comptroller), I will have responsibility for all budget matters within the Department of the Army. The senior military officer who serves as the Deputy Assistant Secretary of the Army for Army Budget will serve under my direct supervision and will be responsible to me for the formulation, justification, and execution of the Army budget. Additionally, if confirmed, I will have formal oversight responsibility for the Secretary for all financial aspects of the Program Objective Memorandum preparation and the Army portions of the annual President's budget submission, along with all the entries in the Future Years Defense Program (FYDP).

## FINANCIAL MANAGEMENT AND ACCOUNTABILITY

*Question.* DOD's financial management deficiencies have been the subject of many audit reports over the past 10 or more years. Despite numerous strategies and initiatives the Department and its components are undertaking to correct these deficiencies, problems with financial data continue.

What do you consider to be the top financial management issues to be addressed by the Department of the Army over the next 5 years?

*Answer.* I believe that the Department of the Army must improve financial management systems—budgetary and accounting—and processes so that the Army leadership has timely and reliable data on which to make business decisions regarding the allocation of resources near term and in the program years. This includes ensuring that the functional proponents' systems (e.g., property, logistics, real estate, personnel, environmental) are fully interfaced, and their data integrated, to present a complete resource picture for decision-makers.

*Question.* If confirmed, how do you plan to provide the needed leadership and commitment necessary to ensure results and improve financial management in the Army?

*Answer.* If confirmed, I intend to make the improvement of financial management in the Department of the Army, particularly in terms of the quality and timeliness of financial information, one of my priorities. I will work closely with Army leaders for their involvement and commitment to improve our financial management practices.

*Question.* What are the most important performance measurements you would use, if confirmed, to evaluate changes in the Army's financial operations to determine if its plans and initiatives are being implemented as intended and the anticipated results are being achieved?

*Answer.* If confirmed, I will enlist the support of the leadership of Department of the Army to establish logical, useful, and relevant performance measures. Efforts should be designed to achieve necessary auditing conditions, as well as provide accurate, reliable, and timely information for decision makers.

## COMPLIANCE WITH CHIEF FINANCIAL OFFICERS ACT

*Question.* The Chief Financial Officers Act requires the annual preparation and audit of financial statements for federal agencies. However, the DOD Inspector General and GAO's financial audit results have continually pointed out serious internal control weaknesses concerning hundreds of billions of dollars of material and equipment, as well as billions of dollars of errors in the Department's financial records.

In your view, is the Army capable of meeting the requirements imposed by the Chief Financial Officers Act? If not, please describe the actions you think are necessary to bring the Army into compliance and the extent to which such actions are the responsibility of the Assistant Secretary of the Army for Financial Management or other officials in the Department of the Army or the Department of Defense.

*Answer.* I understand the Army is not currently able to meet the requirements of the Chief Financial Officers Act. If confirmed, I will work with the Under Secretary of Defense (Comptroller) to ensure adequate funding and the right leadership emphasis and involvement.

## STANDARDIZATION WITHIN THE DEPARTMENT OF DEFENSE

*Question.* Many of the financial management initiatives currently underway within the Department of Defense are centrally controlled by the Office of the Secretary of Defense, and most observers believe that financial management and comptroller practices should be standardized throughout the Department of Defense to the maximum extent possible.

What role do you feel the military departments should have in the decision-making process when DOD-wide financial management decisions are made? What are your views on standardizing financial management systems (including hardware and software) and financial management practices across the Department of Defense?

*Answer.* I believe standardization promotes efficiencies. It is my understanding that the Under Secretary of Defense (Comptroller) has the lead with extensive Service involvement for achieving Department-wide solutions to financial management challenges. If confirmed, I will actively participate in and fully support this process.

*Question.* Are there areas where you believe the Army needs to maintain unique financial management systems?

*Answer.* I am not sufficiently acquainted with the Army's current systems, however, if confirmed, this is an area I will evaluate.

## RESPONSIBILITY FOR ACCURACY OF FINANCIAL DATA

*Question.* When the Department of Defense, through the Under Secretary of Defense (Comptroller) or the Defense Finance and Accounting Service, prepares financial or budget information for submission to the Office of Management and Budget or Congress, who is ultimately responsible for the accuracy of information concerning the Army?

*Answer.* If confirmed, I will be ultimately responsible for the accuracy of the data, with considerable support from the Defense Finance and Accounting Service, as well as the Army's functional proponents, who often initiate and develop the Army's financial data.

## FINANCIAL MANAGEMENT TRAINING

*Question.* In response to the Defense Acquisition Workforce Improvement Act of 1991, DOD has taken action directed at improving the professionalism of its acquisition workforce. This was brought about as a result of the need to better ensure that DOD's acquisition workforce was well versed in the rapidly changing technical skills needed to keep abreast of acquisition trends. A key part of the effort to upgrade the professionalism (technical currency) of DOD's acquisition workforce was the requirement that each acquisition official receive a minimum of 80 hours of continuous learning every 2 years. While DOD has stated that there should be a comparable goal for financial management personnel, DOD has not made such training a requirement because of uncertainties over whether necessary funding would be available.

What are your views on the merits of establishing a requirement that all Army financial management personnel receive a minimum of 80 hours of training every 2 years?

*Answer.* I am a strong supporter of continuing education and maintaining a high level of technical and professional proficiency and currency.

*Question.* If confirmed, what actions would you take to ensure that the Army's financial management personnel keep abreast of emerging technologies and developments in financial management?

*Answer.* If confirmed, I will make part of my strategic plan hiring, training, mentoring, and retaining a professional and skilled financial management workforce that is encouraged and rewarded for the pursuit of excellence and currency in financial management technologies and practices. I will work closely with the Under Secretary of Defense (Comptroller) and the Secretary of the Army to accomplish this goal.

## PLANNING, PROGRAMMING, AND BUDGETING SYSTEM (PPBS)

*Question.* Recently, a commission which included a number of former Defense officials and former Comptroller General Charles Bowsher stated that the Department's Planning, Programming, and Budgeting System (PPBS) is no longer functioning effectively. The Quadrennial Defense Review stated that the Department of Defense plans to study a redesign of the PPBS process.

What are your views on the PPBS process? Are there any changes that you would recommend?

*Answer.* As specified by Army General Order, the Assistant Secretary for Financial Management and Comptroller is responsible for overall management of the PPBS system. If confirmed, I will personally participate in any PPBS reviews, to achieve the desired outcomes that include streamlining the process, improving the quality of PPBS products, and strengthening analytical reviews so that we budget in the same manner that we execute.

## GOVERNMENT PERFORMANCE AND RESULTS ACT (GPRA)

*Question.* If confirmed as the Assistant Secretary of the Army for Financial Management, what would your responsibilities be with respect to the requirements of the GPRA to set specific performance goals and measure progress toward meeting them?

*Answer.* Both the Secretary of the Army and the Secretary of Defense have stated they believe the Department should operate more like a business. To do so requires the establishment of performance-based measures and metrics. If confirmed, I will support this effort.

*Question.* What additional steps can the Army take to fulfill the goals of the GPRA to link budget inputs to measurable performance outputs?

Answer. If confirmed, it is my intent to support the development of meaningful performance metrics and integrate them into the budgeting and decision making process.

#### INCREMENTAL FUNDING

*Question.* In your view, what are the likely benefits or advantages of incremental funding of major weapons systems?

What are the likely costs or disadvantages of such funding?

How do you weigh these competing costs and benefits, and what approach do you believe the Army should take toward incremental funding of major weapons systems?

Answer. It is my understanding there are several approaches for funding major weapons systems. There is incremental funding and full funding. There is the use of single-year and multi-year contracts. If confirmed, I will evaluate the advantages and disadvantages of each and make the appropriate recommendations to the Secretary of the Army.

#### SAVINGS FROM COMPETITION

*Question.* The Army and the other military departments have substantially increased the number of public-private competitions in recent years in order to achieve greater efficiency and effectiveness while reducing costs. Studies have shown that the military departments save money regardless of which side wins the competition.

Do you believe that decisions on whether to outsource work currently performed by government civilians should be made through public-private competition?

Answer. I understand that the public-private competitions have been successful in generating savings and efficiencies. If confirmed, I will work with the Department of Defense and the Department of the Army staff to evaluate the effectiveness of public-private competitions.

*Question.* What steps should the Army undertake to measure the actual savings achieved after such competitions?

Answer. I believe independent cost evaluations are important both prior and subsequent to the competition. The Army should measure savings and also cost estimates for future competitions.

*Question.* What are your views on the practice of including "funding wedges" in the budget that anticipate savings from public-private competition or other efficiencies prior to those savings actually being achieved?

Answer. Funding wedges can be harmful if decisions are delayed, not implemented, or the predicted savings do not materialize. That is why it is important to establish sound policy controls and accurate cost estimates to predict outcomes.

#### WORKING CAPITAL FUNDS

*Question.* Are there any changes you would recommend in the policies governing working capital funds in the Department of the Army?

Answer. I am not currently familiar enough with the Army Working Capital Fund to recommend any policy changes. Based on my understanding of revolving or working capital funds, the Army Working Capital Fund would be an integral part of the Army financial management systems, and important in providing accurate, timely, and reliable financial information.

*Question.* Do you believe the scope of activities funded through working capital funds should be increased or decreased?

Answer. If confirmed, I will review the scope of activities and propose any changes to the scope of activities if warranted.

#### OVERSIGHT OF SPECIAL ACCESS PROGRAMS

*Question.* If confirmed as the Assistant Secretary of the Army for Financial Management, will you be responsible for the financial management of special access programs in the Army?

Answer. If confirmed, I understand I will have responsibility for the financial management of all special access programs in the Army.

*Question.* Are you satisfied with the oversight standards for the financial management of special access programs? Are these standards as stringent as those for other programs?

Answer. I understand the oversight standards for the financial management of special access programs are as stringent as those for other programs, but I am not

yet fully aware of these standards and how they are enforced. If confirmed, I will ensure such standards are carefully and fully applied to these important programs.

*Question.* Does the Office of the Assistant Secretary of the Army for Financial Management have sufficient cleared personnel and authority to review special access programs?

*Answer.* I have seen that the Office of the Assistant Secretary of the Army (Financial Management and Comptroller) has an office dedicated to the financial management of Army special access programs. However, I am not currently aware of the numbers or sufficiency of the cleared personnel. If confirmed, I will ensure that there are a sufficient number of trained personnel with appropriate clearances to guarantee appropriate financial oversight.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant Secretary of the Army for Financial Management?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[The nomination reference of Sandra L. Pack follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*October 10, 2001.*

*Ordered,* that the following nomination be referred to the Committee on Armed Services:

Sandra L. Pack, of Maryland, to be an Assistant Secretary of the Army, vice Helen Thomas McCoy.

---

[The biographical sketch of Sandra L. Pack, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF SANDRA L. PACK

Sandra Pack, nominated by the President to be Assistant Secretary of the Army for Financial Management, is a certified public accountant. Since 1996, she has been a financial consultant to a number of political committees. In March 1999, Ms. Pack became Director of Treasury for the President's campaign and devised and managed the budgeting, accounting, and financial planning systems for the primary and general campaigns, including ensuring that the campaigns complied with federal election laws. Since the election, Ms. Pack has managed the campaign's post-election FEC audit. Ms. Pack also served as Director of Treasury for Senator Phil Gramm's presidential campaign from 1995 to 1997, and Deputy Director of Treasury for Senator Bob Dole's presidential campaign in 1996.

In the private sector, Ms. Pack was Director for Planning and Operations for the MicroProse Division of Spectrum Holobyte, Inc., in Hunt Valley, Maryland, from 1994 to 1995, where she restructured functions affecting finance, planning, accounting, operations, information systems, and facilities maintenance. She was employed for 12 years by Ernst & Young, where she provided innovative and value-added consulting and accounting services to owner-managed businesses in a broad range of industries. While employed at Ernst & Young, she served as Director for Microcomputer Consulting and Accounting Services in Atlanta, Georgia, from 1982 to

1987, and Director for Small Business Consulting and Accounting Services in Baltimore, Maryland, from 1987 to 1994.

Ms. Pack was awarded the degree of Bachelor of Arts in Business from the Notre Dame College of Maryland in Baltimore, where she graduated *Summa Cum Laude*, and received the Nancy Schloss Award for being the outstanding business student in her class. The Atlanta Chamber of Commerce has also recognized Ms. Pack by naming her to its Women of Achievement.

Ms. Pack's husband, Randall, received a naval commission in 1961, served on a destroyer in the Cuban Missile Blockade, and as head of the Engineering Department on two nuclear submarines. He has advanced degrees in Nuclear Engineering and Computer Science, and recently retired as Chief Engineer, Information Technologies, from RWD Technologies, Inc. of Columbia, Maryland.

Ms. Pack's daughter, Amelia Humphries, 34, resides in Atlanta, GA, and is employed by J. Walter Thompson, an advertising and communications company.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Sandra L. Pack in connection with her nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Sandra L. Pack.

2. **Position to which nominated:**  
Assistant Secretary of the Army for Financial Management and Comptroller.

3. **Date of nomination:**  
October 10, 2001.

4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
September 22, 1948; Denver, CO.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Randall Pack.

7. **Names and ages of children:**  
Amelia Anne Humphries; 34.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

Notre Dame College of Maryland—BA Business, August 1990.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

Please refer to enclosed resume.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Major clients of Sandra L. Pack, CPA, LLC over the past 5 years: Bush for President, Inc.—Chairman: Donald Evans (1999); Dole for President, Inc. (1996–1997); Gramm for President, Inc. (1996–1997); American Dream Political Action Committee—Chairman: Henry Bonilla (1997–present); Cardinal Health, Inc. Political Action Committee (1998–1999); Republican Leadership Council, Inc.—Chairman: Lewis M. Eisenberg (1997–present); Foundation for Responsible Government, Inc.—Chairman: Lewis M. Eisenberg (1997–present); Kasich 2000—Kasich Presidential Exploratory Committee (1999); Pioneer PAC—Kasich Leadership PAC (1998–1999).

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

The Maryland State Board of Accountancy since 1991; the American Institute of Certified Public Accountants since 1991; the Summit County Historical Society since 1997; Bill's Ranch Neighborhood Association, Frisco, CO, since 1997; Frisco Historical Society since 1997.

Volunteer work: Defenders of Miner's Creek, Frisco, CO—501(c)(3) organization—since 1997.

13. **Political affiliations and activities:** Republican.

14. List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

15. List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Bush-Cheney 2000, Inc.—Director of Treasury; Bush for President, Inc.—Director of Treasury; Kasich 2000, Inc.—Consultant; Dole for President, Inc.—Deputy Director of Treasury; Gramm for President, Inc.—Director of Treasury.

16. Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

Bush for President, Inc.—\$1,000; Friends of Phil Gramm—\$1,000; National Republican Senatorial Committee—\$110.

17. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Graduated Summa cum Laude and received the Nancy Schloss Award for Outstanding Business Student Notre Dame College.

18. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

19. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

20. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth

in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

SANDRA L. PARK.

This 12th day of October, 2001.

[The nomination of Sandra L. Pack was reported to the Senate by Chairman Levin on November 8, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on November 8, 2001.]

**NOMINATIONS OF R.L. BROWNLEE TO BE  
UNDER SECRETARY OF THE ARMY; DR.  
DALE KLEIN TO BE ASSISTANT TO THE SEC-  
RETARY OF DEFENSE FOR NUCLEAR AND  
CHEMICAL AND BIOLOGICAL DEFENSE PRO-  
GRAMS; AND PETER B. TEETS TO BE UNDER  
SECRETARY OF THE AIR FORCE**

---

**THURSDAY, NOVEMBER 8, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:35 a.m. in room SR-222, Russell Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Reed, Akaka, Bill Nelson, Bingaman, Warner, Thurmond, Inhofe, Allard, Sessions, and Bunning.

Committee staff member present: David S. Lyles, staff director.

Majority staff members present: Daniel J. Cox, Jr., professional staff member; Madelyn R. Creedon, counsel; Richard D. DeBobes, counsel; Evelyn N. Farkas, professional staff member; Creighton Greene, professional staff member; and Peter K. Levine, general counsel.

Minority staff members present: Charles W. Alsup, professional staff member; Judith A. Ansley, deputy staff director for the minority; L. David Cherington, minority counsel; Edward H. Edens IV, professional staff member; William C. Greenwalt, professional staff member; Gary M. Hall, professional staff member; Mary Alice A. Hayward, professional staff member; George W. Lauffer, professional staff member; Patricia L. Lewis, professional staff member; Thomas L. MacKenzie, professional staff member; Ann M. Mittermeyer, minority counsel; Suzanne K.L. Ross, research assistant; Joseph T. Sixeas, professional staff member; Cord A. Sterling, professional staff member; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Dara R. Alpert, Gabriella Eisen, and Daniel K. Goldsmith.

Committee members' assistants present: Menda S. Fife, assistant to Senator Kennedy; William Bonvillian, assistant to Senator Lieberman; Elizabeth King, assistant to Senator Reed; Davelyn Noelani Kalipi, assistant to Senator Akaka; William K. Sutey, assistant to Senator Bill Nelson; Neal Orringer, assistant to Senator

Carnahan; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Douglas Flanders, assistant to Senator Allard; James P. Dohoney, Jr., assistant to Senator Hutchinson; and Derek Maurer, assistant to Senator Bunning.

**OPENING STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Good morning, everybody. The committee meets today to consider the nominations of three individuals for senior positions in the Department of Defense: our own Les Brownlee to be Under Secretary of the Army; Dr. Dale Klein to be Assistant to the Secretary of Defense for Nuclear and Chemical and Biological Defense Programs; and Peter Teets to be Under Secretary of the Air Force. On behalf of the entire committee, I want to welcome each of you and your families. We have a tradition of asking nominees to introduce family members who are present, and we will ask each of them, as they open with their opening statement, to do that for all of us.

We want to thank the family members who are here today for the sacrifices that they will be asked to make. These nominees simply cannot serve in their positions without the support of family and friends, so we want to thank families for their service to this Nation as well.

This is a special day for this committee. One of our own staff members has been nominated to a senior position in the executive branch. Les Brownlee has been nominated by the President to serve as Under Secretary of the Army, and it is no surprise to any member of this committee. He has served with distinction on Senator Warner's staff, on the staff of the committee for the past 18 years. He has been Staff Director under two chairmen for 4 years, including Senator Thurmond, who is now joining us and who was distinguished chairman of this committee, and then Senator Warner.

Prior to joining the committee staff, Les Brownlee had a distinguished career in the Army. He served two terms in Vietnam. He won the Silver Star with Oak Leaf Cluster, the Bronze Star with two Oak Leaf Clusters, and the Purple Heart.

From the first day that Les served on this committee's staff until this moment, Les has always been guided by what he thought was in the best interests of the Nation's security, the best interest of the men and women of the Armed Forces, and in the best interests of this committee. Every member of this committee has benefitted from Les' judgment and advice over the years. We are all proud of what he has done for this committee and what he will do in his new position for the Army that he loves so much.

You may have noted that I am presuming the outcome of this nomination process. Les is not allowed to do that, and I know he follows the rules and will not so presume, but I think it is safe to say that each member of this committee is very proud of what you have done, of the fact that you have now been given this nomination. We are delighted that the President has seen fit to nominate you.

Dr. Klein, the second of our nominees, is the vice chancellor for special engineering programs and professor of mechanical engineer-

ing at the University of Texas. He has served at the University of Texas for 25 years. He is chairman and executive director of the Amarillo National Research Center, and has served on several Department of Energy committees, including the Nuclear Energy Research Advisory Committee. If confirmed as the Assistant Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs, Dr. Klein would be the principal advisor to the Secretary of Defense for all matters concerning the formulation of policy and plans for nuclear, chemical, and biological weapons.

I am going to take the liberty of the chair, however, to interrupt this procedure, because I want Senator Warner to have a very special moment here in introducing Les, and then perhaps to rejoin me while I comment on the other two nominees. I also know that Senator Thurmond is only able to stay with us for just a moment.

Senator WARNER. May I suggest Senator Thurmond follow you?

Chairman LEVIN. I would call first on Senator Thurmond to make comments, then I would like to call on Senator Warner to make his special introduction. Then perhaps Senator Warner can come and rejoin me as we make the other introductions.

Senator Thurmond.

#### STATEMENT OF SENATOR STROM THURMOND

Senator THURMOND. Thank you, Mr. Chairman.

Mr. Chairman, today is a special day for the Armed Services Committee. We are considering the nomination of Les Brownlee, the committee's Republican Staff Director, to be the Under Secretary of the Army.

In his more than 14 years on the Armed Services Committee staff he has become an institution. I am especially pleased with his nomination, since Les served as the Staff Director during my tenure as the chairman of the Armed Services Committee. I know that he is a professional in every aspect, and that he will have a lasting impact on the Army, as he has had on this committee. The committee will miss his expertise, and I understand the committee staff will miss the candy dish he kept in his office.

Les, the committee's loss will be our soldiers' gain. We wish you success, and hope you will never forget your roots here on the Armed Services Committee.

Dr. Klein and Mr. Teets, the fact that I spoke at length on Mr. Brownlee's nomination does not in any way diminish the importance of your nominations to the important positions for which you are being considered. In my judgment, President Bush has selected two highly qualified and professional individuals to fill the positions as assistant to the Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs, and Under Secretary of the Air Force. I support your nominations, and wish you success as you become members of the Department of Defense's team that does such a superb job in providing for the security of our Nation.

Mr. Chairman, I would also like to extend my congratulations to the nominees' family members who are here today. They deserve credit for the success of their loved ones and will have an important supporting role as each nominee takes on the challenges of their new positions.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you very much, Senator Thurmond. I know how significant your words and your presence are to each of our nominees, and particularly to Les Brownlee.

Now I am going to call upon Senator Warner for his special introduction.

Senator Warner.

#### STATEMENT OF SENATOR JOHN WARNER

Senator WARNER. Thank you, Mr. Chairman and members of the committee. I very much appreciate this opportunity. I must tell you that today is a very moving day for me. Mr. Chairman, you and I have been privileged to serve on this committee for 23 years. There are days we shall never forget, and this is one for me.

Thirty two years ago I sat right where I am sitting now before this committee to take on a job which by title is the same that you will take. However, I came up through a political system. Colonel Brownlee came up purely on the basis of merit and achievement, his record of service in uniform far more distinguished than mine, his record of knowledge about the Department of the Army more distinguished. Little did I know that I would stay 5 years, 4 months in those positions, and I hope you can do the same, if you can live that long. [Laughter.]

It is a tough job, but I look back on it, Mr. Chairman, with all due respect to the United States Senate, as perhaps the most exciting and challenging chapter of my life. A war was raging in Vietnam, where you, Colonel Brownlee, were a young soldier. I was a civilian at that time. We had a mission to fulfill, and history will record how well each of us did. A war is now raging, perhaps not of proportions to that in Vietnam, but no less serious as it regards the credibility of the United States of America and the cause of freedom. I know of no more qualified individual that our President could find to take on this job than Les Brownlee.

Those of us who are privileged to serve here in the Senate have the opportunity to recommend to Presidents individuals to take these positions. I was privileged to recommend Les, and I think several other members of this committee joined—I know you did, Mr. Chairman—in making that recommendation. I think each one of us in our hearts knows that this man is more than eminently qualified, and that he will leave this room to be confirmed by the Senate and take on these awesome responsibilities.

I reflect on other staff members on both sides of the aisle now in this room and those who have gone before, who likewise have served this committee and served it admirably, and have gone on to presidential appointments and fulfill those positions with great distinction. It is a credit to the system that we have here in the Senate that we are fortunate to get the services of eminently qualified people to serve on our staffs, people who could earn more, have a better lifestyle beyond the halls of the Senate, but who, like ourselves, share the heavy responsibilities and other burdens of the Senate to do a job in public service.

That is Les Brownlee. He and I have had a very close, personal relationship. We have traveled the world together on behalf of this committee. There are times when we have vigorously disagreed on subjects, at which time we would go into my office. We have a little

ritual, he takes off his colonel's insignia and I take off the U.S. Senate insignia, and we have at it. Oftentimes Judy Ansley, who will succeed him, has to arbitrate. Nevertheless, we have had a marvelous relationship in which he has given me the unvarnished truth and advice, and that he will give the Secretary of the Army, the Secretary of Defense, and indeed, the President.

So we wish him well, and guess what, Colonel Brownlee, you are on your own.

I should say a word about his family, who is here, but I will leave that to Les.

Chairman LEVIN. Thank you, Senator Warner, for that extraordinarily moving introduction. I know how meaningful those words are to Les Brownlee, as they are to each one of us—a very emotional moment, I know for you, Les. In recommending you, Senator Warner is making a major contribution again to this Nation, because we will lose you. His words again have rung true for all of us.

There is only one condition. I usually do not condition my support for nominees, because I do not like to link things that are unrelated. There is one condition, however, that my support really depends on, and that is that you leave that candy jar here. [Laughter.]

I will introduce the third nominee, then I am going to call on Senator Hutchison for her introduction. This is a little disjointed, Senator Hutchison. You will forgive us for this.

Peter Teets served as president and chief operating officer of Lockheed Martin Corporation from 1997 to 1999. He previously served as president and chief operating officer of the Lockheed Martin's Information and Services Sector, and prior to their merger, as president of Martin Marietta Space Group, where he had served for more than two decades. If confirmed as the Under Secretary of the Air Force Mr. Teets would, in effect, be the chief operating officer for the Air Force.

Let me see if Senator Warner has any further opening statement and then I will ask that Senator Kennedy's statement be inserted for the record after his remarks.

Senator WARNER. I will put my statement in the record along with the statements of Senator Smith and Senator Santorum. We have a number of things to get done here in a relatively short period of time.

[The prepared statements of Senators Kennedy, Warner, Smith, and Santorum follow:]

PREPARED STATEMENT BY SENATOR EDWARD M. KENNEDY

Thank you, Mr. Chairman. It is a privilege to join in welcoming Les Brownlee, Dale Klein, and Peter Teets to the committee as we consider their nominations to key positions within the Department of Defense.

I commend each of the nominees before us today, but I want to add a special word about Les Brownlee, the nominee for Under Secretary of the Army. The committee knows him very well, and he has been invaluable to all of us during his long service on the committee staff and as Committee Staff Director. His dedication to our men and women in uniform is well-known to members of the committee. In fact, it was Les who worked so effectively to establish the Soldier/Marine Enhancement Program, which helped to equip our servicemen and women with the most modern and versatile clothing available. We know he'll do an equally outstanding job as Under Secretary of the Army.

All of these nominees will have important duties and responsibilities in the Department of Defense. They will be in charge of many policies affecting the men and women of the Armed Forces, and play key parts in strengthening our national defense to meet current and future threats at home and abroad.

In addition to the ongoing war on terrorism, there are many other important issues facing today's service men and women, including pay, benefits, housing and retention. Especially at this difficult time, we need to do all we can to see that these needs are fully and fairly met. Our personnel continue to be our number one defense resource. I'm sure that these nominees will work effectively to meet their needs, and to carry out their operational responsibilities as part of the Nation's defense.

Again, I welcome our nominees, and I look forward to their testimony.

---

PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in extending a warm welcome to our distinguished nominees and their families. I thank you all for your willingness to serve at this challenging and demanding time in our Nation's history.

Mr. Chairman, this is a very special occasion for me as I am privileged to finally "introduce" my adviser and friend of many years, Les Brownlee, to this committee.

Les Brownlee can only be described as a tower of strength, dedication, and expertise within the Committee on Armed Services. After a highly distinguished career in the Army from 1962 to 1984, including two combat tours in Vietnam, Les joined my staff on December 30, 1983, as my National Security Advisor. He moved to the staff of the committee in January 1987, and, since that time has rendered extraordinary service to the committee, to the Senators who have had the privilege to serve on the committee, and to the United States Senate.

It is indeed a privilege for this committee to have such a valued member of our staff recognized with this high honor. I have worked with this fine man for 18 years now. His dedication to country is surpassed by none. We will miss his wise counsel, but wish him all the best as he returns to the Army—his first home.

Mr. Teets is a highly accomplished former president and chief operating officer of Lockheed Martin Corporation. He began his career in 1963 with Martin Marietta as an engineer in flight control analysis. In 1985, he was named President of Martin Marietta Denver Aerospace, which became Martin Marietta Astronautics Group in 1987. He was appointed president and chief operating officer of Lockheed Martin in July 1997. Thank you for your willingness to serve in this new capacity.

Dr. Klein has had a distinguished career in academia and government. Since 1977, he has been a professor of Mechanical Engineering for Nuclear Programs at the University of Texas at Austin. He has served in a variety of leadership capacities at the University, including Vice Chancellor for Special Engineering Programs and Associate Dean for Research and Administration in the College of Engineering. Dr. Klein has also been an active member of several Department of Energy national committees including the Nuclear Energy Research Advisory Committee and has received numerous honors for his scholarly and public service pursuits.

I welcome all of you.

---

PREPARED STATEMENT BY SENATOR BOB SMITH

Mr. Chairman, I am happy to take part in the confirmation hearing of these three fine nominees. I am especially pleased that one of our own is among the nominees.

I have had the pleasure of working with Les since my arrival in the Senate—the better part of 11 years. I have seen Les progress from a SASC professional staff member to Staff Director for Senator Warner. I am glad to see years of hard work and dedication rewarded in this way.

As a former Army officer and Vietnam veteran, Les brings a world of experience to the Office of the Secretary of the Army. Such experience and leadership is crucial to our Armed Forces and our country in the war against terrorism. Mr. Chairman, let me say that I have no doubt that Les will be an asset to the Army, and I will not need to ask him any questions as I have the utmost confidence in his capabilities, his loyalty, and his integrity.

I also wanted to comment on the Space Commission, which Mr. Teets and I have had the chance to discuss during his courtesy call in my office. I started the Space Commission because I believe space is critical to our future national security. We need to transform our military by leveraging the capabilities that space offers. The events of September 11 reinforce my perceptions.

Global coverage from satellites will help us track down the terrorists. I wish we could augment that coverage by reactivating an unparalleled and magnificent platform, the SR71 "Blackbird"—we have UAV's falling out of the sky in Afghanistan and an obvious problem with reconnaissance asset shortages.

An aerospace plane (if we had one) could have deployed sensors in the theater in hours not weeks, pinning down the terrorists and their Taliban hosts.

I firmly believe the country that controls space will prevail in times of war. DOD must have management and organization committed to space. I supported the findings of the Space Commission, and I was optimistic the findings would be implemented quickly given (1) the support of the administration and (2) the Commission Chairman Mr. Rumsfeld being confirmed as Secretary of Defense.

I am disappointed the changes are taking so long and that the recommendations are not being fully implemented. Most of all, I am disappointed that despite all the talk about military transformation, the Air Force is not a good steward of space, rather it continues to favor old legacy aircraft programs.

The Air Force is not delivering our current capabilities, they are not looking ahead to new opportunities, and they are not being visionary.

(1) Our warfighters are demanding advanced protected satellite communications sooner, but the Air Force is slipping the schedule.

(2) We have an opportunity to deploy a space-based radar that looks deep inside our enemies borders to track their movements, but the Air Force is foregoing that capability in favor of a limited airborne solution.

(3) We have invested millions in reusable launch X-vehicles, but the Air Force decided to drop the programs even though it didn't have a better way to develop the capability.

Mr. Teets, I see a lot of problems in the Air Force regarding space management and stewardship of space—I see you as part of the solution!

If confirmed, I will support your efforts to deliver the first-rate national security space capabilities this Nation needs.

I hope the Secretary of Defense quickly delegates you the broad space-leadership authorities you need to do the job.

---

PREPARED STATEMENT BY SENATOR RICK SANTORUM

Chairman Levin and Senator Warner, thank you for scheduling this hearing. President Bush and Secretary of Defense Rumsfeld have indicated that our Nation's military needs to transform to meet 21st century threats. This means the President and the Secretary will need top-quality individuals in the Pentagon to realize this goal. I think that today's nominees are well qualified to assist in this important transformation process and to make an immediate contribution to our National defense.

Mr. Chairman and Senator Warner, let me first single out Les Brownlee, the President's nominee to be the next Under Secretary of the Army, for the fine work he has performed for this committee and for his tireless efforts to support our soldiers, sailors, airmen, and marines. Les has been a consummate professional in the performance of his responsibilities for this committee. Les has shepherded the difficult annual defense authorization process for many years and has never forgotten the true beneficiaries of the committee's work—our great Nation and the men and women who defend our freedoms. The work of this committee has traditionally been a bipartisan effort. It is staff like Les Brownlee who hold the committee to this tradition.

Many of the challenges facing today's nominees cannot be solved overnight or, I suspect, in the near future. Many of the problems facing the military will require hard choices, choices that have either been deferred or poorly handled. As Les knows from his service on this committee, I have serious reservations about how the Department of the Army is budgeting to support this transformation effort. For example, the latest reports on the Army's 2003–2007 program objective memorandum (POM) indicate significant funding shortfalls. It has been reported that the Army will terminate 19 programs—and restructure another 12—due to this funding shortfall.

Reports are that the Department of the Army—despite receiving nearly \$60 billion more in funding through 2007 than previously expected—will have approximately \$115 billion more in unpaid bills through the POM. These unpaid bills will impact the service's attempt to modernize its Legacy Force, meet near-term requirements, and aggressively support the science and technology investment needed to field an Objective Force. As Les knows, I have serious reservations about the Army's expensive Interim Force acquisition strategy and how this force will relate to the

Objective Force. That being said, I am glad to see that the President has nominated Les for this important position as the Department of the Army will need to make critical decisions in the near future. I am hopeful that Les Brownlee will play a strong role in the efforts to grapple with these problems.

With respect to Mr. Teets, I am glad that the President has nominated a candidate who brings a wealth of experience from the private sector to this important position. I am also concerned with the costs of our tactical aviation programs and the overall affordability of simultaneously purchasing the Navy's F/A-18E/F, the Air Force's F-22, and the multi-service F-35 Joint Strike Fighter. These expensive, short-range aircraft don't address one of the biggest problems facing our military, the denial of access to a theater of conflict or war. I hope that Mr. Teets will keep an open mind to exploring the capabilities that unmanned platforms may offer our combatant commanders. I also hope that Mr. Teets will look long and hard at the issue of Low-Density/High-Demand assets. Too many times we have heard that our forces today lack the proper levels of platforms or assets to effectively prosecute a military campaign. As is true with the Army, it is unlikely that these problems or issues facing the Air Force can be solved immediately. However, your ability to focus on these issues will be immensely important.

Dr. Klein, as the Executive Director of the Amarillo National Research Center, brings a knowledge of policy issues that will greatly help him address many of the emerging threats that are facing the United States. Dr. Klein's expertise in nuclear activities—particularly radioactive waste disposal, thermal analysis of nuclear shipping containers, and nuclear weapon dismantlement—will be a tremendous benefit to the Bush administration. In addition, his knowledge of ongoing United States-Russian efforts to safeguard and secure weapons-grade nuclear material will be a tremendous asset to the position for which he has been nominated.

Again, thank you for scheduling this hearing and I look forward to supporting these nominees.

Chairman LEVIN. Senator Hutchison, please proceed.

**STATEMENT OF HON. KAY BAILEY HUTCHISON, U.S. SENATOR  
FROM TEXAS**

Senator HUTCHISON. Thank you, Mr. Chairman. I want to say that this is, I know, a moving time for the Armed Services Committee, and as a former member of this committee who served personally with Les, I can understand what a great loss it is. I sympathize with all of the people who have mixed emotions about whether he can do more here or more there, but he has made a decision, and we are going to stick with it.

I want to talk a moment about Les, because he is a native Texan. I want to add to what has been said about his later career by Senator Warner and Senator Levin. He is an Odessa boy. His father was actually a legend in West Texas, because he was known as the one person who could handle the most dangerous explosives in the oilfields. If you had a real problem you called Les' father. So Les decided to take the safer job in the infantry in Vietnam. [Laughter.]

Of course his record in Vietnam is known to all, and what a hero he really was, a highly decorated veteran.

I want to say that this is a man who has given his life to public service. We have a Texas saying for his nomination, and that is, it's a done deal. I cannot imagine anyone not supporting him. It will be a great comfort to all of us to know that he is over in the Pentagon, working in the Department of the Army as the number two there, under the Secretary, bringing his expertise in the field at a very important time in our country, and so I certainly support Les.

I also am here to introduce Dr. Klein. Dr. Dale Klein has been a friend of mine for a long time. He is one of the great intellectuals

and original thinkers in our country, and on nuclear issues especially. His nomination to be Assistant Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs is most appropriate, as we are facing the issues of this war on terrorism.

As reports of Al Qaeda's attempts to obtain weapons of mass destruction proliferate, the need to fill this key position grows exponentially with each passing day. Dr. Klein's wealth of knowledge and experience more than qualify him for this position.

The University of Texas has had a long association with the United States Army, doing some major innovative research for the U.S. Army. Dale Klein has been very much a part of that. Not only is he a renowned expert in nuclear issues, he has been elevated at UT as vice chancellor for special engineering programs in the UT system, as well as serving as a professor in the Department of Mechanical Engineering's nuclear program since 1977. He has all of the background to be the advisor to tell us how we can deal with the potential of nuclear, biological, or chemical warfare by these terrorist networks, which we are now exploring.

He is a distinguished fellow of the American Society of Mechanical Engineers and the American Nuclear Society, so I cannot think of a better person who could bring expertise and creative thinking than Dr. Dale Klein. I worked with him very closely in his position with the Amarillo National Research Center, which does the research on plutonium and nuclear weapons dismantlement, so I know that he has the range of experience needed to stop proliferation. He can advise us on what we can do to strengthen our own nuclear arsenal and make sure that what we keep is viable and efficient, so that if we ever got in a worst case scenario, that we would have that weapon ready to go.

So it is with great pleasure that I support the nomination of my friend. I know from personal experience that he will do a great job, and I thank him for taking this job and adding another phase in his public service.

Thank you, Mr. Chairman.

Senator WARNER. Senator, we thank you. That was an excellent statement and, having interviewed Dr. Klein in some depth, I certainly wish to associate myself with your remarks.

Senator HUTCHISON. The President has certainly upgraded the expertise with Les Brownlee and Dr. Dale Klein, who are the two I know, and I am very pleased that you are holding this hearing so that we can expedite their nomination. Thank you, Mr. Chairman.

Chairman LEVIN. Senator Hutchison, thank you so much for coming by. I know how much it means to our nominees to hear those words. Thank you.

Senator WARNER. Mr. Chairman, could I say a word on behalf of Mr. Teets? I had an opportunity to visit with him, and I would like to say a few words. He came up through what I regard as the old aristocracy that there was at one time in the aerospace defense business. He served under some of the toughest taskmasters, Tom Pownell, with whom I was associated for 40 years, and Norm Augustine. If you can survive their tests and be seated here today before us, you have some real mettle, mister, and your qualifications earn you the position of Under Secretary.

As I commented a few minutes ago, after Senate confirmation of your nomination, I think you will find this position one of the most challenging chapters of your career.

Senator ALLARD. Mr. Chairman, may I add just a few comments to the Ranking Republican, Senator Warner?

Chairman LEVIN. Senator Allard.

#### **STATEMENT OF SENATOR WAYNE ALLARD**

Senator ALLARD. Mr. Teets is a graduate of the University of Colorado and a Colorado native. As Senator Warner mentioned, he does bring to his responsibilities a great deal of experience on the private side and in the industrial sector he is intimately familiar with those systems. With his responsibilities towards the NRO I think we could not have come up with a better nominee, and so I just wanted to throw my two bits in and talk a little bit about Mr. Teets and the expertise he is bringing to this position. Mr. Chairman, I offer my prepared statement for the record.

[The prepared statement of Senator Allard follows:]

#### **PREPARED STATEMENT BY SENATOR WAYNE ALLARD**

Thank you Mr. Chairman,

I want to thank each of you for coming here today and for your willingness to accept a tremendous amount of responsibility at one of the most important and challenging periods in our country's history. I am confident that all of you are up to the task and will serve this Nation well. I want to thank you in advance for the work you are about to embark on, as I am sure that you will all be successful.

Dr. Klein, Nuclear, Chemical, and Biological Defense Programs have been of great interest to me and this committee for some time. So much so, Senator Warner and Senator Levin formed the Emerging Threats and Capabilities Subcommittee to address issues related to these programs. The recent events have proven that to be a wise decision. You are taking on this responsibility at a time of renewed interest in the American public. While this may provide you some challenges, it will provide you some opportunities as well.

Also, I am very interested in the Chemical Demilitarization Program, specifically at the Pueblo Depot. I am very concerned about the pace and safety of the destruction and cleanup of the chemical weapons stored at the site. DOD has yet to select a technology to destroy the weapons and I would encourage you to use your new position to move the process forward in selecting the safest and most effective technology. I wish you luck in your efforts.

Mr. Teets, it will certainly be beneficial to the Pentagon to have another Colorado native and Colorado University graduate serving. Your knowledge and background in running a successful business will serve you and this Nation well. Additionally, your expertise in the capabilities of the space industry will become more and more important in the years ahead. I am very pleased to have someone with your credentials as the Under Secretary of the Air Force. Good luck.

Mr. Brownlee, it has been a great pleasure working with you on this committee. The work that you have done here has been absolutely outstanding. You are a proven performer, not only on this committee, but for many years as a soldier and as an Army leader. I have no doubt that, once again, you will serve the Army and this Nation proud and with great distinction in your new role. Your leadership and steady hand will be missed by every member on this committee and I wish you great success and I look forward to working with you.

Chairman LEVIN. Senator Allard, thank you very much. The record will be kept open for any other opening statements that anyone might want to place in the record.

Senator Nelson.

#### **STATEMENT OF SENATOR BILL NELSON**

Senator NELSON. Mr. Chairman, I want to say that as a new member of this committee I have been so impressed with the pro-

fessionalism of this committee. Clearly that reflects the leadership which is the two of you, but it also reflects the leadership of the staff directors, so it is a pleasure for me to be here to help this process along.

I also want to say that I second, Senator Warner, your comments about Mr. Teets. In my former life I was involved with those two individuals you talked about, Tom Pownell and Norm Augustine, and they were good, hard-driving taskmasters, and anyone that can survive that has done a good job.

Chairman LEVIN. Senator Sessions.

#### STATEMENT OF SENATOR JEFF SESSIONS

Senator SESSIONS. Mr. Chairman, I would like to express my appreciation for these three nominees and their willingness to serve our country. They have great backgrounds and integrity, and I think will do an outstanding job for our country.

I think particularly I have to note, Colonel Brownlee, how much I have enjoyed working with you on this committee. It has been a pleasure. As a new member, your wisdom and insight were very helpful to me. I know you have a comprehensive understanding of America's defense structure both as a combat-decorated veteran, as a person who served in defense before and now, with so many years on this committee. I cannot think of a person who could bring more to the job than you.

The main thing that you have brought to this committee is a sense of integrity and confidence among all the staff and all the Senators. It has been a unifying and beneficial atmosphere that you helped create, and I appreciate that. I think all of us do, and I am honored, pleased, and thrilled that the President has given you this great honor, and I know you will do a great job.

Mr. Chairman, I would offer a statement and some questions for the record.

[The statement of Senator Sessions follows:]

#### PREPARED STATEMENT BY SENATOR JEFF SESSIONS

Mr. Chairman I want to thank you for calling this hearing to consider these nominations for the positions of Under Secretaries of the Army and Air Force, and Assistant to the Secretary of Defense for Nuclear and Chemical and Biological Defense Programs. Senator Warner, this must be a bitter-sweet moment for you. You may be losing an outstanding staff director, but the Army will gain an outstanding Under Secretary.

These are indeed important positions. Mr. Teets, I look forward to hearing from you your vision for the Air Force and the aircraft it needs, especially in light of our combat operations over Afghanistan where forward basing rights seem to be at a premium.

Mr. Klein, the position of Assistant to the Secretary of Defense for Nuclear and Chemical and Biological Defense Programs has taken on an importance that few could have imagined prior to the cowardly use of anthrax as a weapon of terror. We have seen these terrorists would not hesitate from using these weapons of mass destruction. I look forward to hearing from you what the course ahead is to protect our service members and our Nation as a whole from these despicable acts.

Finally, Colonel Brownlee, as it has already been said by others, the President could not have picked a finer person to be the next Under Secretary of the Army. From your heroism on the fields of combat in Vietnam, through your outstanding experience as Military Executive to the former Under Secretary of the Army, James Ambrose, and your superb leadership of the Armed Services Committee staff, to your education in Alabama with a Masters Degree of Business Administration from the Auburn University you have the record to prove you will superbly fill the role of Under Secretary of the Army.

I also want to take this moment to thank you for 3 years of superb support you and your staff has provided to me since I have become a member of the Armed Services Committee. While we may not have always agreed, I always appreciated your well thought-out advice. I know Secretary White, the Army and the United States will also benefit from your advice and superb work.

Mr. Chairman, thank you.

Chairman LEVIN. Thank you, Senator Sessions.  
Senator Akaka.

#### **STATEMENT OF SENATOR DANIEL K. AKAKA**

Senator AKAKA. Mr. Chairman, thank you for this opportunity to add my welcome to the nominees this morning, and in particular Mr. Les Brownlee along with other members of this committee. I really enjoyed working with him as staff director here for this committee over the years, and I look forward to continuing to work with you, Les, upon your confirmation as Under Secretary of the Army. I want to also welcome Dr. Klein and Mr. Teets this morning. I have reviewed your questions and biographies, and I want to associate my remarks with my colleagues here this morning. You are all well-qualified to serve in the important positions which you have been nominated for, and I want to wish all of you well.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you very much, Senator Akaka.  
Senator Inhofe.

#### **STATEMENT OF SENATOR JAMES M. INHOFE**

Senator INHOFE. Mr. Chairman, since everyone has spoken I did not want my silence to be misinterpreted as a lack of support. [Laughter.]

Let me say, Mr. Teets, I also went to the University of Colorado 10 years before you did, and we could probably share a few stories about that. I think it is sometimes not emphasized how significant it is to get people in positions like you are going to be in and have this tremendous background in the private sector. You would bring a different perspective, and I am sure that will serve very well. Dr. Klein, I enjoyed our visit very much, and I am looking forward to working with you.

Les, I am not articulate enough to say anything different than has already been said about you, so let me just echo every wonderful thing that has been said on your behalf.

Thank you, Mr. Chairman.

Chairman LEVIN. Senator Bunning.

#### **STATEMENT OF SENATOR JIM BUNNING**

Senator BUNNING. Since everyone is getting to say something in their opening statement, as the junior member of the committee I am going to use just about a minute or 2.

Senator WARNER. You take all the time you want, Senator.

Senator BUNNING. Thank you very much. I want to welcome you and your families to this hearing, because I know how important this day is to each and every one of you. Les, I would like to also thank you for your long and meritorious service to this committee and the country. Things will be a little harder here because of your leaving, but maybe you can take them across the river and make them easier.

You all have great challenges ahead of you in normal times. These positions are nominations that entail significant responsibility. During war they hold even more significance. I have confidence you will all carry these burdens out as no one else can do. We are counting on you to do that, because, Dr. Klein, I know that we have some problems in Kentucky in relationship to the job that you are assuming.

I wish each and every one of you Godspeed. You are going to need it.

Thank you.

Chairman LEVIN. There seems to be a strong consensus to want to see you leave, Les. [Laughter.]

We will now ask each of the nominees a series of questions. You have already responded to our prehearing policy questions, our standard questionnaire. These responses will be made a part of the record. The paperwork on each of the nominees has also been received. That paperwork will be reviewed to make sure it is in accordance with the committee's requirements.

There are several standard questions we ask every nominee who comes before this committee. Before I ask you those questions, I will simply note that in your response to the advance policy questions you agreed to appear as a witness before congressional committees when called, and you have agreed to ensure that briefings, testimony, and other communications are provided to Congress.

Now I will ask you the following questions. Have you adhered to applicable laws and regulations governing conflict of interest? Dr. Klein.

Dr. KLEIN. Yes.

Mr. BROWNLEE. Yes, sir.

Mr. TEETS. Yes, sir.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process? Dr. Klein.

Dr. KLEIN. No, sir.

Mr. BROWNLEE. No, sir.

Mr. TEETS. No, sir.

Chairman LEVIN. Will you ensure the Department complies with deadlines established for requested communications, including prepared testimony and questions for the record in hearings? Dr. Klein.

Dr. KLEIN. Yes, sir.

Mr. BROWNLEE. Yes, sir, I will.

Mr. TEETS. Yes, sir.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests? Dr. Klein.

Dr. KLEIN. Yes, sir.

Mr. BROWNLEE. Yes, sir, I will.

Mr. TEETS. Yes, sir.

Chairman LEVIN. Will those witnesses be protected from reprisal for their testimony?

Dr. KLEIN. Yes, sir.

Mr. BROWNLEE. Yes, sir, they will.

Mr. TEETS. Yes, sir.

Chairman LEVIN. Let me now ask each of you to give us any opening statements you might have, and to also introduce any family members or friends you might have here.

Dr. Klein.

**STATEMENT OF DR. DALE KLEIN, NOMINEE TO BE ASSISTANT TO THE SECRETARY OF DEFENSE FOR NUCLEAR AND CHEMICAL AND BIOLOGICAL DEFENSE PROGRAMS**

Dr. KLEIN. Thank you, Mr. Chairman. Good morning. My name is Dale Klein. I have no statement for the record, but with your permission I would like to make a few opening remarks.

Mr. Chairman, Senator Warner, members of the committee, it is an honor to appear before you today as President Bush's nominee to the Office of Assistant to the Secretary for Defense for Nuclear and Chemical and Biological Programs. I would like to thank the President and Secretary Rumsfeld for their confidence and support. Further, I would like to thank Senator Hutchison for her kind words of introduction. Last, I would like to thank Mr. Peter Aldrich for his support of my nomination.

I especially thank this committee for their support of the men and women in all of the Armed Services. If confirmed, I will work with this committee to address the many challenges that together we will overcome.

I grew up on a small farm near Tipton, Missouri. I attended the University of Missouri-Columbia, where I studied mechanical engineering. I earned a Ph.D. with a specialization in nuclear engineering. For my professional life I have been associated with the University of Texas at Austin as professor of mechanical engineering in our nuclear and radiation and engineering program. I have worked extensively with the Pantex plant near Amarillo, Texas, where hands-on nuclear assembly and disassembly take place.

As associate dean for research, I have supervised a variety of research units, including those in chemical and biological research areas. I have traveled to Russia a number of times, and have worked with Russian nuclear engineers to secure their nuclear materials. Currently, as Senator Hutchison indicated, I served as vice chancellor of special engineering programs for the University of Texas systems.

If confirmed, I will have a number of key responsibilities. If confirmed, I will work closely with the National Nuclear Security Administration to ensure that our nuclear weapons stockpile is safe, secure, and reliable. I will oversee effective chemical and biological defense programs. I will work to counter the proliferation of weapons of mass destruction, and I will oversee the safe and secure demilitarization of our aging chemical weapons stockpile.

I will not be able to do this alone. My wife, Becky, is one of three commissioners of the Texas Public Utility Commission, and is a Major in the Air Force Reserves. Unfortunately, due to her responsibilities she is not able to be with us today. Along with her support, I am certain I will need the support of many other dedicated public servants and the support of this committee. I pledge to you to do my best efforts to address the many challenges we face in winning the war on terrorism and assuring homeland security.

Thank you very much.

Chairman LEVIN. Thank you, Dr. Klein.  
Mr. Brownlee.

**STATEMENT OF R.L. BROWNLEE, NOMINEE TO BE UNDER  
SECRETARY OF THE ARMY**

Mr. BROWNLEE. Sir, with your permission I will introduce the members of my family here. My son John, who came up from Roanoke, my daughter, Tracy and her husband, Clay, and their daughter Kyla, who is 2½ going on 10. [Laughter.]

Chairman LEVIN. Is she the one you have a picture of in your office?

Mr. BROWNLEE. Yes, sir. There are actually two of them, John's wife Lee Ann, and his daughter, Thompson, who is 1½, could not be here this morning. Lee Ann is the anchor for the evening news in Roanoke for Channel 10, and they are in a ratings period and so she could not get away. [Laughter.]

Chairman LEVIN. That is why Senator Warner carries Roanoke. [Laughter.]

Mr. BROWNLEE. When we get the 2½ year old together with the 1½ year old, it is sort of like mixing nitric acid with glycerine.

Senator WARNER. Mr. Chairman, Les is too modest, and his son likewise. His son has just been appointed by President Bush as United States Attorney for the Western District of Virginia. He had a distinguished career in the Army himself and earned his position through merit.

Chairman LEVIN. Thank you. Les.

Mr. BROWNLEE. Mr. Chairman, I do not have a written statement. I have a few remarks I would like to make, if I can get through them before this committee.

Mr. Chairman, Senator Warner, Senator Thurmond and other members of the committee and Senator Hutchison, I cannot thank you enough for the kind words you have said about me. I feel very undeserving, but I just cannot thank you enough for what you have said. It is indeed an honor for me to appear before this committee for the purpose of this hearing. I have to say that as I reviewed the qualifications of these two very distinguished gentlemen sitting on each side of me, I was reminded of something John Hamre once said. He said he felt like a mule who had been entered in the Kentucky Derby. [Laughter.]

I am deeply honored, Mr. Chairman, to have been nominated by President Bush for this important position at this crucial period in our history. I would also like to thank Secretary Rumsfeld, Secretary White, and other members of this committee who recommended my nomination to the President. I pledge that if I am confirmed I will do my utmost to be worthy of their and your confidence.

I would like to express my sincere appreciation to Senator Warner for giving me my first opportunity to work in the United States Senate as his military legislative assistant almost 18 years ago, and later for appointment me to this committee's staff, and to Senator Thurmond, who made me staff director for this committee, and to Senator Warner for allowing me to continue in that capacity when he became chairman. I will be eternally grateful for the op-

portunities you have so graciously provided me and mainly for your trust and confidence.

I would also like to take this opportunity to thank all the members of this committee for your understanding, your kindness, your patience, and your trust. It is through the conscientious and diligent manner that you carry on the critically important work of this committee in the bipartisan manner you do that will ensure its continuing relevance and effectiveness.

I want to thank also my colleagues on the staff, both past and present, who serve here on this wonderful committee. Mr. Chairman, I know that you and the members of the committee are well aware of their professionalism, their dedication, and their standards of excellence. Over the years, they have become a second family to me. I want to thank them for their tireless efforts and their loyalty and support of the vital work of this committee. Time does not permit me to thank each of them personally by name. I will do that before I leave, individually.

Mr. Chairman, I would also like to thank the members of my family, my daughter Tracy, who has excelled in everything she has ever done and continues to do so after putting her own professional career on hold to be a full-time mom to Kyla, and to my son John, who all the members of our family were thrilled to watch last Friday as he took the oath of office as the United States Attorney for the Western District of the Commonwealth of Virginia.

Mr. Chairman, if I am confirmed I will be returning to the Army I have loved and in which I proudly served for 22 years. In fact, since my last assignment in the Army was as the military executive officer to the Under Secretary of the Army, Hon. James Ambrose, if confirmed, I would be returning possibly to the same suite of offices I departed almost 18 years ago.

Our Nation is now in peril, Mr. Chairman, and the dangers are not just on the war front, but on the home front as well. Our Armed Forces have never failed this Nation, and under the leadership of President Bush, and with the guidance and support of this committee, they will not fail in this endeavor.

Mr. Chairman, while I am deeply honored and anxious to assume the duties of the position for which I have been nominated, if I am confirmed, leaving the United States Senate and this committee I have loved and revered, and my fellow staff members, will be difficult. I have never failed to appreciate the privilege of walking onto the floor of the United States Senate, nor the importance of being asked for my views and recommendations by members of this committee and this body.

I plan some day to thrill my grandchildren with the stories of my heroes, many of whom are sitting here today. While there were times when, like others, I may have become temporarily frustrated or impatient, I have never grown tired of the important work that is done here. I have a host of memories which I will carry with me for the rest of my life, of being present at meetings with the highest officials in our Government to witness discussions of the most important national security issues of our day, and fact-finding trips to far-flung battlefields, from Panama to the Persian Gulf, Somalia, Haiti, Bosnia, and Kosovo, and of 18 separate committee markups, floor actions, and conferences.

Mr. Chairman, I appreciate very much the committee's consideration of my nomination. If confirmed, I assure you that my first loyalty and consideration in all matters concerning the Army will be first and foremost to the individual soldier.

Thank you, Mr. Chairman. I look forward to your questions.

Chairman LEVIN. Thank you so much, Les. Your statement is truly a beautiful one.

Mr. Teets.

**STATEMENT OF PETER B. TEETS, NOMINEE TO BE UNDER SECRETARY OF THE AIR FORCE**

Mr. TEETS. Mr. Chairman, good morning, and with your permission I would like to introduce the members of my family that are with us today, my wife Vivian, and our youngest son, Chris.

Mr. Chairman, I have no statement for the record, but with your permission I would like to make a few brief opening remarks.

Chairman LEVIN. Please.

Mr. TEETS. Mr. Chairman, Senator Warner, members of the committee, it is indeed an honor to appear before you this morning as the President's nominee for Under Secretary of the Air Force. I would like to thank President Bush for nominating me for this position. Also, I thank Secretary of the Air Force James Roche for making possible this opportunity to serve, and Secretary of Defense Rumsfeld and Director of Central Intelligence George Tenet for their support.

In addition, Senator Warner, I would like to thank you, Senator Allard, and Senator Inhofe for your kind introductory remarks earlier today.

I have spent over 35 years working in the space and defense world, all of that time in the industrial side. Over the course of that time, I have had the great pleasure of working closely with many talented and dedicated people in the defense and intelligence community. If confirmed, I very much look forward to being able to now do some meaningful and important public service work to support Secretary Roche as his Under Secretary, and also to provide leadership for our vital national security space activities.

Mr. Chairman, if I am confirmed, I will be pleased and honored to work with you and this committee to meet the many challenges that lie in front of us.

Thank you very much.

Chairman LEVIN. Thank you very much.

Senator Warner.

Senator WARNER. Thank you, Mr. Chairman. As I advised the chairman, I am due to open a conference on veterans, on World War I to Vietnam and all U.S. conflicts, so I would simply like to make a statement to each nominee and perhaps solicit a short response.

First to you, Colonel Brownlee, again to personalize my knowledge of the positions which you and Mr. Teets are going to take, when the chairman read off the decorations that you won in Vietnam it conjured up the memories of my visits to those battlefields, fire bases, and aid stations.

When I was in the position of Under Secretary, collectively in the Pentagon we made some misjudgments. I see today in this conflict

we are engaged in thus far, I do not think there have been any misjudgments, but there could come such a time. I just hope that knowing you as I do, that you have the courage to come forward to your superiors and indeed to the Congress of the United States and tell the story from the standpoint of that young person in uniform, wherever he or she may be, and the risks they are taking.

This is a difficult challenge our President has had to face. There is no alternative to what he has done in this conflict, and you have that challenge as well. You and I have struggled with various parts of the proposed reorganization of the Army many times. I respect Secretary White, but you bring a corporate knowledge of that to the Army Secretary, and I think you have to give it some very strong leadership, and do it quickly.

I hope that you will commit to come before this Congress, because we know you and we trust you and we respect you, not that we do not have similar feelings for the other members of the Secretariats and the Military Departments. Our President and Secretary Rumsfeld are to be commended for searching far and wide for the talent they have put together in these Secretariats, talent which was unmatched, I think, in previous years.

So I just hope that you will make that commitment, because we lost the support of Congress during Vietnam, we lost the American public. In the end I am not so sure that we did not do a disservice to those of you who were in uniform.

You are in a position, Colonel, to see that that does not happen again. Do we understand each other?

Mr. BROWNLEE. We do, sir.

Senator WARNER. Now, Dr. Klein, you are going to take over a portfolio that is extremely important. I am going to bring out one matter which you and I discussed at length, and that is that we are engaged by virtue of the first President Bush in not testing our stockpile to determine its credibility. I am not suggesting we deviate at this time from that decision, but as you continue to monitor how this program to replace testing is developed, you have to come and tell us it is on schedule, it is funded or underfunded, because we have to move forward as quickly as possible to determine if that program is going to work. If it does not, then the President and Congress are faced with the decision to return to live testing once again in order to maintain the credibility of that stockpile.

Now, that is not a popular decision, but with the proliferation taking place in this world, we have no alternative but to assure absolutely the credibility of that stockpile and its safety. Most particularly to those who have to handle those weapons, and the communities that fortunately to this date in our country are willing to have them in the proximity of where people live.

We understand each other on that, do we not, that you will be forthcoming?

Dr. KLEIN. Yes, sir. If confirmed, we will certainly be addressing the safety, security, and the reliability of those.

Senator WARNER. To monitor that program?

Dr. KLEIN. Yes, sir.

Senator WARNER. Now, Mr. Teets, I presume you will take over the major responsibility for the procurement systems of your Military Department. Some of the advantages of being Under Sec-

retary, you do not have to deal with the press as much as the Secretary, you do not have to deal with Congress, and you do not have to travel as much as the Secretary. You can get on with the work of the Department.

This Joint Strike Fighter (JSF) is unlike anything in the history of the annals of our procurement in this country. It is three services, the Air Force, the Navy, and the Marine Corps, and you have to be an ombudsman to maintain a political balance. Believe me, there are politics in that system over there, and you know it. You have seen it from a distance in your distinguished career.

This committee was of the opinion that that contract ought to be dual-sourced, but that decision was overridden by the Appropriations Committee. Am I not correct in that, Mr. Brownlee?

Mr. BROWNLEE. Yes, sir.

Senator WARNER. Anyway, I accept it. It is over. It is behind us. But the magnitude of this contract is absolutely awesome. It is almost like we are at a roulette table and we put all of our money on one spot, and you have to make it work. If it does not work early on, or there are some problems, you must come before Congress.

Mr. TEETS. Yes, sir, I do appreciate your comments, and I can assure you that I do understand the size, the magnitude, the importance of the joint strike fighter program, and if confirmed I would be very pleased to take a strong involvement in the program.

Senator WARNER. Thank you very much, Mr. Chairman, members of the committee.

Chairman LEVIN. Thank you, Senator Warner.

Les, let me start with you. You have answered some questions on transformation. Give us your thoughts on prioritizing the requirements of the Army between the Legacy Force, the Interim Force, and the Objective Force as to how you are going to balance that. How do you see it unfolding? What are your thoughts generally on that?

Mr. BROWNLEE. Well, as you well know, Senator, the Legacy Force is a force that is in place that has to be prepared to go to war today. Then, of course, there is the Interim Brigade Combat Teams (IBCTs) which make up the Interim Force, and the Army is beginning, I believe, to field those vehicles now. I would have to check the details of that.

Then, of course, there is the Interim Objective Force which is in the future somewhere, on which there are some science and technology moneys being extended now.

As I look at the question of prioritizing among these, I am reminded of a very old division commander who wisely stated once that there are no priorities among essentials. I think all three of these are essential, Senator, and the trick here is to balance the allocation of resources so that we can, in fact, proceed with all three in an appropriate way.

Chairman LEVIN. You have been intimately involved in the discussions about the Interim Brigade Combat Team force structure.

Mr. BROWNLEE. Yes, sir.

Chairman LEVIN. As to how we are going to evaluate whether or not that structure closes a presumed gap that is going to exist in

capabilities that a medium weight force is intended to fill, what are your thoughts about that particular process?

Mr. BROWNLEE. Yes, sir. My view of this, Senator, as most of the members of the committee know, is that the Army found itself in a situation where they had the best heavy force in the world which was difficult to deploy. They had a much lighter force which was more easily deployed but did not seem to meet the requirements for lethality and mobility that they needed. They then identified this gap in between, which these IBCTs, or interim brigades, should fill, and they are in the process now of putting those together.

It is my feeling, Senator, that at some point in time to be determined by the Army, or whenever it is appropriate, there should be a full operational evaluation of this unit, not just the equipment, but this unit. It is my understanding the Army intends to do that.

Chairman LEVIN. Dr. Klein, you have made reference to the stockpile stewardship program both in response to Senator Warner and also in response to advanced questions, and you indicated, I believe, that you support the stockpile stewardship program, is that generally correct?

Dr. KLEIN. Yes, sir, Senator.

Chairman LEVIN. What are your plans to ensure that that program is, number one, closely coordinated, and number two, in fact is working and viable? You have seen this up close, and so we will be relying on you to give us either assurance that it is working, or in the event that you are no longer able to give us the assurance, that our nuclear stockpile is secure and reliable, that you would then notify us of that. Please give us more detail about how you plan to accomplish that.

Dr. KLEIN. Well, Senator, if confirmed, as you would expect, the safety, security, and reliability of our nuclear weapons stockpile is extremely important. I expect to, if confirmed, work through the Nuclear Weapons Council.

There is a program in place where the laboratory directors certify the adequacy of the stockpile. If confirmed, my office will be very active in discussions with the laboratory directors through the National Nuclear Security Agency. We will have monthly meetings with the Nuclear Weapons Council to make sure that people are informed, and as issues are addressed, they will be consulted with the experts in the field, and if there are any issues that indicate that these weapons are not meeting their requirements, we will certainly inform this committee as well as others, and address those appropriately.

Chairman LEVIN. You indicated you had been to Russia a number of times, so you are obviously familiar with our cooperative threat reduction program. I have a two-part question: first, give us your thoughts about that cooperative threat reduction program. Is it an important program? Should we fully fund it?

Second, are there additional opportunities to do cooperative research with Russia through that program with nuclear scientists and engineers in Russian nuclear weapons complexes?

Dr. KLEIN. Mr. Chairman, as you indicated, I have been to Russia several times, and I have always come away impressed with the diligence that our country has in our scientists, our procedures, and our practices. The cooperative threat reduction program is ex-

tremely important. I think evidences of September 11 have demonstrated that issues can hit us here in our own country.

Weapons of mass destruction are very serious. We need to work with Russia to make sure that the scientists are not really releasing information to those that would do us harm, and I believe the cooperative threat reduction is a valuable program and we should maintain it to the extent that we can.

Chairman LEVIN. On the bioterrorism front, what role do you think the Department of Defense should play in planning and carrying out a response to a bioterrorist threat in the United States?

Dr. KLEIN. Senator, if confirmed as the Assistant to the Secretary for Nuclear, Chemical, and Biological Defense Programs, I would certainly provide whatever resources I could to respond to events. It is my understanding that the Department of Defense is in a support role, and would not necessarily be the first responders, but we certainly have technologies, equipment, and training that would be beneficial to address any event that might occur.

Chairman LEVIN. There is a huge role for both coordination and providing assistance in that area from the Department of Defense. I hope that is going to be at the top of your list of tasks when you are confirmed.

Dr. KLEIN. Yes, sir.

Chairman LEVIN. My time is up.

Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman.

First of all, Mr. Teets, you have quite an undertaking there, and a variety of things to be involved in. In addition to the concentration on space, I would like to ask you something concerning our depots. We have for quite a number of years, as you well know, being on the other side, wanted to maintain a core capability in our depots. We went through a couple of base realignment and closure (BRAC) rounds where we dropped our air logistics centers (ALCs), for example, from three down to two, which are operating now. They have the surge capacity, but they are operating at a full capacity today.

However, a lot of them are operating with World War II equipment, and I would like to ask you what your feeling is as to the role of our depots currently and for the future.

Mr. TEETS. Thank you, Senator Inhofe. I am familiar with the air logistics centers from work that I did several years ago. I did have an opportunity recently in a luncheon conversation with Secretary Roche to talk in general about the subject, and I know he believes strongly in maintaining the core capability of those three existing ALCs. As it relates to the subject of modernization and update he has a strong belief that there is a need to have some public-private partnership to allow modernization to take place in a cost-effective way and in a meaningful way.

I can tell you that I am in 100-percent agreement with Secretary Roche on that subject.

Senator INHOFE. I appreciate that, and I am going to ask you to try, as you look at that change, and keeping in mind that most of our modern platforms are maintained in the private sector, that there is a reason for core capability. Perhaps you would be in the ideal situation to be able to look at various creative ways that we

can leverage private sector funds with our depots and still protect that depot capability, and that is what I would like to be working with you personally on.

Mr. TEETS. If confirmed, I would be pleased to do that, Senator.

Senator INHOFE. Great. Thank you very much.

Les, one thing you are not capable of—I have heard all these good things—and that is, giving short answers. [Laughter.]

Let me ask you to try to do that.

We hear a lot about competition, and you are going to have to be faced with some of the problems that are contentious right now. I know I have been trying to get pulse fast neutron analysis (PFNA) technology used as opposed to just this straight x-ray, and I think now, after September 11, we are going to be able to successfully do that. However, we have not been able to get that competition, and we have tried since 1994, when I arrived from the House to the Senate.

But we also hear about the Star Streak versus the Stinger. I do not have a dog in this fight, but I am tired of hearing reasons why we have to have competition, and yet the excuses why we do not. I understand the back pressure problems that are posed, but I understand that has also been addressed.

Do you have any thoughts about that competition?

Mr. BROWNLEE. Yes, sir. I do not know all the details of what has happened recently, but I have been advised that there are some overpressure problems with firing the Star Streak in an air-to-air role, and I believe the Army needs to work out those problems for safety reasons.

Senator INHOFE. I think the Apache, that they have worked out a way to reduce that back pressure by about 80 percent, and I know this is ongoing, but I would like to make a challenge to you that we either do or do not have this competition, and quit talking about it. I know we can work through that well together.

Mr. BROWNLEE. Senator, I promise that I will look into it and get back to you.

Senator INHOFE. The other thing that, in terms of competition, I am interested in, I had occasion to go to Fort Lewis, as you recall, and in fact you and I talked about that trip, the competition that is out there with the M-113 track vehicle.

I had my own competition. I did it, and I sat in the back of that thing that has been around for 40 years, and then got into the more modern vehicle and recognized that there are ways of putting a track on that wheeled vehicle, the Interim Armored Vehicle (IAV). Senator Warner was talking about the joint strike fighter. The Marine Corps is different than the other. There is a way of adapting a vehicle.

I take a differing view of the rest of the committee on demanding that we have some \$28 million worth of side-by-side testing and competition in that, because when you ride in both of them it is like competing a horse with a Jeep. They are apples and oranges.

I would like to have you use your expertise that you have had on this committee to get us off this high spot, and if we can use the \$28 million more effectively to buy a larger number of these, perhaps do this.

Do you have any thoughts on that particular competition?

Mr. BROWNLEE. Sir, I have certainly been involved in those debates. I have discussed that both with members of this committee and with people in the Army. I certainly believe that the Army needs to have the full knowledge of the operational combat capabilities of the vehicles within its own inventory that at least appear to meet those requirements.

I also believe that if the Army can provide that information to the committee in a timely and satisfactory way, without conducting a test, then the committee could reconsider that.

Senator INHOFE. I have no doubt in my mind that you have ridden in the 113.

Mr. BROWNLEE. Yes, sir. I commanded battalions with them.

Senator INHOFE. Have you ridden in the IAV?

Mr. BROWNLEE. Yes, sir.

Senator INHOFE. Lastly, Mr. Chairman, I would like to ask Dr. Klein, if you were to say there are three most important nuclear issues today, what would those three be?

Dr. KLEIN. Well, Senator, I think the most important issue that needs to be addressed in our nuclear weapons stockpile is our aging stockpile. Those devices have been around for quite sometime, and as Senator Levin indicated there is a stockpile stewardship program, so the first priority I would say is addressing the aging stockpile.

The second issue I have been concerned with a number of times is the retraining of the young people today, certainly in nuclear fields. Being in education, we have not seen a lot of young people enter that profession. We certainly need to make sure that the Department of Defense has a program to replace retiring individuals in the technical fields.

Then lastly, I would say the important thing is budget prioritization.

Senator INHOFE. Thank you very much.

Chairman LEVIN. Thank you. Senator Bunning is next on the early bird basis.

Senator BUNNING. Thank you very much, Mr. Chairman.

Dr. Klein, I would like to explore with you the problems at Bluegrass Army Depot. Your duties, if confirmed, will include ensuring the safety and secure demilitarization of our chemical weapons stockpile. Because of the chemical weapons located at the Bluegrass Depot in Kentucky, this is an area that I am particularly concerned with.

So far, the Army has done a poor job convincing the population near the depot that incineration is the safest way to destroy these weapons. Congress has mandated that a review of alternative technologies be conducted to ensure that the safest method be used to destroy these chemical weapons. This review, which is ongoing, must be completed before a decision about how to destroy these weapons is made for the Bluegrass facility. Will you commit to taking a very hard look at the current demilitarization program to ensure that it is safe and effective?

Dr. KLEIN. Senator, if confirmed, I will absolutely give you that promise.

Senator BUNNING. Will you ensure that both the letter and the spirit of the requirement for alternative technology review are ful-

filled before any decision about how to destroy the chemical weapons at Bluegrass is made?

Dr. KLEIN. Yes, sir.

Senator BUNNING. Will you ensure that the concerns of the citizens around the depot are dealt with before the chemical demilitarization begins?

Dr. KLEIN. Yes, sir.

Senator BUNNING. Will you commit to working closely with my staff and with Senator McConnell's staff to ensure that these concerns are addressed?

Dr. KLEIN. Yes, sir.

Senator BUNNING. Les, I am going to ask you something that has been batted around here for a while.

As a result of the September 11 attack there have been some calls, including right here in our committee, to review posse comitatus, the law restricting the use of the military for performing law enforcement functions. Do you believe that we should change that law, and if so, how?

Mr. BROWNLEE. Senator Bunning, I am not sure if it needs to be changed or not, but I certainly believe it needs to be reviewed in light of the current situation you described. There has been some correspondence already between this committee and the Secretary of Defense relative to that. My understanding is that the President does have authority to use active military forces under some circumstances, but there may be other circumstances where we need to move to modify that law, and I certainly believe it should be reviewed in that context.

Senator BUNNING. I assure you that there are present circumstances that military personnel in the 101st Airborne are being used as military police in Kosovo, because I just visited there. It is not much fun seeing some of the most highly skilled soldiers being used as military police, so I think it needs to be reviewed, and I hope that your tenure, if confirmed, will give it a good look.

Mr. BROWNLEE. Yes, sir.

Senator BUNNING. Given the demonstrated capability of someone to conduct an anthrax attack against us, do you believe we should accelerate the National Guard's deployment of the weapons of mass destruction civil support teams?

Mr. BROWNLEE. Senator Bunning, as you might know, I am a very strong supporter of those teams. That whole thought originated within this committee, and this committee has strongly supported it. I certainly believe that they should be equipped, trained, and maintained properly, and in the context of doing that, if we can accelerate to a number that can give nationwide coverage, not necessarily one in each State, but nationwide coverage, then I believe we should proceed in that direction.

Senator BUNNING. Thank you. I have a question for Mr. Teets. Yesterday's *Washington Times* reported that the Air Force was resisting the transfer of munitions kits to the Navy for attacks on Afghanistan. Today's *Inside the Pentagon* stated that the *Times* report was completely wrong, and that the Air Force arranged for this transfer nearly 2 weeks ago.

Whatever the correct answer, will you commit to working with the other services to ensure that our mission gets accomplished without damaging interservice rivalries?

Mr. TEETS. If confirmed, I will be very pleased to do that, yes, sir.

Senator BUNNING. So far, in our war against the terrorists and their sponsors, most of the air attacks have been made by Navy carrier-based strike aircraft and Air Force long-range bombers. Air Force strike aircraft have not yet played a large role in this fight because of the lack of land base close enough to the fight.

Some have claimed the lesson of this is that we should reduce our reliance on Air Force strike aircraft. In past conflicts, some claimed that the lessons of that conflict were that we should rely more heavily on Air Force strike aircraft. Would you agree that the true lesson is that every conflict has different requirements and that the United States needs to maintain balanced capability, air, naval, and ground forces able to fight and win across the complete spectrum of a conflict?

Mr. TEETS. I would certainly agree with that statement, yes, sir.

Senator BUNNING. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Bunning.

Senator Allard.

Senator ALLARD. Thank you, Mr. Chairman. I have a full statement that I would like to have put in the record, and during the introductory remarks I did not make that full statement. I wanted to recognize Mr. Teets at that time, but I also want to recognize all three members of this panel.

It has been a pleasure to work with you, Mr. Brownlee. I look forward to working with all three of you, not only because you are involved in issues and areas that are important to our country, but also important to the State of Colorado. My staff and I will be visiting with you on a fairly routine basis, as well as through the subcommittee assignments that I have here on this committee. Along with Senator Warner I would appreciate your honest and forthright comments as we move forward.

Dr. Klein, one observation I have made with respect to your position is that it has been vacant for 3 years. This is a position where I think there needs to be some strong leadership, particularly in the cleanup of the chemical demilitarization programs, I think that is really important. We have some priorities in Colorado, just like Senator Bunning does in Kentucky, and I would ask that you do everything that you can to expedite the decision process.

I think both of us feel we need to move forward with the decisionmaking process just for the sanity of the local communities, and so that we can move on with the other business facing this country. I have questions that I am going to direct mainly to you, Mr. Teets, because of your responsibilities. One of those that I wanted to direct to you is my view of the National Reconnaissance Office (NRO) as a result of having served on the NRO commission. That is that they have evolved from a very advanced thinking group that was pushing technology right out front, to one more of a maintenance and sort of a marginal replacement organization.

One of the things that came out in our discussion on that commission was that they need to become more revolutionary in their

technology thinking and carry on with that highly classified heritage that was in the fifties, sixties, and seventies. I would like to know what kind of thoughts you have about the organization divesting itself from the care, feeding, and incremental upgrade assistance, and how you think that may fit into a cutting edge model.

Mr. TEETS. Thank you, Senator Allard. I have had the good fortune of working closely with the NRO for well over 30 years now, and it would be my observation that they have been leaders indeed in developing new technology, and have made some wonderful breakthroughs in the mission areas that they pursue.

I also want to mention that I have read the report put out by the NRO commission and appreciate it. I think an excellent job was done in that review.

I would say that as time has progressed there have become a number of systems that require continual maintenance and operation activity that perhaps seem to have detracted from some of these scientific breakthrough technology developments that the NRO has formerly done. I am not 100 percent current with all the things that are going on within the NRO right now, but if confirmed, I can assure you that I will get on board in a very rapid way and would be more than pleased to come back to you with my personal assessment of that subject.

Senator ALLARD. I think there is a question out there as to whether they should divest themselves of the routine management stuff so they have more personnel and time to devote to the high technology.

Mr. TEETS. I think it is a very valid question that deserves a solid answer. I would also say that one of the recommendations that came out of the National Security Space Commission dealt with the idea that there should be some best practices commingling between NRO and the Air Force and other service-based programs.

The Space Commission implementation memorandum that came out from Secretary Rumsfeld's office on October 18 was a very strong first step towards putting in place mechanisms to really use best practices across our national security space programs.

Senator ALLARD. Another area I want to discuss with you is the area of commercial imagery. I have been an advocate of the use of more commercial imagery. I think that we have some routine needs out there that really do not need to be used by some of our more highly technical secret parts of our information-gathering, and the Director of the NRO, as well as the Director of the National Imagery and Mapping Agency (NIMA), have both sought to develop greater reliance on commercial imagery in the last year, but it just has not been funded in the budget request.

In your view, what important role can commercial imagery play in the future, as we seek to modernize and revitalize the imagery intelligence system?

Mr. TEETS. Senator Allard, I am familiar with commercial imaging systems to the extent that I was very much aware of Space Imaging, Inc., and the activity they had with their Iconos satellite, and I think it does provide high quality 1-meter resolution kinds of imaging.

In my opinion, I think that there are ways for the intelligence community to make use of that, and again, I have not had recent

or up-to-date discussions with people at NIMA or in the NRO on this subject and would want to seek first from them their understanding on this subject. If confirmed I would be happy to do that early on and get back to you on that as well.

Senator ALLARD. Actually, the commercial imaging is going down to a 1/2 meter now.

Mr. TEETS. To some extent, that almost generates a concern perhaps, a concern over control of the product. You are working, I think, a very good question and, as I say, if confirmed, I would be happy to look into all aspects of commercial imaging and its relationship to the NRO and get back to you with solid answers.

Senator ALLARD. I was interested in that on the Intelligence Committee and in my role on the Subcommittee on Strategic here at the Committee on Armed Services.

Finally, we have both airborne and spaceborne reconnaissance efforts, and it appears to me that at times some of these functions overlap, although I think we are getting better at coordinating and feeding them off one another, and in your view, can and should we improve this integration and coordination between space and air-based reconnaissance, or do you think we are in pretty good shape?

Mr. TEETS. I think historically we have not done a good job on that subject, but I think it has been improving over time. However, I would say that it is such a vitally important item that it is an item that we ought to continue to drive hard on and once again I would say that, if confirmed, that is a subject that I would want to attack with some vigor.

Senator ALLARD. I guess we had the same problem there. It is like the joint strike fighter. We designed that so it can be universally used and cut down on maintenance cost and operational cost, and supplies and parts, but in some ways we find the Army, the Navy, and the Air Force all in the space program, and I think we need to work more closely with each one of those services. They each have their specific needs, and they are pretty specific to each one of those, but I think we need to seek for more continued cooperation between those so we can avoid as much duplication as we possibly can in that area.

Mr. TEETS. Yes, sir, I agree with that.

Senator ALLARD. Dr. Klein, we have the NNSA, the national security laboratories. I am curious to know what thoughts you may have on the role of our laboratories in our fight against terrorism, and what we can do to secure their own boundaries so that we do not have incursions into those laboratories.

Dr. KLEIN. Senator, if confirmed, I certainly would like to meet with General Gordon and review the security programs they have in place, and NNSA is getting established. They have been about a year-and-a-half in operation.

I have been impressed with the technical capabilities of a lot of the laboratories. They have a lot of very well-known experts in the field, but I do know that there have been some security concerns in the laboratories. They also have a wide body of expertise, and so I would want to meet with General Gordon as soon as reasonable, if confirmed, to talk about how the labs can be better utilized.

Senator ALLARD. Mr. Chairman, my time has expired. Thank you.

Chairman LEVIN. Thank you, Senator Allard.

Mr. Teets, a couple of questions for you, and then I will be done.

The Space Commission recommended that the Defense Department improve the career path for space professionals in the military services, and they viewed this as necessary for having the requisite Government cadre of professionals that would be needed to deal with the various challenges that are going to be faced. Do you have any specific proposals as to how the Air Force could improve the career path for its cadre of space professionals?

Mr. TEETS. Mr. Chairman, I have read through the Commission on National Security report, and I agree that that was an item that they addressed with some energy. I do not have specific proposals that I would propose to you right now, but I would heartily underscore the idea that that is an important consideration, and it is one that is growing in importance as time goes on.

It will be important not only for Air Force officers but Army and Navy officers, others who use space to have a professional capability here, and of course that expands over into the intelligence community as well.

I would be very pleased, if confirmed, to have a hard look with those organizations to see what programs they have in place right now, and what additional programs we could bring online that would assist in that item.

Chairman LEVIN. What are, in your judgment, the highest modernization priorities facing the Air Force today?

Mr. TEETS. I would have to say, on the subject of modernization, I am not an expert. However, I do know that the average age of aircraft in the United States Air Force is surprisingly large and growing. As a matter of fact, I understand that there is a proposal now that the Air Force really needs on the order of 170 new aircraft procured each year for the next 10 or so years in order to start to have a meaningful reduction in that trend.

I again think that modernization is an important subject to be addressed, and if confirmed I would be pleased to conduct a special review on that subject and get back to you on it.

Chairman LEVIN. Thank you. Just the other day we were told that there is a proposal that we would, I believe, do another re-engineering program on the B-52, which will keep it going for an additional, and maybe Les can help me out on this, 20 or 25 years longer.

This is the proposal from the Air Force, that we extend the life of the B-52 further, which means that 10 years or 20 years from now, or 30 or 40 years, someone is going to be sitting here and saying, do you realize the B-52 is now 80 years old? Yet that is what the Air Force is asking us to do, so that little footnote in history ought to be, that is right, but that is what the request was 30 years ago. Now we are talking in 2030.

I just for the record want to state when your nominations were received, because our staff has been working very hard on these nominations, as they have on all nominations that come to the committee. I think it is important to give reassurance to our colleagues who are not on the committee that we speedily reviewed these nominations.

Dr. Klein, your nomination was received on October 18, and Mr. Brownlee and Mr. Teets, your nominations were received on October 30. Since those nominations were received, we need to do paperwork and questions have to be sent out and answered, your financial reports have to be reviewed, and I just want to thank our staff in particular for the speed with which they take on these nominations.

One of our colleagues the other day was making a point on a different committee that some of these take an awful long time to get here, and I guess in the case of yours, Dr. Klein, as Senator Bunning was saying, I think he made reference to the point of how long this position has been unfilled.

Senator BUNNING. That was Senator Allard's point. It has been 3 years.

Chairman LEVIN. It is not unfilled as a result of this committee being slow in its response. I want to give the public that assurance, because we do move quickly. There are some nominations, obviously, where we have questions that need to be answered, but we try to move quickly.

Do you have any further questions, Senator Bunning?

Senator BUNNING. No.

Chairman LEVIN. We want to thank you all. Again, we thank your families for the contributions that they have made to your careers and will be making further to your careers, and we will stand adjourned.

[Whereupon, at 11:05 a.m., the committee adjourned.]

[Prepared questions submitted to R.L. Brownlee by Chairman Levin prior to the hearing with answers supplied follow:]

*November 6, 2001*

The Hon. CARL LEVIN,  
Chairman, Committee on Armed Services,  
U.S. Senate,  
Washington, DC.

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

R.L. BROWNLEE.

Enclosures

cc:  
The Honorable John Warner,  
Ranking Member.

---

#### QUESTIONS AND RESPONSES

##### DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I fully support the Department of Defense Reorganization Act of 1986 and related Special Operations initiatives for defense reform.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* In my opinion, these defense reforms have been implemented and have achieved desired results. Having said that, I believe it is important, and consistent with the intent of the reform legislation, that the Army continues to assess and

modify its operations and internal procedures to meet the challenges of a dynamic security environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of these reforms in my view were strengthening civilian control; streamlining the operational chain of command, improving the military advice provided to the National Command Authorities, clarifying authority for combatant commanders, enhancing the effectiveness of military operations, and improving the efficiency in the use of defense resources.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes, I fully support the congressional goals reflected in the Department of Defense Reorganization Act of 1986 and other related defense reform legislation.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the National strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am not aware of any current proposals to amend Goldwater-Nichols. I do believe that both Congress and the Department of Defense should recommend changes as new situations dictate.

#### DUTIES

*Question.* What is your understanding of the duties and functions of the Under Secretary of the Army?

*Answer.* Section 3015 of Title 10, United States Code, provides that the Under Secretary of the Army performs such duties and exercises such powers as the Secretary of the Army may prescribe.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* Twenty two years as an Army officer and almost 18 years on Senate staff.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Under Secretary of the Army?

*Answer.* I need to better learn the current challenges facing the Army—from the Army's point of view.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Army would prescribe for you?

*Answer.* If confirmed, I will serve as the principal advisor and deputy to the Secretary of the Army and will support him in the general management of the Department in the fulfillment of his Title 10, United States Code, responsibilities. I envision that the Secretary will also prescribe specific duties to me that will support his efforts to ensure that the Department of the Army is efficiently administered in accordance with the policies promulgated by the Office of the Secretary of Defense.

*Question.* In carrying out your duties, how will you work with the following officials:

1. The Secretary of the Army.
2. The Chief of Staff of the Army.
3. The Assistant Secretaries of the Army.

*Answer.* If confirmed, I will establish and maintain appropriate, professional relationships with the Secretary of the Army, the Chief of Staff of the Army, and each of the Assistant Secretaries and the General Counsel. I prefer direct and open communication with these officials and an environment of cooperative teamwork within the Secretariat and with the Army Staff.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Under Secretary of the Army?

Answer. I agree with the Secretary of the Army that the greatest challenge the Army faces is change. The challenges the Army faces are similar to those of the other services as we collectively readjust our organizations to the threats our country faces. The Army must manage and maintain the momentum of changes that will assure our Army's preeminence in the 21st century to deter threats and defend our national security interest and do it within the joint community.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

Answer. If confirmed, I will work closely with the Secretary of the Army, the Assistant Secretaries, the Office of the Secretary of Defense, and Congress to ensure the Army meets America's future security needs. This includes attracting, training, and retaining America's best and brightest, while providing for their quality of life and well-being. The Army must maintain balance in allocating its resources to remain ready to fight today's battles while transforming itself to address future conflict.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Under Secretary of the Army?

Answer. If confirmed, I would evaluate the specific roles and functions within the Office of the Under Secretary of the Army as assigned by the Secretary of the Army. It is premature for me to identify potential problems at this time.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

Answer. If confirmed, after evaluating the specific roles and functions within the office of the Under Secretary as assigned by the Secretary of the Army, I would recommend appropriate, timely actions to address any such problems.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues which must be addressed by the Under Secretary of the Army?

Answer. If I am confirmed, my priorities will, of course, be in accordance with the specific roles and functions as assigned by the Secretary of the Army. However, my priorities would begin with attracting, training, and retaining America's best and brightest young men and women, while providing quality of life and well-being for them and their families. Another priority would be to achieve balance in the allocation of the Army's resources to ensure current readiness while addressing the essential needs of the future. I believe it is also important to review the Army's acquisition process, and the planning, programming, budgeting, and execution process, along with financial management systems and processes.

#### HEADQUARTERS REORGANIZATION

*Question.* The Army is undertaking an effort to reorganize its headquarters by consolidating functions of the Secretariat and the Army Staff.

In your view, how would the proposed reorganization be accomplished, and what are the expected manpower savings to be realized from that action?

If confirmed, how would you, with a consolidated staff, balance the prerogatives of civilian control with the prerequisite of a clearly delineated military chain of command? More specifically, what role would the Army Chief of Staff perform if subordinate assistant chiefs of staff serve as military deputies to civilian assistant secretaries?

Answer. I have not been briefed on the specifics of the Army's proposed reorganization. I am committed to the principle of civilian control of the military services. I support the roles of the Secretary of the Army, the Chief of Staff, and other civilian officials and military officers of the Army, as prescribed and intended by applicable law.

#### NATIONAL GUARD DIVISIONS

*Question.* In your view, what effect have the results of the most recent Quadrennial Defense Review had on the mission of the eight National Guard divisions of the strategic Reserve?

Answer. The QDR confirmed the need for the Army to retain a robust force in depth. All eight ARNG divisions would, I believe, retain a warfighting capability and increase the Army's global responsiveness.

*Question.* With the increasing role and responsibilities of the Army National Guard in homeland defense, what mission and force structure changes do you anticipate for the Army National Guard? More specifically, in your view, should the strategic Reserve divisions be restructured for a homeland defense mission?

Answer. The scope of the Homeland Defense mission continues to develop. The National Guard has formed unique structure such as the Weapons-of-Mass-Destruction Civil Support Teams (CSTs). The Homeland Defense mission may require adjustments to existing structure such as CSTs, aviation, and military police units. In my view, restructuring of the strategic Reserve divisions for Homeland Defense should be examined in light of their other missions.

#### TRANSFORMATION

*Question.* The Army has embarked on a campaign to transform itself to better combat the expected threats of the new century.

In your view, does the Army have sufficient resources to carry out its transformation? If not, what is the magnitude of the shortfall?

Answer. The Army, along with the other military services, has unfunded requirements, the magnitude of which are known to the committee. If confirmed, I will work to ensure adequate resources are requested by the Army and allocated to accomplish the transformation of the Army as well as its other essential missions.

*Question.* In the absence of any substantial increases in the Army budget, how would you recommend, if confirmed, to the Secretaries of the Army and Defense that the Army meet its current and future readiness and transformation requirements?

Answer. The Army must strive to achieve an appropriate balance in allocating its resources to ensure current readiness while transforming and modernizing itself to address future conflict.

*Question.* The transformation of the Army will be strongly dependent on technological advancements made by science and technology programs both inside and outside of the Army.

In your view, has the Army sufficiently funded S&T programs needed to develop new systems including chemical and biological sensors, unmanned ground vehicles, computer network defense, and others?

Answer. I believe that the Army has appropriately funded within available resources its S&T program to focus on achieving the Army's transformation to the Objective Force.

*Question.* If confirmed, would you be in favor of setting a target percentage of Army Total Obligation Authority for Army S&T programs?

Answer. I support the Department of Defense's guidelines that have a goal of budgeting S&T as 3 percent of the overall DOD budget by 2007. The Army should continue to maintain robust funding for S&T to achieve its Objective Force capabilities.

*Question.* To date, Army leaders have not clearly delineated the relative priorities of the requirements to develop the Objective Force, field six Interim Brigade Combat Teams (IBCTs), and recapitalize and selectively modernize the existing "legacy" forces. If confirmed, how would you prioritize those requirements?

Answer. In my view, each of these requirements is essential. If confirmed, I will assist the Secretary of the Army in achieving an appropriate balance among these essential priorities.

*Question.* In your view, how should recapitalization and modernization of the legacy forces be accomplished?

Answer. In my opinion, the Army must continue to inform Congress of the Army's needs and leverage its existing resources to recapitalize and modernize its essential legacy forces primarily through upgrades and overhauls of these existing systems while moving to the Objective Force. Depots and industry partners should be adequately resourced to support recapitalization and modernization programs.

*Question.* In your view, what is the appropriate role of experimentation in developing the Objective Force?

Answer. I believe experimentation is an essential element that is embedded throughout the overall plan to transform the Army. The process of experimentation helps the Army understand the future warfighting environment and examine a wide range of operational concepts and emerging technologies. As the Army continues the development of the Objective Force, both joint and Army experimentation provide valuable insights into the capabilities the joint force will need to support our national defense.

*Question.* In your view, does the Army have a sufficiently robust experimentation plan, and do the Interim Brigade Combat Teams have a role to play in that regard?

Answer. I have not been briefed on the specifics of the Army's experimentation plan. I believe that lessons learned and insights from fielding of IBCTs as well as joint and Army experiments should enhance the further development of IBCTs and the Objective Force.

*Question.* If confirmed, what specifically would you recommend to the Secretary of the Army regarding the path to the Objective Force?

*Answer.* In my view, the Army should continue to pursue the essential levels of maturity of key technologies in support of the Objective Force.

*Question.* In your view, does the Army have a capabilities gap which the Interim Brigade Combat Teams are designed to fill? If so, will fielding six IBCTs sufficiently close that gap? Is there an alternate solution that you would recommend to the Secretary of the Army, if confirmed, particularly in light of the severe Army funding constraints?

*Answer.* The Army has asserted that the IBCTs will fill the gap for a medium weight force. I believe that at an appropriate time, the Army should conduct an operational evaluation of the proposed IBCT force structure to determine whether it adequately closes that gap. I also believe that alternative solutions that might meet the Army's requirements at reduced costs should be thoroughly examined.

*Question.* The Army has described the Interim Brigade Combat Teams as full spectrum capable, but optimized for peacekeeping.

In your view, are the IBCTs capable of full spectrum combat? If confirmed, would you recommend a comprehensive operational evaluation of the capabilities of the IBCTs in full spectrum combat?

*Answer.* I believe that a comprehensive operational evaluation of the IBCT should be conducted at an appropriate time to be determined by the Army. Such an evaluation should measure the combat capabilities of the IBCT.

*Question.* In the Fiscal Year 2001 National Defense Authorization Act, Congress mandated a side-by-side operational and cost comparison of an Interim Brigade Combat Team unit equipped with the Army's choice of interim combat vehicle, and a unit similarly configured and trained, but equipped with the medium armored vehicle currently in the inventory.

In your view, would such a comparison provide worthwhile information for future decisions?

Given the current war on terrorism, would you recommend, if confirmed, that the Army conduct the side-by-side comparison as currently planned, or seek congressional relief from the requirement?

*Answer.* I believe that the Army should have full knowledge regarding the relative operational combat capabilities and costs of alternative combat vehicles that meet the Army's requirements for such vehicles. I believe it is important and worthwhile for the Army to have this information for current and future decisions. If the Army can provide satisfactory and timely information that Congress requires without conducting a side-by-side test, then a test might not be necessary. The requirement was enacted before September 11. If the Army concludes that the test would have a significant, negative impact on its preparations and operations for the current war on terrorism, I believe Congress should reconsider the testing requirement.

#### DEFENSE LABORATORIES

*Question.* The Army is currently participating in a number of congressionally-mandated pilot programs to reform and revitalize the defense laboratory and test and evaluation enterprise. A number of these programs, including those intended for implementation at the Aberdeen Test Center, have been delayed due to legal and regulatory hurdles.

If confirmed, what actions would you propose to remove those barriers?

*Answer.* I realize that the defense laboratory and test and evaluation centers face many challenges. I understand that Congress has authorized several pilot programs to help reform and revitalize them. If confirmed, I will work with the Army leadership to ensure compliance with congressional mandates in this area.

#### CHEMICAL AND BIOLOGICAL DEFENSES

*Question.* Army science and technology programs fund some of the world's most advanced research on chemical and biological defense and medical technologies. The various technologies that result from these efforts are often delayed by Government (FDA and EPA) regulatory processes and therefore delayed in being transitioned to warfighters.

If confirmed, would you support streamlining the regulatory processes for highly critical technologies?

*Answer.* While I believe that essential testing and evaluation must be accomplished to ensure the health and safety of our soldiers, unnecessary procedures that impede timely fielding of advanced technologies—especially chemical and biological defense technologies—should be thoroughly examined and streamlined where possible.

*Question.* If confirmed, what actions, if any, would you propose to have the Army assist its successful contractors through the FDA and EPA approval process?

*Answer.* I don't feel adequately informed to provide an answer to this question. If confirmed, I will be happy to look into this matter and respond to the committee if it requests.

#### TRANSFER OF BALLISTIC MISSILE DEFENSE PROGRAMS TO THE ARMY

*Question.* The Ballistic Missile Defense Organization has proposed transferring the MEADS and PAC-3 programs to the Army, starting in fiscal year 2002. Although PAC-3 is a mature program, now heading into its final phase of operational testing, the MEADS program is just now emerging from initial concept definition. MEADS is not scheduled for deployment until the end of this decade, or beyond.

What is your view of the proposed transfer of these programs to the Army? What are the advantages and disadvantages of such a transfer?

In your view, is the Army prepared to support and fund these two programs to completion?

*Answer.* I understand PAC-3 is a mature technology and transferring it to the Army who will operate the system makes sense. On the other hand, MEADS is still in development, although it leverages some existing PAC-3 technology. Therefore, in my view, MEADS should remain with BMDO until more fully developed. In my view, while the Army might be prepared to support these programs, funding would be difficult within their current budget.

#### WEAPONS OF MASS DESTRUCTION, CIVIL SUPPORT TEAMS

*Question.* In its September 2001 report on combating terrorism, which was mandated by the National Defense Authorization Act for Fiscal Year 2001, the General Accounting Office asserted that the Weapons of Mass Destruction—Civil Support Teams (WMD-CSTs) “continue to experience problems with readiness doctrine and roles, and deployment that undermine their usefulness in an actual terrorist incident.”

In your view, is it necessary to maintain the WMD-CSTs? If so, what should be done to bring all of the teams up to a high, uniform standard of readiness?

*Answer.* Yes. If confirmed, I would support the Secretary of the Army in ensuring that the teams are properly manned, equipped, trained, and prepared to accomplish their assigned mission.

*Question.* In your view, is there a requirement for additional WMD-CSTs, and should the Department consider augmenting the teams to include such capabilities as decontamination?

*Answer.* It is my understanding that several studies concluded that more CSTs would be required to ensure timely, full coverage across the Nation. Because of the events on and after September 11, I believe the Department of Defense should consider adding new teams. I understand the Army National Guard and Army Reserve have been provided decontamination equipment sets that could be utilized to support a mass casualty decontamination requirement. The Department should seriously consider whether this capability is sufficient to meet the potential need.

*Question.* In your view, should the active duty Army develop WMD-CST-like capabilities?

*Answer.* I believe the active Army should continue its focus on its warfighting mission. The Reserve components are best suited to work with our domestic state, and local first responder communities.

#### ARMY INSTALLATIONS FORCE PROTECTION

*Question.* A September 2001 GAO report on installation antiterrorism/force protection criticized the lack of standards and assessments across all the military services.

In your view, what measures should the Army take, together with the other services, to improve installation preparedness against terrorist attacks?

*Answer.* I believe the Army should define its requirements and standardize its force protection capabilities across its installations and facilities both at home as well as abroad, subject to the standards and requirements by unified commanders in their areas of responsibility. These efforts should be coordinated with other services, DOD, and, where appropriate, local authorities.

*Question.* In your view, what are the greatest vulnerabilities that Army installations face in preventing terrorist attacks and in responding to them, and how would you, if confirmed, propose addressing those weaknesses?

*Answer.* I have not studied this in sufficient detail to provide an adequate response, but I intend to become familiar with all aspects of the vulnerabilities of the

Army's installations and how to address them. I will be happy to provide a response to the committee, if confirmed, if the committee desires.

## ENCROACHMENT

*Question.* On November 27, 2000, the Senior Readiness Oversight Council identified several "encroachment" problems confronting the Department of Defense including protection of endangered species, unexploded ordnance and other constituents, commercial demand for bandwidth and frequency, sustainability of the maritime environment, demand for use of airspace, protection of air quality, abatement of airborne noise, and growth of urban areas. At a March 20, 2001, hearing before the Readiness and Management Support Subcommittee, representatives of the military services expressed concern that this encroachment was hindering their legal responsibility under Title 10, United States Code, to train the forces.

If confirmed, what actions would you propose to address these problems?

*Answer.* In my opinion these problems threaten the ability of our military forces to train adequately for combat. If confirmed, I would work with OSD, other services, and Congress to address these problems.

## AC-RC RELATIONSHIPS

*Question.* During the past decade, relations between the Regular Army leadership and the Reserve components, particularly the Army National Guard, have not always been harmonious.

In your opinion, has the total Army leadership dealt adequately with this problem? If not, what steps would you recommend?

*Answer.* I believe the Army leadership is addressing these concerns and the Reserve components, as an essential part of our total force, will be a high priority for me.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of the Army?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR DANIEL K. AKAKA

## ENCROACHMENT

1. Senator AKAKA. I am interested in your thoughts regarding encroachment. I reviewed your response to the advance questions and noted your commitment to work with Office of the Secretary of Defense (OSD), the other services, and Congress to address problems of encroachment. How do you plan to address encroachment issues as the Under Secretary of the Army?

Mr. BROWNLEE. The Army faces significant challenges in the area of encroachment as it relates to training and ranges, all generally resulting from environmental, social, and economic influences. Impacts include, but are not limited to, restrictions on available testing and training locations; restrictions on available times and duration for testing and training; reduced effectiveness of testing and training activities; and restrictions on weapons systems, equipment, and munitions used during testing and training. The Army is working with the Office of the Secretary of Defense and the other Services to address these challenging issues.

We would ask Congress to support the Army's effort to ensure that encroachment does not prevent effective training in the following ways:

(1.) Support and resource implementation of the Army's Sustainable Range Program (SRP). SRP is the foundation for sustaining live training and the environment on our ranges. Although final funding levels have not been established, we ask Congress to support this important program.

(2.) Support and foster cooperation among regulators and the military, emphasizing the need to balance military readiness concerns and environmental regulation. We believe there are ways to balance the needs of the military with the needs of the environment. It would be helpful if Congress would encourage regulatory agencies to work with DOD to develop compliance methods that support both regulatory and military objectives.

(3.) Undertake legislative initiatives to clarify statutory requirements that apply to military operations. As currently written, several statutes contain broad discretionary enforcement thresholds that are based on the assessment of the regulatory authority as to whether a given condition presents a potential risk or imminent hazard to human health or a particular natural resource. While the Army is not seeking to avoid our responsibilities to the American people, or seeking relief from compliance with environmental statutes, the lack of consistent and measurable standards limits the Army's ability to plan, program, and budget for compliance requirements. It would be premature to discuss specific proposals, but we look forward to working with other Federal agencies and Congress.

The encroachment of commercial interest into portions of the radio spectrum used by the Army is also a serious issue. The growth of commercial wireless services is an important factor in our country's economic well being, but this growth must be balanced with the necessity of providing for our Nation's defense.

The National Defense Authorization Act of Fiscal Year 2000 directed that DOD shall not surrender spectrum of which it is a primary user until comparable replacement spectrum is made available. This language should be an effective tool in ensuring the Army's access to the spectrum it requires. Additionally, we will work with DOD to identify impacts to Army operations. DOD is currently leading an effort that includes Army participation to address potential impacts that would result from loss of access to spectrum for commercial wireless systems.

#### CORROSION PREVENTION AND CONTROL PROGRAM

2. Senator AKAKA. The Department of Defense is spending a significant amount of money because of corrosion—current estimates are about \$20 billion per year. The Readiness Subcommittee has begun to address this issue with the goal of being proactive in order to help minimize the drain on scarce operations and maintenance (O&M) resources. There is a need to address corrosion issues not just through maintenance and repair, but also in the acquisition process in order to decrease total life cycle costs. What will you do, as the Under Secretary of the Army, to assist the Army in addressing this issue?

Mr. BROWNLEE. In 1997, the Army chartered a Corrosion Prevention and Control (CPC) program to address common Army and DOD corrosion issues. This program was developed to resolve Army Materiel Command commodity requirements, address field and depot level maintenance issues, and support new weapon system acquisition. The Army CPC program consists of science and technology (S&T) and Operations and Maintenance Army (OMA) functions. As part of the Army's effort, a working group was established to integrate requirements and guide the Army in identifying and executing high-value solutions. We have since identified tactical vehicles and rotor craft as high-value targets.

A recent example of the impact of our efforts on the Army acquisition program is with the Family of Medium Tactical Vehicles, which responded to our work group recommendations and upgraded 39 components. This increased the projected service lives up to seven times that of the original equipment manufacturer products. The ultimate value of the Army's CPC S&T effort is to develop more durable material that costs less to maintain.

The CPC OMA program's focus is on establishing corrosion service centers and updating Army policy to influence the procurement process. The Army is planning to build corrosion service centers of excellence that protect airframes, ammunition, tactical vehicles, and ground support equipment. We have approved five CPC products and techniques for application on tactical vehicles, material handling, and construction equipment. We need additional candidates for CPC testing on missiles, aviation, and weaponry.

In addition, the Army provided input to DOD that addresses corrosion resistant designs. The Army is currently revising policy on the CPC program. To date, both functions of the program remain unfunded, but have received supplemental funding

for S&T and from reprogramming to resource urgent OMA requirements. However, these additional funds are not sufficient to support a coordinated Army approach to corrosion. Current efforts are high-value, ad hoc solutions. To raise visibility of this program, the Army established an Office of the Secretary of Defense program element entitled "Army Corrosion Prevention and Control Program"—an OMA funding line. The Army is currently working to establish a research, development, testing, and evaluation (RDT&E) funding line for corrosion to support S&T efforts. OMA and RDT&E funding is required to ensure this mission's success.

---

QUESTIONS SUBMITTED BY SENATOR RICK SANTORUM

INTERIM ARMORED VEHICLE SIDE-BY-SIDE TEST

3. Senator SANTORUM. In the Fiscal Year 2001 National Defense Authorization Act, Congress mandated a side-by-side operational and cost comparison of an Interim Brigade Combat Team (IBCT) unit equipped with the Army's choice of interim combat vehicle, and a unit similarly configured and trained, but equipped with the medium armored vehicle currently in the inventory. Senator Lieberman and I worked closely with General Shinseki and General Keane in establishing this requirement. Since the bill became law, Army leadership has repeatedly asked for relief from this requirement.

In your answers to advance policy questions, you stated that "the Army should have full knowledge regarding the relative operational capabilities and costs of alternative combat vehicles that meet Army requirements for such vehicle," that "it is important and worthwhile for the Army to have this information for current and future decision," but that "if the Army can provide satisfactory and timely information that Congress requires without conducting a side-by-side test, then a test might not be necessary."

In your capacity as Republican staff director, did you believe that the Army provided such satisfactory and timely information?

Mr. BROWNLEE. As the Republican staff director and a member of the Senate staff, I have enjoyed many years of personal and professional relationships with the Army. I believe the Army always does their best to provide valuable information as quickly as possible. While I am sure the Army believed they were being totally responsive to Congress in this regard, I believe that we can do a better job of communicating on this specific issue. If confirmed, I will work with the Army and Congress to provide the information Congress has requested. If such information is available and can be provided to Congress without conducting a side by side test, then Congress might consider relieving the Army of conducting the side by side test.

4. Senator SANTORUM. If not, what should the Army do, and what do you believe should be satisfactory to Congress to make the test unnecessary?

Mr. BROWNLEE. The light armored vehicle (LAV)-based IBCT force is the best value decision for the Army's needs. The Army collected and reviewed information on the M113A3 measured against the operational requirements document (ORD) for the interim armored vehicle (IAV) to provide insights that a side-by-side test would likely yield. The analysis of the M113 variant-based proposal and current Army inventory showed that this platform falls far short of IAV ORD requirements. The LAV variant-based design will fully meet our key performance parameters as determined by the Army during source selection, validated by GAO, and reinforced by the findings of analysis conducted by the Army Material Systems Analysis Activity.

In addition, the Army has committed to a robust test program for the LAV variant-based IBCT that far exceeds the operational and technical testing required by the side-by-side comparison. Our comprehensive test and evaluation strategy will validate the effectiveness, suitability, and survivability of the IAV through technical, ballistic and non-ballistic survivability, and operational testing. The Army will conduct a production verification test, a live-fire test, and an initial operational test, and report the results to obtain a full rate production decision in December 2003. Further, the Army will conduct a thorough operational evaluation of the unit before employment.

5. Senator SANTORUM. Do you believe that such a test would have a significant, negative impact on the Army's preparations and operations for the current war on terrorism?

Mr. BROWNLEE. The side-by-side test could cost the Army up to \$28 million and, perhaps more importantly, distract the Army's management attention at this critical

time. Needless to say, the Army would prefer to spend its scarce resources and efforts in other ways, especially now, during this crucial period for our Nation.

6. Senator SANTORUM. Today, Senator Inhofe criticized the cost to the Army of conducting this side-by-side test. What are the potential costs to the Army if a new platform is procured that is the same or only marginally better than the platforms that the Army has already purchased and that are in its inventory?

Mr. BROWNLEE. The Army awarded the IAV contract based on a best-value determination, selecting the proposal determined to be the best overall considering five evaluation areas: schedule, performance, supportability, cost, and management. The best value award addressed the Army's need to procure, field, and support a force of safe, reliable, supportable, and effective systems. Based on the selection criteria, the Army selected the LAV-based proposal over all other systems, including the M113 variant proposal.

The winning LAV proposal was significantly superior to all other competitor proposals in the performance and supportability areas. These advantages were deemed so significant as to outweigh any schedule and cost advantages of the M113 variant.

#### ARMY ACQUISITION STRATEGY

7. Senator SANTORUM. The Army only has enough resources to modernize its Counterattack Corps and selected XVIII Airborne corps units. How might this expensive acquisition strategy undermine the Army's attempts to modernize its Legacy Force and invest in its Objective Force?

Mr. BROWNLEE. The Army has made hard decisions to adapt to new priorities by allocating resources and canceling and modifying programs. The current investment in the Legacy Force, a selected modernization and recapitalization program targeting 17 critical systems, is essential for the combat readiness of the counterattack force. Parallel to this effort is the investment in the Interim Force, an absolute necessity to meet strategic gaps in capability, and the Objective Force.

While the Legacy Force sustains the Army's non-negotiable contract with America to fight and win the Nation's wars, the Interim Force provides critical strategic responsiveness for the near- and mid-term while the Army transforms to the Objective Force. The Interim Force, rapidly deployable, sustainable, and lethal expands the National Command Authority's options when dealing with uncertain threats around the world. The risk assumed by limited recapitalization and modernization of the Legacy Force is mitigated by the Interim Force capability and considerable investment in the Objective Force development to ensure technologies are matured sufficiently to meet aggressive timelines. Erosion in any of the three paths will impact overall transformation. Severely curtailing Legacy Force recapitalization will significantly impact combat readiness and make sustainment of those systems more expensive before they are retired. The balanced approach to transformation sustains combat readiness, fills capability gaps, and assures future combat dominance.

---

#### QUESTION SUBMITTED BY SENATOR JEFF SESSIONS

##### PATRIOT ADVANCE CAPABILITY (PAC)-3

8. Senator SESSIONS. Mr. Brownlee, I agree with your analysis that PAC-3, a mature technology, should be transferred to the Army, and that MEADS, a new system, should remain with the Ballistic Missile Defense Organization.

However, do you agree that if the Army does receive the PAC-3, that it is critical to the success of this system that no less than eight battalions of PAC-3s be funded for and fielded by the Army?

Mr. BROWNLEE. The Army requires ten PAC-3 Active Component (AC) Patriot battalions and the Southwest Asia pre-positioned assets be funded and fielded. The PAC-3 system provides the CINCs the best capability available and is a significant enhancement to the fielded PAC-2 system.

Total Army Analysis (TAA) 07, the Army's method to determine force structure requirements, validated the requirement for 14 Patriot battalions consisting of ten AC, two Army National Guard (ARNG), and two battalions that are unresourced. The results of a recent TAA 09 General Officer Steering Committee confirmed that the Army's requirement has increased from 14 to 15 Patriot battalions (three corps brigades (two battalions per corps for a total of six battalions); two theater brigades (three battalions per brigade for a total of six battalions); and three battalions for homeland security).

Currently, there are 12 Patriot battalions in the Army (ten AC battalions, two ARNG battalions) and one pre-positioned Southwest Asia battalion set. Of the 12 Army Patriot battalions, only seven AC battalions are currently funded for PAC-3 upgrades. The PAC-3 program is funded to upgrade seven AC battalions and the Southwest Asia Patriot pre-positioned assets. Additionally, the program must be funded to procure the required 2,200 PAC-3 missiles to meet the Army's acquisition objective versus the 1,130 for which the program is currently funded.

In June 2001, the PAC-3 program was transferred from the Ballistic Missile Defense Organization to the Army with \$2.7 billion in funding. The transfer provided upgrades for seven PAC-3 battalions and 1,130 PAC-3 missiles. The Army still has requirements to upgrade an additional three PAC-3 battalions and an additional 1,070 PAC-3 missiles to reach the Army's acquisition objective.

[The nomination reference of R.L. Brownlee follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*October 30, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

R.L. Brownlee, of Virginia, to be Under Secretary of the Army, vice Gregory Robert Dahlberg, resigned.

[The biographical sketch of R.L. Brownlee, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF LES BROWNLEE

Les Brownlee has served on the Republican staff of the Senate Armed Services Committee since January 1987 under both Senator Strom Thurmond (R-SC) and Senator John Warner (R-VA). Prior to assuming this position, he was National Security Advisor to Senator John Warner for 3 years.

In March 1996, Brownlee was designated staff director of the Senate Committee on Armed Services by then-Chairman, Senator Strom Thurmond (R-SC). In January 1999, he was designated staff director for then-Chairman, Senator John Warner, serving through the recent change in control of the Senate. Brownlee continues to serve as the Republican staff director for Senator John Warner (R-VA), the current Ranking Member.

From 1987 to 1996, he was the principal Senate Armed Services Committee professional staff member responsible for Army and Marine Corps programs, Special Operations Forces and Drug Interdiction policy and support. In addition, as deputy staff director, he was deeply involved in policies and programs relating to ballistic missile defense, strategic deterrence, and naval strategy, shipbuilding and weapons programs.

Brownlee is a retired Army Colonel and was commissioned as a Lieutenant of Infantry from ROTC at the University of Wyoming in 1962. Airborne-qualified and a Distinguished Honor Graduate of the U.S. Army Ranger Course, he is also an Honor Graduate of the Infantry Officer Advanced Course, the Command and General Staff College, and a graduate of the U.S. Army War College. In addition, he holds a Masters Degree of Business Administration from the University of Alabama.

He served two tours in Vietnam and, during the last 2½ years of a 4½ year tour in the Pentagon, was Military Executive to the Under Secretary of the Army, James Ambrose, before retiring in 1984. His decorations include the Silver Star with Oak Leaf Cluster, the Bronze Star with two Oak Leaf Clusters, and the Purple Heart.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by R.L. Brownlee in connection with his nomination follows:]

UNITED STATES SENATE  
 COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
 NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
 Romie Leslie Brownlee (Les).

2. **Position to which nominated:**  
 Under Secretary of the Army.

3. **Date of nomination:**  
 October 30, 2001.

4. **Address:** (List current place of residence and office addresses.)  
 [Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**  
 July 11, 1939; Pampa, Texas.

6. **Marital Status:** (Include maiden name of wife or husband's name.)  
 Divorced.

7. **Names and ages of children:**  
 Tracy Ann (Brownlee) Carney, 38; John L. Brownlee, 36.

8. **Education:** List secondary and higher education institutions, dates attended, degree received and date degree granted.  
 Odessa Senior High School (Odessa, TX); 1954-1957; High School Diploma.  
 University of Wyoming (Laramie, WY); 1957-1962; BS.  
 University of Alabama (Tuscaloosa, AL); 1967-1969; MBA.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

United States Army; Army Officer; 1962-1984.

Office of U.S. Senator John Warner; National Security Legislative Assistant; 1984-1987, U.S. Senate, Washington, DC 20510.

U.S. Senate Committee on Armed Services; Professional Staff Member, Deputy Staff Director, Staff Director; 1987 to present.

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

None.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

None.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

None.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

03/00—Bush for President—\$250.

10/00—RNC Victory 2000—\$250.

10/00—RNC Presidential Trust—\$500.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Military Awards:

Silver Star, 2 awards.

Bronze Star, 3 awards.

Purple Heart.

Legion of Merit.

Air Medal w/"V" device, 5 awards.

Meritorious Service Medal, 2 awards.

Army commendation w/"V" device, 2 awards.

Combat Infantryman's Badge.

Ranger Tab (Distinguished Honor Graduate).

Senior Parachutist's Wings.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

None.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have not given formal speeches.

**17. Commitment to Testify Before Senate committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

ROMIE L. BROWNLEE.

This 1st day of November, 2001.

[The nomination of R.L. Brownlee was reported to the Senate by Senator Warner on November 8, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on November 8, 2001.]

---

[Prepared questions submitted to Dr. Dale Klein by Chairman Levin prior to the hearing with answers supplied follow:]

November 6, 2001.

The Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Yours truly,

DALE KLEIN.

cc:  
 The Honorable John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* If confirmed, I will fully support the intent of the reforms and will advocate policies that will facilitate accomplishment of joint operations, streamline acquisition management and oversight, and enhance the Department's ability to respond to our 21st century national security challenges.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* I think the Department has done a creditable job in implementing defense reforms. However, without periodic policy reviews, these reforms can lose their effectiveness. It is my understanding that periodic reviews will be conducted to address the evolving security environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* I would consider each of the goals noted below to be an important aspect of these defense reforms. Prime among these is the concept of strengthening civilian control.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* Yes.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the National strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate?

*Answer.* If confirmed, I would consult with the Secretary of Defense and Congress on any changes that might be appropriate.

*Question.* If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* It is premature to offer any thoughts on the question at this time.

DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant to the Secretary of Defense for Nuclear, Chemical and Biological Defense Programs (ATSD(NCB))?

*Answer.* It is my understanding that my primary duty, if confirmed, is to work with the National Nuclear Security Administration to take care of the U.S. nuclear weapons stockpile. My duties also include countering the proliferation of weapons of mass destruction and the oversight of effective chemical and biological defense

programs. Finally, but equally important, it seems clear that my duties also include the oversight of the safe and secure demilitarization of our chemical weapons stockpile.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* Since 1977, I have been a professor in the Department of Mechanical Engineering, Nuclear and Radiation Engineering Program at the University of Texas at Austin. I have been the Vice-Chancellor for Special Engineering Programs at the University of Texas System since 1998. I also serve as the Chairman and Executive Director of the Amarillo National Research Center for Plutonium (ANRC), during which time I have overseen more than \$45 million in funding for plutonium research and nuclear weapon dismantlement issues. I have collaborated very closely with researchers at Pantex and the National laboratories to address stockpile stewardship issues. In addition, I previously served as Associate Dean of Research in the University of Texas College of Engineering, where I had twenty-two research units reporting to me, with several in the chemical and biological areas.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant to the Secretary of Defense for Nuclear, Chemical and Biological Defense Programs?

*Answer.* As you are well aware, the office has been vacant for 3 years. If confirmed, my first task will be to staff my office. Then I need to listen to the subject matter experts and the people in the field to perform my duties as I outlined above.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of Defense would prescribe for you?

*Answer.* I expect to be prescribed responsibilities for maintaining the nuclear stockpile, addressing counterproliferation and chemical and biological defense, and working chemical demilitarization.

*Question.* In carrying out your duties, how will you work with the Secretary of Defense, the Under Secretary of Defense for Acquisition and Technology, the Secretaries of the Military Services, the Defense Threat Reduction Agency, and the Administrator and Deputy Administrators of the National Nuclear Security Administration?

*Answer.* If confirmed, I intend to work as a team with Secretary Rumsfeld, Under Secretary Aldridge, the Secretaries of the Military Departments, and Director Younger. I will also, if confirmed, work closely with General Gordon and the Deputy Administrators of the National Nuclear Security Administration through the Nuclear Weapons Council. Then, working with others in DOD and Congress, I will recommend whatever changes might need to be made.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Assistant to the Secretary of Defense for Nuclear, Chemical and Biological Defense Programs?

*Answer.* I see five major challenges that will confront me, if confirmed. These include maintaining the safety, security and the reliability of our aging nuclear weapons stockpile, countering the continued proliferation of weapons of mass destruction, meeting the challenges of chemical and biological defense, ensuring the safe and secure demilitarization of our Nation's chemical weapons, and ensuring that DOD is able to support the Nation's focus on Homeland Defense.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed, I will listen to subject matter experts, Members of Congress, and the leadership of the Department of Defense, and I will assess existing programs to ensure they adequately address our national security needs.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant to the Secretary of Defense for Nuclear, Chemical and Biological Defense Programs?

*Answer.* Since the position of the ATSD(NCB) has been vacant since 1998, staff and resources will be important, as will fostering a sense of teamwork with other offices and organizations.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* While I am not prepared to discuss specifics at this time, if confirmed, I will take actions to establish management priorities and timelines to address these problems.

## PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues which must be addressed by the Assistant to the Secretary of Defense for Nuclear, Chemical and Biological Defense Programs?

*Answer.* If confirmed, I think the broad priorities would be (1) sustainment of the nuclear weapons stockpile to ensure it remains safe, secure and reliable; (2) countering weapons of mass destruction; (3) implementing effective chemical and biological defense programs; (4) ensuring the safe and secure demilitarization of our chemical weapons; and (5) coordinating our actions with all homeland security activities.

## REPORTING CHAIN

*Question.* What is your understanding of who you would report to, if confirmed, within the Department of Defense?

*Answer.* If confirmed, it is my understanding that I will report to Mr. Pete Aldridge, the Under Secretary of Defense for Acquisition, Technology & Logistics.

*Question.* Section 142 of Title 10 of the United States Code requires that the ATSD "advise the Secretary on nuclear energy, nuclear weapons, and chemical and biological defense." The responsibilities for chemical and biological defense were added to the ATSD in 1996. The position was originally created to ensure that the ATSD had direct access to the Secretary of Defense to ensure that any matters implicating the safety, security or reliability of the nuclear weapons stockpile were immediately provided to the Secretary.

Will the position of ATSD continue to have unfettered access to the Secretary for matters pertaining to the safety, security, and reliability of nuclear weapons?

*Answer.* Yes.

## ORGANIZATIONAL STRUCTURE OF THE OFFICE OF THE ASSISTANT TO THE SECRETARY

*Question.* What is the organizational structure of the office of the ATSD?

*Answer.* Currently the office consists of the ATSD and three deputies: one for Nuclear Matters; one for Counterproliferation and Chemical and Biological Matters; and one for Nuclear Treaty Programs.

*Question.* Will the offices and responsibilities that previously reported to the ATSD the last time the position was filled by an individual appointed by the President and confirmed by the Senate be restored to the office?

*Answer.* Yes.

*Question.* Will the director of the Defense Threat Reduction Agency report to the ATSD?

*Answer.* Yes.

*Question.* Will the office responsible for nuclear matters that previously reported to the ATSD and currently reports to the Director of Defense Research and Engineering (DDR&E) be returned to the ATSD? What role, if any, will the Director of Defense Research and Engineering have in nuclear matters?

*Answer.* Yes.

If confirmed, I will coordinate with the DDR&E on nuclear issues as appropriate.

## DUTIES AND RESPONSIBILITIES

*Question.* Section 179 of Title 10 of the United States Code designates the ATSD as the Executive Director of the Nuclear Weapons Council. The chairman of the Nuclear Weapons Council is the Under Secretary of Defense for Acquisition and Technology.

Will the ATSD have direct responsibility, authority, direction, and control of all the assets, resources, and people needed to fulfill the responsibilities of Executive Director of the Nuclear Weapons Council?

*Answer.* Yes.

*Question.* If confirmed as ATSD, would you propose that the Nuclear Weapons Council resume its monthly meetings, or would you propose a different meeting schedule?

*Answer.* If confirmed, I will continue to schedule monthly meetings.

*Question.* If confirmed as ATSD, would you ensure that the Nuclear Weapons Council carries out its statutorily mandated duties?

*Answer.* Yes.

## NUCLEAR POSTURE REVIEW

*Question.* If confirmed, would you participate in the nuclear posture review?

*Answer.* Yes.

## NUCLEAR WEAPONS TESTING

*Question.* Do you believe that there is a technical reason to resume nuclear weapons testing at the present time?

*Answer.* At the present time, I have no indication that a nuclear weapons test is needed.

*Question.* Do you believe we should develop a new weapon design in an effort to make sure our experienced designers are maintaining their skills and have the opportunity to transfer their expertise to the new generation of nuclear weapon designers?

*Answer.* Until I've had a chance to review this issue in detail, I must defer an answer at this time.

## STOCKPILE STEWARDSHIP PROGRAM

*Question.* Do you support the National Nuclear Security Administration Stockpile Stewardship Program?

*Answer.* Yes.

*Question.* If through our science-based Stockpile Stewardship Program, the Secretary of Energy and Secretary of Defense are unable to certify the safety, security and reliability of our nuclear stockpile, would you support the resumption of underground nuclear testing?

*Answer.* If the Secretary of Energy and the Secretary of Defense reach the point where they are unable to certify the safety, security and reliability of the nuclear stockpile, I would assume that, if confirmed, I would have been a key contributor to that decision. If the President supports this decision and determines that the need for nuclear testing is in the supreme national interest of the United States, if confirmed, I too would support the resumption of underground nuclear testing.

## COOPERATIVE THREAT REDUCTION PROGRAMS (NUNN-LUGAR PROGRAMS)

*Question.* Do you support the Cooperative Threat Reduction Programs?

*Answer.* Yes.

*Question.* Do you support the effort of the United States to assist Russia with the destruction of chemical weapons?

*Answer.* Yes.

*Question.* Do you believe that there are any additional activities that you would propose be undertaken by the Cooperative Threat Reduction program in the areas of nuclear weapons or materials, chemical munitions or chemical weapons technologies; or biological technologies?

*Answer.* While there may be additional activities that could be proposed, I would need to wait to confer with subject matter experts before making a determination.

*Question.* Would you support joint research programs between Russia and the United States in the areas of chemical or biological weapons defense?

*Answer.* Again, I would need to wait to confer with subject matter experts before making a determination.

## CHEMICAL AND BIOLOGICAL DEFENSE RESEARCH

*Question.* There are currently a number of ongoing research and development programs to support chemical and biological defense requirements spread across the various services and agencies.

If confirmed, would you support the consolidation of those programs into one office? What are the advantages or disadvantages of this consolidated management approach?

*Answer.* In order to better manage the joint chemical and biological defense program, it is my understanding that Under Secretary Aldridge has organized a task force to address some of the management deficiencies in the program. If confirmed, I would need to see the report from the task force before I made any determinations.

*Question.* Congress has worked to greatly increase the funding of research in the life sciences and biomedical sciences, especially at the National Institutes of Health.

If confirmed, how would you work to leverage these investments to meet the needs of the Department of Defense in therapeutics, vaccines, decontamination agents, and other technologies? How are the research and development programs of DOD and NIH currently coordinated? In your view, how should this coordination be improved?

*Answer.* It is my understanding that the Department of Defense currently has a collaborative research effort with NIH in the development of the next generation anthrax vaccine. Collaborative efforts with NIH are leveraged on a case-by-case basis.

*Question.* As the Department moves to improve its capability to meet chemical and biological threats, there will be an increasing dependence on the commercial sector, in both research and production.

In your view, what steps can Congress take to improve DOD's ability to leverage the technical talent, production capabilities, and research capabilities of the private sector? In your view, what steps could DOD take to encourage new private sector participation in the development of technologies of interest to the military?

*Answer.* I believe that the current program has taken advantage of considerable technical talent, research and production capabilities of a number of commercial companies who have developed and are producing improved chemical and biological defense equipment. If confirmed, I will place a high priority on advocating sufficient resources and on further enhancing lines of communication with industry, universities, and others.

*Question.* A number of promising medical and CB decontamination technologies that have been developed with DOD's investments are now involved in an extended and costly Federal regulatory process.

If confirmed, how would you work to speed this regulatory process for critical defense technologies? What actions, if any, would you propose to assist successful contractors in getting their technologies approved for use by the military?

*Answer.* The Department of Defense will continue to coordinate efforts with the FDA to facilitate industry compliance with regulations and to ensure that safe and effective medical products are developed in a timely manner. At this point, I cannot comment specifically on appropriate changes that could streamline the regulatory process until I've had the opportunity to fully examine the issue.

#### ROLE OF THE DEPUTY ASSISTANT TO THE SECRETARY

*Question.* In the absence of an Assistant to the Secretary, there has been a Deputy Assistant to the Secretary of Defense for Chemical and Biological Defense matters.

If you are confirmed to the position of ATSD, what would be the role and functions of the current position of the Deputy Assistant for Chem-Bio Defense?

*Answer.* It is my understanding that the current role and functions of the position are to provide day-to-day oversight for all counterproliferation and chemical-biological defense programs, consequence management, chemical demilitarization, assembled chemical weapons assessment, and chemical and biological weapons treaty implementation. If confirmed, I would review these roles and functions.

*Question.* Would the Deputy Assistant report to the ATSD?

*Answer.* Yes.

*Question.* What will be the relationship between the Deputy Assistant and the Under Secretary of Defense for Acquisition, Technology, and Logistics?

*Answer.* If I am confirmed, the Deputy Assistant will report through me to the Under Secretary.

#### ROLE OF THE ASSISTANT TO THE SECRETARY ON CHEMICAL AND BIOLOGICAL DEFENSE MATTERS

*Question.* If you are confirmed, what would you expect your roles and responsibilities to be on chemical and biological defense matters?

*Answer.* If confirmed, my responsibilities will be to address countering the proliferation of weapons of mass destruction. I also expect, if confirmed, to oversee effective chemical and biological defense programs. Finally, but equally important, I intend to oversee the safe and secure demilitarization of our chemical weapons stockpile.

*Question.* If confirmed, would you review the chemical and biological defense program and make any needed recommendations to Congress for improving the program?

*Answer.* In order to better manage the joint chemical and biological defense program, Mr. Aldridge has organized a task force to address some of the management deficiencies in the program. If confirmed, I would need to see the report from the task force before I made any determinations. The task force is required to report to Mr. Aldridge early next year.

*Question.* The Department of Defense plays a significant role in the area of research, development and acquisition of vaccines, medical therapy products, and decontamination technologies for chemical and biological defense, among other things.

If confirmed, would you work with other Federal agencies to review the regulatory and approval process for vaccines, medicines and decontamination technologies to improve the process and the timeliness of product approval?

*Answer.* Yes.

## COUNTERPROLIFERATION PROGRAM REVIEW COMMITTEE (CPRC)

*Question.* The Assistant to the Secretary of Defense (NCB) is mandated in statute to "serve as the executive secretary" to the Counterproliferation Program Review Committee.

If confirmed as the ATSD, would you fulfill this statutory responsibility?

Answer. Yes.

*Question.* If confirmed, what would be your roles and responsibilities relative to the Counterproliferation Program Review Committee?

Answer. If confirmed, my responsibilities would be to ensure that the CPRC adequately coordinates the efforts of the Department of Defense with the Department of Energy and the intelligence community in countering proliferation, and paramilitary and terrorist threats.

*Question.* If confirmed, what priorities would you establish for the CPRC?

Answer. If confirmed, I will review the responsibilities of the CPRC and establish appropriate priorities.

## CHEMICAL AND BIOLOGICAL DEFENSE

*Question.* Will the ATSD (NCB) have oversight of the safety and security of biological and chemical agents in stock at DOD training, R&D, and production facilities?

Answer. Yes.

*Question.* If confirmed, what steps would you take to guarantee the safety and security of these agents?

Answer. If confirmed, I will work with the military services to guarantee the safety and security of these agents.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Answer. Yes.

*Question.* Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Assistant to the Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings, and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTIONS SUBMITTED BY SENATOR ROBERT C. BYRD

## GAO STUDY OF THE CHEMICAL AND BIOLOGICAL DEFENSE PROGRAM

1. Senator BYRD. Dr. Klein, at my request, the General Accounting Office conducted a study of the Chemical and Biological Defense Program. As I am sure you know, this program develops the gas masks and other protective equipment that our troops need to survive an attack using a weapon of mass destruction.

The conclusions of the report are very alarming. If the program were working well, it would start by looking at all types of chemical and biological weapons that are being developed by countries like Iraq, Iran, North Korea, and others. Our intelligence agencies have a pretty good idea of what kinds of research these countries are carrying out, and some of those programs are pretty advanced. The program would then take these threats and develop the equipment necessary to protect our soldiers from them. But that is not the case.

Instead, the Pentagon seems to be buying whatever equipment some contractor might offer to it, without regard for whether it actually works any better than what we had 10 years ago. I understand that the program developed a protective suit for the Navy that begins to disintegrate if it is exposed to salt water!

This is a serious problem. It calls into doubt the safety of our troops at the same time that our country is dealing with a bio-terrorist attack on our homeland.

Have you seen or been briefed on this report?

Dr. KLEIN. At the time of my confirmation hearing, I was unaware of the specifics of this Government Accounting Office (GAO) report. However, I intend to become familiar with this and other GAO and Department of Defense Inspector General (DODIG) reports, their findings and recommendations, particularly those that contain acquisition implications for the Department. I do expect that these programs will be operated in both a safe and cost-effective manner.

2. Senator BYRD. What do you believe are the main challenges facing the Chemical and Biological Defense Program?

Dr. KLEIN. The Chemical and Biological Defense Program consists of all Department of Defense (DOD) research, development, and acquisition (RDA) efforts that develop and procure systems designed to provide U.S. forces with the ability to operate effectively in the presence of chemical and biological agents. The plans and accomplishments of the Chemical and Biological Defense Program are detailed in an annual report and performance plan submitted to Congress. Technical challenges within the science and technology base are also detailed in the Joint Warfighting Science and Technology Plan.

Joint and service unique RDA efforts are structured to support the framework of the three mission areas of CB defense: *contamination avoidance* (detection, identification, warning and reporting, and reconnaissance), *protection* (individual, collective, and medical) and *decontamination*. The current CB program supports warfighters in all services. It focuses on force protection for all the services in all environments. The programs affect all joint warfighting capabilities, while providing an integrated system of systems throughout the battle space. It is essential to view all chemical and biological defense programs as an integrated system, with each mission area important to joint force survival. Our forces need the full spectrum of defensive equipment to survive, fight, and win in contaminated environments. One of the major challenges of the program is ensuring that adequate capabilities in all mission areas are developed and fielded to protect the entire force. For example, capabilities for detection and warning must be supplemented by protection systems, medical therapeutics and vaccines, and decontamination capabilities in order for our forces to sustain operations effectively.

A related challenge is ensuring that defensive capabilities protect against the full spectrum of chemical and biological threats. Not only must we protect against classical chemical and biological agents, such as nerve agents and mustard agents, anthrax, plague, and others, but we must also protect against these agents in combination and in various states (liquid, aerosols, and vapors). Additionally, we must protect against emerging threats, including fourth generation chemical agents and potentially genetically modified biological agents.

Another challenge that is being addressed is the integration of defensive capabilities with the strategy to counter the proliferation of weapons of mass destruction. We are working to ensure defensive capabilities and strategies complement capabilities and plans for *deterrence*, *nonproliferation* initiatives such as the Chemical Weapons Convention and the Biological Weapons Convention, *counterforce capabilities* to destroy adversaries' chemical and biological weapons capabilities, and *combating terrorism* initiatives to prevent and limit the effects of terrorist attacks using chemical or biological weapons.

DOD is addressing some of the challenges to institutionalize acquisition efforts for capabilities to manage consequences of a terrorist attack. This includes efforts to ensure the units such as the Weapons of Mass Destruction Civil Support Teams (WMD-CSTs) and the Chemical Biological Incident Response Force (CBIRF) are adequately equipped to respond to terrorist attacks.

DOD continues to work with other agencies to ensure that the unique assets and capabilities of the Department can be made available to support the lead agencies for terrorist. Additionally, DOD is working with other agencies to develop safe and effective vaccines to protect against a biological agent attack. Specifically, DOD and the Department of Health and Human Services are leading an interagency effort to develop the requirements for a national vaccine production facility for biological defense vaccines.

These are some of the major challenges that are currently being addressed. Numerous technical challenges are detailed in the reports mentioned above. We will continue to improve our capabilities to ensure that U.S. forces are the best protected fighting force in the world.

## INTEGRATION INTO THE ACQUISITION PROGRAM

3. Senator BYRD. I think the main problem here is that the Pentagon seems to be buying whatever new product is offered to it. First we ought to know what something is supposed to do, before we even begin testing it, much less purchasing it.

Do you intend to integrate the intelligence agencies into your acquisition program to make sure we get the right equipment to protect our troops from the very real threat of chemical and biological weapons?

Dr. KLEIN. The Department of Defense Chemical and Biological Defense Program (CBDP) has always, and will continue to, require Defense Intelligence Agency (DIA) validated chemical and biological threat assessments as outlined in the Chairman of the Joint Chiefs of Staff Instruction 3170.01A (10 August, 1999). Warfighter requirements for the acquisition of chemical and biological defense capabilities (medical and non-medical) are focused on the DIA validated chemical and biological threat list. In order to ensure that the DIA threat list that supports the CBDP is current, the Deputy Assistant to the Secretary of Defense (Chemical and Biological Defense) in March 2001 requested the production of an updated chemical and biological warfare agent threat document. Just recently, DIA published a comprehensive threat document entitled the "Chemical and Biological Defense Capstone Threat Assessment" (Reference DIA product DI1650-83-01).

The CBDP also recognizes the need to ensure coordination and integration of the Intelligence Community with the user and acquisition communities. Currently, the Joint Service Integration Group (JSIG), which has responsibility for the integration and oversight of service and CINC requirements for chemical and biological defense RDT&E and initial procurement, is in the process of establishing a sub-group that will be composed of representatives from intelligence, user, and acquisition communities. This JSIG sub-group for addressing existing and emerging chemical and biological threats will ensure coordination and integration among all stakeholders.

## EQUIPMENT STANDARDIZATION

4. Senator BYRD. The program has worked to standardize the protective equipment used by the military, so that an Army soldier can use the same gas mask as a Navy sailor. This makes sense, under most circumstances. But I cannot understand how the program developed a protective suit for the Navy special operations personnel that was damaged by salt water.

What are your thoughts on standardizing this type of equipment, as opposed to having specialized equipment for unique purposes?

Dr. KLEIN. Standardization of equipment is a common sense and cost effective approach toward supporting the operational needs and missions of our joint forces. However, there are instances where specialized equipment may be necessary to facilitate mission accomplishment.

The Joint Service Lightweight Integrated Suit Technology (JSLIST) is the standard joint chemical and biological (CB) suit being fielded to soldiers, sailors, airmen, and marines. As such, JSLIST was developed with the general needs of joint forces in mind. However, a design specific to special operations needs and requirements was also developed. Both provide salt water CB protection to the wearer, but not as much as a dry JSLIST garment.

Again, it should be emphasized that no CB suit technology exists which provides complete CB protection (including salt water exposure). The JSLIST Program Office continues to seek new and promising CB suit technologies, even as the current JSLIST is being fielded. Until such time as a new technology is identified, developed, and thoroughly tested, JSLIST remains the best overall material solution to providing CB protection to our joint forces.

## QUESTIONS SUBMITTED BY SENATOR JACK REED

## COOPERATIVE THREAT REDUCTION PROGRAM

5. Senator REED. If confirmed, will you look at potential areas of future cooperation with Russia through the Cooperative Threat Reduction Program to ensure the U.S. is doing everything possible to safeguard Russian nuclear materials and weapons?

Dr. KLEIN. The Cooperative Threat Reduction (CTR) Program has a number of ongoing projects with the Russian Ministry of Defense to enhance the safety and security of Russian warheads in storage and during transport. Although not involved with the dismantlement of the nuclear weapons themselves, the CTR Program also

has an ongoing project with the Ministry of Atomic Energy to construct a Fissile Material Storage Facility to provide centralized safe, secure, and ecologically sound storage of up to 50 metric tons of weapons-grade plutonium and 200 metric tons of highly enriched uranium removed from nuclear weapons. We continue to be concerned with the potential theft or diversion of Russian nuclear weapons, and, therefore, we will continue to look at potential areas of future cooperation to further safeguard nuclear materials and weapons.

6. Senator REED. Are there additional opportunities to do research with Russia through the Cooperative Threat Reduction program with the nuclear scientists and engineers in the Russian nuclear weapons complex?

Dr. KLEIN. The DOD Cooperative Threat Reduction Program is no longer engaged in employing Russian nuclear weapons scientists and engineers in cooperative research. The Department of Energy, through the Initiatives for Proliferation Prevention and Nuclear Cities Initiative, and the Department of State, through the International Science and Technology Center in Moscow, undertake this task.

#### STOCKPILE STEWARDSHIP PROGRAM

7. Senator REED. You stated in your answers to pre-hearing questions that you support the Stockpile Stewardship Program to keep the nuclear weapons stockpile safe and secure in the absence of nuclear weapons testing. What are your plans to ensure that the Stockpile Stewardship Program is closely coordinated with and supported by DOD?

Dr. KLEIN. The Joint DOD-DOE Nuclear Weapons Council (NWC) has the responsibility under Section 179, Title 10, U.S. Code to conduct this coordination. As the NWC Staff Director and as the Chairman of the Nuclear Weapons Council Standing and Safety Committee, I plan to manage this inter-departmental coordination. In my DOD role as the ATSD (NCB), I plan to work closely with the Joint Staff, Commanders in Chief (CINCs), military services and the Office of the Secretary of Defense staff to identify and ensure DOD requirements are met by the Stockpile Stewardship Program.

8. Senator REED. How will you ensure that the Stockpile Stewardship Program meets both long term science goals as well as the near term goals of supporting the ongoing life extension programs?

Dr. KLEIN. My first priority must be to the stockpile and to the refurbishments necessary for the safety and reliability of each nuclear weapon system. I will work with the military services, Joint Staff, CINCs, appropriate civilian defense officials, and the National Nuclear Security Administration (NNSA) to ensure our near-term safety, security, and reliability requirements are met. I also understand the value of increasing our understanding for weapons-related science and I will examine and support the NNSA Campaigns that have the potential to enhance safety and reliability in the future.

#### DOD STRATEGIC SYSTEMS

9. Senator REED. Over the past several years I have been concerned that the requirements placed on the Department of Defense to maintain certain types and numbers of nuclear weapons are out of sync with the delivery system requirements at DOD. In other words there are far more nuclear weapons than delivery systems. If confirmed would you commit to review this apparent disconnect?

Dr. KLEIN. Yes.

10. Senator REED. Should this also be something that could be addressed in the context of the ongoing Nuclear Posture Review?

Dr. KLEIN. Yes.

#### NUCLEAR POSTURE REVIEW

11. Senator REED. Do you know what your role will be in the Nuclear Posture Review process if you are confirmed?

Dr. KLEIN. No. However, I plan to be engaged in all issues addressed by the Nuclear Posture Review.

## MAINTAINING TECHNICALLY QUALIFIED PEOPLE

12. Senator REED. Maintaining technically qualified people at DOE and DOD to meet your various responsibilities will be a challenge. How can you work with DOE and the military services to make sure the necessary people are available, recruited and retained?

Dr. KLEIN. I will review the recommendations of the Chiles Report on maintaining nuclear weapons expertise within DOE and the recent joint DOD/DOE report on maintaining nuclear qualified people. With their recommendations in mind I plan to work closely with General Gordon at the National Nuclear Security Administration (NNSA) as well as with key military and civilian leaders within DOD to assist them in their efforts to recruit and retain technically qualified people. I believe both DOD and DOE need to establish better long-term relationships with universities so the graduates are aware of the exciting career opportunities with these Departments. In addition, the services need to examine how they structure advancement within their career programs to ensure critical positions are filled with experienced, motivated and technically qualified people.

---

 QUESTIONS SUBMITTED BY SENATOR DANIEL K. AKAKA

## EXCESS PLUTONIUM

13. Senator AKAKA. You have written on the importance of securing and disposing of both Russian and U.S. fissile material that is left over when nuclear arsenals are reduced. While Russia agrees that surplus plutonium must be secured from terrorists, Russia also regards this material as a valuable energy source and commodity. In your opinion, how important is each aspect of excess plutonium to your Russian counterparts?

Dr. KLEIN. In my opinion each aspect of excess plutonium is very important to the Russians. I believe they realize the extreme importance and priority of safeguarding plutonium from terrorists. However, they also understand the resources that were invested to produce the plutonium in question, and, therefore, place a high value on the use of their plutonium. The Russians must strike a balance on their use of plutonium compared to other energy sources while providing supreme protection of this plutonium from terrorists.

14. Senator AKAKA. Is the terrorist proliferation concern overwhelmed by the potential financial gain of this material?

Dr. KLEIN. No. I believe Russia understands the need to safeguard their plutonium; however, their financial resources devoted to this endeavor do merit monitoring.

15. Senator AKAKA. Has this balance shifted since the events of September 11? Dr. KLEIN. I believe that the events of September 11th have heightened Russian awareness of the paramount need to protect this plutonium from terrorists.

## RUSSIAN NUCLEAR WEAPON INFRASTRUCTURE

16. Senator AKAKA. How important are programs that deal with the critical personnel issues relating to the Russian nuclear weapon infrastructure?

Dr. KLEIN. In my view programs that deal with critical personnel issues relating to the Russian nuclear weapon infrastructure are very important in that they help prevent trained scientists and engineers from leaving Russia and selling their expertise to potential proliferants. The DOD Cooperative Threat Reduction Program is no longer engaged in employing Russian nuclear weapons scientists and engineers in cooperative research. The Department of Energy, through the Initiatives for Proliferation Prevention and Nuclear Cities Initiative, and the Department of State, through the International Science and Technology Center in Moscow, undertake this task. Also, I believe it is vital that the Russians retain the critical personnel so that Russia can effectively dismantle and dispose of the excess Russian nuclear weapons and the resulting material in a safe and secure manner.

One critical personnel issue that the DOD Cooperative Threat Reduction Program has dealt with is personnel reliability. We have an ongoing project to enhance the Russian Ministry of Defense's personnel reliability program by providing a capability for drug and alcohol screening and evaluation of personnel who have access to nuclear weapons.

The DOD program does contract with Russian nuclear weapons institutes to develop equipment to enhance safety and security of nuclear weapons and materials.

17. Senator AKAKA. Do you feel that US CTR programs have placed enough attention on the “brain drain” and the risks of internal theft and diversion of nuclear material?

Dr. KLEIN. The “brain drain” issue is very important and is handled by the Departments of State and Energy. The Cooperative Threat Reduction (CTR) Program works closely with the Ministry of Defense to protect against internal theft and diversion of nuclear warheads. These efforts include equipment and assistance in establishing a personnel reliability program to screen and test workers at the warhead facilities. It also includes equipment, services and training on security in the transport, handling, and storage of the weapons as they are withdrawn from operational use and are eventually dismantled. We would like to provide more assistance to Russia’s Ministry of Defense but are hindered by Russia’s laws that prohibit foreign personnel access to their weapons storage areas. This is a problem we are trying to resolve with Russia.

The DOD program does contract with Russian nuclear weapons institutes to develop equipment to enhance safety and security of nuclear weapons and materials.

18. Senator AKAKA. Many of the problems faced by domestic chemical weapons disposal facility planners, namely local opposition, and environmental safety concerns, are shared by planners of Russian chemical weapons disposal facilities. Would you consider sharing lessons learned and best practices regarding chemical weapon destruction with your Russian counterparts?

Dr. KLEIN. The DOD CTR Program shares a very special, on-going and cooperative relationship with our Russian counterparts for the destruction of chemical weapons. We share a common goal of destroying chemical weapons stockpiles. As part of this working relationship, we routinely share information, lessons-learned and best practices pertaining to the safe and efficient destruction of chemical weapons. The U.S. Army’s Chemical Weapons Destruction program office provides a rotating manager to assist in sharing these lessons with Russian counterparts. Additionally, our Russian colleagues have visited Johnston Atoll and other U.S. Chemical Disposal sites and have met with local officials to discuss common problems. We will continue this practice as we work with our Russian partners towards building a nerve agent destruction facility in Shchuch’ye to eliminate these weapons and the threat of their proliferation, and in other areas that enhance U.S. national security goals. The complete, rapid and safe destruction of both the Russian and U.S. chemical weapons stockpiles is a goal of high importance to both our nations.

#### CHEMICAL WEAPON DISPOSAL FACILITIES

19. Senator AKAKA. How would you plan on improving any of the concerns raised in a recent GAO report about some U.S. chemical weapon disposal facilities?”

Dr. KLEIN. Subsequent to the GAO Report *Chemical Weapons Disposal—Improvements Needed in Program Accountability and Financial Management*, the Department made changes in the DOD Chemical Demilitarization program to improve overall program management. First, the Department re-categorized the program to an Acquisition Category (ACAT) ID designation, which provides more senior-level program oversight consistent with the size, scope, and international importance of this mission.

Next, the Under Secretary of Defense for Acquisition, Technology and Logistics directed a series of Defense Acquisition Board (DAB) program reviews be held on the entire Chemical Demilitarization Program. The DAB program review is being used to streamline the overall program, establish realistic schedule and cost estimates, and determine alternative technology methods for two remaining sites.

Finally, the Army has responded by consolidating its management structure within a single chain of command at the headquarters level. This was done to reduce duplication of efforts and improve overall management of the program.

20. Senator AKAKA. One objective of DOD’s CTR Programs is to eliminate and prevent the proliferation of biological and chemical weapons and associated capabilities. CTR programs provide collaborative research for chemical and biological weapon scientists, enhance security and safety at former Soviet biological research centers, and consolidate and dismantle infrastructure associated with biological weapon production or research. Which of these objectives do you feel is the most urgent in the current international climate?

Dr. KLEIN. First and foremost, we seek to destroy weapons of mass destruction and their means of delivery. If it's not possible to destroy such weapons, then we will seek to consolidate and secure them. Further, we seek to prevent weapons of mass destruction, materials, and knowledge from leaving the former Soviet Union.

The Biological Weapons Proliferation Prevention aspect of the DOD CTR program is of exceptional, and increasing, importance. The priority there is to consolidate and enhance the security of dangerous pathogens at former Soviet biological research and production facilities. On the chemical weapons front, we also are concerned with the threat of chemical weapons proliferation and we are troubled by inadequate security and safety measures currently being maintained on stocks of chemical agents, and we have a program that is addressing this concern.

Please note, while the DOD CTR Program is involved in targeted collaborative research with biological weapon scientists on dangerous pathogens to enhance U.S. bio-defense capabilities, the DOD CTR program is not involved in similar collaborative research with chemical weapons scientists—the Department of State engages in this area.

21. Senator AKAKA. Do you feel these programs have the resources and attention needed to accomplish their goals?

Dr. KLEIN. Currently, between unobligated funding and the budget request, there is both the funding and management flexibility to deal with this challenge. The Department in conjunction with the Office of Management and Budget (OMB) will notify Congress if requirements for additional funds arise.

#### QUESTIONS SUBMITTED BY SENATOR JEFF BINGAMAN

22. Senator BINGAMAN. Will the Department look to you as the nominated official for oversight of acquisition programs concerned with weapons of mass destruction and our nuclear arsenal?

Dr. KLEIN. Yes

23. Senator BINGAMAN. Will you work to insure the Nuclear Weapons Council is an active decision making body so that the Department of Energy receives timely guidance and requirements in their Stockpile Stewardship Program?

Dr. KLEIN. Yes.

#### OVERSIGHT FOR COUNTER-TERRORISM

24. Senator BINGAMAN. How will the Department perform oversight for counterterrorism with weapons of mass destruction when the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict (ASD/SO/LIC) is the official responsible for counterterrorism and this position is responsible for weapons of mass destruction?

Dr. KLEIN. One of my responsibilities as the Assistant to the Secretary of Defense for Nuclear and Chemical and Biological Defense Programs (ATSD(NCB)) is countering the proliferation of nuclear, chemical, and biological (NCB) weapons of mass destruction and their means of delivery. These responsibilities include: the development of a counterproliferation (CP) acquisition strategy; the research, development, and acquisition related to CP; development of systems and standards for the administration and management of the approved plans and programs for CP; review and evaluation of programs for carrying out approved policies and standards; coordination, cooperation, and mutual understanding on CP policies, within the Department of Defense (DOD) and between DOD and other Federal agencies; and advisor to the Defense Acquisition Board for review of systems for CP programs.

Another of my responsibilities is that of Executive Secretary for the congressionally-mandated Counterproliferation Program Review Committee (CPRC) and Chair of that organization's Standing Committee. The CPRC is chaired by the Secretary of Defense, with the Secretary of Energy as the vice-chair, and the Chairman of the Joint Chiefs and Director of Central Intelligence also participating. Serving with me on the CPRC Standing Committee is the National Nuclear Security Agency's Deputy Administrator for Defense Nuclear Nonproliferation, the Joint Staff J-5 Deputy Director for Strategy and Policy, the Central Intelligence Agency's Director for Weapons Intelligence, Nonproliferation and Arms Control, and the Assistant Secretary of Defense for Special Operations and Low Intensity Conflict (ASD(SO/LIC)).

The ASD(SO/LIC) has overall responsibility for the counterterrorism mission. My responsibilities, CP duties, and CPRC congressional mandate make me responsible for countering that subset of the NCB aspects of paramilitary and terrorist threats.

In this capacity, I work closely with the ASD(SO/LIC) both directly and within the forum of the CPRC to ensure that our efforts are coordinated and that we capitalize on any opportunities to exploit possible synergies to ensure that we thoroughly address this issue.

#### LOW-YIELD NUCLEAR WEAPONS

25. Senator BINGAMAN. What is your position on the development of low-yield nuclear weapons as a deterrent against hard and deeply buried targets?

Dr. KLEIN. The Department of Defense recently submitted the congressionally-mandated Report to Congress on the Defeat of Hard and Deeply Buried Targets (HDBTs), which responds to Section 1044 of the Floyd D. Spence Department of Defense Authorization Act for Fiscal Year 2001. I support the report's initiatives for finding, locating, and attacking HDBTs in a timely manner.

#### QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

##### STOCKPILE STEWARDSHIP PROGRAM

26. Senator THURMOND. Maintaining a safe and reliable nuclear weapons' stockpile is of supreme national interest to the United States. In the absence of nuclear testing, our Nation relies on the Stockpile Stewardship Program as the primary means of ensuring the safety and reliability of its nuclear deterrent. What are your views regarding the Stockpile Stewardship Program's effectiveness in ensuring the safety and reliability of the weapons under the control of our Armed Forces?

Dr. KLEIN. My perception at this point is that the Stockpile Stewardship Program to date, and the excellent Cold-War era legacy of nuclear weapons scientists, engineers, and production workers, has worked to ensure the safety and reliability of the stockpile. The ability of the program to continue to do so is uncertain. The effectiveness of the program will ultimately be measured by its ability to deliver refurbished safe and reliable weapons in a timely manner to meet operational requirements. We have not yet reached that point.

##### ROLE IN STOCKPILE STEWARDSHIP

27. Senator THURMOND. In your response to the advance policy question on major challenges facing you if confirmed, you indicated that one challenge will be "maintaining the safety, security and reliability of our aging nuclear stockpile." In your view what specific role will you have in "maintaining the safety, security, and reliability of our aging nuclear stockpile"?

Dr. KLEIN. Specifically, I view myself as the principal OSD focal point for the safety, security, and reliability of our nuclear weapon stockpile. As the Nuclear Weapons Council (NWC) Staff Director, as the NWC Executive Secretary and as the Chairman of the Nuclear Weapons Council Standing and Safety Committee, I will manage the joint DOD-DOE/National Nuclear Security Administration (NNSA) activities aimed at maintaining the safety, security and reliability of our aging nuclear stockpile. As the ATSD (NCB), I am chartered as the principal contact with the DOE/NNSA on all atomic energy matters. I am directly responsible to the Secretary of Defense to develop plans for nuclear weapons safety and security. I plan to work closely with the Joint Staff, Commanders in Chief, Military Services, civilian defense officials, the DOE/NNSA in carrying out these responsibilities.

##### CHEMICAL DEMILITARIZATION

28. Senator THURMOND. The United States has an aggressive, but expensive Chemical Demilitarization Program. What will be your specific role in the execution of this program?

Dr. KLEIN. As the Assistant to the Secretary of Defense for Nuclear, and Chemical and Biological Defense Programs, I will provide oversight of the Army Chemical Demilitarization Program and the Assembled Chemical Weapons Assessment (ACWA) Program. One of my primary goals is to foster improved cooperation with the Army to help expedite the destruction of our chemical weapons in a safe, treaty-compliant and cost-effective manner.

29. Senator THURMOND. Further, what are your views on how the program is progressing toward meeting the 2007 deadline for the destruction of the stockpile?

Dr. KLEIN. As of December 2001, the Department reports that 24 percent of the original chemical weapons tonnage has been destroyed. Thus, we have achieved the Chemical Weapons Convention (CWC) 20 percent destruction milestone well before the April 29, 2002, deadline. As part of this destruction effort, all chemical weapons at Johnston Atoll (6.4 percent of the original inventory) were finally destroyed during 2001. Closure operations at Johnston Atoll are currently underway.

Results from the September 2001 Defense Acquisition Board (DAB) review of the Army Chemical Demilitarization program show us that we will not be able to meet the Chemical Weapons Convention 2007 deadline for complete destruction of our national stockpile of chemical weapons. However, a provision in the convention allows for an extension to 2012. The Department is looking at adopting efficiencies that will help us to condense the overall schedule to within the 2012 timeframe without compromising strict safety and environmental standards.

A second and third phase of the DAB program review will occur in March and June 2002, respectively. During these reviews, destruction technologies to be used at the Pueblo, CO, and Blue Grass, KY, chemical depot sites will be determined. Based on the technologies chosen for these sites, the Defense Acquisition Executive will approve the final destruction schedule estimates accordingly.

---

QUESTION SUBMITTED BY SENATOR JAMES M. INHOFE

CHEMICAL AND BIOLOGICAL DETECTION DEVICES

30. Senator INHOFE. Dr. Klein, there is a company in Tulsa, Oklahoma called Airborne Technologies, that has done some great things regarding chemical/biological detection using an airborne platform for detection. They are actively involved in project SAFEGUARD, which was developed by ERDEC in response to needs identified during the Gulf War. Today, SAFEGUARD is our country's only operational, field proven stand-off detection sensor capable of locating, tracking, and identifying the airborne plume produced by chemical weapons of mass destruction (WMD). SAFEGUARD functions by flying over enemy territory on a BQ-145 UAV utilizing its on-board sensors to identify chemical/biological particles.

In 1995, a blue ribbon panel was directed to study SAFEGUARD and the results were overwhelmingly positive. Many of the panel members have written me to express how this program could be of great value due to the recent terrorist events. My office has been working with DTRA to highlight how SAFEGUARD could assist the United States and our allies in these tense times since the attack of 11 September. However, the progress has been slow with DTRA due to bureaucracy.

Dr. Klein, I would like for you to study this issue and report back to me with your findings. I think you will find that the SAFEGUARD program has merit.

Dr. KLEIN. I am currently not aware of the details of the SAFEGUARD program, but will certainly work to gain familiarity with this issue. My general understanding is that research involving the SAFEGUARD program was completed in fiscal year 2001 and the hardware was transitioned to the U.S. Environmental Protection Agency for application and further development. In the interim, the Department focused on investigating unmanned aerial vehicle (UAV) deployment for other standoff and point detectors. This issue bears looking into and I will commit my efforts to that end and report back to you.

---

QUESTIONS SUBMITTED BY SENATOR WAYNE ALLARD

CHEMICAL DEMILITARIZATION

31. Senator ALLARD. There has been much discussion about impact fees for communities that have chemical weapons destruction facilities.

Where would the money for these proposed impact fees have to come from, and how could it affect the chemical demilitarization programs for these sites?

Dr. KLEIN. In accordance with House Report 106-945, Section 152, p. 647, the Department tasked the Institute for Defense Analyses (IDA) to conduct an independent assessment on "the impact of the Department of Defense Chemical Agents and Munitions Destruction program on the communities in the vicinity of the chemical weapons stockpile storage sites and associated chemical agent demilitarization activities" at the eight chemical depot facilities located within the continental United States.

Based on the findings of the report, which reveal an overall positive economic impact at the state level resulting from demilitarization operations at all eight sites, the Deputy Secretary of Defense, in a September 25, 2001, memorandum to Con-

gress, did not recommend economic assistance to the communities. Therefore, based upon this determination, there are no effects to budgets or programs.

32. Senator ALLARD. What do you see as your biggest challenge in meeting the international deadline for the destruction of our chemical stockpile as directed by the Chemical Weapons Convention?

Dr. KLEIN. Results from the September 2001 Defense Acquisition Board review of the Army Chemical Demilitarization program show us that we will not be able to meet the 2007 Chemical Weapons Convention deadline for complete destruction of our national stockpile of chemical weapons. However, a provision in the Chemical Weapons Convention allows for an extension request to 2012. The Department is looking at adopting efficiencies that will help us to condense the overall schedule to within the 2012 timeframe without compromising strict safety and environmental standards. Therefore, our biggest challenge will be to identify and incorporate such efficiencies that will help us maintain treaty compliance without compromising safety and environmental standards.

33. Senator ALLARD. Will we meet the deadline?

Dr. KLEIN. The Defense Acquisition Executive (DAE), during a September 2001 Defense Acquisition Board program review, approved a new schedule for completion of chemical weapons destruction. Based on the new schedule, we will not complete chemical weapons stockpile destruction before the 2007 deadline.

However, a provision in the Chemical Weapons Convention allows for an extension request to 2012. The Department is looking at adopting efficiencies that will help us to condense the overall schedule to within the 2012 timeframe without compromising strict safety and environmental standards.

---

#### QUESTIONS SUBMITTED BY SENATOR TIM HUTCHINSON

##### VACCINE PRODUCTION FACILITY

34. Senator HUTCHINSON. The National Defense Authorization Act for Fiscal Year 2002, passed by the Senate on October 2, 2001, provides authority for the Secretary of Defense to design, construct and operate on an installation of the Department of Defense a Government-owned, contractor-operated vaccine production facility. The Senate provided this authority following a comprehensive review by the Emerging Threats and Capabilities Subcommittee of this committee, as well as the work of other congressional committees. In addition, an advance recommendation of the Gilmore Commission on Terrorism recommends a Government-owned, contractor-operated vaccine production facility. I encourage you to review the work of this committee and other congressional committees, as well as the work of the Gilmore Commission.

Dr. Klein, should the Secretary of Defense utilize the authority provided to him by Congress, I expect that your office will execute his instructions.

Will you assure the committee that the site selection process for a Government-owned, contractor-operated vaccine production facility will be fair and transparent?

Dr. KLEIN. Yes, the acquisition process will follow established policies and provisions of the National Environmental Protection Act, local and State permitting, Federal Acquisition Regulation, and the Defense Acquisition Regulation Supplement.

35. Senator HUTCHINSON. Dr. Klein, will you assure the committee that as the criteria is established for site selection, that this committee be briefed on that criteria and that, before site selection is made, the committee receive a briefing?

Dr. KLEIN. As I stated during my confirmation hearing, I intend to work closely with Congress on all critical national security issues germane to my portfolio in a spirit of openness and frankness. As soon as site selection criteria are established for the vaccine facility, I assure members of this committee that I will inform you of these criteria and brief you on our selection process, and progress made up to that point on establishing a vaccine production facility.

---

#### QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

##### STATUS OF THE CB DEFENSE DETECTION PROGRAM

36. Senator SESSIONS. Dr. Klein, if confirmed you will be leading an office with an extremely important mandate. The bio-terrorist attacks using anthrax have shown us the need to be able to rapidly and accurately detect biological, chemical

and radiological weapons. We need this technology, not only for the soldier in the field, but for the post office worker and in airport security offices. Indeed we need this technology wherever large numbers of people congregate.

Can you tell this committee the status of the Department of Defense's efforts to develop an accurate system, or systems, to detect biological, chemical, and radiological weapons with extremely low false alarm rates?

Dr. KLEIN. The mission of the Chemical/Biological (CB) Defense Program is primarily focused on the "classical combat" environment. This environment requires that the false alarm rate be taken into consideration with the response time, sensitivity, and other parameters that impact on the suitability of the products to the soldier in the field. The technology used in CB Defensive equipment has the potential for other environments, i.e. post offices and airports, but would require testing and evaluation of their effectiveness in those environments and forces various performance parameters to be re-balanced for the specific environment. The capabilities to accurately detect biological, chemical, and radiological materials with extremely low false alarm rates are in various stages depending on the nature of the material. This assessment is focused on a select subset of biologicals and chemicals (i.e. warfare materials) and not the entire list of toxic industrial materials.

The status of the identification of biological materials in a localized environment (i.e. next to the detector) is adequate but requires the use of multiple tests to provide the level of confidence needed for a presumptive identification of the biological materials. Efforts are currently underway to enhance this capability to identify with fewer tests. The status of the identification for early warning is inadequate; the current capability is to provide an inferred warning that something might be out there thus triggering the use of other assets to provide additional information. For this area, technology is the current limiting factor.

The status of the identification of chemical materials is adequate in both the localized environment and for early warning. There are still some areas of improvement (i.e. size, weight, and increased sensitivity while maintaining low false alarm rates) that are desired and are currently being addressed within the development community.

The status of the identification of radiological materials is adequate in the localized environment. There are a number of commercial sources that can provide this capability since it is widely needed within the civilian sector (i.e., hospitals, etc.).

#### STATUS REPORT OF DOD'S RESEARCH EFFORTS

37. Senator SESSIONS. Please provide this committee with a status report on DOD's research efforts, and let us know if you need any more support from Congress.

Dr. KLEIN. The Department appreciates the strong support provided by Congress over the past several years towards improving our Nation's chemical and biological defense research efforts.

In regard to medical chemical and biological defense research, the Department's mission is to preserve combat effectiveness by timely provision of medical countermeasures. A key research initiative to improve chemical and biological defense medical readiness includes enhanced medical diagnostic capability for diseases and injuries caused by chemical and biological warfare agents. Diagnostic research efforts are currently conducted within the Defense Technology Objective (DTO), Common Diagnostic Systems for Biological Threats and Endemic Infectious Diseases. The Chemical and Biological Defense Program (CBDP) utilizes DTOs to focus on more mature medical technologies for advancement through the acquisition process.

Recent bioterrorism incidents with anthrax spores have heightened our interest in improving our diagnostic capabilities, particularly with regard to biological warfare agents. A key objective of our current biological diagnostic research is to develop deployable, state-of-the-art systems, including reagents, protocols, training and devices to be used by medical personnel to confirm a clinical diagnosis of infection with any biological threat agent or endemic infectious disease of military importance. The scope of this effort includes evaluating the advanced medical diagnostic research being conducted by the Defense Advanced Research Projects Agency (DARPA) with a consideration for transitioning the most promising technologies into the Department's CBDP to support the warfighter.

With regard to chemical medical diagnostic capabilities, our overall objective is to diagnose, to determine a prognosis for, and to manage the joint service warfighter exposed to chemical warfare agents. This research objective involves developing effective, field-deployable diagnostic equipment, skin and wound decontamination

products, pharmaceutical treatments, and practical clinical strategies to aid in the clinical management of chemical warfare agent casualties.

In addition to our efforts to enhance medical chemical and biological defense diagnostic capabilities, the Department conducts significant research in developing pre-treatments and post-exposure therapeutics.

Currently, there are three medical chemical defense and seven medical biological defense DTOs. The medical chemical defense DTO research efforts focus on (1) the development of medical countermeasures against vesicant injury (i.e., post-exposure therapeutic); (2) the development of a chemical agent prophylactic (i.e., pre-treatment); and (3) the development of an active topical skin protectant (i.e., pre-treatment). The medical biological defense DTO research efforts focus on the development of vaccines against a variety of pathogens. The medical biological defense DTO research efforts address vaccine development. For example, there are individual DTOs for the development of vaccines against anthrax, plague, encephalitis viruses, and Brucellae. There are also DTOs for the development of a multiagent vaccine delivery approach that could be used to immunize concurrently against a range of agents, as well as a needle-less alternative to the injection of recombinant protein-based vaccines. Finally, there is a seventh biological medical defense DTO to develop state-of-the-art technologies capable of diagnosing biological warfare agents in clinical specimens.

DOD's Non-Medical Science and Technology (S&T) Program conducts a number of research efforts in technologies for detection, warning, and identification of biological and chemical threat materials. The principal focus is battlefield-related scenarios; however, the research readily leverages into solutions for domestic and homeland defense detection applications.

Current and near-term fielded technologies for biological identification rely on antibody-based, single use assays in various implementations from hand-held to automated multiassay environmental diagnostics. The non-medical research program is investigating several approaches to expand the number of agents detectable in unattended hardware formats while reducing overall logistical burdens.

Identification of biological materials is limited by burden of time, requiring tens of minutes. Rapid detection technologies providing indication of biological materials in the environment within timeframes less than a minute have been evolved from the S&T program and are under development for fielding.

Detection of aerosolized particulate threats relies upon efficient air sampling techniques. Research is being conducted to develop more efficient and smaller air samplers for incorporation with future smaller chemical and biological detection devices.

The detection and identification of water-borne chemical and biological threats is being investigated under the DTO, Chemical Biological Agent Water Monitor. Candidate technologies for investigation have been downselected and are currently being evaluated against threat materials. As with the genetic discrimination technology mentioned above, these technology investigations will soon be entering technology demonstration phase. Investigations of technologies for detection and identification of food-borne chemical/biological (CB) threats are initiating this year.

The investigation of early warning, standoff detection technologies continues with increased emphasis. Passive chemical detection technologies which rely upon ambient radiation to provide the necessary discrimination data are investigated under the DTO, Chemical Imaging Sensor, which will produce a candidate technology proving chemical content information at a range of several kilometers with improved mapping capability over current and near-term fielded approaches. Active standoff detection technologies, which utilize a laser to probe the atmosphere at significantly greater ranges, are being investigated to provide improved biological detection capability at ranges to tens of kilometers. Investment into standoff approaches, which address both chemical and biological detection in a single hardware configuration, is being increased.

Studies of improved detection capabilities occur in the context of an improving understanding of the nature and impact of the threat. Investments have increased in the current fiscal year toward understanding of both chemical and biological threats, the fate of chemical threats in the environment (DTO entitled Environmental Fate of Agents), and operational endpoints under low-level chemical threat conditions via operational toxicology studies. The assimilation and fusion of data from multiple sensors to provide enhanced CB awareness over wide areas is the focus of an increased battle management thrust. Development of improved models to predict the evolution of CB hazards is occurring within the Joint Effects Model program recently moved into technology demonstration phase. Development of models to understand and mitigate impacts of CB threats on operations is moving into technology demonstration phase this fiscal year through the Joint Operational Effects Federation.

Significant research is also being conducted into the technologies required for response to CB events in the areas of individual and collective protection and decontamination.

Finally, our Chemical and Biological Defense S&T Program is being coordinated with those of DARPA, the Department of Energy Chemical Biological National Security Program, and the intelligence community under the auspices of the Counter Proliferation Review Committee to optimize leverage of national CB community efforts across the broad spectrum of technology application scenarios. A significant investment in the technology demonstration element of the DOD CBDP S&T Program is applied to support the evaluation and maturation of technologies evolving from the efforts of other government agencies.

To summarize, I would like to say that the Department has a robust program and we are making significant strides in several areas. We appreciate the support we've received from Congress, and if further financial support is needed we will certainly return.

---

[The nomination reference of Dr. Dale Klein follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*October 18, 2001.*

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Dr. Dale Klein, of Texas, to be Assistant to the Secretary of Defense for Nuclear and Chemical and Biological Defense Programs, vice Harold P. Smith, Jr., resigned.

---

[The biographical sketch of Dr. Dale Klein, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF DR. DALE KLEIN

Since 1977, Dr. Klein has been a professor in the Department of Mechanical Engineering (Nuclear Program) at the University of Texas at Austin. He has been the Vice-Chancellor for Special Engineering Programs at the University of Texas System since 1998. Dr. Klein also serves as the Chairman and Executive Director of the Amarillo National Research Center (ANRC), during which time he has overseen over \$45 million of funding concerning plutonium research and nuclear weapon dismantlement issues.

Dr. Klein has held other positions during his tenure at UT Austin: Director of the Nuclear Engineering Teaching Laboratory; Deputy Director of the Center for Energy Studies; and Associate Dean for Research and Administration in the College of Engineering.

In addition to his duties at UT and the ANRC, Dr. Klein is an active member of several Department of Energy national committees, including the Nuclear Energy Research Advisory Committee in July 2000.

He has been honored with the distinction of Fellow of the American Society of Mechanical Engineers and the American Nuclear Society. Dr. Klein has also received many awards, including the Joe J. King Professional Engineering Achievement Award by UT Austin and Engineer of the Year for the State of Texas by the Texas Society of Professional Engineers. Having received his Ph.D. in nuclear engineering from the University of Missouri-Columbia, Dr. Klein has been honored with the University of Missouri Faculty-Alumni Award and the University of Missouri Honor Award for Distinguished Service in Engineering.

Since joining UT Austin, Dr. Klein has received over \$50 million in research funding, equipment, and educational support. He has published over 100 technical papers and reports, and co-edited one book. He has made over 300 presentations on energy and has written numerous technical editorials on energy issues that have been published in major newspapers throughout the United States.

---

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the

advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Dr. Dale Klein in connection with his nomination follows:]

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Dale E. Klein.
2. **Position to which nominated:**  
Assistant to the Secretary of Defense (Nuclear, Chemical, and Biological Defense).
3. **Date of nomination:**  
October 18, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
July 6, 1947; Clarksburg, Missouri.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Rebecca Anne Klein (maiden name Armendariz).
7. **Names and ages of children:**  
N/A.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
1961-1965, Tipton High School; graduated.  
1965-1970, University of Missouri, Columbia; 1970 B.S. Mechanical Engineering.  
1970-1971, University of Missouri, Columbia; 1971 M.S. in Mechanical and Aerospace Engineering.  
1973-1977, University of Missouri, Columbia; 1977 Ph.D. in Nuclear Engineering.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
1977 to Present, The University of Texas at Austin, Professor of Mechanical Engineering (Nuclear Program), Austin, TX.  
1994 to Present, The University of Texas System, Vice Chancellor of Special Engineering Programs, Austin, TX.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
TRAB, Texas Radiation Advisory Board, Chairman.  
DOE, Department of Energy, Nuclear Energy Research Advisory Committee, member.

TCET, Texas Council on Environmental Technology, volunteer appointment by Governor Rick Perry.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

ARDT, Advocates for Responsible Disposal in Texas, Board Member.

CSIS, Center for Strategic and International Studies, Consultant.

Blue Ridge Technologies, Consultant.

UT System, Vice-Chancellor.

UT Austin, Professor.

UT Austin, Radiation Safety Committee, Chairman.

UT Austin, Nuclear Engineering Teaching Lab, Interim Director.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

ASME, American Society of Mechanical Engineers, member and fellow.

ANS, American Nuclear Society, member and fellow.

ASEE, American Society for Engineering Education, member.

NSPE, National Society of Professional Engineers, member.

TSPE, Texas Society of Professional Engineers, member.

IC2, Innovation, Creativity, and Capital, member and Centennial fellow.

Pi Tau Sigma, member.

Tau Beta Pi, member.

Omicron Delta Kappa, member.

Pi Mu Epsilon, member.

Phi Kappa Phi, member.

TRAB, Texas Radiation Advisory Board, Chairman.

ARDT, Advocates for Responsible Disposal in Texas, Board Member.

DOE, Department of Energy, Nuclear Energy Research Advisory Committee, member.

TCET, Texas Council on Environmental Technology, volunteer appointment by Governor Rick Perry.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

George W. Bush.

J. "Jake" Pickle

PACE, Political Action Committee for Engineering (Texas).

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

**HONORS and AWARDS**

The Eyes of Texas Excellence Award, The University of Texas at Austin (May 2001)  
 Certified Fellow, American Nuclear Society (1999-2000)  
 Faculty-Alumni Award, MU Alumni Association, University of Missouri-Columbia (1998)  
 Bob R. Dorsey Professorship in Engineering, College of Engineering, The University of Texas at Austin (1997-present)  
 Fluor Centennial Teaching Fellowship in Engineering No. 1, College of Engineering, The University of Texas at Austin  
 Missouri Honor Award for Distinguished Service in Engineering, College of Engineering, University of Missouri-Columbia (1996)  
 Joe J. King Professional Engineering Achievement Award, College of Engineering, The University of Texas at Austin (1995)  
 Engineering Foundation Award, College of Engineering, The University of Texas at Austin (1993, 1982 and 1979)  
 Texas Engineer of the Year, Texas Society of Professional Engineers (1992)  
 Richard Seaver Centennial Fellow, IC2 Institute, The University of Texas at Austin (1990-present)  
 Engineer of the Year, Travis Chapter of the Texas Society of Professional Engineers (1990)  
 Fellow, American Society of Mechanical Engineers (1988)  
 Order of Alec Award, College of Engineering, UT Austin (1988)  
 Faculty Leadership Award – Department of Mechanical Engineering, UT Austin (1988)  
 Outstanding Service Award, Pi Tau Sigma (1988)  
 Edwin F. Church Medal, ASME (1988)  
 Outstanding Service Award, Travis Chapter, TSPE (1985)  
 Certification of Recognition, Travis Chapter, TSPE (1985)  
 Outstanding Service Award, UT Chapter, Pi Tau Sigma (1985)  
 Continuous Outstanding Service Award, Central Texas Section, ASME (1984-85)  
 Certificate of Appreciation, ASME (1982)  
 Young Engineer of the Year, Travis Chapter, TSPE (1982)  
 Outstanding Service Award, Central Texas Section, ASME (1980-81 and 1978-79)  
 Certificate of Governance, American Nuclear Society (1978-79)

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

#### ORAL PRESENTATIONS

Dale Klein has given over 300 oral presentations relating to energy since 1977. These include several keynote presentations and programs on radio and television. In addition, Dr. Klein appeared on a Cable News Network program on June 27, 1991, entitled, "The Nuclear Graveyard." Also, in May 1991 he appeared in an educational video on high level waste disposal entitled, "A Time to Decide."

#### SELECTED OPEDs, MAGAZINE ARTICLES AND NEWSPAPER INTERVIEWS (Titles listed are those used by the newspapers)

1. "Nuclear Perspective," *Energy 1986*, Vermont Yankee Nuclear Power Corporation, 1986.
2. "Save the Nuclear Energy Option," *Chicago Tribune*, Chicago, Illinois, April 7, 1986.
3. "Nuclear Safety Vigilance," *St. Louis Post-Dispatch*, St. Louis, Missouri, May 31, 1986.
4. "U.S. Nuclear Chernobyl Accident Unlikely," *Austin American-Statesman*, Austin, Texas, June 7, 1986.
5. "Don't Let OPEC Get Away with its Strategy," *Houston Chronicle*, Houston, Texas, August 21, 1986.
6. "Who's Running the Energy Show?" *The Union Leader*, Manchester, New Hampshire, August 28, 1986.
7. "Energy Diversification Keeps OPEC Wolf From Door," *The Atlanta Constitution*, Atlanta, Georgia, October 7, 1986.
8. "Where Do We Go When the Well Runs Dry?" *Houston Chronicle*, Houston, Texas, October 20, 1986.
9. "The Electrical Utilities are Hogtied by Red Tape," *The Philadelphia Inquirer*, Philadelphia, Pennsylvania, November 30, 1986.
10. "But What Will We Do About Energy?" *The Houston Post*, Houston, Texas, April 7, 1987.
11. "Where the Next Oil Crisis Will Crunch," *The Plain Dealer*, Cleveland, Ohio, April 7, 1987.
12. "Oil, Energy and the Persian Gulf," *Chicago Tribune*, Chicago, Illinois, July 23, 1987.
13. "U.S. Energy Policy Needed to Combat Mideast Volatility," *The Atlanta Constitution*, Atlanta, Georgia, July 31, 1987.

14. "For the Lack of an Energy Policy..." *Houston Chronicle*, Houston, Texas, August 20, 1987.
15. "Expert Pushes for More Nuclear Power," *The Vindicator*, Youngstown, Ohio, November 11, 1987.
16. "The Electric Answer in the U.S.," *The Journal of Commerce*, January 11, 1988.
17. " 'Defense in Depth' Design Guards Nuclear Plants," *Corpus Christi Caller-Times*, Corpus Christi, Texas, February 21, 1988.
18. "Nuclear Power Should Be Part of National Policy, Says Energy Awareness Spokesman," *Shreveport Journal*, Shreveport, Louisiana, May 31, 1988.
19. "Now is the Time to Begin Altering 'Greenhouse Effect'," *Post-Bulletin*, Rochester, Minnesota, September 5, 1988.
20. "3-Mile Island After Atom's Eve," *Austin American-Statesman*, Austin, Texas, March 28, 1989.
21. "Galileo and the Nay-Sayers," *The Journal of Commerce*, November 10, 1989.
22. "A Need to See Space Ourselves," *The Tuscaloosa News*, Tuscaloosa, Alabama, November 17, 1989.
23. "Providing Power for the Future," *The Houston Post*, Houston, Texas, February 18, 1990.
24. "Solar, Nuclear Power Will Meet Challenges," *Austin American-Statesman*, Austin, Texas, March 1, 1990.
25. "Team Solar and Nuclear," *Express News*, San Antonio, Texas, March 1, 1990.
26. "Nation is Headed for an Energy Crisis," *Corpus Christi Caller-Times*, Corpus Christi, Texas, April 28, 1990.
27. "Interim Nuclear Storage," *The Plain Dealer*, Cleveland, Ohio, December 21, 1990.
28. "We Need a Temporary Solution," *The Christian Science Monitor*, Boston, Massachusetts, December 28, 1990.
29. "Nuclear Waste Policy Act Flawed," *Austin American-Statesman*, Austin, Texas, January 4, 1991.

#### BOOKS / CHAPTERS

1. *Proceedings of the International Conference on Nuclear Waste Transmutation*, Co-Editor with J. Wiley Davidson, The University of Texas Press, March 1981.
2. "Nuclear Energy," a chapter in *Encyclopedia of Chemical Processing and Design*, edited by J.J. McKetta, Marcel Dekker, Inc., New York and Basel, Switzerland, 1990.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

I have given numerous talks on Nuclear Energy and Nuclear Dismantlement. Most of these are general information with no "official" prepared remarks. See first paragraph (Oral Presentations) on List B.

17. **Commitment to Testify Before Senate Committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the Appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

---

#### SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

DR. DALE KLEIN.

This 4th day of October, 2001.

[The nomination of Dr. Dale Klein was reported to the Senate by Chairman Levin on November 8, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on November 8, 2001.]

---

[Prepared questions submitted to Peter B. Teets by Chairman Levin prior to the hearing with answers supplied follow:]

November 5, 2001.

The Hon. CARL LEVIN,  
*Chairman, Committee on Armed Services,*  
*U.S. Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: Enclosed herewith are the answers to the advance questions the Senate Armed Services Committee asked me to complete.

Sincerely,

PETER B. TEETS.

cc:  
 The Honorable John Warner,  
*Ranking Member.*

---

QUESTIONS AND RESPONSES

DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the Special Operations reforms.

Do you support full implementation of these defense reforms?

Answer. Yes.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

Answer. My understanding is that these reforms have been institutionalized and made part of the daily operations, oversight, and management of the Department of Defense in general and the U.S. Air Force in particular. I am aware that the sweeping changes produced by Goldwater-Nichols require continued diligence to ensure full compliance with the intent of the legislation.

*Question.* What do you consider to be the most important aspects of these defense reforms?

Answer. Goldwater-Nichols has been remarkably successful in getting the services to work together as a joint team. For a decade and a half now, they've been a much more effective instrument of national security policy due, in part to the clearly defined position and authority of the Chairman, Vice Chairman, and combatant commanders.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

Answer. Yes, I support full implementation of the Goldwater-Nichols reforms and agree with its goals. The enactment of Goldwater-Nichols significantly improved the organization of the Department of Defense, focused the joint warfighting capabilities, enhanced the military advice received by the Secretary of Defense, and increased the integration of service capabilities.

*Question.* Recently, there have been articles which indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the national strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

Answer. Fifteen years of experience under Goldwater-Nichols has meant significant changes in the way the Defense Department operates. I am certain that legislative changes could provide further improvements. However, I would prefer reserving judgment on this until, if I am fortunate enough to be confirmed, I have studied any specific proposals and acquired some experience as the Under Secretary of the Air Force. At that time, I would be pleased to share my thoughts with the committee as appropriate.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Under Secretary of the Air Force?

*Answer.* The Secretary of the Air Force, pursuant to 10 U.S.C. 8013 and Secretary of the Air Force Order 100.1, is responsible for and has the authority necessary to conduct all affairs of the Department of the Air Force. Subject to the Secretary's direction and control, the Under Secretary is authorized to act for and with the authority of the Secretary of the Air Force on all matters for which the Secretary is responsible. In addition, the Under Secretary of the Air Force will serve as the Director of the National Reconnaissance Office (DNRO), and will have Milestone Decision Authority for Department of Defense (DOD) Space Major Defense Acquisition Programs and designated space programs as described in Secretary Rumsfeld's memorandum of October 18, 2001, on the subject of National Security Space Management and Organization.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* As president and chief operating officer of Lockheed Martin Corporation, I was responsible for a broad range of defense programs for all the services from 1997 through 1999. I have an extensive background and experience in space systems, having started working on the Titan III Space Launch Vehicle in 1963 for Martin Marietta Astronautics in Denver, and serving as president of the Denver Operation from 1985 to 1993. In addition, I served as president of Martin Marietta Space Group prior to its merger with Lockheed Martin in 1995. In all of these roles I have had the opportunity to develop excellent working relationships with talented career military personnel, civilian Air Force and DOD personnel, and a broad range of industrial counterparts. As a result, I feel well qualified to take on the unique challenges associated with this position of Under Secretary of the Air Force.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Under Secretary of the Air Force?

*Answer.* A complete understanding of current Air Force and Defense Department issues is essential to my ability to discharge these important duties. I pledge to diligently study the broad national security issues that will require my attention if I am confirmed.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Air Force would prescribe for you?

*Answer.* If confirmed, I expect the Secretary to prescribe for me duties that will assist him in carrying out his responsibility to conduct all affairs of the Department of the Air Force. A central focus will be on space activities as designated by the Secretary of Defense, consistent with my planned role as DNRO.

*Question.* In carrying out your duties, how will you work with the following officials:

The Director of Central Intelligence.

*Answer.* If confirmed, I intend to work closely with the DCI, and in my role as DNRO to ensure national and Defense intelligence programs are planned and executed to achieve optimal end-to-end capabilities.

*Question.* The Under Secretary of Defense (Acquisition, Technology and Logistics).

*Answer.* If confirmed, I will closely work with the Under Secretary of Defense (Acquisition, Technology and Logistics) to carry out the designated role of the Department of the Air Force as the Executive Agent for Space within the Department of Defense, with Department-wide responsibility for planning, programming, and acquisition of space systems. I will serve as the Acquisition Executive for Space within the DOD, with Milestone Decision Authority for all Space Major Defense Acquisition Programs and designated space programs.

*Question.* The Assistant Secretary of the Air Force (Acquisition).

*Answer.* If confirmed, and in the absence of the Secretary, I would have full authority over the Department of the Air Force pursuant to the successorship of duties as indicated in 10 U.S.C. Section 8017. In that event, all the Assistant Secretaries, including Acquisition would report to me. If confirmed, in my role as being responsible for space acquisition, I will work closely with the Assistant Secretary for Acquisition to ensure interoperability where appropriate, and to make efficient use of Acquisition resources.

*Question.* The other service acquisition executives regarding management of their space-related programs.

*Answer.* If confirmed, I will work closely with the Department of Defense and our Service counterparts to ensure space acquisition planning, programming and budgeting activities are properly coordinated and implemented, and I will serve as Mile-

stone Decision Authority for all Space Major Defense Acquisition Programs and designated space programs.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the major challenges that will confront the Under Secretary of the Air Force?

*Answer.* If confirmed, the major challenge will be to provide leadership for all National Security Space activities. This will involve active participation by multiple organizational elements including DOD, Air Force, Army, Navy and NRO organizations.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* If confirmed as the next Under Secretary of the Air Force, I will work closely with each of the organizations involved in National Security Space activity to first understand their unique goals, objectives and challenges and then to build a solid, integrated plan for the future that is embraced by all constituents.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Under Secretary of the Air Force?

*Answer.* I believe that the most serious problems include developing an integrated vision and plan for National Security Space, cultural integration of organizational elements, and span of control.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I would work diligently to have a National Security Space Program Assessment for the 2003 President's budget and a National Security Space Plan for the 2004 Program Objective Memorandum (POM) cycle.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues which must be addressed by the Under Secretary of the Air Force?

*Answer.* I believe that we must build an integrated National Security Space Plan embraced by diverse constituencies while maintaining a focus on Mission Success and Program execution for near term activity.

#### MANAGING A WIDER SPAN OF CONTROL

*Question.* If confirmed, you will serve two critical functions having to do with national security space policy and programs, one in the Air Force, and one as part of the Intelligence Community. Traditionally, the official serving in the position of the Assistant Secretary of the Air Force for Space has focused primarily on directing the National Reconnaissance Office (NRO) and the Assistant Secretary of the Air Force for Acquisition has been largely responsible for managing acquisition of Air Force space programs. In addition, the individual serving as the Under Secretary of the Air Force has been fully engaged in running the day-to-day activities of the corporate Air Force.

If confirmed, how would you intend to undertake all of these duties and responsibilities?

*Answer.* For the Under Secretary of the Air Force to serve in both an official Air Force capacity as well as the appointed position of Director, National Reconnaissance Office, is not without precedent. Since 1961, the Air Force Under Secretary has been dual-hatted as the Director, NRO for four separate periods totaling 18 years. In addition, the Secretary of the Air Force has been dual-hatted as the Director, NRO three times over a period of 4 years. The management span of control is a challenge, but well within the capacity of the Air Force and NRO organizational structures.

In his 18 October memo, the Secretary of Defense stated his intent to designate the Air Force as the DOD Executive Agent for Space, to include Milestone Decision Authority for DOD space programs and appointment of the Under Secretary of the Air Force as the Service Acquisition Executive for Space. If confirmed, I will work closely with the Secretary and Chief of Staff to implement organizational realignments within the Air Force to effectively execute those responsibilities. Also I will work closely with the Office of the Secretary of Defense (OSD) to carry out the Secretary of Defense's direction and guidance. For example, I understand the Director of Space and Nuclear Forces (SAF/AQS) and the Program Executive Officer for Space will be realigned under the Under Secretary of the Air Force (USECAF) office and will support all space-related acquisition activities. In addition, the National Security Space Architect (NSSA) will be reassigned under the USECAF office and help develop long range space vision and architectures, assist in developing an integrated

national security space plan, and participate in annual assessments of the intelligence and defense space programs and budgets. The NRO will also report directly to the USECAF, and if confirmed, I would plan to use the best practices of both the Air Force and NRO to deliver the most capable and affordable national security space program possible. I believe the Deputy Director of the NRO will continue to serve a key role in the daily operation of NRO activities.

#### AIR FORCE SPACE VISION

*Question.* The Air Force has been articulating a future vision in which space plays a much more significant role in terms of organization, planning, and operations.

In your view, what changes need to be made in the near-term to expedite this conversion?

*Answer.* I have been briefed that the Chief of Staff's vision for the future, *Global Vigilance, Reach and Power* centers around four key Air Force roles: Global Strike, HUMRO (Humanitarian Relief Operations), Homeland Defense, and Coalition Building. Space will provide six key enabling roles. They include Information Superiority, Robust Communication Infrastructure, Skilled Space Professionals, Modern Equipment, and in the future, Full Spectrum Space Capabilities. When horizontally integrated with other core Air Force transformational capabilities, and those of the other Services and Agencies, Air Force space will enable fulfillment of CSAF's vision.

*Question.* In your view, over what period of time should this transformation occur?

*Answer.* It is my understanding that the Air Force activated a Directorate of Space Operations and Integration (AF/XOS) just last year. As the Secretary of Defense defined responsibilities for the USECAF/DNRO solidifies and the Air Force matures in its role as the Executive Agent for Space in DOD, in my view space will be on the strong path for making significant contributions in the near term.

#### SUPPORT TO THE WARFIGHTERS

*Question.* Do you believe that the NRO is providing adequate support to the Theater Commanders in Chiefs (CINCs)?

*Answer.* Although I have not had the opportunity to study the details, I believe NRO systems give the Theater CINC a tremendous advantage over our adversaries. Additionally, I believe that NRO representatives to the theaters are working with their Intelligence Community and U.S. Space Command counterparts to give the Theater CINC's and their staffs the knowledge to fully exploit the complex technical capabilities of NRO systems. These NRO technical representatives ensure that the full capabilities of our Nation's investment in satellite reconnaissance are exploited to meet the Theater CINCs' needs.

*Question.* If you are confirmed, what changes would you intend to make to further improve that support?

*Answer.* If confirmed, I will work to focus the tremendous technical innovation found in the NRO and its industry partners to give our National leadership and Theater CINC's the information to deter conflict, and when necessary, to win in war.

#### NRO REORGANIZATION

*Question.* The NRO Commission recommended a number of organizational changes to the NRO.

If you are confirmed, what changes in NRO reorganization would you propose?

*Answer.* I fully support the Director, Central Intelligence and Secretary of Defense's letter to Congress in response to the NRO Commission. If confirmed I will work hard to implement the NRO Commission's recommendations consistent with DCI and Secretary of Defense guidance.

#### NRO AND RELATED ACQUISITION PROGRAMS

*Question.* Historically, the NRO has been effective at acquiring intelligence capabilities that are ultimately used by sister intelligence organizations (mission partners). The committee has been increasingly concerned that related investments of mission partners have not kept pace with NRO programs, resulting in inadequate end-to-end capabilities. For example, NRO is acquiring a new system implementing a future imagery architecture (FIA). By all accounts, the National Imagery and Mapping Agency (NIMA) has not programmed sufficient investment in tasking, processing, exploitation and dissemination (TPED) system to take full advantage of the FIA program.

What is your view of how the Department has managed such major NRO and related acquisition programs?

Answer. I believe the Department has put increasing focus, in both the requirements and budget processes, on the interfaces and relationships between the National Foreign Intelligence Program and the many Defense intelligence programs. Rapid shifts in information technology and information processes greatly complicate our ability to anticipate and quantify these interfaces between large acquisition programs.

*Question.* Are you satisfied that such programs fully consider optimal end-to-end capabilities?

Answer. Given the dynamics of information technology and national security needs alluded to in my answer above, I don't know that we are fully satisfied with our end-to-end intelligence capabilities. The close and continuing working relationship between the Secretary of Defense and DCI will provide the leadership to ensure national and Defense intelligence programs are planned and executed to achieve optimal end-to-end capabilities.

*Question.* What changes in process, if any, would you intend to pursue, assuming you are confirmed, to improve this situation?

Answer. If confirmed, I will collaborate with other Intelligence Community and Defense agencies and the users of intelligence to continuously incorporate an end-to-end approach in all of our major system acquisitions.

#### DOD INVOLVEMENT IN NRO REQUIREMENTS PROCESS

*Question.* One of the major initiatives undertaken by the Joint Requirements Oversight Council (JROC) has been to conduct an in-depth review of Intelligence, Surveillance, and Reconnaissance (ISR), requirements, capabilities and shortfalls.

If you are confirmed, would you intend to work with the JROC in the future on this and related issues?

Answer. Yes. If I am confirmed, I will continue to work with the JROC on this and related issues.

*Question.* In your view, does the NRO and Defense requirements process support the timely development and fielding of needed ISR capabilities?

Answer. As the Secretary of Defense and DCI have noted, the national security challenges of this century present a far more difficult problem for requirements and plans than the Cold War. Complex space systems, such as those developed by the NRO, take several years to develop. Therefore, the requirements process must provide insight into future needs. If confirmed, I will work with Intelligence Community and Defense requirements authorities to shape future ISR architectures that are consistent with the strategic direction of the DCI and Secretary of Defense.

#### SCIENCE AND TECHNOLOGY INVESTMENT

*Question.* The investment in the Air Force science and technology (S&T) program has declined dramatically since the end of the Cold War. With the proliferation of new and asymmetric threats, the importance of revolutionary breakthroughs in the science and technology arena are more critical today than ever.

In your view, is the current investment in the Air Force science and technology program adequate to face these new threats?

Answer. There is always more that can be done to exploit the rapid advance of technology to enable our forces to more effectively and safely conduct operations. The issue is always one of balancing priorities against available funding. If confirmed, I will do by best to strike the appropriate balance.

*Question.* Does the science and technology portfolio adequately support the warfighter of today and the future?

Answer. I understand that the Air Force science and technology portfolio supports the Air Force vision of an Expeditionary Aerospace Force in the 21st century and is funded at a level to achieve Critical Future Capabilities.

*Question.* If confirmed, how do you plan to balance the demands of the Air Force between near-term readiness and longer-term scientific and technological discovery?

Answer. As with all investments, I believe that the S&T program needs must be balanced with the systems acquisition requirements and the operational and maintenance demands within the Air Force topline funding allocation. If confirmed, this process of balancing priorities will be a continuing effort involving Air Force senior leadership.

*Question.* Secretary of Defense Rumsfeld has established an investment goal for the defense science and technology program of 3 percent of the total defense budget. Do you support this goal?

Answer. I am in complete agreement with Secretary Rumsfeld.

*Question.* If confirmed, would you set a similar goal for the Air Force science and technology program?

*Answer.* Science and Technology is the Air Force's investment in the future and cannot be forsaken. Already, potential adversaries possess capabilities challenging our own. We cannot afford to fall behind. I believe today's Airmen must be armed with the most advanced technology possible.

*Question.* If so, what time frame would you place on reaching this investment goal?

*Answer.* I would advocate reaching this goal in a reasonable time in balance, of course, with the Air Force's other priorities.

#### SCIENCE AND TECHNOLOGY ORGANIZATION

*Question.* In Section 252 of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001, Congress required the Secretary of the Air Force to conduct a review of the long-term challenges and short-term objectives of the Air Force science and technology programs. This review is currently being completed. One of the issues Congress specifically intended to be addressed by the review is the interaction of the Air Force leadership with the Air Force science and technology executives.

If confirmed, how would you ensure that uniformed Air Force officers are engaged in the science and technology process for determining long-term challenges and short-term objective critical for future defense superiority?

*Answer.* I firmly believe we must focus our science and technology, and acquisition efforts, on valid warfighter requirements. If confirmed, I will ardently work to foster continuing science/technology and warfighter interface. The goal of this is a streamlined acquisition and development process geared exclusively at addressing warfighter requirements.

*Question.* If confirmed, would you support organizational changes to institutionalize a direct reporting requirement from the science and technology executive to the Secretary of the Air Force?

*Answer.* I don't have any specific recommendation at this time regarding organizational changes, however, if confirmed, I plan to devote appropriate attention to this area.

*Question.* If confirmed, how do you intend to facilitate communication between the science and technology community and the warfighter?

*Answer.* If confirmed, I would like to see a recurring system of crosstalk whereby the warfighter and the science and technology community regularly meet to discuss requirements and possible solutions.

#### SCIENCE AND TECHNOLOGY WORKFORCE

*Question.* Over the past few years, Congress has worked with the Department of Defense to waive regulations and create new hiring and promotion authorities so that the Department could become a more attractive workplace for highly trained technical workers.

If confirmed, how would you recommend that the Air Force address the issue of attracting and retaining the finest technical workforce possible?

*Answer.* I support flexibility in both hiring and compensation that will allow the Department of Defense to attract and retain highly skilled scientists and engineers who can meet the dynamic technological challenges of the 21st century. Such flexibility is needed to help level the playing field with private industry. Although I have not had the opportunity to look at specific hiring authorities in detail, if confirmed, I will certainly focus on the challenges the Air Force faces.

*Question.* Do you have specific recommendations for legislative changes or new regulatory relief that would better enable you, if confirmed, to compete with the private sector for these types of employees?

*Answer.* I have no specific recommendations at this time.

#### TECHNOLOGY TRANSITION

*Question.* Technology transition—the ability to rapidly transition mature technologies out of laboratories and into the hands of the warfighter—has been identified as a difficult hurdle for the Department of Defense. Both the lack of adequate funding for transitioning breakthrough technologies and the inadequate buy-in from the user community have been cited as primary obstacles for technology transition.

If confirmed, how would you ensure that technologies are rapidly transitioned from the laboratory into the hands of the warfighter?

*Answer.* I believe valid warfighter requirements must drive our investment in science and technology and our acquisition efforts. The key is to foster a recurring

interface between science/technology and our warfighters with a goal of streamlining the acquisition and development processes.

*Question.* Are there specific initiatives you would propose, if confirmed, to address both the funding and user buy-in issue?

*Answer.* I have no specific initiatives to propose at this time.

#### SPACE

*Question.* The Air Force will have an increasing role in the operation and acquisition of space systems in the future.

If confirmed, what steps would you take to ensure that there is good participation by the other military departments and services in space programs and that their requirements are addressed and met?

*Answer.* The Secretary of Defense has directed implementation of recommendations from the Space Commission that will significantly enhance the integration and coordination of all the Department's space activities. If confirmed, I will coordinate the actions of organizations such as the Joint Staff, U.S. Space Command, the National Security Space Architect (NSSA) and others. Also, I will ensure that the equities of every member of the defense space community are protected.

*Question.* If confirmed, what role do you expect to play in the space missions of the Air Force?

*Answer.* If confirmed, I expect to be charged by the Secretary of the Air Force with the authority and responsibilities to ensure the Air Force carries out its responsibilities as DOD's Executive Agent for Space to include organizing, training and equipping our space forces to successfully execute the missions of the Air Force.

Consistent with Air Force responsibilities as the Executive Agent for DOD-wide space planning, programming and acquisition, I would expect to play an active leadership role in overseeing defense-wide space planning, programming and acquisition to ensure the most effective national security space program across the board.

*Question.* Do you agree with the organizational recommendations of the Space Commission? Where you do not agree, please explain why and how you would address the problems identified by the Space Commission.

*Answer.* I fully support the intent and specific recommendations of the Space Commission report. Centralizing space acquisition as specified by the Commission under the SAF/US-DNRO will allow a much more effective national security space program in the future. The Air Force is currently working with the NRO, OSD, the other Services and Agencies, and the Intelligence Community to fulfill the Secretary of Defense's implementation guidance released on 18 October, 2001.

*Question.* Many high priority national security space missions are not necessarily high priority missions for the Air Force.

If confirmed, how would you ensure that the Air Forces address any such missions if the Air Force assumes greater responsibility in the future for space or if the Air Force becomes the Department of Defense executive agent for space?

*Answer.* If confirmed, I would expect to play an active role within the Air Force planning and advocating space capabilities to meet the needs of both the Air Force and the Joint warfighter. Furthermore, the national security space community is developing a National Security Space Plan and Program Assessment to help guide and assess DOD and Intelligence space programs. If confirmed, I will use these processes as well as my role within the Air Force corporate structure to ensure that the Air Force and DOD increase its focus on space missions. As the DOD Executive Agent for space, the Air Force will assume a leadership role in the planning, programming, and acquisition of space systems. Our vision for the Air Force's future role in space is one that recognizes the unique contributions and advantages space provides to our national security. The organizational changes recommended by the Space Commission and directed by the Secretary of Defense will lead to streamlined acquisition, more comprehensive planning and programming, and better capabilities for the warfighter. The Air Force believes space will be a critical "center of gravity" in all future conflicts and that we must fully integrate space capabilities into current and future warfighting missions.

#### BOMBER FORCE STRUCTURE

*Question.* If confirmed, would you commit to study the bomber fleet and ensure that the Air Force plans for the future of the bomber fleet permit the fleet to meet all potential future missions that might be identified in either the Nuclear Posture Review, the Quadrennial Defense Review, or the National Security Strategy?

*Answer.* I understand the Air Force is currently updating the bomber roadmap and that an initial draft is currently in coordination. If confirmed, I expect to sup-

port the Secretary of the Air Force as the Air Force examines the future needs and options for the bomber force.

#### NUCLEAR FORCE STRUCTURE

*Question.* Do you support repeal of section 1302 of the 1998 National Defense Authorization Act?

If confirmed, would you support retirement of the W-62 warhead when the Peacekeeper ICBM is retired?

Answer. Yes. I understand the Air Force has programmed the retirement of the MK12/W62 warhead from the active ICBM warhead fleet. The Safety Enhanced Re-entry Vehicle (SERV) program will provide the design and equipment to place the MK21/W87 warhead, (being removed from the Peacekeeper) on the MMIII as a replacement for the W62.

#### UNMANNED AIR VEHICLES

*Question.* In the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001, Congress set a goal that, within 10 years, one-third of U.S. military operational deep strike aircraft would be unmanned. In addition, Congress invested an additional \$50 million above the President's budget request in the Air Force Unmanned Combat Air Vehicle (UCAV).

Do you support the 10-year goal of one-third of U.S. military operational deep strike aircraft being unmanned?

Answer. Yes. Based on my understanding I fully support the AF/DARPA project that is underway and that was chartered to achieve that very goal. I understand that the focus today is on developing UCAVs for the Suppression of Enemy Air Device (SEAD)/Strike mission. Other potential UCAV roles being explored include directed energy, electronic attack, and Intelligence, Surveillance and Reconnaissance (ISR) missions.

#### OFFICER PERSONNEL

*Question.* The Air Force has in the past acknowledged problems in its officer personnel processes, including promotions, early retirement boards, and similar actions. Recently, a case involving allegations of reverse discrimination in a selective early retirement board was settled before trial.

What is your opinion as to the health of the officer personnel system of the Air Force? Do you believe that significant change is needed? If so, what changes would you recommend?

Answer. I have no detailed understanding of these particular issues. However, if confirmed I will work with my staff and this committee to review the existing promotion processes and make improvements when required.

#### ENLISTED PROMOTIONS

*Question.* The Air Force has long used a system in which enlisted personnel undergo standardized testing for promotion to E-5 through E-7. Recently, allegations have been made that this system is not an effective way of testing competence in specialties involving manual skills. It has also been alleged that it unfairly penalizes minority members. Lastly, there are sporadic problems reported regarding cheating on the tests, for which group study is prohibited.

What are your views about the Air Force's reliance on this system?

Answer. I have no detailed understanding of these particular issues. However, if confirmed I will work with my staff and this committee to review the existing promotion processes and make improvements when required.

#### ENCROACHMENT

*Question.* On November 27, 2000, the Senior Readiness Oversight Council identified several "encroachment" problems confronting the Department of Defense including protection of endangered species, unexploded ordnance and other constituents, commercial demand for bandwidth and frequency, sustainability of the maritime environment, demand for use of airspace, protection of air quality, abatement of airborne noise, and growth of urban areas. At a March 20, 2001, hearing before the Readiness and Management Support Subcommittee, representatives of the military services expressed concern that this encroachment was hindering their legal responsibility under Title 10, United States Code, to train the forces.

If confirmed, what actions would you propose to address these problems?

Answer. I believe there must be a balance between test, training, and readiness requirements and responsible stewardship. If confirmed, I will foster the develop-

ment and maintenance of partnerships with our sister services, civilian government agencies, tribal governments, and other stakeholders that serve to address areas of mutual interest in order to sustain our required access to ranges and airspace.

## CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

Answer. Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of the Air Force?

Answer. Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

Answer. Yes.

---

[Questions for the record with answers supplied follow:]

## QUESTION SUBMITTED BY SENATOR DANIEL K. AKAKA

## ENCROACHMENT

1. Senator AKAKA. I am interested in your thoughts about encroachment. I am pleased to learn of your intent to develop partnerships with the other services, civilian government agencies, tribal governments, and other stakeholders. By other stakeholders, I would hope you mean the communities surrounding the training ranges and installations where we face encroachment challenges.

Do you have any specific thoughts regarding how you plan to address encroachment issues as the Under Secretary of the Air Force?

Mr. TEETS. This is an important issue not only for the Air Force and the Department of Defense, but also for all Americans. The core of our military readiness is realistic testing and training conducted on military lands and in the special use airspace over our Nation and overseas. I believe that, as a Nation, we owe our men and women in uniform the best equipment and training possible. I also believe that if we do not work this issue aggressively, we may see a reduction in combat proficiency from less realistic testing and training. A key solution to the encroachment challenge is effective 2-way communication. The AF actively seeks to communicate and form partnerships of the type you mentioned. If confirmed, I will continue to work with the other services, Federal and State agencies and local-communities to help fully meet this challenge.

## QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

## DEFENSE OF SPACE SYSTEMS

2. Senator THURMOND. Although increased intelligence collection on our adversaries' intention against our space platforms is critical, it seems to me that the Nation has to be prepared to defend our space systems.

What priority should the Nation place on developing anti-satellite systems to protect our critical space platforms?

Mr. TEETS. Protection of our critical space systems should clearly be a high national priority. We must recognize that our adversaries could attack our systems. No single approach will ensure protection against all potential threats. We must be able to detect and characterize attacks against any element of our space systems, and then be prepared with appropriate measures to withstand and respond.

An anti-satellite capability could potentially deter and counter space-based threats, should such threats emerge. The priority given to developing anti-satellite systems to support protection will depend on the level of national concern about the space-based threat. If confirmed, I will work to ensure our critical space platforms are protected.

## SPACE PROGRAM

3. Senator THURMOND. Early in the manned space program the United States decided that the program should be a civilian program. We have continued in that tradition through several administrations. As we begin this new century and face new challenges, some individuals propose that we should initiate a military manned space program.

What are your views regarding a military manned space program?

Mr. TEETS. To my knowledge, the Air Force has no requirements for manned space flight.

## FUTURE SPACE PROGRAM

4. Senator THURMOND. A key factor in providing for our national security hinges on our ability to control space. We currently have the space systems to provide for that security. My concern is that we may not have those systems in the future.

In your opinion, what are the types of space systems that the Nation must focus on to insure our continued control of space?

Mr. TEETS. To ensure that our national security space systems continue to provide the strategic advantage, we'll pursue a range of improvements to our space control capabilities: Key focus areas include:

(1) Space situational awareness. We must improve our capabilities to understand which objects are threats and what they are doing. Space situational awareness is the critical enabler for timely defensive and offensive responses against space threats.

(2) Negation. The need to be able to deny adversaries their use of space systems and services for purposes hostile to U.S. national security interests.

(3) Space control infrastructure. A space range and credible "Space Aggressor" emulation of foreign threats should be developed to provide the opportunity to test, train, and exercise for space control in an operationally realistic environment.

If confirmed, I will work to ensure these improvements are implemented.

## INSTALLATION READINESS

5. Senator THURMOND. At the Readiness Subcommittee hearing on military construction, General Robbins, the Civil Engineer of the Air Force, testified that the Air Force current backlog in restoration and modernization exceeds \$5.6 billion. Although this backlog is less than the other services, it has a significant impact on readiness and quality of life in the Air Force.

As the Under Secretary of the Air Force, you will have a significant role in determining the allocation of resources. What priority will you place on reducing this significant backlog in the sustainment of Air Force installations?

Mr. TEETS. I concur that this backlog impacts both the mission and the quality of life of the men and women in our Air Force. Besides obvious mission impacts due to degraded airfields and deficiencies in key operational facilities, the quality of the facilities where our troops and their families work, live, and play is a key element that affects our airmen's preparedness to focus on the mission. I recognize that their welfare, whether they are hard at work at their home base or deployed to a variety of locations around the world, especially during these troubled times, is critical to the readiness of the force. If confirmed, I will give full consideration to allocating the necessary resources to reduce this backlog and thus improve mission performance and the quality of life in our Air Force.

## QUESTIONS SUBMITTED BY SENATOR BOB SMITH

## INHERENT CONFLICT OF INTEREST

6. Senator SMITH. Today, the Air Force and the other Services submit their budgets to the Secretary of Defense for him to assess and adjust. In the future, under plans, the Air Force will submit its space budget to itself, creating what I see as an inherent conflict of interest.

If for example, you felt that the Air Force corporate decision to delay the Space Based Radar program was wrong, from a DOD perspective, how could you both support the Air Force budget submission and conduct a fair and honest assessment for all DOD?

Mr. TEETS. The Air Force's role as Executive Agent for Space includes providing space capabilities for the DOD and working with all services and agencies to inte-

grate space into joint warfighting. If confirmed, I will work closely with all the Air Force leadership to ensure DOD space requirements and programs have full attention and priority throughout the AF budget process. I believe the end result will be a balanced approach to air and space programs. Should budgetary constraints limit space programs I believe are vital, I will work with DOD leadership to advocate fixes and the resources to remedy them.

Regarding the space assessment, we expect this to be an open and inclusive process, involving all services and agencies, which will compare DOD-wide space programs and budgets against approved requirements, plans and guidance. This process will provide an objective means to develop and advocate space capabilities across the DOD.

#### JOINT VS. AUTOCRATIC

7. Senator SMITH. I understand the Secretary of Defense is still working on changes to your potential job description, and soon he will be delegating new defense-wide authorities to the Under Secretary of the Air Force to oversee all DOD space activities (consistent with the Space Commission recommendations).

How would you, as an Air Force leader, handle that new authority?

Mr. TEETS. If confirmed, I will work closely with the Secretary of Defense, the Under Secretary of Defense for Acquisition, Technology, and Logistics (AT&L), and the other senior Service Secretaries and Chiefs to implement the recommendations of the "Report of the Commission to Assess U.S. National Security Space Management and Organization."

A major responsibility of the Under Secretary of the Air Force will be to serve in both an official Air Force capacity as well as the appointed position of Director, National Reconnaissance Office. This is not without precedent. Since 1961, the Air Force Under Secretary has been dual-hatted as the Director, NRO for four separate periods totaling 18 years. In addition, the Secretary of the Air Force has been dual-hatted as the Director, NRO three times over a period of 4 years. A complete understanding of Air Force, Defense Department, and Intelligence Community issues is essential to my ability to discharge all the authorities conferred on the Under Secretary of the Air Force. I pledge to diligently study the broad national security issues that will require my attention if I am confirmed.

8. Senator SMITH. Would you make decisions jointly with your sister services or would you dictate the way ahead?

Mr. TEETS. If confirmed, I would pursue the recommendations of the "Report of the Commission to Assess U.S. National Security Space Management and Organization." As a first step, I would begin work toward a National Security Space management process that would include members of both defense-wide and intelligence organizations. I would expect the other services to be full partners in that process.

#### MERGING DOD AND INTELLIGENCE

9. Senator SMITH. According to the Secretary of Defense's plan, the Under Secretary of the Air Force will also become Director of the National Reconnaissance Office (NRO).

Would you build on efforts to align space authority within DOD and also integrate DOD and Intelligence space activities?

Mr. TEETS. Aligning space authority within the DOD was recently initiated and is progressing. I support the Secretary of Defense's approach in his October 18, 2001 memo on National Security Space Management and Organization and will build upon these implementation actions.

The integration of DOD and Intelligence space activities depends on an array of requirements and technical and programmatic variables. If confirmed, I will support the Secretary of Defense and the Director of Central Intelligence to plan, and develop space systems that best achieve our national security space goals, respecting the equities of all space users.

10. Senator SMITH. Would you merge your DOD and Intelligence space management teams or keep them separate?

Mr. TEETS. If confirmed, I will implement guidance already provided by the Secretary of Defense, and the Director of Central Intelligence on space organization and management issues. This guidance directs sharing of "best practices" between NRO and Air Force programs, which I fully support. Further merger or integration of DOD and the Intelligence community space management teams will need to be eval-

uated based on all space users, and the effective, efficient management of space programs.

#### AEROSPACE VS. AIR AND SPACE

11. Senator SMITH. The new Air Force Chief of Staff, General Jumper, took his job and immediately changed the long-standing Air Force vision from an “Aerospace Force” (implying seamless continuity) to “Air and Space Force” (emphasizing the distinction between the two).

What is your vision for the Air Force regarding this terminology?

Mr. TEETS. The Air Force’s vision is Global Vigilance, Reach, and Power. It remains a concise and accurate description of the capability the Air Force provides the Joint Forces Commander to fight our Nation’s wars.

In choosing the words “Air and Space” Force versus “Aerospace” Force, General Jumper is acknowledging the findings of the Space Commission. The Space Commission report does not use the term “aerospace” because it fails to give the proper respect to the culture and to the physical differences that abide between the environment of air and the environment of space. General Jumper feels we should respect those differences.

One way we respect those differences is by understanding we need to develop space warriors—those trained in the planning and execution of space-based operational concepts. At the same time, these warriors are still Airmen who work in our Air and Space Operations Centers, integrating space capabilities with air and surface forces. Air and space capabilities have to work together to bring the right warfighting effect to the right target at the right time. We will accomplish this transformational marriage of air and space capabilities through the horizontal integration of our manned, unmanned, and space platforms.

Another way we respect the differences between air and space is through the transformation of our organizations. On 1 October, 2001, the Air Force implemented a key Space Commission recommendation when we realigned the Space and Missile Systems Center under Air Force Space Command. The result is a clear operational focus on the development of our space capabilities and the acquisition of space systems.

America’s airmen—our air and space warriors—whose job it is to leverage both air and space, will combine their skills and their talents to bring the greatest asymmetrical advantage to those commanders whose job it is to win America’s wars, not only the war we are in today, but every war.

#### SPACE INTEGRATION

12. Senator SMITH. I don’t think there is anything wrong in recognizing the differences between the air and space communities within the Air Force, as long as space is fully integrated with air operations and land and sea operations. I had the opportunity to meet with General Mike Hamel late last spring. General Hamel’s job in the Air Force is to facilitate that integration. I think he is fighting a good fight, but we are still losing the battle. For example, our strategic B-2 bomber does not have the satellite communications it needs when it dies away from the base around the world—that does not make sense.

What would you do to help someone like General Hamel ensure space systems get integrated onto our warfighting capabilities?

Mr. TEETS. Space systems already are very much integrated into our warfighting capabilities right now. We’re building on our current capability by aggressively testing new and emerging space capabilities and incorporating them into our vision of the 21st century air and space force. If confirmed, I will continue to ensure these efforts continue.

---

#### QUESTIONS SUBMITTED BY SENATOR JEFF SESSIONS

##### FUTURE AIRCRAFT PROCUREMENT

13. Senator SESSIONS. Mr. Teets, the Quadrennial Defense Review was recently published and it emphasizes the need for forward basing. The wisdom of this is clearly apparent from our current conflict in Afghanistan.

Given the fact that we have had difficulty in obtaining basing rights for our Air Force’s tactical aircraft fleet and have had to rely on our long range bombers and Naval Aviation, what is your vision for future aircraft procurement?

Mr. TEETS. Bomber modernization is critical to maintaining our ability to project air power around the world. The Air Force will continue upgrading bomber lethality, survivability, and responsiveness. In addition, we are engaged in studies to identify what our next long-range strike capability should be and when it needs to be fielded. If confirmed, I look forward to working with the Secretary of the Air Force and his staff to integrate the lessons learned from OPERATION ENDURING FREEDOM into our future long-range strike procurement plans.

JOINT STRIKE FORCE (JSF) AND F-22 EMPLOYMENT

14. Senator SESSIONS. If the Air Force had the JSF and F-22 today could you tell me if they could be fully employed in Afghanistan today?

Mr. TEETS. Yes. The JSF will eventually replace the F-16 and the F/A-18A/C/D, currently in use in Afghanistan today. The JSF will be capable of performing the same roles and missions. The F-22 will augment those aircraft with its inherent air-to-ground capability, while maintaining air supremacy for coalition forces.

INTER-SERVICE RIVALRY

15. Senator SESSIONS. I was very disturbed to read in the *Washington Times* yesterday that the Air Force is resisting the Navy's request for a transfer of the special kits to turn dumb bombs into smart bombs.

I hope this is not true, but if it is I want your promise that if confirmed you will immediately put an end to this ridiculous inter-service rivalry, which can only help Al-Qaeda and the Taliban, and see to it that the Air Force deliver to the Navy any assistance the Navy might need to support Central Command's combat efforts.

Mr. TEETS. I assure you this is not true. The day prior to the article Air Force and Navy representatives had already worked a transfer of munitions, including these special kits, to support our warfighters. This was the second such transfer, and the fact is, that all of the services are working together to support the warfighters whether they are Navy, Army, Marine, or Air Force. As both the Chief of Naval Operations (CNO) and the Chief have publicly stated, our services have never worked closer. If confirmed, I will ensure all services work together to support our national goals.

HEAVY LIFT PROCUREMENT

16. Senator SESSIONS. We have all heard of the enormous quantity of food supplies the Air Force has delivered to the Afghan refugees. I suspect the current operational tempo has tested our heavy airlift fleet.

Give us a status report on our C-5 and C-17 fleet. Has our recent experience given you any new insight into the direction of our heavy lift procurement plans?

Mr. TEETS. The Air Force's heavy-lift modernization plan calls for both the modernization of the C-5 fleet and procuring additional C-17s. This plan has been proven by Operation Enduring Freedom, with both the C-5s and C-17s unique and complementary capabilities making outstanding contributions to the war effort.

HEAVY LIFT NEEDS

17. Senator SESSIONS. During this period of conflict in Afghanistan are our other regional commands' heavy lift needs still being met?

Mr. TEETS. Yes. Despite enormous lift requirements we are meeting the other regional commands' lift requirements by utilizing USAF and commercial assets. If confirmed I will work to ensure our heavy lift needs are met.

[The nomination reference of Peter B. Teets follows:]

NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
*October 30, 2001.*

*Ordered,* that the following nomination be referred to the Committee on Armed Services:

Peter B. Teets, of Maryland, to be Under Secretary of the Air Force, vice Carol DiBattiste.

[The biographical sketch of Peter B. Teets, which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF PETER B. TEETS

Peter B. Teets is the retired president and chief operating officer of Lockheed Martin Corporation, a position he held from 1997 through 1999. Teets previously served as president and chief operating officer of the Corporation's Information and Services Sector, a post he held since the Lockheed Martin merger in 1995. Prior to the merger, he was president of Martin Marietta Space Group.

Teets joined Martin Marietta in 1963 as an engineer in flight control analysis and held progressively responsible positions since that time. From 1970 to 1975, he managed the integration of a new inertial guidance system to the Titan IIIC launch vehicle. Between 1975 and 1980, Teets served as program manager of the Transtage project and later as the director of Space Systems. From 1980 until 1982, he was vice president of Business Development for Denver Aerospace and from 1982 to 1985, he was the vice president and general manager of Denver Aerospace's Strategic and Launch Systems division. In 1985, he was named president of Martin Marietta Denver Aerospace, which became Martin Marietta Astronautics Group in 1987.

Born in Denver in 1942, Teets received his bachelor and master of science degrees in applied mathematics from the University of Colorado, which also presented him with an honorary doctor of science degree in 1990. In addition, Teets was named a Sloan Fellow and received a master's degree in management from the Massachusetts Institute of Technology.

He is a Fellow of the American Institute of Aeronautics and Astronautics and the American Astronautical Society and was inducted into the National Academy of Engineering in 1999. Teets is also a member of the Board of Directors of the Charles Stark Draper Laboratory.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Peter B. Teets in connection with his nomination follows:]

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)  
Peter B. Teets.
2. **Position to which nominated:**  
Under Secretary of the Air Force, and Director, National Reconnaissance Office.
3. **Date of nomination:**  
October 30, 2001.
4. **Address:** (List current place of residence and office addresses.)  
[Nominee responded and the information is contained in the committee's executive files.]
5. **Date and place of birth:**  
February 12, 1942; Denver, Colorado.
6. **Marital Status:** (Include maiden name of wife or husband's name.)  
Married to Vivian Brearley Teets.
7. **Names and ages of children:**  
Karen K. Avery, 36; David E. Teets (Deceased, 2001); Jennifer L. Teets, 32; Kevin J. Teets, 31; Matthew L. Teets, 19; Christopher K. Teets, 17.
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.  
East Denver High School, Sept. 1956–June 1959, High School Diploma.  
University of Colorado, Boulder, CO, Sept. 1959–June 1963, B.S. Applied Mathematics.  
University of Colorado, Denver, CO, Sept. 1963–June 1965, M.S. Applied Mathematics.  
Massachusetts Institute of Technology, Cambridge, MA, June 1977–June 1978, M.S., Management.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.  
President and COO, Lockheed Martin Corporation, Bethesda, MD; July 1997–February 2000.  
President and COO, Information and Services Sector, Lockheed Martin Corporation, Bethesda, MD; March 1995–July 1997.  
President, Martin Marietta Space Group, Martin Marietta Corporation, Bethesda, MD; May 1993–March 1995.  
President, Martin Marietta Astronautics, Martin Marietta Corporation, Denver, CO; June 1963–May 1993.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.  
None.
11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.  
Director, The Draper Laboratory, Cambridge, MA.  
Director, PRWT Services, Inc., Philadelphia, PA.  
Director, Alumbre Technologies, Inc., Rockville, MD.  
Member of Executive Committee, Next Gen. Capital Fund II, Fairfax, VA.  
Trustee, Immediate Family Trusts.
12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.  
Member, Potomac Presbyterian Church, Potomac, Maryland; since 1993.  
Member, First Presbyterian Church of Littleton, Colorado; 1983–1993.  
Member, Cherry Hills Country Club, Englewood, Colorado; since 1988.  
Member, Columbia Country Club, Chevy Chase, Maryland; since 1996.  
Member Congressional Country Club, Bethesda, Maryland; since 1997.  
Member, Phi Gamma Delta social fraternity since 1960; and President of Beta Kappa Chapter in 1962.  
Member, Tau Beta Pi Engineering Honorary Association since 1963.  
Member, Republican Party since approximately 1980.  
Member, American Institute of Aeronautics and Astronautics since 1960, and a Fellow of the Institute since 1993.  
Member, American Astronautics Society since 1980, and a Fellow of the Society since 1985.  
Member, National Academy of Engineering since 1998.

Member, CATO Institute since 2000.  
 Member, Conquistadores de Cielo since 1998.  
 Trustee, Falcon Foundation since 1980.  
 Member, National Western Stock Show Association since 1986.

**13. Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

Member, Republican Party.

Member, Republican National Committee, 2001.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

2/18/99, \$1,000 to Friends of Conrad Burns (Sen. MT).

7/19/00, \$1,000 to Republican National Committee.

10/10/00, \$1,000 to Republican National Committee.

1/3/01, \$1,000 to Republican National Committee.

1996 thru 1999, \$1,040 per year to Lockheed Martin Political Action Committee.

**14. Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

Tau Beta Pi; Engineering Honorary Association.

Fellow, AIAA.

Fellow, AAS.

Member, National Academy of Engineering.

**15. Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Technical Articles in Journals prior to 1980.

**16. Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

### Speeches

“The Next Challenge for Missile Defense.” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before “Ballistic Missile Defense: Requirements & Contracting For Joint Mission Area Acquisition.” *A Defense Week/BMD Monitor* Conference. Holiday Inn Rosslyn Westpark, Arlington, Virginia: February 23, 1999.

“The New Sinews of Peace.” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before a meeting of the British-American Business Association. Willard Inter-Continental Hotel, Washington, DC: October 13, 1999.

“Educating to Meet the Knowledge Explosion.” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before the 50<sup>th</sup> Anniversary Celebration. University of Maryland University College, College Park, Maryland: May 1, 1997.

“America’s Technology Incubator.” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before the Naval Research Laboratory Diamond Jubilee Celebrating the 75<sup>th</sup> Anniversary of Its Founding. Naval Research Laboratory, Washington, DC: June 19, 1998.

“Does America Need an Aerospace Industry?” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before a meeting of The Economic Club of Colorado. Westin Hotel, Denver, Colorado: October 1, 1998.

Acceptance Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation upon receiving the 1998 American Business Ethics Award at the American Society of CLU & CFC National Conference. Philadelphia Marriott Hotel, Philadelphia, Pennsylvania: October 4, 1998.

“Investing in Intellectual Capital—The Key to Engineering Achievement in the 21<sup>st</sup> Century.” Remarks by Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before the Aviation Week/CEF AeroEngineering Conference: AeroExpo 98, Long Beach, California: November 17, 1998.

### Congressional Testimony

Testimony of Peter B. Teets, President and Chief Operating Officer, Lockheed Martin Corporation before the Subcommittee on Science, Technology and Space of the Senate Committee on Commerce, Science, and Transportation: May 20, 1999

Testimony of Peter B. Teets, President, Martin Marietta Space Group before the Select Committee on Intelligence of the United States Senate: November 17, 1993.

Testimony of Peter B. Teets, Vice President and General Manager, Space Launch Systems Division of Martin Marietta Denver Aerospace before the Subcommittee on Space Science and

Applications of the Committee on Science and Technology, United States House of Representatives: May 18, 1983.

**17. Commitment to Testify Before Senate Committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth

in the Appendix to this volume. The nominee's answers to Parts B-F are contained in the committee's executive files.]

---

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

PETER B. TEETS.

This 31st day of October, 2001.

[The nomination of Peter B. Teets was reported to the Senate by Chairman Levin on December 6, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on December 7, 2001.]

**NOMINATION OF MAJ. GEN. CLAUDE M. BOLTON, JR., USAF, TO BE ASSISTANT SECRETARY OF THE ARMY FOR ACQUISITION, LOGISTICS, AND TECHNOLOGY**

**TUESDAY, DECEMBER 4, 2001**

U.S. SENATE,  
COMMITTEE ON ARMED SERVICES,  
*Washington, DC.*

The committee met, pursuant to notice, at 9:40 a.m. in room SR-222, Russell Senate Office Building, Senator Carl Levin (chairman) presiding.

Committee members present: Senators Levin, Landrieu, E. Benjamin Nelson, Warner, Smith, Inhofe, and Bunning.

Committee staff members present: David S. Lyles, staff director; Christine E. Cowart, chief clerk; Gabriella Eisen, nominations clerk; and Bridget M. Whalan, special assistant.

Majority staff members present: Daniel J. Cox, Jr., professional staff member; Evelyn N. Farkas, professional staff member; Maren Leed, professional staff member; Gerald J. Leeling, counsel; Peter K. Levine, general counsel; and Arun A. Seraphin, professional staff member.

Minority staff members present: Judith A. Ansley, Republican staff director; Brian R. Green, professional staff member; William C. Greenwalt, professional staff member; Mary Alice A. Hayward, professional staff member; Ambrose R. Hock, professional staff member; George W. Lauffer, professional staff member; Thomas L. MacKenzie, professional staff member; Suzanne K.L. Ross, research assistant; Scott W. Stucky, minority counsel; and Richard F. Walsh, minority counsel.

Staff assistants present: Dara R. Alpert and Daniel K. Goldsmith.

Committee members' assistants present: Andrew Vanlandingham, assistant to Senator Cleland; Marshall A. Hevron and Jeffrey S. Wiener, assistants to Senator Landrieu; William K. Sutey, assistant to Senator Bill Nelson; Mark Salter, assistant to Senator McCain; John A. Bonsell, assistant to Senator Inhofe; George M. Bernier III, assistant to Senator Santorum; Robert Alan McCurry, assistant to Senator Roberts; Charles Cogar, assistant to Senator Allard; and Derek Maurer, assistant to Senator Bunning.

**STATEMENT OF SENATOR CARL LEVIN, CHAIRMAN**

Chairman LEVIN. Good morning everybody. The committee meets today to consider the nomination of Major General Claude Bolton,

Jr. to be the Assistant Secretary of the Army for Acquisition, Logistics, and Technology. General Bolton, on behalf of the entire committee I would like to welcome you and your family to the Armed Services Committee. We have a tradition here of asking our nominees to introduce any family members that they have with them. If you have family here, please introduce them at this time, if you would.

General BOLTON. Mr. Chairman, good morning, and thank you very much for that pleasure. I would like to introduce my wife of almost 33 years, Linda, who is with me today. We have two lovely daughters. Our older daughter lives in Manhattan, New York, and is unable to be with us today, but our younger daughter, Jennifer, who lives in Virginia, is with us this morning. Thank you, sir.

Chairman LEVIN. Well, perhaps you could wave at us and we will wave back at you. Nice to have you all with us.

We always make it a point to thank family members for the support that they give to the nominee. It makes a huge difference. You are truly serving your country as well as the nominee by giving him the kind of support that he needs in this position, and I know you have done that for a long time in his military career, so that will be nothing new to you.

General Bolton has worn the uniform of this Nation for some 32 years, most recently as Commander of the Air Force Security Assistance Center at Wright-Patterson Air Force Base in Ohio, where he manages Air Force foreign military sales in the Air Force Materiel Command's international cooperative programs. He has served as the program executive officer for Air Force fighter and bomber programs, the first program manager for what became the F-22 office, a test pilot, and a decorated veteran of Vietnam combat missions.

If confirmed as Assistant Secretary of the Army for Acquisition, Logistics, and Technology, General Bolton will oversee the Army's complex acquisition contracting procurement and logistics systems. He will be responsible for assuring that our soldiers are equipped with the most advanced tools and technologies in the quickest, most cost-effective manner possible. He is well-qualified for this position. We look forward to asking questions of him.

I would also note for the members and staff that are here that, following this open session, we will be moving to executive session to discuss a number of military nominations which have been pending before this committee.

Is there an opening statement that you have, Senator Inhofe, Senator Bunning, Senator Warner?

#### **STATEMENT OF SENATOR JOHN WARNER**

Senator WARNER. Mr. Chairman, I will put my full statement in the record. I had a very nice interview with this distinguished nominee, and one of the areas we discussed was how the President and the Secretary of Defense persuaded him to come back to public service. I am not sure, but he said his family could explain it better than he. I welcome you, sir, you have had a quite a distinguished career.

[The prepared statement of Senator Warner follows:]

## PREPARED STATEMENT BY SENATOR JOHN WARNER

Thank you, Senator Levin.

I join you in welcoming General Bolton and his family. I note that there have been a series of nominations by Secretary Rumsfeld and the Bush administration that place well-qualified nominees with background in one particular military service into senior positions in another service. While this may appear curious at first glance, I think our Secretary of Defense is sending the message that the best people and ideas will thrive in any service. I am convinced after meeting with General Bolton last week that he is the right person, at the right time for this job.

General Bolton has had a remarkable career of military service. Commissioned in 1969, he qualified as a fighter pilot and, over the course of his distinguished career, he compiled over 2,700 flying hours in more than 30 different types of aircraft. During the Vietnam war, he flew 232 combat missions, including 40 over North Vietnam.

General Bolton has also had a very impressive acquisition background, serving as the first program manager for the Advanced Tactical Fighter Technologies Program, which evolved into the F-22 System Program Office. He went on to serve as the Deputy Program Director for the B-2 System Program Office; Program Director for the Advanced Cruise Missile System Program Office; and from 1998 to 2000 as Program Executive Officer for the Air Force fighter and bomber programs within the Office of the Assistant Secretary of the Air Force for Acquisition.

General Bolton is nominated at a time of new emphasis on transformation. The recently completed Quadrennial Defense Review concluded that terrorism, chemical and biological weapons, cyberattacks and missile threats—so-called asymmetric threats—would transform the strategic landscape. The tragic events of September 11, sadly, confirmed that view.

The Department of Defense needs a responsive and capable acquisition system to develop the capabilities required to counter these emerging threats. Secretary Rumsfeld has repeatedly identified the need to streamline acquisitions practices and policies to promote the more rapid development and acquisition of cutting-edge technological capabilities.

The Department of the Army is no stranger to transformation with its vision of moving to a force that is more strategically responsive and dominant across the full spectrum of military operations. General Bolton's extensive background will surely assist the Army in its many challenges of balancing readiness and modernization against investment in future capabilities.

General Bolton, I congratulate you on your nomination and look forward to working together to ensure we have the best possible equipment and forces for our Nation.

Senator Levin.

General BOLTON. Thank you very much, Senator Warner.

Senator WARNER. I remember your service very well. You might share with the committee your wife's response at an appropriate time in the hearing.

General BOLTON. Yes, sir, I will. Thank you, and it is good seeing you again.

Chairman LEVIN. Well, I guess you wanted to sample the Army—[Laughter.]

General BOLTON. Yes, sir.

Chairman LEVIN.—after all those years in the Air Force, right? You want to figure out what is going on over there.

At this time, I would like to include Senator Thurmond's complete statement in the record, as he is not able to be here today.

[The prepared statement of Senator Thurmond follows:]

## PREPARED STATEMENT BY SENATOR STROM THURMOND

Mr. Chairman, I join you in welcoming General Bolton as we consider his nomination to be the Assistant Secretary of the Army for Acquisition, Logistics, and Technology. I am pleased that we are considering an individual with his superb qualifications at the time the Army is transforming its forces to meet the challenges of this century.

General Bolton, congratulations on your nomination. Your biography reflects a career that spans a period of great turmoil in our military. This background will serve

you well as you take on the challenges facing our Army as it transforms from a force to fight on the plains of Europe to the force that can fight all spectrums of conflict. Your extensive experience as a program manager is especially noteworthy. It makes you uniquely qualified for the position and will allow you to quickly take charge of the Army's acquisition program. I support your nomination and wish you success. Thank you, Mr. Chairman.

Chairman LEVIN. The committee has received the required paperwork on General Bolton, and will be reviewing that paperwork to make sure it is in accordance with the committee's requirements. There are a number of standard questions that we ask every nominee who comes before the committee. General Bolton, in your response to advance policy questions you agreed to appear as a witness before congressional committees when called, and to ensure that briefings, testimony, and other communications are provided to Congress. You have already made those commitments, and I will now ask you a series of questions.

Have you adhered to applicable laws and regulations governing conflict of interest?

General BOLTON. Yes, Mr. Chairman, I have.

Chairman LEVIN. Have you assumed any duties or undertaken any actions which would appear to presume the outcome of the confirmation process?

General BOLTON. No, Mr. Chairman, I have not.

Chairman LEVIN. Will you ensure that the Department complies with deadlines that are established for requested communications, including prepared testimony and questions for the record in hearings?

General BOLTON. Yes, Mr. Chairman, I will.

Chairman LEVIN. Will you cooperate in providing witnesses and briefers in response to congressional requests?

General BOLTON. Yes, Mr. Chairman.

Chairman LEVIN. Finally, will those witnesses be protected from reprisal for their testimony?

General BOLTON. Yes, Mr. Chairman.

Chairman LEVIN. General Bolton, do you have any opening remarks that you would like to make at this point?

**STATEMENT OF MAJ. GEN. CLAUDE M. BOLTON, JR., USAF,  
NOMINEE TO BE ASSISTANT SECRETARY OF THE ARMY FOR  
ACQUISITION, LOGISTICS, AND TECHNOLOGY**

General BOLTON. Mr. Chairman, I do. I have some prepared remarks that I would like to read and then offer them for the record.

Chairman Levin, Senator Warner, members of the Armed Services Committee, I am deeply honored and privileged to appear before this committee. I am also extremely grateful to the President and to the Secretary of Defense for the confidence and trust they have shown in me by nominating me to serve in this important position. If confirmed, I am fortunate to have had other valuable experiences in the Air Force that will allow me to bring a thorough knowledge of the Department of Defense and an understanding of best business practices to the very important responsibilities of the office for which I have been nominated.

During the confirmation hearings, both Secretary Rumsfeld and Secretary White described the President's national security goals and key objectives of the Department of Defense and the Army. I

am fully committed to these goals and objectives. If confirmed, I will work hard to support Secretary White's key goals to invest in people, to assure readiness, to transform the Army, and to adopt sound business practices. If I am confirmed, I will do all that I can to keep our Army the most effective fighting force in the world, and to ensure it is prepared to meet our important responsibilities for the security of this Nation in the new century.

I intend to work closely with the Department of Defense leadership and Congress, including all members of this committee, as we work together to meet the great challenges facing the Army in balancing today's readiness and tomorrow's modernization requirements within allowable resources.

Mr. Chairman, I want to thank you for the opportunity to testify, and for the committee's consideration of my nomination. Let me close by saying once again how honored I am to have been nominated by President Bush for this position. If confirmed, I pledge to do my utmost to fulfill the trust and confidence placed in me by the President, the Secretary of Defense, the Secretary of the Army, and the men and women of our Army.

Thank you, Mr. Chairman. I am ready for your questions.  
[The prepared statement of Major General Bolton follows:]

PREPARED STATEMENT BY MAJ. GEN. CLAUDE M. BOLTON, JR., USAF

Chairman Levin, Senator Warner, members of the Armed Services Committee, I am deeply honored and privileged to appear before this committee. I am also extremely grateful to the President and Secretary of Defense for the confidence and trust they have shown in me by nominating me to serve in this important position.

If confirmed, I am fortunate to have had other valuable experiences in the Air Force that will allow me to bring a thorough knowledge of the Department of Defense and an understanding of best business practices to the very important responsibilities of the office for which I have been nominated.

During their confirmation hearings, both Secretary Rumsfeld and Secretary White described the President's national security goals and the key objectives of the Department of Defense, and the Army. I am fully committed to these goals and objectives.

If confirmed, I will work hard to support Secretary White's key goals: to invest in people, to assure readiness, to transform the Army, and to adopt sound business practices. If I am confirmed, I will do all that I can to keep our Army the most effective fighting force in the world, and to ensure it is prepared to meet our important responsibilities for the security of this Nation in the new century.

I intend to work closely with the Department of Defense leadership, and Congress including all the members of this committee, as we work together to meet the great challenges facing the Army in balancing today's readiness and tomorrow's modernization requirements within available resources.

Mr. Chairman, I thank you for the opportunity to testify today and for the committee's consideration of my nomination. Let me close by saying once again how honored I am to have been nominated by President Bush for this position. If confirmed, I pledge to do my utmost to fulfill the trust and confidence placed in me by the President, the Secretary of Defense, the Secretary of the Army, and the men and women of our Army.

Chairman LEVIN. Thank you, General Bolton. We will start with a 6-minute round. General Bolton, you are still on active duty in the Air Force. I understand that, if confirmed, you will resign from the Air Force before the formal appointment is signed by the President for this position, is that correct?

General BOLTON. Mr. Chairman, that is correct.

Chairman LEVIN. You spent your entire career in the Air Force, and now you are looking to be an important part of the Army. Can you tell us how you plan on doing that, what challenges you think

that raises which may be novel or unique, given your Air Force experience, or whether that experience may help you in some ways?

General BOLTON. Mr. Chairman, I think the experience that I have gained over the past 25 years in this endeavor is very transportable to the Army. The time that I spent as a test pilot, as a program manager on three major programs for the Air Force, as an inspector general, as an educator, and as a program executive, give me the background and experience in the various processes, the tools that are available to manage weapons system programs, as well as to look after the sustainment of those weapons systems and, of course, the science and technologies that go into them.

In addition, the one thing I have had, I guess I have been fortunate throughout my career, is good health—a lot of energy, zest, and a sense of purpose, and I bring that as well to this important position. The bottom line has always been for me, and now, if I am confirmed in the Army, to make sure that our fighting force, in this case the Army, remains the most capable, the most powerful, and the most respected Army that we have ever seen. I look forward to that, sir, if confirmed.

Chairman LEVIN. Thank you.

General Bolton, the Army's transformation effort involves modernizing the existing legacy force to maintain current operational readiness, fielding an interim force capability, and conducting a robust research and development effort that is needed to create a lighter and more mobile objective force by the year 2012. Could you tell us what, in your opinion, are the highest priority modernization programs that the Army has?

General BOLTON. As I understand it, under the banner and the initiative of transformation of the Army there are some key programs and priorities, not the least of which is the cornerstone of the major combat systems that will be required in order to make the Army lighter, faster, at least as lethal, if not more so.

From a technology standpoint, I see that a logistics system will have to be more agile and perhaps get away from what we have done in all the services, and that is to have redundancy en masse and get into mobility and situation awareness. I believe, from what I have been told, the Army is moving in that direction. It is making strides, (1) to get on with the interim as well as the objective force, and (2) working very hard on its key initiative, its key programs associated with the major combat systems. I think those things are important if you are going to transform the Army.

Chairman LEVIN. Based on your long experience in the Air Force, particularly in the acquisition part of the Air Force, do you have any specific recommendations on how the Army can streamline the acquisition process?

General BOLTON. From what I have been told, and obviously if I am confirmed I would have to look at this in greater detail, I think the Army is responding first of all to how it is doing its requirements process and streamlining that, and reducing, or increasing the stability in the requirements process.

I think that is key for any development in any system program. If we do not get the requirement right, we cannot write it down. If we do not do it in a disciplined fashion then I do not care how good a program is, you are going to run into some problems, and

I think the Army is taking strides to do that. In addition, I understand that if I am confirmed, the office I would be going into has also been reorganized with an aim toward streamlining and putting into essentially one office, or one person, the entire life cycle of a weapons system if you will, from the cradle to the grave. I think that is a step in the right direction, and then aligning the various authorities and responsibilities. I think those are all important, to get the requirement right, to get the organization right.

There are some other things that I believe the Army is doing that we may want to touch on later, that revolve around the people and how they are trained, educated, recruited and retained, and then the industrial base. But I believe the Army is moving in the right direction and, if confirmed, those are the things that I will be looking at to make sure they are streamlined and supportive of the Army of the future.

Chairman LEVIN. Do you have any specific recommendations, General, on how the Air Force and the Army can cooperate more closely in the development of combat capabilities?

General BOLTON. Yes, sir, and I think we have seen some examples of that. Plugger, for example, which is a lightweight GPS produced by the Army, bought by the Air Force some years ago, took what was then acquisition reform initiatives, with the help of Congress and this committee, given some relief. We were able to take a unit that basically was well over \$3,000 per unit and get it down to \$400 or \$500, \$800 the initial lot.

I think there are plenty of opportunities, if not for the weapon systems per se, certainly for the technologies. When we look at how we get systems, how we work together, how we communicate together, how we use information technology, I think all of those things are transferable between not only the Air Force and the Army, but all the services, and in fact a good share of industry as well. If confirmed, those are the types of things I will be looking for. I do not believe—I know it has been my experience, I do not have all the answers. My service does not have all the answers. You go where you have to get the right answers to do the right thing at the right time.

Chairman LEVIN. Senator Warner.

Senator WARNER. Mr. Chairman, I will defer to my colleagues now and do a wrap-up later.

Chairman LEVIN. Senator Bunning is next on an early bird basis. I should have announced we are going to go by the early bird rule, as always.

Senator BUNNING. Thank you. Thank you, Mr. Chairman. I welcome you, General.

General BOLTON. Thank you, Senator.

Senator BUNNING. I used to have a very good friend that was the commanding officer at Wright-Pat, General Earl O'Laughlin. I do not know if you know him.

General BOLTON. Yes, sir, I know him.

Senator BUNNING. He was the logistics commander for a long time.

General BOLTON. Yes, sir.

Senator BUNNING. He is a good golfer. [Laughter.]

He took money away from me on that course at Wright-Pat. That is how I know that.

General BOLTON. He could probably take a lot of money from me as well, Senator.

Senator BUNNING. We are glad that you have decided to come back again to serve your country with the Army.

General BOLTON. Yes, sir.

Senator BUNNING. I cannot believe that an Air Force man would come back with the Army, but I will do it.

Let me ask you just a couple of questions from some of your testimony that you have written. You have had considerable acquisition experience. Based on that experience, are there any problems that you saw in the acquisition process that are not being addressed by the Department's restructuring plan and, if so, what are they, and how would you address them?

General BOLTON. It may be a little premature for me, particularly in terms of why we are here, for my confirmation, because I just do not have enough details or information with regard to what the Army is doing. But what I have seen from my own service and seen from other services from afar, I think we are moving in the right direction.

This is a period of change. Secretary White has indicated that. All the services are in a transformation, and I think doing as well as we can, to transform ourselves into a fighting force that can meet not only the interim threats that we have, current and interim, but also future threats, and stay within the resources constraints that we have.

Senator BUNNING. In your responses to the advance questions you were given, you highlighted the importance of integrating the programs earlier into the development process. This will streamline the acquisition system without reducing the testing necessary to ensure a full, capable system. What reorganization do you believe will be needed to accomplish that fact?

General BOLTON. Senator, I do not believe reorganization is needed. There may be from time to time emphasis needed to ensure that testing starts, literally from day one in the requirements process, through the development, and certainly into what we traditionally think of as tests, and development testing, and initial operational testing and evaluation and follow-on. But I believe it ought to be an integral process, done from the beginning of the program. In addition, we must remember what test is all about. Test, in and of itself, I think, is not the wisest thing to do, and it is a waste of time and money. But tests used to reduce risk on a program, and used as a tool, that is what test is all about, and I think you can well integrate that throughout a program life cycle.

Senator BUNNING. In your responses to the advance questions you mentioned that the infrastructure for the DOD test range and the Army's instrumentation needs to be upgraded and replaced, to keep in place with advancements of the systems being tested. What is the Army's plan to support that instrumentation, and do you believe it is adequate to meet the requirements for testing of the future combat systems the Army is currently developing?

General BOLTON. Senator, I have not been privy to, nor do I understand what support the Army will give in the future in its budgets. I simply have not seen that.

My indication from some of the initial briefings are that the infrastructure could stand recapitalization, as I think is true for all services—it certainly is true for mine. If confirmed I believe that is well within my job description, to understand what tests and structure we have, and to make sure that we have appropriate infrastructures to do the testing of the future. That testing in the future will revolve more and more around systems and systems within and between services, and perhaps even with other countries, and certainly have heavy emphasis on information and information technology, and how best to go about doing those tests. So if confirmed I look forward to seeing what our baseline is, and then advising the leadership of the Army where we need to go in the future with resources.

Senator BUNNING. Last question. Are any of these testing ranges suffering reduced capability as a result of encroachment either from the civilian population or from the environmental restrictions and, if so, how do you plan to deal with it?

General BOLTON. To my knowledge, sir, that is true for all ranges.

Senator BUNNING. All ranges?

General BOLTON. All ranges that I am aware of. I do not know the specific ones for the Army, but it has been my observation in looking at this over the years that it has been an issue. I do not think there is a simple solution across the board, one solution for all the issues that I am sure are there. But if confirmed I intend to look at each one of those to see how best we can use the ranges and to use other ranges, i.e., other services, and other agencies.

Senator BUNNING. Fort Knox has that specific problem. That is why I am asking.

General BOLTON. Yes, sir, I have heard that. I simply do not know the details on that, but my intention is, if confirmed, to work with you, with other members, and certainly with the Army leadership to see what we can do to arrive at solutions that are in the best interests of the Army, the best interests of the American citizens—we live around those ranges—and for the taxpayers at large.

Senator BUNNING. Thank you.

Mr. Chairman, I have an opening statement I would like to put in the record also. Thank you.

[The prepared statement of Senator Bunning follows:]

PREPARED STATEMENT BY SENATOR JIM BUNNING

Thank you Mr. Chairman. General Bolton, I would like to welcome you and your family and thank you for coming before us today. We all appreciate your continued willingness to serve your country, particularly during this time of great crisis.

The job you have before you would be difficult during normal times. As we all know, these are not normal times. I look forward to working with you to ensure that our Army has the best equipment possible.

Senator BUNNING. Thank you very much, General.

General BOLTON. You are welcome.

Chairman LEVIN. Senator Landrieu has yielded to Senator Inhofe.

Senator INHOFE. Thank you, Mr. Chairman. First of all, I am looking forward to our visit that is coming up. We have not had a chance to do that yet, but I know you by reputation, and I am very excited about the new position you are going to be assuming. I kind of like the idea of getting someone from a different service. This administration, you will be the third one they have done this way.

General BOLTON. Yes, sir.

Senator INHOFE. I think you offer a different perspective. Many things are the same. General, we have undergone a very serious problem for the last 10 years, underfunding in every area, RPM accounts, modernization, and it has taken its toll in terms of retention, and I see us turning that corner now. You have suffered through the last 10 years, and now you are going to be in on the rebuilding, very similar to what we found ourselves in 20 years ago.

We had a hearing the other day and I had a man that was up here from Oklahoma. His name is Charles Sudlett. He had the same kind of parallel career in the Air Force that you had, and something occurred to me. I remember I singled him out—he was in the audience, and I said—he had flown about the same number of missions in Vietnam that you had in the same kind of vehicles, and I said, all during the time that you were in at that time, people questioned, perhaps, the war, the motivation, but in terms of equipment, we had the best of everything, whether it was the F-100s, the F-105s, the F-4s, and the Navy had the A-4s and the A-6s, and they were better than anything that the other side had, and he agreed with that.

Today, that is not true. We are dealing now with equipment—our best air-to-air is the F-15, our best air-to-ground is the F-16, and yet the SU-27s in terms of detectable range and other areas are superior in some ways, and the SU-30s. Now they are coming in with the advanced equipment.

You are going to find, I am sure you agree with that, that we have gotten to a point where we do not have the best of everything today in the Air Force, and that same thing is true in the Army. I remember back when I was in the Army, many, many years ago, we did have the best artillery. We had the best that there was, and that is something that has kind of been our hallmark ever since World War II.

Well, it is not true today, and if you take one vehicle that we have in the Army that you are going to be dealing directly with probably as much as anything else, it is going to be the Crusader. Right now, our Paladin is inferior in terms of rapid fire and range, to artillery pieces that are made in four different countries. So no matter who the adversary is, the likelihood is that they are going to have something better than we have in terms of an artillery piece.

So the first question I would like to ask you is, do you agree with the Secretary of the Army, General Shinseki, and all of the rest of them that when we have asked this question as to the necessity of getting into the Paladin as quickly as possible? I am sorry, into the Crusader, and upgrading that capability?

General BOLTON. I certainly would defer to their judgment on that, since they have much more than I currently do. I am not ex-

perienced on that program. I have not been thoroughly briefed on that program.

To your comments on capability, I certainly agree that we need to increase our capabilities across the board in all the services.

Senator INHOFE. The point I want to make, General, is we have always had the best of everything.

General BOLTON. Yes, sir.

Senator INHOFE. We have had our kids over there and we have tried to give them the best training and the best equipment to use, and as of this moment today, they do not have the best of everything, so as you get into the ground end of our military, I hope you will do that, and actually start with the Crusader, because I think each nominee that we have asked who has been before this committee for the last 3 or 4 years has said, if you could single out one crown jewel that we really need to advance on, it would be—or where we are the furthest behind, it would be in our artillery capability.

I make it a point to get around to a lot of the installations of all the military. I was at Fort Lewis, Washington, during the August recess, and they showed me the interim armored vehicle that we are talking about having the side by-side test in with the existing M-113. Now, I know you have not had time to get into some of the details of this, but it is my understanding that we are going to do two brigades, but before we go to the third brigade, we are going to have this side-by-side competition. It is my understanding that will cost about \$28 million.

Well, I can save you \$28 million, General, because I have already done the competition. I have been in both vehicles, and it is my understanding that as of yesterday there seems to be a change. People are recognizing the fact that the IAV is going to be something that is far superior, something we need to get into and not delay, and not spend a lot of money making that decision.

I would like to ask you first of all if you have any thoughts about that, getting into that modernization, and second, if not, would you go to Fort Lewis and do what I did, and take a ride in both of them?

General BOLTON. Well, Senator, let me see if I cannot do both. [Laughter.]

Senator INHOFE. All right.

General BOLTON. First of all, I do agree with the notion of modernization, whether it is the IAV, or the other programs, weapons systems that are under consideration and development by the Army. If confirmed, those are cornerstones, jewels, if you like, that I will spend a good deal of time understanding the capability we are looking for and how best to get it, and how quickly we can get it, and so I look forward to getting into the details, working with the leadership and working with you and other members here in this committee and with Congress to get the capability of the Army needs and wants very quickly.

I, too, was at Fort Lewis. My wife and I were on vacation. We left on 10 September, and obviously when the attacks occurred on the 11th we were not able to get back. We were just a few miles from Fort Lewis, and we had an opportunity to go out to that post and view what was going on there. There were a lot stories, as you

might imagine, on the interim force and what was going on in the prototype phase at Fort Lewis, so I am very anxious to get back and understand what is going on there. If confirmed, I will be up there.

Senator INHOFE. I appreciate that.

Mr. Chairman, I know my time has expired. I would like to ask him one question just so he can answer it for the record, because it is going to be a rather lengthy answer, and it has to do with our depot capability. I know that you are more familiar, as am I, with the depots and air logistics, and the depots in the Air Force, but some of the problems are the same in the Army depots that we have.

They are a very viable part of our fighting force in terms of the public depots function and mission, but they are very antiquated, poorly designed, poorly equipped, and I would like to have you for the record—not today, but for the record give me a pretty in-depth answer as to what you believe the future of our public depots are, and then, if it is to continue as we have in the past, what plans we have to bring them up to date so that they can do the job that they were—many of them were operating with the same technologies and the same equipment they were using back in World War II, so if you could do that for the record I would appreciate it, and I look forward to serving with you in this capacity.

General BOLTON. If confirmed, I will be more than happy to take that for the record and provide you that answer.

[The information follows:]

#### FUTURE OF ARMY DEPOTS

Our depots are a vital link in our ability to support the Army in transition as well as the future Objective Force. We see our depots not only supporting the long term strategic readiness of our weapons systems, but becoming a full time partner supporting the near term readiness of the transforming Army and the Objective Force. The Army will maintain an organic depot base with multi-functional and multi-capable facilities and personnel trained and equipped to work on the systems that will be in the force between now and beyond 2025. This multi-functional approach will provide us with a built-in surge capability that will be responsive to the needs of our more capable force.

Senator INHOFE. Thank you.

General BOLTON. I look forward to it as well, sir. Thank you.

Senator INHOFE. Thank you, Mr. Chairman.

Chairman LEVIN. Thank you. Senator Landrieu.

Senator LANDRIEU. Thank you, Mr. Chairman. Mr. Chairman, I would like to request that my full opening statement be inserted in the record.

[The prepared statement of Senator Landrieu follows:]

#### PREPARED STATEMENT BY SENATOR MARY L. LANDRIEU

Thank you, Mr. Chairman, for conducting this hearing today. General Bolton, it is nice to see you here today, and you are certainly a well qualified nominee. The Armed Services Committee must confirm scores of nominations to serve key posts within the Department of Defense, but few are as vital as the position before us at this time—the Assistant Secretary of the Army for Acquisition, Logistics, and Technology (ASA(ALT)).

As the chair of the Emerging Threats and Capabilities Subcommittee, I am most interested in seeing that those in charge of acquisition, logistics, and technology are highly qualified and competent. After all, the primary aim of the Assistant Secretary is to ensure that the Army best uses ever-changing science and technology

to obtain the necessary capabilities for warfighting and protection of our Nation's security. As you stated in your responses to the committee's questions, the ASA(ALT)'s "primary duties are to ensure the Army's soldiers are provided with the most capable and sustainable equipment and to wisely shepherd all available resources to provide that capability in the most cost effective manner." Therefore, our men and women in the Army are truly dependent on the Assistant Secretary for their safety and to have a competitive advantage against any possible enemy they may face on the battlefield.

I am encouraged to see that you are an advocate for the Army's transformation. I appreciate your statement, "The Army must leverage new science and technology programs and initiatives to capitalize on emerging trends and breakthroughs. The Army must ensure it transforms into a force that will have the ability to respond effectively not only against today's terrorism and force protection threats, but also tomorrow's unknown threats." For too long those in the Department of Defense have beheld antiquated notions of management and warfighting, but the time has come to make a paradigm shift. I have lauded General Shinseki for his vision and commitment to transforming the Army to make it a leaner, swifter, and more lethal force capable of victory against the unknown enemies we will face in the 21st century. As this committee deliberated the Defense Authorization Bill for Fiscal Year 2002, the Secretary of Defense argued for a delay in transforming the Department of Defense in fiscal year 2002. We must avoid further delays and make necessary changes to improve our Nation's defenses.

Not only do I see a need for the ASA(ALT) to be an advocate for transformation, but the ASA(ALT) must champion each day the transformation push for tangible and cognizable changes in the way the Army operates. The ASA(ALT) must show a dedication to science and technology. With such a devotion, the ASA(ALT) must see that this science and technology are truly catalysts for the research, development, test, and evaluation process and the procurement process. Pragmatism must win out so that worthwhile ideas receive the funding to become the next generation of weapons and equipment, while white elephants are sent out to pasture. Procurement must be streamlined so that those new ideas that are successful can get into the field faster. It takes entirely too long for new equipment to reach the field. Too often, new concepts and innovations are scuttled in favor of the status quo. Where the status quo imposes a danger to our soldiers or our way of life, we must shake the trees at the Pentagon to eliminate out of date and out of touch operating procedures.

In conclusion, I concur in your vision that the Army's transformation and move toward modernization "will enable the Army to field a force that is more responsive, deployable, agile, versatile, lethal, survivable, and sustainable." I hope those in positions higher than yours share your thoughts. Should you be confirmed, I also hope you understand and grasp both the enormity of the task ahead and the opportunity you have to leave a lasting and meaningful impression on the Army for years to come.

Senator LANDRIEU. General Bolton, congratulations on your nomination.

General BOLTON. Thank you, ma'am.

Senator LANDRIEU. I look forward to working with you in a variety of capacities, but particularly in regards to my chairmanship of the Emerging Threats and Capabilities Subcommittee. In our subcommittee we are very focused and very interested in all aspects of acquisition for research and development, particularly in protecting us in these new asymmetrical threats.

Let me say that I was particularly impressed with your opening statement. You said the Army must leverage new science and technology programs and initiatives to capitalize on emerging trends and breakthroughs. You go on to say, the Army must ensure it transforms into a force that will have the capability to respond effectively not only against today's terrorism and force protection threats, but also tomorrow's unknown threats, and I appreciate that emphasis, and want to work with you.

But one question I have regarding that is the conflicting information I am receiving about a peacekeeping vehicle that has per-

formed extraordinarily well, and that is our armored security vehicle (ASV). When General Shinseki testified before our committee not too long ago, I asked him a question in regards to this particular vehicle and its continued production. General Shinseki replied that the Army does not have plans to terminate the ASV program at the end of 2002. The current plan is to continue to field the armored security vehicle to Military Police (MP) units.

Then, however, we read in *Jane's Defense Weekly* in November, "the Army has canceled the ASV vehicle used by military police."

Now, this is my question. Can I count on the statement that General Shinseki made before this committee? Can I count on your support and, if not, what are you going to recommend as a proper substitute for the only vehicle in the Army that can protect, to my knowledge, our forces in a hostile peacekeeping situation?

General BOLTON. Senator, I wish I could give you an answer this morning. I simply do not have the information, other than what you know, about the cancellation of that program. If confirmed, and if you still desire, I certainly will take that for the record and provide you an answer. At the moment, I just do not know. I am sorry.

[The information follows:]

Yes, you can count on the support of General Shinseki and myself. Regarding the status of ASV, the Army is currently procuring the ASV under a 5-year multiyear contract with Textron Marine and Land Systems. The fiscal year 2002 President's Budget includes funding for the fourth year of the contract. The Army's intent is to support the ASV through to the conclusion of the multiyear at the end of fiscal year 2003.

Senator LANDRIEU. Well, I would like to call to the chairman's attention and to our ranking member that to my knowledge, the ASV is the only vehicle fit for the MPs. That is why this is a very serious issue, not simply because its production line is in Louisiana. My staff has researched this pretty thoroughly, and in the Army's whole procurement line there does not seem to be a comparable vehicle. I mean, HMMWVs are, of course, something that our Army uses, but they have a relatively open driver's compartment. Our forces need the proper protection in a peacekeeping environment.

This particular vehicle not only has four-wheel drive capability, a 50 caliber machine gun, and a 40mm grenade launcher, but it can withstand the direct impact of a land mine. If the wheels are shot out by a rifle, it has new technology that continues to inflate the tire and keep our forces in the fight. I would argue that with these new and emerging threats, the back end of these conflicts are going to be as important as the front end. We are going to need a vehicle, either this one or something very similar, to complete our mission.

So I bring that to your attention, and I am going to be working very closely with you. If you can produce something else that is better, then I would be the first to say, well, let us save money where we can, but to take out something that seems so essential, to try to find other essential things just is not the way we should be going.

So I will leave it at that, but I want to work closely with you on that.

General BOLTON. Yes, Senator.

Senator LANDRIEU. Second, since your position will have oversight over Army science and technology (S&T) programs, do you feel the Army is currently investing enough in research and development (R&D)? If not, what are some of your specific plans, and would they include a goal similar to the Secretary of Defense's goal of 3 percent for the DOD budget overall?

General BOLTON. The goal of 3 percent I think is appropriate. Certainly, if I am confirmed, that is what I would recommend to the leadership of the Army. I am led to believe, and looked at some of the figures over the last few years, that the request that the Army has made has been increasing in this area. It is certainly not close to the 3 percent we would like to have, but if confirmed, that is what I believe should be done, and that is what I will support.

Senator LANDRIEU. Finally, the Army plays an important role in performing vital medical, chemical, and biological research for our country. It has been most evident, of course, with our recent anthrax attack—Fort Detrick in Maryland has been a real leader working with us on this attack. How will you work to ensure the Army's expertise is available to our first responders, the Center for Disease Control, and the Office of Homeland Security? Do you have any specific ideas on the subject as you have been thinking about your confirmation process?

General BOLTON. Well, not only for the subject that you have just indicated, but for our entire workforce. As you may know, over the next 2 to 5 years, 50 percent of our civilian workforce is eligible to retire, including those in the area that you just addressed. If confirmed, that is one of my priority areas, to look at how we go about recruiting, retaining, training, motivating, and challenging that workforce.

It is not just true for the Army. It is true across the Department of Defense, and I think that is very important. I will work that very, very hard, and I look forward to working with you and other members here to see what we can do about that.

Senator LANDRIEU. Did you just testify that 50 percent of that workforce is near retirement?

General BOLTON. Yes, ma'am, that is true.

Senator LANDRIEU. Within what, 5 years?

General BOLTON. 2 to 5 years.

Senator LANDRIEU. 2 to 5 years, OK.

Thank you, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Landrieu.

Senator Warner.

Senator WARNER. Mr. Chairman, I am going to put my questions into the record. Also, I am going to put into the record excerpts from the *Congressional Record* when the Senate considered the nomination of General Bolton. The committee examined the allegations with regard to the cruise missile program over which you were the manager at one time. That matter was thoroughly explored by the committee. Comments by Chairman Nunn very clearly indicate that it was the committee's finding that there was no culpability on your part whatsoever.

[The information referred to follows:]

*(Senate—October 8, 1994)*

[Page: 814977]

The PRESIDING OFFICER. The clerk will now report executive calendar number 1281.

The bill clerk read as follows:

The nomination of Col. Claude M. Bolton, Jr. to be Brigadier General.

The PRESIDING OFFICER. Is there further debate on the nomination?

If not, the question is on agreeing to the nomination.

Mr. MITCHELL addressed the Chair.

The PRESIDING OFFICER. The majority leader is recognized.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. GRASSLEY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. Pryor). Without objection, it is so ordered.

Mr. GRASSLEY. Mr. President, first of all, I want to thank the large number of people that voted against the promotion of General Glosson. As I said so many times, I have been, over the last year, spending a great deal of time studying various reports, particularly those of the inspectors general, to bring the public's attention and this body's attention to things that are wrong in the Defense Department--maybe not worse than other bureaucracies, but I have been concentrating on the Defense Department--in an effort to bring some accountability to an accountability of the expenditure of the taxpayers' money, better management by people who are responsible to carry out their duties according to their responsibility, and if they are not responsible, to hold them accountable.

I think with the waste of taxpayers' money, these next two nominations are perfect examples of people who should be held responsible. In the case of the Glosson nomination, it dealt with the responsibility and accountability, not necessarily on the expenditure, of taxpayers' money. I have a long case to lay out in both the Barry nomination and the Bolton nomination. But I have been discussing, at least in the case

of Colonel Bolton, some followup that has been suggested to me by staff of the Armed Services Committee that appears to be a reasonable approach to fixing responsibility.

In the case of Colonel Bolton and the waste of \$300 million of the taxpayers' money, and 60 cruise missiles laying on the floor of a production plant in California, and some possible violations of the Antideficiency Act, and with Colonel Bolton being the program manager, I think we should pinpoint responsibility.

The Senator from Georgia says that it should not be pinpointed toward Colonel Bolton. Well, then where should it be pinpointed?

So I have suggested to the chairman of the Armed Services Committee that if he, in his capacity--and certainly in the oversight powers and responsibilities of his committee--would, through correspondence, request of the inspector general--the committee has already followed up on the mismanagement of the program, there is no doubt about that. They have done a good job in that regard. But we need to pinpoint responsibility. Somebody has to be held responsible. It seems to me that if the committee is willing to do that, there would not be any reason for us to have a vote on the Colonel Bolton nomination, and we would move forward then to the Barry nomination.

I will discuss that in a minute, after the results of this discussion with the distinguished chairman of the Armed Services Committee. If we decide we are not going to have to have a vote on Bolton, I would then still lay out my case sometime when it is not going to interfere with the work of the Senate. I will stay around to do that.

I yield to the Senator for comment, or whatever he can say at this point.

[Page: S14978]

Mr. NUNN. Mr. President, I thank my friend from Iowa. I will follow his request, and I will join with Senator **Thurmond**, assuming Senator **Thurmond** will concur; I have not had a chance to talk to him about this. I believe that instead of writing the IG of the Air Force, it would be more appropriate to write the top official in charge of acquisition, Mr. Komiskey, who is an expert in this area. He is at the DOD level and can review it there, rather than at the Air Force level. I will work with the Senator on that. We will ask him to trace the history of this advance cruise missile program and ask him to assess the things that went wrong, and we will ask him to also assess the responsibility for those things that went wrong.

I have to say, as I said last night, that Colonel Bolton did not take over the management of this program until 1989. The program was started in the Carter administration--at the end of it--under the team there then, and Bill Perry was one of those people. It was developed during the whole Reagan administration. It was a revolutionary technology program involving stealthy characteristics. The program, as many other revolutionary technology programs, ran into overruns and difficulties. The numbers of missiles came down. As the numbers come down, the price goes up. That is what happened. After you wind down a 40-year cold war, you reduce the numbers dramatically, and instead of building a thousand of something, you build a hundred of something, and the price goes up. So that is one of the big problems.

But on Colonel Bolton himself, there is no evidence that he did anything wrong. He took over a program that was already having serious problems. It turned out to be a successful program overall, because it produced a very successful defense capability. But in the process of developing that revolutionary technology, there were cost overruns and technical problems.

The question is, Who is accountable? I am not going to say to the Senator from Iowa that we are going to

get an answer that tells you exactly who should be taken out and flogged in a 12-year program of this nature. But I will do my dead level best, and I will work with Senator **Thurmond** to frame a letter and work with the Senator from Iowa and his staff to frame a letter that would direct the questions at the appropriate people at the DOD level.

If the Senator wants the Air Force level, we can do that, but it is hard for them to look at their own program. Most of these decisions were made by the Secretary of the Air Force, and there were two or three different ones. They are all gone now. So once you assess the accountability, Congress does not have any power to bring them back and flog them, or do anything to them. I am not sure we are going to satisfy the Senator's obvious desire to see someone punished. But I will certainly write that letter, and I will certainly get him the information in good faith, and I will followthrough and get as much information as we can about what went wrong and who is responsible for it.

The PRESIDING OFFICER. The Senator from Iowa.

Mr. GRASSLEY. Mr. President, that is satisfactory as long as we have the Department of Defense inspector general involved in the process, because of the independent status of the inspector general to make sure that we have an independent person making a judgment and also because the DOD inspector general in 1991, 2 years after the Senator said that Colonel Bolton took over, said that there was a violation of the Anti-Deficiency Act. That is the Department of Defense inspector general 2 years after Colonel Bolton became program manager.

That is where responsibility to me is fixed.

Mr. NUNN. Mr. President, I will say to the Senator on that point there is a dispute about whether there was an Anti-Deficiency Act violation. The Senator is correct in that I said that. That decision was not made by Colonel Bolton. That was referred by Colonel Bolton to his superior, and it went to the Secretary of the Air Force. That decision on how to fund that program was made by the Secretary of the Air Force, now retired.

There is no doubt about the fact there was a dispute between the Department of Defense IG and the Department of the Air Force on that. There is no doubt about the fact that Colonel Bolton did what he should have done on that, referred it up the line, and he got his orders from the Secretary of the Air Force.

Mr. GRASSLEY. Mr. President, let me ask the question: Would the Senator from Georgia be willing to include the DOD IG?

Mr. NUNN. I am glad to do that. If he prefers the DOD IG I am glad to do that.

Mr. GRASSLEY. I have one more comment before I ask two more questions. Then I think we are done on this point.

First, I think it is a sad commentary that we have a system of acquisitions that, using the Senator's word, we cannot take someone to take out and flog. I am not suggesting we flog someone. But is it not a terrible system that we cannot pinpoint responsibility? And to me that is a major problem.

I know the Senator has been working for 5 years to get acquisition reform and all that, and the Senator may have a lot of things in place so that this will not be repeated down the road. But it seems to me that there has to be a constant vigil to make sure that we can pinpoint responsibility or else we are not going

to have accountability. We are not going to have proper expenditures of money.

On the last point, I would only, if I could, through you, Mr. President, ask my friend from South Carolina, who has listened to this entirely, would he join Senator **Nunn** in making this request?

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. THURMOND. Mr. President, I have heard the discussion, and I think what has been said here is proper. I will be glad to join in with the distinguished chairman of the committee on this and the distinguished Senator from Iowa.

Mr. GRASSLEY. OK.

Then, Mr. President, I would not request a vote on Colonel Bolton.

At the same time, I will say this: I am going to make a case on General Barry. I will not request a vote on General Barry, and if the floor leader with his power wants to vitiate the cloture vote, then he will have my assent.

Mr. MITCHELL. Mr. President, I thank my colleague very much for his comments and cooperation.

Do I understand correctly now just so there can be no misunderstanding that the Senator is prepared to not have a vote on either the Bolton or the Barry nomination?

Mr. GRASSLEY. And no cloture will be necessary.

Mr. MITCHELL. Cloture will not be necessary.

Mr. GRASSLEY. Yes. But I do want time to speak.

Mr. MITCHELL. The Senator will have as much time as he wishes.

So, again, I want it understood, that there will be no cloture vote; there will be no rollcall vote at all on either nomination.

Mr. GRASSLEY. The Senator is correct.

Mr. MITCHELL. They will be approved by voice vote.

Mr. GRASSLEY. Yes.

Mr. MITCHELL. So there is no misunderstanding.

Mr. GRASSLEY. Yes.

#### **ORDER TO VITiate THE CLOTURE VOTES**

Mr. MITCHELL. Mr. President, I ask unanimous consent that the cloture votes now scheduled on the Bolton and Barry nominations be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MITCHELL. Accordingly, Mr. President, in view of the statement by the distinguished Senator from Iowa for which I thank him, it is my understanding now that these two nominations will be approved by voice vote, no rollcall vote will be necessary on them; therefore, there will be no further rollcall votes.

I thank my colleagues for their cooperation.

The PRESIDING OFFICER. The Senator from Georgia.

Mr. NUNN. Mr. President, I thank the Senator from Iowa. He is conscientious on these matters. He looks at them in detail. We do need careful oversight of the procurement system. In fact, we need careful oversight of every facet of Government, not just the Department of Defense now that we are in a different era. I can say we were a long time in the cold war era. There was almost a compulsion to push the edge of the envelope in terms of technology, and many times in pushing the edge of the envelope programs developed technical flaws. And without any doubt our system of procurement produced the best systems in the world, but many times it did so at a very high cost, and many times there was a lot of inefficiency.

I believe that the new procurement system, which got no attention, I must say, in this Congress, and I read all the critics about nothing accomplished in this Congress. Of course, we did bog down on some items at the end. I have no doubt about that.

But one of the major achievements of this Congress took 5 years to produce and was produced with the cooperation from both the legislative and executive branches, Democrats and Republicans. One of the major achievements had been the overhaul of the acquisition system. It should be a much better system. But it is going to take 5 to 10 years to implement.

We should have a much better procurement system as one of the major accomplishments, in my view, of this Congress and really one of the major accomplishments in the last 15 or 20 years in the Department of Defense.

We will work with the Senator from Iowa on these matters, and I commend him for making this decision and allowing these two officers to be confirmed, one of them retired and one of them promoted, because the committee unanimously decided that though they were in troubled programs they themselves handled themselves superbly and they bore no part of the responsibility in terms of the program problems, that they did what they should have done and when they should have done it. That was the committee judgment by unanimous view.

I thank the Senator from Iowa for his cooperation.

The PRESIDING OFFICER. The Senator from Iowa.

[Page: S14979]

Mr. GRASSLEY. Mr. President, I want to not only thank the chairman of the Committee of Armed Services for his remarks now but I want to thank him and Senator **Thurmond** for their cooperation on this last effort.

Also I want to say that over a long period of time, now probably 15 months, I have been working with either Senator **Nunn** and/or his committee on my interest in these nominations and the whole subject of

accountability, including several amendments on which he cooperated with me getting on various Armed Services Committees.

I thank him for not only his cooperation but he in every respect was a gentleman as he had to deal with me, and I do not suppose it is always easy to deal with.

Mr. NUNN. I thank the Senator from Iowa.

Mr. President, if I could say one more word, I thank the Senator from Iowa. He has my pledge to continue to work with him on whatever questions he has.

Mr. President, I want to just make one point. I am going to make a more lengthy presentation about the role **George Mitchell**, our majority leader, played here during his career in the Senate and particularly majority leader.

I think it ought to be noted on at least the closing part of this session. We will come back in a few days in November on the trade bill, and I will make my lengthy remarks then. But Senator **Mitchell** cares about fairness and justice.

Just a moment ago this nomination was about to go through. He favored the nomination. Senator **Grassley** and I were having a conversation. He came over to alert Senator **Grassley** to make sure it did not go through without his knowing about it.

That is the kind of a majority leader we have. That is the reason he has the reputation for fairness, and I think we ought to all note that.

The other thing I want to note, in the closing moments of this session, is that the majority leader could have pulled the plug on all three of these nominations. Everyone knows people are ready to get out of town. He cares about fairness to the individuals involved. He cared enough to schedule all three of these and to make sure that they were dealt with one way or the other by the U.S. Senate.

So **George Mitchell** has many attributes, but I think in these closing moments we ought to note that kind of leadership, and it will be sorely missed. He will be very difficult to replace, and we all know that.

So I thank the majority leader. I thank the Senator from Iowa. And I thank my colleague from South Carolina.

The PRESIDING OFFICER. The Senator from South Carolina is recognized.

Mr. THURMOND. Mr. President, I want to express my appreciation to the able Senator from Iowa and the fair manner in which he has handled this matter. It was a delicate matter, and I am very pleased it has been handled as it has been done in a satisfactory manner.

These officers now will be approved and other steps will be taken to improve the process here.

And I express my appreciation to the able chairman of the Armed Services Committee too for his part in helping to resolve this delicate situation. I think it has been handled in a very fine manner.

The PRESIDING OFFICER. Is there further debate on the nomination?

Mr. GRASSLEY. Mr. President, I would like to start debating the nomination, but if there are people who wanted to speak, I would give deference to them if they want to get out of town.

Mr. COCHRAN addressed the Chair.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. COCHRAN. Mr. President I have a statement, if the Senator would yield to me.

Mr. GRASSLEY. I yield to the Senator.

---

**ANTIDEFICIENCY ACT VIOLATIONS (Senate - July 22, 1993)**

---

[Page: S9230]

Mr. GRASSLEY. Mr. President, I would like to take just a few minutes this morning to discuss, once again, something that I discussed a couple times earlier this year: The pending promotion of an Air Force Col. Claude M. Bolton, Jr. It may sound insignificant to discuss this before the Senate, but this is an example of a person being recommended for promotion to brigadier general and the fact that this individual was involved in what I would consider a waste of taxpayers' money.

This promotion is now before the Armed Services Committee, and I have formally requested that I be notified before the Senate proceeds to the final approval of Colonel Bolton's promotion. Obviously, there have been some questions raised about my interest in this, and I am very happy to answer those questions. I want to clarify that position, even though I think I have stated it very clearly several times before.

Colonel Bolton's promotion to brigadier general should not be approved, at least it should not be approved until we have all the facts bearing on his role in the Antideficiency Act violations and the procurement scheme while program manager. He was the program manager for the advanced cruise missile, the ACM.

There are too many unanswered questions at this juncture. We need more information before we make a final decision on his promotion.

First, I shared my concern about Colonel Bolton in a letter to the chairman of the Committee on Armed Services back on March 29 of this year. I have that letter and some other inserts that I want to put in at the end of my remarks. I ask unanimous consent to do that.

The PRESIDING OFFICER (Mr. **Wofford**). Without objection, it is so ordered.

(See exhibit 1.)

Mr. GRASSLEY. Mr. President, I also shared on two other occasions my concern about Colonel Bolton in floor statements on April 30 of this year and May 28 of this year. Colonel Bolton was a program manager of the ACM from September 1, 1989 to September 20, 1992. As program manager, Colonel Bolton was in charge and he must, therefore, bear chief responsibility for what happened. I fear that Colonel Bolton may have engaged in either illegal or improper conduct while ACM program manager.

My suspicions are based largely on the audit and investigative work of the Department of Defense inspector general. The results of the IG's work are contained in a report entitled 'Missile Procurement Appropriations, Air Force, Audit Report No. 93-053,' dated February 12 of this year. The Department of Defense IG assessment is buttressed by other damaging evidence. The Senate Armed Services

Committee has

given the ACM program thumbs down for poor performance and for mismanagement.

The committee's evaluation is contained in Senate Report No. 102-352, pages 55 to 57, dated July 23, 1992. The conference committee on the fiscal year 1993 defense appropriations bill has given the ACM also thumbs down for poor performance and mismanagement. Its assessment is presented in House Report No. 102-966, page 538, dated October 1, 1992.

The General Accounting Office has also expressed concern about--their terms--'legal issues' and mismanagement of the ACM program. Some of the GAO's findings are contained in Report No. NSIAD-92-154. The GAO investigative work is continuing and more damaging information will be presented in September of this year.

So, Mr. President, I think the ACM program has come to a disastrous end, as the Armed Services Committee feared, and we need to know who is responsible for the mess and the evident waste of taxpayers' money. Who should be held accountable for what happened? I happen to believe that my concerns about Colonel Bolton rest on solid ground, but I want to be absolutely certain about those facts, as I should be certain about those facts. His career is at stake, and he should not be falsely accused. There can be no room for error.

I want to briefly tell you about the issues against Colonel Bolton, as I understand it today. There are three major allegations:

No. 1, the ACM program violated the Antideficiency Act while Colonel Bolton was program manager.

No. 2, Colonel Bolton and others failed to report a known violation of the Antideficiency Act.

And, No. 3, Colonel Bolton acquiesced in the illegal and destructive reprourement scheme to conceal and to cover up a violation of the Antideficiency Act.

I will discuss this in two parts. In the first case, I would like to review the facts bearing on the violation of the Antideficiency Act and, second, to discuss the facts bearing on the reprourement scheme to hide the violation of the Antideficiency Act.

The IG of DOD uncovered the facts that gave rise to these allegations. The IG charges that the ACM program violated the Antideficiency Act and that program officials knew of the violation in July 1991, but failed to report it. Colonel Bolton was the ACM program manager in July 1991.

Reading from that report, it says:

The Antideficiency Act was violated when the Air Force recognized that the cost to complete the ACM had exceeded amounts available for obligations, but permitted work to continue.

The Antideficiency Act has been violated, and the Air Force has incurred additional costs by not reporting Antideficiency Act violations and requesting congressional relief.

Now, what did Colonel Bolton know, when did he know it, and what did he do? We can safely assume that he knew in July 1991 that the cost to complete the ACM exceeded amounts available for obligation.

Money is a lifeblood of any program. As program manager, he had to know exactly how much money he had and what he owed. He had to know that he was about \$100 million short, and the shortage was increasing every day. He had \$100 million in bills from General Dynamics/Convair but no money to pay those bills.

Colonel Bolton was faced with two difficult choices: Stop work, report the violation, and request relief, or pursue illegal funding solutions.

Colonel Bolton chose to pursue the illegal option, no doubt with the approval and guidance from his superiors, including former Secretary of the Air Force Donald Rice.

With Colonel Bolton's career on the line, we cannot proceed on mere assumptions. We need hard evidence. We need to know exactly what Colonel Bolton knew and when he knew it.

Toward that end, I sent a series of questions to Colonel Bolton in a letter on April 29, 1993. I have yet to receive a response. A nonanswer came from the Assistant Secretary of Air Force for Financial Management, Mr. John Beach. Mr. Beach's nonanswer was dated May 13, 1993. Mr. Beach essentially told me, and the Congress, to take a hike. Mr. Beach said that my letter to Colonel Bolton had been referred to him for a response and that there would be no response.

Mr. President, I included that in what I received unanimous consent to submit.

So, Mr. President, I hate to say it, but Mr. Beach is not to be trusted in this matter. He has no credibility. Mr. Beach is up to his ears in the ACM Antideficiency Act violation, and I have documents to prove it. Both Mr. Beach and his boss at the time, Mr. Michael B. Donley, who has been Acting Secretary of the Air Force until recently, knew the ACM was in violation of the Antideficiency Act but failed to report it, as required by law.

I have a document that bears Mr. Donley's title 'SAF/FM.' It is dated March 1, 1992. On that date, Mr. Donley was SAF/FM.

The document was presented at a worldwide conference of Air Force financial managers at Melbourne, FL, on March 4, 1992.

Mr. Donley was present and spoke about it.

This documents states flat out that three Air Force missile programs--ACM, Titan IV, and, AMRAAM--have antideficiency violations.

This entire matter was clearly within the cognizance of Mr. Beach's office at the time.

To this day, only two of the three violations have been reported. Titan IV and AMRAAM took direct hits. ACM skated. ACM was inoculated--immunized against the dreaded disease. Was this done to save Colonel Bolton's promotion?

The March 1992 document, when coupled with other damaging evidence, tells me that Mr. Donley, Mr. Beach, Colonel Bolton, and a number of other officials all knew that the ACM program was in violation of the law. The documentary evidence is overwhelming.

Mr. President, that concludes my statement for today, but I have much more to say on the matter and will

continue the discussion either tomorrow or next week.

Mr. President, I am also placing in the **Record** at this point an excellent article by Mr. George Wilson on the ACM procurement fiasco. This is a wakeup call in the current issue of the Air Force's hometown newspaper, the Air Force Times.

There being no objection, the material was ordered to be printed in the **Record**, as follows:

[Page: S9231]

## **AF Handling of Procurement Disaster Damage**

(BY GEORGE C. WILSON)

Defense Secretary Les Aspin has called the Air Force's advanced cruise missile program 'a procurement disaster.'

Yet one of the colonels who managed it is now up for promotion to brigadier general. Therein lies an enlightening tale of why Congress gets mad at the military.

The other services dare not snicker too loudly because they took many of the same wrong turns on their weapons programs.

The Army tried for everything on its LHX helicopter and still has nothing, the Navy will never recover from its A-12 attack aircraft fiasco, and the Marine Corps stands accused of having a champagne taste but a beer pocketbook for its new aerial taxi, the V-22 Osprey tilt-rotor aircraft.

But the AGM-129A advanced cruise missile--or ACM--is worth singling out because it is a classic case of how not to handle procurement.

It is bound to make more bad news soon because the Air Force has chosen confrontation over cooperation in dealing with questioning lawmakers.

The ACM was born during the Cold War. The Air Force wanted a missile that could be fired farther out from Soviet defenses than the AGM-86B air-launched cruise missile aboard B-52 Stratofortress bombers.

The Air Force put the ACM in the Pentagon's black budget--the one where mistakes are often hidden so long that they cannot be corrected, as was the case with the Navy A-12, which former Defense Secretary Dick Cheney canceled.

The Air Force, rather than try for modest improvements in its existing penetrating missile went for broke--and got there financially, if not technologically.

By 1988, Aspin, as chairman of the House Armed Services Committee, heard the ACM was in trouble and investigated. He waved the first big, red flag at the Air Force with these words spoken on the House floor April 21, 1988:

'It is a procurement disaster. The ACM is the worst of the programs the committee has looked at. High classification has proved no barrier to bad management.'

But Air Force program managers pressed on, throwing more millions at the technical problems. Its prime contractor, General Dynamics Corp., geared up for production. Costs skyrocketed. The Air Force ACM bank account went dry.

When a Pentagon program runs out of money, 'anti-deficiency' rules require the service to notify the President and Congress. Congress usually will approve a request to raid another account for money if the service submits a reprogramming request.

The Air Force ignored both of those standard procedures and opted for an end run. It canceled existing contracts on the ACM with the idea of covering more than \$100 million in old costs under a new contract. This angered another one of its usual allies, the Senate Armed Service Committee.

'Had new contracts been completed,' the Senate committee scolded in a report, 'the Air Force had had to pay both more profit to the contractor than would have been provided under the original contracts, and more than the ceiling amounts in the original contracts.'

As it turned out, President Bush last year decided that with the end of the Cold War the United States could safely halt production on the ACM and Congress refused to appropriate new money for the missile. So the Air Force still has old ACM bills piling up.

ACM project leaders this year are adding insult to injury.

The Air Force is asking the Senate to approve the promotion of Col. Claude M. Bolton Jr., the project manager on the ACM from Sept. 1, 1989, to Sept. 20, 1992, to brigadier general.

At the same time, the Air Force is stonewalling Sen. Charles E. Grassley as he demands to know the role of Bolton and other officials in what the Pentagon's inspector general views as law-breaking on the ACM procurement.

The Iowa Republican has proved numerous times that he can make life miserable for the Pentagon. He already is armed with the IG's report on how the Air Force broke the rules on the ACM, has put a hold on Bolton's promotion and launched a sweeping General Accounting Office investigation.

All this has not been enough to make the Air Force change course, even though the Senate-Armed Services Committee, given its criticism of ACM management, has no choice but to hold up Bolton's nomination.

Grassley sent a list of questions to the Air Force about the role of Bolton and other officials on the ACM and got back from John W. Beach, the assistant Air Force secretary for financial management a one-paragraph, saying-nothing response.

'Mr. Beach essentially told me to take a hike,' a furious Grassley fumed.

Aspin is hardly in a position to come to the aid of Bolton and the Air Force on the ACM. Not only did Congressman Aspin call the ACM a disaster, but Defense Secretary Aspin during the C-17 Globemaster III cargo plane flap vowed that poor managers would not be promoted.

In short, by refusing to be accountable on how it handled the taxpayers' money on the ACM project, Air Force leaders continue to make a bad situation worse.

It is long past time for Air Force leaders to change course and provide accountability on the ACM and other projects in this new era of hard choices.

As a wise man once said, 'Bad news does not get better with age.'

--

--

### **Exhibit 1**

U.S. Senate,  
*Washington, DC, March 29, 1993.*

Hon. Sam Nunn,  
*Chairman, Committee on Armed Services, U.S. Senate, Washington, DC.*

**Dear Sam:** I am writing to you about the proposed promotion of Colonel Claude Bolton, U.S. Air Force, to the rank of brigadier general.

Colonel Bolton's nomination has been submitted to the Senate and referred to your Committee for confirmation.

Sam, I have good reason to believe that Colonel Bolton may have engaged in either illegal or improper conduct while program manager of the Advanced Cruise Missile (ACM) program. My suspicions are based on information contained in a recent Department of Defense (DOD) Inspector General (IG) report. That report is entitled 'Missile Procurement Appropriations, Air Force,' Audit Report No. 93-053, dated February 12, 1993. A copy is attached for your consideration.

Based on the contents of the IG's report, I respectfully request that Colonel Bolton's promotion not be approved--until I am able to verify whether he bears any responsibility for the misconduct described in that report. I have asked the IG to provide the information that I think I need to make a final decision on this matter.

A brief summary of the contents of the IG's report helps to put my concerns about Colonel Bolton's conduct in better perspective.

I am most disturbed over the revelations outlined in the section on 'Reprocurement of the Advanced Cruise Missile (ACM).' The information presented in this section suggests a total disregard for the laws governing the use of appropriations.

In a nutshell, this is what the IG found:

ACM program is in violation of the Antideficiency Act.

Air Force failed to report and investigate known ACM violation of Antideficiency Act as required by law.

Air Force attempted to 'avoid' or possibly conceal violation by failing to record obligations and

terminating and re-awarding contracts.

Air Force failed to record ACM obligations of \$112.2 million in accounting records for more than two years.

Air Force terminated fixed-price FY 1987 and 1988 ACM contracts for 'government's convenience' and immediately re-awarded contracts to same company, committing government to pay contractor's share of the cost overrun plus additional liabilities.

Inspector General estimates that termination and reprocurement action could cost taxpayers an extra \$79.7 million.

Cost overrun on FY 1987 and 1988 ACM contracts were improperly charged to FY 1992 appropriations--a potential violation of 31 USC 1502.

Sam, the Air Force's handling of the ACM 'reprocurement' was dishonest from beginning to end.

The General Counsel at the General Accounting Office (GAO) has rendered a legal opinion on the central issue addressed in the Inspector General's report--the failure to report and investigate known violations of the Antideficiency Act.

The GAO opinion is embodied in a report entitled 'Analysis of Agency Authority to Pay Overobligations in Expired Accounts and Comments on DOD IG's Proposal to Amend the Antideficiency Act.' The GAO document is dated August 11, 1992, and is identified by the number B-245856.7. It includes a section on 'Current Criminal Penalties for Nondisclosure' of Antideficiency Act violations. A copy is attached.

The failure to report known violations of the Antideficiency Act is a violation of federal criminal law--18 USC 4. The Comptroller General report states: 'the failure to disclose known violations of the Antideficiency Act is a felony and can be the subject of disciplinary action.' With regard to a failure to record 'upward obligation adjustments', the Comptroller General states: 'the knowing and willful failure to record an overobligation in an account to conceal a violation of the antideficiency act would be an offense under existing law.'

Sam, the IG states unequivocally that the ACM program was and is in violation of the Antideficiency Act. Why have responsible Air Force officials failed to report and investigate this matter as required by law?

The Inspector General's report states:

'The Antideficiency Act was violated when the Air Force recognized that the cost to complete the ACM had exceeded amounts available for obligations, but permitted work to continue.'

Sam, exactly when did Colonel Bolton know that incurred obligations against the FY 1987 and 1988 ACM contracts exceeded available funds in the missile procurement accounts for FY 1987 and 1988? On what date did he acquire that knowledge? What steps did he take to report the Antideficiency Act violation to the proper authorities as required by law? Why did he allow work to continue on the contracts once he knew there was insufficient money remaining to pay outstanding bills? Did Colonel Bolton recommend that the ACM cost overrun be handled in more appropriate ways?

I would like to have answers to these questions before I vote on Colonel Bolton's promotion.

1817

Surely, as ACM program manager, he bears some responsibility for what happened to his program.

Your consideration of my request would be appreciated.

Sincerely,

Charles E. Grassley,  
*U.S. Senator.*

U.S. Senate,  
*Washington DC, April 29, 1993.*

Col. **Claude M. Bolton, Jr.**,  
*Commandant, Defense Systems Management College, Fort Belvoir, VA.*

**Dear Colonel Bolton:** I am writing to inquire about your knowledge and awareness of a violation of the Antideficiency Act (31 USC 1341) by the Advanced Cruise Missile program.

I have 7 questions I would like to ask you about a violation of the Antideficiency Act by the Advanced Cruise Missile program during your tenure as program manager. The questions follow:

When did you recognize that the cost to complete the FY 1987 and 1988 ACM contracts exceeded the amounts available in the FY 1987 and 1988 missile procurement appropriations accounts?

When did the dollar value of 'contract work authorized' exceed 'funding authorized' on either contract?

What steps did you take to obtain additional funding?

What actions did you take to report the violation of the Antideficiency Act 'through official channels to the head of the DOD component involved' as required by DOD Directive 7200.1 and statutory law (31 USC 1351)? (Provide a list of persons you contacted)

Why did you allow work to continue on the FY 1987 and 1988 contracts once you realized there was insufficient money available to pay outstanding bills?

Were you aware of the potential for incurring additional costs to the government through cancellation and reprourement of the ACM contracts and to whom did you report that concern?

On March 25, 1992, Secretary Rice approved the ACM reprourement plan to cover the cost overrun on the old contracts with FY 1992 appropriations. At any point, did you recommend that the ACM cost overrun be handled in more appropriate ways?

A written, signed response to these questions is requested by May 7, 1993.

Your cooperation would be appreciated.

Sincerely,

Charles E. Grassley,  
*U.S. Senator.*

Department of the Air Force,  
Washington, DC, May 13, 1993.

Hon. Charles E. Grassley,  
U.S. Senate, Senate Hart Building, Washington, DC.

**Dear Senator Grassley:** Your letters to Colonel Bolton and Mr. Smith, both dated April 29, 1993, have been referred to this office for response. In an effort to ensure that all the facts and relevant decisions on the Advanced Cruise Missile (ACM) program are made known, the Acting Secretary of the Air Force has directed a full review of potential violations of the Anti-Deficiency Act in accordance with the law and implementing regulations. The results of this investigation and any recommendations will be provided to the appropriate officials in the Administration and Congress. The investigation results should provide the information you requested of Colonel Bolton and Mr. Smith.

Sincerely,  
JOHN W. BEACH,

Principal Deputy Assistant Secretary  
of the Air Force (Financial Management).

---

**PROMOTION OF AIR FORCE COL. CLAUDE M. BOLTON, JR. (Senate - July 23, 1993)**

---

[Page: 89355]

Mr. GRASSLEY. Mr. President, I wish to take a few minutes of the Senate's time to clarify my position and express my concerns about the pending promotion of Col. Claude M. Bolton, Jr., to the rank of brigadier general.

I wish to discuss that some more this morning, Mr. President, because I think it is very important to let my colleagues know what I am up to. It is a rather unusual thing when we discuss somebody being promoted from colonel to brigadier general.

My position is this: We should not proceed with Colonel Bolton's promotion until we have all the facts bearing upon his role in the advanced cruise missile, or ACM, procurement disaster. Colonel Bolton was the program manager from September 1989 to September 1992. There are too many unanswered questions and we need more information.

At the end of yesterday's statement, I concluded with this assertion: All the documentary evidence suggests that the ACM program violated the Antideficiency Act, and that Colonel Bolton and other more senior officials further up the chain of command knew this but failed to act on that information in appropriate ways.

Now, Mr. President, what were Mr. Donley, Mr. Beach, and Colonel Bolton supposed to do in order to comply with the law of the land? That is, after all, what public officials are supposed to do. We are all supposed to comply with the law of the land. They should have reported, these individuals should have reported the violation immediately up the chain of command to the Department of Defense Comptroller, and also to the President, as well as to those of us in the Congress.

Under the law, which is 31 U.S.C. 1351, an Antideficiency

Act violation must be reported 'immediately to the President and Congress' along with what are referred to as all relevant facts and a statement of action taken.

That is Federal statutory law. Under Department of Defense directive 7200.1, which establishes procedures for reporting Antideficiency Act violations, Colonel Bolton had a duty as the 'head of the organizational unit' involved, the ACM program office, to 'investigate the circumstances surrounding the violation immediately and report the violation through official channels to the Secretary of the Air Force.'

That is a direct quote from the DOD directive 7200.1. Colonel Bolton was required to file a formal written report. This he never did.

Colonel Bolton, I would ask you, please answer the questions in my letter to you of April 29, 1993. What actions did you take to report the violations up the chain of command as required by Department of Defense regulation and law?

Colonel Bolton, if you attempted to report the violation, please provide a list of persons that you contacted. Was Mr. Beach or any of his subordinates among those persons you contacted? What direction or guidance, if any, were you given regarding the violation?

Perhaps Mr. Beach has good reason to keep Colonel Bolton quiet. Is Mr. Beach trying to silence Colonel Bolton because he knows too much, because he told Mr. Beach about the violation?

Mr. President, I think Mr. Beach needs to be questioned about his knowledge of the ACM Antideficiency Act violation.

Mr. President, I submitted questions to Mr. Beach in a letter dated May 14, 1993, but Mr. Beach also refuses to answer these questions. Mr. Beach's fear of the truth helped to generate another nonanswer from the Air Force. This one came from Maj. Gen. Paul E. Stein, director of legislative liaison. The Air Force is engaged, then, as a result of not answering these questions, in a classic stonewalling operation.

At this point, Mr. President, we do not know what Colonel Bolton did or did not do. But one thing remains crystal clear. The violation was never reported as required by law. Mr. Donley, Mr. Beach, and Colonel Bolton never complied with the law. In fact, they showed contempt for the law.

Mr. President, I wish to discuss issues surrounding the reprourement scheme, which is nothing more than a bureaucratic trick designed to conceal this Antideficiency Act violation. Instead of reporting the violation and requesting a deficiency appropriation, as is provided by law and is quite appropriate for this Congress to respond to when money is short for a program, Colonel Bolton, Mr. Beach, Mr. Donley, and others acted in concert to devise a crooked reprourement scheme to cover up the violation.

The reprourement scheme had one purpose and only one purpose, and that was to generate cash outside the law to get around the Antideficiency Act without coming to Congress. The Air Force should have asked Congress for the money. It is as simple as that.

The Air Force attempted to use contracts to supersede statutory law, to overturn the laws passed by Congress. In the old days, there was a way that the Air Force could simply take care of this, and that would be to go to the M accounts for the money. The M accounts were beyond the purview of Congress. But the M accounts were legal. The M accounts have now been done away with, or they will be done away with very shortly. They are legislatively out of existence, but they are going to be phased out. And that time, I think, is about now to be done with them.

If they had gone to the M account, the problem would have

been solved quickly and quietly and improperly. Those days are over now. The doors to the magic vault are about to slam shut forever. If the Air Force needs money, the Air Force must now request it from Congress.

I hope the ACM reprourement scheme is not a prototype for solving funding shortages in a post-M-account era. If it is, then they are still violating the spirit of our enactment doing away with the M accounts. If it is, then of course the taxpayers in this country are in for a rough ride.

To get the money needed to hide the cost overrun and cover up the Antideficiency Act violation, the Air Force systematically destroyed the ACM program. The Air Force officially launched the reprourement operation in April 1992 by decimating the fiscal year 1992 ACM missile production contract. But the mission had to be aborted in midstream, because then Congress pulled the rug right out from under their plan. Congress unexpectedly rescinded \$344 million in fiscal year 1992 ACM missile procurement money. We did that on June 4, 1992, under Public Law 102-298, just as Air Force officials were about to get their hands on that money.

Congress had appropriated \$522 million to buy 120 more ACM missiles in fiscal year 1992, bringing the total ACM buy to 640 missiles. The rescission reduced the total ACM buy back to that 520 original missiles. Since Congress appropriated \$522 million, why was only \$344 million rescinded? What happened to the remaining \$178 million?

Mr. President, that is what we need answers to.

When Congress denied access to the fiscal 1992 money, the Air Force then turned on the program with a vengeance and terminated fiscal year 1990 and fiscal year 1991 production contracts to get the money. Presumably, they got it this time.

As I understand it, three old contracts were terminated, and these are the words in the law, 'for convenience of the Government,' and then immediately rewarded to the same company but under terms that were most unfavorable to the taxpayers.

The result was predictable and the result was devastating. Missiles were left in pieces on factory floors for scrap. The Air Force claims that the net additional cost of this reprourement scheme was minimal--\$600,000--somehow just to relabel 120 ACM missiles.

That sounds very fishy. It has a very bad odor. In plain language, it stinks, Mr. President. The DOD IG estimated that the additional costs resulting from the fiscal year 1992 contract termination alone would be \$79.7 million. Mr. President, I think the figure will go much higher. The final price tag could be staggering.

A July 2, 1993, Air Force report indicates that the net cost to the taxpayers could be \$483 million, or close to one-half billion dollars. I will have more to say about this next week. But the full impact, in terms of dollars wasted and wasted materiel, has yet to be determined. But the estimates keep climbing.

I asked the GAO, on June 1, 1993, to conduct a full review of the ACM reprourement scheme and to address all of the unresolved issues.

The President GAO's investigation is ongoing. The GAO has promised to provide the needed information by September 1993.

Mr. President, I request unanimous consent to have my letter to the GAO printed in the Record.

There being no objection, the material was ordered to be printed in the **Record**, as follows:

U.S. Senate,  
*Washington, DC, May 14, 1993.*

Mr. **John W. Beach**,

1821

*Principal Deputy Assistant Secretary for Financial Management, Department of the Air Force,  
Pentagon, Washington, DC.*

[Page: 89356]

**Dear Mr. Beach:** I am writing in response to your letter of May 13, 1993, regarding the current disposition of my letters of April 29, 1993, to Mr. E. Ray Smith and Colonel Claude M. Bolton, Jr.

The two above-mentioned letters were directed to Mr. Smith and Colonel Bolton and not to your office. I expect a written, signed response from both officials. Anything short of that is unacceptable.

At the same time, I would like to urge you to proceed with a vigorous and thorough investigation of the Antideficiency Act violation by the Advanced Cruise Missile (ACM) program and fix responsibility as required by law.

Since directing my letter to Mr. Smith, I have come to the realization that his organization falls under the purview of your office. That being the case, I would like to inquire about your knowledge and awareness of a violation of the Antideficiency Act by the ACM program in November 1991 or at any other time.

I have two questions I would like you to answer: At or about the time Mr. Smith signed the attached memoranda, were you aware of any discussion about the need to report a violation of the Antideficiency Act by the ACM program? If so, please provide the names of the persons involved in those discussions or the violation itself, and what direction, if any, was given as a result of those discussions?

A written, signed response to my questions is requested by May 21, 1993.

I would like to remind you that certain financial officers remain pecuniarily liable under the law (31 USC 3528) for illegal or improper payments from accounts entrusted to their care.

I would also like to inform you that during my meeting with Mr. Donley yesterday, he indicated that Colonel Bolton is not solely responsible for the decisions taken to resolve the ACM funding deficiencies in 1991-92. Mr. Donley indicated that there were a number of more senior officials further up the chain of command who bear responsibility for those actions. I asked him to provide that and any other information that might help me reach a final decision in this matter. He agreed to do that.

Your cooperation would be appreciated.

Sincerely,

Charles E. Grassley,  
*U.S. Senator.*

Department of the Air Force,  
*Washington, DC, November 26, 1991.*  
*Memorandum for SAF/FMBMC.*  
*Subject: Request for Approval To Cite Expired Funds--Action Memorandum.*

1822

This office has received the attached request for funding and approval to cite \$71,500,000.00 of FY 87 3020 funds to cover cost overruns associated with the Advanced Cruise Missile program. Based on previous discussions with the 3020 Appropriation Manager, funding of this magnitude is not presently available. However, this requirement needs to be documented and included in the funding strategy discussions being pursued for this and other programs with similar funding problems.

The attached ASD/VCP memo describes the scope and nature of the request for adjustment as well as the information regarding the original contract funding. Please include this action with other unclassified requests for prior year 3020 funding.

E. Ray Smith,

Special Programs Office, Deputy for Budget Management and Execution.

--

Department of the Air Force,  
*Washington, DC, November 26, 1991.*  
*Memorandum for SAF/FMBMC.*  
*Subject: Request for Approval To Cite Expired Funds--Action Memorandum.*

This office has received the attached request for funding and approval to cite \$27,100,000.00 of FY 88 3020 funds to cover cost overruns associated with the Advanced Cruise Missile program. Based on previous discussions with the 3020 Appropriation Manager, funding of this magnitude is not presently available. However, this requirement needs to be documented and included in the funding strategy discussions being pursued for this and other programs with similar funding problems.

The attached ASD/VCP memo describes the scope and nature of the request for adjustment as well as the information regarding the original contract funding. Please include this action with other unclassified requests for prior year 3020 funding.

E. Ray Smith,

Special Programs Office, Deputy for Budget Management and Execution.

--

--

Department of the Air Force,  
*Washington, DC, May 24, 1993.*

Hon. Charles E. Grassley,  
*U.S. Senate, Washington, DC.*

**Dear Senator Grassley:** This correspondence further responds to your letter of 29 April to Colonel Claude M. Bolton Jr. and Mr. E. Ray Smith, and to your 14 May letter to Mr. John W. Beach. As Mr. Beach pointed out in his letter, the Acting Secretary of the Air Force has directed a full review of alleged violations of the Antideficiency Act in the Advanced Cruise Missile program in accordance with the law. As we're sure you will agree, we do not want to jeopardize this ongoing investigation or prejudice its

results. In the interest of achieving a fair and complete investigation, we believe the Antideficiency Act review itself should be the sole fact gathering process.

At the conclusion of the official inquiry, we will ensure that your concerns are addressed and responses are provided to your questions. However, until the investigation is concluded we would respectfully seek agreement that Colonel Bolton and Mr. Smith refrain from answering questions on this subject outside of the investigative process. Allowing the investigation to proceed without outside influence is the best method of ascertaining the facts, while protecting the rights of the individuals involved.

Sincerely,  
PAUL E. STEIN,

Major General, USAF,  
*Director, Legislative Liaison.*

--

U.S. Senate,  
*Washington, DC, June 1, 1993.*

Hon. Charles A. Bowsher,  
*Comptroller General, General Accounting Office, Washington, DC.*

**Dear Mr. Bowsher:** I am writing to request that your report on the Air Force Advanced Cruise Missile (ACM) program, NSIAD-92-154, be updated.

I would like your office to conduct an audit of all ACM production contracts. Was the money spent in accordance with the laws of the land, and what has been provided in return for the money spent? Is all the money accounted for?

In the process of conducting the audit, I would like the following questions answered:

How much money was obligated against each ACM production contract, how much was spent, and how much remains unobligated?

How many ACM missiles were placed on contract, and how many of those missiles are operational, and how many operational missiles are defective?

How much did the decision to terminate FY87, FY88, FY90, and FY91 contracts for 'convenience' of the government cost the taxpayers? Did the Air Force incur contract termination costs, penalties, or other liabilities as a result of these contract actions?

What happened to the work-in-progress and other inventories following termination of the four production contracts (FY87-88 and FY90-91)? How many missiles remain incomplete? How much was scrapped? Did the government receive credit for scrapped materials? Were follow-on contract prices adjusted accordingly?

How much money was actually shifted from three contracts--FY90-92--to cover cost overruns and a shortage of cash on earlier contracts?

Congress provided \$127.1 million in FY93 procurement funds for 'a 450-missile' ACM program. How was that money used? What is the total cost to complete the 450-missile program?

What was the dollar value of the reduction in missile quantities that resulted from these contract actions?

Mr. Bowsher, your last report on the ACM program seemed to express some apprehension or uneasiness about what was unfolding in the ACM program in early 1992. Your report contains this statement in two different places: 'We are concerned about the potential for cost increases, as well as the legal and programmatic issues that may arise from their actions. We plan to continue to review these matters.' (See pages 1 and 5)

Mr. Bowsher, which legal issues were you concerned about? Were any laws violated? If so, which laws were violated, and who was responsible for violating them?

As you proceed with your audit of ACM production contracts, I request that you coordinate your efforts with those of the Inspector General at the Department of Defense. Mr. Vander Schaaf's effort is focusing on the failure of the Air Force to report and investigate a known violation of the Antideficiency Act and not contract actions, so there should be no duplication or overlap between your review and his on ACM issues.

I ask that this work be completed as soon as possible.

Your cooperation would be appreciated.

Sincerely,

Charles E. Grassley,  
*U.S. Senator.*

General Accounting Office,  
*Washington, DC, June 3, 1993.*

Hon. Charles E. Grassley,  
*U.S. Senate.*

[Page: 89357]

**Dear Senator Grassley:** We have received your letter dated June 1, 1993, requesting an update of our report on the Air Force Advanced Cruise Missile (ACM) program, NSIAD 92-154.

We have forwarded your letter to our National Security and International Affairs Division. Staff from that Division will be in touch with Charlie Murphy if they have any questions.

Sincerely yours,

Richard P. Roscoe,  
*Legislative Advisor.*

Mr. GRASSLEY. I yield the floor.

**PROMOTION OF AIR FORCE COL. CLAUDE M. BOLTON, JR. (Senate - July 26, 1993)**

---

{Page : S9406}

Mr. GRASSLEY. Mr. President, last week, I came to the floor on Thursday and Friday to clarify my position and to express concern about the pending promotion of Air Force Col. Claude M. Bolton, Jr., to the rank of brigadier general.

Colonel Bolton was program manager of the advanced cruise missile or ACM from September 1989 to September 1992.

Mr. President, the ACM Program has come to a disastrous end, and we need to know who should be held accountable for what happened.

The DOD IG charges that the ACM Program violated the Antideficiency Act while Colonel Bolton was in charge.

The Armed Services Committees and the GAO have uncovered gross mismanagement in the program during Colonel Bolton's tenure as program manager.

We need to assemble all the facts and evaluate all the evidence before making a final decision on Colonel Bolton's promotion.

Mr. President, I would now like to resume my discussion of the ACM reprourement scheme.

Mr. President, I would like to briefly review the facts bearing on the reprourement scheme.

'In July 1991,' according to the DOD IG, 'program officials determined that the cost of the fiscal year 1987 and 1988 ACM contracts would exceed budgeted targets and would approach or exceed ceiling costs.'

The Air Force had two big problems. First, the Air Force had only enough money to cover the target price in the contract, and no more.

Second, the Air Force was locked into a fixed-price contract with the contractor--General Dynamics/Convair. Under the contract, the Air Force paid 100 percent of all costs to the target price.

If costs exceeded the target price, then the Air Force paid 70 percent of those costs and the contractor paid 30 percent. The contractor was liable for all costs over the ceiling price.

How did the Air Force solve the problem?

The Air Force tore up those contracts for the convenience of the Government and instantaneously rewarded new ones to the same company, using money previously authorized and appropriated to buy other ACM missiles.

The terms and conditions in the new contracts were not favorable to the Government.

Mr. President, this was the essence of the reprocurement scheme, and the Senate Armed Services Committee took a dim view of it.

The committee's critical assessment of the ACM Program appears on pages 55 to 57 of the report on the fiscal year 1993 Defense authorization bill (Rept. No. 102-352).

The Senate Armed Services Committee's appraisal of the reprocurement scheme is very honest but damaging.

The committee is distressed by what has happened to the ACM Program. While the committee never mentions Colonel Bolton by name, the mismanagement described in the report clearly occurred on his watch.

The Senate Armed Services Committee said 'the Air Force both gave up its negotiated ceiling cost cap and jeopardized the warranties on partially completed ACM's.'

The Senate Armed Services Committee said: 'had new contracts been completed, the Air Force would have had to pay both more profit to the contractor than would have been provided under the original contracts, and more than the ceiling amounts in the original contracts.'

Mr. President, we do not yet know how all this finally played out, but it does not sound like a very good deal to me.

Listen to this. Here is some more from the Senate Armed Services Committee report.

This is the Senate Armed Services Committee talking: 'the Air Force has dug itself a deep hole on the ACM program, and the committee does not intend to extricate the Air Force from its current predicament.'

The committee expressed fear that the program would 'end in expensive and wasteful disarray.'

Those same concerns were echoed in last year's conference report on the Defense authorization bill--on page 538 of House Report No. 102-966--where ACM got another thumbs down appraisal.

The conferees expressed frustration and concern about the possibility of 'repetitions of the ACM fiasco' in the future? Those are the conferees, exact words: 'Repetitions of the ACM fiasco.' That is how the conferees saw the ACM Program. It was a fiasco. A fiasco is a complete failure.

Those are strong words for the Armed Services Committees.

Even though the conference looked down on ACM as a fiasco, they were generous with the money.

The conference gave the Air Force another \$127.1 million in fiscal year 1993 money 'to deliver 450 operational ACM missiles to the using command.'

I am puzzled by that move.

Why would Congress provide another \$127.1 million to buy 450 ACM's when Congress had already authorized and appropriated enough money to buy 520 ACM missiles?

Guess what?

The taxpayers should be happy to hear this. They better grab their wallets.

The Air Force now wants another \$482.9 million, one-half a billion dollars, to complete those 520 ACM missiles.

The extra one-half billion dollars is needed to finish the last 60 ACM missiles that are lying in pieces--abandoned--on a factory floor in San Diego, CA.

Those 60 ACM's are lying in pieces on the factory floor because the Air Force ripped the program apart to get some money.

The 60 missiles, which may never be delivered, are from the fiscal year 1990 and 1991 contracts. Those contracts were torn apart by Air Force officials to finish 120 missiles from the fiscal year 1987 and 1988 contracts.

Is this how the Air Force will raise money in the post-M account era.

They should have asked Congress for the money, but they did not. Instead, they chose to raise the money outside of the law. To do that, they had to rip the ACM Program apart.

Mr. President, we already paid for those 60 missiles. How many times over do we have to pay for those missiles?

The reprourement scheme was not only very destructive and wasteful, it was also illegal.

It violated another very basic rule to control the use of public money.

It violated section 1502 of title 31 of the United States Code.

Section 1502 is the companion piece to the Antideficiency Act. The two statutes work together to ensure that agencies maintain fiscal discipline and stay within funding limits set by Congress.

The Antideficiency Act and section 1502 are supposed to provide leak-proof control financial control.

If you run out of money as Colonel Bolton did then you come back to Congress with hat in hand and request legislative relief.

There is no escape clause.

You cannot draw on appropriations provided for other purposes and fiscal years to bail yourself out of trouble.

Once again the Air Force tried to use contracts to overturn the law of the land.

The Air Force attempted to make an end-run around Congress.

A distorted interpretation of section 1502 was the philosophical underpinning for the reprourement scheme.

The Air Force attempted to launder old bills and old work through the reprourement scheme to make them look new.

Well, the deception failed.

The nature of the underlying work never changed: man-hours and money were needed to complete work-in-progress--120 unfinished missiles from the fiscal year 1987 and 1988 contracts. That is old work.

No matter how you slice it, Mr. President, new money was used for old work.

Mr. President, why would the Air Force need to spend \$600,000 to relabel 120 fiscal year 1987 and 1988 ACM's?

I will tell you why.

Air Force officials spent \$600,000 to make old missiles look like new missiles, like cosmetic surgery.

They had to make the year of manufacture match up with the money.

If this was indeed new work, there would have been no need to relabel. There would have been nothing to relabel.

Mr. President, the relabeling of the ACM missiles reeks of fraud.

Section 1502 specifies that appropriations can be used only to cover obligations properly incurred during their period of availability.

The reprourement scheme, which was cooked up by Mr. Donely and Mr. Beach and carried out by Colonel Bolton, initially used fiscal year 1992 but eventually 1990 and 1991 money to cover obligations incurred in fiscal year 1987 and 1988--a clearcut violation of section 1502.

I have documents that show the Air Force officials knew they had to use fiscal year 1987 and 1988 funds to cover the ACM cost overrun. They knew it was wrong to use other moneys for that purpose.

DOD Comptroller O'Keefe disapproved the reprourement scheme on March 31, 1992, because it was illegal.

But the Air Force went ahead and did it anyway.

Mr. President, I ask unanimous consent to have three documents printed in the **Record**: First, Mr. O'Keefe's March 31, 1992, memo to Mr. Donley; and second, two Air Force documents, dated October 1991, that show Air Force official knew that they had to use fiscal year 1987 and 1988 money to fund

the ACM cost overrun.

There being no objection, the documents were ordered to be printed in the **Record**, as follows:  
COMPTROLLER OF THE

Department of Defense,  
Washington, DC, March 31, 1992.

[Page: S9407]

*Memorandum: For the Assistant Secretary of the Air Force (Financial Management and Comptroller).  
Subject: Advanced Cruise Missile Program Funding.*

It is evident from your memorandum of March 27, 1992, that you have not been kept informed of the ongoing staff level discussions relative to the appropriate use of prior and current year funds. In these discussions it has been clear that prior year contract adjustments to cover target to ceiling cost adjustments are chargeable only to the fiscal year appropriation of the contract.

Your staff has been asked on several occasions, to develop a paper supporting the position that the FY 1992 ACM program funds could be appropriately charged to cover the cost of the prior year programs. Until such time as a legal determination, based on the facts peculiar to this program, is approved by Counsel, you should not proceed to charge current year funds as proposed.  
*Sean O'Keefe.*

DEPARTMENT OF THE AIR FORCE, HEADQUARTERS AERONAUTICAL SYSTEMS DIVISION  
(AFSC), WRIGHT-PATTERSON AIR FORCE BASE, OH,  
October 30, 1991.

*Subject: Request for Expired Appropriations for Contract Overrun (FY88, Appn: 3020).  
To SAF/FMBMB.*

1. Request you provide Budget Authorization to fund a contract requirement. The following information provides the specifics concerning this request:

a. Amount Requested: \$27,100,000 (FY88, Appn: 3020).

b. Date funds are needed, lead time away from obligation date, necessary to get contractual documents processed: May 1992.

c. Date approval is needed to preclude penalties from accruing: The contractor states current funding will cover work through June 1992. Any work performed thereafter will be unbillable due to insufficient funding on the contract.

d. Amounts, nature, and dates of penalties that would accrue: Unknown.

e. Accounting Classification: 5783020 158 6045 20CLPG 010100 00000 659900 F59900.

- f. Contract Number: F33657-88-C-0103.
  - g. Name of Contractor: General Dynamics, Convair Division.
  - h. Type of Contract: FPIF (70/30 percent overrun share).
  - i. Contract Purpose: Production of Advanced Cruise Missiles (AGM-129A) in the FY88 procurement contract.
  - j. Date of the original contract: 30 January 1990.
  - k. Contract change certification: This requirement is not for a contract change.
  - l. Amount of FY88 funds previously deobligated from the contract: None.
  - m. Within scope certification: This requirement is within the scope of the original contract.
  - n. Purpose of adjustment: To fund the Air Force share of over-target costs on this production contract. The latest estimate-to-complete conducted by the ACM Program Office in September 1991 indicates that the final contract price will be at contract ceiling price. The DCAA will provide an audit report concerning the contractor's overrun proposals. This report is due to the Program Office approximately 4 November 1991.
  - o. Justification for using the expired appropriation: Appropriations used to fund cost increases are the same as used to fund the original effort (i.e., FY88/3020) per DoD Directive 7200.4, Full Funding of DoD Procurement Programs, implemented by AFR 172-14. Cost overrun is attributable to: (1) unplanned efforts associated with the investigation, redesign, and replacement of missile components failing to meet required specifications or quality standards; and, (2) factory shutdown and restart impacts related to suspension of missile delivery.
  - p. Amount originally obligated for the contract: \$133,603,000 (excludes \$98,130,000, FY87 Advance Buy funds obligated for this purchase).
  - q. Program name: Advanced Cruise Missile (AGM-129).
  - r. Cumulative amount of restorations approved for program: None known at field level (i.e., ASD/VC). Appropriation records kept at SAF/FMBM.
  - s. Total amount obligated from FY88 for the program: Appn: 3020; BPAC: Multiple; Amount: \$144,294,950.
  - t. Amount previously deobligated from FY88 for the program: None.
  - u. Source of deobligations: None known. Financial and contracting personnel in the ACM Program Office are auditing contractual and accounting records for this contract to reconcile with those of the contractor. Any excess obligations will be reapplied to fund this overrun.
2. My point of contact for this matter is Mr. David C. Engwall, ASD/VCPB, AV:785-7879.  
MARK V. DAVIDSON,

Director of Program Control,  
Advanced Cruise Missile SPC.

--

DEPARTMENT OF THE AIR FORCE, HEADQUARTERS AERONAUTICAL SYSTEMS DIVISION  
(AFSC), WRIGHT-PATTERSON AIR FORCE BASE, OH

October 28, 1991.

Request for Expired Appropriations for Contract Overrun (FY87, Appn: 3020).

To: SAF/FMBMB.

1. Request you provide Budget Authorization to fund a contract requirement. The following information provides the specifics concerning this request:
  - a. Amount Requested: \$71,500,000 (FY87, Appn: 3020).
  - b. Date funds are needed, lead time away from obligation date, necessary to get contractual documents processed: 16 December 1991.
  - c. Date approval is needed to preclude penalties from accruing: The contractor states current funding will cover work through December 1991. Any work performed thereafter will be unbillable due to insufficient funding on the contract.
  - d. Amounts, nature, and dates of penalties that would accrue: Unknown.
  - e. Accounting Classification: 5773020 157 6045 20CLPG 0012 659900.
  - f. Contract Number: F33657-88-C-0103.
  - g. Name of Contractor: General Dynamics, Convair Division.
  - h. Type of Contract: FPIF (70/30 percent overrun share).
  - i. Contract Purpose: Production of Advanced Cruise Missiles (AGM-129A) in the FY87 procurement contract.
  - j. Date of the original contract: 25 September 1989.
  - k. Contract change certification: This requirement is not for a contract change.
  - l. Amount of FY87 funds previously deobligated from the contract: None.
  - m. Within scope certification. This requirement is within the scope of the original contract.
  - n. Purpose of adjustment: To fund the Air Force share of over-target costs on this production contract. The latest estimate-to-complete conducted by the ACM Program Office in September 1991 indicates that the final contract price will be at contract ceiling price. The DCAA will provide an audit report concerning the contractor's overrun proposals. This report is due to the Program Office approximately 4

November 1991.

o. Justification for using the expired appropriation: Appropriations used to fund cost increases are the same as used to fund the effort (i.e., FY87/3020) per DoD Directive 7200.4, Full Funding of DoD Procurement Programs, implemented by AFR 172-14. Cost overrun is attributable to: (1) unplanned efforts associated with the investigation, redesign, and replacement of missile components failing to meet required specifications or quality standards; and, (2) factory shutdown and restart impacts related to suspension of missile delivery. The attached explanation of the overrun chronology is for your information.

p. Amount originally obligated for the contract: \$537,200,000 (9/25/89).

q. Program name: Advanced Cruise Missile (AGM-129).

r. Cumulative amount of restorations approved for program: \$2,524,950 was returned to the program via Amendment 11, OA-760-027, on 6 March 91. \$3,236,000 was issued via Budget Authorization #35, issued 30 September 1991. These additions were provided for payment of Award Fee liabilities.

s. Total amount obligated from FY87 for the program: Appn: 3020; BPAC: Multiple; Amount: \$555,600,000.

t. Amount previously deobligated from FY87 for the program: None.

u. Source of deobligations: None known. Financial and contracting personnel in the ACM Program Office are auditing contractual and accounting records for this contract to reconcile with those of the contractor. Any excess obligations will be reapplied to fund this overrun.

[Page : S9408]

MARK V. DAVIDSON,

Director of Program Control,  
*Advanced Cruise Missile SPC.*

Mr. GRASSLEY. I yield the floor. I believe, Mr. President, that there is no quorum present, so I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BROWN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

---

**PROMOTION OF AIR FORCE COL. CLAUDE M. BOLTON, JR. (Senate - July 29, 1993)**

---

[Page: S9775]

Mr. GRASSLEY. Mr. President, I have come to the Senate floor four times in the last week to express my concern about the pending promotion of Air Force Colonel Claude M. Bolton, Jr., to the rank of brigadier general.

Colonel Bolton was program manager of the advanced cruise missile, or the ACM, as we call it, from September 1989 to September 1992. The ACM has come to a disastrous end. So it is not really before us as an instrument, but we do need to be concerned about holding people accountable for what happened in this disastrous program. We should not proceed with Colonel Bolton's promotion until we have a firm grasp of all the facts bearing on unresolved issues with the ACM. There are simply too many unanswered questions at this juncture.

We need to know and we need to understand what these questions are and what happened to this program. At this point all we have is a barebones outline of what took place. We have no more than a thumbnail sketch.

We can see the results of the reprourement scheme. Those results are these, Mr. President: That we have 60 ACM missiles that were left for scrap, abandoned on the factory floor in San Diego, CA. It is going to cost one-half billion dollars to finish those 60 ACM missiles, missiles that were authorized and appropriated by Congress. In other words, it is like paying for them twice, or more.

These are missiles that the Congress and the taxpayers have, as I said, already paid for.

Why did the Air Force waste \$500 million to cover up the Antideficiency Act violation? That is an old law on the books to protect the taxpayers. This \$500 million mistake defies reason, and it defies understanding. All the Air Force had to do was report the violation and come to Congress for relief. There would be no potential for demotion, there would be no potential for going to jail, just come to Congress and explain it to us. Need more money, get more money. Do not play games.

There may be more to the ACM story, though, than we know. We need to keep digging, we need the Department of Defense, inspector general, and the GAO to fill in the blanks.

Mr. President, what is the bottom line of the ACM reprourement scheme?

First, there has been gross mismanagement in the ACM Program.

Huge sums of money have been wasted. Vital military materiel has been left for scrap.

Second, there has been patent disregard for the spirit and the letter of the law, and, I think, even

contempt for the law.

The Air Force, it seems, has tried to use contracts to overturn and circumvent the law of the land.

I also believe that senior Air Force officials have attempted to cover up violations of law with the deceptive and dishonest reprocurement scheme.

Senior Air Force officials did not want to report a known violation of the Antideficiency Act. They tried to avoid it--even if it cost the taxpayers \$500 million.

Those who 'knowingly and willfully' violate the Antideficiency Act--section 1341 of title 31 of the United States Code--can be fined and sent to jail.

They may be suspended from duty without pay or removed from office.

A violation of the Antideficiency Act is a class E felony. That is serious.

Though rarely, if ever enforced to the point of imprisonment, many a fine career has been ruined by such transgressions.

Government officials, who manage public money, still have to worry about getting caught violating the Antideficiency Act.

The Comptroller General has rendered an important legal opinion on the central issue in the ACM procurement disaster--the consequences of failing to report a violation of the Antideficiency Act.

In a document dated August 11, 1992, and identified by the numbers B-245856.7, the Comptroller General answered the question:

[Page: 89776]

The failure to disclose known violations of the Antideficiency Act is a felony and can be the object of disciplinary actions.

Under section 4 of title 18 of the United States Code, the failure to report a known violation of the Antideficiency Act can bring a \$500 fine or up to 3 years in jail.

The Comptroller General goes on to say this:

The knowing and willful failure to record an obligation in an account in order to conceal a violation of the Antideficiency Act would be an offense under existing law.

Mr. President, I fear that Mr. Donley, Mr. Beach, and Colonel Bolton and others may have acted in concert to conceal a violation of the Antideficiency Act by:

First, failing to record an overobligation in the books; and, second, by attempting to conceal it through the reprocurement scheme.

The DOD IG charges that the ACM program violated the Antideficiency Act while Colonel Bolton was in charge.

The DOD IG says the law 'was violated when the Air Force recognized that the cost to complete the ACM had exceeded amounts available for obligations.'

The DOD IG also says that 'program officials' knew in July 1991 that critical funding limits were breached.

Colonel Bolton was ACM Program manager in July 1991.

Surely, Colonel Bolton knew that he had \$100 million in bills from the contractor--General Dynamics/Convair. But no money to pay them.

How could you, if you were a program manager, not know if you were \$100 million short?

He must have known he was \$100 million short and in serious trouble.

Mr. President, as I have said before, we cannot proceed on mere assumptions. Colonel Bolton's career is at stake. We must verify every shred of evidence.

All allegations must be addressed and resolved in an appropriate way.

Mr. President, at this point in our inquiry, we do not have all the facts.

We need more information before we can resolve all the issues surrounding Colonel Bolton's promotion.

The DOD IG, the GAO, and the Air Force need to complete their investigations.

We still need the following:

First, the Air Force should complete its investigation of the Antideficiency Act violation in a timely way and fix responsibility where it belongs--all the way up to the Secretary of the Air Force--if necessary.

Second, the DOD IG should follow through on its recommendations and ensure that the Air Force investigation is thorough and that responsible officials are held accountable.

Third, the GAO should determine the total cost--in terms of dollars and materiel wasted--of the procurement scheme.

I would like to know if Colonel Bolton is in any way responsible for misuse or waste of precious ACM program resources, beside the fact that a program manager should know if a program comes up \$100 million short.

Mr. President, with this information in hand, I will be in a position to make a reasoned judgment about Colonel Bolton's promotion.

Those responsible for such abuses must be held accountable and above all must never be rewarded with promotions.

A good dose of accountability here will take us a long way down the road to acquisition reform. Acquisition reform without accountability is a nonstarter.

Promoting somebody that is responsible for the waste of \$100 billion of the taxpayers' money is not a way to encourage careful use of the taxpayers money.

Mr. President, before concluding my statement today, I would like to talk briefly about the importance of the Antideficiency Act.

I know some of my colleagues are wondering why the Senator from Iowa is so upset about a violation of the Antideficiency Act.

Well, I am upset, and I will tell you why.

Any representative of the taxpayers should be upset when this kind of money is being wasted.

The Antideficiency Act is a very important control mechanism governing the use of public money. It was enacted nearly 100 years ago.

It is broad and general, and it constitutes one of the few controls that has teeth.

Sadly, recent audit reports emanating from the GAO and the office of the DOD IG suggest that this law is being violated with impunity.

Nobody seems to care. Nothing is being done about it.

Mr. President, when the Antideficiency Act is violated, it means the agency involved is conducting unauthorized business.

It means legal spending limits set by Congress have been exceeded.

In the case of the ACM, obligations exceeded amounts available for obligation in the appropriations accounts.

The Air Force had bills to pay, but no money to pay them.

Instead of coming to Congress for relief, the Air Force used money provided by Congress for other purposes. The Air Force misappropriated that money. That money was not used for the purposes for which it was appropriated.

Mr. President, controlling the purse strings is one of Congress' most sacred constitutional responsibilities.

The public's money must never be taken from the Treasury without proper authorization from Congress.

Well, Mr. President, when we have a violation of the Antideficiency Act, money is being used for unauthorized purposes. Money has been taken from the Treasury without the approval of Congress.

Access to the Treasury must be carefully guarded by Congress.

We must find a way to enforce the Antideficiency Act. Without it, there will be no discipline and integrity in the management of the public's money.

Comptroller General Bowsher and agency inspector generals, like Mr. Derek Vander Schaaf at DOD, have auditors poring over the Government's books every day. They know that those books are in total disarray and that congressional spending limits are exceeded with disgraceful regularity. The abuse must stop. They need to speak out forcefully. I hope they are not afraid to do this.

We cannot ask the people of this country to pay higher taxes and at the same time tell them that we do not know how the money was used, that we are unable to control its use or to provide an accurate accounting of how it was spent.

That would be a denial of our responsibility as representatives of the taxpayers, watching how the taxpayers' money is spent.

How long will the people of this country tolerate that kind of behavior on the part of their governmental leaders?

I yield the floor.

I notice other Senators here so I will not suggest the absence of a quorum.

General BOLTON. Thank you, Senator.

Senator WARNER. These records sometimes are examined by others and in the years to come someone might make reference to it. This is a matter which you and I discussed in our meeting together, and I think the record should reflect the findings of the committee on this issue.

General BOLTON. Thank you very much.

Senator WARNER. I just wanted to share a few thoughts with you philosophically. Senator Levin and I had the real privilege of visiting with our troops during the course of Thanksgiving in the AOR about Afghanistan. We are coming up on December 7 soon, and I am old enough to remember a good deal of that period. There is a story I think may be partially true that within a week after Pearl Harbor the Army Chief of Staff ordered 20,000 horses and 10,000 mules to gear up for the next conflict. There may be some truth in it, because the cavalry really dominated the Army in those days in terms of promotions and one thing and another.

As we visited over there, I looked at these special operations teams going in and we met with them. You could not tell, of course, from the uniforms what their mission was or what their specialties might be. They were dressed in a certain appropriate way for the operations they were about to perform. I cannot talk about it in open session, but what I observed was all the services coming together, one officer and a dozen sergeants. They just have performed magnificently. I think some in the Army still may linger on the dream of every West Point graduate and others, that some day they will be a corps commander, and will have a command post. They envision a battle with two divisions up and one division in reserve, and all of that history.

I do not think this Nation and the world is going to revisit those chapters of military history, but our future configuration of the Armed Forces have to move in the direction of the extraordinary heroism and ingenuity and technology that is being employed at this very minute in that AOR.

Now, I would hope, since you are going to, I am certain, be confirmed by the Senate, that you will push the technology that our distinguished chairwoman of the Emerging Threats and Capabili-

ties Subcommittee just alluded to, and grapple with that mentality which still lingers in the Department of the Army, and try and move them more and more, and help those in the Army.

Try and move them into more and more innovation and away from the concept of having so many divisions. They have to move toward the direction of where these young Army officers and sergeants are performing brilliantly in this conflict today.

General BOLTON. Yes, sir.

Senator WARNER. They have to rely less and less on the concept of two up and one back in every fight to come, and the ability to coordinate with the air and the sea elements, all pulling together in this particular conflict.

General BOLTON. Absolutely.

Senator WARNER. You are a man of vision, and this cross-pollenization of the Secretary of Defense and others that are putting the Army with the Navy and the Navy with the Army, I thought was somewhat unusual in the beginning, but I am beginning to think it is a darned good idea, so go for it.

General BOLTON. Yes, sir, I will. Thank you.

Senator WARNER. Just think, a fighter pilot amidst all of those men who spent their lives, most of them, running around knee deep in the mud or snow somewhere. Good luck to you.

General BOLTON. Thank you, sir.

Senator WARNER. Thank you, and thank you for the support that your family is giving you as you undertake another great challenging chapter in your distinguished career.

General BOLTON. Thank you, Senator Warner, I appreciate that.

Senator WARNER. The questions that I put in the record, just go ahead and drop me the answers as soon as you can.

Thank you, Mr. Chairman.

General BOLTON. Thank you.

Chairman LEVIN. Senator Warner, when you started off recounting that story about horses and mules, I thought you were going to lead to the point we could have used some of those horses in Afghanistan. [Laughter.]

Senator WARNER. You are absolutely right.

Chairman LEVIN. That is where I thought you were going with that, you were going to ask whether he had any experience in the acquisition of horses.

General BOLTON. No, sir, not in the Air Force.

Chairman LEVIN. That is part of the ingenuity that Senator Warner was talking about, though, that those special forces, some of them learning how to ride, literally, on the job, learning how to ride.

Senator WARNER. We have to share a story—I have forgotten whether it was you or Judy, but someone asked the question: how many of you have had any experience riding? They all had taken a crash course, and one sergeant stood up and he really had a scar laid right down across his forehead. He said, yeah, this is testimony that I know how to ride now, but I did not know how a month or so ago.

Chairman LEVIN. Calling in air strikes from horseback is not in any manual I know about at any rate.

Senator Ben Nelson is next.

Senator BEN NELSON. Well, thank you, Mr. Chairman. I always enjoy welcoming nominees to the Armed Services Committee, but particularly when they are graduates from the University of Nebraska.

General BOLTON. Yes, sir.

Senator BEN NELSON. I understand your wife, Linda, is from Alma, which is near my hometown on the Republican River in Harlan County. I would like to extend my welcome to both of you and your family for being here.

General BOLTON. Thank you, Senator.

Senator BEN NELSON. As a distinguished graduate of the Air Force ROTC program at the University of Nebraska, I know that you received an excellent education and a good start in the Air Force, and you have been able to take that good start and have a very strong career in the Air Force. As I was looking over your resume in anticipation of this hearing this morning, there was just one question that I have that I think you might be able to help us with, and that is in the area of science and engineering.

As an electrical engineer, I think you not only have the experience that it takes in this field, but you may have some serious thoughts about what we can do to solve one of the problems. I notice that you mentioned that one of the challenges which the Army faces is, in your words, impending loss through retirement of a significant percentage of resident expertise and corporate knowledge in the science and engineering workforce, and the shortage of younger S&Es to whom this experience would normally be transferred through training and monitoring.

I wonder if you can address this challenge, and also what impact, if any, this could have on the Army's goal of the transformation, especially of Future Combat Systems, as you take on your new duties.

General BOLTON. Well, Senator, if I could answer those maybe in reverse. First of all, the impact of not having these people. It has been my observation over the years that the reason the United States is a great country, the greatest democracy, the greatest economy, the greatest military, has absolutely nothing to do with what I call natural laws. It has everything to do with people, people who have vision, energies, abilities, capabilities, bringing those together to reach those visions. In our military, that has certainly been the case. The reason we are as good as we are is because of the people who had the ideas, who could write requirements, who could transform those into technology challenges, and then meet those challenges, put those into weapons systems, field those weapons systems, and sustain those weapons systems.

Now we are going to lose those people. I am told—and this is not only true for the Army, it is true for the Air Force, and I presume it is true for the other services—in the civilian workforce we could lose as many as 50 percent between now and the year 2005 or 2006. I am told the Army has a number of programs. If confirmed, I am going to look at those programs, personnel and recruitment programs, to see how we go about enticing people to come in to replace those who are leaving, how to keep the workforce that we have, and how to shape that workforce.

That is going to require a lot of energy on the part of the Army leadership, as well as working with members of Congress and certainly this committee to make that happen. But I see that as a short-term solution, short-term being 5, 6, maybe as long as 10 years.

The longer-term is, how do you do the things that need to be done, but with fewer people? We do not know how to do that yet, but we are going to have to figure that out 10 or 15 years from now, because the pool we are drawing from is the same talented pool that industry is drawing from, and particularly the commercial sector. So they, too, are trying to figure out how to do it with fewer people. We need to do the same thing.

But in the interim, I do not see how we can do that. We simply have to work through the personnel programs and make that work for us.

Senator BEN NELSON. We have to be competitive, is what I hear you saying, and innovative as circumstances change.

General BOLTON. Yes, Senator.

Senator BEN NELSON. I appreciate very much what your commitment will be to that endeavor, and I am very encouraged by someone of your caliber being nominated for this position. I look forward to your serving in the role. Thank you very much.

General BOLTON. Thank you.

Chairman LEVIN. Senator Nelson, thank you.

Senator Smith.

Senator SMITH. No questions, Mr. Chairman.

Chairman LEVIN. Thank you, Senator Smith. I just have a few additional questions. Senator Inhofe made reference to the interim armored vehicle, the IAV. I have a couple of questions relative to what has been decided on that, which is to do a low-rate initial production (LRIP) of that vehicle, but about 50 percent of all the vehicles to be built would be included in that low-rate initial production, which is not really low-rate.

My question is, do you have any concerns about such a large initial production of the IAV? I also would ask relative to the testing of the IAV, the initial production will not be subject to the initial operational test and evaluation until after three of the interim brigade combat teams are fielded, and I am wondering if you see risks in that, and if so, how we could mitigate those risks.

General BOLTON. Senator, obviously I do not know all the details on that. There are risks involved. If confirmed, I intend to understand the full details of what the risks are and how well our risk management program is addressing mitigating those risks.

There are always a number of reasons why we want to increase the quantities under LRIP. I am not familiar with the Army's rationale yet, so I cannot tell you whether or not that is a good rationale, but I can assure you that, if confirmed, we will look at the details. We will figure out whether or not we have the adequate testing, the information, the data to convince you and other members, as well as ourselves, whether or not it is a wise thing to do, whether this version of the acquisition strategy for that vehicle is the wise thing to do.

Chairman LEVIN. When you become familiar with those issues which I have just identified, would you get us a report or a letter to this committee about that subject?

General BOLTON. Yes, Mr. Chairman, I will.

Chairman LEVIN. After you are familiar with it. Even with a transformation effort, the Army is going to continue to require a heavy counterattack corps, including combat support vehicles such as the Grizzly, the obstacle breacher, the Hercules, the recovery vehicle, and the Wolverine heavy assault bridge. All those programs historically have been underfunded, subject to cancellations, and frequent changes that have undermined those programs. Will you take a good look, a hard look at each of those programs and report back to us on how you intend to address the problems that I have just identified, the funding permutations, cancellations, and restarts in those three programs?

General BOLTON. Mr. Chairman, if confirmed I will, indeed.

Chairman LEVIN. OK, thank you.

I think Senator Bunning is next. Senator Bunning.

Senator BUNNING. I have no more questions.

Chairman LEVIN. Thank you.

Senator Landrieu, any more questions? Senator Smith? Senator Nelson?

Senator BEN NELSON. No more, thank you.

Chairman LEVIN. OK. I think we are all set. Thank you again for your service. Congratulations on your appointment. Thanks to your family for their support, and we hope that we can get this to the floor very quickly.

General BOLTON. Mr. Chairman, thank you again, and to each and every one of you, the best of the season's greetings from the Bolton family.

Chairman LEVIN. Thank you.

General BOLTON. Thank you, sir.

Chairman LEVIN. I remind colleagues and staff, we are going immediately into executive session.

[Whereupon, at 10:32 a.m., the committee adjourned.]

[Prepared questions submitted to Maj. Gen. Claude M. Bolton, Jr., by Chairman Levin prior to the hearing with answers supplied follow:]

*November 29, 2001.*

Honorable CARL LEVIN, *Chairman,*  
*Committee on Armed Services,*  
*United States Senate,*  
*Washington, DC.*

DEAR MR. CHAIRMAN: I respectfully forward for your consideration my responses to the advance policy questions put to me by the committee. I look forward to appearing before you when the committee considers my nomination to be Assistant Secretary of the Army for Acquisition, Logistics, and Technology.

Sincerely,

MAJ. GEN. CLAUDE M. BOLTON, JR.

Copy furnished:  
Honorable John Warner,  
*Ranking Member.*

## QUESTIONS AND RESPONSES

## DEFENSE REFORMS

*Question.* Almost 15 years have passed since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 and the special operations reforms.

Do you support full implementation of these defense reforms?

*Answer.* Yes, I fully support the Department of Defense Reorganization Act of 1986 and related special operations initiatives for defense reform.

*Question.* What is your view of the extent to which these defense reforms have been implemented?

*Answer.* From what I have learned to date, these defense reforms have been implemented and have achieved the desired results. Having said that, I believe it is important, and consistent with the intent of the reform legislation, that the Army continues to assess and modify its operations and internal procedures to meet the challenges of a dynamic security environment.

*Question.* What do you consider to be the most important aspects of these defense reforms?

*Answer.* The most important aspects of these reforms were strengthening civilian control; streamlining the operational chain of command, improving the efficiency in the use of defense resources, improving the military advice provided to the National Command Authorities, clarifying authority for combatant commanders, and enhancing the effectiveness of military operations.

*Question.* The goals of Congress in enacting these defense reforms, as reflected in section 3 of the Goldwater-Nichols Department of Defense Reorganization Act, can be summarized as strengthening civilian control; improving military advice; placing clear responsibility on the combatant commanders for the accomplishment of their missions; ensuring the authority of the combatant commanders is commensurate with their responsibility; increasing attention to the formulation of strategy and to contingency planning; providing for more efficient use of defense resources; and enhancing the effectiveness of military operations and improving the management and administration of the Department of Defense.

Do you agree with these goals?

*Answer.* I fully support the congressional goals reflected in the Department of Defense Reorganization Act of 1986 and other related defense reform legislation.

*Question.* Recently, there have been articles that indicate an interest within the Department of Defense in modifying Goldwater-Nichols in light of the changing environment and possible revisions to the National strategy.

Do you anticipate that legislative proposals to amend Goldwater-Nichols may be appropriate? If so, what areas do you believe it might be appropriate to address in these proposals?

*Answer.* I am not aware of any current proposals to amend Goldwater-Nichols. It is too early for me to comment without additional evaluation and insight to address any proposals.

## DUTIES

*Question.* What is your understanding of the duties and functions of the Assistant Secretary of the Army for Acquisition, Logistics and Technology?

*Answer.* The Assistant Secretary of the Army for Acquisition, Logistics, and Technology's (ASA(ALT)) primary duties are to ensure the Army's soldiers are provided with the most capable and sustainable equipment and to wisely shepherd all available resources to provide that capability in the most cost effective manner. The ASA(ALT) serves, when delegated, as the Army Acquisition Executive, the Senior Procurement Executive, the Science Advisor to the Secretary, and as the senior research and development official for the Department of the Army. The ASA(ALT) also has the principal responsibility for all Department of the Army matters related to logistics. In these capacities, the ASA(ALT) advises the Secretary on all matters relating to acquisition and logistics management, and executes the acquisition functions and the acquisition management system of the Department of the Army. He appoints, manages, and evaluates program executive officers and direct-reporting program managers and managing the Army Acquisition Corps and the Army Acquisition Workforce. The ASA(ALT) executes the DA procurement and contracting functions, including exercising the authorities of the agency head for contracting, procurement, and acquisition matters pursuant to laws and regulations, the delegation of contracting authority; and the designation of contracting activities. He oversees the Army Industrial Base and Industrial Preparedness Programs and ensures the production readiness of weapon systems. The ASA(ALT) oversees all DA logistics

management functions, including readiness, supply, services, maintenance, transportation, and related automated logistics systems management.

*Question.* What background and experience do you possess that you believe qualifies you to perform these duties?

*Answer.* I bring nearly a quarter century of relevant experience as a successful test pilot, program manager of three major Air Force programs, an educator, an Inspector General and a Program Executive Officer. I fully understand the key processes employed within the Department of Defense, particularly in programmatic discipline, planning, resource allocation and acquisition. This in-depth understanding is derived from knowledge and experience, both in theory and in practice. I have successfully demonstrated this at all levels of government and industry, domestically and globally.

I have an excitement of purpose, untiring energy, and a keen desire to continue to serve my country in this important capacity. If confirmed, my priority will be to ensure that the United States Army continues to be the most powerful, capable, and most respected Army the world has ever seen.

*Question.* Do you believe that there are actions you need to take to enhance your ability to perform the duties of the Assistant Secretary of the Army for Acquisition, Logistics, and Technology?

*Answer.* I am unaware of any actions that I need to take at this time.

*Question.* Assuming you are confirmed, what duties and functions do you expect that the Secretary of the Army would prescribe for you?

*Answer.* If confirmed, I expect the Secretary of the Army will delegate to me and expect me to fully perform the functions of the Army Acquisition Executive, as well as the full complement of responsibilities previously described.

#### MAJOR CHALLENGES AND PROBLEMS

*Question.* In your view, what are the *major* challenges that will confront the Assistant Secretary of the Army for Acquisition, Logistics, and Technology?

*Answer.* I believe that a successful transformation strategy and execution is one of the most significant challenges that faces the Army today. We must ensure that we meet the Army's needs to develop, acquire, and field the critical elements of the Objective Force, particularly its cornerstone, the Future Combat Systems (FCS). While this continues, the Army must maintain and sustain its current and near-term capability to meet contingencies. Another major challenge for the Army is posed by the impending loss, through retirements, of a significant percentage of resident expertise and corporate knowledge in the scientist and engineer (S&E) workforce, and the shortage of younger S&Es to whom this expertise would normally be transferred through training and mentoring.

I agree with the Secretary of the Army that the greatest challenge the Army faces is change. The challenges the Army faces are similar to those of the other services as the Army collectively repositions organizations to overcome the threats our country faces. I feel that the Army must manage and maintain the momentum of the changes it has undertaken to assure its international preeminence in the 21st century. This will ensure America's ability to deter threats and defend our National security interests and to do it within the joint community.

*Question.* Assuming you are confirmed, what plans do you have for addressing these challenges?

*Answer.* With regard to transformation, I believe that a focused, productive science and technology program is a prerequisite. The Army must maintain an adequately funded S&T program to focus on achieving the Army's transformation to the Objective Force. I understand that the single largest investment in S&T is for Future Combat Systems (FCS) with the goal to field FCS by the end of this decade. I have no preconceived plans for addressing these challenges. However, if confirmed, I will work closely with the Secretary of the Army, the Assistant Secretaries, and the Office of the Secretary of Defense (OSD) in a unified effort to transform the Army to meet America's future security needs. This includes attracting, training, and retaining America's best and brightest. It also mandates that we provide for their quality of life and well-being. The Army must assure its daily readiness, while transforming itself into an Army capable of dominance along the full spectrum of military operations in the 21st century.

*Question.* What do you consider to be the most serious problems in the performance of the functions of the Assistant Secretary of the Army for Acquisition, Logistics, and Technology?

*Answer.* If confirmed, I would evaluate the specific roles and functions within the Office of the Assistant Secretary of the Army for Acquisition, Logistics, and Technology. It is premature to identify potential problems at this time.

*Question.* If confirmed, what management actions and time lines would you establish to address these problems?

*Answer.* If confirmed, I will need to evaluate the specific issues and work with the Army staff and Secretariat as well as DOD to establish time lines as appropriate.

#### PRIORITIES

*Question.* If confirmed, what broad priorities would you establish in terms of issues, which must be addressed by the Assistant Secretary of the Army for Acquisition, Logistics, and Technology?

*Answer.* I see three very broad priorities. Clearly, Army transformation is the keystone to maintaining and improving the Army's warfighting capability in the 21st century. That is the Army's paramount consideration. Within the transformation the Army must leverage new science and technology programs and initiatives to capitalize on emerging trends and breakthroughs. The Army must ensure it transforms into a force that will have the ability to respond effectively not only against today's terrorism and force protection threats, but also tomorrow's unknown threats.

Underpinning this effort is the Army's Acquisition Corps. It must stand ready to assist in the transformation by developing new systems and capabilities in a timely manner while recapitalizing the Legacy Force. This will assure that the Army is able to project an ever-improving full-spectrum combat capability. Critical to the Army's ability to effect this transformation is the health of the Army's Acquisition Corps. If confirmed, I must work to ensure the Army recruits, trains, and retains the required expertise, both military and civilian, that will support the transformation plan while positioning the workforce to successfully meet the challenges of the 21st century. I think the Army must also closely examine the continued viability of the United States industrial base to ensure that it does and will continue to meet current and potential wartime requirements.

#### ARMY ACQUISITION SYSTEM

*Question.* The Army recently approved a plan to reorganize its acquisition structure to centralize oversight of all Army program executive officers and program managers under the military deputy and the Army Acquisition Executive.

What is your opinion of the Army plan to restructure its acquisition system? Do you have any specific concerns with the intended changes?

*Answer.* I have only received an initial briefing on the acquisition reorganization plan, but I am pleased with the approach. One of the primary goals is to ensure a single manager is assigned to develop, produce, field, and sustain all systems in the Active and Reserve components, and to realign programs along commodity lines. For instance, the PEO for aviation will be responsible for the life cycle management of all aviation assets—not just those in active development. This focuses fiscal and manpower resources to develop and manage the fleet in the most cost effective manner. This appears to be a healthy approach to streamline the overall process and reduce redundant reporting and oversight layers in management. I have no specific concerns with the intended changes, and if confirmed, would continue to develop and refine the process.

*Question.* Given your experience with other services' systems, would you, if confirmed, anticipate making any specific recommendations for further changes? If so, what changes would you recommend?

*Answer.* I have a broad base of experience in the DOD acquisition process and major system acquisitions. If confirmed, I intend to apply that experience across the board, where it makes sense, to improve the Army processes and take advantage of other service successes, but at this time I have no specific recommendations for changes.

#### STREAMLINING THE ACQUISITION PROCESS

*Question.* Both Secretary of Defense Donald Rumsfeld and Under Secretary of Defense Pete Aldridge have indicated that they believe that there is a compelling need to streamline the acquisition process to further reduce the fielding time for new weapons systems and capabilities.

In your view, what role should realistic testing play in the acquisition process prior to any decision to enter into high-rate production?

*Answer.* I am concerned with the length of time that it takes to field new equipment. I agree that the acquisition process has to be streamlined. Likewise the way in which we integrate test and evaluation into this process must be improved. The way to accelerate acquisition programs is to integrate testing earlier in the development of new systems. In essence, we need to make testing part of the development

process and not an addendum that scores the results of completed programs. Testing must be designed to examine design options, reduce risk and help move systems forward to successfully accelerate fielding.

At each step in a progressive test process, the test conditions should be as realistic as possible consistent with the test objectives. Many years of experience attest to the fact that there is no substitute for realistic operational testing by real soldiers in a combat-like environment. This is what has led us today to an Army that has the best ground combat systems in the world. I understand the Abrams tank, the Bradley Fighting Vehicle and the Multiple Launch Rocket System (MLRS) are successes because the Army shook out the design and manufacturing problems in realistic operational tests before the systems went into full-rate production.

*Question.* If you are confirmed as the Assistant Secretary of the Army for Acquisition, Logistics, and Technology, how would you propose to achieve an appropriate balance between the desire to reduce acquisition cycle times and the need to perform adequate operational testing?

Answer. I do not see a conflict between reforming the acquisition process to accelerate fielding and the need to conduct realistic operational testing. A careful look at past programs will show that the conduct of operational testing consumes only a very short period in the development and fielding process. All early testing goes on concurrent with other development activities, and only the initial operational test and evaluation (IOT&E) must wait for a fully production-representative system. With carefully laid out acquisition programs, operational testing need not cause delays in transitioning from low-rate initial production to full-rate production.

*Question.* How would you assess that the balance achieved is the appropriate one?

Answer. I am not sure that a precise balance can be found, but I would measure the rates at which problems are being found. The degree to which problems are found early and do not occur later is the degree to which we are improving on the balance. If the occurrence of problems accelerates later in the program development, then we are clearly missing the mark.

While we will never abandon realistic operational testing, we also know that we must fully integrate technical testing, modeling and simulation and other data sources to resolve as many issues as possible before we get to the IOT&E. If confirmed, I would try to leverage early and continuous testing and evaluation to make sure that systems are properly postured for success long before they are ready for fielding.

*Question.* In comparison to other services with which you are familiar, do you believe that the Army has adequately funded its testing activities?

Answer. It is premature for me to comment on the funding adequacy of the Army's comprehensive testing activities but I am aware that the funding profile for T&E in the Army has improved in the past 10 years. The infrastructure for DOD test ranges and much of the Army's instrumentation is aging and needs to be upgraded or replaced. Instrumentation must keep pace with the complexity and technical advances of the systems being tested. New instrumentation and test tools are needed to adequately test today's complex systems. Almost every major system now operates in a complex system of systems environment. This means that more sophisticated tests are required to truly create a "realistic" operational environment for validating system capabilities. We are relying heavily on models and simulations to help us create the realistic environments for these tests, but these new tools all take resources to develop and maintain. Balanced against its other priorities, I believe the Army is resourcing T&E as well as the other services.

#### COMANCHE

*Question.* Press reports indicate that the Army has decided to restructure the RAH-66 Comanche helicopter program, delaying initial operational capability by 2 years. If these reports are true, what is your understanding of:

The new schedule?

Answer. I understand that recent reviews of the Comanche Engineering and Manufacturing Development (EMD) program indicated that the program was experiencing both cost and schedule problems. I am told that the Army is currently in the process of developing alternatives that would implement a block upgrade strategy, maintain Objective Force linkages and address these concerns. Although adjustments to the program are imminent, I understand the Army leadership has not yet decided on a course of action, and remains firmly committed to the success of the Comanche program. I agree that it is a critical component in the Army transformation and the Objective Force.

*Question.* The programmatic reasons for such a restructure?

Answer. I am told the EMD contract is experiencing difficulties driven by system concurrency, system integration challenges, and underestimation of risk.

*Question.* Any additional costs involved, and how the Army will pay for those costs?

Answer. As stated previously, I understand the cost of the Comanche program adjustments may be resourced from within the current approved Comanche funding by using the delay in the production program to fund the increased development effort.

I look forward to reviewing and contributing to this critical program, if confirmed.

#### FUTURE COMBAT SYSTEM

*Question.* The Army currently has four teams working on the Future Combat System (FCS) under concept design agreements. The Army has announced its intention to solicit for a single lead systems integrator to take the system to a fiscal year 2006 production decision.

In your opinion, what are the advantages and disadvantages of the Army's new acquisition approach for FCS?

Answer. I understand there are two facets to the new acquisition approach—accelerating Milestone B by 3 years from fiscal year 2006 to fiscal year 2003, and placing the effort under Lead Systems Integrator (LSI) management. I agree that the major advantage of the program acceleration is that the Army may be able to field revolutionary new capabilities by the end of the decade. The FCS LSI will provide the Government with a capable industry partner, having total systems integration responsibility for designing, developing, producing, fielding and supporting the FCS system of systems.

I agree that the disadvantage of program acceleration is that it may limit the Army's technology options for the Block I concept and increase program risk, but I believe this disadvantage can be mitigated by an iterative upgrade plan, providing enhancements for lethality, survivability, and so on. A potential disadvantage in having a single LSI is that the selection of an LSI can limit competition for new ideas from other major defense contractors in later phases of the program. I understand DARPA and the Army are addressing this issue by requiring a rigorous best value competition process for the selection of systems and subsystems, with government access to all data and concurrence in decisions.

*Question.* In your opinion, how much risk is involved in such an acquisition schedule?

Answer. DARPA and the Army have, in effect, asked the firms pursuing the Lead Systems Integrator role to balance technical and schedule risk in their proposed concepts in order to achieve an IOC within this decade. The winning LSI's concepts will mature in parallel with the evolving Operational Requirements Document to provide acceptable risk at MS B and beyond. If none of the answers meet the needs of the Army transformation, the Army should reconsider the Army's requirements.

*Question.* If confirmed, how would you propose to divide the responsibilities for the FCS program between yourself and the Director of the Objective Force Task Force?

Answer. The responsibilities of the Objective Force Task Force are spelled out by the Secretary of the Army—I do not believe there is duplication. ASA(ALT) is responsible for overall execution of the FCS acquisition program, to include science and technology efforts. The task force integrates, coordinates, and assesses efforts in concepts and requirements, S&T (including DARPA), and acquisition. Task force findings are provided to ASA(ALT) for consideration and action. If confirmed, I propose to continue, develop, and refine this relationship.

#### LOGISTICS REFORM

*Question.* The 2001 Report to the President and Congress stated that logistics reform must move toward performance-based support and must link modern warfighting and business practices. To accomplish this fundamental transformation, the Department has developed a long-term logistics reform strategic plan, established a logistics architect to help guide the transformation effort, and begun the process of implementing new business strategies.

In your view, what are the key factors shaping Army logistic modernization?

Answer. The Army is in the process of transformation. As the Army moves toward an Objective Force, logistics modernization will enable the Army to field a force that is more responsive, deployable, agile, versatile, lethal, survivable, and sustainable. Army logistic modernization is a key component of that transformation process. The Army is changing the paradigm of a logistics system built on redundancy of mass to one based on velocity, mobility, and situational understanding. I understand

three objectives drive the Army's modernization process. The first is to enhance strategic responsiveness to meet the time lines outlined in the Army vision. This is key to the Army's future relevance. The second is to reduce the size of the Combat Support/Combat Service Support footprint in the combat zone; this will enable Joint Force Commanders to maneuver without being tethered to a large supporting structure. Third, the Army must reduce the cost of logistics without reducing warfighting capability or readiness. Decreasing logistics demand is a major element of cutting cost and improving flexibility. The Army should consider efficiency, reliability, and deployability key performance parameters as the Army designs and fields new combat systems. The application of information and communications technologies to weapon systems design and logistics business processes is a key component in the Army's effort to create a more responsive logistics system. As the Army looks at the magnitude of the Army's business from installation to foxhole these are significant challenges but I think the Army has a duty to get it done.

*Question.* In your view, what commercial market logistics practices should the Department of the Army consider in its logistics modernization program?

*Answer.* There are many. Nothing drives innovation like a competitive market and we can learn a great deal about efficiency and effectiveness from the commercial sector. Several promising practices do come to mind: the Army has to use a longer-term business model in the acquisition process; the Army has to invest up front in reliability and predictability to reduce the cost of maintaining Army systems; the Army has to look at the total life-cycle cost of equipment when it is designed. While the Army has really improved its supply chain management with the Single Stock Fund program, the addition of commercially available automatic identification technology can pay big dividends in efficiency. The Army needs to leverage commercial sector transportation efficiencies, particularly the use of multi-modal systems that can reduce repackaging, material handling, and en-route damage as well as the costs associated with them. The commercial sector is doing some exciting things with embedded diagnostics and prognostics that really save equipment repair costs. The list goes on, but I think we can learn a lot from the commercial market and I will continue to look to world-class businesses for their logistics lessons, if confirmed.

*Question.* In your view, is the privatization of the Army's logistics function a viable alternative?

*Answer.* I think there is value in privatizing some of the Army's logistics functions but I'm hesitant to endorse it as a rule. I firmly believe that we must preserve a National Military Capability in critical logistics functions. Here again, you have to take a business view. While there are many functions and services the private sector can provide at a lower cost, that's not the entire equation. In many instances, the Army owns infrastructure just for the purpose of performing those same functions and services. When we add the cost of maintaining that to the lower privatized cost, we don't always see a savings. You have to have a plan to divest that infrastructure prior to outsourcing. We have to ask two questions when we move to the private sector. First, is readiness retained or improved? Second, is the total Army cost reduced? If the objective answer is yes to both questions, privatization is an alternative that should be considered.

#### MUNITIONS PROGRAMS

*Question.* The Army is considering the cancellation of several munitions programs including the TOW missile, the Hydra-70 rocket, the Remote Area Denial Artillery Munition, and the antipersonnel land mine alternatives.

Given that the replacement systems to many of these programs are not yet fully developed and may not be available for many years, how would these cuts, if approved, impact the Army's ability to execute the National Military Strategy?

*Answer.* I understand the Army's ability to execute the National Military Strategy will not be impacted should any of these programs be cancelled. I am told the RADAM and APL-A programs do not provide an enhanced warfighting capability above and beyond when the Army has today. I understand the Army will continue to produce the Hydra-70 rocket in sufficient quantities to meet training requirements until the Advance Precision Kill Weapon System starts production in fiscal year 2005. I also understand the Army has begun a dedicated stockpile management program to retain sufficient TOW 2B in the inventory under the Common Missile program which begins production later this decade.

## ARMY ACQUISITION SYSTEM

*Question.* If confirmed as the Assistant Secretary of the Army for Acquisition, Logistics, and Technology, you will manage the Army Acquisition Corps and Army Acquisition Workforce.

In your view, what steps should the Army take to improve overall management of its acquisition personnel?

*Answer.* Simply put, I believe that we must refine the Army's existing management system to ensure the dedicated, professional members of the Army Acquisition Corps are fully trained, constantly challenged to innovate and streamline, rewarded for their efforts, and secure in their belief that we care about them and their families. We are all aware that this workforce has been significantly reduced over the past few years. While that was necessary and productive it also created a set of new challenges. For instance, I am concerned with the number of personnel that are or will be retirement eligible in the immediate future (2-5 years). In some career fields over 50 percent of the personnel fit this category. While the Army cannot say with certainty how many will actually retire, the potential loss of experience and expertise is enormous. This problem is further complicated because potential replacement personnel are reluctant to enter the Acquisition Corps because of the history of reductions. To answer these challenges, I understand the Army is working to stabilize the workforce, overcome the fear of further mass reductions, attract new employees from industry and academia, and, probably most important, enhance the training opportunities and professional growth of the current workforce. Lastly, in concert with DOD and the other services, I am gratified that the Army is developing a comprehensive strategic plan to address current problems and prepare the Army's acquisition workforce for the challenges of the 21st century.

*Question.* How do you plan to ensure that the Army recruits, trains, and retains an acquisition workforce that will be able to operate in a 21st century environment?

*Answer.* The Army has numerous programs that provide advanced training and education opportunities for the current workforce. If confirmed, I intend to review these and, in concert with the Defense Acquisition University, training managers, and private institutions, ensure these existing programs are providing the right focus, right perspective, and right tools required to support the fundamental tenets of acquisition excellence. This will ensure the Army Acquisition Corps is poised to support Army transformation and continually improve the Acquisition System.

We need to ensure that the Army's employees are working in a professional, safe and productive environment that enhances their desire to come to work. The Army, and indeed all the services, have an incredibly professional and dedicated workforce that continuously answers the call to public service. If confirmed, I intend to ensure the Army has the plans and programs that enhance skills, provide for the most effective and efficient use of resources and, most importantly, makes the Army's employees proud to be members of the U.S. Army.

I understand the Army Acquisition Corps has already begun to develop a comprehensive program to attract new military and civilian employees with the necessary skills to support transformation and lay the foundation for the Army of the 21st century. If confirmed, I will do my best to ensure that the program is fully resourced and complemented by a responsive management system that allows us to swiftly react to changing priorities and technological evolution.

## INTERSERVICE RELATIONSHIPS

*Question.* In your view, are there areas in which the Department of the Army and the United States Marine Corps should more closely cooperate in the development of land and air capabilities?

*Answer.* I am not familiar with all functional areas where the Army and Marine Corps are able to cooperatively develop capabilities, but I am aware of several cooperative successes. This October the Army began procuring the Marine Corps developed M107, 50 caliber, Sniper Rifle. Both marines and soldiers are using this rifle in Afghanistan. An excellent example of ongoing cooperation between the marines and Army is the development of the Joint Lightweight 155mm Towed Howitzer. In this program, the marines are developing the basic Howitzer while the Army develops the digital fire control for the Howitzer. A memorandum of agreement governs the program with the Navy and Army sharing management responsibility. The Navy Acquisition Executive is the milestone decision authority while the Army functions as the head of contracting agency. Additionally, the Marine Corps product manager is located at the Army's Picatinny Arsenal and oversight is shared by the Army Program Executive for Ground Combat Support and the Marine Corps Systems Commander. This has been a successful arrangement for both services.

*Question.* If confirmed, what actions would you take to increase Army and Marine Corps joint program development?

*Answer.* If confirmed, I would build on the relationship with the Navy Acquisition Executive and the Marine Corps from the Joint Lightweight 155mm Howitzer and Sniper Rifle and proactively review similar requirements across the other services to identify additional areas for cooperation.

CONGRESSIONAL OVERSIGHT

*Question.* In order to exercise its legislative and oversight responsibilities, it is important that this committee and other appropriate committees of Congress are able to receive testimony, briefings, and other communications of information.

Do you agree, if confirmed for this high position, to appear before this committee and other appropriate committees of Congress?

*Answer.* Yes.

*Question.* Do you agree, if confirmed, to appear before this committee, or designated members of this committee, and provide information, subject to appropriate and necessary security protection, with respect to your responsibilities as the Under Secretary of the Army?

*Answer.* Yes.

*Question.* Do you agree to ensure that testimony, briefings and other communications of information are provided to this committee and its staff and other appropriate committees?

*Answer.* Yes.

[Questions for the record with answers supplied follow:]

QUESTIONS SUBMITTED BY SENATOR MARY L. LANDRIEU

ARMORED SECURITY VEHICLE (ASV) PROGRAM

1. Senator LANDRIEU. General Bolton, on July 10, 2001, I asked General Shinseki if media reports were true that the Army intended to terminate the armored security vehicle program at the end of fiscal year 2002.

General Shinseki replied, "The Army does not have plans to terminate the ASV program at the end of fiscal year 2002." Further, he stated, "The current plan is to continue to field the ASV to MP units."

On the other hand, the November 21, 2001, issue of *Jane's Defense Weekly* reported that the "Army canceled . . . the armored security vehicle, used by military police."

General Bolton, should I simply not trust everything I read from the British press; has the Army supplied me with improper information; or is this a sudden change of plans by the Army to finance the push toward transformation?

General BOLTON. The Army is currently procuring the ASV under a 5-year multiyear contract with Textron Marine and Land Systems. The fiscal year 2002 President's Budget includes funding for the fourth year of the contract. The Army's intent is to support the ASV through to the conclusion of the multiyear at the end of fiscal year 2003. It would appear that the source of the data for the British Press was inaccurate in their understanding of Army leadership's decision relative to ASV.

2. Senator LANDRIEU. What is the reason for the inconsistency?

General BOLTON. The Army's senior leadership has been consistent with Congress when asked its position concerning the ASV program—no contracts have been canceled.

SCIENCE AND TECHNOLOGY FUNDING

3. Senator LANDRIEU. The Army's transformation will be strongly dependent on science and technology (S&T) and the new capabilities that emerge from those programs.

Since your position will have oversight over Army science and technology programs, do you feel that the Army currently invests enough in research and development (R&D)?

General BOLTON. The Army has adequately funded its S&T program to focus on achieving the Army's transformation to the Objective Force. The Army's fiscal year 2002 budget request for S&T is \$1.58 billion. This is an 18 percent increase over the fiscal year 2001 request and clear evidence of the Army's commitment to achieve Objective Force capabilities.

4. Senator LANDRIEU. Secretary Rumsfeld has established a goal for science and technology investments Department-wide at 3 percent of the total DOD budget.

Would you support the establishment of a similar goal for the Army?

General BOLTON. I support the DOD guidelines that have a goal of budgeting S&T as 3 percent of the overall DOD budget by 2007. The Army is committed to its transformation vision and S&T is at the center of our efforts to achieve Objective Force capabilities.

#### INTERAGENCY COORDINATION

5. Senator LANDRIEU. The Army plays an important role in performing vital medical, chemical, and biological research for our country. Your researchers at Fort Detrick, Maryland, have been key players in the ongoing anthrax investigation.

How will you work to ensure that the Army's expertise in these important scientific areas is available for our first responders, the Center for Disease Control, the Office of Homeland Security, and other Federal and local Government agencies?

General BOLTON. The Army coordinates with other Department of Defense, Federal, and local government agencies across all echelons. Army medical and scientific personnel are members of numerous response teams and interagency working groups. During the ongoing anthrax investigation, the scientists and command staff of the U.S. Army Medical Research Institute of Infectious Diseases at Fort Detrick actively participated in an interagency group formed to address the issues at hand. In addition, that organization and other Army laboratories have specific agreements with agencies such as the Centers for Disease Control and Prevention and the Federal Bureau of Investigation to provide expertise or perform analyses. Individual Army scientists routinely interact with colleagues throughout the scientific community by engaging in collaborative research efforts and participating in national and international scientific conferences. The Army medical community has been actively engaged in providing expertise to other agencies and to first responders through training and education courses such as the satellite broadcast of "Biological and Chemical Warfare and Terrorism: Medical Issues and Response." Over the past several years, Army experts have served on intergovernmental teams to provide training and support to local authorities for major events such as the 1996 Olympics in Atlanta, Georgia, presidential nominating conventions, and others. The Army will continue appropriate participation in numerous interagency groups, and provide its outstanding support and expertise to other agencies.

#### MOVING CRITICAL MEDICAL TECHNOLOGIES THROUGH REGULATORY PROCESSES

6. Senator LANDRIEU. The Army invests in a significant amount of research on new medical technologies—including bandages, drugs, vaccines, and decontamination agents. Some of these are especially critical as we work to improve our ability to respond to the threats of weapons of mass destruction. Unfortunately, many of our best technologies get caught up in slow and expensive regulatory processes established by the FDA and the EPA.

How will you work to ensure that Army investments in critical new medical technologies can be moved quickly through these regulatory processes, so they can be used by our troops and the general public as soon as possible?

General BOLTON. The Army continues to emphasize the need to comply with FDA and other governmental agency regulatory guidance within its programs. These agencies provide a necessary and important quality control function that the Army both respects and demands. We do not want policy or perception to lead the American public to believe that soldiers are an experimental population. Rather, we strictly wish to enforce the same health and safety standards for soldiers. Only in a time of warfare and extreme need do we willingly take the calculated risks of using non-fully approved products, although we still gain FDA guidance for clinical protocols and informed consent.

The best method to ensure we move quickly through the regulatory process is to communicate frequently with those agencies. The FDA is now a more open agency that supports frequent dialog. Through early discussions, such as pre-investigational new drug meetings, we can discuss our plans and trial methods with the FDA and modify them accordingly. This is especially important for products, such as critical chemical-biological defense drugs and vaccines that will rely on animal data and indirect measures, because human efficacy cannot be ethically obtained through clinical trials.

Another means to increase the speed of the process is to team with industrial partners with greater experience in developing medical products. In the aftermath

of September 11, 2001, the increased market potential for many of our medical product lines may provide greater financial incentive to more firms to develop and produce our products.

---

QUESTIONS SUBMITTED BY SENATOR JOHN WARNER

MISSILE DEFENSE PROGRAMS

7. Senator WARNER. General Bolton, the Ballistic Missile Defense Organization (BMDO) proposed to transfer the Patriot PAC-3 and Medium Extended Air Defense System (MEADS) programs to the Army and the Navy Area Defense to the Navy. Congress is likely to allow such transfers only after the director of BMDO establishes appropriate criteria to do so.

Do you support the transfer of PAC-3 and MEADS to the Army?

General BOLTON. Yes. The Army is excited about the opportunity to manage the Patriot PAC-3 program. This represents a significant enhancement to the fielded Patriot system. Passing management of the program to the Army is the right thing to do at this point in the program's lifecycle. One of the benefits of the PAC-3 program is the use of the PAC-3 missile as the missile for the MEADS program. By doing so, we reduce the risk of the MEADS program and take advantage of PAC-3's very capable and mature technology. However, the program must be fully funded before a transfer to the Army takes place. Specifically, the program must be funded to upgrade 10 active component Patriot Battalions and the Southwest Asia Patriot assets to the PAC-3 configuration. Currently, the program is funded to upgrade 7 active component Battalions and the Southwest Asia Patriot assets. Additionally, the program must be funded to procure the required 2200 PAC-3 missiles versus the 1159 for which the program is currently funded.

Transfer of the MEADS program to the Army at this time is not recommended. The MEADS program is currently insufficiently mature in its acquisition cycle, does not have an approved program baseline, is an unstable international program and likely will incur significant cost growth. However, once the program has successfully accomplished Milestone C and begins entering operational testing, the program should begin the transfer to the Army and be fully funded to procure the required number of fire units and missiles.

8. Senator WARNER. What criteria would you recommend to the director of BMDO to guide such transfers in the future?

General BOLTON. The BMDO should continue management and development for programs in the areas of spiral/evolutionary development, technical insertion, reliability improvements and sustainment initiatives (i.e., reducing the logistical footprint) and provide a coordinated investment plan to Congress prior to transfer.

BMDO, in coordination with the Army, should establish criteria for transition of programs to the services. Based upon cost, schedule, and technical risk/performance, BMDO should submit an agreed upon BMDO/Army transition plan to Congress prior to transfer. In the plan, BMDO should identify and fund any cost risk associated with the program.

DIRECTED ENERGY WEAPONS

9. Senator WARNER. The Army has been the lead agency in the development of the tactical high energy laser (THEL). Space and Missile Defense Command has expressed interest in pursuing a mobile version of THEL for air and missile defense, but the Army has not funded either THEL or a mobile THEL program.

In your view, how important are directed energy weapons to the future of the Army?

General BOLTON. I believe that directed energy (DE) weapons have the potential to provide significant technological opportunities for the warfighter. These opportunities may allow the warfighter to achieve new and improved capabilities across a broad spectrum of missions that support the Army transformation strategy. The Army is currently exploring the potential of DE weapons to meet the future United States Army needs and joint service requirements from both ground and airborne platforms. These needs may include space control, special operations (ultra-precision engagements), military operations on urban terrain, countermine operations, destruction of unexploded ordnance, improved lethality for artillery projectiles, disruption of command and control systems, survivability of ground and air systems, and the suppression of enemy air defense.

The Army has strategically invested in DE technologies that support our mission areas. We have developed a program plan to fund the follow-on effort for a mobile version of the THEL demonstrator with Israeli cooperation. We have funded a solid-state laser effort to demonstrate a 15-kilowatt high average power solid-state laser by 2004 and 100 kilowatt by 2007 that experienced a congressional cut this year. The Army is also funding efforts to develop high-powered microwave systems for non-lethal, countermine, and weapons application. These efforts provide significant developmental milestones for DE weapons technology candidates to meet the Future Combat Systems and other Objective Force requirements.

10. Senator WARNER. Is Army investment in this area adequate?  
General BOLTON. Directed energy (DE) technologies have the potential to provide the Army with dramatic leap-ahead capabilities that support many of the joint and Army visions and warfighting concepts of the 21st century. We strive within the current Army budget constraints and priorities to develop and exploit DE technologies consistent with our other priorities for the Objective Force.

#### SCIENCE AND TECHNOLOGY INVESTMENT

11-12. Senator WARNER. Secretary of Defense Rumsfeld has established an investment goal for the defense science and technology program to reach 3 percent of the total defense budget.

If confirmed, would you set a similar goal for the Army science and technology program?

If so, what time frame would you place on reaching this investment goal?

General BOLTON. I support the Department of Defense's guidelines that have a goal of budgeting S&T as 3 percent of the overall Department of Defense budget by 2007.

#### FUTURE COMBAT SYSTEMS

13. Senator WARNER. The Army is currently partnering with DARPA to conceptualize, develop, and field the Future Combat System. The Army recently accelerated the FCS effort by 2 years with the goal of equipping the first unit by fiscal year 2008.

Is there adequate investment in the S&T program to meet this accelerated goal?

General BOLTON. Since the Army's decision to accelerate FCS post-dated the President's Budget, additional S&T funds are required to meet the aggressive accelerated schedule. In order to determine the technical and financial impact of the FCS acceleration, my Deputy for Research and Technology has had an Independent Technology Assessment performed by technical experts from government, academia, and industry. The assessment concluded that more funds are needed in fiscal year 2002 and 2003 to develop and mature critical technologies to achieve the initial capability desired (Block 1) for the First Unit Equipped in 2008. The Army is reviewing all options to fund those shortfalls.

#### COMANCHE RESTRUCTURING

14. Senator WARNER. The Army recently announced that it has decided to restructure the Comanche helicopter program because the program encountered "unacceptable risk" and may be underfunded by as much as \$1.5 billion. As a result, the initial operating capability will be pushed back to December 2008, about the same time as the Army intends to field the Future Combat System. This also coincides with the projected fielding of the Crusader System. The fielding of all of these systems will obviously stress the Army's ability to fund these programs.

If confirmed, how will you deal with the Army's apparent funding shortfalls in these areas?

General BOLTON. This is probably the hardest question Secretary White and General Shinseki have to deal with in terms of balancing priorities. This is going to be a significant challenge for not only the Army, but also for the Department of Defense, because we are going to be competing with the other services for resources. I will work closely with the Army senior leadership to ensure we maintain a balance of our priorities that will permit the Army, to the greatest extent possible, to continue with the investments required to meet our future fielding commitments. It will be a significant challenge for the United States Army to achieve the balance of current readiness with the investments required for that future force. The Army must be prepared, with the support of Congress, to make those investments.

## ARMY TRANSFORMATION (FUTURE COMBAT SYSTEM)

15. Senator WARNER. The Future Combat System (FCS) will be the centerpiece of the Army's Objective Force. Four industry teams are currently designing concepts and conducting technology assessments for FCS. Until recently, the Army was considering retaining two of the four teams to continue the design work and to build models until fiscal year 2006, when one team would be awarded a contract for development. Now, the Army has released a draft solicitation for a lead systems integrator to continue the work of the four industry teams.

Do you agree with this approach?

General BOLTON. Yes, I agree with the approach. The Army's decision to develop a new acquisition strategy and FCS solicitation was based on the need to accelerate transformation and field the FCS in 2008. The Army, through its memorandum of agreement with Defense Advanced Research Projects Agency, is seeking a lead system integrator to execute this accelerated program.

---

 QUESTIONS SUBMITTED BY SENATOR STROM THURMOND

## COMANCHE HELICOPTER PROGRAM

16. Senator THURMOND. General Bolton, a problem with the modernization of our Armed Forces is the time it takes to bring a new system into the inventory. A prime example is the Army's Comanche helicopter program which recently underwent its sixth major revision since they awarded the contractor the development contract in 1991.

What are your views regarding the Department's acquisition process and why does it take so long to bring a new system on line?

General BOLTON. The previous Under Secretary of Defense (Acquisition, Technology and Logistics), Dr. Gansler (among others within the Defense community), was also concerned about the length of time that it takes to bring a new system on line. To that end, in the latter half of 1999 he directed a complete rewrite of our Defense acquisition policies as contained within the Department of Defense (DOD) 5000-series set of documents. That effort took almost 2 years. It was completed in June 2001 with the final approval of the regulation, DOD 5000.2-R.

Historically, it has taken all the services longer than anyone would wish to bring major systems to the field. However, given the initiatives (*e.g.*, blocked requirements, evolutionary acquisition, and the use of more mature technology) incorporated in the new defense acquisition policies, I believe that we will begin to see a substantial improvement in those fielding times.

## INDUSTRIAL BASE

17-18. Senator THURMOND. The United States' defense industrial base has undergone a significant reduction since the end of the Cold War era. This shrinkage has occurred not only in the major weapons systems such as aircraft, but also in the small arms production base which now consists of only two major producers.

Do you consider the decline of our defense industrial base an acceptable risk?

What steps, if any, should we take to protect our industrial base?

General BOLTON. Yes, the consolidation has been necessary. The post-Cold War defense budget drawdown of the 1990s resulted in a significant consolidation of the U.S. defense industry—fewer prime contractors, rationalization of capacity in the industrial base, and substantial cost savings for the Department of Defense. The central tenet of my industrial capabilities-related policy is to seek to maintain a sufficient number of capable defense firms in core market sectors to ensure the competition critical to providing affordable, innovative defense products that meet the needs of the 21st century warfighter. It is a continuing challenge to meet this goal in today's smaller and more concentrated defense industrial structure. Prudent steps include a wide variety of actions. Examples include vigilant buying practices like limiting the use of restricted-source competitions. Instead we seek to attract more suppliers through reduced military specifications and use of broad market surveys. We can also oppose contractor teaming and formal business combinations, if that is in our best interest. On a case-by-case basis, when a thorough analysis supports it, we can intervene to protect critical, defense unique, endangered suppliers.

## BUY AMERICA PROVISIONS

19. Senator THURMOND. What are your views on the role of the "Buy America" provisions in protecting the industrial base?

General BOLTON. Any preclusion of foreign firms from competing for Army contracts should only take place when U.S. national security interests would truly be threatened by foreign participation. We have adequate means to do this now on a case-by-case basis using exceptions to our requirements for full and open contracting. "Buy American" restrictions may invite retaliation and harm our industrial base. Finally, in all cases, I want to ensure that we access the very best technology for our soldiers.

## TECHNOLOGY DEVELOPMENT

20. Senator THURMOND. Whenever the Army focuses on technology development, it is on the major weapons systems and not on the individual soldier's combat systems.

What will be your focus regarding equipping the individual soldier to meet future threats?

General BOLTON. The Army vision recognizes that the soldier is the centerpiece of our transformation to the Objective Force. As such, we have focused our soldier system developments on integrating emerging new technologies into a multi-function capability. The result will be a soldier more lethal, sustainable and survivable, with significantly less weight to carry. Less weight also means increased soldier mobility, another desirable outcome. Our developments will aggressively address both future threats as well as the soldier's currently large logistics tail. Included in the above are the modeling and simulation, human science, and manpower and personnel integration efforts to ensure that the human factors aspects are considered in the design from the beginning. The Army's warrior systems modernization strategy (WSMS) integrates program planning to connect the entire Army's research and development (R&D) investment (including Defense Advanced Research Projects Agency leveraging) related to soldier systems across all phases of the R&D life-cycle.

The Army strategy is highlighted by the Land Warrior (LW), a first generation integrated fighting system for the individual soldier that bridges to the Objective Force Warrior (OFW). The LW is an Acquisition Category II program designed to enhance the soldier's battlefield capabilities through the development and integration of a variety of Army components and technologies into a single "system." The LW includes: a computer/radio subsystem; a global positioning system receiver; VHF and UHF radios; video capture capability; an integrated helmet assembly subsystem with heads-up display and image intensifier for night operations; a weapon subsystem with thermal weapon sight, close combat optic, video camera, laser range-finder/digital compass, and an infrared laser aiming light; and protective clothing and individual equipment subsystem with load carrying equipment, body armor, a chemical/biological mask, and a laser detector.

Emerging concepts for the Objective Force and the Future Combat Systems (FCS) recognize the soldier plays a central element in the FCS Unit of Action. The intent of OFW is to develop a formidable warrior in an invincible team, demonstrating unsurpassed individual and squad lethality; survivability; communications; and agility. The OFW science and technology program will provide the next generation of capabilities beyond LW. The OFW program uses a systems engineering, integrated approach to achieve new capabilities without overburdening the soldier. The program will develop a lightweight, stealthy soldier survivability system, integrated with multi-functional sensors, weapons and proactive medical capabilities. The OFW will have connectivity to other dismounted personnel and robotic air/ground platforms for improved situational understanding and effects. The OFW will be fully integrated with FCS. Additional benefits from applying a systems engineering approach to the soldier system are: shortened product development cycles; lower acquisition costs; and reductions in size, weight, and power requirements.

The integration of continuous technology advances in command and control, tactical mobility, intelligence capabilities, and survivability will enable full-spectrum dominance at the individual and small unit level. These efforts support the Army vision to field a force that is responsive, deployable, agile, versatile, lethal, survivable, sustainable, and dominant at every point along the spectrum of operations, anywhere in the world.

## ARMY DEPOT SYSTEM

21. Senator THURMOND. The Army maintains a significant depot system to maintain aging weapons systems and equipment. As more equipment comes due for recapitalization, will the depots be able to handle the increased workload?

General BOLTON. Yes. The Army Recapitalization Program is a key enabler of Army transformation that will allow us to transition to the Objective Force while maintaining a capable Interim Force to meet the Army's non-negotiable contract with the American people. Our organic base is up to the mission assigned to it. Depot capacity was one of the many factors reviewed when presenting the fleet recapitalization options to the senior Army leadership.

22. Senator THURMOND. Would you consider transferring some of this work to the private sector?

General BOLTON. Those decisions have already been made. The VCSA directed early on in the Recapitalization Program to consider partnerships with industry. With public/private partnering, we get the best of both sectors, maintaining a viable industrial base in support of our weapon systems. Based on the end state capability required for the recapitalized systems and the time line needed to field the systems, public-private partnership arrangements were exploited and in some cases decisions were made to use the original equipment manufacturers. Some illustrative examples are the Bradley Fighting Vehicle and the Heavy Mobility Tactical Truck. Bottom line: the Recapitalization Program will aid in maintaining our skill levels in our depots, produce a stabilized workload, and foster sound government-industry partnerships.

---

 QUESTIONS SUBMITTED BY SENATOR BOB SMITH

## DOD/GAO INVESTIGATIONS

23. Senator SMITH. Your promotion to Brigadier General was held up by Congress because of apparent procurement irregularities which were examined by both Department of Defense (IG) and GAO investigations.

Can you comment on the results of both of those investigations, the issues at stake, your role in the controversy, what lessons you have drawn from this experience, and how this will affect your heading the Army procurement system?

General BOLTON. Much has been said about the allegations concerning my performance as the System Program Director of the Advanced Cruise Missile (ACM) System Program Office (SPO). During my Brigadier General Officer confirmation, an allegation was made that I had violated the Anti-Deficiency Act (ADA), and therefore should not be promoted to Brigadier General. Those allegations were made on the floor of the Senate in April/May 1993 and in several newspapers around the country. I became aware of this about the same time. It was alleged in a Department of Defense Inspector General (DOD IG) report and later by a member of the United States Senate, that I had violated the ADA. The report stated that when the ACM Program determined it would not have sufficient funds to complete the program, as planned several years in the future, it was antideficient. The Air Force did reclamation the IG report and stated no ADA violation took place since the existing contract was fully funded for current activity and would be rebased for budget realities. The response was not accepted by the DOD IG.

Shortly after the allegations were made, in 1993, the Air Force General Counsel was asked to render an opinion on this matter. Each General Counsel involved in this review quickly dismissed the possibility of an ADA violation. Further, the rendered opinion documented that the DOD IG explanation and interpretation of the alleged ADA violation was in error. From that point until my confirmation hearing on October 8, 1994, the focus of two Air Force, one GAO and one Comptroller General investigation were not so much the review of an ADA violation (the original and only formal allegation), but an examination of virtually every decision I made in the ACM Program during my 3-year tenure. The results . . . Nothing! No ADA, no improprieties, nothing. While I was pleased with the eventual outcome, I was very disappointed in what the reports did not say. Few Government Program Managers (PM) had undergone such a review, and to have such a finding is extraordinary. The reports failed to note that perhaps this PM and in particular, his staff should be praised for what they did. In one year this Government/contractor team took a severely poor performing program, one directed by Congress in law to be terminated if it did not drastically improve, and turned it completely around. When all was said and done, the program met all cost, schedule and performance requirements. This team provided the warfighters the most advanced, most accurate, most

survivable cruise missile in the world. The ACM, I am led to believe, remains so today. Since none of the investigative reports recognized these achievements let me say at this time I am proud to have had the opportunity to lead such a fine team; both Government and contractor personnel. This team worked tirelessly to take a troubled program and turn it into a world-class military capability. It also demonstrated an age old lesson learned; namely, give good people a vision and the tools to reach it and anything is possible. Their effort is a model for the entire Department of Defense, and the reason I am where I am today. They are the finest, most dedicated and most professional people I have ever known. They and countless others like them throughout our acquisition, logistics and technology community, are the reason our United States Military remains the world's most capable, most powerful and most respected fighting force on the planet. It was my pleasure to serve them. I have continued to manage and lead as I did while in the ACM Program. I intend to do the same in the future for the Army.

#### INTERSERVICE EXPERIENCE

24. Senator SMITH. Have you had any interservice experience with the Army?

General BOLTON. I have been briefed on the current Army organizations and the ongoing reorganization. If I am confirmed, I will of course work closely with all of the Army in all facets as I perform my duties. To do that effectively will require I understand the relationships implied.

25. Senator SMITH. Do you have any knowledge of the relationships, policies, and organizational relationships existing today in the Army?

General BOLTON. I commanded the Defense Systems Management College at Fort Belvoir, Virginia for 3 years. I have gained good insight into the existing Army structures along with those of the other services and industry.

#### PROGRAM EXECUTIVE OFFICE (PEO) AIR AND MISSILE DEFENSE (AMD)

26. Senator SMITH. It is my understanding that the Army is considering double-hatting the PEO for Air and Missile Defense (PEO-AMD) as well as the Deputy Commander of Space and Missile Defense Command (SMDC).

Does this require a waiver of DOD regulations and has a waiver been granted?

General BOLTON. On 3 December 2001, General Shinseki approved the assignment of Brigadier General John Urias to the Program Executive Office for Air and Missile Defense in the position of Program Executive Officer, Air and Missile Defense/Deputy Commanding General for Research, Development and Acquisition, United States Army Space and Missile Defense Command. This was done in coordination with the acting Army Acquisition Executive and the Military Deputy; the Director, Ballistic Missile Defense Organization; and Commanding General United States Army (USASMDC). Due to the direct interdependency on USASMDC by PEO-AMD programs, this special arrangement was deemed to be in the best interest of both organizations. To help streamline his acquisition role as PEO, Brigadier General Urias' chain of supervision was designated as the ASA(ALT) MILDEP and ASA(ALT) (the normal rating chain for an Army PEO) with only letter input from the Commanding General, USASMDC. At the time, there was unanimous agreement that this assignment did not violate any statutory requirements, but there were varying opinions as to whether a waiver of Department of Defense (DOD) regulations was required. Having seen that this question still remains, I intend to formally seek DOD concurrence with this special arrangement.

27. Senator SMITH. Does this imply that the PEO-AMD is not a full-time job?

General BOLTON. No. If anything it shows the complexity of the duties associated with being a PEO who has ultimate responsibility for the acquisition programs assigned.

28. Senator SMITH. Will other Army PEOs be assigned additional responsibilities?

General BOLTON. Today's acquisition programs are directed, funded efforts designed to provide a new, improved, or continuing materiel, weapon or information system capability, or service, in response to a validated operational or business need. To facilitate decentralized decisionmaking, execution, and compliance with statutory requirements, the PEO structure aligns program management by weapon platform, recognizing customer base, equipment pairing and ultimate support to Army transformation. All PEOs are ultimately responsible for the life-cycle management of all the programs assigned to them. This encompasses a myriad of respon-

sibilities and duties. I do not consider these as "additional" duties. They are all interconnected and required for a PEO to successfully manage his systems. However, under the Secretary of the Army's Headquarters, Department of the Army (HQDA) realignment initiatives, the objective of aligning missions and functions, streamlining decisionmaking, and passing HQDA responsibilities to the field, may require the assigning of additional responsibilities to all Army PEOs.

---

QUESTION SUBMITTED BY SENATOR WAYNE ALLARD

ARMY GREEN AMMUNITION PROGRAM

29. Senator ALLARD. General Bolton, the Silver Cartridge Company of Arvada, Colorado, and the Army have had discussions regarding the Army's Green Bullet program. I would like to hear again your assurance that the Department of Defense will properly deal with the Green Bullet patents and any private sector companies.

General BOLTON. The Army met with representatives of the Silver Cartridge Company in August 2001. It is Army policy to deal fairly with all contractors and sub-contractors. The Army has reviewed the Silver Cartridge Company patents and claims, has met with legal counsel representing the Department of Energy (the independent materiel patent holder), and has conducted an independent patent infringement study. Information regarding submission of claims of patent infringement has been provided to Silver Cartridge Company.

During prior meetings with Silver Cartridge Company and its legal counsel, Hogan and Hartson, Silver Cartridge Company agreed to forward, in writing, to the Army, specific information concerning alleged patent infringement. Once received, the Army will analyze that information, make new findings, and respond appropriately to Silver Cartridge Company.

---

QUESTIONS SUBMITTED BY SENATOR CARL LEVIN, ON BEHALF OF SENATOR RICHARD J. DURBIN

INTERNAL DEFENSE INDUSTRIAL CAPABILITIES

30. Senator DURBIN. General Bolton, do you believe that there is a minimum industrial capability that must be retained in-house so that the Defense Department can quickly respond to deployed forces and to provide the internal expertise to evaluate contractor proposals for industrial type work?

General BOLTON. The Department of Defense is authorized by law to retain a minimum essential nucleus of government-owned plants and production lines. The Army has been reducing this number since peaking during World War II. The Army will continue the review of its ordnance manufacturing centers to ensure we retain optimal capability.

INDUSTRIAL MOBILIZATION CAPACITY

31-32. Senator DURBIN. The Industrial Mobilization Capacity budget line acts as a premium on a mobilization capability "insurance policy" at Army arsenals. Last year's Defense Authorization Act directed the Army to budget fully for Industrial Mobilization Capacity. In spite of this legal requirement, the fiscal year 2002 budget request did not fully fund Industrial Mobilization Capacity. Do you support fully funding the Industrial Mobilization Capacity budget line?

Will you work to follow the public law in this matter and ensure this line is fully funded?

General BOLTON. I understand the requirements of section 342 of the Floyd D. Spence National Defense Authorization Act for fiscal year 2001, and I will comply with the law. I will ensure the Department of the Army properly budgets for the unused and underutilized plant-capacity costs of those facilities and equipment required for mobilization.

LIGHTWEIGHT 155MM HOWITZER

33. Senator DURBIN. The joint Army/Marine Corps lightweight 155mm Howitzer program is in the development phase. Two consecutive reports by the General Accounting Office have shown that this program is overbudget, behind schedule and beset by serious technical problems. The Engineering and Manufacturing Development (EMD) guns have been determined not to be suitable for operational testing.

Will you commit to review this program to see if you agree that it is time to pursue an alternative strategy, to include a side-by-side competition of existing Howitzers that offer a better chance of providing our fine soldiers with indirect fire power in a timely and cost effective manner?

General BOLTON. The Joint Lightweight 155 Millimeter Towed Howitzer is being developed in conjunction with the Marine Corps. Under the agreement between the two services governing this development program, the Marine Corps is responsible for development of the basic Howitzer and leads in procurement and the Army is responsible for developing and integrating the digital fire control onto the Howitzer and follows in production. Additionally, under the joint agreement, the Navy Acquisition Executive is the Milestone Decision Authority during the development. Because the Marine Corps is responsible for and solely funds the development of the basic Howitzer and decision authority resides with the Navy, I believe this question is more appropriately addressed by them.

#### ARSENAL ACT

34. Senator DURBIN. I am concerned that some recently drafted Army regulations (AR 700-90) may violate the Arsenal Act. I ask that you commit to investigate this issue and report back to the committee and to me within 2 months following your confirmation on whether the Army's regulations are in accordance with the Arsenal Act.

General BOLTON. All Army regulations undergo legal review before publication to ensure compliance with all statutory requirements, to include the Arsenal Act, Title 10. Pursuant to your request, I will look into the specific issues associated with the draft revision to AR 700-90 and report back to you within 2 months.

#### M67 GRENADES

35-37. Senator DURBIN. A few months ago, the Army Material Command awarded Rock Island Arsenal a contract for M67 grenades. That award has now been put on hold while the Army Secretariat reviews this procurement. I believe this decision may violate both the spirit and intent of the Arsenal Act. What is the basis for this review and when do you think it will be resolved?

What process and data will be used to make this decision?

Do you favor awarding this contract to Rock Island Arsenal?

General BOLTON. The Army is in the process of determining the appropriate method for obtaining M67 grenade metal bodies to meet its requirements. This part has not been manufactured since 1993. In accordance with the Arsenal Act, the out of pocket costs for making this part at Rock Island Arsenal will be compared to the price the Army would pay for industry to provide them. Neither Rock Island nor industry currently has a contract for this item. It is anticipated that the Army will be able to compare a neutrally developed independent Government cost estimate portraying Rock Island Arsenal's costs to those being offered by industry in response to an existing solicitation for the Marine Corps in late January 2002. At that time, if confirmed, I will provide you with an analysis and the Army's intent.

#### 120MM MORTAR

38. Senator DURBIN. We understand that the Marine Corps is testing an existing rifled 120mm mortar system. We believe this new mortar would offer the new Army interim brigades more firepower combined with a much better shoot and scoot capability. Would you review this with the Marine Corps to see if you should change the currently planned mortar for the Army interim brigades?

General BOLTON. We completed our review with the Marine Corps and found the existing rifled mortar system did not meet our requirements.

39. Senator DURBIN. Would you inform Congress of the results of your review not later than February 1, 2002?

General BOLTON. Yes.

---

[The nomination reference of Maj. Gen. Claude M. Bolton, Jr., follows:]

## NOMINATION REFERENCE AND REPORT

AS IN EXECUTIVE SESSION,  
SENATE OF THE UNITED STATES,  
November 8, 2001.

*Ordered*, that the following nomination be referred to the Committee on Armed Services:

Maj. Gen. Claude M. Bolton, Jr., of Florida, to be an Assistant Secretary of the Army, vice Paul J. Hoepfer.

[The biographical sketch of Maj. Gen. Claude M. Bolton, Jr., which was transmitted to the committee at the time the nomination was referred, follows:]

BIOGRAPHICAL SKETCH OF MAJ. GEN. CLAUDE M. BOLTON, JR.

Claude M. Bolton, Jr., nominated by the President to be Assistant Secretary of the Army for Acquisition, Logistics, and Technology, served over 32 years on active duty with the United States Air Force. A command pilot with more than 2,700 flying hours in more than 40 different aircraft, Mr. Bolton flew 232 combat missions in the Vietnam War, 40 of them over North Vietnam. He was a test pilot for the F-4, F-111 and the F-16. Among his decorations are the Defense Distinguished Service Medal, the Legion of Merit, the Distinguished Flying Cross with oak leaf cluster, and Air Medal with 16 oak leaf clusters.

Mr. Bolton's last assignment was Commander, Air Force Security Assistance Center, Headquarters, Air Force Materiel Command, at Wright-Patterson Air Force Base, Ohio, where he managed foreign military sales programs exceeding \$60 billion that supported more than 80 foreign countries. His responsibilities also included managing the command's international cooperative programs and its foreign disclosure policy.

Prior to commanding the Air Force Security Assistance Center, he was the program executive officer for Air Force fighter and bomber programs in the Office of the Assistant Secretary of the Air Force for Acquisition, where he served earlier in his career as a special assistant to the Assistant Secretary. Mr. Bolton was the first program manager for the Advanced Tactical Fighter Technologies Program which evolved into the F-22 System Program Office. His other acquisition assignments have included service as program director for the Advanced Cruise Missile System Program Office; deputy program director for the B-2 System Program Office; F-16 program element monitor and division chief, Low Observable Vehicle Division in the Office of Special Programs; AFMC director of requirements; and AFMC inspector general. A graduate of the program manager's course at the Defense Systems Management College, Mr. Bolton also served as its commandant.

Mr. Bolton graduated from the University of Nebraska in 1969, where he majored in electrical engineering and was a distinguished graduate in the Air Force ROTC program. He later earned a master's degree in management from Troy State University. He is a 1986 graduate of the Naval War College where he later earned a master's degree in national security and strategic studies.

Mr. Bolton is married to the former Linda Roll of Alma, Nebraska. They have two lovely daughters, Cynthia and Jennifer.

[The Committee on Armed Services requires all individuals nominated from civilian life by the President to positions requiring the advice and consent of the Senate to complete a form that details the biographical, financial, and other information of the nominee. The form executed by Maj. Gen. Claude M. Bolton, Jr., in connection with his nomination follows:]

1860

UNITED STATES SENATE  
COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearing and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)

Claude M. Bolton, Jr.

2. **Position to which nominated:**

Assistant Secretary of the Army for Acquisition, Logistics, and Technology.

3. **Date of nomination:**

November 8, 2001.

4. **Address:** (List current place of residence and office addresses.)

[Nominee responded and the information is contained in the committee's executive files.]

5. **Date and place of birth:**

December 13, 1945; Sioux City, IA.

6. **Marital Status:** (Include maiden name of wife or husband's name.)

Married to Linda I. Roll.

7. **Names and ages of children:**

Cynthia J. Bolton, 31; Jennifer A. Bolton, 28.

8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.

University of Nebraska, 1964-1969, BS, Electrical Engineering.

Troy State University, 1975-1978, Masters, Management.

Naval War College, 1985-1986, Masters, National Security and Strategic Studies.

9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.

October 2000 to Present: Air Force Security Assistance Center Commander, Wright-Patterson AFB, OH (Major General, USAF).

June 1998 to October 2000: Program Executive Officer for Air Force Fighter and Bomber Programs, Pentagon, Washington, DC (Major General, USAF).

June 1996 to June 1998: Director of Requirements, Wright-Patterson AFB, OH (Major General, USAF).

March 1996 to June 1996: Special Assistant to Assistant Secretary of the Air Force for Acquisition, Pentagon, Washington, DC (Brigadier General, USAF).

March 1993 to March 1996: Defense Systems Management College Commandant, Fort Belvoir, VA (Brigadier General, USAF).

September 1992 to March 1993: Inspector General, HQ Air Force Materiel Command, Wright-Patterson AFB, OH (Colonel, USAF).

August 1989 to September 1992: System Program Director, Advanced Cruise Missile Program, Wright-Patterson AFB, OH (Colonel, USAF).

10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

No additional.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

Member of the Board of Trustees for Girls' and Boys' Town (The Original Father Flanagan's Boys' Home), Omaha, NE.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

None.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

None.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

None.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

None.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals, and any other special recognitions for outstanding service or achievements.

Professional—Sigma Tau.

Honorary—Eta Kappa Nu, Pi Mu Epsilon, Phi Eta Sigma, Innocents Society.

Kappa Alpha Psi—Social.

Distinguished AFROTC Graduate.

Defense Distinguished Service Medal with oak leaf cluster.

Legion of Merit.

Distinguished Flying Cross with oak leaf cluster.

Meritorious Service Medal with two oak leaf clusters.

Air Medal with 16 oak leaf clusters.

Vietnam Service Medal with three service stars.

Republic of Vietnam Gallantry Cross.

Republic of Vietnam Campaign Medal.

Chuck Jones Development Planner Award winner, Wright-Patterson AFB.

Macolm Baldrige Quality Award/Finalist, Educational Pilot, Defense Systems Management College.

"Masters" Honoree, University of Nebraska, 1999.

Hall of Fame Inductee (first inductee), AFROTC, University of Nebraska.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

Program Managers Magazine, Defense Systems Management College, Commandant's Commentary.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

None.

17. **Commitment to Testify Before Senate Committees:** Do you agree, if confirmed, to respond to requests to appear and testify before any duly constituted committee of the Senate?

Yes.

---

[The nominee responded to the questions in Parts B–F of the committee questionnaire. The text of the questionnaire is set forth in the appendix to this volume. The nominee's answers to Parts B–F are contained in the committee's executive files.]

1862

SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

MAJ. GEN. CLAUDE M. BOLTON, JR.

This 9th day of November, 2001.

[The nomination of Maj. Gen. Claude M. Bolton, Jr., was reported to the Senate by Senator Ben Nelson on December 6, 2001, with the recommendation that the nomination be confirmed. The nomination was confirmed by the Senate on December 20, 2001.]

## APPENDIX

### COMMITTEE ON ARMED SERVICES QUESTIONNAIRE ON BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF CIVILIAN NOMINEES

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

(202) 224-3871

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES

INSTRUCTIONS TO THE NOMINEE: Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

#### PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearing and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)
2. **Position to which nominated:**
3. **Date of nomination:**
4. **Address:** (List current place of residence and office addresses.)
5. **Date and place of birth:**
6. **Marital Status:** (Include maiden name of wife or husband's name.)
7. **Names and ages of children:**
8. **Education:** List secondary and higher education institutions, dates attended, degree received, and date degree granted.
9. **Employment record:** List all jobs held since college or in the last 10 years, whichever is less, including the title or description of job, name of employer, location of work, and dates of employment.
10. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed above.

11. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, company, firm, partnership, or other business enterprise, educational, or other institution.

12. **Memberships:** List all memberships and offices currently held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

13. **Political affiliations and activities:**

(a) List all offices with a political party which you have held or any public office for which you have been a candidate.

(b) List all memberships and offices held in and services rendered to all political parties or election committees during the last 5 years.

(c) Itemize all political contributions to any individual, campaign organization, political party, political action committee, or similar entity of \$100 or more for the past 5 years.

14. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, military medals and any other special recognitions for outstanding service or achievements.

15. **Published writings:** List the titles, publishers, and dates of books, articles, reports, or other published materials which you have written.

16. **Speeches:** Provide the committee with two copies of any formal speeches you have delivered during the last 5 years which you have copies of and are on topics relevant to the position for which you have been nominated.

17. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

#### COMMITTEE ON ARMED SERVICES FORM

##### FINANCIAL AND OTHER INFORMATION REQUESTED OF NOMINEES

INSTRUCTIONS TO THE NOMINEE: Information furnished in Parts B through F will be retained in the committee's executive files and will not be made available to the public unless specifically directed by the committee.

**Name:**

##### PART B—FUTURE EMPLOYMENT RELATIONSHIPS

1. Will you sever all business connections with your present employers, business firms, business associations or business organizations if you are confirmed by the Senate?

2. Do you have any plans, commitments or agreements to pursue outside employment, with or without compensation, during your service with the government? If so, explain.

3. Do you have any plans, commitments or agreements after completing government service to resume employment, affiliation or practice with your previous employer, business firm, association or organization?

4. Has anybody made a commitment to employ your services in any capacity after you leave government service?

5. Is your spouse employed and, if so, where?

6. If confirmed, do you expect to serve out your full term or until the next Presidential election, whichever is applicable?

## PART C—POTENTIAL CONFLICTS OF INTEREST

1. Describe all financial arrangements, deferred compensation agreements, and other continuing dealings with business associates, clients or customers.
2. Indicate any investments, obligations, liabilities, or other relationships which could involve potential conflicts of interest in the position to which you have been nominated.
3. Describe any business relationship, dealing or financial transaction which you have had during the last 10 years, whether for yourself, on behalf of a client, or acting as an agent, that could in any way constitute or result in a possible conflict of interest in the position to which you have been nominated.
4. Describe any activity during the past 10 years in which you have engaged for the purpose of directly or indirectly influencing the passage, defeat or modification of any legislation or affecting the administration and execution of law or public policy.
5. Explain how you will resolve any potential conflict of interest, including any that may be disclosed by your responses to the above items. (Please provide a copy of any trust or other agreements.)
6. Do you agree to provide to the committee any written opinions provided by the General Counsel of the agency to which you are nominated and by the Attorney General's office concerning potential conflicts of interest or any legal impediments to your serving in this position?

## PART D—LEGAL MATTERS

1. Have you ever been disciplined or cited for a breach of ethics for unprofessional conduct by, or been the subject of a complaint to any court, administrative agency, professional association, disciplinary committee, or other professional group? If so, provide details.
2. Have you ever been investigated, arrested, charged or held by any Federal, State, or other law enforcement authority for violation of any Federal, State, county or municipal law, regulation or ordinance, other than a minor traffic offense? If so, provide details.
3. Have you or any business of which you are or were an officer ever been involved as a party in interest in any administrative agency proceeding or civil litigation? If so, provide details.
4. Have you ever been convicted (including a plea of guilty or nolo contendere) of any criminal violation other than a minor traffic offense?
5. Please advise the committee of any additional information, favorable or unfavorable, which you feel should be considered in connection with your nomination.

## PART E—FOREIGN AFFILIATIONS

1. Have you or your spouse ever represented in any capacity (e.g., employee, attorney, business, or political adviser or consultant), with or without compensation, a foreign government or an entity controlled by a foreign government? If so, please fully describe such relationship.
2. If you or your spouse has ever been formally associated with a law, accounting, public relations firm or other service organization, have any of your or your spouse's associates represented, in any capacity, with or without compensation, a foreign government or an entity controlled by a foreign government? If so, please fully describe such relationship.

3. During the past 10 years have you or your spouse received any compensation from, or been involved in any financial or business transactions with, a foreign government or an entity controlled by a foreign government? If so, please furnish details.

4. Have you or your spouse ever registered under the Foreign Agents Registration Act? If so, please furnish details.

#### PART F—FINANCIAL DATA

All information requested under this heading must be provided for yourself, your spouse, and your dependents.

1. Describe the terms of any beneficial trust or blind trust of which you, your spouse, or your dependents may be a beneficiary. In the case of a blind trust, provide the name of the trustee(s) and a copy of the trust agreement.

2. Provide a description of any fiduciary responsibility or power of attorney which you hold for or on behalf of any other person.

3. List sources, amounts and dates of all anticipated receipts from deferred income arrangements, stock options, executory contracts and other future benefits which you expect to derive from current or previous business relationships, professional services and firm memberships, employers, clients and customers.

4. Have you filed a Federal income tax return for each of the past 10 years? If not, please explain.

5. Have your taxes always been paid on time?

6. Were all your taxes, Federal, State, and local, current (filed and paid) as of the date of your nomination?

7. Has the Internal Revenue Service ever audited your Federal tax return? If so, what resulted from the audit?

8. Have any tax liens, either Federal, State, or local, been filed against you or against any real property or personal property which you own either individually, jointly, or in partnership?

(The committee may require that copies of your Federal income tax returns be provided to the committee. These documents will be made available only to Senators and the staff designated by the Chairman. They will not be available for public inspection.)

#### SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

This \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_\_.

COMMITTEE ON ARMED SERVICES QUESTIONNAIRE ON BIOGRAPHICAL  
AND FINANCIAL INFORMATION REQUESTED OF CERTAIN SENIOR  
MILITARY NOMINEES

---

UNITED STATES SENATE

COMMITTEE ON ARMED SERVICES

Room SR-228

Washington, DC 20510-6050

COMMITTEE ON ARMED SERVICES FORM

BIOGRAPHICAL AND FINANCIAL INFORMATION REQUESTED OF  
NOMINEES FOR CERTAIN SENIOR MILITARY POSITIONS

INSTRUCTIONS TO THE NOMINEE:

Complete all requested information. If more space is needed use an additional sheet and cite the part of the form and the question number (i.e. A-9, B-4) to which the continuation of your answer applies.

If you have completed this form in connection with a prior military nomination, you may use the following procedure in lieu of submitting a new form. In your letter to the Chairman, add the following paragraph to the end:

"I hereby incorporate by reference the information and commitments contained in the Senate Armed Services Committee form 'Biographical and Financial Information Requested of Nominees for Certain Senior Military Positions,' submitted to the Committee on [insert date or your prior form]. I agree that all such commitments apply to the position to which I have been nominated and that all such information is current except as follows: . . . ." [If any information on your prior form needs to be updated, please cite the part of the form and the question number and set forth the updated information in your letter to the Chairman.]

PART A—BIOGRAPHICAL INFORMATION

INSTRUCTIONS TO THE NOMINEE: Biographical information furnished in this part of the form will be made available in committee offices for public inspection prior to the hearings and will also be published in any hearing record as well as made available to the public.

1. **Name:** (Include any former names used.)
2. **Position to which nominated:**
3. **Date of nomination:**
4. **Address:** (List current place of residence and office addresses. Also include your office telephone number.)
5. **Date and place of birth:**
6. **Marital Status:** (Include name of husband or wife, including wife's maiden name.)
7. **Names and ages of children:**
8. **Government experience:** List any advisory, consultative, honorary or other part-time service or positions with Federal, State, or local governments, other than those listed in the service record extract provided to the Committee by the Executive Branch.

9. **Business relationships:** List all positions currently held as an officer, director, trustee, partner, proprietor, agent, representative, or consultant of any corporation, firm, partnership, or other business enterprise, educational, or other institution.

10. **Memberships:** List all memberships and offices held in professional, fraternal, scholarly, civic, business, charitable, and other organizations.

11. **Honors and Awards:** List all scholarships, fellowships, honorary society memberships, and any other special recognitions for outstanding service or achievements other than those listed on the service record extract provided to the committee by the executive branch.

12. **Commitment to testify before Senate committees:** Do you agree, if confirmed, to appear and testify upon request before any duly constituted committee of the Senate?

13. **Personal views:** Do you agree, when asked before any duly constituted committee of Congress, to give your personal views, even if those views differ from the administration in power?

#### COMMITTEE ON ARMED SERVICES FORM

##### FINANCIAL AND OTHER INFORMATION REQUESTED OF NOMINEES

INSTRUCTIONS TO THE NOMINEE: Information furnished in Parts B through E will be retained in the committee's executive files and will not be made available to the public unless specifically directed by the committee.

**Name:**

##### PART B—FUTURE EMPLOYMENT RELATIONSHIPS

1. Do you have any plans, commitments or agreements to pursue outside employment, with or without compensation, during your military service. If so, explain.

2. Has anybody made a commitment to employ your services in any capacity after you leave military service?

##### PART C—POTENTIAL CONFLICTS OF INTEREST

1. Describe all financial arrangements, deferred compensation agreements, and other continuing dealings with business associates, clients or customers.

2. Indicate any investments, obligations, liabilities, or other relationships which could involve potential conflicts of interest in the position to which you have been nominated.

3. Describe any business relationship, dealing or financial transaction which you have had during the last 10 years, whether for yourself, on behalf of a client, or acting as an agent, that could in any way constitute or result in a possible conflict of interest in the position to which you have been nominated.

4. Explain how you will resolve any potential conflict of interest, including any that may be disclosed by your responses to the above items. (Please provide a copy of any trust or other agreements.)

5. Do you agree to provide to the committee any written opinions provided by the General Counsel of the agency to which you are nominated and by the Office of Government Ethics concerning potential conflicts of interest or any legal impediments to your serving in this position?

6. Is your spouse employed and, if so, where?

## PART D—LEGAL MATTERS

1. Have you ever been disciplined or cited for a breach of ethics for unprofessional conduct by, or been the subject of a complaint to any court, administrative agency, professional association, disciplinary committee, or other professional group? If so, provide details.

2. Have you ever been investigated, arrested, charged or held by any Federal, State, or other law enforcement authority for violation of Federal, State, county or municipal law, regulation or ordinance, other than a minor traffic offense? If so, provide details.

3. Have you or any business of which you are or were an officer ever been involved as a party in interest in any administrative agency proceeding or litigation? If so, provide details.

4. Have you ever been convicted (including a plea of guilty or nolo contendere) of any criminal violation other than a minor traffic offense?

5. Please advise the committee of any additional information, favorable or unfavorable, which you feel should be considered in connection with your nomination.

## PART E—FOREIGN AFFILIATIONS

1. Have you or your spouse ever represented in any capacity (e.g., employee, attorney, business, or political adviser or consultant), with or without compensation, a foreign government or an entity controlled by a foreign government? If so, please fully describe such relationship.

2. If you or your spouse has ever been formally associated with a law, accounting, public relations firm or other service organization, have any of your or your spouse's associates represented, in any capacity, with or without compensation, a foreign government or an entity controlled by a foreign government? If so, please fully describe such relationship.

3. During the past 10 years have you or your spouse received any compensation from, or been involved in any financial or business transactions with, a foreign government or an entity controlled by a foreign government? If so, please furnish details.

4. Have you or your spouse ever registered under the Foreign Agents Registration Act? If so, please furnish details.

## SIGNATURE AND DATE

I hereby state that I have read and signed the foregoing Statement on Biographical and Financial Information and that the information provided therein is, to the best of my knowledge, current, accurate, and complete.

This \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_.
